phratry had been created by fusion of two others, and the appointment of two phratriarchs to serve simultaneously can be otherwise explained. There is no other certain case of a phratry with more than one phratriarch (nn. 162, 171). As long as the status of citizen continued to matter to the great majority of those entitled to claim it, celebration of the Apatouria in the traditional manner and place will have exerted a considerable compulsion. The years of the Peloponnesian War probably represented the greatest threat in the classical period to phratry cohesion, and it is possible that some phratries split or moved to a base in the city area at that time. However, the grant to the Council and other state officials of a five-day holiday for the Apatouria in 323/2 (if that is the correct date; n. 63) indicates that a substantial proportion of Athenians still left the city to celebrate the festival. It is only after the disenfranchisement and emigration of many citizens in 322 and subsequent years (ch. 22 at n. 35) that we can perhaps see a gradual drift away from phratry allegiance towards attachment to smaller cult groups, *genê*, *orgeones*, and *thiasoi*, some of which perhaps detached themselves from phratries, while others were formed, for non-citizens as well as citizens, by extension of a model that had first come into existence under the umbrella of the phratry.¹⁸⁵ Because processes of phratry subdivision were negotiated around the boundaries of social, residential, civic, and sacred geography—kinship, neighbourhood, deme affiliation, cooperation in cult, all these themselves interrelated—the privileging of the Apatouria and of shared sanctuaries of phratry deities, while citizenship remained significant, would provide a centripetal attraction tending to keep phratry subgroups in a loose union round each sanctuary. It is quite possible, however, that such loose unions were accompanied by diverging attachments to other cults and by separate management of at least some funds, which would prepare the way for eventual dissolution.

PRACTICES AND PROSOPOGRAPHY

References to phratry ‘laws’, *nomoi*, in orators’ speeches indicate that litigants were concerned to present the practices by which their status and relationships had been legitimized as those of a body with a recognized position in the structure of the state, the phratry, sometimes linked to subgroups, *gennetai* or *orgeones*, whose names seemed to imply an additional degree of legitimacy. One phratry might have different *nomoi* from another, but the concept *nomos* belonged to the level of the phratry rather than the *thiasos*, as did the practice of publishing decrees. The Demotionidai had passed a *nomos* concerning the

¹⁸⁵ In some parts of the Greek world the term phratry is used for such groups in the Hellenistic period: Seyfarth 1955.

scrutiny of candidates for membership; the phratry of Pyrrhos had a *nomos* requiring *gamelia*, and sacrifice of the *meion* for girls as well as boys;¹⁸⁶ in the phratry of Apollodoros of Leukonoion it was *nomos* for the sponsor of a candidate for admission to swear on a sacrificial victim that the boy was the legitimate son of citizen parents, and for this oath to be followed by a vote of the whole phratry; in the phratry of the speaker of Isaios 8 *nomoi* required bridegrooms to celebrate their weddings with an offering of *gamelia* in the phratry.¹⁸⁷ The term *nomos* belongs, of course, to the rhetoric of the courts; but the phratry too had its place in the world of law, though perhaps a marginal place. It was important to assert that phratries had *nomoi*, something which in the case of *demes* went without saying.

Further prosopographical information about named phratry members, where it is available, does not tell us very much. We know the names of five phratriarchs. Kallikles son of Aristeides of Myrrhinous had an earlier kinsman, Aristeides son of Autokles, commemorated by a *loutrophoros* in the early fourth century (*IG* ii² 6886, no provenance); Kichonides son of Diogeiton of Gargettos served as a *dikast* or had a homonymous kinsman who did so;¹⁸⁸ Pantakles of Oion Dekeleikon is not otherwise attested. Diopeithes II son of Diophantos of Myrrhinous, co-phratriarch of the *Dyaleis* with Kallikles in 300/299, belonged to a trierarchic family (*APF* 4435) already wealthy in the 370s. His father was presumably Diophantos III, son of Diopeithes I, who undertook the *eutaxia* liturgy *c.*330, and made a dedication to Eubouleus at Eleusis towards the end of the century with Baukideus son of Apollodoros of Kerameis, who also belonged to a trierarchic family. It is not clear whether this dedication to a minor Eleusinian figure, rather seldom honoured on his own, implies membership of an Eleusinian *genos*; at least it seems to imply an enthusiasm for the Mysteries and/or detailed knowledge about the sanctuary and its traditions.¹⁸⁹ Diopeithes II's older cousin (FFBS) Diophantos II, son of Phrasikleides, was more prominent in city politics; he was one of the guarantors of the ships sent to Chalkis in 341/0, served as councillor in 337/6 proposing three Council decrees dealing with naval matters, was still active in naval affairs in 325/4, and proposed further decrees in 322/1

¹⁸⁶ Is. 3. 76; *nomos* appears to be applied to both practices (*tauta*) although *suggestio falsi* may be involved.

¹⁸⁷ Is. 7. 16–17; 8. 18 (in 19 the *nomoi* may be those of the city). Note the emphasis in both passages on the legalism (*akribeia*) of phratry proceedings. The verb used for *gamelia* is *eispherein*, which does not necessarily imply sacrifice (cf. above, n. 67). On sacrifice of the *meion* for girls see n. 48 above. The sacrifice may have been more often made if the girl was the couple's first child.

¹⁸⁸ Kroll 1972, no. 96e.

¹⁸⁹ *LGN* has Diopeithes II as son of Diophantos II, but Diophantos III (son of Diopeithes I) seems more likely. *APF*'s text has a misprint, Diophantos I for Diophantos III. Baukideus, *APF* 1419; the dedication, *IG* ii² 4615, was a statue, possibly by Praxiteles (*LIMC* s.v. *Eubouleus*).

and 320/19. Evidently both Diophantoi were supporters of Lykourgos' policies, Diophantos II more concerned with reestablishing Athenian seapower and Diophantos III more attracted to questions of morale and religion. The lease of phratry land arranged during Diopeithes II's year of office, with its provision for purchase of the land by the lessee if he is willing to commit himself before the lease expires, perhaps shows the influence of the Lykourgan scheme for encouraging demes, phratries, and similar bodies to sell land.¹⁹⁰

Euxitheos of Halimous had also served as phratriarch. He was a wealthy man, sufficiently unpopular in his deme to be denied membership in the scrutiny of 346/5; in the deme he had been a candidate for the office of priest of Herakles, selected by lot from 'the best-born', which may be connected with his claim to be a *gennêtês* (Demosthenes 57. 67). He seems to have been a man who sought importance at the local level, in phratry and deme, but did not leave any trace of activity in city affairs.

The lessee of the Dyaleis, Diodoros son of Kantharos, who like the phratriarchs belonged to the deme Myrrhinous, is not otherwise known, and lists of phratry members and of orgeones—*gennêtai* are treated in ch. 20—do not add a great deal (cf. ch. 12 n. 70). The Paianian (?) phrateres of *IG ii² 2344* may perhaps be linked to membership of the Council of 500, but not to higher office, except for a possible affinal connection with Epichares II son of Agonochares of Paiania, who served on the board set up to organize the *Amphiaraiia* in 329/8.¹⁹¹

Decrees honouring benefactors and, to some extent, the 'epidosis' list *IG ii² 2345*, take us into higher social strata. Arrheneides of Paiania, honoured with another member of the phratry for his contribution to building work on its temple in *SEG 3. 121*, came as we have seen from a family prominent in the political struggles of the late fifth century. He is recorded as trierarch in 357 and as one of the guarantors of the ships sent to Chalkis in 341/0, in which year he also served as choregos; he contributed 2300 drachmas to the cornfund in the early 320s, and this contribution was credited towards the payment of the trierarchic debts of Konon III and others in 326/5. He leased publicly owned land in (?) 333, and received a payment of 12½ dr. for transporting stone to Eleusis in 329/8. His son Kallikles is also attested as a trierarch, with partial responsibility for two triremes in 322; in 324 he was living as a newly-married man in a part of the city in which a house-to-house search was made for recipients of the Persian gold brought by Harpalos. This seems to be a family of wealthy, conservative

¹⁹⁰ Schwenk 1985, no. 88 suggests that in proposing that decree (*IG ii³ 324b*) in 322/1 Diophantos was upholding the sovereignty of the assembly, though the content was routine. On the sale of land owned by corporate groups, see n. 154 above.

¹⁹¹ *IG ii³ 355*; cf. *ii² 7020*, the tombstone of his father; *IG ii³ 1155. 75*, probably his grandson (SS).

patriots like that of Diopeithes II of Myrrhinous, with landed interests that may well have included property in the deme.¹⁹²

The ‘epidosis’ list *IG* ii² 2345 perhaps leads to a more representative range of supplementary information about the contributors. Seven of them came from families for which office-holding is attested. Diokles may be the Diokles of Alopeke who served as general in 357/6;¹⁹³ Hagnotheos, eponym of a thiasos, served as secretary to the epistatai in charge at Eleusis from 336/3 to 333/2; Euphrosynos of Paiania was sent as envoy to Keos in the 350s. Leo[stratos], father of Demophilos, was one of the epimeletai of the dockyard in 360/59, and left a debt of 101 drachmas paid by his son in the late 340s. Sosidemos (contributing 55 dr.) is probably the father of Pytheas, commissioner for waterworks in 333/2; Glauketes of Kephisia is probably the brother of Kleochares, who took part in the sacred embassy to Delphi (Pythais) of 330/29 or 326/5. The grandfather of Pantaretos probably served as amphiktyon on Delos in 390/88.¹⁹⁴

Names on this list can be linked to three trierarchic families: those of Diokles (*APF* 3990) and Glauketes (*APF* 2952), already mentioned, and perhaps that of Sokrates’ friend Kriton of Alopeke (*APF* 8823), to whom Archestratos son of Spoudides may have been related.¹⁹⁵ Two names can be linked to records of cavalry service: Aristides son of Phoryskides will be an ancestor of the third-century cavalryman [Aristomenes?] son of Ph[o]ryskid[es], and Chion, whose father and son were both called Lysiades, will belong to the same family as Thebaios son of Lysiades of Alopeke, who made a dedication to Hermes as hipparch in the third century.¹⁹⁶

Ten men in this list can be identified as, or related to, councillors or Council officials. Hippon of Agryle served in (?) 336/5 (*Agora* XV 42. 21), Diogenes and Euxitheos in 334/5 (*IG* ii³ 4. 81. 5, 53), Theopompos c.330 (*Agora* XV 46. 56), Demophilos c.321 (55. 39). Antiphon son of Nautes may have been a kinsman

¹⁹² See n. 146 above; *APF* 2254. Lease: *Agora* XIX L 10. 42–3 (on the date see A. Williams 2011). Arrheneides seems to have been an associate of Konon III (*APF* 13700): *IG* ii² 1623. 175–7, 1628. 410, 1629. 930. He was alive in 325/4 but may perhaps have died shortly afterwards. The transport of stone was probably undertaken as a service by a landowner who had draft animals rather than as a regular business (cf. Burford 1960, 1965; *Eleus* II, 158–62). Kallikles: Theop. *FGH* 115 F 330.

¹⁹³ *APF* 3990 (erroneously 3099 in *LGPN*); a connection with Diokles son of Themistokles, adopted into Alopeke, is possible (*APF* 6669 VII). However, as Lambert 1999*a* observes, the name is very common.

¹⁹⁴ See Humphreys 1990*a*, Lambert 1999*a*. Hagnotheos: *IG* ii² 1543–4. Euphrosynos: ii² 1128. 39f. Leostratos: ii² 1622. 558–63. Sosidemos and Pytheas: cf. Habicht 1989. Kleochares (cf. n. 176): D. M. Lewis 1955, *AO* 330/29 on the date. Pantaretos: n. 179 above. Glaukippos son of Glaukon of Alopeke (I. 15?) made a dedication found in the theatre with four other men, apparently relating to their service on a board of 4 officials and a secretary (*IG* ii³ 4. 64).

¹⁹⁵ Archestratos son of Kriton of Alopeke (*APF* 8823) was alive in 342/1 and should have appeared somewhere on this list. See however Lambert 1999*a*.

¹⁹⁶ *SEG* 47. 197. See Bugh 1988; both Bugh and *LGPN* miss Thebaios. The name Phoryskides is also attested in Lamptraí (*City* 2000, no. 137) and Leukonoion (M. J. Osborne 2009*b*; ch. 26 s.v.).

of Antiphon son of Solon, councillor in 334/3 (*IG ii³ 4. 81. 56*); Gnathios should be the father of —sos Gnathiou, councillor in 303/2 (*Agora XV 62. 303*); —phon son of Kephisos, councillor in the same year (62. 305), may be related to the family in Thiasos I that used the Kephiso- root in its names; [Kalli]stratos and [K]t[esi]kleides, sons of Kteson, served as councillors.¹⁹⁷

Other evidence indicates at least a moderate level of wealth, as we would expect from donors. Leptines son of Olympiodoros of Alopeke was choregos for boys' dithyramb in 331/0 (*APF 9045*) and might be, or be related to, the tribal priest Leptines of *SEG 3. 117 = ISE 8* (303/2; no demotic, and the name is attested in Pallene in the 3rd c.). A Theodosios of Alopeke, perhaps to be identified with, or a kinsman of, the donor in Thiasos I, freed a slave in the 330s–320s, as did Lysiades II, son of Chion (line 85). Demon of Agryle appears as lessee of a mine for 20 drachmas in the poletai records of 367/6 (*Agora XIX P 5. 56*). The Glaukippos of Thiasos I may be the son of Glaukon, who dedicated *IG ii³ 4. 64* with colleagues in the middle of the fourth century. The tombstones of Kaineus, of Lysis the father of Lysandros of Euonymon, and of the daughter of Aresias I,¹⁹⁸ also indicate wealth. Pantaretos II (line 57) probably appears as leader of an eranos responsible for a loan of 1800 dr. secured on a house in Mounichia (*IG ii² 2743 = Finley 1952, no. 70*).

This scatter of prosopographical information, even if for the moment we ignore the doubts attached to conjectural identifications and problems of dating, does not settle into any very clear pattern. It does not contradict conclusions that could have been deduced a priori and will be supported by the analysis of prosopographical data related to demes (chs. 23–32); the management of phratry affairs was likely to be left to men whose ambitions did not rise above the local level, wealthy quietists or village busybodies. Those with serious political ambitions would seldom become deeply engaged in phratry affairs, although they might occasionally be persuaded to contribute funds or forensic skills in an emergency.

¹⁹⁷ [Kalli]stratos *SEG 39. 204*; [K]t[esi]kleides *Agora XV 55. 37* (Lambert 1999*a*, 122 n. 51 suggests dating this list earlier; Appendix 1). The fact that these records of Council service come from the 330s and later is due to the scarcity of earlier lists; see ch. 17 n. 15 for evidence of men serving as councillors late in life. On the date of *Ag. XV 42* see *AO 336/5*.

¹⁹⁸ Kaineus: above, n. 173. Lysandros: *IG ii² 6180*, found on the Akropolis (stele). *SEMA 88*, Pheidylla daughter of Aresias (I?) of Alopeke, a relief monument of the mid 4th c. found in Odos Demetrakopoulou (NE of Kallithea, in an area not far W of Alopeke though perhaps hardly inside the deme) probably commemorates the sister of Antiphanes son of Aresias, l. 45. The monument of Pos[ei]d[o]nios son of Diog[eito]n of Alopeke (*ii² 5575*) may belong to a brother of Diogenes, the leader of Thiasos III (cf. n. 176); Diogeiton, their father, probably appears as *klētēr* in a denunciation of property in Alopeke on *Agora XIX P 5. 15–16*. I would now withdraw the suggestion made in Humphreys 1990*a* that this is the family of Lysias 32.

HISTORICAL SUMMARY

A clearer idea of the historical curve of phratry activities might nevertheless be revealing. We can at least identify a series of especially problematic periods. Kleisthenes' reforms must have set up tension between the phratries (and their subgroups) and the new deme organization. Tribe and trittys boundaries may in some cases have been designed to cut across those of phratries; more often, perhaps, the failure to designate deme centres or define deme boundaries (chs. 21–22) will have allowed hamlets and smaller villages to make their own decisions about deme affiliation; some of these decisions will have been based on, and will then have accentuated, boundaries of kinship and residence that divided phratries internally. The Kleisthenic scheme also strengthened existing divisions within phratries between those who resided in or near the phratry centre and those who had migrated elsewhere, principally to the city/Piraeus area, who would now be registered in the deme where they lived. Discrepancies between deme and phratry boundaries, and in some cases correspondences between the boundaries of subgroups within the two systems,¹⁹⁹ provided a permanently available basis in social and spatial experience for the crystallization of factions.

In the period from 507 to 431, relation between phratries and demes are likely to have been determined mainly by correspondences or discrepancies between their boundaries and by the effect of Kleisthenes' scheme on leading families. Phratries whose dominant families were still locally resident and affiliated to local demes will have differed in their history from those whose leading families had moved to the city and were registered in city demes. In the latter case, again, families now separated from the phratry base will have reacted in varying ways, some concentrating on creating a new power base in city and deme,²⁰⁰ others expending more energy on maintaining their position in the phratry. In those phratries where the former elite turned its attention elsewhere, new leaders might arise who had ambitions to control both deme and phratry. We cannot, therefore, predict *a priori* whether the move of a dominant family to the city would favour fusion of deme and phratry interests, both being controlled by the same new, locally resident leaders, or a separation, because elite families resident in the city still controlled phratry affairs. In this period, therefore, there may have been a rather rapid takeover of phratry cults and sanctuaries by demes in some places, while phratries continued to dominate local cult in others (cf. ch. 22 at n. 73).

¹⁹⁹ Cf. above, at nn. 119–23 on Upper and Lower Paiania, and the division of the Salaminioi into Sounians and others (ch. 20 at nn. 105–7).

²⁰⁰ Cf. ch. 20 at n. 69 on Kimon's relations with Lakiadai.

The Peloponnesian War, as we have seen, affected both rural demes and rural phratries, but presented more serious problems for the latter for three reasons: phratry business required access to a sanctuary and altar, whereas deme business could be conducted in any public space; the deme was required to carry out a wider range of functions, more closely linked to state business, than the phratry; finally, the split between locally resident and non-resident families had been a feature of phratry structure since 507, whereas the rate of definitive migration from rural demes to the city area between 507 and 431 may not have been high.²⁰¹

During these two periods the distinction between public and private spheres hardened in Athenian social experience and culture, and the phratry had features that associated it with the private sphere: the informal character of its festivals, and its association with family life, including marriage and the birth of children. Like rural demes, rural phratry centres and their festivals became foci of nostalgic longings for peace and a golden-age traditional way of life; country opposed to city, peace to war, cult to politics.²⁰²

The reality of the postwar decades shattered these dreams. Athenians who had moved into the city initially as a temporary measure, but had during the thirty years of war developed a new way of life there based on service in army and fleet and on the opportunities of the urban market, were faced with the choice of struggling for existence in a depressed economy or trying to recover and revitalize farms they had abandoned.²⁰³ Class hostility sharpened, both in response to the economic situation and in retaliation for the offences committed by the oligarchic juntas of 411–10 and 404–3. Since oligarchy had appealed to land-owners, many members of local landowning elites will have found their traditional authority threatened.²⁰⁴ Some, as in Dekeleia, managed to re-establish control, but elsewhere this may well have been a period in which responsibility for phratry cults and sanctuaries were abandoned to demes.

Over the period *c.* 378–322, class relations in Attika gradually stabilized. The position of Athens as the major seapower of the Aegean was re-established, but she could no longer draw on large payments of tribute to support it. A higher proportion of the cost was borne by the rich; on the other hand, irregularity in the payment of troops and crews made military and naval service less attractive

²⁰¹ The opportunities for service in the fleet and for acquiring land in *kleruchies* during the period 480–431 may have slowed down the rate of deliberate migration to the city, although rowers will have increased the population of the city–Piraeus area when not at sea.

²⁰² Humphreys 1983*a*/1993, chs. 1–2, 1986*a*, 104–5; cf. the discussion of *Ar. Peace* above, and *Ar. Ach.*

²⁰³ Humphreys 1978, chs. 6–7; Strauss 1986; V. D. Hanson 1983, P. Harvey 1986, Pritchett 1991 on the effects of invasion on the agricultural economy (note Boulay 1974, 32 on the collapse of mudbrick houses after about 5 years of neglect).

²⁰⁴ Loening 1987; ch. 14 at n. 39, 15 s. ‘The Thirty’.

to many citizens. Young men, in many cases, sought mercenary service overseas;²⁰⁵ married men were more likely to return to the land or find urban occupations that demanded attention throughout the year. Phratry and deme boundaries could once again play their part in the local microdynamics of village politics, if a phratry had retained sufficient control over cult centres and resources to function as more than the framework for a simple annual gathering at the Apatouria.²⁰⁶ Those phratries that have left evidence of their activities did so by imitating and adopting the procedures and language of the public sphere: marking their property, holding assemblies, electing officials, passing and inscribing decrees.²⁰⁷ They became, with and like the demes, local centres of public life. After 322 they declined, like the demes, because local settlements were abandoned and the character of public life changed. The surviving demes were those that served as forts, though some of them retained or later recovered an identity as tourist centres;²⁰⁸ the phratries survived only as cult groups of orgeones and thiasoi.

In these alternatives we can perhaps see a new adaptation of the distinction between public and private life. A minority of demes retained their identity in a new kind of public policy, in which Athens played a defensive role both in military and in cultural terms, guarding her boundaries against attack, trying to free her territory from foreign garrisons, making claims on the attention of the great powers based on her past and her cultural achievements. Athenians who were not wholeheartedly involved in these struggles will have reintegrated their purposes and the meaning of their lives in a variety of ways; for some, membership in a groups of orgeones or a thiasos provided a kind of public life, which included a place for family relationships, a set of rituals that enriched the rhythms of the calendar, supernatural patrons and temporal friends on whom they could call for help. The rollicking, country-fair milieu of the phratry began to drift in the direction of the sect or chapel.²⁰⁹

This chapter, clearly, has not entirely escaped the influence of traditional conceptions of the phratry. I still see it, like Fustel, as an early institution; like Gernet,

²⁰⁵ Humphreys 1978, chs. 6–7; Marinovič 1988 on mercenaries.

²⁰⁶ A phratry that met more frequently and controlled more sanctuaries would be more ‘real’ to members than one that met only for the Apatouria: above, n. 32.

²⁰⁷ We have less evidence for phratry officials than for deme officials, but the Demotionidai had hieropoioi (*IG* ii² 1242 = *SEG* 21. 528); the phratry of *SEG* 32. 150 had a commission of epimeletai; *IG* ii² 1239 may have had a [grammateus] (n. 162 above). On protenthai and oinoptai see above, n. 69. A new phratry priest at Myrrhinous (Dyaleis?), *SEG* 53. 210/57. 201; ch. 25 n. 44. The egalitarian basis and atmosphere of phratry festivals in the 5th c. may have discouraged multiplication of formal offices; the rarity of references to phratry temples (only *SEG* 3. 121) may be a parallel phenomenon, although phratry relations with genè and demes must be taken into account.

²⁰⁸ Cf. Lauter 1993, Alcock 1993; ch. 22 at n. 35.

²⁰⁹ Hellenistic thiasoi and groups of orgeones, in addition to giving rights to members’ wives and daughters (*SEG* 21. 530) took on funerary responsibilities which are so far not attested for the classical period (ch. 12 n. 69).

as tied to the village and its festivals.²¹⁰ I have tried, however, as they did not, to ask how Athenians themselves thought about phratries in each period, how association with the past and countryside interacted with other factors (war, politics, settlement patterns) to shape the phratries' histories. At every period there was both continuity and restructuring, invention based on 'realities' rooted in experience.

²¹⁰ Gernet 1928, cf. 1951; Humphreys 1978, ch. 3. D. Roussel 1976 (cf. Bourriot 1976) stressed the artificiality of the tribe/phratry system (going so far as to accept J. H. Oliver's 1972 interpretation of *A.P.* fr. 3); I have tried to reconcile what is obviously valid in this constructivist view with the (to my mind) equally obvious antiquity and centrality of the phratry as a social group by separating the question of phratry origins from that of the incorporation of phratries into tribal systems (cf. ch. 18).

The *Genê*

Genos is used here in a technical sense that did not become common in Attika until the fourth century BCE: to denote a named corporate group owning rights to office, the members of which were called *gennêtai*. These groups, in early times, seem to have been referred to by name rather than by any established use of a collective noun: the Eumolpidai, the Kerykes, the Praxiergidai. However, the expression ‘the *genos* of the Kerykes’ occurs in a law quoted from the *kyrbeis*, in which the dual is used: the law must be early but we cannot be sure that the quotation has not been edited.¹

When lexicographers use *genos* in the technical sense they usually add *itha-genôn*, ‘of direct descendants’ (Herodotus 2. 17 uses this term in distinguishing natural mouths of the Nile from man-made channels). The term *gennêtai* is first attested in the fourth century, in forensic speeches (Isaios 7. 13 and elsewhere; Demosthenes 57. 67; [Demosthenes] 59. 55, 59, 61), in a decree of the Krokonidai (*IG ii*² 1229; c.330, Tracy 1995), and probably in *A.P.* fr. 3.² It derives, like *gennaios* (‘well-bred’) from *genna*, descent—not from *genos*—and may well have meant something like *eupatridês* (‘of good ancestry’) before becoming more specifically associated with the *genê*. In the third century Philochoros (*FGH* 328 F 35) uses it to gloss *homogalaktes* in a probably Solonian law (ch. 19 n. 3).

As we have already seen (ch. 18 n. 29), this stress on purity of descent did not deter a theorist of the late fourth century from proposing that *gennetai* had been assigned to their *genê*: thirty *genê* per phratry. Most of the sources that describe this arrangement clearly derive from the *Athenaion Politeia*, but the statement in Proklos’ scholia to Hesiod that Attika had 360 *leschai* (clubhouses, meeting places) seems to preserve a variation of the same scheme, and may possibly suggest that the first writer to put it forward supported it with some reference to

¹ Athen. 234 c–f, Polemon F 78 Preller 1838: *kai tô kêruke ek tou genous tôn Kêrukôn tês mystêriôtidos*.

² *Ithagênês* is used to distinguish legitimate sons from *nothoi* in Od. 14. 200; cf. also Hdt. 6. 53. In Plat. *Laws* 878d *gennêtai* appears to mean ‘parents’. It is not entirely certain from citations of *A.P.* fr. 3 (on which see ch. 18 pp. 546–50) that the equivalence of *genos*-members and *gennêtai* appeared in the original text, but it is probable. For further discussions of terminology see Bourriot 1976; W. Thompson 1983; Bresson and Debord 1985.

evidence for widespread distribution of local *genê* in Attika.³ The suffix *-idai* was widely used to form both *genos* names and place names, and in ancient as in modern times it was often thought of as a patronymic form, a view reinforced by its use to form patronymics in Homer. As with the ‘patronymic adjective’ suffix *-ios*, the use of *-ides* and *-idai* was not confined to patronymics, and some of the Attic place names ending in *-idai* are likely to derive from nicknames, not always complimentary: Skambonidai for a city district, from *skambos*, crooked; Boutadai and Pambotadai perhaps for farming communities, Keiriadai for shepherds? Auridai perhaps prided itself on its breezes. Halai Aixonides and Halai Araphenides were the salt pans of Aixone and Araphen. Hamlets as well as larger villages bore such names, which also occur as toponyms of locations where there may never have been settlement (a mine *em Philomêlidôn*, *Agora XIX* P 26. 238). Some of these place names correspond to the names of attested *genê* or phratries (Boutadai, Philaidai, Thymaitadai, Titakidai, Thyrgonidai, Semachidai), others—like many place names without the *-idai* suffix—were believed to be named for heroes and hence might be thought to have once housed the hero’s descendants.⁴ An antiquarian who systematically collected Attic place names of appropriate form and added them to the list of *genê* active in the fourth century might well conclude that 360 was not an exaggerated estimate for the original number of *genê*.

He might also be encouraged to think of the *genos* as the smallest unit of the citizen body in the earliest Attic tribal system by the use of *genos* and the equivalent term *patra* for such units in other cities (N. F. Jones 1987, Index I no. 16) and—if sufficiently tolerant of inconsistency—by the evolutionary scheme deriving human society from the combination of households into extended families, and thence into phratries, tribes, and cities, which was becoming popular among philosophers. Plato makes the family the first social unit in the *Laws* (680d–e); Aristotle (*Politics* 1252b 9–18) traces an evolution from the household to a wider group variously known as *homokapoi*, *homosipues*, or *homogalaktes*, and thence to village and city; Dikaiarchos (F 52 Wehrli 1967 = Fortenbaugh and Schütrumpf

³ Schol. Hes. *WD* 493–5. On *leschai* see Dragoumes 1892; *RE* s.v.; Wycherley 1970; Fisher 2001, 359; *IG* i³ 1102, ii² 2492; cf. perhaps the Piraeus building reported *AR* 1985–6, 13, and the *klision* of the Lykomidai, Paus. 4. 1. 7. As several commentators have noted, *A.P.*’s idea that priesthoods were distributed among the *genê* by lot may be influenced by practices of (intra-*genos*) appointment in his own day (n. 17).

⁴ Duploux 2010. Cf. also Keurentjes 1997. Cromey 1978 notes that *-(i)dai* can be added to a place name to form a term denoting the inhabitants: Hdt. 5. 62 has *Paioniê* for the deme later known as Paionidai, while a 5th c. demesman of Kollytos calls himself *Kollytides* rather than Kollyteus (*DAA* 184, *IG* i³ 779; cf. ch. 22 n. 39). Nicknames formed with *-ides* are discussed by Wilamowitz 1893 II 181–2; Diels 1902; Mras 1937; cf. Erbse and Latte 1965, pp. 261–2, 264; ch. 8 n. 42. As we shall see, detailed examination shows that the relationship between *genê*, heroes, and place names formed with *-idai* was untidy.

2001 F 1) suggests that two *patrai* exchanged women and subsequently united to form a phratry.⁵

Nevertheless, whatever scholars might believe about the days of Ion, in fourth-century Attika (and earlier) not everyone was a *gennetes* and not every family was a *genos* in the technical sense defined here. *Genos* was of course a term with a broad range of meanings (cf. Vartsos 1978). In the non-technical sense the term could be used to refer even to the descent of a slave: in the lists of property confiscated in 415–13 from the Hermokopidai and those who parodied the Mysteries, slaves are described as Karian, Thracian, etc., by *genos* (IG i³ 427 a 3–12). Aristotle uses the term *kata genos* to refer to divisions of the citizen body by occupation (*Politics* 1329a 41–b 2). *Genos* had no special association with the upper classes; *oikos* or *oikia* are more commonly used of aristocratic lineage.⁶ Nor was the term *genos* restricted to patrilineal descent. Grants of citizenship to the recipient and his *genos* probably qualified female descendants to bear legitimate children to citizen husbands as well as assuring the rights of male descendants.⁷ Demosthenes (23. 213) describes Charidemus as contributing half the *genos* required for citizenship in Oreos, since his mother came from that city, yet nevertheless being treated as a *nothos* and not entitled to citizenship.⁸ One could be *anchista genous*, next of kin, by cognatic as well as agnatic reckoning (ch. 1 n. 90), and Isaïos probably uses the expression ‘return to the *genos*’ to explain that if there are no kin within the prescribed limits (up to second cousins) on the father’s side of the family, the search for an heir recommences on the mother’s side.⁹ *Genos* here would refer to *d.c.*’s lineal ascendants, specifically his mother. When the *Iliad* (3. 354f.) says that Zeus and Poseidon have the same *genos*, full siblingship is meant.

⁵ Earlier philosophers had used the herd as a model of early human society (T. W. Cole 1967). Dikaiarchos came from Samos, and may have known the Ionian use of *phrétēr* to mean ‘brother’ reported by Hsch. (s.v.).

⁶ *Oikos/oikia*: e.g. Pind. *Ol.* 13. 2; Hdt. 5. 31, 6. 9, 125; Thuc. 1. 137. On the *oikos* of the Dekeleians (IG ii² 1237) see ch. 19 nn. 85–7. Cf. Bourriot 1976, Lambert 2004a. In Aristotle’s statement (*Pol.* 1252a 33–5) that in Crete the *kosmoi* are elected from certain *gené* only, it is not clear whether he was misled by the custom of appointing a whole board of *kosmoi* from the *startos* (equivalent to Roman *classis*, the hoplites?) of the same tribe, or had some more detailed information (cf. De Sanctis 1901; Bourriot 1976, 560–4; N. F. Jones 1987, 219–31).

⁷ Women’s rights were not clearly defined (Whitehead 1986b), and in the classical period the number of honorary citizens who took up residence in Athens was presumably small.

⁸ Note the equivalence of *nothos* status with lack of citizen rights (ch. 22 n. 45).

⁹ MS reading in Is. 11. 2 *ean de kai tout’ eklipe, eis to genos palin epanerchetai*, kept by Thalheim 1903. Schoemann (1831) and P. Roussel (1922) delete *eis* and punctuate after *genos*, which does not seem necessary; Reiske’s *eis to <prōton> genos* does not help. Cf. Is. 8. 32, where FFF is described as ‘the beginning of the *genos*’, i.e. of the set of *oikoi* in terms of which closeness of kinship is reckoned (on the father’s side in this case); Table 1.1. Is. 2. 10, 45 may have used *agenēs* to mean ‘childless’ (Blass 1874).

The use of *genos* to denote named groups of *gennētai* derives from these untechnical uses of *genos* for the descent of any individual, and probably developed in the Lykourgan era, perhaps encouraged by the number of lawsuits over *genos* privileges brought at that time (below, at nn. 119–23). When Apollodoros of Acharnai describes the hierophant Archias as *ek genous onta tôn Eumolpidôn* ([Demosthenes] 59. 117), the usage is still borderline: he is a Eumolpid by descent. But by 330 Aischines (3. 18) can refer to the Eumolpidai and Kerykes as ‘the *genē*’, and it is at this period that decrees start to refer to the body that passes them as ‘the *genos* of the x’. In 363/2, the Salaminioi in their *genos* decree (*Agora* XIX L 4) use the term *genos* only once, at the end, in specifying that anyone who proposes to change the agreement which has been made, or spend collective funds other than as specified, is to be liable to the whole *genos*. Elsewhere in the text they refer to themselves only as ‘the Salaminioi’. However, by c.306/5 they have adopted the expression ‘the *genos* of the Salaminioi’ (*IG* ii² 1232).

This change in terminology does not mean that ‘the *genos*’, in the technical sense, was a new phenomenon in the fourth century. François Bourriot (1976) was undoubtedly right to reject the nineteenth-century model of the *genos* as primordial social unit, based mainly on evidence for the Roman *gens*, but he did not demonstrate that named aristocratic descent groups played no role in archaic and fifth-century Attic society. Moreover, his division of the few early *genē* he was prepared to recognize into two groups, priestly *genē* and those based on local communities, does not seem either valid or useful (cf. Kearns 1989; R. Parker 1996, 61). The two best attested *genē* with ‘local’ names, the Eteoboutadai and the Salaminioi, both had significant non-local cult responsibilities, and the ties of the latter with Salamis may well have been remote (Humphreys 1990*a*; below, at nn. 103–11). The decision of Duplouy 2006 (following Bourriot) to omit sacrifice and priesthoods from his discussion of elite prestige in early Greece seems perverse.

Proto-*genē*—lineages of shallow depth that cite pedigrees in support of their status and lay claim to hereditary office or specialized skills—can be seen in the Homeric poems and in many Greek cities. Although the Priamidai seem to be in firm control of Troy in the *Iliad*, even the Greeks know that Aineias too is of royal lineage, and that he nurses hopes that his line may rule again one day. The two Spartan kings traced back their descent to the eponymous ancestors of the Agiad and Eurypontid lines, but despite the depth of these pedigrees (the founders were placed 12 to 14 generations before the kings of the late eighth century) Sparta was not full of men claiming royal descent. Cadet lines evidently merged back rapidly into the ranks of commoners. Seers traced their pedigree to famous ancestors, poets claimed descent from Homer, but seers and poets travelled and did not form corporate groups.¹⁰ The Aigeidai of Sparta were numerous enough for

¹⁰ Iamidai: Bourriot 1976; M. A. Flower 2008*a*, 2008*b*. Homeridai: Ritook 1970. The *poinikastas* Spensitheos who was given hereditary office in a small Cretan city c.500 BCE may have been an immigrant (*SEG* 27. 631; Bile 1988 no. 28); note the name advertising his religious expertise.

Herodotos to call them a *megalê phylê*, a 'great tribe' (4. 149), and claimed kinship with Thera, Kyrene, and Thebes; they may have been responsible for the cult of Kadmos, Oiolykos, and Aigeus, whose shrines were still visible in Pausanias' day (3. 15. 8), and they may have stressed their foreign connections in order to claim a status almost equal to that of the kings, but despite the tradition that they commanded the centre of the army in the First Messenian War in the late eighth century (Pausanias 4. 7. 8) they do not seem to have had any major institutionalized position.¹¹

Pride in pedigree may have encouraged some interest in old burials archaeologically attested from the eighth century (Whitley 1988), but we cannot identify the monuments and tombs of *genos* eponymoi known to Pausanias (Erysichthon at Prasiai, Ion at Potamos, Pausanias 1. 31. 2) with any archaeologically known remains or preserved references to cult. The relation between *genê*, tombs, and hero cult is at best loose. The Eteoboutadai were responsible for the cult of Erechtheus on the Akropolis, and there was a tradition that he had been driven into the rock by Poseidon there, but they did not claim direct descent from him, though their eponymous ancestor Boutes, who had an altar on the Akropolis (Paus. 1. 26. 5, cf. *IG* ii² 5166), is sometimes said to be Erechtheus' brother. The connection of the Kephalaïdai with the hero Kephalos (who received sacrifices at Thorikos, *IG* i³ 256 *bis* = *SEG* 33. 147) is problematic, since the deme Kephale, where the myth of his accidental killing of his wife Prokris seems to be located, is like Thorikos in SE Attika, whereas the *genos* was associated with a sanctuary of Apollo Pythios, supposedly founded by his descendants, on Mt Aigaleos, between the Athenian and Eleusinian plains, probably at modern Dafni. Many heroes and heroines to whom local groups sacrificed were nameless; many named heroes are not associated with either a *genos* or a cult; the activity of the Attic *genê* in the late fourth century and in the Hellenistic and Roman periods did not produce any archaeologically traceable interest in Bronze Age tombs, although post-classical offerings at Bronze Age tombs are attested in Boiotia and the Peloponnese.¹²

¹¹ The view that Agiadai, Eurypontidai, and Aigeidai had once been the leaders of the three Spartan tribes is improbable, both because the two royal lines should both have belonged to Hylleis and because early Greek cities tended to avoid correspondence between tribes and offices (at Athens, 4 tribes with 3, then 9 archons; cf. ch. 18 n. 93). In Pind. *Py.* 5. 75–6 it is probably the Kyrenean choir and not the poet that claims Aigeid descent. Sparta had hereditary priests in the Roman period (Chrimes 1949; Cartledge and Spawforth 1989), but Huxley's claim (1962) that the Aigeidai were hereditary priests of Apollo Karneios is supported neither by Pind. *Py.* 5. 68ff. nor by Kallim. *H. Ap.* 71 ff.

¹² See Bourriot 1976; H. A. Thompson 1978; Whitley 1988; Kearns 1989, esp. ch. 4; Alcock 1991; Antonaccio 1995; ch. 18 n. 44. Offerings at BA tombs continued into the 6th c. at Menidi (Acharnai) and Thorikos, but elsewhere in Attika signs of cult seem to be confined to the 8th c. Several of the peak sanctuaries studied by Langdon (1976, 110–12) also had a short life, mainly in the 8th–7th c., and they do not seem to be associated with *genê*. Toepffer 1889, 301–7, does not establish that there was a sanctuary of Apollo Kynneios on Mt Hymettos.

Anthony Snodgrass's suggestion (1971, 190–7) that cult at Bronze Age tombs in Attika was connected with more intensive settlement in rural areas in the eighth century was a plausible one, but it should be recognized that the eighth century is likely to have been a period of considerable instability in cult, both because of population movements and because of the impact of the poetic elaboration of myth and theology. Centripetal and centrifugal tendencies were always in tension with each other in Greek religion, and the factors that promoted the development of new local cults—among which we can count the discovery of past tombs—were not necessarily sufficient to ensure them a long life. The cultural interests of the aristocracy, and the contacts of villagers with the city, with villages elsewhere in Attika, or with communities elsewhere visited for trading purposes, stimulated identification of local deities with gods or heroes recognized elsewhere and reconfigurations of the local pantheon. The local cult calendars of the fifth and fourth centuries represent efforts at stabilization to which local communities earlier may not have aspired. The ambitions of aristocratic families, though they no doubt included interest in providing generously for local festivals in areas where they held land, also generated cultic competition, especially in the city; this greatly increased the richness and diversity of the festival calendar, but it may have taken some time for agreement to be reached on the periodicity of festivals and the list of those accepted as part of the whole community's relationship with its gods. Payment from public funds, as we shall see, is likely to have developed even more slowly.

The Athenian calendar of festivals, as we have seen (ch. 18 n. 56), is rather strikingly characterized by reduplication: a cluster of midsummer new year celebrations (Plynteria, Skira, Synoikia, Panathenaia), a cluster of fruit-harvest festivals associated with incorporation of the new year's crop of young men (Pyanopsia, Oschophoria, Apatouria). A leading man or family claimed a place on the cultic map by introducing or expanding a festival that conformed to established patterns. A successful innovation turned a manifestation of elite ambition into an expression of communal solidarity. In the eighth and seventh centuries the rhythm of the cultic year may have shifted over the decades rather as it shifted over the centuries in Egypt or Mesopotamia, the rise and fall of cults dominated by the various leading families corresponding to the rise and fall of the various city gods of the great river-valley states.

Bourriot, then, was right to argue that the Attic *genos* does not represent any survival of primordial social groupings; it was a product of history. Nor does its history parallel that of the Roman *gens*, to which Fustel de Coulanges (1864) and Maine (1861) assimilated it. The situation in Italy in the eighth century may indeed have been similar to what we see in the Homeric poems, with sporadic use of adjectival name forms to denote descent from, or other

forms of association with, a few especially well known individuals, living or dead; but, for reasons that are still far from clear, the use of the gentilic as part of every man's name was generalized in Latium and other parts of Italy at a much earlier stage than the incorporation of the demotic into the citizen's name in Attika. In combination with the systematization of inheritance in Roman law, which gave it a strong agnatic bias, this incorporation of an indication of group affiliation into the naming system favoured the attribution of residual inheritance rights to the Roman *gens*, and over the centuries moulded what may well in early times have been a conglomeration of named groups varying widely in size and function—from quasi-colonial migrant populations taking the name of their leaders (Claudii?) to, perhaps, roving military bands of *suodales*, or old city families whose exclusiveness eventually led to the disappearance of their names (Gegani? *RE* s.v.)—into a more homogeneous system of corporate descent groups. The recent study by C. J. Smith (2006), which includes a valuable survey of the history of ideas about *gens* and *genos*, should be read by everyone concerned with the latter; there are interesting parallels. Smith stresses historical change both in the functions of the *gens* and in Roman conceptions of it: 'The way to understand the *gens* is through the history of an argument about the patriciate' (p. 302); the *gentes* were at least partly 'designed to provide for distribution of privilege and office' (311; cf. Sourvinou-Inwood 2011 on Attika).¹³

In Greece, the crystallization of small lineages into named, corporate *genê* seems to be associated essentially with hereditary rights to office, and the form and history of the *genê* in different parts of Greece, and in different periods, can be seen to relate to the way in which these rights were distributed—although, especially where a system of *genê* established itself, as in Attika, they predictably acquired additional functions that had an influence on their development. Historical reality never conforms precisely to models, but a model of variation between the poles of an egalitarian, strongly bounded group in which rights to compete for office are equally distributed among members and a sharply ranked group in which an office held for life is normally inherited in the dominant lineage provides a useful guide to the varieties of the aristocratic *genos* in Greece. The Bakchiadai of Corinth, who at least in the later decades of their rule seem to have monopolized the right to stand for election to annual office, would represent the egalitarian, strongly bounded end of the spectrum, a characterization supported by the tradition that they insisted on group endogamy (Herodotus 5. 92); the Spartan royal lineages,

¹³ Smith also relates the development of the *gens* to control of new territory acquired in the early Republic; resemblances and differences between Rome and Attika on this point are harder to assess, despite the use of the term *pelatai* in Attika. See also Rix 1972 on gentilics in Italy; A. D. Momigliano 1989.

in which life monarchy was passed on from father to son and junior branches rapidly ceased to assert claims to membership, would represent the opposite pole.

In Attika the situation was more complex. If there is any validity in the tradition that the Medontidai had once occupied a position in Athens like the Bakchiadai at Corinth, monopolizing rights first to a 'life archonship' and then to an archonship held for ten years, it would be appropriate that we find the Medontidai existing later as a phratry rather than a *genos*;¹⁴ at least the example of the Bakchiadai shows that a bid for power resting on numbers, and on offering several competing lines a chance of sharing power, was a possible strategy. The Eumolpidai and Kerykes of Eleusis maintained group cohesion over the centuries by allowing all members a share in the kudos and profits of initiation to the Mysteries; the Eumolpidai at least may also have opened the office of hierophant to all members, though the equivalent position of Torchbearer (*daidouchos*) among the Kerykes was held for three generations by the Kallias/Hipponikos family of Alopeke (below, p. 675).

However, if the Medontidai had ever had a monopoly on office, they had lost it by 683, when competition for annual office was open to any member of a group of families recognizing each other as nobles, the Eupatridai. Their decision need not have been, and probably was not, as formal as the agreement in the second half of the third century BCE in Thessaly of the Basaidai and the four families (*genê*; Table 20.1) that were to share the office of tagos in (?) the city of Metropolis (*ISE II* 97);¹⁵ but the introduction of annual office—perhaps of three annual positions, archon, polemarch and basileus, and probably with some restriction on iteration¹⁶—inevitably meant that if a candidate's suitability was

¹⁴ Ch. 19 n. 153. The name Medontidai seems to be formed from a title (LSJ s.v. *medô*) rather than from a personal name. According to legend, the kingship passed from Thymoites, eponym of the phratry Thymaitis (and deme Thymaitadai), to the Medontidai. On the ten-year archonship see Jacoby 1902*b*; *FGH* III B *Suppl.* on 323a F 23. The idea must respond in part to chronological preoccupations, and seems to have been introduced between Hellanikos and *A.P.* (3. 1), perhaps by Kleidemos. On early kingship cf. Lenz 1993, Carlier 2005. The views of Herda 2006, 229–37, on the Neileidai and the *basileus* at Miletos are heavily influenced by his conception of Athens.

¹⁵ *SEG* 36. 584/60. 597; see now R. Parker 2010*d*; Mili 2015, 64–8. The frequency of father–son pairs among the representatives of the 4 *genê* suggests that the agreement to share power is recent, but it is not clear how the 6 mini-lineages that can be identified were grouped into 4 *genê*, nor whether there were other Basaidai who did not belong to this privileged group. I am not convinced by the argument of Duploux 2003 that the Athenian Eupatridai were opponents of tyranny.

¹⁶ *A.P.*'s idea that the polemarch served under the kings, the basileus replaced them, and the office of eponymous archon was added later (3. 2–3), is pure speculation and clashes with the commoner assumption that kings were replaced by archons (cf. Mitchell 2013). On the thesmothetai see Humphreys 1983*b*, 234. Forrest and Stockton 1987 point out that there was probably no bar in the archaic period to successive election to differently titled posts (this has important implications for the size of the Areiopagos), and perhaps no bar to re-election to the same post after an interval (cf. M/L 2, Bile 1988 no. 2, Dreros). The name Miltiades appears twice in the list of 7th c. archons (Cadoux 1948: 664/3, 659/8). Solon, in opening candidacy to a wider group, may have introduced additional restrictions.

TABLE 20.1. SEG 36.548: The ‘four families’

questioned, the status and office-holding record of his forebears would be discussed. It seems that by the time of Solon (594) some ambitious men were being refused the right to stand for office because they were not Eupatridai, and this implies that a measure of consensus on the boundaries of the ‘order’ (*Stand*) had been reached. The impulse towards the crystallization of *gené* and the development of corporate cultic activity probably came not so much from the most powerful families—who could no doubt still make their way into the inner circle, even if newcomers, with some manipulation of pedigrees, and who could maintain their position, if it was of long standing, without recourse to arguments—but from the less successful branches of once noble lines who clung to descent as their proof of status.

The problem with this model, of course, is that though logical and (I hope) plausible, it describes a state of affairs that only lasted from *c.*683 to 594, after which the situation changed. Solon put an end to the Eupatrid monopoly of office, and after his reforms named *gené* retained their cohesion—to varying degrees and for varying lengths of time—from the combination of rights to priestly office and the privileged position given to them in the *phratries*, where Solon allowed them to retain control of their own procedures for scrutinizing and admitting new members (ch. 1 at nn. 52–8; 19 n. 3). It is my view that

genos control of priesthoods was a significant phenomenon in archaic Attika, and that this situation is unlikely to have arisen after Solon's laws, or without the stimulus to the crystallization of named *genê* supplied by the 'Eupatrid' monopoly of elective office.¹⁷ Before proceeding to consider the impact of Solon's reforms, therefore, we must examine the evidence for the association of *genê* with cults that are likely to have existed already in the eighth or seventh century.

All too often modern, culturally conditioned assumptions about what is likely to be 'early' in cult will play a part in this argument, but we may start with a case in which there is some documentary evidence. The list of Eleusinian leaders in the Homeric *Hymn to Demeter* (153–5) is so close to the list of heroes honoured in the sacrifices ascribed to the Eumolpidai in the Athenian sacrificial calendar of 410–399 that the poet must surely have known the festival or derived his names from a Eumolpid source. The *Hymn's* list of Eleusinian leaders is Triptolemos, Dioklos, Polyxeinos, Eumolpos, Dolichos, and Keleus: Keleus, in the narrative, is the most important, and the order of names may be influenced by metrical constraints. The calendar (*SEG* 52. 48, face A, fr. 3, col. III) lists Eumolpos, Melichos, Archegetes, Polyxenos, Threptos, Dioklos, and Keleus. I take it that the poet of the *Hymn*, or his Eleusinian informant, interpreted Archegetes as a name for Triptolemos and Threptos as a reference to Demophon, the son of Keleus nursed by Demeter, who of course had no place in his list of Keleus' fellow *basileis*. The replacement of the generic title Archegetes with a proper name suggests that the poet depends on the list of sacrifices and not vice versa.

The only problem of correspondence is that of Melichos in the calendar with Dolichos in the poem; here the *Hymn*—where the reading in our texts is supported by Hesiod F 227 M.-W.—may have been influenced by the occurrence of Dolichos in another list of Eleusinian sacrifices, and perhaps by the difficulty of interpreting the clearly euphemistic term Melichos (usually, in the form Meilichios, an epithet of Zeus) as the name of a human leader. *D[oli]chôî* has

¹⁷ On priests and the polis see the important paper of Sourvinou-Inwood (1988*b*); Aleshire 1994*b*; Blok and Lambert 2009; Blok 2014; Lambert 2010*b*, 2012*b*; Rasmussen 2011 (hypercritical). One should not try to distinguish too sharply between inheritance and sortition, since the lot would be used to decide between candidates who volunteered themselves, and they may have been few (R. Parker 1996, 291–3). It would be useful to have a collection of the evidence for archaic *genos* priesthoods from other parts of Greece (e.g. Hdt. 3. 142–3, 7. 153; Paus. 3. 13. 3); it was a widespread but not universal phenomenon. Theano (*Il.* 6. 300) has been given her position as priestess of Athena by the Trojans. She is a foreigner, wife of Antenor, who to some extent represents the authority of the community vis-à-vis that of the royal lineage. Sourvinou-Inwood (262; cf. eadem 2011) suggests that with the formalization of Eupatrid rights to political office rights to priestly office had also been divided among the privileged *genê*; I would prefer to think of a systematization by Solon of a pattern of overlapping rituals elaborated in competition among leaders, a pattern that continued even after the publication of Solon's written calendar (Panathenaia, Kimon). New developments were often grafted onto rituals that went back to the Dark Ages or earlier (since they gave their names to months), and that continued to be celebrated in simpler forms by villages, phratries, or households.

been restored in *IG* i³ 5 (*IEleus* 13), a list of sacrifices made by *hieropoioi* c.460, and it is possible that he had a shrine at Eleusis in the fourth century (*IEleus* 177. 25; Mylonas 1961, 170).¹⁸

Dates for the *Hymn* have too often been influenced by the assumption that it must have been written at a time when Eleusis was an independent state, which is neither necessary nor plausible. The *Hymn* can hardly, linguistically, be earlier than the late seventh century (N. Richardson 1974; Janko 1982),¹⁹ and it is hard to imagine the incorporation of such a large district into the Attic system of tribes and phratries so late. The *Hymn* makes its acknowledgement of ties with Attika by bringing Demeter to Eleusis via Thorikos (cf. ch. 27 n. 68). Traditions of war between Athens and Eleusis, and the frontier-marking rituals carried out on either side of Mt Aigaleos, to be discussed below at n. 33, should not be taken as evidence for political conflict between independent states, but as expressions of the ambition of Eleusis to be a power centre of a different kind: not the capital of a territorial state, but a magnet for periodic visitors to its festival, developing an organization for ensuring peace for pilgrims rather than an army.²⁰ From this perspective it is significant that Dioklos, who appears both in the *Hymn* and in the Eumolpid sacrifice list, was a Megarian hero (Richardson 1974, 196), while the Eumolpid cult of Melichos may be related to the importance of Zeus

¹⁸ N. Richardson 1974 thinks that Threptos was Triptolemos, and notes that Polyxe(i)nos is an epithet of Hades. Healey 1984 agrees that the *Hymn* and sacrifice list are closely related, but identifies Melichos with Eubouleus and Archegetes with Eleusis or Hippothoon. He suggests that the Eumolpid list in *SEG* 52. 48 was followed by a similar list (for which the Kerykes were responsible? but see n. 75), from which the names Triptolemos and Dolichos were taken. R. Parker 2005*a*, 328–9 connects Dolichos with races at the Eleusinia; cf. Rzepka 2014, 151. Clinton (comm.) connects *IEleus* 13 with the Mysteries and not the Eleusinia (the hieropoioi would be ‘hieropoioi of the Eleusinians’), and is doubtful about Dolichos. Clinton 1986 argued that the author of the *Hymn* was not Athenian, but revised this view in 1992, 28–37 (see Richardson op. cit. on Atticisms in the poem). There seems to be deliberate vagueness in the *Hymn* on the way the Mysteries are to be organized, and perhaps on other matters too (J. S. Clay 1989, 23, 205–6; cf., perhaps, avoidance of detail on contemporary institutions in Homer). The Phytalidai had an altar of Zeus Melichos on the Eleusis side of the Kephisos, near their sanctuary of Demeter and Kore in Lakiadai (Paus. 1. 37. 3; below, n. 33). I am not entirely sure that *dolichos* in *IEleus* 177. 25 refers to a shrine (cf. *AD* 33 B 28–9).

¹⁹ The story of Triptolemos’ mission to teach the secrets given him by Demeter, which seems to spread only in the second half of the 6th c. (Raubitschek 1982; Schwarz 1987; *LIMC* s.v.), and as it develops draws on a mixture of Orphic and sophistic interests (Graf 1974*b*, 163, 176–81), seems to be unknown in the *Hymn*; but the name may be older.

²⁰ See R. Parker 1987*a*, 204; 1996, 13, 25; 2005*a*, 198 n. 24; so also N. Richardson 1974, Clinton 1986. The question is not when Eleusis became part of the Athenian state, but in what contexts and for what purposes assertions of past independence were made. We should, however, think more carefully about the frontier between Dorians and Ionians (cf. below, n. 52, on Eleutherai). The discussion of territory-making rituals in Polignac 1984 has been somewhat modified by later discussions (Polignac 1994, 1995; 2009). The *Hymn to Apollo* shows awareness that some major cult centres (Delphi, Delos) had grown up in territories that could not support a polis (ch. 18 n. 10).

Meilichios in Megara (Hanell 1934, 177–80; cf. Wycherley 1964, Graf 1974*a*). Eleusis needed to maintain friendly relations with both her neighbours.

Full incorporation of Eleusis into the Athenian state from an early date is suggested by the appearance of Eumolpid and Keryx families in demes of the city and the Athenian plain, implying residence in these areas at the time of Kleisthenes' reforms in 507. Eumolpidai are found in Paiania, Perithoidai, and probably Kydathenaion and Halai Aixonides. The Paiania family, recognizable by its use of the Doric name Lakrateides in place of the Attic Leokratides, had risen to the eponymous archonship at some time during the reign of Darius I (522–486; *FGH* 328 F 202); the deme produced two hierophants in the fourth century. There was a prominent family of Kerykes in Alopeke, and other lines in Koile and Xypete.²¹

On the interpretation of Solon's reforms which will be advanced below at n. 43—in which the extension of the right to stand for office to *demiourgoi* is taken to refer to groups that provided minor cultic officials—we would not expect a reference to an eponymous ancestor of the Kerykes in the *Hymn*; nor would we expect the Eumolpidai to recognize the Kerykes in their sacrifices. Even at a later period we find them claiming that Keryx was a son of Eumolpos, whereas the Kerykes preferred to assert that he was the child of Hermes by one of the daughters of Kekrops.²² Nevertheless, the Kerykes seem to have acquired at an early date a privileged position beside the Eumolpidai at Eleusis that was not shared by any other *genos*. Only Eumolpidai and Kerykes could introduce candidates to the final stages of initiation, and for this service they were entitled to a fee. The priestess of Demeter also received a fee for each initiate (*IG* i³ 6 = *IEleus* 19), but although this was (at least in the fourth century and later) a *genos* priesthood, the *genos* Philleidai as such did not receive any perquisites.²³ Discussion of the other Eleusinian *genê* is best reserved for later sections of this chapter, dealing with the periods in which they are attested.

The Kerykes presumably acquired their privileges by taking on the role of ambassadors for the sanctuary, announcing the dates of festivals and asking for

²¹ Below, n. 57. Koile, Table 20.2. Clinton 1986 suggests that even the Eumolpidai did not originate in Eleusis.

²² Cf. *FGH* 10 F 13, 324 F 1; Henrichs 1983 n. 49, 1985, 1987; Sourvinou-Inwood 2011, 320–3. N. D. Robertson 1983*a* suggests that the Eleusinian Kerykes may have played a role in the ritual of the Arrhephoroi (if only to announce the basileus' choice, Suda s.v. *epiôpsato*), and that their claim to descend from Hermes and one of the daughters of Kekrops may derive from this function.

²³ Philleidai is the spelling of Phot. s.v. and *IEleus* 379, but *IG* i³ 251 = *IEleus* 22, from Eleusis, seems to record regulations of a body named *laidai* or *līdai*, and I wonder whether Phillidai was an alternative earlier spelling (cf. Toepffer 1889 s.v. Phyllidai; Blok and Lambert 2009). In *IEleus* 379 (1st c. CE) the right to appoint the priestess is possibly shared by another *genos*, whose name is lost (but see R. Parker 1996, 317; comm. *IEleus* 379, suggesting the Eumolpidai). List of priestesses in Blok and Lambert 2009.

unhampered passage for pilgrims. Such embassies must have grown in importance during the archaic period, as sanctuaries competed in advertising their games, and the heralds who travelled to make the announcements would acquire valuable guest-friendships and knowledge of the distribution of power in other states.²⁴ It is not surprising that we find a family of Kerykes in Alopeke, which by 490 had acquired control of the office of Torchbearer (and may have increased its importance), emerging in the sixth century as successful chariot-racers, thoroughly at home among the Panhellenic aristocracy that assembled at Olympia and other centres. Kallias I won two Olympic horse races in 564 and had earlier won at Delphi, while the name of his father Phainippos suggests that the family had already competed in the seventh century (*APF* 7826).

There seems to be no strong reason to accept the earlier view (e.g. Feaver 1957) that this family was of Athenian origin and acquired its rights in Eleusis as the result of Athenian conquest, now that this 'conquest' has itself been called into question. A move from Eleusis to a base closer to the centre of political power, at some time during the seventh or sixth century, seems much more likely. Indeed, the rather persistent traditions that the family had acquired its wealth discredibly—by taking advantage of Solon's cancellation of debts, by buying up property confiscated from the Peisistratidai, by appropriating a deposit made by Diomnestos of Eretria in 490, by discovering hidden Persian treasure—may have derived some of their impetus from a sense that it was new to the city aristocracy not only in terms of status (as part of a 'demiurgic' *genos*) but also in terms of residence.²⁵

Families of Eumolpidai or Kerykes who moved away from Eleusis into other parts of Attika would have every reason to remember and maintain their *genos* allegiance, since it gave them not only the right to hold religious office—which at least in the case of the Eumolpid hierophant may well have required residence in Eleusis²⁶—but also the right to initiate and to collect fees. In terms of the model put forward earlier, we would expect these two *gené* to maintain a strong corporate identity, even if there was also ranking at the *genos* core among those families in a position to compete for priestly office.

²⁴ By 367 (R/O 35, n. 100) *spondophoroi* were appointed from both the Eumolpidai and the Kerykes, but heralds must have been employed on these missions from early times, even if they did not travel alone. Giovannini 1969 argues that Delphi was already sending out messengers to announce its festivals in the 7th c. (but see Visser 1997). Cf. the *genos* of heralds at Sparta, the Talthybiadai, *Hdt.* 7. 134.

²⁵ *APF* 7826 I–II, VII C; *Plut. Sol.* 15. 7, *Hdt.* 6. 121. 2, Herakleides F 58 Wehrli (42 Schütrumpf 2008), *Plut. Aristid.* 5. 7–8, etc. The story about Solon's debt law may belong to the late 5th or the 4th c., but the others seem to have been current in the 480s. *Hdt.* 6. 121. 2 may have mistaken a reference to sale of Peisistratid property after 510 for an earlier confiscation. Another great horse-racing *oikos*, that of the Alkmeonidai, was the target of equally far-fetched stories about the origins of its wealth (*Hdt.* 6. 125).

²⁶ A hierophant (Archias?) owned a house in Athens in the 370s, but possibly mortgaged it and gave up control to his creditor (*Is.* 6. 33) because he was not living there (below, n. 98).

If it is accepted that the Kerykes of Alopeke were of Eleusinian origin, we have to ask whether Athens had in early times had its own *genos* or *genê* of heralds. There is some evidence that it did. The early law quoted from the *kyrbeis*, already mentioned (above, n. 1) specifies that two heralds from the *genos* of Kerykes of the Mysteries are to receive meals (*parasitein*) in the shrine of Delian Apollo every year. While this text indicates that the Eleusinian Kerykes were acquiring additional privileges, unconnected with their role at Eleusis, at a relatively early date, perhaps under the Peisistratid tyranny, it also suggests that at that date it was still necessary to distinguish the Eleusinian Kerykes from other herald *genê*.

The Eleusinian Kerykes may have acquired a role in the Athenian ceremonial embassy (*theôria*) to Delos as a result of their specialization in foreign relations. It is more surprising to find the Eleusinian Torchbearer playing a role in the Athenian Lenaia, a feast in honour of Dionysos. Since this festival was one of the responsibilities of the *basileus*, it might be thought to be one of the city's earlier cults.²⁷

However, the view that the *basileus*' religious responsibilities continued in an unbroken tradition from a period when Athens was ruled by kings can no longer be accepted without serious scrutiny. Even in the Bronze Age, religion was not centred on the palace in Greece, and in post-Mycenaean times the term *basileus* was often used to denote members of a group of nobles. Nor was it the case that the *basileus* of Athens in the historical period was responsible for all the city's major rituals. The cult of Athena Polias and Poseidon Erechtheus, with the associated new year ritual of the Skira, was the responsibility of the Eteoboutadai, who never claimed descent from Attic kings, while two other rituals associated with purification and renewal, the expulsion of scapegoats (*pharmakoi*) at the Thargelia and the sacred embassy to Delos, which may have brought back new fire for the city hearth, were the responsibility of the archon (*A.P.* 56. 3–5). Attic historical tradition firmly indicated the archon as successor to the kings; the question of the relation between archon, polemarch, and *basileus*, and the theory that the office of archon was created later than the other two, seems to be the product of institutional research and speculation in the school of Aristotle, represented for us by the *Athenaion Politeia* (above, n. 16).

A new look at the functions of the archon *basileus* suggests that his function may have been to represent the city in its dealings with priesthood-holding

²⁷ Schol. Ar. *Frogs* 479. By c.329 the epimeletai of the Mysteries assisted the *basileus* in organizing the Lenaia, *A.P.* 57. 1; cf. *IG* ii² 1496 A a 74; *IEleus* 177. 182; Deubner 1932, 125–6. A calendar from Mykonos of c.200 BCE, *LS* 96, has sacrifices on Lenaion 10 to Demeter, Kore, and Zeus Bouleus (cf. Eubouleus at Eleusis), on Lenaion 11 to Dionysos and (?) Demeter, and on Lenaion 12 to Dionysos Lenaios, Zeus Chthonios, and Ge Chthonia (cf. Jeanmaire 1951, 47). On the argument of Sourvinou-Inwood 2011, 333–5 that Hipponikos II son of Kallias II of Alopeke served as priest of Dionysos Eleuthereus see p. 675).

genê, rather than to act as leader of the whole community in its religious aspect. He is Athens' Pontifex Maximus: president of her priests, and as such responsible for settling disputes about rights to priesthoods and proclaiming the exclusion of offenders from all rites and sacred ground. Hence he presided over the four tribal kings, the *phylobasileis*, and the *ephetai* in homicide cases; he also selected the *gerairai*, the fourteen women of noble birth who accompanied his wife, the Basilinna, when she went to spend the night with the god Dionysos in the Boukoleion at the Anthesteria. This rite of union with the god may well have been a symbolic expression of the charisma of office, rather than a survival from a period of monarchy.

The *gerairai* had Eleusinian associations and may in the fourth century have been appointed from two Eleusinian genê, the Krokonidai and Koironidai (below, at n. 120). The basileus' Dionysos was a mystic Dionysos, hailed as Iakchos by the Eleusinian Torchbearer at the Lenaia and visiting the basileus' official home for secret rites at the Anthesteria. These cults have an Orphic tinge, and the basileus may have acquired his responsibilities at a time when Orphic teachings provided the Eleusinians with a basis for extending their influence. Once the pattern of distribution of cultic responsibilities between competing genê had settled down—a process which must have been well under way by the time of Solon, if not earlier—the basileus tended to be given responsibility for major cultic innovations, unless they obviously belonged to the sphere of another official, as in the case of the polemarch's responsibility for festivals associated with war. But conceptions of the division of labour between archon and basileus may well have changed over time. A role for the basileus is no guarantee that a cult is early in date.

The chief argument for positing the existence of non-Eleusinian Heralds in Athens comes from the Dipolieia, a ritual in which the basileus was involved only peripherally. A passage in the part of the re-edited Athenian calendar of sacrifices inscribed before 403 refers to 'the Kerykes who ... at the Dipolieia' (*IG* i³ 241 = *LS* 17 A, *SEG* 52. 48), and we can perhaps connect with it Kleidemos' statement (*FGH* 323 F 5) that at Athens heralds had the role (*taxis*) of Mageiroi and Boutypoi. *Mageiros* was a general term for the assistant who helped to slaughter, carve, and cook sacrificial victims (Berthiaume 1982), but the title Boutypos (Ox-feller) was especially used at the Dipolieia, where genê called Boutypoi, Kentriadai, Daitroi, and (?) Thaulonidai were responsible for appointing the Ox-feller, Goader, Carver, and (perhaps) Slaughterer who carried out the roles corresponding to their names. Photius' entry *Kentriadai: patria Kerykôn* may support Kleidemos' statement with the information that the role of Goader traditionally belonged to the (or a) genos of Kerykes, or might be interpreted as an assertion that the genos Kentriadai was a branch (*patria* or *patra*) of the Kerykes. There seem therefore to be some grounds for suggesting that in early times the four

genê associated with the Dipolieia could collectively be called Kerykes (could they have been the Heralds of the four pre-Kleisthenic tribes?). By the 330s–320s they seem to have owned property collectively under the name Dipoliastai (Lambert 1997*a* F 11A 5–9), which again suggests that despite their separate names these genê acted and were perceived as a single unit.²⁸

The Dipolieia was the festival of Zeus Polieus, Zeus of the Akropolis, and the myth associated with the cult stressed the involvement of the whole community in the sacrifice, which supposedly commemorated the killing for the first time of a plough ox in sacrifice, a heinous deed for which no individual wished to take responsibility (Porphry, *On Abstinence* 2. 29–30; Durand 1986; R. Parker 2005*a*, 187–91). In a similar ritual in honour of Zeus and Hestia in Kos (*IG* xii 4. 1. 278, *LS* 151, R/O 62 A, ch. 18 n. 9), each section of the citizen body contributed a victim, and the oxen thus selected were paraded in front of the assembled community by heralds: a vote determined the final choice of the beast to be sacrificed. In Athens the victim was selected from a group of beasts by its own act: the ox which ate grains scattered on the altar was killed to punish it for its sacrilege. In both cases there seems to be an underlying idea that if a victim is to be offered by the whole community it must be selected by some process which eliminates individual decision or the acquisition of special credit by its erstwhile owner. But while Kos elaborated the idea of collective responsibility by giving every tribal group a share in its festival, Athens built on early speculations about the practice of sacrifice (visible also in Hesiod's accounts of the myth of Prometheus, *Theogony* 535–616, *Works and Days* 47–105; cf. Vernant 1965, 1974*b*) to develop a story of collective guilt for the slaughter of a domestic animal. Blame, in the ritual, was finally attributed to the knife with which the victim's throat had been cut; it was solemnly condemned by the basileus and phylobasileis in the Prytaneion, and thrown into the sea.

This last refinement may have been introduced only in the period after Drakon's publication of the law concerning non-intentional homicide, when there seems to have been considerable discussion of procedure for dealing with homicide and bloodguilt, and a new elaboration of myths in which Athens is presented as a centre of expertise in such matters (Humphreys 1991). But in any case the ritual is

²⁸ See the discussion in R. Parker 2005*a*, 187–191. N. D. Robertson 1980, 19–22 suggests that there was a *genos* Thaulonidai, responsible for sharpening the axe (R. Parker 1996, 299). *IG* ii³ 551 (*LS* 179), a fragmentary *lex sacra* of the 4th c., may contain regulations for the Dipolieia (Skrophorion? 14); if so, at this time *hieropoioi* were at least partly responsible for the festival. The occurrence of the name Dipoliastai in the late 4th c. (below, n. 126) seems to indicate that even at this time the Eleusinian Kerykes had not taken over responsibility for the Dipolieia, though they may have done so later. (Porph. *Abst.* 2. 30. 5 claims that the ritual was still performed in his day, cf. Paus. 1. 24. 4). Zeus Polieus (R. Parker 2005*a*, 397) was also worshipped at Erchia (*LS* 18) and Thorikos (*SEG* 33. 147; *IG* i³ 256 *bis*); cf. *IG* i³ 232 (*LSS* 2), ii² 4626. His priest's theatre seat, *IG* ii² 5024, is dated to the 2nd c. BCE by Maass 1972.

likely to belong to the seventh century, if not earlier. It represents—together with other myths of sacrifice, in which the animal victim is said to have been introduced as a substitute for a human victim, and other stories in which ritual is prescribed by the deity as payment for an original transgression—a feeling of unease about the procedure of sacrifice which is absent from Homer's view of the world (though not necessarily from that of his contemporaries); in the case of the Dipolieia this unease is associated with a ritual in which sacrifice is an act of the whole community and not that of a rich man exercising his traditional role of host by inviting both the gods and human guests to share the meat of an animal bred on his estate. Sacrifice is democratized, becomes a communal act in which the officiants are Heralds of the community and not associates of a wealthy individual.²⁹

Such speculations apart, we know that by the 420s the Dipolieia could be singled out by modernists as a ritual so archaic that only a diehard traditionalist would take it seriously (Aristophanes, *Clouds* 984–50). In comparison with the Panathenaia, introduced in 566, or the City Dionysia, elaborated later in the sixth century, it must indeed have seemed strange.

My argument that the Eleusinian Kerykes can hardly have played a role in Athens' sacrifice to Zeus Polieus can perhaps be supported by reference to two further Akropolis cults with strong claims to antiquity, both of which recognize a ritual frontier between Athens and Eleusis. One was the prerogative of the Bouzygai, the other of the Eteoboutadai.

The Bouzyges was Athens' ritual Ploughman. The office seems to have been held for life: Demostratos and Demainetos, who may have been kin (FB/BS? below, n. 88), are both colloquially called 'the Bouzyges', and it seems unlikely that holders of an annual office would carry it out in such a striking fashion that the title would stick to them as a nickname. From the late first century BCE onwards we meet the title Bouzyges attached to priesthoods held by the genos Gephyraioi (*SEG* 30. 85, cf. *IG* ii² 3177, 5055); it seems unlikely—though it is not impossible—that the Gephyraioi, recognized as an immigrant group, held the office in the archaic period, and more likely that an early genos that had rights to the office (not necessarily called Bouzygai) had died out by the late first century.³⁰ The marriage of a man who may have come from the family of

²⁹ For parallels to the competition of the Kos sacrifice see *LSAM* 9 (Ilion; tribe's name written on cow) and *SEG* 45. 1508 A–B (Bargylia); but in the latter case the competitors are liturgists. On Miletos, see Herda 2006, 189–200. We do not need hunter-gatherer parallels for the stuffed ox skin, a symbol which might easily be reinvented (cf. Humphreys 1986*b*); the Dipolieia seem to me firmly anchored in the world of Hesiod and the early polis. There seems to be a development from the idea of collective responsibility (still visible in Porph. *Abst.* 2. 29. 4–5) to a story about attempts to escape guilt and pollution, associated with the role of the basileus and Prytaneion court in the ritual (cf. Humphreys 1991).

³⁰ Cf. R. Parker 1996, 286–7. Burkert 1970*a* argues that the association of the Bouzyges with the cult of Zeus *epi Palladiōi*, for which the Gephyraioi were responsible in the late 1st c. BCE (*SEG* 30. 85), is early (cf. Parker 1983); but the tradition that Demophon gave the Palladion to 'a man named Bouzyges'

Demostratos and Demainetos to a priestess of Aglauros in the third century BCE (*IG* ii³ 1002, *APF* 3276) may possibly support the attribution of gennetic status to them, since there is some evidence that families from the old genê liked to intermarry. The *Etymologicum Magnum* (s.v. *Bouzygia*, for which we should probably read *Bouzygai*) calls them a *genos*.

The Bouzyges was responsible for a ritual ploughing, marking the beginning of a new season, carried out in fields close to the Akropolis. The crops produced were used in sacrifices to Athena. On this occasion he also pronounced a series of curses which, like the curses pronounced in Teos and elsewhere by public officials at the beginning of the civic year (M/L 30, *SEG* 31. 984–5; *Nomima* I 104, Arnaoutoglou 1998, 70), defined norms of conduct for the community. The Bouzyges cursed the man who refuses to give fire or water, misdirects a traveller, fails to bury a corpse which he discovers, or urges another to do something he would be ashamed to do himself. As in the Dipoleicia, we seem to be close to the world of Hesiod; indeed, the Ploughman seems to be rather firmly restricted to precepts appropriate to his role, and the ‘*genos*’ (if it ever was one) may not originally have had Eupatrid status.³¹

Plutarch (*Moralia* 144a) notes two other sacred ploughings in Attika. One was carried out in the Rarian plain, the easternmost part of the territory of Eleusis, and was associated with Triptolemos. The other took place at Skiron, on the Athenian side of Mt Aigaleos, which divided the plain of Eleusis from that of Athens. This was, at least in its ritual and mythical associations, dry, chalky, infer-

to take to Athens is only attested by Polyainos (*Strat.* 1. 5), earlier versions of the story being more interested in linking the Palladion with the law court *epi Palladiôi*, which was at Phaleron (Humphreys 1991, n. 17). Like the story that the Palladion fell from the sky onto a bridge, which gave rise to a cult of Athena Gephyritis (Schol. Veron. Verg. *Aen.* 2. 165; Lydus *Mens.* 4. 15; cf. *FGH* III B *Suppl.* I p. 617, II p. 499 n. 6, on 33 F 4), it may well have arisen to explain an association developed only in the Hellenistic period. (On cult statues that fall from the sky see Bettinetti 2001.) The cult of Zeus *epi Palladiôi* is not attested in classical sources, which have only Athena *epi Palladiôi* (*Dérioncôî*), *IG* i³ 379. 73, 90; and we cannot certainly identify the gennetai who accompanied the epheboi when they escorted the ‘Pallas’ to the sea and back in 107/6 (*IG* ii² 1011. 10–11; Gephyraioi in Burkert 1970a, Praxiergidai in Sourvinou-Inwood 2011). They may even be representatives of various genê, like those who at the same period took part in the Pythais to Delphi (below, p. 716). The record of the ritual duties of the epheboi (admittedly fragmentary) mentions this Palladion procession also in 123/2 and 119/8 (*IG* ii² 1006. 11–12, 1008. 9–10), but without the gennetai; by 100/99 it is no longer part of the ephebes’ programme, or is no longer considered worth recording (*IG* ii² 1028). Sourvinou-Inwood 2011 argues that it was the statue of Athena, not a Palladion, that was bathed. Mitsos’ reasons (1965b) for locating a shrine *epi Palladiôi* in Kallithea (Xypete?) do not seem to me compelling; on the view that the sanctuary from which the Palladion went to the sea was located east of the city, near the Ilissos, see Travlos 1971, 412–16; Sourvinou-Inwood 2011, 246–62, below at nn. 143–5.

³¹ On the Bouzyges’ curses see Bernays 1885, 277–82 (1876); Toepffer 1889, 139; Durand 1986, 175–9. They are referred to by the 6th c. poet Lasos of Hermione (G. Privitera 1965 F 4 = *POxy* 1367). The Eikadeis, a ritual group located in the area of Markopoulo, recited the curses of their eponymous hero, *IG* ii² 1258 (324/3; ch. 19 n. 152). On curses in early law, Latte 1920, 68–82.

tile land, but the Bouzyges perhaps ploughed it to mark the limits of his ritual responsibility for Athenian agriculture.³²

This suggestion is reinforced by the appearance of Skiron as the ritual boundary of the *chôra* associated with the Akropolis in the festival of the Skira. On this occasion in midsummer (Skirophorion 12) the priestess of Athena Polias and the priest of Poseidon Erechtheus, both appointed by the Eteoboutadai, solemnly processed under a canopy from the Akropolis to Skiron. In that area they sacrificed to Athena, Poseidon, Demeter, and Kore, i.e., to the deities of their own Akropolis and those of Eleusis. While they were absent the women of Athens seem to have celebrated secret rites in honour of Demeter in the city; there is probably some confusion in the sources between Skira and Thesmophoria, but it seems that in both cases a period of disorder—symbolized by performance of roles of authority by women in the absence of the usual personnel, and in the case of the Skira perhaps by the use by men in the procession of white plaster masks, associated with femininity—preceded the re-establishment of normal life, marking a change of season.³³

The Eteoboutadai certainly had strong claims to ancient status as a *genos* of Eupatridai. Fragments of the sixth-century Hesiodic *Catalogue of Women* mention their eponymous ancestor Boutes, son of Poseidon, and his sons, the Boutidai Polykoon and Polykreion (223, 251 M-W = 169, 189a Most 2007; cf. F 46 Bout—). Lykourgos I, from the family that may have provided the priests

³² Marathon had a hero called Echetaios (Plough-handle) who may have performed a ritual ploughing in the Tetrapolis (Toepffer 1889, 140; Jameson 1951; C. L. Gray 2006). Pausanias (1. 32. 5) was told that his cult was instituted, with the approval of Delphi, after the battle of Marathon (he was portrayed in the painting of the battle in the Stoa Poikile, Paus. 1. 15. 3). Cf. ch. 31 n. 50. On Skiron and Skira see Jacoby on *FGH* 328 F 14–16 (Brumfield 1981, 168–9 demolishes Gjerstad's view, 1929, that the ritual ploughing took place at the Skira; she doubts whether the Bouzyges ploughed at Skiron, but no one has yet suggested a convincing alternative). The Bouzyges perhaps eventually became responsible for the ploughing on the Rarian plain, since he receives a share of sacrifices at Eleusis in *IEleus* 489 (cf. Toepffer 1889, 138, and Schol. Arist. 3. 473, but this text is very confused). The Salaminioi had a 'sacred field' at Sounion, *Agora* XIX L 4a 43–4. Triptolemos' ploughing may have been the basis of the story of his agricultural mission, Spahn 1980a; a possible representation, BArch 300384. Cf. *LIMC* s.v., and below, n. 88.

³³ Ch. 18 n. 18; Sourvinou-Inwood 2011, 172–5; R. Parker 2005a, 173–7; Jacoby, *loc. cit.*; on masks and parasols, Ellinger 1978 and the cautionary discussion of M. C. Miller 1992 (cf. eadem 1999). New year festivals: cf. Brumfield 1981, 88–95 on the Thesmophoria; Burkert 1966 (Prometheia); ch. 18 n. 56. According to Paus. 1. 37. 2 the sanctuary of the Phytalidai in Lakiadai contained altars of Athena and Poseidon as well as Demeter and Kore (cf. Brumfield 1981, 167); it does not seem possible, however, to fit descriptions of Skiron to this area, and I wonder whether the terminus of the Skira procession was moved in post-classical times. The idea that piglets were thrown into pits at the Skira and recovered at the Thesmophoria should be abandoned (the associations of both Skira and Thesmophoria with secrecy and female control of the city, attested by Ar. *Thesm.* and *Eccl.*, are enough to account for the tendency of e.g. Clem Al. *Protr.* 2. 17. 1 to link them); but I am not convinced by the new suggestions of either Brumfield 1981 or Clinton 1988b. Foxhall 1995b suggests that the Skira was associated with the replastering of threshing floors (cf. N. D. Robertson 1996b); but see R. Parker 2005a, 176.

of Poseidon Erechtheus in the fifth and fourth centuries, led the faction of the Plain of Athens in the conflicts of the 560s (Herodotus 1. 59. 3; *A.P.* 13. 4; *APF* 9251); the family was resident in the deme Boutadai at the time of Kleisthenes' reforms in 507, and the name Eteoboutadai—the true Boutadai—was adopted at some subsequent date to distinguish members of the *genos* from members of the deme.³⁴ As in Troy, where the priestess of Athena was supplied by the house of Antenor and not by the royal dynasty, the highest priestly honours were held by a *genos* that did not claim to have held the kingship. The position of the Eumolpidai in Eleusis may be analogous, except that the name of the Eumolpidai associates them with a specific priestly service function as singers, whereas the Eteoboutadai appear always as aristocrats of conventional type.

By the time of Kleisthenes, the family that provided the priestess of Athena Polias in the fifth century and later was based in Bate (ch. 24 n. 13). Like Boutadai, this was a deme in the plain, close to the city, but to the north of it, whereas Boutadai lay to the west. Davies (*APF* p. 349) took the view that the two cults were originally separate and that the *genos* Eteoboutadai known in historical times was created by the fusion of two earlier distinct groups. This view does not seem to me to cast any useful light on the complex of relations to Athena expressed by the figures of Erechtheus, Erichthonios, and Poseidon (cf. Brulé 1987), in which Erechtheus is linked both to Athena's protégé and to her defeated rival. This configuration may well imply that the two deities had been closely associated in cult for a long time, and it seems to me more likely that the possession of two *genos* priesthoods led to dual leadership in the *genos* than that two originally separate *genê* would have merged. The tendency over time, in the period for which we have evidence, was for Athena to grow in importance at the expense of Poseidon, rather than for the two to become more closely associated.³⁵ On the other hand, the increasing prominence of Athena was counterbalanced in the classical period by the opportunities for the priests of

³⁴ R. Parker 1996, 290–3. On *Eteo*-compounds in Homer (*Eteokrétês*, *Od.* 19. 176; *eteodmôôn*? *Od.* 16. 305) see Levet 1976, 180. The name Eteoboutadai is perhaps attested already in the 5th c.; the evidence for the priesthood of Poseidon Erechtheus before Lykourgos IV is unsatisfactory (n. 79). The mythographic traditions are hard to unravel, but may go back to relatively early (7th c.?) attempts to integrate Attic stories with those of other areas, quite often through links between the east coast of Attika and the area round Thessaly. The Boutidai marry the daughters of Hyllos (cf. cults of the Herakleidai in Attika), and take them to the house of Keyx in Trachis; in *D. S.* 5. 50 Boutes is the son of Boreas, and a younger patrilateral half-brother of the Thracian Lykourgos, who settles on Naxos and seizes the nymph Koronis (n. 51) in a raid on Achaia Phthiotis, for which he is killed by Dionysos. Versions in which Boutes is brother or son of Erechtheus may be later (Kearns 1989, *LMC* s.v.). Thrones for priests of Hephaistos (*IG* ii² 4982) and Boutes (5166), perhaps Lykourgan, see N. D. Robertson 1985. The origin of the proverbial expression 'faster than Boutes' (*Zenobios* 4. 28 and lexika s.v. *thattôn*) is irrecoverable, but the tradition tells us that he appeared on a wall of the Stoa Poikile.

³⁵ The reference to worship of Erechtheus in *Il.* 2. 550–1 should perhaps be earlier than any Peisistratid tampering with the text, since Athena was already more prominent in the 6th c. However, Mikalson's

Poseidon Erechtheus to play a greater part in public life than was available to the priestesses from the other branch of the *genos*. It was not until the Hellenistic period—by which time there is no sign of collective *genos* activity—that the position of priestess of Athena Polias clearly became the more important role of the two, and by this period it is held by women claiming descent from the line of Lykourgos, though by tenuous links (below, n. 132).

Early cults on the Akropolis may also have included worship of Kekrops and his daughters. The Praxiergidai were responsible for washing the wooden statue of Athena Polias and perhaps for generally cleaning the sacred area.³⁶ The festival Plynteria took place, in the classical period, at the end of Thargelion; it seems possible that a spring-cleaning rite (or rather, midsummer cleaning), originally closely associated perhaps with the Skira, when the principal Akropolis priests left the citadel to others, was displaced to an earlier date when a comprehensive calendar of sacrifices was drawn up, partly in obedience to the logic of calendar-making and partly, perhaps, because the closing of the sacred area for the Plynteria acquired sinister connotations incompatible with the more light-hearted character of the Skira, with its elements of reversal and revelry (cf. ch. 18 at nn. 64–70).

The cult of Kekrops in the Roman period was the responsibility of the Amynandridai (*IG* ii² 2338 = *SEG* 30. 120), and since the priest of the tribe Kekropidai does not seem to have been appointed by the tribe (Schlaifer 1940) this responsibility may go back to an early date. The *genos* has not so far appeared in sources of the classical period, but there may be an indirect reference in Plato's *Timaios* (21c), where a fellow phrater of Kritias I, ancestor of Plato's cousin (MFBS) Kritias IV, is named Amynandros. Kritias came from a family of Eupatrid status, since the family names Kritias and Dropides appear in the archon list in the pre-Solonian period (Dropides 645/4, Kritias 600/599), and it seems possible that Plato here is discreetly hinting at their *genos* affiliation.³⁷

suggestion (1976) that a festival of Erechtheus was transformed into the Panathenaia rests on flimsy grounds.

³⁶ *IG* i³ 7; R. Parker 1996, 307–8; Sourvinou-Inwood 2011; below, n. 78. Associations between *gené* and other statues considered ancient (*xoana*: not necessarily wooden, Donohue 1988; see also Romano 1988, Bettinetti 2001) are problematic. The Erysichthonidai, whose eponym supposedly brought a xoanon of Eileithyia from Delos to Prasiai, are not so far attested before the Hellenistic period (Pythais of 97/6, Jacquemin a.o. 2012, 201; cf. N. D. Robertson 1984; Shapiro 1990), although Erysichthon was mentioned by Phanodemos (*FGH* 325 F 2); the Gephyraioi may have acquired their association with the Palladion at a late date (n. 30). We have no trace of a *genos* descended from Kolainos son of Hermes, who founded the cult of Artemis Kolainis at Myrrhinous (Hellanikos *FGH* 323a F 13; Paus. 1. 30. 3).

³⁷ R. Parker 1996, 285–6; cf. Baslez 2004, 107–8; Blok 2009. It is rather uncommon for *genos* eponyms to have names that remain in general use, but Amynandros (formed from two common elements) occurs in 4 demes in the 4th c. Lambert 2008a (cf. 2015a) points out that Plato gives the name Euenor (eponym of the *genos* Euenoridai, cf. Malouchou 2008 = *SEG* 58. 145; n. 108) to the original inhabitants of Atlantis in *Krit.* 113c–d.

On the whole the preserved names of archons of the pre-Solonian period (Cadoux 1948) do not help us in identifying the *genê* of the archaic city. The only names we can attach with certainty to families that survived into classical times—apart from Damasias I (639/8), whose descendant Damasias II made a bid for tyranny in 582–579³⁸—are those of ancestors of Peisistratos (669/8), Miltiades (664/3, 659/8), and the Alkmeonidai (Megakles I, 632/1). It is unlikely that a list was kept up year by year from 683/2, the year in which the list available to authors of the classical period seems to have begun; I shall argue below at n. 42) that this list may have been constructed under the Peisistratid tyranny.

It is of course likely that Peisistratos, Miltiades, and Megakles II, leader of the Coast faction in the 560s, all came from Eupatrid families; this is certain in the case of Megakles I, whose tenure of the archonship in the year of Kylon's attempted coup provided the basis for accusations that his descendants were under a hereditary curse because he had killed suppliants who had been promised that their lives would be spared. We cannot, however, attribute either the Peisistratids or the Alkmeonidai to any known *genos*. Both families claimed to descend from Pylia immigrants, a claim that may have been felt to explain their lack of cultic responsibilities in Attika, while it also fitted in with Athenian claims that the founders of the cities of Ionia had passed through Athens on their way east. The claim that Athens was 'the oldest land of Ionia' was already made by Solon (F 4a West), and Athenians may have been meeting Ionians on Delos at the festivals of Apollo from the eighth century, or even earlier; they were aware of resemblances in dialect, calendar, and festivals, and the theory of migration to Ionia from or via Athens was one means of explaining these (cf. ch. 18). But we are hardly in a position to say whether the choice by Peisistratids and Alkmaionids of a pedigree that stressed international ties rather than local roots is a sign that they made their way into the core of the aristocracy at a relatively late date, or that they had always been so secure of their status in Attika that they were able to concentrate their interests on relations with leading families elsewhere. Our information about them in the sixth century could support either view. On the one hand they are represented as leading peripheral areas against a central group headed by the Eteoboutad Lykourgos, the Diakrioi/Epakrioi of the north (see below, p. 654–7) and the Paralioi of the east against the Pedieis of the central plain; on the other hand both families clearly already have widespread alliances.

³⁸ The name recurs with Damasias the bandy-legged, linked with the general Laispodias in Eupolis' *Demoi* (PCG 5 F 107), perhaps the D. of Hippothontis killed in action c.410 (IG i³ 1186. 55, cf. Damasos in i³ 1190 and the Damasidas of i³ 585), and D. of Prasiai, whose son Naukrates was involved in a *diadikasia* c.380 (APF 10535). These seem to be Boiotian names.

It is salutary to remember that our knowledge of the existence of the *genos* Philaidai, to which Miltiades belonged, depends only on a genealogy recorded by Pherekydes (*FGH* 3 F 2) and a notice in Diogenes Laertios (10. 1) that Epikouros also came from this *genos*. The Philaidai claimed descent from a son of Ajax, but there is no evidence that they had a cult either of Ajax or of their eponym Philaios; the Kleisthenic tribe Aiantis met at the shrine of Ajax' other son Eurysakes, also used by the *genos* Salaminioi, though the decision to do so may have been influenced by the location of the Eurysakeion in the city deme Melite (ch. 29 n. 2). Nor is there much evidence of a special interest of Miltiades' descendants in the cult of Artemis Brauronia, whose sanctuary lay in the deme named after the *genos*. By about the middle of the sixth century Miltiades' family must already have been settled in Lakiadai, west of the city (Herodotus 6. 34–5); ambitious families of the periphery had to acquire a base in or near the city if they were to compete in city politics.

It is therefore perhaps likely that the majority of families of securely recognized Eupatrid status came from the plain of Athens, the coastal settlements that looked towards Phaleron (Halimous, Cape Kolias, Cape Zoster, Aixone), and Eleusis, whose claims to antiquity could not be denied. Among the early Eupatrid *gené* of the plain we should probably include the Lykomidai, whose cult centre at Phlya, by Pausanias' day, contained temples and altars of Apollo 'gift of Dionysos' (Dionysodotos), Artemis Selasphoros, the 'Great goddess' Earth (Gê), Demeter Anesidora, Zeus Ktesios, Athena Tithrone, Kore Protogone, and the Semnai (Eumenides). They perhaps also honoured Apollo Daphnephoros (Pausanias 1. 31. 4, 4. 1. 5, Plutarch *Themistokles* 15). The history of the *genos* and its cults evidently came to include close associations with Orphism—Pausanias claimed to have been shown, by an Eleusinian Torchbearer, a hymn of the Lykomidai attributed to Mousaios (9. 27. 2)—and associations with the mysteries of Andania, probably developed only in the Roman period (Deshours 2006, 216–17). The Lykomidai seem during the classical period to have maintained the independence of their own mystery cult from that of Eleusis, while other centres where Demeter was worshipped (Agrai, Paiania, Marathon, Phaleron) were willing to affiliate themselves to the more prestigious sanctuary; this may explain their enthusiasm for Orphism (though Eleusis was also influenced: Graf 1974*b*), their interest in Andania, and perhaps associations with Delphi (Apollo Daphnephoros). However, *IEleus* 435 is a joint dedication of the Roman period by Eumolpidai and Lykomidai. Earlier independence from Eleusis perhaps suggests that the *genos* and its cult had established their own authority at an early date; this conclusion is supported by the appearance of two powerful *genos* families in different demes in the late sixth century, those of Lykomedes of Phlya and Themistokles of Phrearrhioi (*APF* 9238, 6669), both of which will be further discussed below at n. 74).

A fuller consideration of the *genê* of the Attic countryside is best postponed until we come to consider Solon's reforms and their effects; but first we should look at a *genos* which may have been created in the late seventh century, the Hesychidai, responsible for the cult of the Semnai or Eumenides on the Areiopagos, and apparently also at Kolonos. The Areiopagos cult was associated with the story of the impious killing of the followers of Kylon. Thucydides (1. 126) says that they were killed at the altars of the Semnai, whereas other sources say that the Cretan seer Epimenides, called in to advise on means of freeing the city from pollution, created or reorganized the cult. This association might explain the exclusion of Eupatridai from the rituals of the *genos*, attested by a fragment of the Hellenistic antiquarian Polemon;³⁹ on this interpretation (Humphreys 1991) the Hesychidai may have derived their name from their freedom from involvement in the major conflict between Eupatrid families which developed out of the Kylonian conspiracy and subsequent accusations of impiety and homicide. The name was later explained by the silence observed at rituals in honour of the Semnai, whose offerings were also wineless. *Hieropoioi* appointed by the state are attested for this cult in the fourth century (Demosthenes 21. 115, Deinarchos F VIII 2 Conomis 1975); it is not clear whether they already existed at the time of Aeschylus' reference to the Areiopagos cult in the *Eumenides*, which seems to provide evidence of a procession, and Sophokles' reference to the cult at Kolonos in the *Oedipus at Colonus* (ch. 24 n. 10).

594–507: SOLON, THE TYRANTS, KLEISTHENES

Athenian accounts associate Solon's measures and the end of Eupatrid monopoly of the right to stand for office with the system of census classes, which probably restricted office to members of the two upper classes, *pentakosiomedimnoi* and *hippeis*, though only members of the wealthiest class could act as treasurers of Athena and supervise the Akropolis and its cults and treasures. This distinction encouraged the richest Athenians to lavish resources on the city's cult centre, and loosened the grip on it of the priest-appointing *genê*, while at the same time allowing all those families capable of maintaining horses a share in power.

In connection with this reform Solon must have either introduced or revised the questions put to candidates for election. Besides being asked to name their

³⁹ Epimenides: *FGH* 457 T. 1. 112; cf. 2, 4; Polemon F 49 Preller 1838; G. Herrmann's correction of *ou metechei* to *ho metechei* (1835, 118) is arbitrary, but is accepted by N. D. Robertson 2010, 114–16. On the Semnai at Kolonos see Büttner 1911; Kearns 1989, 208–9; *SEG* 38. 265; Robertson *op. cit.*, p. 110, rejecting restoration in *SEG* 52. 48 (Lambert 2002*b*); ch. 24 n. 10. See also R. Parker 1996, 298–9. Robertson dates the festival in late Anthesterion. Myron of Phlya, also associated with the story of the Kylonian pollution (Plut. *Sol.* 12. 3–4, *A.P.* 1), perhaps belonged to the Lykomidai (ch. 29 n. 84).

fathers and grandfathers, they were also asked whether they had a cult of Zeus Herkeios and Apollo Patroios, and where they worshipped; whether they were responsible for tombs (*éria*), and if so, where; whether they took care of their parents and took part in the city's military campaigns; and what their census class was. This list of questions may well have been modified over time; indeed, *A.P.* 55. 3, from which we derive it, reports that candidates were asked whether they paid their taxes (*ta telê ei telei*) rather than their census class (*ti telos telei*), which must surely have been the original query.⁴⁰ However, the question about military service may be related to the requirement that archons should be physically unimpaired (cf. *Lysias* 24. 13), the question about care for parents is paralleled by other indications in Solon's legislation of concern that young men who acquired control of family land did not neglect the fathers who ceded it to them (ch. 1 n. 134), the term *éria* was by the classical period an archaism, and the references to Zeus Herkeios and Apollo Patroios seem to be early.

It has been suggested that these were *genos* cults to which members of the phratry to which the *genos* belonged had access (Andrewes 1961, 7–8), but the evidence hardly supports this view. The only *genos* with an attested cult of Zeus Herkeios is the Eumolpidai (*SEG* 52. 48, Face A F 3 col. III), though the Eteoboutadai or Praxiergidai may have been responsible for the cult of Zeus Herkeios on the Akropolis (*FGH* 328 F 67); the only *genos* with an attested cult of Apollo Patroios is the Salaminioi. The way to ask an Athenian if he belonged to a phratry would have been to ask if he had a cult of Zeus Phratrios and Athena Phratia. My impression is that these questions are posed at the individual level rather than that of group affiliation. Zeus Herkeios was in most contexts a god of the household and its encircling fence; a man who had a cult of Zeus Herkeios would belong to a substantial establishment. It is not clear whether a young man still included in his father's household could give a satisfactory answer to this question or not; possibly in Solon's time a candidate for office had to be a household head, which might lend additional point to the questions about care of elderly parents and of tombs.⁴¹ The question about tombs should be taken to refer to tombs of recently

⁴⁰ The question was already taken to refer to tax-paying by the younger Kratinos (*PCG* 4 F 9), but by this time we are well into the 4th c.; cf. Dein. 2 *Aristog.* 17–18. Pollux 8. 86 preserves a reference to census class (P. J. Rhodes 1981a, 618).

⁴¹ Cf. Sjövall 1931; Wycherley 1964, 175–9; Travlos 1971, s.v. *Zeus Herkeios*; Jameson 1990, 105; R. Parker 2005a, 16–17, 22 n. 64. N. D. Robertson 2005, 82 suggests that the priestess in *SEG* 52. 48 served Themis and not Demeter. The deme Thorikos may have taken over its sacrifice to Zeus Herkeios (*IG* i³ 256 bis; *SEG* 33. 147. 22) from a *genos* or phratry. There was an altar of Zeus Herkeios, Hermes, and Akamas on the inner side of the Dipylon gate; Akamas may appear here as the tribal eponym of the deme Kerameis, but the *akamantes* are linked with the Tritopatreis in the Tetrapolis calendar (*SEG* 50. 168 B 32) and at Kyrene (N. D. Robertson 2010, ch. 19; ch. 10 n. 124–6), and seem like them to be elemental powers (Wilamowitz 1893 II, 407; cf. below, n. 83); all are liminal figures. Brunel 1984 is doubtless right in principle in disconnecting Akamas from the Akamantes, but in this context there may be some interference. The Elasedai had a sanctuary of Apollo Patroios (*IG* ii² 2602), but we do not know if they were a *genos* or phratry (ch. 19 n. 133); so did the phratry Therrikleidai (ii² 4973; above, ch. 19 nn. 130–1), and in the 2nd c. CE the Gephyraioi (ii² 3629–30).

deceased kin, not ‘*genos* tombs’, for the existence of which there is as yet no solid evidence (above, ch. 11 n. 3; Bourriot 1976). Apollo Patroios is more problematic; it seems unlikely that it was felt necessary to ask every Athenian whether he was of Ionian origin. A possible explanation, even though there is no evidence to support it, is that the four pre-Kleisthenic tribes worshipped Apollo Patroios, perhaps in association with their eponyms. After Kleisthenes’ reforms it was perhaps open to any Athenian who could not cite a local cult of Apollo Patroios to refer to the cult in the Agora.

The questions asked of candidates for office, therefore, do not tell us anything about the prevalence of *genê* in Solon’s day. My conviction that *genos* organization was widespread, and that Solon had to respect it, even though he weakened it by destroying the Eupatrid monopoly of office, is based partly on the law cited by Philochoros (*FGH* 328 F 35), compelling phratries to respect the admission decisions of *gennêtai* (*homogalaktes*) and *orgeônes*, which I ascribe to Solon (above, chs. 1 n. 134; 19 n. 3), and partly on the statement of *A.P.* 13. 2 that in 582/1, after Damasias (II) had held on to the office of archon for two years and two months, a commission of ten men was appointed to hold office for the rest of the year, composed of five Eupatridai, three *agroikoi* and two *dêmiourgoi*.

I take it that this statement was derived from a list of eponymous archons, though the idea of Damasias’ extra two months may well be the result of speculative interpretation (with influence from memories of the Four Hundred?); and there seem to me to be good reasons for ascribing the construction of the archon list to the time of the Peisistratid tyranny, at which date the events of the 580s would still be more or less within living memory. The archon list included, as we have seen, an early Peisistratos and an early Miltiades as well as the notorious Megakles I; it included the names of men who after the end of the tyranny did not wish it to be remembered that they had held office in the 520s (or whose descendants preferred to forget the fact), Kleisthenes and Miltiades IV, so it was not published in the early years of the new constitution; and we are told by Thucydides that the Peisistratids allowed elections to take place normally, except that they made sure they always had one of their own supporters in office (6. 54. 6). This may only mean that (as we now know from epigraphic evidence, *M/L* 6, *IG* i³ 1031) Thucydides had access to a list of names stretching without break from the late fifth century to 683/2, and made his own deduction, perhaps somewhat maliciously, from the presence of Peisistratid names in the list; but the lack of any break during the period of tyranny is significant. Athenians were forced to accept that the archonship had been filled during the period of Peisistratid rule, and it is doubtful whether a list composed at any later period would have provided this evidence of constitutionality.⁴²

What, then, is the explanation of the commission of 582/1? My suggestion is inspired by A. D. Momigliano’s observation (1967), that in the early years of the Roman republic we seem to have a number of ways of classifying status in terms of paired categories—

⁴² See R. Thomas 1989, 288 on the re-presentation of memories of the period of tyranny. I date Solon’s reforms in his own archonship, 594/3: ch. 1 n. 43; on archon lists see ch. 1 n. 70.

patres/conscripti, patrons/clients, *populus/plebs*, *classis/infra classem*—out of which the major opposition between patricians and plebeians crystallizes only gradually. On this model, the categories Eupatridai, *agroikoi*, and *dēmiourgoi* need not represent a firmly established division of the population of Attika into three occupational groups (an interpretation that had some appeal in the fifth and fourth centuries, when philosophers began to discuss the capacity of the working classes to govern responsibly, but seems inappropriate for the early sixth century),⁴³ and might instead reflect the terms in which pre-Solonian Eupatridai had rebuffed candidates for office whose claims they were unwilling to recognize: groups responsible for minor cults in rural areas were *agroikoi* and not true Eupatridai, groups responsible for minor functions in city cults were *dēmiourgoi*, specialists serving the community, and not true Eupatridai. *Dēmiourgoi* were dependants of Eupatridai, *agroikoi* were independent minor (or new) landowners.

‘Demiourgic’ *genē* might have included the Kerykes of the Dipoleia; the Euneidai, who are said to have provided musicians, heralds, and dancers for processions, and may have become prominent later in the sixth century (below, n. 53); and possibly some of the other *genē* known only from the lexicographers: the Aigeirotomoi (poplar cutters), the Phreôruchoi (well diggers), possibly the Pamphides, women who sang the hymns of Pamphos, the Poimenidai (shepherds), who provided a priestess of Demeter, the Chimaridai (goatherds?), the Zeuxantidai (ploughmen?), or the Phrasidai, who may have been seers. The line between noble and ‘service’ *genē* must have been drawn on a practical rather than an ideological basis, since the Eumolpidai, despite their demiourgic name which identified them as singers, had clearly established Eupatrid status at an early date (cf. the Molpoi of Miletos), and the Eleusinian Kerykes may have done the same; but it was a useful distinction to draw when Eupatridai were faced with groups which on the basis of skills passed down from father to son and hereditary roles in ritual had adopted a *genos*-like form of organization.⁴⁴

If *genos* organization was associated with Eupatrid status, which seems to me to be suggested both by the model of links between descent-group formation and rights to office put forward above, and by the interpretation of Philochoros’

⁴³ This reasoning led Gernet 1938 to argue that the archon list was constructed only in the late 5th c. He was at least clear that what we have to explain is an entry in the list; Cavaignac’s theory, accepted by Wade-Gery and P. J. Rhodes (1981a, *ad. loc.*), that each tribe was to put forward 10 *prokritoi*, 5 Eupatridai and 5 commoners, does not solve the problem (nor does Figueira 1984). On the view advanced here, *agroikoi* (cf. Borgeaud 1995) would be the original term, *geōmoroi* (Plut. *Thes.* 25. 2) and *geōrgoi* substitutes introduced by rationalizing historians (cf. Wade-Gery 1931). For Momigliano’s model see ch. 18 n. 106. Duploux 2014 argues that labels used in common speech to classify others might become a basis for group identity.

⁴⁴ For this sense of *dēmiourgoi* see Berthiaume 1976; Descat 1986. Forsberg 1943, though inclined to overstate his case, has useful material on ‘service’ *genē*. On the Euneidai see below, n. 53; the other *genē* are known only from late sources (see Toepffer 1889; R. Parker 1996). The fragments of Philyllios’ comedy *Phreôruchoi* (PCG F 17–18) show no sign of connection with the *genos*; Lambert 2015a suggests that it, and perhaps the Aigeirotomoi, may be comic invention. The emendation of *hierôn orgeôn ē nautai* to *hierôn orgeôn gennētai* in *Dig.* XLVII 22. 4, Martina 1968, 342a (Gaius) is not very persuasive (ch. 19 n. 3). On the Milesian Molpoi (and Onitadai, a *genos* of *mageiroi*) see Herda 2006, 2011.

law as giving *genê* autonomy in admitting boys to their phratry, one would expect that those who wished to claim Eupatrid status would copy it, and that those who held hereditary rights to priesthoods or other roles in cult, since some prominent Eupatrid *genê* held such rights, would attempt to claim Eupatrid status. Hence there may well have been a tendency for ambitious families in the Attic countryside to expand local cults, award themselves hereditary priesthoods, and claim to be Eupatridai. In such circumstances Solon's introduction of a new criterion of eligibility for office may have been prompted as much by the increasing number of disputes over the status of candidates, and the difficulty of deciding who was Eupatrid and who was not, as by any strong feeling that those admitted to office by his reforms would represent new interests. The coalition between those refused the right to stand for office and the indebted *demos* would be merely a matter of conjunctural political tactics. It is indeed likely that the *agroikoi* included a substantial number of rural landowners, but cancellation of peasant debts was not in their interests. Possibly admission to office was a concession to soften the blow of debt cancellation, and encourage rich landowners to develop a relation with peasant neighbours based on need for support in their competition for office rather than on competition for wealth.

Several of the rural *genê* who may have benefited from Solon's reforms come from northern Attika, and have to be considered in connection with the question of the identification of the Diakrioi or Epakrioi from whom Peisistratos got much of his support. But there were probably others: the calendar of Erchia, in the Mesogeia plain (Spata), has references both to sacrifices carried out *es Sôtidôn*, which may be a reference to a sanctuary once owned by a *genos* whose responsibilities had passed to the deme, and to a still functioning group of Pythaištai (*LS* 18). The Phytalidai of the deme Lakiadai probably owed their prominence, as we shall see, to their fellow demesman Kimon, but may have been in existence already in Solon's day.⁴⁵

⁴⁵ The Marathonian Tetrapolis sent its own Pythaištai to Delphi when sacrificial omens were bad (*FGH* 328 F 75; below, nn. 49, 143; R. Parker 2005a, 83), and Ikarion and Erchia may have done the same. Such embassies were rare; the Athenian Pythais was sent 'when lightning is seen over the Harma' (a saddle of Mt Parnes), which came to mean 'once in a blue moon', and the Tetrapolis had to assure Delphi in 215 that the group had kept up its sacrifices, though evidently not its embassies (*Syll.*³ 541, *FD* III 2. 18). The *genos* was otherwise responsible for the local cult of Apollo. On the Phytalidai see below, n. 69. The 5th c. *horos* of Artemis Orthosia of the Demokleidai, set up near Paiania c.420 (to ward off Spartan depredations? *IG* i³ 1083; she was also worshipped in Piraeus, *IG* ii² 5012, and in the Kerameikos, Schol. Pind. *Ol.* 3. 54a; ch. 19 n. 116), may belong to a rural *genos*; the Komadai, however, who had a *hieron* (perhaps of Zeus) near Dekeleia, may be only villagers (*IG* i³ 1086 *bis*, second quarter of 5th c.; Lambert 1997a, 221 n. 15; ch. 19 n. 112). On the Eikadeis, considered to be a *genos* by Papazarkadas 2011, see ch. 19 n. 152. The E(e)tionidai (*IG* i³ 1016, c.500–480, Papagiannopoulos-Palaios 1929b), who worshipped Herakles, call themselves a *thiasos*. *IG* i³ 972 has only tenuous claims to be considered a list of *genos archontes* (Wiseman and Shaw 1970; Bourriot 1976, 335–9). 4th c. *horoi* marked the property of Apollo Patroios of the Elasedai (*IG* ii² 2602), of the (?) Arledai (ii² 2633, from a farmer's sketch of a lost

It is becoming increasingly clear that the Diakria or Epakria, the area which supposedly provided much of Peisistratos' support in his bid for tyranny, is to be located in northern Attika, in an area running approximately from Dekeleia (Tatoi) in the foothills north of the plain of Athens, through Aphidnai and the northern slopes of Mt Pendeli, to the plain of Marathon and the cult union of the four cities (Tetrapolis) of Marathon, Probalinthos, Oenoe, and Trikorynthos (Traill 1978*a*, 95–6; 1986, 99–100, 103–6). Both the terms Diakria and Epakria are associated with this area, which had its own cultic traditions and was probably considered to have formed one of the four kingdoms into which Attika had once been divided, in a tradition that may well belong to the period of conflict between local factions dated between Solon's reforms and the establishment of Peisistratos' tyranny (chs. 18 at nn. 48–9; 19 n. 16).

This area had its own stories about Theseus, noticeably separate from those of the coast and the city: after seizing Helen he had hidden her at Aphidnai, but when her brothers, the Dioskouroi, came to look for her the secret was revealed by Dekelos, eponym of the oikos and deme Dekeleieis (ch. 19 at n. 39–40), and Aphidnai was betrayed by Titakos, eponym of the nearby hamlet Titakidai (Herodotus 9. 73). The Etymologicum Magnum (s.v. *Titakidai*) says that Titakidai and Thyrgonidai were 'obscure *gené* and phratries attacked in comedy as penurious' (or easily bribed? *eis entelean*); it seems they claimed a status to

stone, near Liopesi), and of the Kolieis (Raubitschek 1974), who also appear as a *genos* in Hsch. (s.v.), and as sellers of property in the *hekatostai* inscriptions (with Oikatai, —akinidai, Apeidantidai, and Dipoliastai: below, n. 126). The Kolieis (also a *naukraria*, ch. 18 s. 'Naukrariai') were presumably responsible for the well-known sanctuary of Aphrodite and the Genetyllides at Cape Kolias (Paus. 1. 1. 5, Solders 1931), which became a popular place for outings from the city which were probably not all *genos*-related (Ar. *Lys.* 1–3, *Clouds* 51–2; Chabrias gave a notorious party there in 374, [Dem.] 59. 33–4; ch. 29 n. 119); in the late 5th and 4th centuries they may have played some role in the 'mysteries' celebrated at Halimous just before the Thesmophoria (Mikalson 1975, 71; Plut. *Sol.* 10. 3). Halimous may also have had a *genos* or *gené* responsible for the local cult of Herakles (Dem. 57. 46); Aixone had a *genos* whose ancestor had entertained him (Plat. *Lys.* 205c–d; below, n. 89). Glaukidai, Epikleidai, and .erkeidai lent money to members on the security of land (below, n. 125). On the Erysichthonidai of Prasiai (Paus. 1. 18. 5, 31. 2) see above, n. 36; on the Philaidai of Brauron (Eupatrid, since they appear in the archon list before Solon, *APF* 8429 V), below, n. 72. Hsch. lists the *genos* Kephisieiis, presumably based in the deme, and the Charidai, who had a priest of Kranaos (Paus. was shown his tomb in Lamptrai, 1. 31. 3). A new attestation of the Konnidai (or Koneidai, R. Parker 1996, 302; cf. Curbera 2013, 130–1), *SEG* 63. 52. We also have a *horos* of the Tritopatreis (see n. 83) of the Zakyadai (*IG* ii² 2615); but in *Agora* XIX H 20 (*SEG* 21. 650), *horos hierô Tritopatreôn Euergidôn* (beginning of 4th c.; re-used in *Agora*), Euergidai should be taken as another name for the Tritopatreis. We cannot be certain that all these groups were *gené*; some may have been *orgeônes*, or phratries. The —ntidai who set up *IG* i³ 247 may be the deme Kydantidai; see ch. 24 n. 89. The mine location *em Philomêlidôn* (*Agora* XIX P 26. 238) may well be Nightingale Wood (and the sacrifice there to Zeus Kataibates made by the deme Thorikos, *SEG* 33. 147. 25–6, offered at a spot where a tree was struck by lightning; the deme also sacrifices to him 'at the *sêkos* by the Delphinion'); and the location *Miltiôn* in Alopeke, in the *hekatostai* texts (Lambert 1997*a*, fr. 13A, 1–4; ch. 19 n. 156), may be a hamlet named for some association with red lead, *miltos* (Lambert, op. cit. 198, is undecided). Cf. the *lophos Bambide(i)os* in *Agora* XIX P 26. 224.

which the social position of their members did not seem adequate. Possibly these jokes belong to the early fifth century, when the groups were expressing resentment at being included in the deme Aphidnai rather than being given separate status as independent demes: a plausible emendation restores Titakidai as the name of a comedy by Magnes, who was probably writing by the 470s. The two hamlets were mentioned in the fourth century in a lost speech by Isaïos, and are sometimes classed as demes by late sources, although it is doubtful if they ever formally achieved this status.⁴⁶

Aphidnai was also the home of the Gephyraioi, who were believed to be immigrants from Tanagra in Boiotia or from Euboia; in Herodotus' day (5. 57–61) they preferred the latter version, claiming Eretrian origin, but after the battle of Tanagra in 457 it would have been impolitic to claim a connection with that city. Their *genos* cult of Demeter Achaia is well attested in Boiotia (Schachter 1981, 162–3). Herodotus says that they were excluded from a number of rights (or places?) not worth detailing; this is perhaps more likely to refer to cultic exclusions than to political rights. The *genos* owed its success and survival largely to the hereditary right of dining in the Prytaneion awarded to the families of two of its members, Harmodios and Aristogeiton, as a reward for assassinating Peisistratos' second son Hipparchos. Malicious versions of the assassination story claimed that Harmodios, the younger of the two, had had a lovers' quarrel with Hipparchos ([Plato], *Hipparchos* 224b), or was angry because his sister had been denied a place as a basket carrier (*kanêphoros*) in a religious procession (Thucydides 6. 54. 1–4, 56. 1–2). The import of these stories seems to be that the assassins had been associates of the tyrant family, which would fit the view that ambitious families of the northern area supported Peisistratos and established themselves in the city when he came to power.⁴⁷

⁴⁶ PCG 5 Magnes F 6; Isaïos F XXXIV Th.; Traill 1975*a* on the status of Titakidai and Thyrgonidai. These myths were no doubt used when the Spartans invaded Attika in the Peloponnesian War, but the story of the rape of Helen seems to have been known before the main period of development of the Theseus myth as a rival to the legend of Herakles (Ghali-Kahil 1955; Neils 1987; Hitzl 1989). In a list which may date from the late 4th c. (below, n. 127; ch. 19 nn. 39–40) Demotion, eponym of the phratry Demotionidai, appears as a companion of Theseus on his Cretan voyage.

⁴⁷ *Eirgesthai*, the term I have translated 'excluded', usually seems to have a spatial connotation (cf. e.g. Hdt. 7. 197; Paus. 5. 13. 1). The Gephyraioi were at first defined negatively, by restrictions rather than privileges (cf. Hdt., loc. cit.; Parker 1996, 288–9; ch. 15 at n. 16, on the Alkmaionid curse). They may not have been recognized in pre-Solonian times as Eupatridai, but I doubt if [Dem.] 59. 92 is relevant; and it is surely a mistake to connect Hdt. 5. 57. 1 with the story of Harmodios' sister (Brulé 1987). [Plat.] *Hipparchos* is generally taken to be a work of the early 4th c. by a minor Socratic, who was perhaps parodying Thuc. (I do not see why Souilhé 1930*a* thinks he must predate Thuc.). These anti-tyrannicide stories may well come from the early 5th c., when the kudos acquired by the Gephyraioi must certainly have been resented by some of their peers; they may also have circulated in the late 5th and early 4th c. in gossip related to the legal disputes in the family of Dikaïogenes of Kydathenaion (ch. 7 Case 2). The proverb 'to a Gephyraian a friendly house is the best house' (*andri Gephyraïoi oikos philos, oikos aristos*)

Other genê of this area were the Semachidai, who gave their name to a deme of the trittys Epakreis (Traill 1978*a*), claimed that their ancestor Semachos was the first man to welcome Dionysos in Attika, and held the right to appoint priestesses of his cult;⁴⁸ and the Pythian and Delian genê of the Tetrapolis, who were responsible for interpreting omens in the sanctuary of Apollo Pythios at Oenoe, or of Apollo Delios at Marathon, when the Tetrapolis sent a sacred embassy to Delphi or Delos (*FGH* 328 F 75). The independent tie with Delphi was still remembered in the third century, when the Tetrapolis sent an embassy to remind the Delphians of their ancient privileges and ask that these should be renewed. Ikarion and Erchia may also have consulted Delphi.⁴⁹

The end of the Eupatrid monopoly of the right to stand for office must thus have added to the confusion of a picture already complicated by imitation of the *genos* organization of leading families and by disputes about rights to Eupatrid status. Some successful lines in peripheral genê, families who had established themselves as competitors in city politics, may have broken free of any *genos* affiliation they once had, preferring individual reputation to a status shared with less notable *gennetai*; on the other hand, genê whose reputation was purely local now met less opposition if they claimed a history reaching back to the heroic age.

The state began to encroach on *genos* control of cults in the major religious centres, the Akropolis and Eleusis. A board of treasurers for the Akropolis had been created by the 560s; the new penteteric celebration of the Panathenaia, in which Athens hoped to rival Olympia (and Delphi, Nemea, and Korinth?) in drawing competitors from all over Greece, founded in 566, was the responsibility of this board (*IG* i³ 507–8). It was first celebrated in the archonship of Hippokleides

may be an early comment on their change of residence, but the story told to explain the proverb *dory kai kerykeion* (Eust. *ad Il.* 3. 222; Erbse 1950, D 23) does not seem to have been known to Hdt. It may be associated with their claim to a special relationship with Delphi (*SEG* 30. 85, late 1st c. BCE). Their cult of Demeter Achaia still existed in the Roman period (*IG* ii² 5153). Pace Mavrogiannis 2007, there is no reason to connect them with Lefkandi.

⁴⁸ Semachidai: *FGH* 328 F 206; Kalogeropoulou and Vanderpool 1970, Traill 1978*a*, 95–6. The existence of a mine called *Semacheion* (*Agora* XIX P 26. 221) might conceivably be due to a member of the *genos*. There is no record of a *genos* associated with the Hekalesia, a festival of Hekale associated with Theseus (Plut. *Thes.* 14. 2; ch. 32 n. 33).

⁴⁹ *FD* III 2. 18, *Syll.*³ 541, Jacquemin a.o. 2012, 198–200. 215 BCE. DauX (1936, 534) thinks that the link with Delphi had never been interrupted, but Philochoros' statement (*FGH* 328 F 75) proves only that in his day there were *gennetai* who knew the correct procedure (he wrote a book on the Tetrapolis and must have had good contacts with local antiquarians), and the envoys to Delphi claimed only that sacrifices had continued. On Ikarion see ch. 24 n. 42. One of the 4 *pythaistai* who dedicated *IG* i³ 4. 632 in the 4th c., Timokritos son of Timokrates of Ikarion, councillor in 341/0, may appear also on *IG* ii² 12791 (correct the ref. in *APF* 13768); another has the appropriate name Python son of Sosigenes. Opinions differ on whether they worshipped Apollo locally (Bousquet 1964, 66 n. 4), sent a local Pythais, or sent delegates with the city Pythais (the latter seems to me unlikely). Cf. *SEG* 32. 249; Boethius 1918, Voutiras 1982.

of the Philaidai, who had competed against Megakles II, unsuccessfully, for alliance with the tyrant Kleisthenes of Sikyon; a man whose ambitions went beyond the politics of property in local cults.

The process of bringing cult finances under the control of elected officials is likely to have continued under the tyrants, who would have preferred to keep patronage and sources of power in their own hands. The question of Peisistratid 'policy' should be approached with some caution, since the evidence is mainly archaeological, and the dating of buildings is often controversial (on the date of building works at Eleusis see Clinton 1994*b*, Lippolis 2006, 159, *Agora XXXI*). Finds at the site of the City Eleusinion may go back to the seventh century (*Agora XXXI*) and a black-figure loutrophoros of c.540–30, found at Eleusis, which depicts a procession of men carrying sacred objects, may represent the transfer of Eleusinian sacra to Athens that preceded the procession of the *mystai* to Eleusis. The tie between the 'lesser mysteries' at Agrai and the Eleusinian Mysteries may also have been created in this period, since it is associated with the story of the initiation of Herakles, which became popular with vase painters in the age of the tyrants.⁵⁰

A convergence of interests is likely to have been at work. Athens was becoming more prominent both as a cultural and political centre and as a market; it is therefore not improbable that would-be initiates from overseas made their way first to Athens, and there joined the procession of Attic *mystai* on the road to Eleusis. Eumolpidai and Kerykes, as we shall see (n. 57), were moving from Eleusis to the city and to other parts of Attika; they would favour arrangements that allowed them to prepare candidates for initiation in the city as well as at Eleusis.

In this connection it may be noted that the clearest contemporary reference among the names of Theseus' companions on the François vase, dated c.560, is that one of the youths is named Daidokos, surely a recognition of the claims of the Kerykes to a place in Athens' mythical past. Other possible links with prominent genè can be found in the names of Hippodameia (daughter of Boutes, Apollodoros 3. 14. 8), Koronis (possibly associated, via the *Koronides korai*, with the Eleusinian *genos* Koironidai?), Lysidike (wife of Ajax and mother of Philaios, ancestor of the Philaidai, according to Stephanos of Byzantion s.v. *Philaidai*), and perhaps Menestho, since the name Menestheus/Menesthes later appears in the Theseus tradition in contexts that may suggest the *genos* Salaminioi as source.⁵¹ It is, however, unlikely that the association of fourteen families

⁵⁰ Shapiro 1989; loutrophoros, Eleusis Mus. 471, BArch 301576. Cf. J. K. Davies 1988. Spahn 1980*a* suggests that the Peisistratids introduced the obligation to send *aparchai* of corn to Eleusis (this would be Peisistratos' *dekatê*; see also R. M. Simms 1975; Sancisi-Weerdenburg 1993; Cavanaugh 1996 on later periods); the parasites of Herakles may have played a role in collection. Representations of Triptolemos appear in the 530–20s; Hayashi 1992, *LIMC* s.v. (G. Schwarz). See the discussions of 'Peisistratid policy' in Sancisi-Weerdenburg 2000*a*.

⁵¹ See Cristofani a. o. 1981; E. Simon 1981, 73. Koronis is associated with Boutes in D. S. 5. 50 (above, n. 34), but the story is not attached to Attika. She may be associated with the Koroneian heroines

descended from Theseus' companions already existed at this date. As we shall see, a quite different list of names, perhaps constructed in the late fourth century, appears in Servius' commentary on the *Aeneid* (6. 21; below at n. 127), and a near-contemporary of the François vase has yet another list of names, though with fewer signs of mythological sophistication.

Another cult procession which may have been introduced under the tyrants, similar in theme to the transfer of *sacra* from Eleusis, is that which brought the ancient cult statue (*xoanon*) of Dionysos to Athens from the Akademy each year for the City Dionysia. A temple in honour of Dionysos Eleuthereus seems to have been built on the south side of the Akropolis, in the area where the theatre would later be constructed, perhaps in about the middle of the sixth century (Sourvinou-Inwood 2003*a*, 104), and the first performance of proto-tragedy, by Thespiis, was dated to 534.⁵² The increased prominence of Dionysos at this period, attested also by the popularity of Dionysiac subjects in vase painting, and his association with song and dance, is likely to have favoured the *genos* Euneidai, who worshipped Dionysos Melpomenos and established a connection with theatrical festivals that lasted into the Roman period. Their claim to descend from Euneos, son of Jason by Hypsipyle, daughter of Thoas of Lemnos, may possibly have been elaborated in the early fifth century when Miltiades captured the island for Athens.

Here we may have an example of a 'demiourgic' *genos*, which had not been particularly distinguished in early times, rising to greater prominence after Solon's reforms, in a new climate which favoured emphasis on expansion of city cults and development of cultic ties between the city and rural cult centres, and perhaps promoted by the patronage of the tyrants.⁵³ Whether the penteteric *theôria* to

worshipped at Thorikos, *SEG* 33. 147 = *IG* i³ 256 *bis*; see however n. 122. Lysidike is daughter of Koronos in St. Byz., *l.c.*, and Tzetzes *Lyk.* 53. Redfield 2003*b*, 92–3, *Koronidai korai* at Orchomenos. *FGH* 328 F 3, Skiros helped Theseus because his DS Menesthes was one of the boys sent to Crete (below, n. 66). Eriboia (Periboia in Servius) seems to be a permanent feature of the story; she is Theseus' wife and Ajax' mother in Plut. *Thes.* 29; cf. Bacchyl. 17. 14 ff.

⁵² Connor 1989 argues for dating the procession and City Dionysia immediately after the end of the tyranny, but see Ehrhardt 1990, Sourvinou-Inwood 2003*a*; 2011, esp. 19–22; ch. 18 n. 90. I suspect that the decision whether or not to include frontier areas (Salamis, Oropos, Eleutheraï) in the Kleisthenic deme system was taken on ethnic grounds (dialect, calendar, tribal affiliation; cf. Alty 1982; Hornblower 1992; Connor 1993), and was not therefore merely dependent on the date of conquest or incorporation. In the Apatouria myth (ch. 19 at nn. 25–8) Eleutheraï and Melaineis are on the frontier between Attika and Boiotia.

⁵³ Hdt. 6. 136–40, c.495. The Euneidai first appear in Kratinos' play of that name (*PCG* 4 F 71–2; parodied in Ar. *Knights*, 524, 529ff., so produced before 424), and were probably referred to at the end of Eur. *Hypsipyle* (c.408; Bond 1963, 20, 144). By the 2nd c. BCE they had acquired the house of Poulytion, confiscated when he was condemned for parodying the Mysteries (Paus. 1. 2. 4–5; Toepffer 1889, 204; the reference in Pherekrates *PCG* 7 F 64 must be earlier), but we do not know if they acquired it in the 5th c. (Aneziri 2000 assumes that they did). They were mentioned in a speech by Lysias (F CXV Thalheim 1913, CXXX/280 Carey 2007), and then disappear from view until 106/5 and 97/6, when

Brauron was established in the same period is much less clear. The only solid evidence for ties between Brauron and Athens at this time is a late sixth-century *krateriskos* from the Akropolis of the form associated with the cult of Artemis; and the tradition that Peisistratos came ‘from (the) Philaidai’⁵⁴ is not enough to prove an interest in the Brauron sanctuary, since the claims of Miltiades’ family also have to be considered.

It also seems possible that the tribal torch-race, a relay race held at night, in which each team passed a lighted torch from runner to runner, was an innovation of the tyrants: the race at the Prometheia, run from the Academy to the city, may be associated with the development of a gymnasium in that area. But if so, it was taken over by the new tribes after Kleisthenes’ reforms. It was probably the model for the torch-race for Pan introduced after Marathon.⁵⁵

Finally, it is worth asking whether the appointment of *parasitōi* to attend gods when they feasted is a custom that goes back to the sixth century. We have already seen that the Eleusinian Kerykes had the right to appoint two of their members to dine each year in a sanctuary of Delian Apollo (n. 1); the law from which this prescription is quoted is said to have been inscribed on a *kyrbis*, which probably means that it belonged to the sixth century, and the sanctuary in question may have been on Delos itself, since the only ‘Delion’ known in Attika is that of Marathon, and it is hard to see why the Kerykes of Eleusis should have been introduced there. Peisistratos ‘purified’ Delos by removing burials within sight of the sanctuary to Rheneia, perhaps c.545–40, and may have revived poetic competitions there; a new temple was also built during his period of power. The degree of Athenian control of the island should not be exaggerated, since Polykrates of

they take part in the Pythais (below, n. 145). Sourvinou-Inwood 2011 thinks that they were not prominent in the City Dionysia in the Hellenistic period, their role at the time being due to their links with the Dionysian *techmitai*. In the Roman period Athens had two priests of Dionysos Melpomenos, one appointed by the *genos* and the other by the actors’ guild (*IG* ii² 5056, 5060; Maass 1972). We do not know if they were associated with the shrine of Dionysos Melpomenos at Acharnai (Paus. 1. 31. 3). Toepffer’s suggestion (1889, 184) that they supplied the herald who assisted the *basilinna* at the Anthesteria should be discarded; the Eleusinian Kerykes have a better claim, especially since [Dem.] 59. 78 uses the term *hierokéryx* (Graf 1974b, 63 suggests that the Torchbearer officiates, carrying wedding torches, but in that case one might expect [Dem.] to say *daidouchos*).

⁵⁴ [Plat.] *Hipparch.* 228b; *ek tôn Philaidôn* should refer to *genos*, but this seems inconsistent with the tradition of Pylian origins, supported by Peisistratos’ name (cf. Plut. *Solon* 10. 2, *dêmos*).

⁵⁵ Polemon F 6 Preller (1838); Paus. 1. 30. 2; Deubner 1932, 211–12. Schol. Patm. Dem. 57. 43 (Latte and Erbse 1965, 141) seems to confuse tribal torch-races, lamp-carrying at the Apatouria (ch. 19 n. 62), and the wedding processions of the *gamêlia*. The race at the beginning of the Panathenaia started from the altar of Eros (Schol. Plat. *Phaidr.* 231e), and was perhaps introduced when this altar was founded, under the tyranny (*FGH* 323 F 15). The altar of Prometheus, from which the race at the Prometheia started, was also in the Academy (Paus., *ibid.*); this race was the responsibility of the *basileus* (*A.P.* 57. 1), whose association with the *phylobasileis* would give him an interest in tribal competitions in pre-Kleisthenic times (cf. chs. 18 n. 87; 19 n. 52; 21 n. 58).

Samos also intervened there, but negotiation of a privileged position for Athenian representatives, in return for Athenian support and promotion of the island's cult, does not seem impossible.

Elsewhere, parasitoi were not recruited from any single *genos*, even though in some cases there may have been a tendency for the right to become hereditary. For a time in the fifth century, perhaps after Perikles' citizenship law of 451, the right to supply the parasitoi of Herakles at Kynosarges was taken over (if not invented) by a group who identified themselves as *nothoi*, perhaps sons of prominent families excluded from citizenship by this law (Humphreys 1974; earlier dating in Ogden 1996). Award of either hereditary or annual rights to dine as parasitos in a well-known sanctuary to supporters would have been a useful form of patronage for the tyrants, and the practice of charging parasitoi with the duty of collecting local contributions to cult expenses may have gone back to this period, although the relation between parasitoi and crop tithes (*aparchai*) is still very obscure. However, comic poets of the late fourth century who contrasted the parasitoi of their own day, hangers-on of rich households, with cult parasitoi were clear that the latter were themselves wealthy; even if an element of taxation was involved, the role of parasite was a liturgy in which the honorand was expected to contribute generously from his own resources.

Parasitoi were appointed for the sanctuary of Athena Pallenis: since Peisistratos' definitive victory over his opponents was won in a battle at Pallene, and followed by a triumphal entry into Athens with a local girl from Paiania dressed as Athena (the priestess?) at his side (Herodotus 1. 60, 62–3), it is tempting to wonder whether he was responsible for the institution. However, there may have been some changes in the Lykourgan period, and we have no information on the earlier system, which may have included only four demes (R. Parker 1996, 331; one of these, however, Acharnai, was hardly 'local'. It is not at all certain that the reference in Athenaios 235c to parasites 'from the demes' refers to Athena Pallenis).⁵⁶

Like that of Solon, the impact of Peisistratos and his sons on the *gené* is likely to have been divergent. Some of the older *gené* found their monopoly of power declining; on the other hand, peripheral *gené*, or branches of major *gené* that had moved away from their cult centre, may have benefited. It was in the nature of tyranny for the rulers to prefer to reward and privilege individuals whose

⁵⁶ References are collected in Athen. 234d–235e. Neither Schlaifer 1943 nor Schmitt-Pantel 1992, 100–4, is entirely satisfying (see also Tagalidou 1993). The league of Athena Pallenis was in existence by 432/1 or 404/3 (Polemon F 78 Preller 1838); the sanctuary is also mentioned in the records of the Treasurers of the Other Gods, *IG* i³ 383. In the 4th c. its parasitoi were drawn from a wide range of demes (below, n. 129); we do not know that the range was narrower in earlier times. The parasites made contributions to Apollo at Acharnai, but (*pace* P. Wilson 2015, 133, 137) this was not their base. Note the 4th–3rd c. reference in *Agora* XVI 153 to a *paráskition* with which the widow (?) and son of Olympiodoros of Gargettos are concerned.

support they could count on, or had good hopes of winning, rather than to respect old-established privilege; on the other hand, the richness of mythical reference and innovation in literature, cult, and art may well have encouraged opponents as well as allies of the ruling family to elaborate family traditions and genealogical claims.

Thus any attempt to assess the aims and effects of Kleisthenes' reforms, in so far as they concerned the *genê*, starts with a complex situation. We have to ask how Kleisthenes and his contemporaries saw the *genê*, before trying to decide what role (if any) they played in his policy.

D. M. Lewis's hypothesis (1963) that irregularities in the geographical grouping of demes into trittyes, producing an 'enclave' of members of one tribe in territory otherwise assigned to another, were due to a wish to limit the influence of existing cult units as a basis for local solidarity and political power, profoundly marked research on the demes and trittyes for at least thirty years, pulling research on topography and local documents firmly into the narrative of social and political history. Nevertheless, it may prove to be one of those hypotheses doomed to collapse under the weight of the research it has generated (see Humphreys 2008). Opinion seems to be swinging round to the view that the main motivation for the irregularities identified by Lewis was the intention to produce tribes and, within the limits of possibility, trittyes of equal size, this being a requirement both for the organization of the army and for representation in the new Council of 500 (ch. 21). On this view the break-up of old-established cult units would at most have been a secondary motive, guiding the choice of demes to be 'enclaved' rather than determining the whole system.

In support of this second view it may be argued that the Lewis picture of the cultic geography of Attika is probably considerably simpler and clearer than that which presented itself to Kleisthenes. We happen to know of a limited number of cult associations that grouped together three or more settlements: the Marathonian Tetrapolis, the Trikomoi (Three Villages) of Eupyridai, Kropidai, and Pelex, and perhaps another group centred on Erchia, the Tetrakomoi (Four Villages) Xypete, Thymaitadai, Phaleron, and Peiraios, perhaps the League of Athena Pallenis if it was in origin a grouping of villages close to Pallene (R. Parker 1996, 328–32). We know of these groupings because they survived into the classical period and left epigraphic records that happen to have been rediscovered; in the wake of Kleisthenes' creation of the demes and trittyes, they developed some degree of formal organization. Even in the category of cultic groupings that did produce records, our knowledge is not likely to be complete. New evidence may yet emerge from the Attic countryside. But it is also likely enough that these records represent the tip of an iceberg of informal neighbourhood feasting. Demes, as we begin to see from the increasing accumulation of calendars and other cult-related texts, were very diverse in their festival patterns, and no doubt much of this diver-

sity was due to the tendency for phratry and genos cults, over the decades, gradually to pass into deme control. Though there were festivals—notably the Apatouria—at which every phrater should have returned to his own phratry (ch. 19 nn. 44, 63) and every gennetes to his own genos, village pride may at other times have encouraged units celebrating local festivals to welcome visitors from neighbouring settlements, in emulation of the city's power to attract crowds to its festivals both from rural Attika and from outside the state. Was Kleisthenes really in a position to target especially influential cult unions for attack, or would it have seemed to him that the whole of Attika was made up of overlapping units of this kind, some of which he would have had to break up on any plan for distribution of demes into trittyes?

Possibly the answer lies somewhere between these two alternatives, since it seems clear that in the Marathonian Tetrapolis the separatist tendencies of northern Attika were expressed in cultic form, and the rise of Peisistratos had shown that this separatism could be dangerous. There was fighting against the Boiotians and Chalkis in 506, and the importance of closely integrating this area with the rest of Attika could hardly be ignored. On the other hand, while Erchia certainly had a rich cultic calendar in the fourth century, it seems doubtful whether it could ever have been a centre either for separatist tendencies or for cultic power on the grand scale.

Examination of the deme affiliation of known gennetai suggests that Kleisthenes may have been struck more by their dispersal than by the danger that genê could provide a basis for the redivision of Attika into competing regional factions. The Salaminioi, perhaps originally based in Alopeke, since that was the home of their phratry (ch. 19 n. 173), had a solid group of members in Sounion but also had members in seven (or six) tribes other than Leontis (IV), to which Sounion belonged. The Eumolpidai, presumably still well represented (though unattested) in Eleusis, also had members in Paiania, Perithoidai, and probably Halai Aixonides and Kydathenaion. There were Eleusinian Kerykes in Alopeke, and perhaps Halai Aixonides and Xypete; Lykomidai in Phrearrhioi as well as Phlya; Eteoboutadai in Bate as well as Boutadai; Philaidai in Lakiadai and Gargettos.⁵⁷ The roads of Attika must have been crowded at the Apatouria with gennetai and phrateres returning to their genos and phratry sanctuaries; and it is also likely enough that some of the rank and file of phratry members, if they moved from home to seek new opportunities in the city or in the silver mines, which produced an increased yield in the later years of the tyranny, had ignored Solon's attempts to clarify the boundaries

⁵⁷ Below, nn. 96, 99, 116, 141 (Eumolpidai); n. 138 (Kerykes); n. 139 (Xypete); n. 128 (Philaidai; see also *APF* 2481, Chologos, and 8410, Aphidnai). The scattering of Amyndridai across tribes by the late 1st c. BCE (*IG* ii² 2338, *SEG* 30. 99) may, *pace* J. H. Oliver 1980 (followed by Aleshire and Lambert 2011), be nothing unusual (G. Anderson 2000 implausibly attributes scattering to exile from the city).

of the citizen body. At least there were suspicions, of a kind that tended to surface after every change of government, that men ‘of unclear origin’ had wormed their way into the phratries and tribes through the influence of the tyrants and their friends or by other dishonest means (*A.P.* 21. 4, cf. 13. 5).

As it turned out, demesmen did not stay where they were registered any more than phrateres and gennetai had done, and with hindsight one may feel inclined to ask why there is no sign that Kleisthenes anticipated this problem. It would, however, be anachronistic to expect him to consider setting up a system of local Registry Offices to document births, marriages, and deaths, and pass information on changes on residence to a central databank.⁵⁸ Knowledge of identity, parentage, and legitimacy was stored in kin groups and local communities (Humphreys 1986*a*); personal witness testimony and continuity over the generations were essential to it. In addition, the migrations of the age of the tyrants may have been regarded as exceptional. The city seems to have grown at an unprecedented rate, and there may have been something of a ‘silver rush’ to the Laureion district. Since Kleisthenes could not foresee the Persian wars, the Athenian empire, or the Peloponnesian War, all of which profoundly affected settlement patterns and the political relations between city and countryside, it is extremely hard for us to imagine the society he hoped to create. But he surely expected more stability than Athens was to experience; it was not unreasonable to suppose that it would be some centuries before another reformer had to revise the tribal system in order to bring tribe and deme affiliation back into harmony with residence.

Kleisthenes may also, however, have underestimated the staying power of phratries and *genê*. It seems—again with hindsight—to have been something of a mistake to set the age of entry to the demes two years later than that of entry to the phratry (ch. 19 at n. 37). The reason may have been military: whereas entry to the phratry was related to puberty, entry to the deme took place at 18—when a boy was sufficiently grown to play his part in war? But the discrepancy left the phratry to carry much of the burden of proof of legitimacy and entitlement to citizenship, since its decision, though now lacking the legal standing given to it by Solon, came before that of the deme. *Genos* cults, too, re-emerged as a factor in city politics in the age of Kimon to a perhaps unexpected degree, and were to have further periods of resurgency later.

Our only other clue to Kleisthenes’ intentions is in the naming system. He seems to have hoped to introduce the use of the demotic as a qualifier for a man’s proper name instead of the patronymic: one would distinguish between two men called Kallias by reference to their demes and not to their fathers.

⁵⁸ Hence his reform did not introduce a change from groups based on kinship to groups based on residence, as claimed by Fustel de Coulanges (1864) a.o. The problem was, rather, that increasing emphasis on citizenship made adjusting descent to residence problematic.

There is little sign that reference to *genos* or *phratry* affiliation had ever been a regular element in the Athenian naming system, although there are a few possible isolated examples. A Νῖ[ko]- or Μϵ[ne]demos insulted in an early graffito as a passive homosexual may be called Philaiides, but the reading is far from certain; the Oin[obio]s or Oin[iade]s who c.500–480 in a dedication to Hermes calls himself Keryx may be stating either his *genos* affiliation or his occupation; Alkmeonides is sometimes used on ostraka to identify kin of Megakles IV. These uses belong to the domain of nicknames rather than that of formal naming practice. There is some evidence that Athenians followed the Kleisthenic pattern in political contexts in the fifth century, but they clearly continued to use patronymics frequently in ordinary conversation; this usage was favoured by the practice of addressing and referring to boys and younger men by patronymic rather than proper name. Eventually a compromise was reached and the Athenian's official name came to consist of proper name, patronymic, and demotic.⁵⁹

A.P. (21. 2) attaches a proverb to this change in the naming system: 'Don't quibble about tribes' (*mê phylokrinein*), in the author's view, was said to those wishing to examine family origins (*exetazein ta genê*) as a result of Kleisthenes' reforms. The expression *phylokrinein* must surely refer to the pre-Kleisthenic tribes, and it seems to me that the most probable explanation of the phrase is that it referred to those who retained memory of their tribal affiliation in the pre-Kleisthenic system. By the time of the author of *A.P.*—and indeed perhaps already in the fifth century—these would be members of families still interested in holding the office of *phylobasileus*, 'tribal king' in the old system. It would presumably be especially in the *genê* which claimed Eupatrid status that this information would be preserved.⁶⁰

⁵⁹ Nikodemos: Langdon 1976, 22 no. 36. Oinobios: *IG* i³ 776 (*CEG* 234). In the sculptor's signature *Leóbios: epoiêsen; Pyrêtiadês* (c.510–500: *IG* i³ 665, *DAA* 88), the second name may be the father's name written in the nominative, as on some ostraka (*Agora* XXV, 17–18). The reading Heroiadou which Peek (1942, 84–5 n. 1) took as a gentilic (though it could well have been an early demotic: cf. *IG* i³ 1260; *CEG* 72, 500–480, Αφῖ[dnaïos]) has disappeared in *IG* i³ 1399. It was not uncommon to add *-idai* to the name of a prominent recent ancestor to make a complimentary (Pindar) or derogatory 'lineage name' (Bourriot 1976, 350–4), but these pseudo-gentilics seem to derive from Homeric usage rather than from the use of the names of corporate *genê* as an element in personal names. Cf. the use of Alkmeonides in *Hdt.* and in *Agora* XXV 206, 215, 524. See further Wilamowitz 1893 II, 171–4; *DAA* 467–78; Vanderpool 1970*a*, 6–8; above, n. 4. D. M. Lewis 1992 notes that demotics may have been used more often on ostraka to identify men who came from outside the city (e.g. Themistokles Phrearrhios), and toponymics may have been so used earlier (Myron of Phlya, *Plut. Sol.* 12).

⁶⁰ Manville's view (1990, 177) that *phylokrinein* refers to judicial scrutinies by tribes does not seem to me possible; cf. ch. 18 n. 41. The statements of Androtion and Philochoros (*FGH* 324 F 4, 328 F 20) that members of the *Areiopagos*—by which they seem to mean the *ephetai*—had to be Eupatrid is presumably an interpretation of the term *aristindên* in Drakon's law (*IG* i³ 104), and would refer only to the

It came to be believed—whether correctly, as a result of statements made at the time, or by subsequent conjecture, we can hardly tell—that Kleisthenes' assignment of demes and trittyes to tribes, and his choice of the ten heroes after whom his new tribes were named, was unplanned; he had used the lot for tribal assignments, and had asked the Delphic oracle to select ten heroes from a list of one hundred. What this tells us is that neither selection seemed obvious to Athenians. There were puzzling irregularities in the deme–trittys–tribe distribution, and the choice of heroes followed no obvious logic. Indeed, it was so far from instantly imposing its authority that in a monument at Delphi commemorating the battle of Marathon the tribal eponyms Oineus, Hippothoon, and Ajax were replaced by Philaios, Kodros, and Theseus. Though the choice of Miltiades' genos eponym Philaios, probably to replace his father Ajax, eponym of the tribe Aiantis, might suggest that Kimon was responsible, Kodros and Theseus might well have been expected to figure in a list of major Attic heroes.

The relation between tribal heroes and earlier genos cults, moreover, was erratic. Erechtheus was the responsibility of the Eteoboutadai and the tribe Erechtheis seems to have held its meetings on the Akropolis and called on the services of the Eteoboutad priest when sacrificing, although the family in Boutadai that probably held the office throughout the classical period did not belong to the tribe. Aigeis may have met in the sanctuary of Apollo Delphinios, since there is a tradition that Aigeus had once had his palace on the site (Plutarch *Theseus* 12. 6; cf. N. D. Robertson 2005, 55–6; Goette 2001, 99, 101). Pandionis met on the Akropolis and seems to have appropriated the Pandia, about which we know little except that it must have honoured Zeus, as its tribal festival (R. Parker 2005*a*, 477–8; ch. 21 nn. 91–2). Leontis set up at least some tribal decrees at Dafni, perhaps ancient Kettos, in or near the sanctuary of Apollo of the Kephallidai (on the hero Leos see Appendix 1). Akamantis met (once?) in Kallithea, perhaps ancient Xypete. Oineis may have met at Acharnai, or in the Agora (Kron 1976; M. Meyer 1989*a*, 188–9); Kekropis met on the Akropolis and had non-tribal priests, probably from the genos Amyndridai. Hippothontis, which met at Eleusis, also had non-tribal priests, perhaps supplied by an Eleusinian genos; Aiantis met in the shrine of Eurysakes, apparently shared with the Salaminioi, but at least by the fourth century seems to have appointed its own tribal priest of Ajax; Antiochis met in or near the Herakleion at Kynosarges, Antiochos being a son of Herakles, but seems to have had its own priest. This does not suggest any consistent attitude to genos cults.⁶¹

However, the list of the heroes whose names Kleisthenes supposedly submitted to Delphi, which later antiquarian writers seem to have been able to consult, can hardly go back to 507. Two of the names quoted—Kephalos and Araphen—are those of deme eponyms, though the former is also a genos eponym, while the third, Polyxeinos, is one of the Eleusinian leaders listed in the *Hymn to Demeter*. It seems rather unlikely that Kleisthenes would have wanted deme eponyms and tribal eponyms to coincide, and it is all too probable that one of the Atthidographers set out to reconstruct his list, drawing

pre-Solonian period. For the use of *plén* in this passage to mean 'and, moreover', which has misled some scholars (i.a. Duplouy 2003), cf. e.g. Soph. *OC* 1643.

⁶¹ Schlaifer 1940; Mitsos 1965*b*; Traill 1986, 81 (*IG* ii³ 4. 207); Kearns 1989, 84–5, 210–22; Billot 1992 and S. Privitera 2002 on Kynosarges. Cf. ch. 21 n. 77.

on deme eponyms, literary sources, and perhaps the list of forty-two heroes after whom the Attic age classes were named, a list that was perhaps created by Kleisthenes. The only (possibly) attested names in this latter list are Mounichos, eponym of the harbour Mounichia, and thus of a location that was not given deme status, and Panops.⁶²

THE FIFTH CENTURY

Our first piece of evidence about the gené in the years after Kleisthenes' reforms is characteristically ambiguous. The decision to confer quasi-heroic status on Hipparchos' assassins, Harmodios and Aristogeiton, by erecting statues of them in the Agora and awarding their next-of-kin hereditary dining rights in the Prytaneion, was pregnant with long-term implications for the future of their genos, the Gephyraioi, but these can scarcely have been recognized at the time. The award was not made to the Gephyraioi as a genos, but to the next-of-kin of two individuals (Humphreys 2017*b*).

In the years between Kleisthenes' reforms and Marathon, genos leaders had to adjust to being grouped in civic contexts with their deme of residence rather than with their genos and phratry; it would not yet be clear what role remained for phratries and gené in public affairs, and some may have decided to transfer most of their ritual responsibilities to deme control at an early date, if there was a solid core of gennetai or phrateres in the deme and absentee members showed little interest in maintaining their ties.⁶³ In addition, ambitious men had to defend themselves against charges of collaboration with the tyrants, press their claims to have been actively involved in resistance (R. Thomas 1989), show support for the new regime by suggesting constitutional refinements,⁶⁴ avoid any suspicion that they might themselves be aiming at tyranny, and take a stand on the seriousness of the threat posed by Spartan and Persian expansion. The wider range of military alliances—Athens and Eretria sent ships to help the Ionians in their attempt at revolt in 499–4, while Sparta was asked but refused (Herodotus 5. 38–97)—encouraged

⁶² Habicht 1961*b* Mounichos; Herodian *Peri mon. lex.* A 17 (*Gramm. Gr.* III ii p. 923) Araphen; Schol. Eur. *Hipp.* 455 Kephalos; Hsch. s.v. *Polyxeinos*. On age-class eponyms see Humphreys 1983*b*, 241–21, 2009 n. 4; the 4th c. dedication to Mounichos IG ii² 4590 may be evidence of local rather than age-class cult. Panops: Photius s.v. Steinbock 2011 suggests that Kodros was another.

⁶³ Relations between genos, phratry, and deme must have been greatly affected by variations in the size of the core (if any) of genos or phratry members still resident in or near the group's cult base, and the ratio between this group and the rest of the deme's membership (cf. Geertz 1964; Geertz and Geertz 1975, for useful comparative data and discussion; chs. 19 n. 23; 22 at n. 71).

⁶⁴ Even our sources, which tend to assume that each legislator passed extensive reforms on a single occasion, reveal on closer inspection that a major reform programme was usually followed by a period of further tinkering with institutions (ch. 1 n. 127). For attempts to understand the dynamics of this process see Humphreys 1983*b*, 247–8; 1991, 35–8.

references to mythical ties, and Hekataios of Miletos began a fashion for extending the genealogical systematization of the Hesiodic *Theogony* and *Catalogue* beyond the heroic age, in prose. He was followed, perhaps in the 460s, by Pherekydes of Athens, whose *Theogony* included a pedigree running from Ajax and his son Philaios to Miltiades III ‘who colonized the Chersonese’.⁶⁵

Miltiades was not a conventional *genos* aristocrat. He was presumably already living in Lakiadai, near the Sacred Way from Eleusis to Athens, when invited by the Dolonkoi of the Thracian Chersonese (the Gallipoli peninsula) to settle in their territory. They were returning from consulting the Delphic oracle (Herodotus 6. 34. 2), and their route is less likely to have taken them through the deme Philaidai, on the east coast near Brauron, whence the *genos* Philaidai possibly originated. He ruled in the Chersonese as a tyrant, and his adopted grandson (SS; by birth great-nephew, BSS) Miltiades IV is portrayed as *kalos* on a plate painted c.520–510, in barbarian dress (BArch 201526). Miltiades IV collaborated with Darius’ abortive attempt to add Skythia to the Persian empire, but later seems to have moved to the greater security of the islands Lemnos and Imbros, to which he invited Athenian colonists; this move no doubt helped him to return to Athens, although he had to defend himself on a charge of tyranny. He received the credit for the Athenian victory at Marathon, but when a follow-up expedition against the island of Paros failed he was condemned for ‘deceiving the demos’ and heavily fined, dying of injuries soon afterwards. His son’s insistence on his own Philaid pedigree, which as we shall see was only one in a varied set of strategies for keeping himself in

⁶⁵ FGH 3 F 2; see R. Thomas 1989; Duplouy 2006; 2007, 64–72, on Kimon. On the Hesiodic *Catalogue* (c.600–550?) see Most 2006, il–lv. Possibly this reference to colonization may suggest a date at or after Kimon’s trial in 463, when he was accused of failing to acquire land for colonization in Thrace (Plut. *Kim.* 14, cf. 7. 3, 8; Humphreys 1999; but there may have been an attempt to settle at Ennea Hodoi in 476/5: Schol. Aisch. 2. 31; HCT I 391 n. 1; Badian 1993, 205 n. 19). Pherekydes’ statement (FGH 3 F 149) that Theseus made a vow to Apollo Oulios and Artemis Oulia before his expedition to Crete must have been written after Kimon’s recovery of Theseus’ bones c.476/5, probably also after the birth of Kimon’s twin sons Lakedaimonios and Oulios at about the same date; an Oulios was included in the list of Miltiades’ ancestors (APF 8429 I, XIII), and Bacchylides worked compliments to the family into a poem on Theseus probably written for an Athenian festival (18. 50–6, cf. Barron 1980). I am still sceptical of alleged Athenian interest in Apollo cults in the empire (APF *ibid.*), and inclined to think Oulios was nicknamed ‘Curly’ soon after birth (ch. 8 n. 32); if the alternative Eleios (Plut. *Per.* 29. 2) goes back to Stesimbrotos, as it well may, it perhaps indicates a feeling that the name Oulios was unfamiliar and problematic (Matthaiou 2011a, 86 suggests that the Eleios commemorated in SEG 48. 83 was Kimon’s son, but Oulios is supported by IG ii² 1388. 81f., etc.). The genealogy also implicitly gave Kimon a link with the Salaminioi. Sourvinou-Inwood 1979, 64 discusses possible connections between the Pherekydes genealogy and the myth and iconography of Theseus. Pherekydes F 60, in which Phereboia bears Ajax to Telamon and subsequently marries Theseus, may show the same tendency to reduce Ajax’s prestige as the Marathon monument at Delphi (n. 73). There was of course much poetic genealogizing in the 6th and 5th c. (cf. Kowalzig 2007).

power, must therefore be seen against a background of suspicion of the family as semi-barbarian.

A less extreme example of the use of *genos* affiliation in this period is provided by Lykomedes of Phlya and Themistokles of Phrearrhioi, both of the Lykomidai. Lykomedes was the first Athenian to capture the stern ornament of a Persian ship at the battle of Artemision; he dedicated it to Apollo Daphnephoros in the *genos* sanctuary at Phlya (*APF* 9238). Themistokles (*APF* 6669 V), responsible for victory at Salamis and for the policy of building a fleet to protect Athens from Persian attack, countered by rebuilding the *genos* *telestêrion*, its ‘mystery house’, which had been damaged by the Persians. But he did not restrict his monuments to the *genos* context. He also built a shrine in the city deme Melite, where he lived, to Artemis Giver-of-Good-Counsel (*Aristoboulê*; doubted by Amandry 1967), and perhaps dedicated land in Piraeus to Athena of the Defences ([He?]-rkane, possibly a reference to wooden walls; *IG* ii² 1035, *SEG* 26. 121/61. 128, Culley 1975). His house in Melite was still pointed out in the time of Demosthenes (23. 207). The Artemis sanctuary was the property of the deme by the 330s, when it was restored by the rich demesman Neoptolemos (*APF* 10652; ch. 29 n. 5); but it seems to have gone out of use fairly soon after its construction, presumably as a result of Themistokles’ exile, so he may originally have appointed a member of his own family (a daughter?) as priest or priestess. (Ogden’s attempt, 1996, 54–8, to rescue the tradition that his mother was a hetaira by suggesting that the Lykomidai nevertheless accepted him is implausible and unnecessary.)

It has been suggested that the story of Theseus’ struggles against Menestheus (the Athenian leader at Troy; Carlier 2005, 128) and against Lykomedes king of Skyros, who supposedly killed him, alluded to Themistokles’ rivalry with Lykomedes of Phlya and Menestheus. However, the name Lykomedes was also in use in the classical period in the family of Lykourgos of the Eteoboutadai (Table 4.6), and Kimon’s links with Theseus are much stronger than those of Themistokles.⁶⁶

⁶⁶ Connor 1972 (cf. *APF* 6669 V); Plut. *Kim.* 8. 5–7. The Theseus–Menestheus story may have gone through several reinterpretations before reaching the version of Plut. *Thes.* 32–5; the name Lykomedes for the king of Skyros is more securely linked to Kimon’s expedition than the other details. It therefore seems equally possible that the name was intended to suggest the hostility of Themistokles–Lykomedes to the project of Kimon–Theseus. Kimon saw no incongruity in returning Theseus’ bones to Athens shortly after presenting the capture of Eion, on the Herms, as the deed of a second Menestheus; cf. the collaboration of Theseus and Menesthes (DS of Skiros) in *FGH* 328 F 111, a story about Theseus’ pilots which seems to be influenced by Athenian interest in Kerkyra in the 430s (Ampolo and Manfredini 1988). Stories of hostility between Theseus and Menestheus depend on (a) chronological developments which raised the question why the Athenian forces at Troy were not commanded by a son of Theseus, and (b) reactions to the radical democracy of the late 5th c. (Cantarelli 1974, though I do not think we need posit a speech composed by Antiphon for Menestheus). For the (later?) connection of the Lykomidai with Lykos son of Pandion see Paus. 4. 1–2 with Kearns 1989, 71 n. 36; Graf 2003, 242–3; Deshours 2006, 216–17.

Kimon was hampered in the 480s by his youth—though he may already have been a target for ostracism—and by the fine imposed on his father. He seems to have responded by associating himself with two other families under suspicion at this time, the Alkmaionidai, accused of conspiracy with the Persians at Marathon, and that of Kallias of Alopeke. The story that Kallias wore the priestly robes of his office as Torchbearer on the battlefield may be an insinuation that he hoped to pass as Persian; it was also said that he had become rich by discovering Persian treasure hidden in a pit.⁶⁷

Kimon's marriage to the Alkmeonid Isodike and his sister Elpinike's marriage to Kallias (ch. 4 n. 38) probably helped him to pay off the fine imposed on Miltiades, and the story that he led a group of rich young horsemen up to the Akropolis before Salamis to dedicate their bridles to Athena, with the promise to serve in the fleet instead of on horseback until Persia was defeated (Plutarch *Kimon* 5), may well be true: he had a flair for symbolic gestures. When fighting on land resumed, in the campaigns to clear Persian garrisons from the coasts of the Aegean, he rapidly made a name for himself as a commander; his victory at Eion was commemorated by the dedication of three grinning ithyphallic Herms in the Agora, with an epigram comparing this Athenian exploit to those of Theseus' successor Menestheus at Troy.⁶⁸ In 476, backed by an oracle commanding the Athenians to recover the bones of Theseus, he cleared the island of Skyros of pirates and returned with bones of heroic proportions, which were enshrined in a new sanctuary, probably in the Agora. (Makres 2014*a* suggests that *IG* i³ 82 deals with the Theseia.)

Kimon's use of the Theseus myth seems to have extended to cooperation with two genê, the Phytalidai of his deme Lakiadai and the Salaminioi. The Phytalidai worshipped Demeter, Kore, and Zeus Meilichios; whether they also had altars of Athena and Poseidon in the fifth century is more doubtful (above, n. 33). Their genos sanctuary was near the place where the Sacred Way to Eleusis crossed the river Kephisos, and the altar of Zeus Meilichios was on the Eleusinian side of the river. They claimed that Demeter had taught their eponymous ancestor Phytalos (Planter) to cultivate figs. They also claimed (perhaps with Kimon's encouragement) that they had purified Theseus, when he arrived at the borders of Attika, from the pollution incurred by his slaughter of criminals along the road from Troizen to Attika. They were put in charge of a cult supported by offerings from

⁶⁷ Plut. *Aristides* 5. 7–8; Schol. Ar. *Clouds* 64 Dübner 1877. On the relation between priestly robes, oriental dress, and theatrical costume see M. C. Miller 1989.

⁶⁸ Plut. *Kim.* 7, Aischines 3. 183–5; Jacoby 1945; Clairmont 1983, 149–54 with pl. 1; R. G. Osborne 1985*c*. The Herms are probably represented on the Pan Painter's pelike in the Louvre (C 10793, BArch 206335); note the similar use of sexual imagery (in my view a democratic appeal to common masculinity, not, as suggested by Clairmont, a reminiscence of aristocracy) on the Eurymedon oinochoe, BArch 1107. Cf. Humphreys 1999; M. C. Miller 2010*b*.

families who claimed descent from the fourteen youths and maidens rescued by Theseus from the Minotaur. The number was canonical, appearing already, as we have seen, on the François vase; the names do not seem to have been firmly fixed. Here was a new type of *genos* cult, no longer connected to the admission procedure of the *phratries*; collectors of the tax would not always enquire too closely into the pedigrees of those who volunteered to pay it.⁶⁹

This support for the *Phythalidai* and their cult seems to have been one of Kimon's ways of gaining popularity in his deme. With the *Salaminioi* he had, as far as we know, no such links. But their *genos* ritual, the *Oschophoria*, like the cults of the *Phythalidai* in their position on the ritual frontier between Attika and Eleusis (ch. 18 n. 68), had elements that fitted it for incorporation into the Theseus legend. We do not know, indeed, in either case whether the claims came in the first place from the *genos* or from Kimon himself; but his repatriation of Theseus' bones provided an occasion for ritual elaboration of an already popular set of stories.

At the *Oschophoria* two youths dressed as girls, carrying bunches of dried grapes (*óschoi*), after a supper in the sanctuary of Athena Skiras at Phaleron supplied by women of the *genos* (the *Deipnophoroi*), processed towards Athens in the black cloaks associated with *epheboi*, accompanied by a crowd shouting mixed cries of grief and rejoicing. It was an honour to be chosen for the role of *óscho-phoros*, and a poet might be commissioned to write a song for the occasion (similar songs were commissioned for the Boiotian *daphnéphoria*, in which a bough of laurel was carried in procession in honour of Apollo; ch. 9 at n. 28).

In my view, this ritual in pre-Kleisthenic times is likely to have been part of the celebration of the *Apatouria* by the *Salaminioi*. Perhaps, instead of joining in the *phratry dorpia* on the first evening of the *Apatouria* (ch. 19 at n. 55)—or in an additional celebration on the day before—the *Salaminioi* supped at Phaleron in their sanctuary, and arrived at Alopeke the next day.

If this suggestion is right, the festival will have lost some of its significance after Kleisthenes' reforms, and was ripe for reinterpretation. On the new explanation, at least in its earlier versions, the procession from Phaleron commemorated Theseus' return with the youths and maidens he had rescued, and the mixed

⁶⁹ *Phythalidai*: Paus. 1. 37. 1–3, Plut. *Thes.* 12, 23; R. Parker 1996, 169, 318. They have left no epigraphic record, though they apparently still existed in Pausanias' day. Schlaifer 1940 suggests that this Theseus tax was still being collected c.342–338 (*Agora XIX* P 26. 479–80). We do not know which Theseus cult it supported; Philochoros knew of 4 sanctuaries (*FGH* 328 F 18 with Jacoby ad loc.; cf. Koumanoudes 1976; Ampolo and Manfredini 1988, 256–7). Garland 1994, 97 rightly points out that Theseus is being categorized as *oikistês* of Athens. The tax may be seen as a compromise between *genos* and parasite systems of funding cult; it does not seem to have generated a lasting association between a particular set of 14 *genê* and Theseus, since the list of his companions in Servius (*Aen.* 6. 21, see below, n. 127) looks like an antiquarian construction.

cries of joy and sorrow were linked to the story that he forgot to hoist a white sail on approaching the Attic coast, and was greeted with the news that his father had killed himself in grief. The date of the festival may have been moved to Pyanopsion 6, two days before the Theseia founded by Kimon, and the procession went all the way to Athens (ch. 19 n. 51).

Once the link with the Theseus story had been made, the way was open for further convergences between myth and ritual, but the early Atthidographers (*FGH* 323a F 14, 325 F 17) are firm on the point that Theseus left Attika to rescue seven young men and seven girls who were already in Crete. It is only Demon (*FGH* 327 F 6), in the fourth century, who interprets the disguise of the Oschophoroi as a ruse, and asserts that Theseus set out with the fourteen victims (two girls being replaced by extra youths in disguise). In this version of the story the suppers at Phaleron precede the start of the expedition. This is not to say that Demon's version was unknown before his time; the painter of the François vase seems to depict the fourteen victims arriving in Crete with Theseus, greeted by Ariadne and her nurse (Hedreen 2011). But perfect consistency between myth and ritual was not required.⁷⁰ The beginning of prose historiography may have given a new authority to historical explanations of ritual, which were also fashionable in drama and choral poetry.

Such explanations derived their plausibility from following pre-existing cultural patterns (ch. 19 n. 59). Pherekydes linked Kimon and Theseus with the Pyanopsia, celebrated on Pyanopsion 7, the day before the Theseia, by claiming

⁷⁰ Oschophoria: *FGH* III B *Suppl.* on 328 F 14–16 (F 17 does not show whether Philochoros sent the 14 to Crete with Theseus or earlier). I do not understand why Calame (1990) refuses to associate the festival with initiation; the code of alimentary symbols he analyses so well seems to fit nicely with the ‘cooking’ of adolescents—except that I suspect the Deipna came at the beginning and not the end of the festival. On the Salaminioi and Alopeke see ch. 19 nn. 174, 183. Rutherford and Irvine 1988 do not prove that there was a race at the Oschophoria; *ôschophorika* and *daphnêphorika* may well have seemed to editors to resemble *epinikia* because all 3 types of song were written for processions honouring young men and boys, and *daphnêphorika* certainly honoured boys chosen for a leading role in a ritual procession. The Salaminioi inscription *Agora* XIX L 4a (line 61) refers to a race (*hamillos*), but it might have been part of a *genos* festival. R. Parker 2005a, 211–17, accepts that there was a race at the Oschophoria, but it is very difficult to see when it would have taken place, and (as he admits) there is no reference in our sources elsewhere to a race at the Oschophoria between competitors drawn from the whole citizen body. Aristodemos (*FGH* 383 F 9; c. 150–30, working in Ptolemaic Egypt) and a scholion to Nicander (*Alex.* 109) evidently imagine a tribal relay race, the ‘baton’ being a bunch of grapes, but this may well be mere guesswork (cf. ch. 19 n. 53). The date Pyanopsion 6 is not certain (Mikalson 1975; R. Parker 1996, 315–16). It is conceivable that the Salaminioi's sacrifice in (?) late Boedromion to Poseidon Hippiodromios and three heroes is a legacy from a pre-Kimonian Oschophoria, but the rest of the account in N. D. Robertson 1992 is implausible. The fullest correspondence between myth and ritual is presented by Plut. *Thes.* 23; it is not certain whether his source is Demon (so Jacoby *ad FGH* 327 F 6) or a later writer. Lykourgos (*FGH* 401 C F 1 = Conomis 1961, 1970, F XIV) does not associate Theseus with the Pyanopsia and *eiresiônê*. On the François vase see above at n. 51; on the Theseia, Schmitt-Pantel 1992, 136–9; R. Parker 2005a, 483–4.

that Theseus had made a vow to Apollo Oulios and Artemis Oulia before setting off on his task (*FGH* 3 F 149). The story of Theseus' voyage to Crete—the exploit of an ephebos—fitted into a complex of festivals celebrating the fruit harvest and the period of anxiety and transition preceding the community's acceptance of its annual crop of young men. Additionally—unlike some of the other Theseus stories that had been equally popular earlier—it celebrated Athenian sea power.

It was perhaps at this time that the Salaminioi were granted contributions from public funds towards the cost of celebrating the Oschophoria, which for this reason does not figure largely in the fourth-century *genos* agreements about the apportionment of cult expenses.⁷¹ Kimon's only ongoing association with the festival, as far as we can see, is that it continued to remind the Athenians of Theseus and so of his recovery of Theseus' bones. He seems to have had no interest in developing a permanent personal involvement in any one cult; after each successful act of symbolic innovation, he moves on to a new enterprise.

In this context it seems less surprising that he apparently made no attempt to exploit *genos* connections with Philaidai and Brauron. The *genos* pedigree published by Pherekydes makes no reference to Brauron, highlighting instead the archonship of Hippokleides in the year when the Panathenaia were instituted and claiming connections with earlier office-holders (R. Thomas 1989). The penteteric *theôria* to Brauron must have existed before the Peloponnesian War (Aristophanes, *Peace* 874), but only the story that the Pelasgians sailed for Lemnos from Brauron with captured Athenian women links the sanctuary to the family of Miltiades. There is no association between the Brauroneion on the Akropolis and the Kimonian wall (R. F. Rhodes and Dobbins 1979), and there is no evidence of a preclassical building on the Brauroneion site.⁷²

⁷¹ *Agora* XIX L 4a; cf. Schlaifer 1940. R. Parker 1996, 308–16, does not discuss this question. The Salaminioi also got a subsidy for their sacrifice to Herakles at Porthmos, 'in the *kyrbeis*', which might suggest a pre-Kleisthenic grant, possibly associated with the development of mining in SE Attika. (The suggestion of Cromey, 1979, 137, that Kleisthenes or another Alkmeonid married into the Salaminioi has no basis.)

⁷² Since there is little evidence to date the Brauroneion on the Akropolis (Goette 2001, 9 attributes it to the Peisistratids, but note Boersma 2000, 52–4), and the excavations at Brauron have not been fully published, the history of this cult is highly problematic, and there is a danger of circular argument, buildings being attributed to Kimon's period because of his *genos*. In reaction, *APF* 8429 XVI went so far as to suggest that the deme area around Brauron was named Philaidai to stress the ties between the Philaidai and Peisistratos; it would be less adventurous to suggest that traditions of Peisistratid ties with this area discouraged Miltiades and Kimon from paying attention to it (cf. Phot. s.v. *Brauronia*, Theodorides 1982; Peppa-Delmousou 1988a, 1988b; ch. 24 n. 100. I do not think Ar.'s use of *theôria* can be pressed as evidence of a *theoria* from Brauron to Delos). The 4th c. dedication to Artemis Brauronia of the wife of Oulios' son (*IG* ii² 1388. 81–2, 1400. 66, 1447. 16, 1451. 16) mentions Kimon but not the *genos*. Bourriot 1976 doubts the existence of the *genos*, but D. L. 10. 1, on Epikouros, seems to provide decisive evidence.

On the other hand, Philaios probably appeared on the Pheidon monument at Delphi commemorating Marathon, replacing either his father Ajax or Oineus, eponym of Kimon's tribe. Miltiades was prominently represented, so Kimon presumably had a hand in the design. Nevertheless, though Vidal-Naquet (1967) is right in noting that at Delphi, outside Attika, Kimon could experiment with the system of tribal heroes in a way that would hardly have been possible at home, we must also recognize that in the Delphian setting his choices must be related to a panhellenic code of signification rather than a local one. Moreover, the monument was, as the representation of the ten heroes showed, Athenian and not personal. The replacement of Hippothoon and Oineus may have been justified partly by the argument that their names meant nothing outside Attika. A panhellenic reading of the monument might indeed suggest some reconciliation of the views of Kimon and his opponents, perhaps at the point when he returned from ostracism. Kodros, on this view, would represent Athenian ties with Messenia—in 459 Athens had facilitated the resettlement of Messenian rebels at Naupaktos on the Korinthian gulf—and hostility to Dorians. Theseus, replacing Oineus, would represent Athenian sea power and the special relationship of Theseus with Kimon and his deme (Pausanias 10. 10. 1).⁷³

Such a reading can at least remind us that by 460 Athens was openly at war with the Peloponnesian league, and the favourable climate for elaboration of mythical genealogies provided by the afterglow of cooperation in the Persian wars was clouding over. Kimon's younger rivals had less interest in references to the mythical past, and gennetai who succeeded in the politics of the post-Ephialtic era had to do so on their merits. The claim that Ephialtes' reforms of 461 deprived the Areiopagos only of additional functions it had acquired over the centuries, while leaving it its original functions, represented a new attitude to the past, though one for which Kleisthenes' decision not to interfere with phratries and genê had paved the way.

The leading family of the Lykomidai in Phlya, conspicuous at Artemision, continued to produce office-holders through the fifth century and into the early years of the fourth (*APF* 9238). Archestratos son of Lykomedes lived up to the hopes expressed in his name by serving as general in 433/2, and may have been one of the treasurers of Athena in 429/8; the Lykomedes killed in action *c.*424

⁷³ The MS text has Phileus; Philaios is Curtius' emendation. Vidal-Naquet (1967) thinks that Kodros replaced Hippothoon, Theseus Ajax, and Philaios Oineus. Alan Griffiths' suggestion (Kearns 1989, 81–2) that the tribes were renamed after Salamis seems to me to raise more problems than it solves (why Philaios, if this is the correct reading, in 507?). N. D. Robertson (1988) points out that Kodros' defeat of a Dorian invasion from Megara, relevant *c.*510, would acquire new resonance in 460 (though he does not appear on vases until *c.*430, Shapiro 1986*a*). Vatin 1991 claimed to have found the base of the monument, with many superimposed inscriptions, but has not persuaded epigraphists. See also Amandry 1998; Stewart 2008, 610 (date after *c.*450).

may have been his eldest son. Chaireas, who was sent by the Athenian fleet from Samos as envoy to Athens on the sacred trireme *Paralos* in 412/11, and served as general in 410, may be Archedestratos' brother. Kleomedes son of Lykomedes of Phlya, general at Melos in 418/7/6, should be a third brother; Diomedes of Phlya, treasurer in 398/7, may be the son of Chaireas or of Kleomedes. However, despite weathering the oligarchic conflicts of the late fifth century successfully, helped perhaps by the reference in Herodotus' history (8. 11. 2) to Lykomedes' actions at Artemision, which placed them among the new nobility of Athens' recent history as well as the old Eupatrid gentry, they seem to have relapsed into purely local activity in the fourth century, although a member of the Phlya branch of the *genos* evidently married Demosthenes' cousin (MZD) Hippokleia, daughter of Demochares of Leukonoion.⁷⁴

Kallias II of the Eleusinian Kerykes (*APF* 7826), linked to Kimon by his marriage to the latter's sister Elpinike, and later to Perikles (his son Hipponikos married Perikles' ex-wife: ch. 14 at nn. 17, 22), played an active part in fifth-century politics, especially as ambassador to both Sparta and Persia, a role for which he was fitted both by the traditional responsibilities of the Kerykes and by his exceptional wealth. He may also have served as general (Badian 1993, 193 n. 33), and if he paid for the construction of the 'Kallion' court was using his wealth in support of one of the major innovations of the new radical democracy. Hipponikos II served as secretary to the Council in 444/3 and as general in 426/5; *pace* Clinton 1974, he must have inherited his father's office as Torchbearer, since his irresponsible and scandal-prone son Kallias III can hardly have acquired it except by hereditary charisma. (*Pace* Sourvinou-Inwood 2011, 333–5, there is no evidence that he was the red-haired Hipponikos of Kratinos and Eupolis.)

Two inscriptions of *c.*460, *IEleus* 13, 19 (*IG* i³ 5, 6), provide evidence of further developments in the relation between the state and Eleusinian cult. The former text prescribes sacrifices to be made by the Eleusinian *hieropoioi*, who were probably appointed by the state, perhaps in association with the Eleusinia, a competitive festival.⁷⁵ *IG* i³ 6 (*IEleus* 19) seems to have provided explicit state

⁷⁴ Hippokleia: n. 103. For further possible identifications, based on the name Archedestratos alone, see *APF*. Chaireas: *HCTV* 266, on Thuc. 8. 74. 1. *APF* suggests that the Lykomedes of Kekropis killed in action *c.*424 was a younger son of Lykomedes I, and Kleomedes the son of this Lykomedes II, but it does not seem to me unlikely that a younger brother of Archedestratos (who may have been still alive in 424/3) was elected to a generalship after the latter's death (cf. Eukrates brother of Nikias, ch. 16 s. 'Aigeis').

⁷⁵ The interpretation of *IEleus* 13 is very controversial; the best discussion is now N. D. Robertson 1990, 69. To the bibliography in *IG* i³ 5 and *IEleus* add Clinton 1988*a*; Brumfield 1981 (criticizing R. M. Simms 1975); Ostwald 1986, 140; Raubitschek and Sakurai 1987; J. K. Davies 1988 (perhaps too much emphasis on state control). The correspondence between the list of sacrifices here and in *SEG* 52. 48 is not particularly close, and it is rash to identify the two lists and attribute both to the Kerykes (Clinton 1979, *IEleus* comm.).

backing for settlement of disputes between the sanctuary and citizens of states other than Athens, and for the embassies of the Eleusinian *spondophoroi* (truce bearers; side B); it confirmed the right of Eumolpidai, Kerykes, the priestess of Demeter, and the *hier[opoioi]* or *hier[ophantidai]* (*IEleus* comm.) to collect fees from initiates (C 6–26), but may have placed some limit on the number of initiates each gennetes could present at a single festival, and forbade gennetai to waive initiation fees, except in the case of the *pais aph' hestias*, representative of the city (C 36–30).

It would probably be a mistake to imagine that the grandees of Eleusis resented these measures. The story that Triptolemos had received the knowledge of agriculture from Demeter and had travelled all over the world to transmit it, already represented on sixth-century vases (Hayashi 1992; *LIMC* s.v.), heightened the reputation of Eleusis as well as contributing to Athens' claims as a centre of civilization. The genê needed the backing of the state to enforce the inviolability of their heralds and of visitors to the sanctuary; indeed, they had every reason, in the years of the first Peloponnesian War and the new court system, to seek clarification and confirmation of their relation with the city.⁷⁶

Possibly it was in part the restatement of the privileges of the Eleusinian genê that prompted one of the cult genê of the Akropolis, the Praxiergidai, to seek reconfirmation of its own privileges. The appearance of a Praxiergos as archon in 471/0⁷⁷ may be further evidence of political ambitions in this genos in the Kimonian era. The question had been referred to Delphi, which seems to suggest that there had been some dispute that Athenian courts were unable to handle, either between the Praxiergidai and another genos or between the Praxiergidai and Athenian officials: possibly it was the right of the Praxiergidai to close the Akropolis for their annual cleaning festival, the Plynteria, that was the cause of

⁷⁶ Courts: Humphreys 1983*b*. Some special arrangements are made for (Athenian?) orphans: can these be associated with the introduction of the state burial of war dead? The ban on waiving fees is significant; the Mysteries were not to be used to create collective or individual relations of patronage. Athens was to exercise some control over Eleusinian finances; further controls were introduced in the early 440s (*IG* i³ 32 = *IEleus* 30; Clinton (comm.) following Mattingly 1974, dates this text c.432/1), perhaps on the pretext of building operations, with the appointment of an annual board of *epistatai*. The existence of this board, and the sanctity of the site, which safeguarded it from Spartan attack, will account for singularities in the relationship of Eleusis to the Treasurers of the Other Gods (Linders 1975).

⁷⁷ There is also a Demotion, in 470/69; Kleisthenes' reforms may have encouraged a fashion for re-using the names of group eponyms (but note also Demotion of Lamptrai, *IG* ii³ 4. 54. 39, cf. Xen. *Hell.* 7. 4. 4; Demotion of Phegous, *IG* ii² 7642; Demotion of Acharnai, *PA* 3649; Demotion of Prospalta, *Agora* XV 62. 121). The change in the method of appointing archons dated by *A.P.* (22. 5) in 487 probably did not make a great difference; the figure 500 for the list of candidates from whom archons were selected by lot must be wrong (Badian 1971, P. J. Rhodes 1981*a* ad loc.; ch. 21 nn. 51–2). The office of general was becoming more important, especially since there were no bars to re-election, yet on the other hand only a fairly small and elite group would have had the confidence to stand for positions that still carried significant public responsibilities, especially in the judicial sphere (Humphreys 1983*b*).

contention. Delphi sent back an oracle favourable to the Praxiergidai, which was accepted by the Assembly, and the Praxiergidai made a further request that the Assembly's decision should be inscribed on stone and set up on the Akropolis. The resulting inscription (*IG* i³ 7, *SEG* 54. 38) is explicitly stated to be a record of the 'ancestral rights' (*patria*) of the Praxiergidai.⁷⁸

Echoes of this dispute, or evidence that discussion of 'ancestral rights' in the sphere of cult became a frequent phenomenon in the fifth century, may be preserved in a story told by Plutarch (*Moralia* 534c) as an example of the tactful use of a joke to reject an unwelcome request. Lysimache, priestess of Athena Polias from c.440–380, is said to have declined to pour a libation for woodcutters with the excuse, 'I fear it may become *patrion* if I do.'

The Eteoboutadai, secure in their claims on Athens' two major priesthoods, could afford to look down on the anxieties of lesser genê. Nevertheless, they did not play a major role in Athenian politics in the fifth century. Lysimache herself no doubt became a prominent figure through her exceptionally long tenure of office of priestess—she served for 64 years and lived to be 80 or 90—and was probably the model for Aristophanes' Lysistrata, but her kin appear in the record only in the office of her brother Lysikles as secretary of the treasurers of Athena in 416/5. The Boutadai branch of the genos, which appointed the priest of Poseidon Erechtheus, may have produced the Lykourgos (II) who served as general in 476/5, but must have suffered from competition with Kimon, who belonged to the same tribe; the claim made at the end of the fourth century that Lykourgos II's son Lykomedes was 'buried in the Kerameikos' ([Plutarch] *Moralia* 843e), if not based on *SEMA* 174 (Table 4.6), may only mean that he died on military service. Lykourgos III was known only for his activities as priest and, as we shall see, attracted some gibes from comic poets, though he was sufficiently wealthy and free from oligarchic sympathies to be killed by the oligarchic *junta* in 404/3.⁷⁹

⁷⁸ *LS* 15; D. M. Lewis 1954, 17–21 (with a different interpretation of the reference to an earlier decree); R. Parker 1996, 307–8; Lambert 1999*a*. On the Plynteria see Burkert 1970*a*; Mikalson 1975, 163–4; N. D. Robertson 1983*a*; Brulé 1987; R. Parker 2005*a*, 478–9; Sourvinou-Inwood 2011. Timotheos II of Rhamnous, nephew (BS) of Iphikrates, made a dedication with members of the Praxiergidai c.350 (Jameson 2000, *SEG* 49. 188); but he was not necessarily a gennetes himself, and the gennetai whose names survive come from Alopeke, Agryle, and Melite. On possible connections between the Praxiergidai and the Salaminioi see Lambert 1999*a*; ch. 19 n. 174. The Praxiergidai seem to have been struggling in the middle of the 3rd c. (archon Alkibiades), when the priestess of Athena Polias gave them 100 dr. for their traditional sacrifice from her private estate (*IG* ii³ 1026), but were still able to pass an honorary decree for the priestess of Athena Polias in the 3rd c. CE (ii² 3678). Close association between this genos and the Eteoboutadai's priestess is also implied by Euripides' choice of the name Praxithea for the wife of Erechtheus, who is to be the first priestess, in his *Erechtheus*. On the gennetai who escort the Palladion to the sea and back (not Praxiergidai?), see above, n. 30.

⁷⁹ *APF* 4549, 9251; D. M. Lewis 1955, 1–12; Georgoudi 2009. Both *APF* and Develin (*AO*) doubt whether Lykourgos II and Kimon, members of the same tribe, could have served together as generals in

The leading families of the Eumolpidai seems to have maintained a traditionalist stance. A Lakrateides is said to have been one of Perikles' accusers (with a Drakontides, perhaps the father of the priestess Lysimache) in 430; if this is not a claim made later, when Lakrateides III of (?) Paiania was holding the office of hierophant, he will be identical with the Lakrateides whose name is used by Aristophanes in the *Acharnians* (220; 425 BCE) to typify the older generation; he will have represented defence of traditional beliefs against the new scientific ideas of Perikles' crony Anaxagoras. The speaker of Lysias 6, accusing Andokides IV on behalf of the Eumolpidai in 399, refers to the service of his great-grandfather (FFF) as hierophant and the role played by his FF Diokles in a trial of Megarians for impiety, perhaps in the 430s.⁸⁰

The only two possible instances of the use of *genos* traditions in foreign relations after the death of Kimon in 450 are problematic. Our text of Thucydides 1. 51. 4 names an Andokides as general on the second Athenian expedition to Kerkyra (Corfu) in 433/2. This would be Andokides III son of Leogoras I of Kydathenaion, grandfather of the orator Andokides IV; a somewhat garbled quotation from Hellanikos (*FGH* 323a F 24) adds that he was chosen because of his ancestral ties with the Ionian islands, being descended from Hermes through Odysseus and Telemachos. Documentary sources show that the Thucydides reading is a mistake; the general in question was Drakontides of Thorai (*IG* i³ 364. 20–1; *APF* 4551). But the Hellanikos passage seems to provide respectable evidence that Athens sent someone on this expedition whose pedigree provided a basis for claiming

476/5. No source states explicitly that Lykourgos III held the *genos* priesthood, but everything we hear about him seems to imply it; he was certainly a conspicuous figure (below, n. 87). *APF* suggested that Aristodemos of Bate, who denounced him to the Thirty, was a *genos* rival. Two horoi copied in the Roman period from texts in 5th c. Attic script marked land belonging to Athena controlled by the Eteoboutadai (*Agora* XIX H 23–4; on *guês* see Walbank 1983, Part II n. 5. A 5th c. text would perhaps have said *proshékôn Eteo[boutadais]* rather than *Eteo[boutadôn genêi]*?); this may be our earliest evidence for the use of the name Eteoboutadai. The land may have been re-marked when sacred land was reclaimed from private occupiers in the late 1st c. BCE (*SEG* 26. 121/54. 199/60. 161/61. 128, *IG* ii² 1035; Schmalz 2008); Meritt, however (*Hesp.* 1968, 292–4, nos 35–6, followed by *Agora* XIX) put the texts in the 2nd c. CE. I do not see much reason to assume that the land was planted with sacred olives; these seem to have been widely distributed (cf. Lys. 7), and represent a method of distributing cult costs among landowners quite divergent from the *genos* system. Epiteles and Oinochares sons of Soinautes of Pergase, who made a dedication to Poseidon Erechtheus together c.450 (*IG* i³ 873, cf. 1184; Epiteles is perhaps the general of 448/7, *IG* i³ 943, M/L 48) may be Eteoboutadai, but since Pergase was in the tribe Erechtheis they may alternatively be tribesmen showing a particular devotion to their tribal eponym. Their descendant Epiteles son of Soinomos of Pergase, perhaps a fellow *gennêtês* of Lykourgos, was one of the *epimelêtai* of the Amphiaraiia in 329/8 (*IG* ii³ 355), *naopoios* at Delphi over the period 328–3, and *proxenos* in 327/6 (*CID* II 32. 95, 97, 102, 119; p. 209). Cf. chs. 12 n. 72; 23 n. 31.

⁸⁰ Plut. *Per.* 35 (Herakl. Pont. F 47 Wehrli 1953, 27 Schütrumpf 2008); cf. *HCT* II 184–9, M. H. Hansen 1975, 71–3 no. 6. A coalition of Lakrateides, Drakontides, and Thoukydides son of Melesias (*HCT*, 189) would certainly be an impressive array of conservative forces. However, *HCT*'s interpretation of Kratinos' *Ploutoi* (F 171 *PCG* 4) is very problematic, and there are other men named Drakontides in Thorai (*APF* 4551) and Aphidnai. Idomeneus named Kleon as an accuser (Plut. *ibid.*), but this may have been a guess.

long-standing ties with Kerkyra. The genos that made these claims seems to have been the Kephallidai. According to Aristotle's *Constitution of the Ithakans* (F 462 V. Rose 1870) their ancestor Kephalos, expelled from Attika for homicide, had settled in Kephallenia. Unable to sire children, he consulted the Delphic oracle and was told to have intercourse with the first creature he met on his return home; this turned out to be a she-bear, and the result of their union was Odysseus' grandfather (FF) Arkeisios, the bear-man. The connection with Hermes may have been made by Hellanikos through Odysseus' MF Autolykos, who also appears in Pherekydes (FGH 3 F 120) as Kephalos' cousin (FZS), since Philonis, daughter of Kephalos' father Deioneus, is said to have borne Autolykos to Hermes. Since Andokides IV never refers to the Kephallidai, and his claim to belong to a line (*oikia*) of exceptional antiquity (1. 147) suggests a more distinguished genos, it is perhaps more likely that Drakontides was the Kephallid; the hesitation in sources on this episode between Kydathenaion and Thorai as Andokides' deme, and the location of Thorai in south-east Attika, where Kephalos was eponym of the deme Kephale and was worshipped at Thorikos, rather favour this view. It is perhaps too far-fetched to suggest that the name Drakontides may have appealed to a Kephallid family because the myth of Kephalos was one of the famous stories about the mythical history of homicide trials in Athens; we might at least conclude from the appearance of the same name in the priestly branch of the Eteoboutadai in Bate (APF 4549), that through reference to Drakon the name carried connotations of ancient nobility.⁸¹

A second possible case of the manipulation of genos traditions in foreign relations is even more problematic. Two inscriptions of c.400 on Delos mark the shrines of a Tritopator (anonymous ancestor) and of the Nymphs of the Pyrrhakidai. In the late second century BCE the Pyrrhakidai re-emerge as an Athenian genos, playing a prominent role in sacred embassies to Delphi (below, n. 145). Their ancestor Pyrrhakos is said to have been a contemporary of Erysichthon, another genos eponym with Delian connections (Hesychius s.v. *Pyrrhakos*). However, some of the Pyrrhakidai of the second century have un-Attic names; one would be tempted to dismiss them as a Delian genos which somehow established itself in Athens after 166, were it not for the addition to the Tritopator inscription of the word *Aigiliôn*, which seems to imply that it was set up by a

⁸¹ APF 828, 4551. Statements that Andokides was a Keryx, while perhaps based partly on inferences from the reference to his Hermes *patrôios* in Lys. 6. 11 (i.e. the Herm outside his family house), may also have derived from *muôn* in Andok. 1. 132. Wilamowitz' arguments against membership of the Kerykes (1893 II, 74 n. 5) still seem strong; however, although *IEleus* II shows that there was a preliminary initiation that any member of the Eumolpidai or Kerykes could perform, it still seems likely that *muein* could be used more loosely to denote the sponsoring of a non-Athenian, as in [Dem.] 59. 21, referring to Lysias. Andokides' descent from Telemachos and Nausikaa (hence Odysseus and Autolykos): Suda s.v. *Andokides*, Plut. *Alk.* 21. Philonis, FGH 3 F 120 (she gets a *trapeza* at Thorikos, IG i³ 256 bis/SEG 33. 147. 44). The reference to Hermes in [Plut.] *Mor.* 834b may be due to contamination with the tradition that Andokides was a Keryx. Can we believe that Thuc. picked up a mistake from Hellanikos? In any case the link between Kephalos and Kephallenia should be a product of Athenian interests in the 5th c. It was perhaps only in this period that the Kephallidai, whose cultic responsibilities centred on the temple of Apollo on Mt Aigaleos, probably at modern Dafni (Paus. 1. 37. 6–7; Oikonomides 1959, Travlos 1988, 177–9), became interested in linking themselves with the hero of SE Attika. There is no evidence that a branch of the genos had ever been responsible for the sacrifices to Kephalos and Prokris at Thorikos (SEG 33. 147; cf. Kearns 1989, s.v. Kephalos; Brancaccio 2012).

branch of the Pyrrhakidai that had connections with the attic deme Aigilia, possibly through intermarriage with an Athenian resident of Delos. There was state-owned land in Delos in the second century associated by name with the Pyrrhakidai, and we do not hear of Attic genê acquiring property overseas in any other source.⁸²

Tritopatreis seem to have been anonymous, unidentifiable ancestors; it has been suggested that the circular monument of the Pyrrhakidai, which was used for sacrifices (P. Roussel 1929), was set up in reaction against the Athenian repurification of the island in 426/5, when the graves that had not been disturbed by Peisistratos were opened and their contents reburied on the neighbouring island of Rheneia. An alternative explanation, which would be less problematic chronologically, would be that it marked an overlooked burial discovered later that was given special status to legitimize its survival.

The Athenians too worshipped Tritopatreis. They had a prominent shrine in the Kerameikos, in the angle of the fork between the Sacred Way to Eleusis and the tomb-lined road leading to the Academy, marked by four *horoi* declaring the area sacred and not to be entered (*abaton*); the delimited area contained a low round tomb of fifth-century date, and though one of the horoi (*IG* i³ 1067) is dated 500–480 it seems likely that the enclosure was reinstated, if not created, in the second half of the fifth century (*IG* i³ 1066: 445–10). Concern over the disturbance of earlier graves may have been at work here too (ch. 10 n. 126). The *Tritopatreis energidai*, a horos of whose sanctuary, dated to the beginning of the fourth century, was found in re-use in the Agora (*Agora* XIX H 20), are not a genos group but sinister powers addressed with a placatory epithet; but the Zakyadai, who set up a horos to their Tritopatreis at about the same date (*IG* ii² 2615; no provenance), may be an otherwise unattested genos (or phratry). Sacrifices to Tritopatreis were made in Mounichion by an unidentified group which published its ritual calendar c.470–50 (*IG* i³ 246); in Skirophorion by the Marathonian Tetrapolis (*IG* ii² 1358 = *SEG* 50. 168 col. II 33) and in Mounichion by the deme Erchia (*LS* 18 D 41–6). The Euphronidai to whom a Kal(l)ias dedicated a herm c.500–480 near Trachones (*CEG* I 307, *IG* i³ 1007) may have been similar beings. Phanodemos (*FGH* 325 F 6) claimed that only Athenian women made offerings to the Tritopatreis when they wanted to bear children; their association with fertility and with the winds probably derives from scientological teachings of Orphic

⁸² Interpretation is complicated by the fact that Delos was independent from Athens 405–394. *ID* 66–7; P. Roussel 1929; land, *ID* 1416 B 1. 57–63 (157–5 BCE). Some Delian families moved to Athens and were given citizenship c.165 (Roussel 1916, 18). The known Pyrrhakidai of the 2nd c. (below, n. 145) are Aineias son of Herakleides, Eukles son of Timanax and Timanax son of Eukles of Phlya, and Sosikrates son of Theotimos. Pyrrhakos is a Cycladic name (cf. *BE* 2012, 160); a Delian Pyrrhakos 410/9, V. Chankowski 2008 no. 5 = *ID* 93. 46. Timanax and Timonax (the Delian form) are much commoner in the Aegean than in Attika, though the one Timanax in *PA* (*IG* i² 1065, now dated 4th c., *IG* i³ p. 973; his deme is Peiraia) has been joined by Proxenos son of Timanax on 16 ostraka (Brenne 2001 no. 239; his deme may have been Amphitrope). See *LGPNI*, II. Papazarkadas 2011, Appendix V (criticisms, *BE* 2012, 160, Feyel), argues that the P. were an Attic genos dating back to at least the 5th c., which had ‘special ties’ with Aigilia (no Aigilieis among attested Athenians on Delos in the classical period, V. Chankowski 2008, 525–9; however, she suggests p. 372 that the Pyrrhakidai were an Athenian family with ancestral links to Delos). But it seems also possible that Athenians from Aigilia had joined a Delian group.

type. The element *trito-* in their name was not a literal reference to great-grandfathers but a superlative: they were ancestors of remote and untraceable antiquity (cf. Brulé 1987, 328–9).⁸³

Gené left few other markers on the land in the fifth century, but two horoi of Roman date seem to copy fifth-century inscriptions marking a tract of land (*gués*) as the property of Athena Polias, administered by the Eteoboutadai (above, n. 79). The fragmentary text *IG* i³ 247, dated c.460/50, which may deal with the lease of land (or appointment to a priesthood?) owned by a group called —ntidai (n. 142), might have been set up by the deme Kydantidai, whose territory was not far from Spata, where it was found, or by a *genos* or phratry. Some of the treasures transferred from rural shrines to the Akropolis in the 430s, when war was imminent, and placed under the supervision of the Treasurers of the Other Gods, may have come from *genos* shrines: that of Artemis at Mounichia, whose priests were supposed to descend from Embaros, founder of the cult (*FGH* 323a F 5; Sale 1975; Brulé 1987; R. Parker 1996, 319–20; Viscardi 2014); of Apollo Zoster and (?)Athena Zosteria; of Athena ‘by the Palladion’, or ‘by the Palladion at Derioneia’, if she had any association with the cult of Zeus by the Palladion in which the Gephyraioi and Bouzyges were involved in the late first century BCE (n. 30); perhaps that of Ion ‘from Pleistieis’, unattested elsewhere. The parasitai of Athena Pallenis and Herakles at Kynosarges also deposited their treasures at this time, as did a number of better-known sanctuaries for which no *genos* association is attested (*IG* i³ 52, 369, 383; Linders 1975).

Many of the leading families of Periklean Athens either had no *genos* affiliation or did not care to advertise it. Perikles’ family could claim an ancestor, Ariphron, in the list of the ten-year archons who succeeded the kings and life archons, but this may well mean only that the family was already prominent when the list was produced. Indeed, the list of ten-year archons may be later than the list of annual *eponymoi* from 683/2, perhaps only created by Kleidemos in the fourth century. Even Perikles’ more conventional rival Thoukydides son of Melesias of Alopeke seems to have been linked to the panhellenic aristocracy only by his father’s fame as a wrestler and trainer of wrestlers, and not by any right to boast of mythical ancestry.⁸⁴ Aristides, also of Alopeke, made his own reputation, as did the pankratiast Sophanes of Dekeleia, though Herodotus’ note on the latter (9. 73–5, cf. 6. 92) may indicate that he belonged to the *oikos* (*genos*) Dekeleieis, whose claim to have helped the Dioskouroi in their search for Helen became relevant when Sparta invaded Attika in the Peloponnesian War (ch. 19 n. 86). Leagros I of Kerameis, general with Sophanes at Drabeskos (Humphreys 1999; forthcoming *b*), belonged to a family prominent as *kaloi* on vase paintings for two generations, perhaps in part because they belonged to the potters’ deme; his son

⁸³ *CEG* 307 and *IG* i³ 1007 suggest that the Euphronides were Nymphs. On Tritopatris see also Bourriot 1976; Kearns 1989; ch. 10 nn. 124–6; n. 45 above. On *tris-* and *tri-* as superlatives, Latte and Erbse 1965, 271. The Kerameikos hieron, constructed between c.445 and 410 (*IG* i³ 1066), probably ceased to be visible at the end of the 4th c. (*AA* 1965, 328). Tritopatris seem more like the *kéres* of the Anthesteria than family or *genos* ancestors (*FGH* 325 F 6, 327 F 2, 328 F 182, 352 F 1). The resemblance in form and use (both contained sacrificial debris) of the Pyrrhakidai monuments to the Tritopator and to the Nymphs may perhaps indicate that Tritopatris are chthonic powers contacted through proximity to graves rather than ancestors buried in them.

⁸⁴ *APF* 7268; Wade-Gery 1932. On his affinal link with the Philaidai see ch. 14 n. 20.

Glaukon II was also elected general at least twice (ch. 16 n. 39). Glaukon married into the Philaidai (*APF* 3027; 8429 VI), and his daughter married the Torchbearer Kallias III of Alopeke. But when the comic poet Plato cited Leagros II, Glaukon's son, as an example of the sons who fail to live up to their great ancestry (*megan genos*), he was alluding only to the reputations of Leagros' father and grandfather. There is no sign that the family belonged to a *genos* in the technical sense.⁸⁵

The family into which Glaukon II married was rich and aristocratic and clearly of some significance in Athenian upper-class social life in the fifth century, but does not present a clear political profile in our sources. Epilykos I, perhaps a distant cousin of Miltiades IV, appears as *kalos* on many vases of the late sixth century; his son Teisandros II was a candidate for ostracism in 443. Teisandros' three daughters married Perikles' son Xanthippos II, Glaukon II of Kerameis, and Leogoras II of Kydathenaion, father of the orator Andokides IV. Their brother Epilykos II served as councillor and secretary of the Council, and as ambassador to Susa, in 424/3, and died on the Sicilian campaign of 415–413. He left two infant daughters, one of whom survived to marriageable age and may have married her cousin (FZS) Andokides.⁸⁶

By the 420s some *genos* rituals were beginning to seem not only archaic but absurd, in comparison with the more obviously rational cults of Athena Hygieia (introduced by Perikles), Zeus Soter and Athena Sotera, or Asklepios (privately imported from Epidauros in 420), with the generous provision of meat at state-funded sacrifices, and with the more colourful torch-races in honour of Pan, Prometheus, Hephaistos, and Bendis. The Unjust Argument of Aristophanes' *Clouds* (422; line 984) characterizes his opponent's nostalgic picture of earlier and better days as 'all that old stuff about cicada-ornaments and the Dipolieia'; there were jokes associating Lykourgos III with Egypt;⁸⁷ the Bouzyges' cursing, which was evidently carried off with a fine dramatic air by the holder of the office c.415, Demostratos, was another source for jokes in comedy; Alkibiades and his

⁸⁵ *APF* 3027; cf. however W. Thompson 1971; Francis and Vickers 1981; Mannack 2014. Plato Com. *PCG* 7 F 65 (c.390); cf. Bourriot 1976.

⁸⁶ *APF* 8429 III–IV; Table 4.2. There were however two other Athenians named Teisandros in the 6th–early 5th c.: the father of Kleisthenes' opponent Isagoras, from a family that worshipped 'the Karian Zeus' but did not have notable ancestors (Hdt. 5. 66. 1), and the son of Staseas, named on an ostrakon in the large Kerameikos deposit (Brenne 2001 no. 253); cf. also *APF* 8410 and perhaps *IG* ii² 4329, *SEG* 16. 168. If any branch of the Philaidai was associated with the construction of the Brauroneion on the Akropolis and the building work at Brauron in the second half of the 5th c., Epilykos' family would have to be considered; but see above, n. 72.

⁸⁷ The explanation that he had helped to introduce the cult of Isis to Athens rests only on the comic poets and on Lykourgos IV's support for it (*IG* ii³ 337). Kratinos says in the *Deliaides* (c.425? *PCG* 4 F 32; cf. Ar. *Birds* 1291–6, Pherekrates *PCG* 7 F 11) that he wore a *kalasiris* (Hdt. 2. 81), and since there is some other evidence for the adoption of exotic robes by priests (n. 67), this may have been the basis for the ridicule. On Philyllios' *Phreôrychoi* see n. 44.

friends parodied the Mysteries. It was a proof of modernity to take risks with the supernatural, mutilating images of Hermes or feasting on offerings left for the underworld goddess Hekate at crossroads and meeting on days of ill-omen (ch. 13 n. 4). Though there may have been political motives for the mutilation of the Herms, awareness of this fashion for playing ‘chicken’ with the gods lay behind both the view that the mutilation was a drunken prank that should not have been taken seriously and the use made of it as an occasion for accusing Alkibiades of the more serious offence of parodying the Mysteries. Alkibiades’ prosecutor was not a member of one of the major Eleusinian genê, but Thettalos son of Kimon, a Philaid but also a representative of the new *nobiles* whose ancestors had distinguished themselves in the Persian wars. Aristophanes’ jokes about the award of dining rights in the Prytaneion to Kleon, after his capture of the Spartan forces on Sphakteria in 424, were perhaps made in the same spirit as Thettalos’ prosecution.⁸⁸ The horizon defining worthiness to hold power in Athens is no longer set, by those who still tried to impose such criteria, by reference to Eupatridhood, but instead by reference to a new heroic age located in the late sixth and early fifth century. As in late republican Rome, two generations of distinction could ennoble a family.

Plato’s dialogues show young gennetai who cared little about their status. When Alkibiades, in a discussion of hereditary ability, claims descent from Zeus through Eurysakes—our only evidence that he belonged to the *genos* Salaminioi—Sokrates, whose father made terracotta statues, counters that he too is descended from Zeus, through Daidalos (Plato *Alkibiades I* 121a). In the *Lysis* (205 c–d), the friends of Lysis II of Aixone tease his admirer Hippothales for writing poems in which he referred to the entertainment of Herakles by an ancestor, in return for which Lysis’ family had been granted a hereditary priesthood of Herakles:

⁸⁸ Rationalization: Humphreys 1986*c*. Bouzyges: Ar. *Lys.* 387–97 (cf. Weill 1966), Eupolis *Démoi* (417 BCE?, Storey 2003, 120; cf. ch. 22 n. 24) F 103, 113 PCG; he is choleric (*cholozygês*) and curse-laden (*alitêrios*) both individually and in performance of his official duties. It seems likely that the Bouzyges Demostratos and his successor Demainetos, general in the Korinthian War (Aisch. 2. 78), were kin; the names turn up in wealthy families in both Kerameis and Paiania (APF 3273, 3276). If they belonged to Kerameis (ch. 27 n. 4), Demostratos may have been archon in 393/2 (Aischines’ reference does not necessarily imply that Demainetos was already Bouzyges at that time); but if Timasitheos I was *dinaitês* in 371 (IG ii³ 4. 24, APF 3273; see Lambert 2004*b* n. 5) his son Demainetos would hardly be old enough for the generalship. The marriage of Demostratos II (?) of Paiania to a priestess of Aglauros (Salaminioi?; on the Euenoridai see n. 108) in the early 3rd c. may be an additional reason for thinking that his family was of gennetic status (IG ii³ 1002; ch. 17, Table 17.1). It has been suggested that Diokles of Halai Aixonides, whose bones were apparently buried at Vari in a RF bell krater of c.430 representing a heroic ploughman, was a member of the Bouzygai (Harvard 60. 345, BArch 214755; cf. R. Parker 2005*a*, 198 n. 24); but since there was a Eumolpid family in the deme (n. 116) the ploughman may be Triptolemos (so ARV² 1115. 30 (19)) rather than Bouzyges. Diotimos son of Diodoros of Halai, Bouzyges in the late 1st c. BCE (SEG 30. 85) was Gephyraios, and is best left out of the discussion (n. 133). Alkibiades’ prosecution: Plut. *Alk.* 22. 4, M. H. Hansen 1975 no. 12.

Ktesippos dismisses such claims to distinction as old wives' tales. Neither Lysis nor Alkibiades needed to boast of mythical ancestors or *genos* affiliation. Lysis' father, grandfather, and other ancestors had won chariot victories at the Pythian, Isthmian, and Nemean games (ch. 11 n. 40); his grandfather Lysis I appears as *kalos* on many vases of the 470s–460s, and his father may have been a lover of Alkibiades. The latter also came from a racing family: a dedication by his FFFF Alkibiades I at Delphi in the last quarter of the sixth century probably commemorated a victory there. His great-grandfather (FFF) Kleinias I had fought conspicuously at Artemision in a privately owned trireme (Herodotus 8. 17); his grandfather Alkibiades II had been ostracized, perhaps c.460, though he had at that time renounced the proxeny of Sparta which had probably been held by the family since at least the middle of the sixth century. Alkibiades III's father Kleinias II possibly proposed the 'tribute decree', if it was passed in 448/7 (*IG* i³ 34), and died at the battle of Koroneia in the following year, leaving his sons in the guardianship of Perikles. This put Alkibiades III in an excellent position to take up a political career, which he did at the earliest possible opportunity.⁸⁹

Genos affiliation therefore was not incompatible with modernism; the ranks of the oligarchs of the late fifth century are likely to have included traditionalist members of old *genê* as well as the young intellectuals who in many cases came from the same background. Euripides evidently felt no incongruity in combining innovative interpretations of myth with references to antiquarian lore. Kritias, as we have seen, may have belonged to the Arynandridai; in any case he came from a Eupatrid family, though the idea that he was a descendant of Kodros and Melanthos may derive only from the tradition (*Timaios* 20e) that Kritias' ancestor Dropides II was a relative (*oikeios*) of Solon, to whom Plutarch (*Solon* 1. 2) attributes this ancestry.⁹⁰ Plato's own right to this descent (Diogenes Laertios 3. 1) is even slimmer, since it may be a loose inference from his relationship to Kritias, his MFBS. The retreat of the Thirty to Eleusis when they could no longer retain control of Athens may indicate that they

⁸⁹ *APF* 600; section II should have laid to rest the idea that Alkibiades belonged to a *genos* called Eupatridai. The description of Chairion as an Athenian Eupatrid, *IG* i³ 1516, is no doubt due to the Eretrian context. On Hellenistic Eupatridai see below, n. 133; R. Parker 1996, 323–4. Lysis, *APF* 9574; tombstone representing him with his son Timokleides, *SEMA* 50 (chs. 11 n. 40, 29 n. 105). Lysis' daughter Isthmonike married Euegoros son of Philoinos of Paiania, possibly proposer of a law on festivals (Dem. 21. 10); Kallias son of Kalliades of Aixone, priest of the Herakleidai in 320/19 (*IG* ii² 1199, see Whitehead 1986a) may also be a member of the *genos* (his tombstone, from Aixone, *IG* ii² 5430; but 5413–14, associated with this family by *APF*, come from Acharnai, and it may be rash to place weight on the common name Kalliades). Current opinion dates *IG* i³ 34 c.425.

⁹⁰ *APF* 8792. N. D. Robertson 1988 suggests that the proverbial phrase *eugenesteros Kodrou* (Zenob. *Prov.* 4. 3) may refer to courage rather than aristocratic birth, but Lucian *Tim.* 23 and the use of *semmoteros* as a synonym in *Anth. Pal.* 9. 63 (Gow and Page 1965, no. 958) tell against this. The Medontidai, supposedly descended from Melanthos and Kodros, were a phratry (ch. 19 n. 153).

hoped to find some sympathy for oligarchy among the dominant families there, as well as a base that would be secure from military attack and had its own sources of revenue.⁹¹

The short-lived but violent oligarchies of the late fifth century left a nasty hangover of suspicions and accusations, despite a formal amnesty (chs. 7, 14 at n. 39, 15 s. 'The Thirty'); one of the least attractive responses was the propensity of men who were not free from suspicion to attack targets more obvious than themselves. Sokrates' accuser Lykon, father of Autolykos of Thorikos, who had been killed by the Thirty, is said by the scholia to Plato's *Apology* (23e) to be Ionian (*Ion*) by *genos*; this seems to mean that he belonged to a *genos* Ionidai, which could well have existed in eastern Attika. Pausanias was shown a tomb of Ion at Potamos, near Thorikos, and there was a deme Ionidai further north, near Gargettos.⁹² Autolykos had been at least loosely connected with the Sokratic circle; he is represented by Xenophon as the guest of honour at a symposium given by Kallias III to celebrate his athletic victory in the pankration in 422. Kallias himself, who had opened his house to sophists when he inherited his father's estate (and office) c.423, if we can believe Plato's *Protagoras*, attacked Andokides in 399 for impiety towards the Eleusinian goddesses. He was claiming the right to speak for the Eleusinian establishment, and if the speech against Andokides attributed to Lysias (6) was indeed written for this trial, was supported by a member of the Eumolpidai, whose great-grandfather had held the office of hierophant. This speaker was called either Meletos or Epichares. If he was a Meletos, he may have been identical with, or related to, (a) the Meletos who negotiated with Sparta on behalf of the Athenian oligarchs (Xenophon *Hellenika* 2. 4. 36), (b) the Meletos condemned in 415 for parodying the Mysteries, or (c) the Meletos who prosecuted Sokrates.⁹³

⁹¹ D. L. does however attribute Kodrid descent to Plato's father Ariston (ch. 24 n. 4). Note the role of Kleokritos, herald of the Mysteries (hence a Keryx), in negotiations between the returned democrats and the oligarchs after the battle of Mounichia (Xen. *Hell.* 2. 4. 20–22; he may be the archon of 413/2 and target of Ar. *Birds* 877 and Eupolis F 120, 136 PCG, but the name is fairly common: cf. IG i³ 1146, 1186, 1458). The oligarchs, however, did not stress cult during their time in power, and hostile sources preferred to stress their humble origins (Lys. 20. 11, Phrynichos) and encouragement of the dregs of society (Lys. 13. 67–8).

⁹² Paus. 1. 31. 2; ch. 24 n. 90. On Ion and the history of the concept 'Ionian' see Wilamowitz 1926, 1–10 (I am not convinced by Sakellariou 1976). The sanctuary of Ion *ek Pleistieíon*, whose funds were managed by the Treasurers of the Other Gods during the Peloponnesian War (Linders 1975, 79–80 n. 36; IG i³ 383. 147–9) has not been located.

⁹³ Wilamowitz 1893 II 74 n. 5; Dover 1968*a*. The name Zakoros in Lys. 6 may be a gloss (Martha 1882, 156). MacDowell (1962, 208–10) suggests that Andokides' prosecutor was the Meletos of Xen. *Hell.* 2. 4. 36, sent as ambassador to Sparta by the Athenian oligarchs in 403, during the process of reconciliation encouraged by Pausanias, with Kephisophon (of Aphidnai? see APF 8410). If so, he is unlikely to be Sokrates' prosecutor Meletos son of Meletos of Pithos, a young man in 399, and the occurrence of the common name Diokles in Pithos (APF 4048; his dedication to Athena c.390–80, CEG II 756, IG ii² 4320) is hardly a strong argument for assigning Lysias' speaker to that deme, though he could be the

Two stories about the responses of Eleusinian officials to the condemnation of Alkibiades would indicate some distaste for the whole affair if they genuinely belong to 415. The priestess of Demeter, Theano daughter of Menon of Agryle, when asked to curse those condemned, said that cursing was not part of her job; the hierophant Theodoros, asked to repeal his curse when Alkibiades returned to Athens, said, 'If he has done nothing wrong, I did not curse him' (Plutarch *Alkibiades* 22, 33; Sourvinou-Inwood 1988c). It seems rather likely, however, that these are *bons mots* invented at a later date, perhaps at the end of the fourth century when Eleusinian officials began to pride themselves on their outspokenness (*parrhêsia*) in confrontations with potentates (n. 140).

The prosecution of Andokides can have done Kallias little good. Kallias' first wife had been a cousin (MZD) of Andokides, and the orator was able to provide the jury with a rich collection of scandalous stories about his opponent. Kallias was believed to have squandered much of his father's fortune on lavish hospitality when he inherited it as an irresponsible young man in his early twenties; Andokides accused him of trying to improve his situation by defrauding the orphan daughters of Epilykos, whose mother and subsequently grandmother he married; he also recruited members of Kallias' *genos*, the Kerykes, to testify that Kallias had at first repudiated his son by this third wife, Chrysilla, when her kin presented him to the *genos* for the *meion* sacrifice, but had later changed his mind and taken an oath that the boy was legitimate, which forced the *genos* to accept him.⁹⁴

It seems possible that Kallias' poor relationship with at least some of his fellow *gennêtai* may have been exacerbated by what appears to have been an unsuccessful attempt by the Kerykes to take over the cult of Asklepios when it was introduced from Epidaurus. The god (possibly first established in Piraeus, but see R. Parker 1996, 175–85) was invited to Athens and, it seems, temporarily housed in the Eleusinion in 420/19. In the following year, however, there was a dispute with the Kerykes about land, and Asklepios moved, possibly into the precinct of the healing hero Amaryn or the house of the poet Sophokles (ch. 12 n. 62). His festival, the Epidauria, remained linked to those of Eleusis, celebrated on the day after the Mysteries (Boedromion 17), and initiates kept vigil in the temple (presumably at Eleusis) during the procession in honour of him (*A.P.* 54. 4), but he acquired his own shrine and sacred precinct in 415–412; responsibility for this was probably divided between a group of *orgeônes*—who perhaps also worshipped

father of Sokrates' accuser. Blumenthal 1973 wished to identify the two accusers. Cf. ch. 13 n. 30. The fact that the FFF of Lysias' speaker was hierophant and his FF Diokles was not does not, of course, imply that the post was not hereditary, since Diokles might have had an elder brother. Cf. the prosecution of Nikomachos in 399 by an oligarch, N. D. Robertson 1990.

⁹⁴ Cf. ch. 19 n. 80. Pace Carawan 2008, it is not clear that this boy ever got full citizenship; he was popularly known as 'Kallias' *nothos*' (Metagenes F 13 K, 14 PCG; ch. 7 case 7). On Kallias' daughter see ch. 27 n. 40.

Sophokles, after his death, under the title Dexion, the Host—and a priest, either descended from the founder of the cult, Telemachos, or appointed annually by the state. Behind the bare chronicle of events recorded on stone in *IG ii² 4960* seems to lie an attempt by the Eleusinian genê to take over the cult, which failed because it became too obvious that costs were attached to Eleusinian hospitality, and because the Kerykes had underestimated the potential of the cult for finding resources elsewhere. Kallias, as Torchbearer, is likely to have been involved in these negotiations and may have been blamed when they failed, being new to the office, and unusually young for his position, at the time.⁹⁵

Kallias retained his position as Torchbearer to the end of his life; he is represented by Xenophon (*Hellenika* 6. 3. 2–6) as ambassador to Sparta in 371, interested only in recalling his own achievements and his family's hereditary ties of proxenia with the Spartans, and was still alive in 367, by which time he must have been in his seventies. The title probably did not pass to his son Hipponikos IV; in 352/1 the Torchbearer was a Hierokleides.⁹⁶

THE FOURTH CENTURY: 400–338

Apart from the attempt by Kallias and one of the Eumolpidai to use genos prestige to cover themselves against possible attacks by attacking Andokides in 400, we hear little of the genê in the early fourth century; any claim that might

⁹⁵ See Aleshire 1989; Clinton 1988*a*, 1993; R. Parker 1996, 175–85; Lamont 2015. The assumption that the priesthood was hereditary in Telemachos' family depends on the very uncertain restoration Thea[ngelos] in *IG ii² 4963* (*SEG* 25. 227/61. 178); this Theangelos would be Telemachos' son, father of Telemachos son of Theangelos of Acharnai, who is known from sources of the Lykourgan period but has no attested connection with the cult of Asklepios (R. G. Osborne 1985*a*, 4–5 is confused). The special priesthood conferred on Demon of Paiania, perhaps in the Lykourgan period (Aleshire 163–4; *IG ii² 4969*, *APF* 3597 III C), does not imply that the office had been continuously in private hands (Schlaifer 1940; on the use of tribal rotation for the priesthood in the 4th c. see Aleshire 1989, 77). On the other hand, *IG ii² 47* shows that in the early 4th c. *epistatai* were cooperating in the Peiraios sanctuary with a priest from an enterprising Eleusinian family, Euthydemos I (cf. ch. 30 n. 87), who was making his own prescriptions about sacrifice (cf. *IG ii² 4962*) and very possibly identifying his own source of revenue (a quarry); this does not look like the behaviour of a priest appointed only for one year. Possibly Euthydemos' father, or a kinsman, had helped Telemachos in his negotiations with Eleusis and had been left in charge of the Peiraios sanctuary when Telemachos moved on to Athens. See ch. 28 n. 69; Walter 1953, Aleshire 9–11, and Connolly 1998, on the role of Sophokles (possibly invented on the basis of his paean, *IG ii² 4510*? cf. the cult functions attributed to Euripides in the *vita* attached to his works, n. 116 below). The dispute with the Kerykes is discussed in Wickkiser 2005; see also Lamont 2015. *IG i³ 1392* may be a 5th c. *horos* of the Kerykes. A suggested reference to them in *i² 318* (c.420) has disappeared in *i³ 392*.

⁹⁶ *IG ii³ 292*, *FGH* 324 F 30, 328 F 155. He may be the Hierokleides mentioned by a descendant in 20/19 BCE, with a Hermotimos, as having held office before the beginning of regular records, and may possibly be affinally related to Thrasyphos son of Hierokleides of Xypete (nn. 99, 139); but such names were probably common in priestly genê (ch. 12 n. 75).

provoke suspicions of oligarchic sympathies was to be avoided. As we have already seen (ch. 19) there were serious problems in Dekeleia, probably chosen as a Spartan base in 413 partly on the strength of local *genos* claims that Dekelos had helped the Dioskouroi when they came to northern Attika in search of Helen. The new source of prestige in Athens was the claim to have escaped from Athens under the rule of the Thirty and ‘brought back the democracy’ from Phyle (R. Thomas 1989).

The Eteoboutadai emerged unscathed, helped no doubt by the prestige of Lysimache I as priestess of Athena Polias and the execution of Lykourgos III, priest of Poseidon Erechtheus (?), by the Thirty; the Bouzyges Demainetos held a command in the Corinthian War, probably in 388 (Aischines 2. 78). A nephew (BS) of Iphikrates, Timotheos II son of Teisias I of Rhamnous, made a dedication to Herakles in the middle of the fourth century with a group of Praxiergidai, but this does not necessarily imply that his family belonged to the *genos*; sources on Iphikrates never refer to it. Nor do we hear of any *genos* affiliation in connection with Konon (II) and Timotheos of Anaphlystos, though the family was thought to be old (Plutarch *Solon* 15. 7, cf. *A.P.* 6. 2), and Konon III appears among the parasites of Athena Pallenis. The name Dropides, borne in Kritias’ family, re-emerges only with Dropides III, ambassador to Dareios in 333. Plato’s portrayal of Kritias’ ancestry in the *Timaios*, written towards the end of his life when he was sufficiently secure to make a cautious attempt to rehabilitate the memory of his cousin, may have contributed to the re-emergence of Dropides as a respectable member of the Athenian elite; but as we have seen the reference to the Amynandridai in *Timaios* 21c was so discreet that it could easily be missed.⁹⁷

The hierophant in office in 379, Archias, had sufficiently close relations with Thebes to send a message to a homonym in that city warning him that an attack on the city, to be mounted from the Thriasian plain, was being planned in Athens (Plutarch *Pelopidas* 10); this may suggest that he had taken refuge in Thebes with the democrats in 404, and perhaps owed his appointment to that fact. He was subsequently impeached by the priestess of Demeter for impiety (*asebeia*), and condemned, because he had sacrificed at the Haloa, which was her prerogative, and on behalf of a *hetaira* ([Demosthenes] 59. 116–17). Resentment of Archias’ political ambitions may have played a role in this prosecution. He was perhaps the hierophant who mortgaged a house in the city to Euktemon of Kephisia (Isaios 6. 33); he will have needed cash to pay the fine imposed on him.⁹⁸

⁹⁷ Timotheos: *Agora XVIII* C 113, *APF* 7737; above, n. 78. Konon: *APF* 13700 (claims by Kerykes of the Roman period to descend from him need not imply purely patrilineal descent; on similar claims see Clinton 2004). Dropides III (missed by *APF* 8792): Curtius 3. 13. 15, cf. Arr. *Anab.* II 15. 2, 4, ch. 16 n. 25.

⁹⁸ He had been of liturgic status, [Dem.] 59. 117; see *APF* 2447, p. 596, 2481; above, n. 26. It is not clear whether this transaction implies that Archias had been residing in the city during his period of office; Euktemon took possession of the house under the *prasis epi lysei* agreement.

By 354 the office of hierophant had passed to Lakrateides III (of Paiania?); we have met his ancestors Lakrateides I, archon in the late sixth or early fifth century in a year of unusually heavy snow, and Lakrateides II, accuser of Perikles, and Marathon veteran in Aristophanes' *Acharnians*. He was still in office in 350/49 (FGH 328 F 155; cf. IG ii³ 292, 352/1). A betrothal in his youth to the matrilinear half-sister of Apollodoros of Leukonoion, himself a gennetes, though we do not know the genos, had for some reason been annulled (Isaios 7. 9). Hierokleides son of Teisamenos of Paiania, honoured by the deme Eleusis for his activities as hierophant perhaps in the 340s or early 330s, presumably came from the same branch of the genos, but there is no evidence that the two were close kin. The office of hierophant does not seem to have been hereditary, but Hierokleides' name indicates an interest in priestly activities in his family, and Lakrateides may have helped his fellow demesman to become known at Eleusis and in the genos by calling on him for assistance in some of his duties. Hierokleides' father Teisamenos I had served as treasurer of Athena in 414/3, and his son Teisamenos II had dedicated to her a gold crown, possibly the one bestowed on his father by Eleusis, before 334–331.⁹⁹

The state had taken action on behalf of the Eleusinian genê in 367/6, protesting against the mistreatment of their envoys (*spondophoroi*) in Aitolia.¹⁰⁰ The restoration of the name of the Eumolpid envoy as Pr[o]phanes] on the basis of identification with the proposer of IG ii² 1231, Prophan[es] (Wilhelm 1940*b*) is perhaps rather rash, but we can identify the Keryx, Epigenes, with more confidence. He should be Epigenes I son of Metagenes of Koile, amphiktyon on Delos in 377/6–374/3, and cited as a witness by Apollodoros son of Pasion of Acharnai in the late 340s ([Demosthenes] 59. 61). His father Metagenes I had served as general at Kerkyra in 433/2 (IG i³ 364. 20), and Epigenes may indeed, as his name suggests, have been born rather late in his father's life. Epigenes II, son of Euergetes, who proposed a genos decree of the Kerykes in honour of Euthydemos

⁹⁹ Lakrateides: APF 1395. Paiania, possibly Eleusinian dedication, *Agora XVIII* V 587; Lakrateides of Ikarion, who made a more imposing dedication in the late 2nd c. BCE (*IEleus* 239; *LIMC* s.v. *Eubouleus*, no. 2; *LGPN* Lakrateidas 3) should be a descendant, and the (?) Eumolpid family of Eukles in Halai Aixonides (below, n. 116; Table 20.3) may have adopted the name Lakrates as a result of an intra-genos marriage. Hierokleides: *IEleus* 72 (Clinton 1974, 18; Whitehead 1986*a*, 377 no. 23), 340s or early 330s. At the time of this decree he had been in office for some time, and he may have died soon afterwards (IG ii² 7057; his mother, 6054, c.365–49). Teisamenos I, IG i³ 309; Teisamenos II IG ii² 1496. 60; a possible grandson, Teisamenos III, ephebe 267/6, IG ii³ 917. Bourriot (1976, 1229–31 n. 336) is surprised to find a hierophant and a Torchbearer both named Hierokleides in the same period, but such names are common in families with priestly ambitions. Cf. Thrasyphos son of Hierokleides of Xypete, probably a Keryx, IG ii² 1235, Dow 1979 (below, n. 139). Bubelis 2012 fails to show that the office was hereditary.

¹⁰⁰ *Agora XVI* 48, XXXI 26, R/O no. 35; cf. Wilhelm 1924*a*, 101–3, on *spondophoroi*. At some time between 367 and 348 the laws concerning the Eleusinian cult were re-inscribed and perhaps modified (*IEleus* 138); the board of *epimelêtai* now consists of one Eumolpid, one Keryx, and two representatives of the citizen body.

TABLE 20.2.
Epigenes and
Metagenes
(*APF* 10807)

of Eleusis at the end of the fourth century (*IG* ii² 1230) should be a grandson (SS) of Epigenes I (see Table 20.2). The alternation of the names Epigenes and Metagenes occurs also in the rich family of Epigenes I of Kydathenaion (*APF* 10807), perhaps because his mother was a sister of Metagenes I of Koile. The Kydathenaion family, in turn, may conceivably have been linked to another family in the same deme, that of Metrodoros and Konon (*APF* 10808), which produced three hierophants in the Hellenistic period (but the names are common).¹⁰¹

The historian Kleidemos, who published a religious handbook, an *exégétikon*—a mixture of ritual advice and antiquarian knowledge—as well as his history of Attika,

¹⁰¹ Dow's suggestion (1979) that the *spondophoros* Epigenes is Epigenes of Acharnai, son of the priestess of Demeter whose dedication was published in 1957 (*Agora* XVIII V 584, *Agora* XXXI no. 3, before 350), seems much less likely, since at this date the priestess should not have come from the Kerykes (a priestess from another family in Kydathenaion c.100 BCE, Clinton 1974 no. 25, Glauke daughter of Menedemos). On Epigenes son of Metrodoros of Kydathenaion, archon of the Mesogeioi in the early 3rd c. (*IG* ii² 1247) see below, n. 130, and Clinton 1974. On Euthydemos see ch. 30 s. 'Eleusis'; below, n. 138. See also Humphreys 2017b on the commission to delimit the *orgas* (*IG* ii³ 292), suggesting that Philokrates of Hagnous (ch. 27) may have been a Keryx.

entitled *Protogoneia*, ‘The First Race’, probably came from the rich family of Kleidemides of Melite, which may possibly have taken a wife in the late fifth century from Harmodios’ branch of the Gephyraioi. Kleidemos’ book was well informed on religious matters, dealing with the Kerykes of the Dipolieia (*FGH* 323 F 5), a special sacrifice performed by the tribe Aiantis on instructions from Delphi after the battle of Marathon (F 22), and the parasites of Herakles (F 11). His reference to a heroon of Melanippos, son of Theseus, in Melite (F 2) indicates an interest in the cults of his deme, and there is a faint possibility that he was responsible for inserting the name of Kleidikos into the list of the ‘ten-year archons’ who held office in the eighth century. The family was rich but does not seem to have been politically active or even assiduous in using its wealth in liturgies.¹⁰²

Our best information on *genos* activities in the middle of the fourth century comes from the Salaminioi, who set up a long text recording the agreement reached after a dispute between two sections of the *genos* in 363/2 (*Agora XIX* L 4a). From this text we learn incidentally that the three brothers Hegesandros, Hegesippos, and Hegias, sons of Hegesias, of Sounion were members of the *genos*. Hegesandros, who married an *epikleros* (Aischines 1. 95) should (theoretically) be the eldest; both he and Hegesippos were active in city politics. Hegesandros served as treasurer to the general Timomachos and as treasurer of Athena *c.*361 (*AO*, W. Thompson 1970*e*); Hegesippos, nicknamed ‘Hairknot’ (Krobylos), is first attested in politics *c.*365 and was attacked by Aischines in 346 for having kept Timarchos as a male prostitute. The nickname was an appropriate one for a member of the *genos* responsible for the Oschophoria, and may be evidence that Hegesippos had served as Oschophoros in his youth, though it also implied effeminacy. He paid a debt to the dockyard in 325/4. Hegias, one of the men who took the oath to abide by the settlement of 363/2 on behalf of the Salaminioi of the deme Sounion, may have been the only brother who resided in the deme and busied himself with local rather than city affairs. His son Hegesias II served as treasurer of Athena in 349/8 and made a dedication to Asklepios in 339/8 (Aleshire 1991). The family

¹⁰² Jacoby, introduction to *FGH* 323; *IG* i³ 1289, ii² 6008, 6832, 6859; *APF* 12267 VI C. Kleidikos: cf. however, *APF* 600 IV. For Kleidemos as ‘antiquarian’ rather than democrat see Humphreys 2017*b*. Jacoby’s suggested tie (*FGH* III B Suppl. 328 T 1 comm.) between K. and Philochoros, via Philochoros son of Demonikos (deme unknown), husband of K.’s (?) sister Aristomache (*IG* ii² 6832), is doubtful; although the name Ph. is comparatively rare, choruses were important in Athenian life. The name Koroibos, found in the family to which Jacoby suggested attaching Kleidemos, occurs also in Kephisia, Eleusis, and perhaps a deme of Aiantis (*Agora XV* 46, *c.* 330). The architect Koroibos who worked at Eleusis, and his (?) grandson who worked on the Eleusinion in Athens (*IG* i³ 32 = *IEleus* 30 with comm.), might have come from the Eleusis family, but are separated by a substantial interval from the Koroibos of Eleusis whose son was secretary of the council in 325/4 (*IG* i³ 367–8). The *tamias* Koroibos of 370/69 (*IG* ii² 1424a 4, cf. *AO*), could be Koroibos I of Melite, and the archon of 306/5 could be a descendant, taking a prominent role after the restoration of democracy. Cf. ch. 11 nn. 27, 29.

survived to produce councillors in the third and second centuries (*IG* ii³ 1030. 9, *Agora* XV 206. 75).¹⁰³

Another prominent family in the Sounian branch of the *genos* may be seen here in the local beginnings of an upward movement that had brought it into a prominent position in the city by the late 340s (*APF* 4487). They owned land in the mining area. Diphilos son of Diopeithes is recorded as archon of the Salaminioi of Sounion, and his cousin (FBS) Diopeithes son of Phasyrkides was one of their oath-takers. Diphilos' brother Diophanes I served as councillor *c.*325 (*Agora* XV 52), and his son Diopeithes II rose to the generalship in *c.*343/2, perhaps continuing in office for three years. The latter's son Diphilos II may have been a prominent figure in the Lykourgan era; the family still produced a councillor, perhaps from the line of Diophanes I, in the middle of the third century (*IG* ii³ 1030. 5). Other named members of the Sounion group may be attested as trierarchs and councillors.¹⁰⁴

The dispute lay between the Salaminioi of Sounion and the Salaminioi of 'the Seven Tribes', a diaspora already scattered by the time of Kleisthenes' reforms. The attested demes in the latter group are Boutadai, Agryle, Acharnai, and Epikhephisia, all located in the Athenian plain;¹⁰⁵ the *genos* was concerned with the sanctuaries of Eurysakes in Melite and Athena Skiras at Phaleron, and seems to have belonged to a phratry based in Alopeke (Humphreys 1990*a*; ch. 19 n. 173). Its name was presumably somehow related to the contest in the sixth century between Athens and Megara for control of the island

¹⁰³ *APF* 6351, Table 8.3. The *krobylos* was an old-fashioned hairstyle (*RE* s.v. *Haartracht und Haarschmuck*, 2120–4), appropriate for boys, who were supposed to cut their hair only on reaching adolescence, and not unlike women's styles (ch. 26 n. 98). For cultic activity by the undistinguished kin of prominent politicians cf. Demosthenes' FBSS Demon II, who dedicated his house and garden to Asklepios after a dream, and was given an extraordinary priesthood in recompense (*IG* ii² 4969; above, n. 95; Demon's FF Demon I praised for his activities as tribal priest of Pandionis, *IG* ii² 1140; ch. 21 n. 92). Demosthenes' MZH Demochares I of Leukonoion (or possibly his MZSS Demochares II if the *horos* is 3rd c., as Bourriot 1976 says) married a daughter to a member of the Lykomidai, with a dowry of 1 T (*IG* ii² 2670, Finley 1952 no. 146).

¹⁰⁴ Cf. Lambert 1999*a*. Chalkideus son of Andromenes of Sounion may be the Chalkideus attested as trierarch *c.*373/2 (*APF* 15281), although the name occurs also in Melite; his son Andromenes served as councillor *c.*325 (*Agora* XV 52. 24). Philoneos son of Ameinonikos served as councillor in 371/0 (*IG* ii³ 4. 53). Ameinias son of Philinos, perhaps a kinsman, may have been active in mining (Lambert p. 109). Among the named Sounian Salaminioi only Chariades son of Charikles and Theuphanes son of Zophanes are unattested elsewhere. For the suggestion that Timodemos of Acharnai, celebrated in Pindar's *Nemean* 2, was a Salaminios, see R. Parker 1996, 327.

¹⁰⁵ Agryle was a deme of I Erechtheis (ch. 23 n. 21); the others belonged to VI Oineis. Some Salaminioi must surely have belonged to Alopeke (X Antiochis). The arbitrators chosen to resolve the dispute between the two branches of the *genos* came from Acharnai (VI), Myrrhinous (III), Lamptrai (I), and Aithalidai (IV), but even arbitrators chosen by the Salaminioi of the Seven Tribes were not necessarily selected on the basis of deme ties. Moirakles 'the Salaminian' of Eleusis was probably a resident of Salamis, not a member of the *genos* (ch. 30 n. 89; M. C. Taylor 1997). R. Parker (1996, 312) thinks that the '7 tribes' might be 'an archaic organization (perhaps of Salamis itself) otherwise unknown' (a similar view in N. D. Robertson 1992).

of Salamis. ‘The Skir- names and epithets are associated with both Athens and Megara’ (Sourvinou-Inwood 2011, 172), and there was a sanctuary of Athena Skiras on the island, presumably at the western end since Corinthian ships came to it while fleeing from the battle in the straits (Herodotus 8. 94). However, the *genos* documents show no sign of cultic or other interests in the island in the fourth century. It seems on current evidence a plausible guess that the sanctuary of Athena Skiras at Phaleron was founded as a rival to or substitute for the one on the island; whether by island immigrants or Athenians eager for conquest, we can hardly say. The Sounian branch perhaps developed later, possibly connected with the ‘silver rush’ of the late sixth century; whether these migrants came from elsewhere in Attika or from the island is, again, unclear.¹⁰⁶ It is possible that some of the Aiginetans resettled in the Sounion area in the early fifth century (Herodotus 6. 90) might have been admitted to the *genos* on the strength of Ajax’ ties with Aigina (cf. Herodotus 6. 35; Pindar *Nemean* 4).

The Sounian branch of the *genos* had prospered; its members were wealthier and more prominent politically than the Salaminioi of the Seven Tribes,¹⁰⁷ and the *genos* collectively owned land and an *agora* in the Sounion area; its harbour cult of Herakles at the Crossing (Porthmos) attracted a state subsidy. On the other hand, the most prestigious sanctuaries and cults were those of the city area: the Eurysakeion, also used by the tribe Aiantis, and the Oschophoria, to which the state also contributed. Some of the Seven Tribes group were also active in phratry affairs in Alopeke. The conflict apparently concerned the distribution of *genos* revenues: the Seven Tribes group may have suspected the Sounians of taking more than their fair share.

Five arbitrators were appointed to settle the dispute: two from Myrrhinous, one from Acharnai, one from Aithalidai, and one from Lamptrai. Only Stephanos of Myrrhinous, attested as member of a naval symmory between 356 and 340 (*APF* 12891) appears elsewhere in our sources. In the resulting agreement, the two branches of the *genos* agreed to continue to hold their priesthoods (of Athena Skiras, Herakles at Porthmos, Eurysakes, and Aglauros) in common, appointing a new priestess or priest by lot from the whole *genos* whenever one of the current incumbents died. Priests would continue to receive their customary perquisites; the priest of Eurysakes was also to serve as priest of the Hero at the Halê (Salt-pan). The landed property, however, consisting of land round the Herakleion at Porthmos, ‘other land’, and the *agora* at Koile,¹⁰⁸ is to be

¹⁰⁶ R. Parker 1996 notes that we do not have evidence for land-holding in the mining area by Sounian Salaminians, but this argument from silence does not carry much weight. Their association with Sounion rather than other ‘mining’ demes, and their sanctuary at Porthmos, if it was in the deme, suggest interests in transport. (Leduc’s idea, *SEG* 52. 134, that they were a *naukraria* does not help.) Lambert suggested (1997*b*) a connection between the *genos* and the crew of the ‘sacred trireme’ *Salaminia*; see now Bubelis 2010, and ch. 29 n. 91 on the cult of Paralos, eponym of the sister ship, in Aixone (*SEG* 54. 214).

¹⁰⁷ In the Seven Tribes group only Stratophon son of Straton and Demon son of Demaretos, both of Agryle, are attested elsewhere, in the Alopeke phratry list *IG* ii² 2345 (Humphreys 1990*a*; Lambert 1999*a*). Presumably the conjuncture of *genos* and deme interests in Sounion persuaded more prominent families in that branch of the *genos* to take an interest in its affairs.

¹⁰⁸ For arguments that the priestess of Aglauros served on the Akropolis see Sourvinou-Inwood 2011, 152–4. On the topography of *genos* property in Sounion, see Goette 2000, 71–4, Papazarkadas 2011, 173–6; on the *halê*, Langdon 2010. Lambert 1997*b* puts Porthmos on the coast opposite Salamis, and

divided between the two branches of the *genos*, marked with *horoi*, and leased separately. Each section of the *genos* is to contribute equally to festivals from its revenues, contributions from the state (*dēmosion*) are to be expended by the two branches jointly, and meat from sacrifices is to be divided into two shares, one for each branch (if the division had previously been made per capita among those attending festivals, there may have been claims that one side or the other was getting an unfair advantage); each side is to contribute a portion for the priest officiating at the sacrifice. Each branch in turn is to provide an archon of the *genos*, appointed by lot, who is responsible for selecting the *óschophoroi* and *deipnophoroi* (above, pp. 671–3), in association with the priestess of Athena Skiras and the herald, according to traditional procedure (at the time of the dispute, each branch had its own archon). Any repairs needed in *genos* sanctuaries are to be carried out jointly, each branch contributing half the cost. Records are to be kept in common, and any lessees of *genos* land whose leases have not expired are to pay half their rent to each branch until the lease expires. The two branches are to take turns in presiding over the preliminary sacrifice that takes place before the race (*hamillos*). The office of herald is to belong to Thrasykles—presumably the son of Thrason, of Boutadai, who is one of the oath-takers—by hereditary right (*kata ta patria*).

The record of the agreement and those who took the oath to keep it, seven from each side, is followed by a calendar of sacrifices and their cost to the *genos*, to a total of 530½ drachmas.¹⁰⁹ Most of the sacrifices seem to have taken place either at the Eurysakeion in Melite or at the temple of Athena Skiras at Phaleron, but there was a major festival of Herakles at Porthmos in the month Mounichion, at which the *genos* sacrificed offerings paid for by the state plus an ox (to Herakles), a goat, 4 or 5 sheep, and two piglets, from its own resources. The date might have been Mounichion 4, on which the deme Erchia sacrificed to the children of Herakles; the Salaminioi honoured Iolaos and Alkmene as well as Herakles in this festival.

The *genos* sacrificed to Athena at the Panathenaia, and its sacrifice to Apollo Patroios, Leto, Artemis, and Athena Agelaa on Metageitnion 7 may have coincided with other celebrations of the Metageitnia, a ‘festival of neighbours’ about which we know very little. It sacrificed to Theseus on Pyanopsion 6, probably in connection with the Oschophoria; to Eurysakes on Mounichion 18; to Poseidon Hippodromios and various nautical heroes in Boedromion; and to Athena Skiras and Skiros in Maimakterion.¹¹⁰

the agora in the city deme Koile, but two relief monuments representing Herakles were found in the Punta Zeza area. Since Pheidistrate, sister of Chremonides and Glaukon of Aithalidai, served as priestess of Aglauros in the early 3rd c. (*IG* ii² 3459, cf. Humphreys 2007), this family should have belonged to the Salaminioi, as should that of Polynikos of Aphidnai (*IG* ii³ 1002, cf. *SEG* 51. 93). In the mid 2nd c. the (genos?) Euenoridai were concerned in some cultic activity in the Aglaureion: *SEG* 58. 145, Malouchou 2008, cf. Lambert 2008*a*.

¹⁰⁹ The sums recorded on the stone do not add up to the total it provides.

¹¹⁰ It also sacrificed in alternate years to Ion; possibly in this and the sacrifice to Apollo Patroios the Salaminioi were emphasizing that they were Athenian and not Megarian (cf. Plut. *Sol.* 10. 4). The Oschophoria presumably do not appear on this list because the state paid for the festival, though the families of the two boys who served as *óschophoroi* and of the women who acted as *deipnophoroi* will also have contributed (cf. Mikalson 1975, 68–9 on the date; the Theseia were celebrated on Pyanopsion 6 or 8, n. 70). On Poseidon Hippodromios see below at n. 123.

A genos decree of the end of the fourth century, found in the theatre area in Athens, honours two (?) benefactors with a crown of 1000 drachmas each and other privileges, including permission to dedicate something in the sanctuary of Athena Skiras. The two copies of the decree are to be set up in the Eurysakeion and in the sanctuary of Athena Skiras; there is no mention of the Sounian branch. Since we know that by c.260 (?) fission between the two branches of the genos had developed yet further, this text may indicate that the Salaminioi of the Seven Tribes were already acting on their own by the end of the fourth century. On the other hand, we do not know that genos decrees had ever been published at Sounion.¹¹¹

In any case, by c.260 (?) the Salaminioi were again resorting to arbitration (*Agora XIX* L 4b). The arbitrators, Antigenes of Semachidai and Kalliteles of Sounion, delivered their verdict at the Herakleia. By this time the 'Archaiosalaminioi of the Seven Tribes' and the 'Archaiosalaminioi of Sounion'—apparently using these names to distinguish themselves from residents of Salamis—thought of themselves as two separate genê. The previous settlement had apparently promoted fission rather than checking it. Property again seems to be the source of dispute. A distinction is made between the part of the temenos of Herakles which is reserved for cult use and the remaining area, and the boundaries of the temenos are clearly specified. All this land is to be shared by 'the two genê'. The Sounian genos is to make a new threshing floor, the same size as its own, at its own expense, in this common area, and it is to belong to the genos of the Seven Tribes. Each genos is to have its own house (to be used, presumably, for storage and perhaps as a dining place for genos dignitaries); they are to divide the gardens and rights to the well, and are to share the salt-pan and the agora at Koilê. The Sounians are to have the eastern side of the genos lands, the Seven Tribes the western side and the field in which the sacred ploughing takes place.

This text, like the earlier ones, was presumably set up in the Eurysakeion, since it was found in the Agora at Athens. We hear no more of the Salaminioi, though their temple of Athena Skiras was still standing in Pausanias' day (1. 1. 4). Our last text may represent an attempt to re-establish normality after the problematic years of the Chremonidean War (Papazarkadas 2011, 296–8, suggests that the split was due to war conditions). After the war Sounion remained a garrison post, but garrison troops there as at Eleusis presumably tended to deal with demarchs rather than with priests or genos archons. The Oskophoria did not become part of the ritual programme of the epheboi, and may have suffered from the expansion of the Theseia associated with them.

¹¹¹ *IG ii*² 1232; the agreement of 363/2 (*Agora XIX* L 4a) is to be set up in the Eurysakeion. D. Harris and Lawton 1990 suggest that a relief of Ajax and Eurysakes crowning a single honorand, perhaps of the Lykourgan period, found in re-use on Salamis (M. Meyer 1989*a*, N 7; *SEG* 40. 130), belonged to a decree of the Salaminioi; but since there were two wreaths below the main text the honorand must have been crowned by two bodies (unless the two branches of the genos awarded separate crowns). Some ephobic activity connected with Salamis in which the tribe Aiantis had distinguished itself may possibly account for the provenance (see *IG ii*² 1035, *SEG* 26. 121/60. 161, l. 32, for a sanctuary of Ajax on Salamis; Mikalson 1998, 183–4; Humphreys 1985*a* for experiment with ritual in the early years of the ephorate); Aiantis seems to have used the Eurysakeion as its meeting place, and a tribe is more likely than a *genos* to have combined with another body (the honorand's deme, the epheboi). On *IG ii*² 1260, honouring a general concerned with coastal defence, found at Sounion, see G. J. Oliver 2007*a*, 165, dating it ? 304/3; *pace* Lambert 1997*b*, the Salaminioi here should be island residents and not the genos.

Though Kleisthenes' reforms made them more conscious of their dispersal, it was not democracy that destroyed the Salaminioi. They had their moment of greatest glory under Kimon, and *genos* responsibilities in and around the city may have helped members of families like those of Hegesippos and Diopeithes II to make the transition from local to city politics. Apparently the Salaminioi were able to come to terms with democracy, and on those terms—their rituals might provoke some mockery, but they were noticed, recognized, and even financially supported—construct new meanings for their own identity. But dispersal and the local character of their festivals proved too much for them as the audience for Athenian claims to prestige increasingly came to be sought outside Attika.

The value of the material on the *genè* from the period from 399 to 338 is that the increased use of written record, and the evidence of forensic speeches, allow us to observe *genos* business being carried on, and attachment to *genos* identity being maintained, by relatively insignificant men. The Salaminioi are neither the beneficiaries nor the harbingers of a *genos* 'revival'; that would come only with the regime of Lykourgos IV, the first major *genos* leader to play a leading role in Athenian politics since Kallias II had negotiated peace with Persia. What we see in the middle decades of the fourth century is the routinized preservation of relics of an earlier aristocratic charisma, which now conferred distinction only of a marginal kind, at a local level, or in the circle of those who shared the same values.

In the quasi-*genos* Dekeleieis (ch. 19 at n. 85ff.), Theodoros son of Euphantides succeeds a kinsman in office as priest of the Demotionidai in the 360s; Theodoros' son Ekphantides registers and leases a mine c.340 (Hedrick 1990: *Agora XIX* P 30. 11–12, 17; cf. also *APF* 6029).

The speaker of Demosthenes 57, Euxitheos of Halimous (Table 7.12), was defending himself against the attempt of opponents in his deme to deprive him of citizenship. He claims to have been selected 'among the best-born in the deme' (*eugenestatoi*) to be one of the candidates from whom the priest of Herakles would be chosen by lot (§ 46). He seems to be trying to give the impression that he belongs to a *genos* (§ 23), although his witnesses are *phrateres* and not *gennetai*. The picture—true or not—is of a priesthood that has passed into the control of the deme but is still the monopoly of the members of one or more *genè*; and presumably Euxitheos hopes that *genè* still have a better reputation for careful scrutiny of candidates for membership than *phratries* or demes.¹¹²

That may have been somewhat doubtful; we have seen that the Kerykes of Eleusis accepted a child Kallias III had earlier refused to acknowledge, though the mother was certainly of citizen status and their union had some at least of the characteristics of a marriage. The *genos* Brytidai, six members of which

¹¹² *APF* 3126. Euxitheos' kin occupy minor civil posts as councillors and treasurers. *IG* ii² 1173, a deme decree (deme unknown) of the first half of the 4th c., awards a crown to a Lykomedes who may be a member of the Lykomidai or Eteoboutadai.

were called as witnesses by Apollodoros son of Pasion of Acharnai in his prosecution of Neaira in the late 340s ([Demosthenes] 59. 61) took a tougher line with Phrastor of Aigilia, ‘a working man who had got together the basis for a livelihood with difficulty’ (§ 50), who married Neaira’s daughter believing her to be of citizen descent. When he learnt that she was not, Apollodoros claims, he threw her out and refused to return her dowry; Neaira’s protector Stephanos, who had presented the girl as his own daughter, sued Phrastor for the cost of the girl’s maintenance (*sitos*), and Phrastor replied by prosecuting him for giving a foreign girl in marriage. Both suits were withdrawn, and the parties came to a compromise. Later, however, Phrastor fell seriously ill; Neaira and her daughter looked after him and persuaded him, since he had no other child, to accept the boy Neaira’s daughter had borne him as his son. However, when he tried to sacrifice the *meion* on the child’s behalf the Brytidai refused to accept it. He filed suit against them, and representatives of the *genos* challenged him in the presence of the public arbitrator to take a sacrificial oath that he truly believed the boy to be his own son, born to him in lawful wedlock by a woman of citizen descent. This he could hardly do ([Demosthenes] 59. 50–61).

One of the witnesses from the Brytidai, Nikippos of Kephale, is attested as a co-trierarch in 322 (*APF*10833). Another, Eualkos of Phaleron, served as *epistatês* and councillor in the same year (*IG* ii³ 324. 35; Schwenk 1985, no. 88); he may be related to Eua(l)kides of Phaleron, who appears as a contractor in the accounts of the administrators of the Eleusis sanctuary for ? 333/2 (*IEleus* 159. 25; Clinton 1971, 112). A third, Euphranor of Aigilia, was perhaps a kinsman of Phrastor, since they belong to the same deme and their names come from the same root. The others—Xanthippos of Eroiadai, Timostratos of Hekale, and Anytos of Lakiadai—are not attested elsewhere. Most of the names have a vaguely aristocratic ring (this, however, could be said of a large proportion of Attic names), and those of Phrastor and Euphranor carry religious overtones. The Brytidai appear in no other source; one has to wonder whether this was a short-lived cult association that conferred *genos* status on itself, but its association with phratry ritual and the incomprehensibility of its name seem to indicate that it really was an archaic *genos* whose members were already dispersed by 507 but had been kept together by clinging to the privilege of separate scrutiny in the phratry conferred on them by Solon.¹¹³

¹¹³ Apollodoros’ witnesses do not seem to be members of the commission of *synégoroi* appointed to represent the *genos* against Stephanos, since they apparently did not testify about the proceedings before the *diaitetai*. Since two of them were still active in 322, it seems possible that he had to rely on relatively young witnesses who had no inhibitions about airing *genos* scandals in court. The demes represented in the *genos* are widely scattered and we cannot tell where it was based.

In both his attempts to marry off Neaira's daughter, Phano, Stephanos picked gennetai, men of modest position who nevertheless still cherished some social ambitions, centred not on the competitive world of politics but on the quieter backwaters of ancient lineage and traditional religion. His second victim was Theogenes of the Eleusinian *genos* Koironidai,¹¹⁴ who had stood, and had been selected by lot, for the office of *basileus*: 'a well-born man, but poor, and with no experience of public affairs' ([Demosthenes] 59. 72). Stephanos helped him through his *dokimasia*, offered to bear some of the expenses of his office, and so 'bought' the position of *paredros* (ch. 15 n. 6); and then persuaded him to marry Phano.

At about the same period we find Aischines, who also came from a relatively humble background—though his mother's brother had been elected general in 388 (2. 78)—but who had greater political ambitions, letting drop the information that his father's phratry shared its altars with the Eteoboutadai (2. 147). His mother's family went in for a different type of religious distinction; her brother Kleoboulos was a seer (*mantis*) and she herself played a role in some kind of initiatory rite, of which Demosthenes liked to give highly-coloured accounts. It was perhaps in response to such attacks that Aischines tried to use the name of the Eteoboutadai to give his family an air of greater respectability.¹¹⁵ By this time the relation between phratry and *genos* was probably not very clear to the average juror. Gennetai, however much they might pride themselves on their ancestry, were in general no wealthier and no more distinguished than their fellow phrateres. Aischines' reference may suggest that the presence of a major *genos* in a phratry was thought to confer distinction on the phratry as a whole, and not only on the gennetai. The Eteoboutadai, like the Brytidai, presumably continued to take their own decisions on the admission of new members, but not every *genos* clung to this privilege. The Dekeleicis seem to have stood on the same footing as any of the thiasoi of commoner members of their phratry, the Demotionidai, even

¹¹⁴ The MS text is *Kothokidēs*, but at § 84 he is said to belong to Erchia. It seems clear that a *genos* name must be restored (Titakidai may also be a possibility). On the Koironidai see below, nn. 121–2.

¹¹⁵ Dem. 18. 129–30, 284; 19. 199, 249, 281; *APF* 14625 II; add E. M. Harris 1988*a*, and *CEG* 776 = *IG* iv² 1. 255. We do not know where the phratry was based; Traill 1975*a* locates Kothokidai near Eleusis, but the association with the Eteoboutadai, plus the fact that the Apheidantidai owned land in the deme and the possibility that the family of Habron of Bate belonged to that *genos* (n. 142) may suggest a phratry centre near the city, and movement from that area to the Eleusinian plain before 507 is perhaps not very likely. Many small demes in Oineis are not securely located (ch. 28). Not all Eteoboutadai in the 4th c. were respectable: 'Pyrrhos the Eteoboutad' registered as a *dikast* while listed as a state debtor (Dem. 21. 182), and Demeas son of Laches the Eteoboutad was represented by Alexis (*PCG* 2 F 205) as a rich man whose parasite complains of his farting. The claim to quasi-gennetic status by the Bouselidai (ch. 7 Case 9) shows the blurring of boundaries.

though they still appointed the phratry priest and could be called on to undertake other responsibilities (ch. 19).

We can identify another family of gennetai, who would become prominent only in the second century BCE, leading a quiet life as deme aristocrats in the fourth century in Halai Aixonides (ch. 12 n. 77). The priest of Apollo Zoster in mid-century was Eukles II son of Eukles I; his father, Eukles I son of Eukleides I, was a member of the deme commission responsible for setting up a statue of Aphrodite *c.*360. The family also took an active interest in the worship of the Nymphs in a cave above Vari, where dedications were made by Eukleides, Eukles, and Lakrates, and by Eukles III, son of Lakles. The latter purchased properties at Poros in the Lykourgan period for *c.*125 drachmas. Lakrates II son of Lakles, councillor in 303/2, may be his brother. The tombstone of either Eukles II or Eukles III was found on the Akropolis.

The family re-emerges in the Hellenistic period with Eukles V son of Eukles IV, ephebe in the 250s, and his sons or grandsons Aristokles and Amynomachos, who successively held the office of hierophant (Table 20.3). Aristokles was adopted into a family in Perithoidai, but gave his *genitor's* name to his son Eukles VI.

Though by the late first century BCE we find men claiming membership in more than one genos, and priestesses may have acquired their rights matrilineally even earlier, the fact that this family was holding a priesthood in the deme in the fourth century seems to me an argument for believing that they were Eumolpidai of long standing. It is also possible that the names Lakrates and Lakles (the latter produced by combining Lakrates with Eukles) came into the family through a marriage alliance with the Eumolpid family of Lakrateides of Paiania.¹¹⁶

¹¹⁶ Linders 1975 takes the cult of Apollo Zoster to be a state responsibility, because the priest is honoured in the 4th c. by the boule and demos as well as the deme (Kourouniotes 1927–8, no. 3), and the Treasurers of the Other Gods had charge of its property; but the priest may nevertheless have been appointed by a genos (cf. Whitehead 1986*a*, 182–3). The priesthood still existed in the Roman period, *IG* ii² 5081 (Maass 1972). The story in the Euripides *vita* that he served as *pyrphoros* of Apollo Zoster may not be reliable (he is also said to have acted as *oinochoos* for Apollo of Phlya, Theophr. *Peri methês ap. Athen.* 424 e–f; these stories provide interesting evidence on later ideas about the relations between poetry and religion, but see Lefkowitz 1981, 92). Aphrodite: *IG* ii³ 4. 223, Whitehead 1986*a*, 431 no. 186; ch. 29 n. 134. Nymphs: *IG* ii² 4651, 4653. Eukles IV, *IG* ii² 1594. 20–1 (Lambert 1997*a* Stele II A F 7a, 17–22, Eukles L[akleous] Hal.); Lakrates II, *Agora* XV 62. 218; Eukles II or III, *IG* ii² 5481 (*SEG* 13. 79). *IG* ii³ 1011. 49–52 shows (*pace* LGPN and Blok and Lambert 2009, Aleshire and Lambert 2011, 559, who follow ii² 2332 and Clinton 1974) that it was Aristokles who was adopted into Perithoidai, perhaps because his mother was an *epiklêros* (ch. 2), and called this son after his *genitor*, while the younger Amynomachos remained in their father's deme. (A very odd attempt in Ismard 2010, 388, to make Amynomachos' appointment non-familial.) The family of Pasion of Halai (*IG* ii² 4551, ii³ 4. 364, with Peek 1942, no. 74) may belong to the same genos, but see ch. 30. On the Eumolpidai of Paiania and Perithoidai see nn. 99, 141. (Eukles son of Aischylos P., *Agora* XV 62. 182, *IG* ii² 7219, unconnected?)

Notes: *IG ii*² 5481 (*AG I*, 8 no. 10), Eukl—Eukl—Hal., cannot be placed. Lambert 1997*a*, 158–60 needs revision. All treatments of the hierophants Aristokles and Amynomachos since (at least) *IG ii*² have assumed that Amynomachos was adopted from Perithoidai into Halai, but since Aristokles contributed to the epidosis of 183/2 for himself and his brother Amynomachos (not yet adult?) and his son Eukles (called, one would assume, after his *pater*), it is fairly clear that Aristokles was adopted, probably to his MF. The fact that Amynomachos succeeded his brother as hierophant does not, at this date, prove the contrary. (See also, still following *IG ii*², Ismard 2010, 388–9.)

TABLE 20.3. Hierophants

THE FOURTH CENTURY: 338–300

The man who rebuilt Athens' confidence and financial reserves after her defeat by Philip of Macedon at Chaironeia in 338 was the Eteaboutad priest of Poseidon Erechtheus Lykourgos IV.¹¹⁷ It is not entirely easy, however, to say what contribution his aristocratic descent and priestly office made to Lykourgos' conception of his role, to his policies, and to his success.

He was a man of *auctoritas*; calm authority was part of the priest's role. He liked to pass severe moral judgment on offenders, preferably attacking them by *eisangelia* in the Assembly, a procedure he was prone to use even in trivial cases. This too had links to the priest's role: priests had traditional powers to keep order at festivals, while conceptions of pollution were slowly drifting in a moralizing direction. He had studied with Plato, and may have been particularly impressed by some of the ideas put forward in the *Laws*: authority for older men, the role of the lawgiver as educator. New measures introduced under Lykourgos' regime tended to come before the Assembly as complex laws already drafted by himself or one of his friends and approved by a legislative court of *nomothetai*, requiring only explanation and final approval; one has the impression that there was less free debate on open questions in the Assembly of this period than there had been in earlier times.

Nevertheless, his model may have been the position of Perikles as judged by Thucydides (2. 65)—in theory democracy, in practice rule by the best man—rather than that of the Platonic philosopher-king. Certainly Periklean echoes were prominent in his policy. He replaced the golden statues of Victory on the Akropolis which had been commissioned by Perikles and melted down in the later years of the Peloponnesian War (Linders 1987, 119–20); set up statues of Aischylos, Sophokles, and Euripides in the theatre, and insisted that actors should faithfully follow the script of an approved text of their plays; kept the fleet up to strength, used it against pirates, and improved facilities in the dockyards. He also remodelled the Pnyx, and built lawcourts; the statues of the eponymous heroes of the Kleisthenic tribes in the Agora were given a new base.

All Athenian politicians of the fourth century looked in one way or another to the past. Some, like Konon II, the founders of the Second Athenian League, and Demosthenes, still hoped to rebuild the city's position as mistress of the seas and a major power in Aegean affairs; others wanted to reunite Greece in a crusade against Persia (Isokrates, Androtion)—or against Macedon; others, more modestly, concentrated on achieving political stability by replacing tribute with revenue

¹¹⁷ *APF* 9251; Humphreys 1985*a*; 2004, ch. 3; Faraguna 2011. Lykourgos also served as hieropoios of the Semnai. Blok and Lambert 2009, followed by Rasmussen 2011, point out that Lykourgos is not attested as priest of Poseidon in our sources, but see n. 132, Appendix 4, on Habron and Lykophron.

from mining and trade (Euboulos, Xenophon's *Poroi*). Arguments persisted about the reasons for failure in the fifth century and the means of avoiding it in future. Suggestions that the Areiopagos council should play a greater role in government (Isokrates, Androtion) implied idealization of a pre-Periklean, more traditional and more limited form of democracy. In the crisis years before and after Chaironeia the Areiopagos was indeed given some new responsibilities, though on an ad hoc rather than a permanent basis.

Lykourgos, however, did not apparently want to change Athens' political institutions. His first four-year term of office seems to have begun in 336/5, the year in which the city passed a law decreeing penalties for any attempt at tyranny or overthrow of the democracy, and specifically forbidding meetings on the Areiopagos in any crisis of this kind (*IG* ii³ 320). Respect for traditional religion was not incompatible with loyalty to democracy. A new temple of Zeus Phratrios and Athena Phratia rose opposite the monument of the Kleisthenic *eponymoi* in the Agora.¹¹⁸ The role of the centre of Greek civilization, *paideia tēs Hellados*, had been projected back into mythical times already in the fifth century. Triptolemos had set out from Eleusis to teach mankind the arts of agriculture, Theseus was the father of democracy.

Thus the renewed interest in *genos* rights that seems to emerge in the Lykourgan period belongs to a political climate that was insidiously rather than polemically right-wing. Rich men were effusively honoured for their contributions to public enterprises, *gennetai* were encouraged to regard their traditions as part of the Athenian heritage, but there was no formal change in institutions.

Increased *genos* activity is documented both in the titles of lost forensic speeches and in inscriptions. Lykourgos himself wrote a speech for a case concerning the rights of the priestess of Athena Polias; he and Deinarchos both wrote speeches for a *diadikasia*

¹¹⁸ *Eponymoi*: *Agora* XIV 40; Rotroff 1978 with D. M. Lewis 1979; Camp 2010. The temple of Zeus Phratrios and Athena Phratia may have been built, and the temple of Apollo Patroios planned, before Chaironeia (*Agora* XIV, 136–40; but see ch. 19 n. 126). Canonization of the great 5th c. tragedians (cf. Hanink 2014) was compatible with new developments in comedy; revival of *genos* activity was combined with renewed prominence for the descendants of heroes of the democracy. Nikeratos of Kydantidai, SSS of the 5th c. general Nikias, was a prominent member of Lykourgos' Pythais of (?) 326/5 and of the equally programmatic board of *epimelētai* of the new Amphiaraiia of 329/8 (*IG* ii³ 355). The only possible *gennetes* appearing in these lists, apart from Lykourgos himself, is Epiteles son of Soinomos of Pergase (above, n. 79). Miltiades VII (*APF* 8429 XV) was sent as oikist to the Adriatic in 324 (his daughter subsequently married into two Hellenistic dynasties, her first husband being Ophellas of Kyrene and her second Demetrios Poliorketes); the ambassadors sent to Dareios III in 333 were Dropides III, Iphikrates II, and an Aristogeiton (above, n. 97); Konon III was sent as ambassador to Nikanor in 319/8 (D. S. 18. 64. 5). A descendant of Themistokles, Archepolis son of Pantenor of Phrearrhioi, appears as *ephebe* and *lochagos* in (?) 330/29/8 (*IOrop* 253; Humphreys 2009). Other possible descendants are Themistokles IV, councillor in ? 370/69, and perhaps the archon Themistokles of 340/39; *APF* 6669. Cf. the use of Miltiades son of Stesagoras as ambassador to Lysander in 404, and of Kimon IV as ambassador to Philip (*APF* 8429 XV).

between two Eleusinian genê, Krokonidai and Koironidai. Speakers for the two genê discussed the genealogy of their eponyms, the sacrifice Prochaireteria or Procharisteria, which commemorated the moment when Persephone re-emerged from the underworld, the Theoinia (a festival of Dionysos), the three *oinoptai* appointed to supervise drinking, probably at this festival, the genos Kynnidai, and the behaviour of a priestess who was either neglecting or exceeding her rights and obligations. It is not clear whether this latter passage refers to the priestess of Demeter, appointed by the Philleidai and perhaps another genos, or to a priestess appointed by one of the two genê involved in the dispute.¹¹⁹ The Krokonidai, perhaps soon after this case, passed a decree honouring with a gold crown or crowns the commission elected by the gennetai to repair the [*hier?*]on of Hestia, who had paid for the work themselves; perhaps the genos had a priestess of Hestia.¹²⁰

The Koironidai were also referred to in these speeches as Philicis and Perithoidai, which suggests that the genos may have belonged to a phratry named Philicis (otherwise unattested; ch. 19 n. 13), and that there may have been a core of gennetai resident in the deme Perithoidai, which probably lay near the route of the initiates' procession from Athens to Eleusis, and produced a hierophant towards the end of the fourth century. Another group of gennetai may have belonged to the city deme Skambonidai, since it was mentioned in the speech attributed to Lykourgos, and Pausanias (1. 38. 2) reports a local tradition in the deme that Krokon was not a son of Keleus (Demeter's host in the *Homeric Hymn*) but his son-in-law, husband of Keleus' daughter Saisara. The Krokonidai, on the other hand, claimed that Krokon was a legitimate son of Triptolemos (or Keleus?), and Koiron his bastard brother.¹²¹

The mention of the Theoinia may suggest that one of the genê, or both, had the right of supplying candidates for office as *gerairai*. The basileus every year appointed fourteen gerairai to attend his wife when she celebrated her sacred union with Dionysos at the Anthesteria, and they swore an oath that they were pure and would celebrate the Theoinia and Iobakcheia for Dionysos on the appropriate dates according to tradition. The

¹¹⁹ Conomis 1961, 1970, F VI; 1975, F LXXXIV; R. Parker 1996, 302–4. *Oinoptai* (ch. 19 n. 69) appear in Eupolis *PCG* 5 F 219; Didymos (F 14 Schmidt 1854) says that they were phratry officials, but in view of the association here with the Theoinia the assumption that all phratries appointed *oinoptai* (responsible for A. Mommsen's statement, 1864, 307, that there were 36) may be mistaken. If the Kynnidai were associated with Apollo Kynneios, worshipped at Halai (Krates *FGH* 362 F 2; cf. above, n. 12), it is hard to see how they entered into this case; the speaker may have been gratuitously displaying antiquarian knowledge. [*Kyn*]ne[*i*]d[*ôn*] may be a possible restoration in *IG* ii² 2871 ([*Eu*]ne[*i*]d[*ôn*] is not), a text of the beginning of the 1st c. BCE dealing with Apollo Patroios and a *mystikê oikia*. Rabel 1915 is not helpful on the priestess who was unwilling *ta idia dran*; the phrase is odd, and however idiosyncratic the use of *exoulê* in this case (Harp. s.v. *dike exoulês*), the priestess should be being prevented from performing a rite rather than being compelled to do so. I wonder therefore whether *ta idia dran* is a variant on *ta idia prattein*, the problem being that she was interfering in sacrifices that were not her responsibility (cf. perhaps *FGH* 3 F 45).

¹²⁰ *IG* ii² 1229; cf. Giangiulio 1982, 952–3. The honorands receive gold crowns; they had personally paid for the building work.

¹²¹ [Dem.] 59. 84 supplies a member of the Koironidai registered in Erchia (above, n. 114). Cf. Istros *FGH* 334 F 15 (Harp. s.v. *Koironidai*); the statement of *An. Bekker* 1814 l. 273 that both Krokon and Koiron were sons of Triptolemos may come from another period.

Theoinia, according to Harpokration (s.v.), were celebrated at the time of the Rural Dionysia, in the month Poseideon. It seems quite likely that the *genos* Theoinidai, which passed a decree in late Hellenistic or possibly Roman times honouring its priestess of the Nymph, and the *genos* Iobakchoi from which we have a decree of the second century CE, are successive later manifestations of the same group. On this view the Krokonidai and Koironidai, and any other *genê* entitled to nominate *gerairai*, would have merged at some time in the third century or later, under the name Theoinidai, and would later have changed their name to Iobakchoi.¹²²

Deinarchos also wrote a speech for a *diadikasia* between the deme Phaleron and the Phoinikes, concerning the priesthood of Poseidon, presumably in the cult of Poseidon Hippodromios at Phaleron; but it is not clear whether the Phoinikes were a *genos* or a group of Phoenicians resident in the deme. Hesychios' statement (s.v.) that they were a *genos* may be only an inference from the title of this speech. However, the Salaminioi made offerings in Boedromion, in the 360s, at Phaleron to Poseidon Hippodromios with the heroes Teukros, Phaiax, and Nauseiros; if Phoenician immigrants had adopted the cult, they had taken over a sanctuary with local traditions.¹²³

Other speeches in the Deinarchan corpus, dealing with similar matters, were rejected as spurious by Dionysios of Halikarnassos as either too early or too late in date. A speech against the Kerykes, for someone whom they had rejected, was dated in the archonship of Euboulos or Lykiskos (345, 344), when Deinarchos was only twenty. Another *diadikasia*, dated by Dionysios in 341/0, concerned the deme Athmonon and a ritual involving Demeter and Kore and the use of garlands of myrtle and smilax, but the identity of the second party to the dispute is not clear. The *diadikasia* between the priestess of Demeter and the hierophant, and the *diadikasia* between the (H)eudanemioi and the Kerykes, are both dated after Lykourgos' death (F xxxiv, xxxv, xxxviii Conomis 1975).

¹²² [Dem.] 59. 78; Apollodoros implies that there were other, secret promises in the oath. *TGFI* 208 F 1 seems to refer to the *Korónidai* (*Koirónidai*?) *korai* as daughters of Theoinos (cf. Kearns 1989, 67; n. 51). Theoinidai: Vanderpool 1979, *SEG* 29. 135, Humphreys 2004 ch. 6; we do not really know whether the inscription belongs to the Hellenistic or the Roman period. In any case, it seems too late for an association of their priestess of the Nymph with the sanctuary south of the Akropolis, where offerings cease in the 2nd c. BCE (Travlos 1971, 361–3). In my view the letters *RA* in line 9 suggest the restoration [*thugate*]ra, and hence a longer line than Vanderpool's text, with room for the priestess's personal name and the name, (patronymic?), and demotic of her father. A longer line would also allow for specification of the site where the decree was to be set up. Alternatively, the *genos* possibly derived revenue from a [*periste*]ra, dovecote (line 12); this would strengthen the case for connecting its priestess with the priestess of Aphrodite Pandemos Nymphes recorded on a theatre seat (*IG* ii² 5149). Iobakchoi: *IG* ii² 1368, *LS* 51, Moretti 1986; Vermaseren 1982, p. 48 no. 180. The Iobakcheia in the 2nd c. CE took place at the City Dionysia, whereas the Theoinia are associated with the Rural Dionysia by Harp. s.v., but a change of date resulting from decline of the rural festivals does not seem impossible. On the *genos* Bakchiadai, attested in the 2nd c. (*IG* ii³ 4. 657), see Lambert 1998; Humphreys 2004, 264; Sourvinou-Inwood 2011, ch. 6. It is uncertain whether the *geraira* of *IG* ii² 6288, wife of Menekrates of Ikarion, held her office in the cult of Dionysos or of Kybele (possible kin of her husband, *IG* i³ 254, ii³ 1231. 64).

¹²³ Din. F XX Conomis 1975; Baslez 1986, 291–2. Alope, who bore Hippothoon to Poseidon and was turned into a spring (subject of a tragedy by Euripides), was mentioned by Deinarchos. The (presumably Eleusinian) *genos* responsible for the cult of Hippothoon as tribal eponym (Schlaifer 1940) has not been identified.

The priestess of Demeter had clashed with a hierophant earlier, when Archias held the office (above, p. 688), and the Philleidai, who held the office, must always have had some difficulty in defending their rights against encroachment by the Eumolpidai and Kerykes, whose officiants were male. The *genos* nevertheless survived to pass a decree in the first century CE with the —]dai, who perhaps by this time shared the right of appointing the priestess (*IEleus* 379; R. Parker 1996, 317); by the second century CE priestesses are being appointed from the Kerykes and Eumolpidai (Clinton 1974).

We know almost nothing about the *gennetai* of this *genos*. If the story in Plutarch *Alkibiades* 22 is reliable, the priestess in 415 was Theano, daughter of Menon of Agryle (outside the city of Athens, on the east side), and she had been given the name of a Homeric priestess (ch. 12 n. 76). Another fifth-century priestess may have been called Lysistrate (*CEG* 317, *IG* i³ 953).

The Heudanemoi or Eudanemoi, a much more obscure *genos*, disputed with the Kerykes ‘about the basket’; presumably about the right to appoint the bearer of a basket in some part of the Eleusinian ritual. Basket bearers (*kanêphoroi*) were usually young girls; statues of girls who have played this role, in a variety of rituals, start to be dedicated by kin in the late fourth or early third century (ch. 12 n. 18). Arrian refers to the altar of the Heudanemoi, ‘which those initiated at Eleusis have seen on the bare earth’;¹²⁴ it was presumably an *eschara*, an altar made of sacrificial ashes. The Heudanemoi do not appear elsewhere; the name may suggest a connection with Orphic teachings, but since they take part in a court case it seems clear that they are a *genos* (or group of *orgeones*) and not deities.

Minor *genê* appear at about this time also as creditors, lending funds against the security of land, and (perhaps in consequence) as owners of parcels of land sold in a general sale of land belonging to corporate groups. *Demes*, *phratries*, and groups of *orgeones* also sell land at this time (Lambert 1997*a*); there seems to have been some official encouragement for small groups to sell scattered parcels of land they had acquired over the years and finance their operations by lending out the resulting cash at interest. Sale was not obligatory—the Salaminioi kept their property at Sounion—but many groups may have had difficulty in finding reliable lessees (Appendix 2).

A mortgage marker (*horos*) set up on the land of a man who seems to have been raising loans in his *phratry*, perhaps in the region of Anaphlystos, records debts to two sets of *phrateres* (thiasoi or sections of thiasoi; cf. ch. 19), and also to the Epikleidai and Glaukidai, who may be minor *genê* belonging to the *phratry*. Hesychios records a festival of Demeter called the Epikleidia, and the Glaukidai may be associated with the hero Glaukos, who receives a lamb, together with Xouthos, in a calendar of c.430 (*IG* i³ 255). The *genos* Lykomidai also lends money at this time.¹²⁵

¹²⁴ Arr. *Anab.* 3. 16. 8 (R. Parker’s translation ‘on the plain’, 1996, 293, seems to me less likely). My impression is that something has dropped out of the text, which would originally have referred to an altar of the tyrannicides (cf. *A.P.* 58. 1; Rudhardt 1958 s.v. *enagizein*, *enagisma*) as well as their statues, and noted its resemblance to the altar of the (H)eudanemoi, known to those initiated at Eleusis. Cf. *Agora* III, no. 260. On sacrifice and altars at Eleusis see [Dem.] 59. 116–17; Mylonas 1961, 169–70; Clinton 1988*b*. On ‘weathermongers’ see Parker loc. cit. and Laks 2013.

¹²⁵ *IG* ii² 2723, Finley 1952 no. 41; there is a *chiliastys* Glaukeis at Ephesos (N. F. Jones 1987). On *IG* i³ 255 see ch. 21 s. ‘The Trittyes’. The Lykomidai lend with the deme Phlya and the tribe Kekropis

Sellers of land include the Dipoliastai, presumably a collective name for the genē responsible for the Dipolieia (doubted by R. Parker 1996, 334); the Apheidantidai, who owned land in Kothokidai and were represented by their *epimelētēs* Leontios son of Kalliades of Epikēphisia; and perhaps the Oikatai, whose name gives no clue to their nature.¹²⁶

We can restore the name of the eponym of the Apheidantidai in the list of Theseus' companions transmitted in a very garbled state in Servius' commentary on Vergil *Aeneid* 6. 21: 'idest arcadis' should be Apheidas Arkados, since there was a tradition that Apheidas was the son of Arkas, the eponymous hero of Arkadia, by Metaneira daughter of Krokon. The Apheidantidai may also be the —]ntidai who appear as the genos of the descendants of Lykourgos' father-in-law Habron of Bate in the record of the Pythais of 106/5 BCE.¹²⁷

Servius' list of Theseus' companions has a strongly Eleusinian flavour. 'Hippoforbas et libi' may be a variant of Hippothoon son of Alope; the connection of the Arkadian Apheidas with Athens is associated with Krokon; the names of 'puresion celci' and 'iesione celei' are usually thought to conceal those of a son and daughter of the Eleusinian Keleus; two of the other girls are Andromache daughter of Eurymedon and Eurymedousa ('seupymedusa') daughter of Polyxenos. Polyxenos was an Eleusinian hero, and two hierophants at the end of the fourth century were called Eurymedon and Eurykleides. Other parts of Attika were also represented. Menestheus, whose name (like that of Periboia) seems to have been firmly attached to the tradition of this expedition, is said to be son of Sounion (sumiani); 'demolion cydani' may represent the eponyms of the Demotionidai of Dekeleia and of the deme Kydantidai; 'phidokos ramuntis' must be Amphilochos son of Rhamnous, another indication of late fourth century date, since the Amphiareion of Oropos, where Amphilochos was worshipped, only returned to Athenian control in 335; 'milita triaconi' presumably represents Melite, perhaps as daughter

(Finley no. 146; above, n. 103); money is also lent by the Gephyraioi (Finley no. 147, Davidson and Thompson 1943, p. 1. 1) and by the .erkeidai (*Agora XIX* H 88).

¹²⁶ Above, n. 28; Appendix 2. The land of the Dipoliastai is in Phlya, and one of their two officials belongs to that deme (Lambert 1997*a*, s.v.; the *epimelētēs* of the Oikatai, who also purchases their land, for 100 dr., is Straton son of Mnesiphane of Kothokidai (F 16A, 15–18, *IG* ii² 1597; ch. 28, Lambert 1997*a* n. 5); the land of the Apheidantidai (ibid. no. 40; cf. below, n. 142) is in Kothokidai, and their *epimelētēs* is Leontios son of Kalliades of Epikēphisia; land is also sold by the —akinid[ai] (Stele III B no. 43, *Agora I* 3771).

¹²⁷ The text reads: *Hippoforbas et libi idest arcadis antimachus euandri mnesteus sumiani phidokos ramuntis demolion cydani puresion celci* (boys) and *Peribea alcatim medippe pyrii iesione celei andromache eurimedontis seupymedusa polixeni europe laodicit milita triaconi* (girls). For Apheidas son of Arkas and Metaneira (Meganeira) see Apollod. 3. 9. 1. The suggestion that 'puresion' is Porphyryon, founder of the temple of Aphrodite Ourania at Athmonon according to Paus. 1. 14. 7 (Thilo 1884), may be too far-fetched. Eurymedon is FF of Nausithoos in *Od.* 7. 58, and we have a dedication to him from the first half of the 4th c. BCE from Piraeus (*IG* ii² 4567). Apheidantidai: ch. 24 n. 13.

of Trikomoi or Tetrakomoi. The list may go back to Phanodemos or Demon (*FGH* 325, 327); if it has any connection with the fourteen families on whom Kimon laid the obligation of contributing to sacrifices in honour of Theseus performed by the Phytalidai (above, n. 69), this list must already have reflected the ties of the Phytalidai with Eleusis.

If the Theseian ‘fourteen families’ were indeed still (or again) in operation at this time, they would have been on a footing similar to that of two pseudo-genē or genos-like groups which flourished in this period. A long list of the *parasitōi* of Athena Pallenis and their archons has been variously dated to c.350 or to the Lykourgan period; they came from demes as far afield as Lamptrai, Aigilia, Anaphlystos, Acharnai, and Epikēphisia, and include among the names that can be reconstructed enough to make identification possible an impressive number of wealthy men. It seems likely (*pace* March 2008) that the ‘league’ had been reconstituted shortly before the record was made. One of its members, Epilykos son of Nikostratos of Gargettos,¹²⁸ may have been of Philaid origin, but belonged to the new military aristocracy of the years after Chaironeia, serving as hipparch in 325; a younger kinsman, Theophantos son of Nikostratos of Gargettos, was taxiarch in 281/0. Konon III son of Timotheos II of Anaphlystos, known before Chaironeia only for his activities as trierarch and as arbitrator in a private dispute ([Demosthenes] 40. 39), served as general in command of Piraeus in 334/3 and 333/2 and was sent on an embassy to Nikanor with Phokion and Klearchos in 319/8. Though he was probably descended from the Konon who held the archonship in 462/1, the family became prominent only with the career of Konon II, first attested as general in 414/3 and responsible for rebuilding Athens’ fleet after the Peloponnesian War.¹²⁹

¹²⁸ The argument is based only on the name Epilykos (cf. *APF* 8429 XVII) and the statement by Epikouros’ friend Metrodoros, in his *Peri eugeneias*, that Epikouros, also of Gargettos, belonged to the Philaidai (D. L. 10. 1). Cf. ch. 24 n. 62.

¹²⁹ Peek 1942, 24 no. 26 (late 4th c.); Stanton 1984a (c.350; but see *SEG* 34. 157); R. Parker 1996, 330–1. Cf. above, n. 56. There was some connection with deme organization, with the *basileus*, and with roles for *gerontes* and for women who had had only one husband (*prōtoposeis*): Themison *FGH* 374 F 1. Stanton suggests that there were 3 *parasitōi* from each Kleisthenic tribe. On Konon’s embassy see above, n. 118. Other known parasites in this text are Kephisodoros of Oe (*APF* p. 290, cf. 9816), attested as a contributor of naval equipment c.366 (the son of Melesias, choregos for dithyramb in 375/4, *IG* ii³ 4. 441, seems too early, and is perhaps an older kinsman); Nikokles son of L[ysikles] of Kydantidai (*APF* 10903), who undertook the *eutaxia* liturgy c.330, bought land in his own deme in the *hekatostai* sales for 162½ dr. (*IG* ii² 1597, Lambert 1997a F 16A 4), and figures on a curse tablet perhaps of the late 320s with other members of his deme (*SEG* 58. 265 A III 80–1, cf. chs. 14 n. 70, 24 n. 97; he seems to be a deme notable rather than a major figure at city level); and Prokles son of Protokles of Plotheia, who like Konon III was one of the guarantors of the triremes sent to Chalkis in 341/0, and was sole trierarch—which at this period implies considerable wealth—at some date before 325/4 (*APF* 12234; his tombstone, with that of his father, *IG* ii² 7240–1; a descendant may have proposed *IG* ii³ 898 in 248/7, archon Diomedon: Habicht 1982a). Many names are too poorly preserved for identification. Three of the

A clearer example of the rise of a new group is provided by the Mesogeioi. Their earliest record seems to be an inscription of the late fourth century from Kamatero (Eupyridai?). At this date the group has a sanctuary, in which the inscription is to be set up, an archon, a treasurer, archives kept by the archon, and a festival of Herakles at which honours are to be proclaimed. By 275/4 the group has apparently moved or expanded its operations to a site close outside the Acharnian gate, on the north side of the city. Its archon in this year was Polyeuktos II son of Lysistratos of Bate, brother of the priestess of Athena Polias Lysimache (?) II, and thus a member of one of the leading families of the Eteoboutadai (*APF* 4549). By this time the festival of Herakles included a procession and a sacrifice, with a distribution of meat and wine and a table set for the god. The archon distributed cash to members of the group from his own pocket. In a later text of *c.*260 the *genos* archon is Epigenes IV son of Metrodoros II of Kydathenaion, who may have belonged to the Eumolpidai (*APF* 10807). The festival is now more ambitious; the group appoints a fire carrier (*pyrphoros*), and perhaps a leader of a choir or procession of girls (*koragôgos*); it has recorders (*mnêmones*) and a hereditary (*patrios*) herald. It can afford to bestow a crown worth 500 drachmas, and has a more complex system for funding sacrifices. It has both a priest of Herakles and a priest of Diomos.

Diomos is associated with Herakles in an explanation of the name of Kynosarges, one of the main centres of the cult of Herakles in the neighbourhood of the city. An Athenian called Diomos was sacrificing to Herakles when a white dog snatched the meat. He gave chase, and built an altar where the dog dropped its prize (cf. Parker 1993).

The Mesogeioi called themselves either a *genos* or an *oikos*. They cannot have been a *genos* of the traditional kind, since members of other *genê* belonged to the group, but they may have intended membership to be hereditary and may have thought this justified use of the term. The records show the group constantly expanding its activities: making its festival of Herakles more elaborate, appointing additional officials. It seems quite possible, therefore, that it also acquired a new site nearer to the city, perhaps part of that used by a modest group of *orgeones* whose cult table, with two decrees inscribed on it, was found not far from the later decrees of the Mesogeioi; the mention of a priest of Diomos in *IG* ii² 1247, of *c.*260, suggests that the Mesogeioi may have been becoming involved in the cult of Herakles at Kynosarges. The group may not have lasted for much more than two generations, but during its heyday it was remarkably successful in attracting rich men from notable families to serve as its archons.¹³⁰

archons of the group come from local demes (Gargettos, Pallene, and Paiania; the fourth from Acharnai), but this may be due to residence in 507 rather than historical tradition.

¹³⁰ See Dow and Gill 1965; R. Parker 1996, 306–7. *IG* ii² 1244–5 and 1247 are decrees of the Mesogeioi; Dow/Gill 1 and *IG* ii² 1246, inscribed on the same cult table, are probably both decrees of a

Note: Uncertainties here have increased since the publication of *APF*. If Keesling's date in the first half of the 4th c. for *IG* ii² 3464 is accepted, we do not know the name of the priestess honoured in ii² 3455, and cannot securely place the dedicant. The treasurer of *SEG* 23.82 and ii² 1375 could belong to any deme of II Aigeis; Bate is an obvious possibility, but there are others. We cannot at present place the dedicant of ii² 3455, [c.6–7] Pol[y]euktou Er[chieus].

TABLE 20.4. Priestesses of Athena Polias *APF* 4549 (revised)

Polystratos of Bate was perhaps attracted to the group because its second cult centre was in or near his home deme. The office of priestess of Athena Polias (Table 20.4) may have been handed down continuously in his family since the long tenure of Lysimache I from c.430 to 366.

group of *orgeônes*, which also refers to itself as a *thiasos* (however, *en tōi thiasōi* in D/G 1 should in my view refer to oral announcement of honours rather than publication on stone). 1245 was found near the cult table, 1247 150 paces farther north. *IG* ii² 1248, concerning the cult of Herakles at Cholargos, may well be unconnected (chs. 24 n. 8, 27 n. 15). On Diomeia and Kynosarges see n. 61. It is of course possible that ii² 1244 was carried to Kamatero from a site nearer the city, but Mesogeioi would be an odd name for a group originating just outside one of the city gates. In ii² 1244 the Mesogeioi refer to themselves either as a [*genos*] or as an [*oikos*] (Schlaifer 1944; cf. perhaps the *oikos* of the Dekeleians, ch. 19 at nn. 87 ff.). On the topography of the Paiania area and the provenance of ii² 1244 see Wilhelm 1905, 231–4, Vanderpool 1967; chs. 19 n. 116, 25 n. 18. ii² 1245, honouring Polyekutos of Bate, was proposed by his fellow demesman Amynomachos son of Philokrates, one of the trustees of Epikouros' will (D. L. 10. 16); his homonymous FF had served as councillor in 343/2 (*IG* ii³ 4. 75. 30; ch. 24 n. 13). It does not seem certain that the cult centre in the early 3rd c. lay in Bate, though it is possible. The decree for Epigenes, *IG* ii² 1247, was proposed by Prokleides of Kerameis (his homonymous grandfather, FF, was honoured in 326/5 as choregos by Pandionis, *IG* ii² 1157 with Tracy 1995, 134 n. 3). The expansion of the Mesogeioi may have some connection with the earlier existence of groups of parasites of Herakles, about whom we still know far too little (cf. Tagalidou 1993, 59–63; ch. 22 at n. 58).

Phanostrate, perhaps her great-niece (BSD) was priestess in 341/0; she was succeeded by [Lysimache ?] II, Polyeuktos' sister, who was honoured with a statue made by Kephisodotos and Timarchos *c.*300–290, and was still alive *c.*270. From her the office probably passed to Polyeuktos' daughter, perhaps a [Phanostra]te or [Lysistra]te, who was in office in the archonship of Alkibiades (237/6?). It eventually passed to this priestess's great-granddaughter (SSD) Theodote, daughter of Polyeuktos of Amphytrope; we do not know whether the marriage of [? Phanostra]te to Archestratos son of Euthykrates of Amphytrope, member of a rich fourth-century family with interests in mining (*APF* 2419) was an intra-genos marriage or not. Either before or after Theodote the priesthood was also held by Penteteris daughter of Hierokles of Phlya, possibly from the family in Phlya into which Lysimache I had married. Her name—if she was not renamed on taking office—suggests that she was destined for the office from birth.¹³¹

The branch of the Eteoboutadai that supplied the priest of Poseidon Erechtheus fared less well in the Hellenistic period, despite the fame of Lykourgos. On his death the priesthood was awarded by lot to his second son Habron, but Habron ceded it to his elder brother Lykophron II; it seems quite likely that Lykourgos' three sons were the only candidates. Habron was appointed finance minister of Athens in 307/6, the year in which Demetrios Poliorketes liberated the city from Macedonian control; by this time Athenians looked back on the Lykourgan age as a golden period of independence, democracy, and prosperity. Honours were decreed for Lykourgos, among them the privilege of perpetual dining rights in the Prytaneion for his next-of-kin. It was probably this privilege—passed down through the second marriage of Kallisto, daughter of Lykophron II, although it is unlikely that Symmachos, son of this union, was ever formally adopted into the *oikos* of his MF Lykophron—that preserved the genealogy recorded in [Plutarch] *Life of Lykourgos* (*Moralia* 843a–c). The genealogy traces Kallisto's descendants, through her great-great-granddaughter (SSSD) Philippe, who married the Eumolpid Medeios son of Lysandros of Peiraios, to Theophrastos and Diokles sons of the Torchbearer Themistokles of Hagnous, who held office at the end of the first century BCE. Philippe I's daughter, another Philippe, became priestess of Athena Polias, and her son Medeios II served as priest of Poseidon Erechtheus, in the first century BCE; by this time descent from Lykourgos, whether in the male or in the female line, seems to be almost synonymous with membership of the Eteoboutadai, and we have no evidence that the genos was still functioning as a corporate body. The Erechtheion became almost a family museum for Lykourgos'

¹³¹ *APF* 4549; cf. ch. 8 at n 17, on the instability of women's names. The history of this family does not entitle us to state that genos membership could be transmitted by women in the Hellenistic period, since Lysimache I and [Phanostra]te may have married within the genos. List of priestesses in Blok and Lambert 2009; cf. also Von den Hoff 2008; Keesling 2012.

descendants, housing wooden statues of Lykourgos and his sons by Kephisodotos and Timarchos, a painting of the same group with their mythical ancestors Hephaistos, Ge, and Erechtheus showing Habron handing the trident, symbol of priestly office, to Lykophron II, and the list of Lykourgos' descendants from Kallisto to Philippe. The use of the archaic material wood for statues that assimilated recent and perhaps even living members of the leading *genos* line to their mythical forebears is striking.¹³²

Though the rules of transmission were not the same, hereditary dining rights in the Prytaneion and *genos* membership seem to have reinforced one another. *Sitêsis* in the Prytaneion could be transmitted through women, whereas *genos* membership could only be so acquired by the adoption of the sons of *epikleroi*. In the Hellenistic period, however, such distinctions may well have broken down.¹³³ Philotera daughter of Pausimachos, son of Philostratos, who claimed in the late second century BCE to be 'of the true blood of the Boutadai', and held the office of priestess of Athena Polias, also claimed descent from Lykourgos, and from famous generals.¹³⁴ *Sitêsis* was an honour, and genealogical connections that might form a basis for claiming it were remembered.

¹³² On Lykourgos IV and his kin see Table 4.6; *APF* 9251; Humphreys 1985*a* with 2004 ch. 3; Bourriot 1976, 1343–4; *FGH* IV A I 1013 with comm. Lykophron II married into a rich family in Aixone (ch. 29 n. 117, Whitehead 1986*a*, 420 no. 97). Descendants of the agnatic kin now known from *SEMA* 174–6 do not seem ever to have benefited from the grant of *sitêsis*. Use of the lot to appoint *genos* priests is attested for the Eteoboutadai also in *IG* ii² 1146 (*pace* Schlaifer 1940, there is no reason to suppose that the mode of appointment has changed, cf. n. 17), and for the Salaminioi in *Agora* XIX L 4a; cf. also Dem. 57. 46. On Habron's dedications see Hintzen-Bohlen 1990, 152–3, ch. 12 n. 107, and Appendix 4. On the Eumolpid family of Medeios of Peiraios see *IEleus* 275, Tracy 1982; Karila-Cohen 2007; Schmalz 2009; Ismard 2010 (378–83); Lambert 2012*b*, 89–92; Sourlas 2013. They would have married into the Eteoboutadai c.140, just when the *genos* revival was beginning. The award of Eteoboutad priesthoods to Medeios II and his sister Philippe II may be associated with Roman patronage, like his 3-year tenure of the eponymous archonship in 91/0–89/8.

¹³³ A rescript of Marcus Aurelius (J. H. Oliver 1970, 4 plaque II. 7–14, *SEG* 29. 127) deals with the permissibility of co-membership of both Eumolpidai and Kerykes, and seems to imply that a matrilineal link could facilitate this. In the late 1st c. BCE Pammenes son of Zenon of Marathon seems to have belonged to Gephyraioi, Erysichthonidai, and Eumolpidai (P. Roussel 1929; *ID* 2516–18, *SEG* 30. 85; *IG* ii² 3523–4; Baslez 2004; Schmalz 2009). Such cases, however, are perhaps rare. Diotimos son of Diodoros of Halai was a member of the Gephyraioi and held the office of Bouzyges, also in the late 1st c., but it is unlikely that the Bouzygai were still functioning as a *genos*; we should perhaps hesitate to assume that his appearance as member of a commission appointed by the Kerykes in 20/19 BCE (Clinton 1974, 50–52 = *IEleus* 300) proves that he was also a Keryx (cf. P. Roussel 1934). Gennetai who appear sometimes as representatives of the Eupatridai and sometimes as representatives of a specific *genos* are varying the description of their status; even in the Hellenistic period the Eupatridai were not a *genos* (Wilhelm 1924*b*, 124–6; Daux 1936, 551–4; R. Parker 1996, 323–4).

¹³⁴ *IG* ii² 3474; cf. 3473, 3870; Wilhelm 1909, 81; Habicht 1982*a*, 83; Humphreys 2007. Cf. Clinton 2004 = *SEG* 54. 307, claiming descent from Perikles; Perrin-Saminadayar 2014. Possible reform of *genê* in 21 BCE, Aleshire and Lambert 2011 (L. doubtful).

It seems very likely, therefore, that it was the award of *sitesis* to the next-of-kin of Harmodios and Aristogeiton that enabled the Gephyraioi to re-emerge as an influential *genos* in the late first century BCE (Baslez 2004, 107). A marriage of c.330 may indicate the tenacity with which even remote links to the tyrannicides were remembered. Dikaiogenes IV son of Menexenos II of Kydathenaion, who was to serve as general in 324/3 and 323/2, married Eukoline, daughter of Aristogeiton II of Aphidnai (*IG* ii² 6569; *APF* 3773, 12267 III). Dikaiogenes' grandfather (FF) Dikaiogenes III had been adopted out of the tyrannicide family of his father Proxenos I into the *oikos* of Dikaiogenes I of Kydathenaion in 411; we have seen his disputes with his kin (ch. 7, Case 2, Table 7.2). The privilege of *sitesis* was probably handed down from Dikaiogenes IV's FFB Harmodios III, who had opposed the grant of *sitesis* to Iphikrates in 371, to his son Proxenos II, general in the 340s, but condemned for misconduct between 346 and 343.¹³⁵ He presumably lost his privileges at this time, but had recovered his citizenship by 340; the family names, indicating either enjoyment of the privilege or hopes of recovering it, are perhaps continued by (?) [Harmo]dios IV, who (??) appears on a fourth-century *horos* (*Agora* XIX H 95; cf. *APF* 12267 VI), and by Proxenos III, archon basileus in 227/6 (archonship of Theophilos, *IG* ii² 1706. 22) and treasurer of the Council in 223/2 (*IG* ii³ 1152. 69–71, 1153. 56).

In 336/5 one of the two tyrannicide positions was held by Demokrates son of Demokles of Aphidnai (Hyperides 2 *Philippides* 2–3; ch. 31 n. 24). Though he may have replaced Proxenos II, it is perhaps more likely that he represented the descendants of Aristogeiton. The story that an impoverished granddaughter (DD) of Aristogeiton had returned to Athens from Lemnos to marry a wealthy husband indicates that there were disputes about the line of descent in this branch of the *genos*. Lemnian connections appear again in references to the dispute between Archippos and Aristogeiton—probably Eukoline's father—over the estate of Archepolis.¹³⁶ One possibility is that Demokrates' father or grandfather (FF) had acquired *sitesis* by claiming to be Aristogeiton's DDS through a marriage with a Lemnian girl; this claim had been accepted by the *demos*, but raised hopes in another Lemnian line that it had a better right to the position. By the time of Aristogeiton II, named on the basis of these hopes, the family had returned to Attika; Aristogeiton II may have hoped that alliance with Dikaiogenes IV would provide him with a supporter who could claim familiarity with traditions in the tyrannicide families and had his own reasons to resent exclusion from their privileges. Since Demokrates'

¹³⁵ Harmodios III was evidently already well known, though probably still in his 30s, when the speaker of *Lys.* 1 (41) singled him out as one of the friends and neighbours whom he had tried to recruit as witnesses. His father was dead by 399, and he would probably already have been enjoying the family privilege. For the attack on Iphikrates see *Lys.* fr. XVIII Thalheim 1913, VII G; Carey 2007 41a–49, cf. p. 464–5.

¹³⁶ Is. F III Thalheim 1903. Archippos may be A. of Aphidnai, *naopoios* on Delos in 346/5 (*ID* 104-23, lff., 104-24. 13ff.). On suspicion of Lemnians see ch. 7 n. 23. The Aristogeiton sent as ambassador to Dareios in 333 (ch. 16 n. 25) presumably belonged to this family.

family can be traced into the second century (*APF* 12267 IV), and the name Aristogeiton disappears, these hopes were apparently disappointed.

The Eumolpidai and Kerykes were never in danger of dissolution; their privileges were too widely distributed and their offices too numerous and prestigious. In the late fourth and early third century, however, the two gené draw closer to each other and to the deme of Eleusis, which was flourishing as a garrison centre. The Kerykes passed a decree honouring Lykourgos' friend Xenokles son of Xeinis of Sphettos, perhaps during his years of service as Athens' finance minister in 332/1–329/8, for his benevolence to the sanctuary (*IEleus* 87); in (?) 321/0 (or 318/7) he served as one of the epimeletai of the Mysteries and built a new bridge on the processional route at his own expense.¹³⁷ Later, perhaps towards the end of the century, they honoured Euthydemos son of Moirokles of Eleusis for his services to the genos while acting as paredros to the basileus.¹³⁸ Euthydemos came of a prominent Eleusinian family, and served as demarch c.300; his cousins Moirokles II (FBS) and Kallippos II (FBSS) were conspicuous in city politics in the late fourth and early third century (ch. 30 n. 89, Table 30.3). The text provides interesting evidence on the collaboration of basileus, genos, and resident demesmen in celebrating the Mysteries.

Another associate of Lykourgos, Neoptolemos son of Antikles of Melite, was honoured by the Eumolpidai, c.330 (?), for supervising the *hiera* and decorating the *hieron* of Plouton. Since he is awarded the same share (*meris*—of sacrificial meat?) as the Eumolpidai, he is evidently not a member of the genos; he may have either been an especially zealous and generous member of a board of commissioners appointed by the city, or held an individual position.¹³⁹ By the time of Chairetios, hierophant perhaps in the early 220s, the two gené are passing decrees

¹³⁷ *APF* 11234, Ampolo 1979, Habicht 1988*b*, ch. 27 n. 27; *IEleus* 87 = *Agora* XVI 77/XXXI 27. Bridge: *IEleus* 95 = *IG* ii³ 4. 232. Gow and Page 1965 I, p. 11 no. 2; cf. also *IG* ii³ 4. 212–13. Xenokles was brought out of retirement in 307/6 to hold the office of agonothetes at the Lenaia (and Dionysia? *IG* ii³ 518, 519), and was sent on an embassy to Antigonos soon afterwards (ii² 1492. 100); he was represented as host of a dinner party in a parody poem by Makron shortly after 307 (Athen. 134d–137c), and is named on the curse tablet *SEG* 58. 265 A I 25. His grandson (SS) was priest of Akamas (his own tribe) in ? 223/2 (*IG* ii³ 1153. 55).

¹³⁸ *IEleus* 100, proposed by Epigenes son of Euergetes of Koile (above, at n. 101; Table 20.2); J. K. Davies 1996, 631 n. 123 notes correctly against MacKendrick 1969 (followed by Ismard 2010, 256) that the language of the decree 'virtually excludes' that Euthydemos was a member of the genos.

¹³⁹ *IG* ii² 1231, emended by Wilhelm 1939, 13–16 (missing from *APF*); *IEleus* 93 reads Hi(c)rophan[es] as the proposer's name, connecting him with *IG* ii³ 4. 35. 109, Halai Aix. Neoptolemos, who came from an old family (*APF* 10652, ch. 29 n. 5), is not otherwise heard of after 326/5; the decree is dated c.330 by Tracy (1995, 84). On the date of *IG* ii² 1235 (Chairetios; *SEG* 29. 134, *IEleus* 201) see Dow 1979 (Clinton 1974 dated it 248/7). The proposer, Thrasyphon son of Hierokleides of Xypete, may be a Keryx (the name is suitable for office in either *genos*), and father of the altar priest and Torchbearer in the late 3rd c., Hierokleides; he also proposed *IG* ii³ 1009, a decree honouring the *epimelētai* of the Mysteries, and possibly ii³ 1027 (G. J. Oliver 2007*a*, 225 n. 186). The two gené

jointly, and can only afford to honour their hierophant with a myrtle wreath (excused as traditional, *patrion*). The Chremonidean War and Macedonian occupations may have made the middle decades of the third century a difficult period for Eleusis.

One Eumolpid family that was to achieve a leading position in Athens in the second century seems, however, already to have risen to hold the office of hierophant in 323. Eurymedon, who prosecuted Aristotle for impiety in that year on the grounds that the philosopher had composed a hymn in honour of his father-in-law, the tyrant Hermias of Atarnai,¹⁴⁰ and his successor Eurykleides, who was teased by the ‘atheist’ philosopher Theodoros during the reign of Demetrios of Phaleron, probably both belonged to the family of Kephisia first attested in the service as councillor in 367/6 of Euripides son of Eurykleides (*IG* ii³ 4. 54. 22), and prominent in Athenian affairs from the middle of the third century to the late second century (Habicht 2006*a*; Paschidis 2008, A 71–2; Tracy 2015). In the second century Habryllis, daughter of Mikion V of Kephisia, served as priestess of Demeter and Kore. It is somewhat surprising, if the hierophants of the fourth century belong to this family, that it shows no sign of interest in Eleusis later.¹⁴¹ There may however be a parallel silence from Chremonides and Glaukon of Aithalidai, perhaps Praxiergidai (n. 78); and we hear nothing of *genos* affiliation in the family of Phaidros, Kallias, and Thymochares of Sphettos.

The Athens of Demetrios of Phaleron, if we can judge by a fragment of Menander’s *Flatterer* (c.314; F 5 Sandbach 1972), was still full of *gennetai*; a character complains, ‘We couldn’t even find a *gennetes*, although there are so many’ (or, ‘I have so many’), ‘and so I am left here all alone’. But their pretensions met with less sympathy. It is not until the late second century that references to *genos* affiliation become prominent.

act jointly also in *IEleus* 236, 2nd c., honouring a hierophant with a bronze statue, though here the Eumolpidai pass their own decree in addition; cf. also *IEleus* 221.

¹⁴⁰ Cf. the story that the Torchbearer Pythodoros opposed Demetrios Poliorketes when he demanded to proceed directly to the final stage of the Mysteries, the *epôpteia*, without the required preliminaries (Plut. *D. P.* 26, 302 BCE). It may be at this period that stories about the *parrhêsia* of earlier Eleusinian officials became popular (above, p. 686).

¹⁴¹ D. L. 5. 5, 2. 101; cf. Habicht 1982*a*, 179–82. There is also a choregos Eurykleides in 459/8 (*APF* 5963). Habryllis: *IG* ii² 3477, with *Agora XXXI* no. 75 and Themis 2009*a* = *SEG* 56. 235; cf. *IG* ii² 6398; D. M. Lewis 1955, 1–12. Lysistrate, daughter of Mikion VI of Kephisia, restored in *IG* ii² 1036, should be deleted (Aleshire and Lambert 2003, *SEG* 53. 143). Another hierophant of the late 4th c. is [Bi-] or [Mol]ottos of Eleusis, *IG* ii² 1544. 35, perhaps in office in the 330s. Hierophantes (Aristokles) son of Noupgrades of Perithoidai, who may have been the first to change his name when he took office, is now dated c.170–150 (*IG* ii² 1934; Tracy 1990, 155–6; *IEleus* 233, 234 = *Agora XVI* no. 306; *IEleus* II introduction). Mnesimachos son of Noupgrades of Perithoidai, councillor in 335/4 (*Agora XV* 43), will be an ancestor; he also perhaps appears in ii² 7221, a list of names which is probably not funerary (Dow 1983). This would be the family into which Aristokles of Halai Aixonides was adopted in the 2nd c. BCE (above, n. 116; Table 20.3).

There is still work to be done on the fluctuating fortunes of the *gené* in the Hellenistic and Roman periods, and it cannot be attempted here. The threads of continuity between the classical period and the *genos* revival of the late second century BCE were slim. A prominent family in the Kerykes which can be traced from the second century into the Roman period, that of Themistokles son of Theophrastos of Hagnous, claimed descent from the general Themistokles of Phrearrhioi, but we do not know how the pedigree was constructed (*APF* 6669 VII; Clinton 1974, 2004; *IEleus* 300); this link may be the basis, or a sign, of the closer relations between Eleusis and the Lykomidai of Phlya reflected in Pausanias' statement that he was shown the hymn of the Lykomidai, attributed to Mousaios, by a Torchbearer (9. 27. 2), and by a joint dedication by the Eumolpidai and the Lykomidai around the end of the first century CE, *IEleus* 435. Descendants of Lykourgos' father-in-law Habron of Bate also reappear in the late second century, both as representatives of the [?Apheida]ntidai and as *exégētai*; one of them, Drakon son of Ophelas of Bate, wrote a book *About gené*; another, perhaps Habron V son of Kallias IV, wrote on festivals and sacrifices. The information about *gené* in the lexicographers must derive partly from these antiquarian works of the late second century and partly from commentaries on the orators.¹⁴²

It has been claimed that by this date there was a *genos* Eupatridai, but this is now taken to be a misleading description. References to Eupatrid *exegetai* occur, with other references to *gené*, in the records of the sacred embassies sent from Athens to Delphi in the period 138/7–97/6. The custom of sending a Pythais

¹⁴² *APF* 7856. [Palla]ntidai, [Medo]ntidai, and [Zeuxa]ntidai are less likely, since Pallantidai is known only as a name for the sons of the early king Pallas, the Medontidai are only attested as a phratry (ch. 19 n. 127), and the Zeuxantidai appear only in Hsch. s.v. (the —ntidai of *IG* i³ 247 may be the deme Kydantidai, ch. 24 n. 89). The Apheidantidai sell property in the *hekatostai* texts (Lambert 1997a, *Stele* 4 F 16 A, 19–23). The genealogy that made Apheidas the son of Arkas and of Metaneira, daughter of Krokon, gave them Eleusinian connections (above, n. 127). Drakon: *FGH* 344 (*IG* ii² 2334. 71–3 = Migeotte 1992, no. 20; *ID* 1653, 2614, 2229); Habron (V), *FGH* 359, *FD* III 2. 13 (106/5). They may have been cousins (FBS; cf. Rolando 2004). Apollodoros (*FGH* 244 F 158) may also have written on *gené* in the middle of the 2nd c.; there were later works by Theodoros the Panages, *FGH* 346, on the Kerykes, in the first half of the 1st c. CE, and by Meliton, *FGH* 345, on *gené*, in the 2nd c. On service by members of this family as *exegetai* on the Pythais see Humphreys 2017b, n. 3. Habron IV was appointed *proxenos* at Delphi in 189/8 (*Syll.*³ 585); cf. *IG* ii² 2334. Davies (*APF*) suggests that Lykourgos married into the family that rivalled his fellow *gennetai*, descendants of Drakontides (*APF* 4549), for leadership in the deme Bate; but it is also possible that it was his *gennetic* connections with Bate that brought the Apheidantidai—if that was indeed their *genos*—to his attention. (The names Drakon and Drakontides were evidently both considered to carry suggestions of ancient lineage, and it is unlikely that Drakon son of Ophelas owed his name to ties with the Eteoboutadai.) The family was old—an early Kallias son of Habron set up a bronze dedication on the Akropolis in the first half of the 6th c., *IG* i³ 551—but plays remarkably little role in Athenian affairs except in the Lykourgan period, when Lykourgos' WB Habron served as *tamias stratiōtikōn* in 338/7, and again in this burst of activity in the late 2nd c. On the Hellenistic *gené* see now Karila-Cohen 2005, 2007; Perrin-Saminadayar 2005; Deshours 2011; Ismard 2013.

to Delphi seems to have been revived partly in response to the success of an initiative of the Marathonian Tetrapolis, which had sent envoys to Delphi in 215 to remind the Delphians of their own custom of sending deputations to the sanctuary, and to ask for the renewal of traditional privileges,¹⁴³ and partly in reaction to the Roman presence from 168 onwards.¹⁴⁴ The practice of identifying some members of the Pythais as *genos* representatives may have been begun by the Pyrrhakidai, who had strong connections with Delos. In 138/7 one representative was sent by the Pyrrhakidai, three by the Tetrapolis, and five (four of whom came from the same family) by the 'Eupatridai'. In 128/7 one representative of the Pyrrhakidai was named, and three representatives of the Tetrapolis. In 106/5 we have one member of the Pyrrhakidai, four Eupatridai, among them Habron son of Kallias of Bate, three Kerykes, three Euneidai, and one representative of the Tetrapolis. A member of a Eumolpid family, Sostratos son of Lakrateides of Ikarion, appears among the *pythaistai* chosen by lot, but is not identified as a *genos* representative; a member of the Bate family, a son of Habron, represents the [?Apheida]ntidai. In 97/6 Tetrapoleis, Pyrrhakidai, Kerykes, and Euneidai are joined by an *archetheōros* and three *theōroi* from the Erysichthonidai, another *genos* with Delian ties.¹⁴⁵

This evidence suggests to me that members of minor Attic *genê* by this time were in many contexts content to describe themselves as Eupatridai rather than specifying the name of their *genos*. As in the archaic period, a convincing claim to Eupatridhood would have to be backed by claims to *genos* membership; but standards of proof were probably less strict. Eupatridhood was perhaps becoming what it had been before the introduction of the annual archonship: a claim to be sustained by wealth, pedigree, and an aristocratic lifestyle, and validated by the acceptance of one's peers. Sporadic bursts of corporate activity by *genê* continue, but are probably to be explained by the ambitions of individuals rather than any sustained tradition of collective concern with *genos* business.

¹⁴³ *FD* III 2. 18–20 (*Syll.*³ 541, 637): 215, 204, 178 BCE. The Athenian actors sent an embassy in 130/29 asking for renewal of privileges granted in the 270s (*IG* ii² 1132, cf. 1134). See the important account of relations between Delphi and Athens (and Rome) in Habicht 1995, 275–80. Sacred embassies from Athens to Delos were revived in the same period (Roussel 1916, *IG* ii² 2336).

¹⁴⁴ Cf. Cartledge and Spawforth 1989, 86–7. I wonder whether the revival of the *genê* at Athens was partly prompted by a feeling that they were equivalent to Roman patrician *gentes*, and might therefore impress the Romans (cf. Lambert 2010*b*).

¹⁴⁵ Cf. n. 82; Humphreys 2017*b*, n. 3. The names of the representatives of the Pyrrhakidai were added later to *FD* III 2. 7 (138/7) and 13 (106/5), but in *FD* III 2. 8 (128/7) the record of their representation seems to have been there from the beginning; it is not clear whether the idea of representation of specific *genê*, rather than the whole Order of Eupatridai, came from the Pyrrhakidai, the Kerykes, or the Euneidai. The involvement of the Euneidai may be due to the parallel initiative of the actors (n. 143). The Erysichthonidai listed members of the *genos* in 91/0, *IG* ii² 4991; the 'revival' of this *genos* seems to have been led by the family of Pammenes and Zenon of Marathon (cf. N. D. Robertson 1984; *SEG* 60. 230). See also Jacquemin a. o. 2012, 198–201.

SUMMARY

The complex picture of *genos* history in Attika presented here is paralleled by recognition of the complexity of the history of similar phenomena in other periods: medieval ‘clans’ (Heers 1977), Scottish clans (Cathcart 2006), Chinese aristocratic families (Ebrey 1978). Large-scale descent groups are not a natural phenomenon, as was believed by nineteenth-century historians, but arise from and are sustained by hereditary rights. However, once they are in being—have a name, members, and some collective property—they acquire, to some degree, a cultural life of their own. Their past becomes part of their capital, especially if they are linked to a system of stratification. The history of the *genê* is a story of the role of status honour based on descent in changing systems of power and government.

I have argued here that the system of named, priesthood-holding aristocratic *genê* attested in Attika was peculiar to that state, though similar groups arose elsewhere in Greece in a less systematic way from the same causes. The Attic *genê*, on this view, would have crystallized as a result of the introduction in the early seventh century of annual elections for office in which only members of families that recognized each other as Eupatridai were accepted as candidates. No doubt it was not long before this boundary line was contested; after less than a century, excluded groups contemptuously described by the Eupatrid core as ‘service’ groups (*dēmionurgoi*) or ‘rustics’ (*agroikoi*) were able to gain the right to stand if they met the new wealth criteria defined by Solon.¹⁴⁶

Solon, however, while detaching the right to stand for political office from *genos* membership, left the *genê* a privileged position in their phratries. Their decisions on admission did not have to be subjected to the approval of the phratry as a whole. Increased competition for office, with the removal of the Eupatrid monopoly, probably encouraged ambitious men to make the most of their opportunities for generosity at festivals both in the home of their phratry and in the city; the areas of Attika remote from the central plain had to be roused to make the effort to vote by suggestions that they were not getting their fair share of power, and elaboration of local traditions giving them a place in Attic history. This latter trend harmonized with the increasing interest of leading men all over Greece, who met at Panhellenic festivals, in stories that linked their ancestors into a common mythical past.

Although Solon seems to have made an attempt to systematize the calendar of rituals to which the city was committed, it was always open to additions. Hereditary transmission of priesthods, in a *genos* or a specific descent line,

¹⁴⁶ In Roman terms, the period from 683/2 to Solon is a period of ‘*serrata del patriziato*’ (but this concept is now questioned by C. J. Smith 2006).

was favoured by the use of private wealth in cult in the archaic period, by a sense of the unpredictability of the gods, perhaps best dealt with at close quarters by those who had grown up on familiar terms with them, and probably by the special case of Eleusis, whose leading families established a firm grip on the celebration of the Mysteries at a date when Eleusis was still ritually, though not politically, independent of Athens.

The sixth century, though it may have been a period of intensified cult activity at grass-roots level, was also a time of population movements. Aristocrats and craftsmen moved into the city and its environs; in the 530s–520s the success of silver mining drew other families to the Sounion–Laureion region. By 507/6 the members of many *genê* were scattered across Attika. Kleisthenes' reforms accentuated this dispersal, but it now seems doubtful that his regroupings were prompted by fear that *genê* and other local cult associations might provide the basis for a renewal of regional conflict.

As it turned out, Athenians had very different problems to face. The Persian wars and the growth of empire confirmed the central role of the Assembly and Council of 500 in Athenian politics. When Kimon made a last attempt to use *genos* cults as a basis for personal power he did not build on his own membership of the *Philaidai*, but chose two other *genê*, with bases closer to the city—one in his own deme, *Lakiadai*—and with cultic ties to the city's mythical founder, Theseus.

Perikles had no intention of competing in revival of archaic pageantry. The only bones given ritual burial in Athens after 464/3 were those of men killed in battle during the year; the new buildings on the Akropolis were presented as part of Athens' campaign against Persia. Some older ritual projects were revived in the 420s, perhaps under the influence of Nikias (see however Hornblower 1992)—purification of Delos, invitation to all Greeks to send tithes of corn to Eleusis (if not earlier)—but these were not *genos* traditions. Many of the old *genos* rites by now seemed comic; and prominent young *gennetai* who had grown up listening to the sophists led the mockery.

One might almost wonder that the *genê* survived the repudiation of their traditions and values by both the left and the right wings of the intellectual elite in the second half of the fifth century, and the suspicion of oligarchic sympathies that their members nevertheless faced in the early years after 403. *Genos* cults were favoured, however, by a nostalgia for pre-war country life that we see already in Aristophanes and Euripides (cf. Borgeaud 1979; Humphreys 1986*c*); and the institutions designed by Kleisthenes and elaborated by the proliferation of administrative committees in the years of empire turned out to provide a very suitable niche for a modest snobbery at the local level. To belong to a *genos*, or even to share altars with one, could be a source of satisfaction for the men who served in the Council, held minor office on administrative boards, supported deme activities, built dignified tombs for their families, but did not aspire to

positions of great power: the undistinguished brothers of well-known orators (Hegias of Sounion), the naive husbands of Neaira's daughter Phano. *Genê* became absorbed into the democracy's representations of its past, but also into the routine operations of phratries, demes, and in some cases tribes; patterns of distribution of *gennêtai* and *phrateres* in demes and tribes affected their structure. Some survived even the collapse of collective activity in phratries and demes, but many succumbed. Whereas the *genos* of the classical period succeeded in establishing ties with a popular sense of history, the *genos* of the Hellenistic and Roman periods returned to an elite discourse on privilege, history, and the representation of Athens to a panhellenic or Roman audience. The evidence on the *genê* and their cults in these later periods has much to tell us about conceptions of history and religion, as well as kinship, but cannot be followed here.

The Kleisthenic Tribes and Trittyes

REORGANIZATION

Reforms introduced *c.*507, during the struggle for power after the expulsion of the tyrant Hippias, introduced a new tribal system: ten tribes, named after Attic heroes, each divided into three trittyes. All but the largest trittyes were further subdivided into demes, and every adult male Athenian was required to register in the deme where he lived, ‘deme’ being a common term for a rural settlement, perhaps also for an urban neighbourhood.

So much is agreed; but opinions diverge on the purpose of this restructuring and the sequence of moves by which it was set in place.

Most of the discussion has started from attempts to deduce Kleisthenes’ motives, without first asking what he knew about the distribution of the population of Attika before he started, and trying to reconstruct the sequence of events.¹ Let us start, instead, by asking what Kleisthenes’ mental map of Attika might have looked like, and where he would have looked for information about population distribution (cf. Humphreys 2008, 18).

We do not know where Kleisthenes lived, but he had brothers in Alopeke and Xypete,² and the view of the ‘city’ area that seems to be embodied in his scheme may have a different emphasis from the notion of the ‘Plain’ current in the 560s. Kleisthenes’ city area consists of the Piraeus and Phaleron, the coastal plain, the city, and a rather narrow suburban ring round it. Acharnai and the other villages of the plain north of Athens are ‘inland’, and are not thought of as closely linked to the city.³ This ‘city’ area would presumably be conceptualized by most of its

¹ Andrewes 1977 is an exception. See Humphreys 2008 for a more detailed presentation of this argument.

² It is not certain that he had descendants: see ch. 15 n. 23 on (?) Kallixenos Kleisthenous, and *APF* 9688 on his siblings.

³ Kinzl (1987, 1989) has argued that the city/coast/inland division was not current in 507 but was projected onto Kleisthenes by later sources. But in my view (ch. 18 at n. 48) the relation between the three regional factions of 560 and the scheme of 12 early Attic towns and 3 kingdoms (4 with Megara) goes back to the 6th c. The epigraphic evidence for the classical period, while it indicates that Athenians did not in all contexts think of tribes as divided into 3 sharply distinguished regional blocks, also shows that there was no uniform, institutionalized division into 3 sets of demes producing almost equal numbers of councillors (see below at nn. 25–7).

residents in terms of major roads leading out of the city (the Sacred Way, the Acharnai road, the Piraeus road, the Phaleron road, cf. Korres 2009; the names of gates known from the 5th–4th centuries give us an idea of these road names, even though we do not know the course of the wall, if there was one, in 507), physical and sacred landmarks (Kolonos hill, the rivers Ilissos and Kephisos, the gymnasia with their shrines, the sanctuary of Athena Skiras at Phaleron, the Skiron area which served as a ritual boundary between Athens and Eleusis, cf. ch. 20 nn. 32–3), city and suburban quarters (the Kerameikos, in particular, will already have had a distinctive personality), and substantial settlements outside the city, some or all of which will also have been phratry and/or cult centres (Alopeke, Euonymon, Phaleron, Peiraios, Thymaitadai, etc.). Age, class, and gender will have introduced variations into this mixture of sacred, social, and commercial geography, as will the seasons of the year and the days of the month; and there will probably have been a tendency for those who did not live in sacred centres to overestimate their population as a result of only visiting them at festivals. Phratry size could have been ascertained by consulting phratry priests or other leading men, but Kleisthenes and his contemporaries were aware that phratry membership and residence did not always coincide.

Outside the city area, the mental map of the city resident may well have been sketchier. Eleusis and its plain would seem like a separate unit, and anyone who had made the journey to Eleusis for the Mysteries would presumably have noticed a largish village called Thria on the route. City residents may also have attended festivals in the plain north of Athens, at Phlya and Athmonon, perhaps also at Pallene, known as a key point on the route between Hymettos and Pentelikon to the eastern plain and the northeast, and as the site of a notorious battle against Peisistratos (R. Thomas 1989, 139–43). The concept of the ‘Paralia’, named, probably, for the coast from Aixone to Sounion, but sometimes carrying wider connotations, would have been somewhat modified by the knowledge that the hilly area north of Sounion was now the site not only of the old town Thorikos, but also of increasing activity in silver mining. To the north of the mining area, there were some substantial farming villages, and on the coast ports from which sacred embassies were sent to Delos (Prasiai? ch. 25 n. 73), and sanctuaries of Artemis (Brauron, Halai Araphenides). Finally, the Diakria/Epakria region of the north represented a somewhat problematic border area which had to be secured against Boiotian expansion, especially in view of the death of two prominent aristocrats from Aphidnai at the hands of Hippias,⁴ and the possibility that

⁴ The tradition suggests that Harmodios and Aristogeiton had come to Athens as protégés of the tyrants, but had later turned against them (ch. 20 at n. 47). The net result of the whole affair might well have been to lay Aphidnai open to approaches from Boiotia (cf. the suggestion of Bintliff 1994*b* that—until the late 6th c.?—it was still possible that Athens, like Thebes, would fail to establish institutional domination over her hinterland).

loyalty to the tyrant family still lingered in the Marathon plain. Athens had to fight off Boiotian-Chalkidian attacks on her northern borders in 506, and the Persian decision to land at Marathon in 490 may have been based on hopes that the area would rally to Hippias.

Thus far, a map based on mountains, ports, mines, and defence considerations. Attika, however, was also divided into 48 *naukrariai*, and they must have played a role in Kleisthenes' mental map.⁵ They were, on my interpretation (ch. 18 s. 'Naukrariai'), supposed to represent approximately equal divisions of the population, although that supposition may not have been accurate; they were based on residence; they represented a formalization of arrangements by which leading men in the principal ports of Attika could draw on inland villages for manpower and other resources (food for shipwrights, sacrificial victims, provisions for voyages, leather, metal, etc.) to be used in building and maintaining ships, which would then perhaps be at the disposal of the leading men of the inland villages if they, or their sons, wished to visit sanctuaries overseas, take part in panhellenic games, or mount an expedition for plunder or trade. The area of the city and its plain would support a small fleet based at Phaleron, but in other parts of Attika each port, like the Cinque Ports of southern England in the middle ages, would have its inland 'limbs', connected to it by a mixture of geographical (roads) and social ties. Each *naukraria* would be able to recruit, when necessary, 50–100 young men aged between fifteen and thirty to man its vessel.⁶

So much for Kleisthenes' knowledge. How did he proceed? The decision to create ten tribes and thirty *trittyes* was evidently taken *a priori*, but was this also true for the *demes*? Scholarship has tended to assume that the identity and number of the *demes* was fixed from the beginning, but there are serious difficulties in this view.

There is no evidence that *deme* boundaries were marked in the fifth century. Intensive exploration of the Attic countryside has led to the discovery of an increasing number of rock-cut *horos* inscriptions, many of them in remote spots

⁵ Kinzl 1989 insists that pre-existing structures must have exerted an influence on the development of the Kleisthenic system, but does not think of the *naukrariai*; Siewert 1982 also disregards them. I am grateful to him for the point that mental maps were organized around roads (cf. also Myres 1886, 1943); reviewers have pointed out, however, that this theory works better for some tribes than others and is totally unsatisfactory for city *demes* (cf. especially D. M. Lewis 1983*a*). I suggest here that roads were thought of as connecting inland areas with ports, and not only as running from the periphery to the centre. (Siewert is still followed by Steffebauer 2007.)

⁶ Some discussions of the *naukrariai* (B. Jordan 1975, 1979; Gabrielsen 1985) have had difficulty in believing that Athens had by the late 7th c. a state fleet and a system of taxation to support it. I do not think, however, that we need to dissociate the *naukrariai* from ships in order to solve this problem. The etymology linking them to temples is unsatisfactory (Lambert 1986, 111 n. 26), and we are told that Athens had c.50 ships before the construction of Themistokles' fleet. A system producing both *prytaneis* (ch. 18 at nn. 96–101; pp. 730–2 below) and ships was perhaps given more systematic financial functions under Peisistratid rule. See also Van Wees 2013*a*, 44–61.

where we would not expect to find a mortgage horos or a boundary marker for private or sacred property, but none has been dated earlier than the fourth century.⁷ The earliest records of definition of boundaries between states refer to geographical features (streams, ridges, etc.) and not to horoi.⁸ The existence of many very small demes, producing only one councillor per year or even one councillor every other year, alongside some very large ones (Aphidnai with 16 councillors, Acharnai with 22), and the phenomenon of ‘divided’ demes, suggests that communities could to some extent choose whether to become demes or not. It is hard to see why Kleisthenes should have wanted to have so many small demes, hard even to believe that he was aware of the existence of all the communities that subsequently claimed deme status. ‘Divided’ demes achieved varying levels of separateness. Aristophanes could joke about Nether Lamptrians (*Amphiaraos*, 414 BCE, F 27 K, 27 PCG), but Lamptrai was unusual in being a large deme divided into two substantial villages, producing 5 (Upper) and 9 (Lower) councillors. Even in this case the Upper/Lower description was not part of a demesman’s official name, we do not know whether there were separate demarchs, and there is evidence suggesting that a move from one village to the other could lead to reclassification (*APF* 14329). Upper and Lower Paiania, which were unequal in size, Upper Paiania producing only one councillor and Lower Painaia 11, are listed separately in some lists of councillors and not in others.⁹ The other divided demes are all small, and found only in three tribes:

⁷ Ch. 22 n. 52. Traill 1986, 116–22 plus *SEG* 38. 168–9. Lauter 1982 notes that horoi may have been inscribed in the course of disputes; Traill suggested that deme boundaries were marked when demes were redistributed to create two new tribes in 307/6.

⁸ Hdt. 6. 108, Boiotia, late 6th c.; *SEG* 35. 991 B, Crete, early 5th c.; M/L 42. 26–9, Crete, c.450. However, arbitrators in a territorial dispute between Miletos and Myous c.390 were shown *ouroi* (*Syll.*³ 134. 22; R/O 16) and horoi marking Corinthian borders existed by 392 (Xen. Hell. 4. 4. 6). Cf. Humphreys 2017*b* on *IG* ii³ 292.

⁹ No Athenian epigraphic text modifies the demotic of a member of a ‘divided’ deme when it occurs in a list of full names (name, patronymic, demotic) even when those listed are councillors (e.g. *IG* ii³ 360). In lists erected by tribes (of councillors or ephebes), Erechtheis divides Lamptrai (Upper and Coastal) and Agryle (Upper A. and A.), but not Pergase, in *IG* ii³ 4. 56; *Agora* XV 1 and 21 show no sign of divisions; *IG* ii³ 4. 336 divides Pergase and Lamptrai, and *IG* ii² 1952 (kleruchs) divides Lamptrai. Aigeis divides Ankyle (without modifying the name) in ii³ 4. 76, but not in ii³ 4. 69. Pandionis divides Paiania (Upper P. and P.) in ii³ 4. 29, 55, and (?) 83, but not in ii³ 4. 21 and 26. Leontis divides Potamos in ii³ 4. 25 and 53, but not *Agora* XV 56; Potamos is also divided in Reinmuth 1971, nos. 9 (see now Alipherê 2015) and 15 (*IOrap* 353). In lists covering more than one tribe, *Agora* XV 21, 42, and 56 (whole Council) recognize no divisions; 43 divides Pergase (without modifying the name), Paiania, and Potamos, but may not have recognized all the other divisions (Stanton 1984*b*), and appears to group Dekeleia and Oion Dekeleikon under a single heading (below, n. 103). XV 492, thought to be a list of councillors and alternates (but perhaps kleruchs, see Humphreys 2010*a*) does not divide Ankyle but has a separate heading for Upper Pergase (not adjacent to Lower P.). The lists of *diaitêtai* organized by deme, *IG* ii³ 4. 35 and ii² 1932, do not divide Lamptrai and Paiania (4. 35) or Potamos and Ankyle (1932). These data do not suggest to me that splits in these demes had been firmly institutionalized when the Kleisthenic system was set up.

Upper and Lower Agryle (2 and 3 councillors), and Upper and Lower Pergase (2 and 2) in Erechtheis, Upper and Lower Potamos (2 and 1) in Leontis, and Upper and Lower Ankyle (1 and 1) in Aigeis. If they have been correctly located,¹⁰ the Potamos (?) and Ankyle demes are close to Agryle, and one cannot help wondering whether the division of Lamptraí set off further demands for division in Erechtheis (Agryle, Pergase), which then spread to neighbours of Agryle in Aigeis and (?) Leontis.

The fact that it had by the fourth century become conventional to record these distinctions in some lists of councillors—very possibly because councillors were indeed appointed separately by the hamlets concerned—and sometimes, by an extension readily understandable in the limited domain of the composition of lists of tribe members, in inscriptions listing ephebes, does not necessarily mean that divided demes acted separately in all contexts, still less that Athenians from other parts of Attika were strongly conscious of the division. It was, however, used in the revision of tribes in 307 when Antigonis and Demetrias were created (Traill 1975*a*).

At the other end of the scale, we know that Aphidnai was surrounded by small hamlets that maintained some degree of independent identity into the Roman period, and may even have achieved deme status in some cases; they had komarchs (village headmen) in the late fourth century.¹¹ Acharnai, too, is likely to have had some hamlets in its deme territory that could have been treated as separate if it had been felt important to set limits to deme size (ch. 28 n. 28).

Modern assumptions about Kleisthenes' treatment of the demes are perhaps inconsistent. Historians recognize that demes were in some sense natural communities, but nevertheless cling to the idea that a definitive list of natural communities was produced by fiat in 507. This may have been necessary to some extent in the most densely populated areas of the city, where divisions between Melite, Skambonidai, Kydathenaion, Kollytos, and Koile may have been defined by roads¹²—though it is only an assumption that interdigitation of deme affiliation along the borders of city quarters would have been felt to be problematic—but the same problem did not arise in the countryside. Most are happy to assume

¹⁰ See Traill's notes on location, 1986; chs. 23 n. 64, 24 n. 14, 26 n. 111. The seller from Upper Lamptraí in Lambert 1997*a* F 2. 5 should perhaps be restored as komarch rather than demarch. The position of Agryle and Ankyle is fairly well established, that of Potamos less certain.

¹¹ Lambert 1997*a*; see Traill 1975*a* on spurious and late Roman demes; ch. 31 n. 19. Thyrgonidai, Petalidai, Perrhidai, and Hyporeia appear in the catalogue of demes set up in 200 BCE (Traill 1986); the borderline between 'constitutional' and non-constitutional demes may have been more fluid in the case of small communities than he is prepared to admit.

¹² Note, however, Str. 65 C/1. 4. 7 (Eratosthenes), no markers between Melite and Kollytos; cf. Lalonde 2006*a*, 2006*b*.

that inhabitants of isolated farms (who were perhaps few in number)¹³ could safely be left to decide where they belonged; we should also consider taking a further step, and asking whether hamlets too were not expected to make this decision for themselves.

I am suggesting that Kleisthenes defined tribes and trittyes, the latter by reference to major suburbs or villages, most of which will also have been phratry and/or naukraria bases, and defined the concept of deme, but then left his fellow citizens to work out the rest of the scheme on the ground. Kleisthenes and the other planners of the scheme may not have expected more than 75–100 demes to emerge.¹⁴

Some of the irregularities of the system, both in deme size and in trittys affiliation, will be due to the workings of political ambition at this stage (cf. Kienast 2005, 91–9). It seems clear that the deme would have appeared to powerful families as a new field for exercising political influence; particularly in the suburbs, each leader wanted to have his own deme. Thus the area along the Sacred Way, assigned to Oineis, was split into six small demes producing between one and three councillors each, the two closest to the city being Boutadai (one councillor), residence of a leading branch of the *genos* (Eteo)boutadai, and Lakiadai, where Miltiades would settle when he returned from the Chersonese and Lemnos.¹⁵ The Eteoboutadai and Arynandridai of Bate did not want, or did not manage, to include Kolonos (where there was an entrance to the underworld associated with Theseus and Peirithoos, Oedipus, and the Eumenides; ch. 24 n. 10) in their deme. Phrearrhioi, the base of the family of the Lykomidai from which Themistokles was to emerge, succeeded in recruiting enough inhabitants from the surrounding area to qualify for a council quota of 9, and may have decided on its own initiative to unite with Sounion rather than Anaphlystos or Thorikos (unless this was already the naukraric pattern).

Ethnographic analogy would support this model of a highly schematic superstructure that appears less symmetrical and more flexible when one focuses on relations in the minimal units, on the ground.¹⁶ It will never be possible to

¹³ R. G. Osborne 1985*a*, with the additional observation that isolated farm buildings in SE Attika may have been associated with mining, in which case they would have been fewer in 507. See further ch. 22 n. 84.

¹⁴ D. Roussel 1976 also thinks that much was worked out at the local level. Whitehead 1986*a*, 18 makes the point that if Kleisthenes had assigned ten demes to each tribe (cf. Hdt. 5. 69. 2) there should have been more than six demes in Aiantis; I do not consider it inconceivable that Aphidnai swallowed four neighbouring demes, but in any case an official list seems to me most unlikely.

¹⁵ The location of the other four demes (Perithoidai, Ptelea, Lousia, Epikēphisia) is not certain. On the other hand, it seems doubtful whether Traill can be right in locating Kothokidai in the Thriasian plain (ch. 28 n. 5): on this, and on cults in Lakiadai, see ch. 20 n. 115.

¹⁶ Cf. Barth 1961, Dresch 1989; ch. 22 n. 71. Pre-bureaucratic societies and states are not uninterested in symmetry and ‘rationality’, but their schemes of classification are not imposed on local action by centralized bureaucratic control mechanisms.

reconstruct all the local alliances, local hostilities, and ties stretching over longer distances that came into play at this level. But we can indicate two or three more stages at which adjustment is likely to have taken place before the system became fixed in the form known from epigraphic records, nearly all of which date to the fourth century or later.

Kleisthenes and his collaborators doubtless aimed at producing tribes of approximately equal size; this was a presupposition of the division of the council into ten tribal groups of fifty councillors, and of the use of tribal 'regiments' in the army, to be discussed further below at nn. 34–40. Interest in numerical schemes of troop organization went back to the catalogues of the *Iliad*.

Our capacity to estimate their sources of information, at tribe level, is limited. Lists of councillors show that the same quotas were fairly regularly met during the fourth century, though some small demes may on occasion have failed to find a nominee (Traill 1975*a*); but we do not know how much quotas had altered during the fifth century, nor how accurately they had initially been related to population. From the 330s–320s we have lists of ephebes, eighteen-year-olds joining the citizen body, but the numbers fluctuate quite widely from year to year, partly because some years had an extra month and partly, it seems, because controls on age were rather lax. Lists of sixty-year-olds serving as *diaitetai* (public arbitrators) show even wider variations. Redistribution of the quotas when new tribes were created in 307/6, to honour Antigonos I of Macedon and his son Demetrios, suggest that in a few cases serious discrepancies had developed: Lower Paiania had its quota raised from 11 to 22.¹⁷ It seems likely that larger demes could only gain additional places on the Council (except in these general revisions, which probably took place only when new tribes were created) if smaller demes in the same tribe admitted their inability to fill their quotas. This they may have been reluctant to do, though there are some signs of pairing of small demes to share small quotas (ch. 22 n. 63).

¹⁷ See M. H. Hansen 1985, 2007. Like Hansen and Sekunda (1992), I believe that councillors, ephebes, and arbitrators were all recruited from the whole citizen body (P. Roussel's suggestion, 1941, that lists of arbitrators listed only those who were actually called on to settle disputes, and not the whole panel, should not be forgotten, though the list of 371/0, *IG* ii³ 4. 24, Ruschenbusch 1984, differs from later lists in form). On the question of the over-representation of 'twins' in ephebic lists see Humphreys 2009 n. 2, 2010*a*. Hansen notes that the unfit will not have served; but it is a complicated matter to assess the proportion of 18-year-olds (actually 20-year-olds when listed) who would count as unfit, in a society which (a) exposed the deformed at birth, and (b) had a high infant mortality rate, but (c) may not have treated children's bone fractures very effectively, and (d) placed a high value on the unblemished, well-formed young male body, which might lead to connivance in excusing the unshapely from duty. Lists of arbitrators, where organised by demes, seem to indicate a noticeable under-representation of larger demes, in relation to their council quotas. But the identification of some of these lists is problematic: *IG* ii³ 4. 35 has only three names for Pandionis. Note that since these 'lists' are dedications, a *diaitetes* who died during the year would not figure.

To some extent Kleisthenes could and, it seems, did try to ensure this equality by matching large and small trittyes in a single tribe. Erechtheis had a large coastal trittys, Anagyrous and the two Lamptraí demes, totalling 20 councillors, and a small inland trittys (10). Aiantis also had a large coastal trittys (25), and a small city trittys (Phaleron, 9). Antiochis had a large coastal trittys (27) and a small inland trittys, though Pallene (6–7) being a cult centre, may have turned out to have a smaller population than expected, and the role it had played in the establishment of the tyranny may have made inhabitants of neighbouring villages reluctant to register there.¹⁸ Hippothontis also had a large coastal trittys (20), if Oenoe and Azenia were considered to belong to it, as seems likely (ch. 30 nn. 2, 119), and a small inland trittys (10). Oineis had a huge inland trittys consisting of the single deme Acharnai (22), and a small city trittys (9–10).¹⁹

Nevertheless, when deme and tribe leaders assembled in Athens with their lists and totals, there will have been problems and discrepancies. Some intertribal ‘enclaving’ may well have taken place at this stage. The area between Pentelikon and the Marathon plain seems to have been regarded as particularly problematic, or particularly open to reassignment; the deme centres that emerged here were perhaps caught in tension between the rival claims of the cult centres of the area: the Marathon Tetrapolis, Ikarion and Semachidai with their cults of Dionysos, Anakaia worshipping the Dioskouroi (Anakes), the Apollo cult of the Epakreis,²⁰ the phratry cults of Dekeleia, and the ambitions of Aphidnai. It looks as if the original trittys assignment(s) of this area had left many demes discontented and willing to be reassigned to tribes whose numbers had turned out to be too low.²¹

Leontis, in particular (ch. 26), seems to have had recruitment problems in all areas except the south-east. Both its city and its inland trittys are extraordinarily scattered—though it is true that locations are also very problematic. The core of the city trittys had perhaps been, in original intention, Skambonidai and Halimous, and neither of these had been particularly successful in attracting demesmen. Halimous seems to have lost in competition with its neighbour Euonymon; Skambonidai had a significant metic resident population, and if boundaries

¹⁸ The insistence of the inhabitants of Hagnous that they never intermarried with Pallene may be a sign of this attitude, though the two demes seem too distant for a question of choice of registration to have arisen (cf. ch. 27 n. 38).

¹⁹ These figures have to be treated cautiously, since a significant number of demes are either unlocated, or located at deme sites discovered by survey on the basis of assumptions about trittys assignment. Furthermore, we cannot be certain that inequalities in the representation of trittyes on the council were a feature of the system from the start rather than a result of adjustments and negotiations after the system had run for a generation. No deme would have difficulty in filling a quota in the first years.

²⁰ Possibly a phratry based at Ikarion: see ch. 19 n. 16; below, n. 133.

²¹ The argument here is of course vulnerable to D. M. Lewis’ observation (1983*a*, 432) that to postulate piecemeal tinkering after the main process of registration is ‘a sign of an unsatisfactory hypothesis’. But it is hard to imagine what a satisfactory hypothesis for Leontis, on this standard, would look like.

within the city were not defined by fiat, will have been disadvantaged by its name in competition with the much more prestigious Kydathenaion. Some minor peripheral demes had to be added, perhaps, to this already divided core to make a viable trittys. In the inland trittys, the area assigned to Leontis must have lost recruits to Acharnai; numbers were made up by the addition of two demes from the Epakria area.

I should stress again, at this stage in the argument, that I am concerned with reconstructing the process by which the Kleisthenic tribes were institutionalized. New evidence will certainly produce changes in the location of smaller demes, but I do not think the overall picture of regionally defined trittyes with some anomalies will change. This is certainly the way the Athenians themselves understood the system. Kleisthenes had assigned the demes to city, coastal, and inland trittyes, but he had done it by lot.²²

I suggest, then, that Kleisthenes and his collaborators appointed tribal epimeletai—three per tribe—in 508/7, from men already well known in their phratries or naukrariai, and instructed them to spread the news that each adult Athenian was to register in his deme of residence. Leaders in some demes (Acharnai, Aphidnai) took this as an opportunity to enhance the importance of their own community, others took a more laissez-faire attitude. Problems were sorted out, and adjustments were made, either at the first tribal assemblies at the end of 508/7 or at the end of 507/6 (perhaps both). The new tribes and demes would perhaps already take part in the Lesser Panathenaia at the beginning of 507/6; in any case the procession at the Great Panathenaia of 506/5 would be organized with especial solemnity to represent the new structure of the citizen body. The process of registration would facilitate mobilization of hoplites for the war against Boiotia and Chalkis which was successfully concluded in 506, and since Athens had not had to field a hoplite army for some time it is quite likely that it was organized by new tribes (cf. Eder 1992), even if some of the assignment of demes to tribes were still under review.

While the assignment of demes to tribes had to be settled fairly quickly, adjustments within demes and tribes may well have continued for several more years. A few solitary types living in the hills in interstitial areas may have registered late, or may even have changed their registration. A man who moved his residence and then deme in the early years of the system, before the principle of hereditary affiliation and the permanence of deme membership became firmly established, may have been accepted as a member of the deme into which he moved. Some

²² M. H. Hansen 1987*b* argues that the attested distribution could indeed have been produced by lot, but adds that Kleisthenes might have claimed that he had used the lot even if he did not. Note the suggestion of Polignac 2011 that the assignment of border trittyes to the ‘marginal’ heroes Hippothoon and Ajax was non-random. On ‘trittyes of councillors’ see below at nn. 25–7.

small communities that had eagerly insisted on separate deme status at the beginning may have found it a burden they preferred to relinquish. There were quarrels and splits.²³ The fact that the records of the fourth century show a stable system does not imply that there were no changes in the first generation. Some adjustment in Council quotas is also likely to have taken place during this period. The situation was not unlike that of the early years of the Athenian empire, when small communities that had enthusiastically promised to contribute to the fleet soon found it hard to fulfil their obligations and agreed to pay money instead.²⁴

The requirement that the tribe in prytany, serving its annual turn of duty as leading tribe in the Council, had to maintain a permanent presence in the Agora is likely to have been modified by the construction of the Tholos, which provided new eating and sleeping quarters, but in my view it cannot have originated at that time. The Tholos is usually dated *c.*460. Gschnitzer's study of the history and uses of the term *prytanis* (1973) strongly suggests that in origin the prytanis or prytaneis were officials who represented the community. Their house, the prytaneion, contained its sacred hearth, where visitors to the city were entertained; the deposit of prytaneia by litigants conferred a public character on their proceedings. On this basis I have argued above that the prytaneis of the naukraroi had already functioned as a representative committee of citizens in pre-Kleisthenic Athens, four of them being on duty each month (ch. 18 n. 97; cf. Lambert 1986, 112). They probably ate in the prytaneion with the archons during their term of duty. If that is so, Kleisthenes' tribes must have been expected to provide prytaneis from the beginning to replace the prytaneis of the naukrariai, working on a new calendar in which the year was divided into ten instead of twelve parts. Dating by prytany in the law on ostracism (*FGH* 328 F 30) may provide some confirmation of this view.

We do not have to assume, however, that in the early years the Kleisthenic tribes had stationed a significantly larger number of prytaneis on permanent duty than their predecessors. It is quite possible that the tribe in prytany elected an epistates for each day—among other duties, he took charge of the city's seal—and he chose a small number of companions, who ate with him at the archons' table. *A.P.*'s statement (44. 1), sometimes forgotten in modern reconstructions, that the day's epistates chooses the trittys of councillors that will remain with him in the Agora, perhaps lends some support to this view.

²³ Some of the Upper/Lower divisions may have manifested themselves at this time, though in my view it is doubtful whether any of them developed into two fully institutionally separate demes (cf. n. 9 above; ch. 22 n. 14). On arguments for later reorganization see Ismard 2010, 97.

²⁴ A serious study of the stability of the deme system in the 5th c. would require an analysis of the evidence for small-deme demotics. We do not actually know that Titakidai was not a deme *c.*470 (ch. 20 n. 46). Previous discussions have suggested changes in 403 or even later, but have not considered earlier periods.

We may perhaps assume, then, that inequalities in the size of trittyes' Council contingents did not present a problem until c.460 (it will be argued below that the trittyes were not military units). The dimensions of the problem varied from tribe to tribe, and the evidence suggests, to me at least, that solutions also varied. W. Thompson's suggestion (1966) that tribes had reorganized their internal structure to produce three equal trittyes of councillors rested on the detection of regular patterns in the ordering of demes in lists of councillors. Such patterns, however, are not observable in all tribes (P. J. Rhodes 1972).²⁵ To understand these lists we have to consider three factors: the ease with which a tribe could divide itself into equal council-trittyes, the pressures that may have led some tribes to prefer flexibility, and the influence of aesthetic considerations on the arrangement of inscribed names on stone.

Akamantis may have had trittyes that produced equal numbers of councillors if Eitea (2) was a city deme, but it did not list consistently by trittys in *IG* ii³ 4. 52; the order of demes in *Agora* XV 43, 46, and 56 is not the same as that of 42, which does seem to list by trittys. Pandionis could produce equal council-trittyes by grouping the five councillors of Probalinthos, which in any case was an enclave in an area otherwise occupied by other tribes, with those of the city deme Kydathenaion (11–12). One Pandionis list seems to have had trittys headings (*IG* ii³ 4. 29), and the other lists suggest that this was a fairly stable arrangement. Leontis also produced one list with trittys headings (*IG* ii³ 4. 53), but did not maintain a consistent pattern in its other lists.²⁶ Aiantis could have produced regular trittyes by grouping Rhamnous (8 councillors) with Phaleron (9), but we have no council lists to prove that it did; *IG* ii² 1927 (kleruchs? Humphreys 2010*a*) lists Rhamnous after the other coastal demes, the whole coastal group being preceded by Phaleron and Aphidnai. Oineis must have shifted some of the 22 Acharnian councillors elsewhere, and may consistently have coupled them with the small city trittys, but patently developed no regular mechanism for splitting the deme.

Councillors had families, farms, jobs, and other business to attend to. Some of them filled minor offices while serving as councillors (Hansen 1980). An arrangement that pre-assigned full-time duties in the Agora to a block of councillors for a continuous stretch of days would have been inconvenient and hard to enforce, as well as being difficult to reconcile with the explicit statement of *A.P.* 44. 1 that each day's epistates chose his own trittys. It is possible that in Pandionis he was

²⁵ D. M. Lewis 1983*a* summarizes the history of the debate; P. J. Rhodes 1972, Traill 1978*a*, 1986, 107–10, collect evidence on arrangement of lists by trittys; Stanton 1984*b* makes the point that the arrangement of printed lists does not always accurately represent what is on the stone (cf. id. 1994). It must be stressed that the number of lists complete enough to be usable is small. Cf. Humphreys 2008, 17 n. 27.

²⁶ On the heading *Epakreón trittuos* in *IG* ii² 2490, probably a list of property owned by Aigeis, see below, nn. 137–8.

restricted to a choice from three pre-constituted trittyes, which did not change from year to year, but in other tribes rosters may have been reconstituted at the beginning of each prytany, or even worked out as it ran its course.²⁷

It should not be assumed a priori, therefore, that the officials who drew up lists of names to be inscribed on stone worked from a roster of demes already arranged by trittys. Tribal lists (unlike lists of the whole Council) normally had three columns, but in many cases were designed to produce three columns of equal length rather than three columns containing equal numbers of councillors. *IG ii³ 4. 54* (Erechtheis) has three equal columns, one of which ends with a deme heading; deme lists run on from one column to the next also in no. 21 (Pandionis). In *ii³ 4. 56* (Oineis), where Acharnai runs on from column 2 to column 3, the columns are almost equal in length, but the first contains 13 names, the second 17, and the third 20. Only *IG ii³ 4. 26* (Pandionis) and 4. 81 (Antiochis) suggest that listing by council-trittys was more important than symmetry, since the column lengths are visibly unequal while the number of names in each is 17:17:16. 4. 25 (Leontis) has columns of 17:17:16 names neatly spaced, with a shorter central column and blank lines carefully left for missing patronymics, which may indicate that stone cutters could impose their own design on lists; 4. 76 (Aigeis) has unequal column lengths and names (16:15:18).

This evidence does not suggest that the requirement that a trittys of councillors remained permanently on duty in the Agora each day, whenever it was introduced, led to any institutionalized modification of tribal structure.

On the above reconstruction, which allows for a considerable amount of minor tinkering with the system in its early years, and some fluidity even in the fission and fusion of 'divided' demes,²⁸ speculation about Kleisthenes' intentions may well seem rash. I believe it is; but the question must be addressed. Three main lines of interpretation have been proposed: Kleisthenes was trying to break the power of aristocratic families and traditional religious groupings (D. M. Lewis 1963); he was only interested in an equal division of the population, principally for purposes of military mobilization but also for the Council (Van Effenterre 1976, Siewert 1982); the system was designed to increase the political control of 'the Alkmeonidai' and lessen that of their rivals (the pre-Lewis view, revived by Stanton 1984b).²⁹

²⁷ Dow 1976 argues that each epistates picked his own associates individually. We do not know that there was anything to prevent an older or wealthier man from spending more than his fair share of time in the Tholos.

²⁸ It must again be stressed that we do not know whether recognition or disregard of division in tribal lists corresponds to variations in the way councillors were nominated, or merely reflects the attitude of the officials drawing up the lists.

²⁹ Military organization: Welwei 1983 attributes this motive also to Kleisthenes of Sikyon. Cf. March 2008. In addition, there are still proponents of the ancient view that Kleisthenes was interested in the

The view put forward here draws something from all of these theories, but shifts the emphasis from Kleisthenes' intentions to the influence of earlier institutions (the *naukrariai*) and of local ambitions and rivalries. Thus the arrangement of trittyes along roads (in some tribes) stressed by Siewert is in my view the result of earlier *naukratic* structures; the roads do not lead from the coast through inland trittyes to the city, but from inland areas to harbours. The irregular assignment of demes in the Hekale–Ikarion–Probalinthos area to tribes is taken to be the result of a combination of concern with numbers (Siewert) and rivalry between competing religious centres (a modification of Lewis).³⁰ The strung-out shape of the inland trittys of Leontis is ascribed to unsuccessful competition of villages on the southern and eastern slopes of Parnes against Acharnai in recruiting demesmen, plus compensatory allocation later for numerical reasons of two demes from the Hekale area; the city demes of Leontis will similarly have been affected by Halimous' lack of success in competing with Euonymon.

It remains striking, however, that the city deme Alopeke, in which Kleisthenes' nephew (BS) Megakles IV was registered, was assigned to the same tribe (Antiochis) as a large coastal trittys in the Paralia area with which Megakles II, Kleisthenes' father, had been associated.³¹ We cannot point to any similar linkages in other tribes. In Hippothontis, the only deme outside the Eleusinian plain in which we can trace members of both the two main Eleusinian *genê* is the small city deme of Koile (ch. 20 at n. 101); the Lykomidai of Phlya were separated from the branch of the *genos* in Phrearrhioi, and the Salaminioi found themselves scattered across seven (or eight) tribes.³²

Our information is, however, extremely incomplete, and it is quite possible both that other major city families' ties with coast and hinterland were recognized,

integration of Attika (Levêque and Vidal-Naquet 1964; Chr. Meier 1973; D. Roussel 1976) and in the incorporation of new citizens or those whose status was questionable (stressed by D. M. Lewis 1983*a*). Ismard 2010, 98–100, is over-insistent that earlier groupings were not changed.

³⁰ See also on *naukrariai*, ch. 18 n. 96; Kienast 2005, 78–81.

³¹ The association of Megakles II with the Paralia in 560 does not necessarily mean that his sons and grandsons were well informed about population growth in the area in the period c.530–507. They may however have been aware that the development of silver mining had given SE Attika an unusually high proportion of citizens whose status was questionable (immigrant Aiginetans were to be settled here in the early 5th c., Hdt. 6. 90). Antiochis also received Pallene, which had associations with the tyrants, as its inland trittys; one could argue that Kleisthenes wanted to have the most problematic areas in safe hands.

³² On the reconstruction offered here, the decision to give the name Philaidai rather than Brauron to the deme in which the sanctuary of Artemis Brauronia was located will have been made at local rather than central level. It may have been affected by association of the name Brauron with the tyrants, or by contacts with Miltiades in the Chersonese; it is also possible, however, that the main settlement in the area had always been called Philaidai, Brauron in early days being no more than a fishing hamlet with an adjacent sanctuary in boggy, uncultivated ground. There was in 507 no particular reason to suppose that Miltiades or his sons would return to Attika.

and that these were expected to play a positive role in drawing outer areas into more active participation in city politics. The aim, that is, would have been to channel aristocratic competition into an institutionalized framework centred on the city, rather than to impede it.

We should remember that the implications and impact of the new scheme will have varied across classes and regions.³³ There may also have been a sharp division in the minds of leading Athenians between the needs and problems of the elite and those of the rest of the citizen body. The change from tyranny to isonomia will have left some families in a vulnerable position. Any realignment in power relations in a Greek city opened up opportunities to pay off old scores and advance interests (chs. 7, 14). These problems could occur at all levels; aristocratic families had to deal with suspicions that they had been too close to the tyrants, but commoners were more likely to be accused of having gained citizenship on false pretences, especially if they had moved from one part of Attika to another. While members of the elite, especially if they were *gennetai*, might not change phratry affiliation if they moved, it may not have been unusual for commoners to do so. The decision in their case would presumably be affected by the presence of kin in either the old phratry or the new area, and by distance. A resident of Piraeus could return more easily to Alopeke or Halimous for festivals than to Aphidnai or Marathon.

As I suggested above, Kleisthenes and his associates may have seen the social map as an untidy web of strands linking residence to phratry affiliation, some of which had snapped and left individuals without secure proof of status. Though the danger of re-emergence of regional factions had to be taken into consideration, ambitious leaders were only just beginning to re-mobilize regional support after some forty years of political quiescence. Commoner members of rural demes remote from Athens are unlikely to have travelled to the city for elections or assembly meetings during the tyranny. More of them will have come to the city for festivals, some of which included tribal competitions; Kleisthenes and his contemporaries were aware of the integrative functions of ritual. But they had to create a framework capable of mobilizing a steady stream of voters. Rural apathy was perhaps a more immediate problem than the danger of renewed factional conflicts based on regional loyalties (cf. D. Roussel 1976).

³³ For more discussion of the location and trittys-affiliation of demes see Stanton 1994 and chs. 23–32. There has been little attempt to construct a social map of Attika in 507, apart from W. Thompson's analysis (1970*c*) of the regional distribution of families that can be assigned to the highest Solonian census class. Thompson's regional categories are problematic; for example, several of the rich families later economically active in the mining area (Nikias of Kydantidai, Strombichos of Euonymon) may have developed their interests after 507.

MILITARY ORGANIZATION

Further consideration of the implications of the new system requires analysis of the evidence for tribal assemblies, elections, and other activities. Since, however, military organization also had an influence on the sense of tribal solidarity, and played a role in tribal politics, it will be useful first to look at the effect of Kleisthenes' reforms on the army, the fleet, and the military command structure.

Until recently, modern studies paid too little attention to the major changes that took place in Athens' military (including naval) needs and operations between 507 and *c.*300.³⁴ In 507 a Greek city expected to use its armed forces in defence of its own borders and occasional raids on neighbours. Only Sparta had greater ambitions. Owing to the system whereby *helot* labour produced food for hoplites and their families, Sparta could field a large citizen army for prolonged campaigns of conquest, or intimidation of neighbouring states. Sparta, however, was not prepared to commit troops to support the Ionian revolt in 499. Athens' decision to send twenty ships was a bold and unprecedented move.

The decentralized *naukraria* system was geared to local defence. In 506, the Athenians had managed, perhaps using some combination of *naukraric* organization and the new tribal system, to mobilize enough troops first to intimidate a Peloponnesian force that had penetrated into the plain, and subsequently to defeat the Boiotians and Chalkidians, who were perhaps demoralized by the withdrawal of the Peloponnesians. Though no doubt exaggerated in Athenian tradition,³⁵ this was a striking success for such a new regime, and will have strengthened Athenian enthusiasm for it. By 490 there was a fully operational citizen army ready to confront the Persians at Marathon.

This may indeed have been the kind of army Kleisthenes wanted his new system to produce. It was even, perhaps, the kind of army Archidamos of Sparta expected to meet in the field, and defeat, when he first invaded Attika some 60 years later. But most Athenian mobilization in the fifth century was different. It required larger numbers of rowers than hoplites; sea battles played an essential role in it; it took place, usually, overseas; and increasingly, as time went on, the Athenians were engaged on more than one front simultaneously.

³⁴ For local defence see Ober 1985; Spence 1990; M. H. Munn 1993. N. F. Jones' study of the tribe as a factor in solidarity (1999) ignores military organization.

³⁵ Hdt. 5. 74, 77; M/L 15. M. H. Munn 1993, 107 suggests that the Athenians may have mustered at the Aigaleos-Parnes gap. The Boiotians, who had taken Oinoe in preparation to joining the Peloponnesian attack, were perhaps retreating to link up with the Chalkidian forces when the Athenians attacked them, subsequently crossing to Euboea to fight the Chalkidians. The Peloponnesian withdrawal may have well set off dissension among the Boiotian cities, while the Athenian confiscation of land from the Chalkidian aristocrats (the *Hippobotai*), which was given to 4000 Athenian *kleruchs*, suggests that there was internal conflict in Chalkis (were the *kleruchs* those whose claims to citizenship could not be accepted even by the new regime?).

The system set up by Kleisthenes does not seem to have been very well designed to meet these changes, but the evidence suggests that the Athenians adapted to it by ad hoc modifications rather than systematic reform.

We can, if we wish, assume that Kleisthenes expected his tribal army to be organized in tribes and trittyes, but there is no evidence for the trittys as a military unit, probably because the size of the hoplite forces used in fifth- and fourth-century Athenian warfare was too variable to allow for rigid structuring at this level. Tribal taxiarchs seem to have made their own arrangements to divide the forces under their command into lochoi and appoint lochagoi (platoon commanders).³⁶

We are told that the tribe Aiantis held the right wing, the position of honour, at the battle of Marathon, and that the whole army was drawn up by tribes (Herodotus 6. 110). Scattered references in the sources confirm that a man would fight with his fellow demesmen and tribesmen; but we also know that a tribe could be fighting in more than one field in the same year.³⁷ Erechtheis recorded in 460/59 that members of the tribe had fallen on six different battlefields during the year;³⁸ this was no doubt an exceptional boast and in fact only two expeditions were involved (one local, one to the eastern Mediterranean), but it seems clear that the principle of including equal numbers from all tribes in any levy overrode the scheme of fighting in tribal 'regiments'.³⁹ This, as we shall shortly see, must have created problems in command structure. Lists of casualties were organized both by tribe and, quite often at least, by field, although the public funeral ceremony grouped the bones of the dead by tribe, and recognized the significance of campaigns only in the speech in which their achievements were celebrated.⁴⁰

³⁶ Sekunda 1992; on Plat. *Rep.* 475a see below, n. 132. Men from the same deme would group together (ch. 16 n. 64; Whitehead 1986a, 224–6; Van Wees 2004, 107), and in some cases such groupings may have linked neighbouring demes in the same trittys, but these arrangements were informal. Crowley 2012 is too formalistic; at most the evidence shows that de facto hoplites usually fought with fellow-demesmen.

³⁷ Pandionis, Kekropis, and Antiochis passed a decree honouring a Megarian who in 446 had helped their soldiers retreat safely from the Megarid, but this does not imply that only those three tribes were in action there (it may suggest the opposite), or that none of their members were serving on other fronts. On tribal organization in the army see *HCT* on 6. 98. 4, 7. 69. 2. Plut. *Arist.* 5 says that Aristides and X Antiochis were left at Marathon to guard the booty while the other tribal contingents returned to Athens. Athenians buried abroad in the 5th c. (*IG* i³ 1505, 1510–15, cf. *IG* xii 8. 63. 6–8) are identified by tribe as well as deme. Cf. R/O 4, comm., on the listing of (?) isoteleis by tribe in 401/0.

³⁸ *IG* i³ 1147, M/L 33. Clairmont 1983 suggests that the stele may have included the casualties of 2 summers, 459 and 458, but the stress on 'the same year' in the text tells against this idea.

³⁹ J. Ober brought a counter-example to my attention: in 323 the Athenians voted that three tribes should defend Attika while the other 7 prepare for service abroad. See below, n. 47, on *epilektoi*. See also Lambert 2015b on *IG* ii² 1155 = ii³ 4. 260, a dedication by the Kekropis taxiarch and soldiers of 339/8 recording crowns awarded by the *boulê* and the tribe.

⁴⁰ Field-designations are represented on stelai in vase painting (Amsterdam 2455, BArch 42150). Folk memory thought in terms of campaigns more than tribes; bones came back sorted by field as well as tribe, and lists of casualties will also have been made up by field in the first place.

Lists of naval casualties were at least in some instances—where losses had been heavy—organized by ship and not by tribe.⁴¹ A ship was a fighting unit of some size (c.200 men), whose members tended to float, swim, or sink together; its commander was chosen for his wealth and he appointed his own subordinate officers. There were continuities in crew composition, but they were due to choice and not dictated by structure (cf. [Demosthenes] 50).

Athenian soldiers, and the crews of Athenian ships, were paid regular wages from shortly after 480. This may well have lessened the distinction between hoplites and non-hoplites, which was not linked to any formal procedures of inspection. It was ultimately left to demarchs to supply information about hoplites in each deme (though experienced taxiarchs will also have been quite well-informed), and it appears that anyone who had procured the requisite armour could have his name included on the list; the demarch's responsibility was to see that men equipped to serve as hoplites did not escape duty. However, there were many years in the fifth century when the state's demand for hoplites was low and some hoplites may have volunteered for service as epibatai (marines) or rowers, especially during the Peloponnesian War when inhabitants of rural demes had taken refuge in the city. We know that the boundary between cavalry and hoplites was fluid (Lysias 14. 7, 16. 13), and the same may be true of the boundary between hoplites and non-hoplites even though attempts were periodically made to use the distinction for political purposes.⁴²

There is no evidence that conscription was needed in the fleet during the fifth century; we first hear of compulsory recruitment of rowers in 362. It is therefore somewhat improbable that the fifth-century markers labelled with tribe and tritytes names found in Piraeus marked out mustering stations for rowers. An alternative explanation will be offered below at nn. 133-5, in discussion of the markers found on the Pnyx and in the Agora.⁴³

⁴¹ IG i³ 1190, c.411, lists marines (*epibatai*) by tribe, and rowers by ship; this might be an example of oligarchic discrimination, but thetes were used as epibatai (Thuc. 6. 43. 1, cf. 8. 24. 2). B. Jordan (1975) has argued that epibatai were normally hoplites, but it seems better to see them as an ambiguous group, somewhat déclassé, not recognized as true hoplites by those who could afford to forego the wages received for service at sea in years when there was no land campaign. IG i³ 1032 lists crews, including slaves, by ship; if it is a record of casualties from 412 (Graham 1998), the use of slaves as rowers on this occasion would supply an additional motive for disregarding tribal structure (cf. Bakewell 2008). Another crew list, SEG 54. 226 (ch. 16 n. 58). IG i³ 1184, 425/4 or 424/3, lists all casualties by tribe except *engraphoi* (mainly Plataians?), archers, and *xenoi* (metics and other mercenaries). This may be the year of the heavy land casualties at Delion (424/3).

⁴² Sekunda 1990 seems to me to make too rigid a distinction between hoplite guards and light-armed *peripoloi* on the frontiers; Aischines in 2. 167–70 was not boasting of having served in a category associated with inability to afford hoplite armour. Note the honours to *peripolarchoi* in the 330s, IRb 92–6 and IEleus 181; in 302/1, Agora XVI 123; cf. Couvenhes 2007.

⁴³ Demosthenes proposed in 354 that markers should be installed by the shipsheds (14. 22–3); there is no archaeological evidence that his suggestion was put into practice (but markers in this position would

Sources refer to hoplite call-up ‘from the catalogue(s)’, ‘in the parts’ (*en tois meresi*), and ‘by eponyms’, and by age-groups. Catalogues were made up for each campaign by generals and taxiarchs, in consultation with demarchs and/or tribal officials; there was no central catalogue of hoplites.⁴⁴ There were evidently some arrangements for rotating the obligation to serve, even if complaints are heard that they were not rigorously observed (Lysias 9. 4), and there must have been many years in which only small numbers of hoplites were required. There does seem to have been a shift, at some unknown date, from call-up by catalogue to call-up by age-set eponyms. It still seems to me likely that the 42 age-set eponyms whose names were given in turn to each entering class of new citizens, until the members of the first age-set had served (in their sixtieth year) as *diaitetai*, when the cycle recommenced, were instituted by Kleisthenes.⁴⁵ A reform of c.403 or later would probably have been content to refer to age-sets by eponymous archons, which indeed perhaps became the more common practice. There seems no reason to reject the statement of the Suda (s.v. *Terthreia*) that ‘call-up in the parts’ was short for ‘in the safer parts’, and was used of service by the youngest and oldest hoplites, who were normally used on home guard duty. Aischines, then, in claiming to have served as a peripolos and then as a hoplite both ‘in the parts’ and ‘by eponym’, is recording a military career that proceeded from patrol duty to home guard service (which unexpectedly included some hard fighting) and thence to regular service overseas.⁴⁶

by now have been carried off elsewhere or would be under water). He seems to envisage a different procedure from that adopted in 362 ([Dem.] 50. 6–7, 16), when crews were to assemble on the mole, and it seems unlikely that he was inspired by any surviving 5th c. markers used for military purposes, although he may have seen such markers.

⁴⁴ M. H. Hansen 1981; cf. the arrangements made by the 400 to draw up their own catalogue of those able to serve the oligarchy both physically and financially (*A.P.* 29. 5, *Lys.* 20. 13). It is thought that by the end of the 5th c. metics liable for hoplite service had been catalogued by tribe (*IG* ii² 10 + 2403, R/O 4 with comm.).

⁴⁵ Humphreys 1983*b* (the question whether *diaitetai* were instituted in 507, as suggested there, or in 403/2 is immaterial here: see ch. 22 n. 15). The attested age-set eponyms are (probably) Mounichos and Panops (ch. 20 n. 62). The first specific reference to call-up by age seems to be Dem. 3. 4, in 352 (all Athenians up to 45 years to man triremes); but Philochoros (*FGH* 328 F 38) discussed service by eponyms in bk. 4 of his *Atthis*, which covered the years 461–404. Norms of hoplite fighting included ideas about the best position for soldiers of different ages (J. K. Anderson 1970, 243–4; Lazenby 1985, 12–20).

⁴⁶ Aisch. 2. 167–70. It is even possible that the second reference to service *en tois meresi*, usually deleted from the text, concerns service when he was over 50; at the time of his speech he would be 54 if born in 397/6 (D. M. Lewis, *ap. APF* 14625 II), 52 if born in 395/4 (M. H. Munn 1993; E. M. Harris 1988*b*, 1995, defends the text of l. 49 and 390 as birth-year). Christ 2001 does not satisfactorily explain *en tois meresi*. Note that on the view taken here, service ‘in the (safer) parts’ would have begun at 20 (not 18); Aischines on Harris’ dating would still have been ‘young’ in 366, at 24, but not in 362. Van Wees 2004, 103, translates ‘by sections’, ‘whether one or more of the tribal regiments or some other group’, justifying this by reference to Sparta (p. 104) and to *IG* i³ 1505 (but see n. 37). On peripoloi and their

Aischines had also served as an *epilektos*, at the battle of Tamynai in Euboea in 348. Tritle (1989) argues that the Athenians organized a formal corps of picked hoplites, *epilektoi*, perhaps in the second quarter of the fourth century; but it seems to me more likely that each *taxiarch* picked his own squad or squads according to the men available and the needs of the situation. Certainly the decree passed by the older *epilektoi* of Antiochis in honour of their *taxiarch* c.330 does not require us to believe that every tribe had one or more formally enrolled special units.⁴⁷

It thus seems rather unlikely that the Athenian infantry underwent any formal reorganization between 507 and the late fourth century, although informal changes were certainly introduced to adapt it to changing demands and to variation in the size of mercenary forces used alongside citizen troops. In the cavalry, however, there was a change; an initial force of 300 horsemen under three *hipparchs*, elected from the whole citizen body, was expanded in the 440s or 430s to 1000 horsemen divided into ten tribal squads, each commanded by a *phylarch* from its own tribe; the whole force was commanded by two *hipparchs*. In terms of battle order this perhaps represented a change from a plan for two flanking and one reserve unit in a single battlefront to a system more easily deployed when the city was fighting in more than one area, although it must be said that we know even less about the use of the cavalry in the fifth century than about the use of the infantry.⁴⁸

Reconstructing the stages of development of the infantry command structure is more problematic. Eventually—and probably already by the 480s or 470s—the Athenians elected ten *strategoi*, by a process that took some account of tribal representation, as commanders of the whole army, and ten *taxiarchoi* each of whom was responsible for his own tribe. However, *A.P.* 22. 2 dates a change in the system of appointing *strategoi* in 501/0, while Herodotus' account of the battle of Marathon implies both that the *polemarch*, Athens' military leader in

commanders see also Chaniotis 2007; Couvenhes 2011; A. Chankowski 2014. I am not convinced by Chankowski's argument for an early *ephebate*.

⁴⁷ There may have been some reorganization at the time of the institutionalization of the *ephebate* in 335. The state honoured the *epilektoi* of Kekropis for their actions, apparently in defence of Attika, in (?) 318/7 (*Agora* XVI 105; G. J. Oliver 2007a, 180), and a deme praised its *epilektoi* perhaps at about the same time (*IG* ii² 1209). *Epilektoi* and cavalry were sent to resist the Gauls at Thermopylai in 279, *IG* ii³ 1005.

⁴⁸ See Bugh 1988; Spence 1990, 1993. Though it is generally assumed that the office of *phylarch* was created in this reorganization, the ceremonial role of tribal squads of cavalry (*anthippasia*, Panathenaic procession) may well go back to pre-Kleisthenic times, and it is not impossible that ten *phylarchoi* replaced the four *phylobasileis* in 507 (cf. Hdt. 5. 69; Gschnitzer 1968). If so, they may have controlled tribal funds and managed civil business until c.440, when their duties became more exclusively military and the *epimelētai* took over their civil duties. It is far from certain that *IG* ii² 5522 commemorated the dead of a single tribal squadron (Bugh 1988, 136–9; cf. ch. 27 n. 78).

the pre-Kleisthenic system, still played a role of some importance in 490, and also, perhaps, that strategoi at that date were still more closely tied to tribes than in later decades.⁴⁹

Presumably the phylobasileis had at one stage commanded tribal fighting units in the pre-Kleisthenic system, and tribal commanders must have been created for the new tribes from the beginning. It seems unlikely, however, that both strategoi and taxiarchs were created simultaneously in 507. Competition for office was evidently intense in the period of 507–480 (and indeed later), and a number of modifications to the system of distribution of power and authority were introduced during this time. The relation between the new office of tribal commander and the traditional board of nine archons was evidently one of the points of contention. Perhaps at least in part because the new regime faced three serious military emergencies in its first thirty years (506, 490, 480), the traditional system of rotation of office, by which repeated tenure of high office was prohibited, was felt to be impracticable in the case of military commands.⁵⁰ However, the decision to allow tribal commanders to hold office repeatedly inevitably created an unstable relationship between these positions and the traditional archonships, especially the office of polemarch. Out of this conflict emerged, by a process we cannot fully construct with certainty:

- (1) perhaps a temporary stage in which the lot was used to select the polemarch, lasting until at least 490;⁵¹
- (2) the reform dated by *A.P.* in 501/0, which perhaps transferred elections of the strategoi from tribal assemblies to the assembly of the whole citizen body, by which the nine archons were also elected;
- (3) in 487, a further reform by which the lot was used to select all nine archons, and the secretary to the thesmothetai, as part of the process by which holders of minor offices were appointed;⁵²

⁴⁹ Hdt. 6. 109–10. The polemarch's tribe, Aiantis, held the position of honour on the right wing, while the Plataians were on the left wing. The ten strategoi took turns in supreme command (*prytaneîē*); it is not clear whether they shared it with the polemarch, who had an equal vote with them.

⁵⁰ We do not know the exact rules about iteration of office in the pre-Kleisthenic period (cf. Forrest and Stockton 1987), and we do not know whether the ban on iteration had ever applied to phylobasileis. The Romans developed proconsular and propraetorial commands to deal with the same problem.

⁵¹ The current explanation of this change (Badian 1971; but see M. H. Hansen 1985*b*, 57) is that the Assembly elected a board of 9 (or 10) archons and the lot was used to assign specific positions to them. Whatever the solution to this problem, the amount of change in modes of appointment to major office in the early years of the Kleisthenic regime should warn us not to assume that there were no modifications in the tribe/trittys/deme system.

⁵² On the question whether the demes could have produced a panel of 500 candidates (*A.P.* 22. 5) see below at n. 67.

- (4) at about the same time, the introduction or at least the first use of ostracism, a procedure for election-in-reverse by which the man who got the most votes (provided 6000 votes were cast in all) was eliminated from political competition for ten years.⁵³

The decision to elect tribal taxiarchs in addition to the strategoi, and a further modification that made it possible to elect more than one strategos from a single tribe, are more difficult to date and may have come somewhat later. Taxiarchs will have become especially necessary when Athenian forces began to fight on more than one front in the same campaigning season; the election of more than one strategos from a single tribe is first definitely attested in 441, and it has been argued that it was Perikles' long run in the office which made the change especially necessary. Kimon, however, had earlier been elected strategos repeatedly, and it is possible that he had a colleague from his own tribe in 476.⁵⁴

Formal election of taxiarchs presumably accompanied or preceded this modification of the procedure for electing generals, since a tribe that lacked a general could not be left without a senior officer; but there may have been a period in which generals made ad hoc appointments to command in fields which they were unable to supervise personally, before the office of taxiarch was formalized. In any case it appears that ad hoc delegation of responsibilities remained common. We do not know whether the *peripolarchoi* who commanded frontier patrols before the ephebic reform of 335 (Sekunda 1992), were formally elected; fortresses will have had their phrourarchs, also, and both may have been appointed by any generals and taxiarchs left to organize the defence of Attika while others went on campaign.⁵⁵ Needs varied from year to year. There may have been a tendency, in forces recruited for campaigns outside Attika, to select the taxiarchs drafted with them from tribes not represented by generals, but it cannot have been uncommon for some tribal squadrons to have no elected officer with them on campaign; presumably a *lochagos* was chosen to command the squadron in

⁵³ See P. J. Rhodes 1981*a*. The principal justification for the introduction of ostracism, if the institution was invented after the battle of Marathon, was probably that it could be used to remove men suspected of Medism (friends of the tyrants, the Alkmaionidai) without controversial trials. But ambitious men may also have seen it as a means of disposing of tribal rivals for the office of strategos; some of the scatter vote may be due to this factor.

⁵⁴ Ch. 16 n. 3. We do not know for certain that there was a rule of tribal representation after 501/0. Piérart 1974 suggests that double representation came about spontaneously through the Assembly's readiness to accept a second nomination from a tribe already represented on the board (cf. M. H. Hansen 1987*a*, 45–6); CAH V² 86 (P. J. Rhodes) would restrict this to cases in which no candidate from a particular tribe had received a majority of votes in his favour. Piérart's reconstruction of the voting procedure is probably correct, but Plat. *Laws* 759d implies that it was feasible to decide which of a number of candidates had received the smallest majority (cf. Wade-Gery 1958, 110–15 = 1931, appendix B).

⁵⁵ One general was given formal responsibilities for the defence of Attika before 352/1 (*IG* ii³ 292); M. H. Munn 1993, 190–2 suggests shortly after 366.

such cases. Taxiarchs assisted generals also on naval campaigns,⁵⁶ but subordinate commands may well have been given to experienced trierarchs.

Before 355, at least, there was little formal military training in Athens. Perikles' funeral speech boasts that Athenians fight as bravely as Spartans though they do not spend their spare time drilling (Thucydides 2. 39; J. K. Anderson 1970, esp. 210–12; Pritchett 1974). Xenophon (*Poroi* 4. 52) complains that young men get paid for military training only when they are practising for tribal team events in religious festivals. He seems to be principally concerned here with physical fitness, since the main responsibility of tribal gymnasiarchs was to train runners for torch-races, but it was probably also true that phylarchs trained the horsemen under their command principally for the Anthippasia contest. Young men learnt to use the bow, arrow, and spear when hunting, and might practise throwing the javelin in the gymnasium, but these were voluntary activities for the upper class and were not organized on a tribal basis.⁵⁷

FESTIVALS

Teams of runners trained by gymnasiarchs were entered in the torch-races in honour of Hephaistos and Prometheus and at the Panathenaia. Hephaistos' race was undoubtedly a relay race, and one would naturally assume that the same was true of the Prometheia and the Panathenaia. References to a prize for the winning runner, as well as his tribe, do not constitute a decisive objection to this assumption; the runner who completed the final stretch of the course for the winning team—who probably held the title of *lampadarchos*—lit the fire on Athena's altar with his torch, and therefore had a special role in the festival. Nor do we need to assume that Aristophanes' references in the *Frogs* to the residents of the Kerameikos mocking lagging runners implies a sort of Athenian city marathon in which all ephebes of the year competed. Members of the losing tribes, as the teams came into the final stretch of the course, will have been urging on their runners with jeers, trying to spur them into greater effort before it was too late.⁵⁸

⁵⁶ Xen. *Hell.* 1. 6. 29; cf. B. Jordan 1975.

⁵⁷ See however Spence 1990, 2010 on the use of cavalry during the Peloponnesian War. Ober 1985 argues for the introduction of more systematic training between the Social War and 335. Hoplomachy ('fencing with hoplite weapons', J. K. Anderson 1970, 86) was a novelty taught by paid specialists in 420s, the dramatic date of Plato's *Laches*. The ephebes from 335 had two teachers of military skills, sometimes foreigners. At this date there may have been a reorganization of the gymnasiarchy, torch-race gymnasiarchs being chosen from the ephebes (Palagia and Lewis 1989), while an older man became responsible for supervising the gymnasia and seeing that oil was provided (*IG* ii² 3206, attributed by Goette 1989 to Nausikles son of Klearchos of Oe; chs. 11 n. 62, 28 n. 76, 32 n. 59).

⁵⁸ Cf. ch. 18 n. 85, 19 n. 52. J. L. Shear 2012 suggests that the torch-races and euandria contest might have been introduced c.500. The cutaxia competition (*IG* ii³ 550), also tribal and probably ephebic, may

The only obstacle to assuming that all tribal torch-races were relay races is an inscription of the ephebes of Erechtheis of 334/3/2 which lists about 50 *lampadéphoroi*, that is, probably the whole annual cohort. This text is not a reliable guide to pre-Lykourgan practice. The tribe could have fielded three or four teams during the year, for the Hephaistia, Prometheia, Panathenaia, and perhaps the Nemesia at Rhamnous, and other torch-races may well have been organized at this time; the institutionalization of the ephebate stimulated a number of religious innovations.⁵⁹

Tribes also competed for prizes in *euandria*, ‘manliness’, at the Panathenaia; we do not know whether they were selected and trained by gymnasiarchs or taxiarchs, but the former seems more likely.⁶⁰ Xenophon’s portrayal in *Memorabilia* 3. 4 of a disgruntled taxiarch who has been defeated in election for the generalship by a rich choregos with no military experience suggests that taxiarchs did not have liturgic functions.

The position of phylarch was elective and not liturgic, and cavalrymen were expected to pay their own expenses, but the ambitious phylarch would buy himself a showy mount and spend time rehearsing the best mounted members of his tribal squadron for the Anthippasia, and probably for their role in the Panathenaic procession. Cavalry displays were much admired, as we can see from the prominence of the horsemen in the Panathenaic frieze (cf. Osada 2011), and successful phylarchs commemorated their victories, sometimes with ostentatious monuments (below at n. 121). They liked to do some of their rehearsing in the north-west corner of the Agora (Bugh 1988, 219–20; Camp 2007). Hipparchs too, to judge from Xenophon’s *Hipparchikos*, were much concerned with making a good show at festivals.

have been short-lived: Lambert 2011*b*, 186 (cf. *A.P.* 42. 4?). On torch-races see *Frogs* 131, 1087–98; Sekunda 1990, Bentz 2007. *IG* ii² 1250, interpreted by Sekunda as a decree of Aiantis honouring a victorious team of 10 *lampadéphoroi* and their gymnasiarch, in the 350s–340s (see also Whitehead 1991), was perhaps set up in the Lykeion: the Zappeion area, where it was found, was not where Aiantis’ decrees were usually set up. Sekunda’s view that the torch-race in honour of Pan was incorporated into the Panathenaia is probably correct, although the Herakleia at Marathon (*IG* i³ 3) may be an alternative.

⁵⁹ *IG* ii³ 4. 336; cf. *IG* ii³ 4. 429, which records 4 gymnasiarchs, each of whom perhaps served for a single festival. On religious innovations of the Lykourgan period see Humphreys 1985*a*, 2004; Faraguna 1992. *IG* ii³ 449 contains regulations for a new festival that seems to have included tribal competitions: Walbank 1982*a* suggested the Amphiarraia, O. Hansen 1985 the Bendideia, but the role assigned to the polemarch still makes me think of the Epitaphia (Humphreys 1985*a*, n. 33); the Nemesia are also possible, Rhamnous being now a garrison town.

⁶⁰ *IG* ii³ 4. 545, from the Akropolis, commemorates victories in the torch-race and in *euandria* at the Panathenaia, and with a boys’ chorus at the Thargelia (cf. Goette 2007*b*). It is dated to the mid 4th c.; in line 1 a tribe’s name should be restored rather than [*chorégôn*]. Monaco 2011, 224 suggests that *IG* ii² 3134 = *IG* ii³ 4. 589 could refer to euandria.

CIVIL OFFICE

Each tribe had to produce, every year, 50 councillors and some reserves to fill places vacated because the original nominee failed to pass scrutiny at the *dokimasia*, or died during the year; 500 men for garrison duty (*phrouroi*); a considerable number of members for boards of officials; and wealthy men to serve as choregoi, gymnasiarchs, and ‘feasters’ (*hestiatores*) for tribal contests.⁶¹

Councillors and *phrouroi* were appointed by demes and *A.P.* 62. 1 says that minor official positions were also at one time filled by demes, but corruption had led to this duty being assigned to tribal assemblies, which also appointed senior officials (after 487, the nine archons and the secretary to the *thesmothetai*), and liturgists. A *terminus ante quem* of c.370–362 has been provided for this change by analysis of bronze allotment plates which were used first to assign jurors to courts (from ? 378/7) and subsequently also for allocation to office (Kroll 1972). Tribal election processes, from this time on, evidently used places where allotment machines were available, in and around the Agora.⁶²

Attempts have been made to use four clay tokens of the late fifth century, three of them found in the Agora, to reconstruct the process of appointment to office when it was done in the demes. These theories seem to me mistaken—these clay objects are recognition tokens and are not likely to have been used in allotment⁶³—but nevertheless the tokens may cast light on the nature of the corruption of which the demes were accused. They are small domino-shaped pieces of clay, cut irregularly across the middle, carrying on one side, across the cut, the name of a tribe, and on the other side, on one half the name of the deme and on the other the letters POL, probably standing for *pôlêtês*. Since so few of these tokens have been found it is likely that they represent an experiment that lasted at most for a few years and may even have been confined to the office of poletes.

Prima facie, these tokens guaranteed that the candidate who turned up with the deme half had indeed been appointed by his deme to fill the office assigned to it. The office of poletes was a sensitive one, since the poletai confiscated and sold property belonging to state debtors and other offenders. They had to decide whether to recognize claims that the land had been leased or that other creditors had prior liens on the property, they ran the sale, and there is some evidence that they did not always make serious efforts to extract the highest possible bids from

⁶¹ M. H. Hansen 1980; P. J. Rhodes 1972. *Agora* XV 492, which contained c.750 names, has been identified as a list of councillors and alternates, but see Humphreys 2010a, suggesting kleruchs.

⁶² See n. 68. In *Aisch* 3. 27 two days are allocated for tribal assemblies, which may imply a succession of meetings in the Theseion. Cf. N. F. Jones 1999, 164–6; A. Chankowski 2014.

⁶³ Herman 1987, 62–9, rightly insists that these *symbola* are recognition-tokens, but in my view goes too far in totally rejecting the association with demes, tribes, and office. Context and letter forms seem to indicate a date near the middle of the 5th c. (*Hesp.* 1951, 51–2). See also Cordano and Grottanelli 2001.

buyers. Friends of the man whose property was being sold would put in claims that part of it was owed to them, or might buy it up, as cheaply as they could, on his behalf so that he could later repurchase it from them. It would, therefore, be very useful to have friends on the board of *poletai*, and suspicions of corruption might well arise.⁶⁴

In the pre-360 system, then, tribal officials notified demes of the positions on official boards that they were expected to fill, presumably taking some account of deme size in their allocation of offices. There must, however, have been considerable changes over time. In 507 the number of boards of ten tribal representatives must have been very small, and some may well have been filled from the Council. It was not uncommon for boards to be filled entirely or partially from the Council later⁶⁵ and the references in *IG i*³ 73 and 224 to ‘the *kôlakrêtai* of the x prytany’ suggest that this financial board, which was certainly already in existence in 507, was closely related to the Council structure.⁶⁶ We are not well informed about the limits on iteration of minor offices, except that an office-holder could not be re-elected until he had successfully passed scrutiny for his previous tenure, but in any case it seems that, as minor boards proliferated in the fifth century, a man who enjoyed office and could afford to spend his time on public business could move from one board to another and find frequent employment. The practice of assigning appointment to the demes might have been introduced to ensure that city residents did not monopolize official positions.

The principal tribal assembly of the year, between 487 and c.370, had to select its representative on the board of archons ‘from the 500 pre-selected by the demes’ (*A.P.* 22. 5; P. J. Rhodes 1981*a*, 273–4), elect three tribal *epimêlêtai*,⁶⁷ and allocate minor offices to demes. An Eleusis decree of the Lykourgan period (*IEleus* 85) refers to a meeting of the demesmen in the Theseion in Athens at the time of the appointments to office (*archairesiai*) in Metageitnion, but this may well refer to deme elections in Metageitnion; probably the tribes held election meetings some time between the election of military officials, which took place ‘in

⁶⁴ Ch. 14 at nn. 37–40. Since the names of demes and offices were painted on the tokens before firing, the assignation of offices to demes was known in advance. It would not be Athenian practice to have a secret list of assignations known only to tribal officials and potters. On the scheme proposed here, an elected *pôlêtês* could still sell his token to a fellow-demesman (perhaps this is why the system was short-lived), but at least the market was reduced to a single deme.

⁶⁵ Cf. M. H. Hansen 1980. A list of decrees ordering the appointment of new officials, some of which specify that part or all of the board is to come from the Council, is given in Piérart 1974, 134–6.

⁶⁶ Cf. *IG i*³ 36, *kôlakrêtai* of Thargelion; Wilhelm 1939, 52–72; Van Wees 2013*a*, 40–44; Matthaiou 2015 on i³ 224.

⁶⁷ Since *epimêlêtai* were responsible for managing tribal funds used for sacrifice, it is possible that they were elected at a meeting held after the tribe’s main festival of the year rather than at the same time as tribal representatives on city boards. Pandionis held an assembly after the Pandia, *IG ii*² 1140; Kekropis held a *kyria agora* on the Akropolis, ii² 1141. The number of tribal assemblies may have increased during the Peloponnesian War, when more Athenians were living in the city. See below, n. 71; A. Chankowski 2015.

the first prytany after the sixth in which the omens were favourable' (*A.P.* 44. 4), and the end of the year.⁶⁸ Such meetings may have been timed to coincide with festivals that would attract large numbers of country-dwellers to the city. However, there must have been further tribal meetings to select candidates for the position of ephebic sophronistes (*A.P.* 42. 2); the tribe's new members would presumably be presented on this occasion.⁶⁹ Metageitnion would be a suitable date for this, and some purely tribal offices may have been filled at the same time.

Tribal epimeletai are not formally attested before the late fifth or early fourth century, but it would have been apparent soon, if not from the outset, that the tribes needed civil officials to convene meetings, and perhaps to manage tribal property, in addition to their military leaders.⁷⁰ The term *epimelêtês* is first documented in 426/5 (*IG* i³ 68. 38–9), but the deme Rhamnous had *epistatai* in charge of its finances before 480 (*IG* i³ 247 *bis* = *IRh* 181). It was perhaps

⁶⁸ One would expect the appointments to civil office to take place after the elections to military commands, both because the latter were positions of greater power and because military commanders might well have to travel some distance to take up office. Indeed, the rule that elections to military command could take place any time after the sixth prytany, provided the omens were favourable, is perhaps best viewed as a modification introduced to advance the date of these elections when the conventional date at which archons had traditionally been elected was found to create difficulties for commanders assigned to campaigns overseas. In that case the reference to omens—perhaps not taken very seriously, if we can judge by Ar. *Clouds* 579–87—would be explained not by the greater weight attached to military office (P. J. Rhodes 1981*a* on *A.P.* 44. 4), but as the normal precaution taken when a deviation from custom was introduced (Humphreys 1985*a*, n. 29). On the Hellenistic period see Gauthier 1998.

⁶⁹ Ch. 22 nn. 45, 113. After the appointment by the *boulê* of the sophronistai and kosmetes the epheboi processed round sanctuaries (*A.P.* 42. 3) and then (?) took their oath in the shrine of Aglauros (P. J. Rhodes 1981*a*, 506). This will have preceded their parade at Agrai on Boedromion 6 (the schedule in Humphreys 2004, 184 is too compressed). The presentation of armour to war orphans (cf. Couvenhes 2007) must also have taken place shortly after their dokimasia; it was apparently replaced (cf. Aischines 3. 154) when the ephebate was institutionalized by a parade of all ephebes, receiving a shield and spear, in the stadium (Dillery 2002), at the beginning of their second year of service. Erchia makes its only sacrifices in the city on Metageitnion 12; see Jameson 1980; Mikalson 1975, 36; Humphreys 2004, 183. Myrrhinous, *IG* ii² 1183, seems to have held its euthynai somewhat later. See the discussions in Whitehead 1986*a*, 266–70 and N. F. Jones 1999, 164–6. It should be stressed that appointment was a two-stage process: identification of candidates (volunteering, or agreeing to stand under pressure) at an assembly, followed by sortition if there were competing candidates. The latter process may have involved only tribe/deme officials and the candidates, plus (perhaps) the thesmothetai as supervisors, and any interested supporters; it need not have taken long. Some units may have held assemblies in the Theseion, others elsewhere. *IG* ii² 1164 (early 3rd c., Akropolis, unknown tribe) seems to have been voted before its honorand had passed his euthynai (but after the end of his year in office?) and before the election of epimeletai for the coming year. On dates of deme assemblies see also Papazarkadas 2011, 116–9; ch. 22 n. 115.

⁷⁰ Unless, as suggested above (n. 48), phylarchs performed these functions until c.440. Pace Trail (1986, 79–80), it is extremely doubtful whether *IG* i³ 377. 21–2 (407/6) contains a reference to epimeletai (of Aiantis, in Antiochis' prytany), but they are certainly referred to in *IG* ii² 1138–9 + 2812 + *Hesp.* 1953, 177 no. 1, of the 380s. If *epimel[êtai]* is to be restored in *IG* i³ 252, which is more than doubtful, we would have the term attested c.450.

normal practice to elect one epimeletes from each trittys, but we do not have much evidence. If this principle was adopted in Pandionis at the time of *SEG* 21. 515 (between 332 and 323), Probalinthos was treated as a city deme for the purpose of the appointment, as in council-trittys lists.⁷¹

The change in the mode of appointing minor city officials may have been a matter of technology rather than principle. With allotment machines it was possible to move directly from matching offices with demes to sortition of office-holders (Staveley 1972). It would, however, be necessary at this stage for demes to produce a panel of approved candidates, and it is quite likely that *A.P.*'s reference to 'the 500 prokritoi from the demes' denotes this panel. If so, *A.P.* will have been mistaken in thinking that it was already in existence in 487. In any case several of the tribal boards of officials in the early fifth century required special qualifications: treasurers of Athena had to be *pentakosiomedimnoi*, archons *pentakosiomedimnoi* or *hippeis*, who had not held office as archon previously.⁷² Sortition *ek prokritón* in such cases may mean only that a panel of nominees was constituted and the lot was then used to choose between them; in most cases the candidates' qualifications will have been well known (the *pentakosiomedimnoi* and *hippeis* of a tribe were also its liturgists), and nominators could testify in cases where, for example, an orphan who had recently come into his father's estate was being asked to serve for the first time.

TRIBAL OFFICES AND LITURGIES

We do not know whether choregoi, gymnasiarchs, and hestiatoures were appointed at the same meeting as other officials or another one; perhaps business that could

⁷¹ Above at n. 26. In *IG* ii² 1152 (Pandionis, late 4th c.), the epimeletai come from Paiania (inland), Myrrhinous (coast?), and Kydathenaion (city); in *Agora* XVI 80 (332/1, 327/6, or 324/3; *SEG* 21. 515, 34. 101), from Probalinthos, Paiania, and Kytherros, the latter taken to be a coastal deme by Traill 1986. Aiantis' epimeletai *c.* 342/1 come from Phaleron (city), Aphidnai (inland), and Oinoe (coast): *Agora* XIX P 26. 513–15 (wrongly dated to 346/5 by Traill 1986). In *IG* ii² 1151, however, Aiantis' epimeletai come from Aphidnai, Marathon, and Rhamnous, which is only a 'city' deme if we accept Traill's reconstruction of council-trittyes in this tribe (above at nn. 25–7; ch. 31 n. 60). *IG* ii³ 4. 207 (Leontis, 357/6) has epimeletai from Deiradiotai, Leukonoion, and Aithalidai. Deiradiotai is generally taken to be a coastal deme, but Lewis 1983*a* suggests that Leukonoion may also be coastal (Traill says city); Aithalidai is unlocated, but probably inland. In addition to the epimeletai records collected by Traill 1986, the following reliefs in M. Meyer 1989*a* may represent epimeletai: A 132 (*IG* ii² 2482, 321/0 or 318/7); A 149, from Acharnai (Oineis?); A 163, from the Akropolis. Possible epimeletes in [Dem.] 58. 14–16, see ch. 26 n. 62. Election of epimeletai by trittys did not require assemblies of trittyes (below at n. 131). Epimeletai also appear in *IG* ii² 1142+ (Pandionis), *Agora* XVI 136 (late 4th c.), and perhaps *SEG* 3. 117 (but see *BE* 2012, 160).

⁷² It was probably the introduction of tribal representation that extended the ban on iteration of office to all archons (above, n. 50); this would have increased the size of the Areiopagos.

be fitted into a single meeting in the early fifth century would have required two meetings in the fourth. It may also have been necessary to delay the appointment of tribal liturgists until the city had appointed its trierarchs, and its choregoi for dramatic performances. Each tribe required three or four choregoi for the men's and boy's dithyrambic competitions at the Dionysia and Thargelia (the latter obligation being shared by two tribes, from some date before 420/19). Each also appointed gymnasiarchs for the torch races at the Prometheia, Hephaistia, and Panathenaia. We do not know the number of hestiatores, and the lack of evidence suggests that the post was of minor importance.⁷³

Liturgists would be nominated in tribal assemblies, either by their friends or by opponents who wished to embarrass them or who felt they were not taking their fair share of the burden. There would be a vote if there was competition among willing liturgists, or perhaps if the friends of a man nominated against his will made a counter-nomination. Normally, however, a reluctant liturgist would turn to the archon's court, either to argue that he was not liable (due to other current obligations, service in the previous year, or a grant of exemption) or to challenge another man to take on the liturgy or exchange property (*antidosis*). In 349/8, when the archon was assigning flautists to tribal choregoi in the city Assembly, Pandionis was unable to name its liturgists; the archon rebuked the tribe's epimeletai, who responded by blaming the archon. Evidently there was an antidosis case that had not been settled. Demosthenes at this point—perhaps because it suited his political agenda, perhaps only to take advantage of an unusual opportunity for publicity—volunteered to pay for one of the dithyrambic choruses at the Dionysia.⁷⁴ It does not appear that tribes usually had serious difficulty in finding liturgists; we have more examples of men who boast of doing more than their fair share than of complaints about shirkers.⁷⁵

Tribal assemblies, when not making use of the allotment machines in the Theseion, probably met in or near the sanctuaries of their eponymous heroes; this is where their decrees were set up. *IG ii² 1141* refers to an assembly of

⁷³ J. K. Davies 1967. Possibly the figure of 60 'encyclical' liturgists per year in Dem. 20. 21 refers only to tribal liturgies and belongs to a period when each tribe appointed only one gymnasiarch (cf. Schol. Patm. ad loc., *BCH* 1877, 147) and two 'feasters', one for the Panathenaia and one for the Dionysia. They perhaps had to provide wine and other supplements to accompany the tribe's share of sacrificial meat. Sourvinou-Inwood 1988*a* suggested that the Brauron 'bears' were selected by tribe, but this does not seem probable to me: cf. ch. 9 n. 22.

⁷⁴ Dem. 21. 13. Gabrielsen 1987*a* explains how antidosis suits could be delayed. [Dem.] 42 was written for an antidosis case that came to court in the early 320s (*APF* 14734); this was probably a rare occurrence. Isokrates 15 (354) is a fictional speech of self-justification, Isokrates having ceded to a challenge about two years earlier (*APF* 7716). On the *diadikasia* inscriptions of ? 380/79 see Gabrielsen 1987*b*.

⁷⁵ Is. 5. 35–6 plays down the liturgies of Dikaiogenes III of Kydathenaion, but in 10 years he had served as tribal choregos for the Dionysia and as choregos for tragedy and *pyrrhichistai* (*APF* 3773). Demes may have had more difficulty.

Kekropis on the Akropolis, and Erechtheis, Aigeis, and Pandionis also probably met there. Leontis may have used the Leokoreion, the sanctuary of Leos' daughters on the north side of the Agora, but also erected monuments at Daphne; Akamantis might have used the shrine of Akamas in the Kerameikos, but also set up a decree found in Kallithea (Xypete? *SEG* 23. 78);⁷⁶ Oineis might have met at Acharnai, to which deme almost half its members belonged if Council quotas provide a reliable guide to population. Hippothontis seems to have met at Eleusis, in (or near) the shrine of Hippothoon. Aiantis met in the shrine of Ajax' son Eurysakes, in Melite (Stroud 1998, 85–104; chs. 20 n. 111, 29 n. 2). Antiochis set up decrees in the shrine of its eponymous hero (*SEG* 3. 115. 22–3), perhaps associated with that of his father Herakles in the gymnasium at Kynosarges.⁷⁷

Tribes will have sacrificed to their eponymous heroes, and eventually acquired significant amounts of property that provided income to pay for these sacrifices;⁷⁸ presumably leading members of the tribe, demes (*IG* i³ 244), and in some cases genê will have contributed in early years. Antiochis had property on Lemnos in 303/2 (*SEG* 3. 117), and it seems possible that the first kleruchs had assigned

⁷⁶ Cf. N. F. Jones 1999, 157–61, 321–3. The restoration of a reference to monthly tribal assemblies in *IG* ii² 1165 seems to me very improbable (cf. Jones, 162). D. M. Lewis 1955 collects decrees and dedications of Pandionis (add *SEG* 21. 515, reprinted in Traill 1986, 85); Habicht 1961*b* discusses Akamantis. *IG* ii³ 4. 207, a dedication by the epimeletai of Leontis for 357/6 (to Leos?), was seen by Kirchner (Traill 1986, 81) at Daphni, which has also produced a dedication by a phylarch of Leontis (*SEG* 36. 269; ch. 26 n. 29; *SEG* 47. 197, ch. 32 n. 15, is a different text). Dedications to Hermes would not be out of place in the sanctuary of Apollo Pythios of the Kephallidai, who claimed to descend from Hermes (ch. 20 n. 81); nothing in sources on Attic mythology, however, explains the presence of Leos here. The sacrifice of Skambonidai to Leos, *IG* i³ 244, was presumably made in the Leokoreion, which was in the territory of that deme (D. R. Jordan 1985 questions the common identification of the Leokoreion, but I do not see why Leos, as a hero, or his daughters, as young female suicides, would not be thought suitable as transmitters of curses; see also Weir 1995, Kron 1999). Another sacrifice to Leos in the Agora, Alipherê 2015; perhaps also *Agora* XVI 106E. The suggestion of Papazarkadas 2007*a* that Aigeis met at Teithras is most improbable.

⁷⁷ *IEleus* 63, 67, and perhaps *IG* ii² 1142, were set up at Eleusis; only ii² 1163 (284/3, Tracy 2003, 109 no. 10) specifies that one copy is to be set up in the Hippothontion (Paus. 1. 38. 4), the other in the Asklepicion, the honorand being priest of Asklepios. Note also *IEleus* 119. Hippothontis' city demes were located W of the city, and members of its inland demes could reach Eleusis via the Aigaleos–Parnes gap. Horos of tombstone of an Oineus, perhaps the tribal hero, 4th c., re-used in Agora, *Agora* XIX H 70. The location of the sanctuary or sanctuaries of Herakles at Kynosarges and of Antiochis is still controversial: the X Antiochis decree *SEG* 3. 117 (*ISE* 8) was not found *in situ* and instructions for setting up the stone are not preserved. See Billot 1992; S. Privitera 2002; Culasso Gastaldi 2008, 285–7; Greco (ed.) 2011, 503, 508–9; chs. 24 n. 8, 32 n. 2.

⁷⁸ See Papazarkadas 2011, 99–111. These sacrifices were performed on behalf of the city as well as the tribe (*IG* ii² 1146), but there is only one reference to funds coming from the city. In 304/3 the city gave the councillors of Akamantis 300 dr. for a sacrifice and an offering (*anathêma*) to Akamas (on which, presumably, the decree was inscribed), and voted to give them [200] dr. a year in future for a sacrifice to the Saviours (Antigonos and Demetrios) and Good Fortune, in Elaphebolion—i.e. at the City Dionysia—commemorating the good news that had reached Athens in their prytany (*Agora* XVI 114; see Habicht 1990*b*; Matthaïou 1991*b*). This seems to be an exceptional grant.

temenê to tribal heroes.⁷⁹ It would have been a popular move at the time, when the *epônymoi* were still new, and might have provided a precedent both for later *temene* assigned collectively to the eponymoi of Athens, on Samos, and for the assignment of mountainous land in the territory of Oropos to the tribes perhaps *c.*374 (Knoepfler 2010*b*; BE 2017. 179).

RESOURCES

The Oropian mountains (*orê*) were assigned to tribes in pairs, and non-traditional considerations may well have influenced the decision to use the tribes to exploit this area: the terrain was wild (it was the site of a notorious case of brigandage in the nineteenth century), and the population unfriendly. If Athenian woodcutters, resin-collectors, and charcoal-burners were to move into the area, and revenue was to be derived from their activities, enterprise on a scale larger than that of the individual donkey-owner was needed.⁸⁰ To give the land to tribes was a way of motivating wealthy men to take on management roles.⁸¹ We do not know whether the tribes kept all the revenue for themselves, or were expected to use it for contributions to the Panathenaia, to which other Oropian revenue may have been devoted.⁸² Athens lost Oropos in 322, but recovered it in 307/6; a recently discovered decree of Aiantis refers to the arbitration of a dispute over the tribe's holdings in this second period, perhaps *c.*304/3, and the *syndikos* honoured by Antiochis in 303/2 for representing the tribe in its dispute concerning Lemnos had also been put in charge of its Oropian lands.⁸³ By the third century, and probably well before, tribes also had land in Attika. Antisthenes son of Nikandros of Lamptrai, honoured by Erechtheis in the late fourth or early third century for

⁷⁹ On the history of Athenian settlement on Lemnos see now ASAA 88; Culasso Gastaldi (2010, 248; 2011) thinks it Kimonian, but there is some earlier Attic archaeological material. Practice in awarding *temene* seems to have varied from one part of the empire to another; we do not know who was to own the sacred lands at Brea (Malkin 1984). R. Parker (1994) argues that *temene* of Athenian deities and heroes in the empire were used to support cults in Athens. See now Papazarkadas 2011, 19–21, 24–5, 91–2. On *temene* see Hegyi 1976.

⁸⁰ The *terminus ante quem* for the grant is *c.*330 (Hyp. 4. *Eux.* 16–17; cf. Engels 1989; Whitehead 2000); Knoepfler 2010*b* argues that arrangements made *c.*370 were renewed in 335/4. Perhaps either the preparations for the Amphiarraia of 329/8, or the celebration of the festival, emboldened sanctuary officials to claim that part of the land assigned to the tribes belonged to Amphiarraos (Hyp., *ibid.*). On timber in Attika see Meiggs 1982, ch. 7; Olson 1991. See also Papazarkadas 2011, 102–4; Cosmopoulos 2001, 14–15, 74–6 on survey evidence for the economy of the area.

⁸¹ Cf. below at n. 100, on the role of the tribes in wall-building and other construction enterprises.

⁸² On L. Robert's interpretation (1960, 189–203) of the term *Nea* as referring to Oropos in *IG* ii³ 447 (R/O 81, *Agora* XVI 75), see Knoepfler 2010*b*, 449–54.

⁸³ *Agora* XIX L 8, XVI 84, *SEG* 51. 102; cf. Sineux 2007; Papazarkadas 2009*a*; Knoepfler 2010*b*. Athens had lost Oropos again by 287.

his careful administration of tribal property, had increased the tribe's revenues to more than 3000 drachmas, and had persuaded it to pass a decree regulating leasing procedures and requiring epimeletai in future to inspect each parcel of land personally twice a year to see that it was being properly farmed, and that its *boroí* were in position. These inspections clearly took place in Attika.⁸⁴ *IG* ii² 1168, a lost tribal decree perhaps of approximately the same period regulating leases and providing for publication of a list of lessees, might be part of Antisthenes' decree; its provenance, however, is not known. Earlier, Kekropis had praised Phoryskides son of Epi— for his just behaviour concerning tribal property (*koina*, *IG* ii² 1143); this decree was passed shortly after the Peloponnesian War, at a time when there may well have been difficulties in re-establishing tribal rights to land. *IG* i³ 252, c.450, from the south slope of the Akropolis, may be a tribal lease (Papazarkadas 2011, 100). *IG* ii² 2490 also deals with leases and seems to contain the beginning of a list of estates owned by Aigeis, organized by trittys.⁸⁵ *IG* ii³ 4. 36, another decree of Aigeis, which should probably be dated 313/2, honours three officials and the *tamias* of the tribe. Traill (1986, 91), following Pittakes, took the officials to be [*logist*]*ai*, but since at least two, and perhaps all three, came from Halai Araphenides this seems rather unlikely. It is better to restore [*horist*]*ai*, in which case we might interpret the text as the result of successful resolution of a dispute concerning tribal property in the vicinity of Halai.⁸⁶

Tribes may have also had capital that they lent out at interest to produce income; some of this might have come from fines. Kekropis lent money on land

⁸⁴ *IG* ii² 1165 (Behrend 1970, no. 19; cf. N. F. Jones 1999, 176–7); on the danger that corporate property would be privatized or neglected see ch. 22 at n. 119; on disruption in the period 307–280, G. J. Oliver 2007*a*. Tracy (2003, 96–7) dates ii² 1165 c.286–270; Papazarkadas (2011, 104 n. 22) suggests the late 4th c. *If* Nikandros, father of the honorand Antisthenes, served as treasurer of Athena in 343/2 (ii² 1443. 6), and *if* treasurers had to be over 30 (probable but not certain: Kahrstedt 1936), Antisthenes should have been born by c.340 and his epikleros daughter by c.310, which would suggest a *terminus ante* of c.290. The decree was evidently passed in a period of turmoil (difficulties over tribal leasing, fear that tenants may decamp in the future and that the girl may be orphaned); see G. J. Oliver 2007*a* on the many disruptions of this period. For curse tablets possibly related to intra-tribal disputes see *SEG* 40. 265 + 42. 217 (ch. 14 n. 83, 23 n. 76), *SEG* 44. 226 (ch. 14 n. 71, 32 n. 64) *SEG* 58. 266 (ch. 30 n. 52).

⁸⁵ Cf. n. 138. Dated *ante med. s. IV* on spelling, but the reference to written leases and records of the names of contract-holders might suggest the later 4th c. *IG* ii² 598, a late 4th c. decree concerning the lease of a *hieron*, from the area west of the Akropolis, may be tribal (or from a deme).

⁸⁶ Traill (1986, 91–2) argues that the commission member Philagros came from Erchia, not Halai, but see Whitehead 1986*a*, 433 (*APF* 14208 *bis*); there are two references in this period to a Philagros of Halai whose tribe is undetermined. Since Nikeratos Hal., father of one of the (?) horistai, was diaitetes in 326/5 (*IG* ii³ 4. 35) the date should be 313/2. On the reading in line 1 of *IG* ii³ 4. 36 see *SEG* 42. 151. Cf. also N. F. Jones 1999, 180–1; Papazarkadas 2011, 107 n. 33. They would be (*pace* Knoepfler 2010*b*, 445) a commission set up ad hoc (like *syndikoi* and *klētēres*) not regular tribal officers. Cf. the tribal *geónomoi* at Brea, *IG* i³ 46. 10–15.

security some time before the 360s; Pandionis (or its kleruchic subdivision) lent money on Samos during the period of the fourth century Athenian kleruchy on the island, possibly after an initial allocation of temenos land had been sold.⁸⁷

From these varying sources tribes were deriving, by the second half of the fourth century, quite substantial revenues. Erechtheis' 3000+ drachmas from rents have already been mentioned; Aiantis by the early 340s had an annual revenue of 2000 drachmas, which it had to recover from a delinquent board of epimeletai, the third of whom was still owing his share of 666 $\frac{1}{3}$ drachmas (plus an additional penalty of the same amount imposed in 346/5) c.342/1, when the tribe finally denounced him to the poletai in order to recover their dues from the sale of his confiscated property. Perhaps the most noteworthy aspect of this affair is the lengthy delay before the tribe took formal proceedings against him.⁸⁸ Another delinquent epimeletes, Theokrines of Hybadai, had carried an unpaid debt for several years by 341/0 ([Demosthenes] 58); he had recovered enough standing to be appointed councillor in 328/7, at the age of sixty-two (*IG* ii³ 360).

EXPENDITURE

There is not much evidence about the sacrifices on which these revenues were spent. Some tribal heroes were already worshipped before Kleisthenes' reforms, and in these cases the tribe probably continued to use the services of the genos priest. The Eteoboutadai appointed the priest of Erechtheus; the Amyndridai, probably, the priest of Kekrops. The priest of Hippothoon was allocated money for a *pelanos* (cake or liquid offering) at Eleusis in the Lykourgan period (*IEleus* 177. 419), but this may well be a post-Kleisthenic arrangement. *IG* ii² 1146 = *SEG* 25. 140, a fourth-century decree of Erechtheis, refers to an additional (*epithetos*) sacrifice which the priest selected by lot is to continue to make in future years; since we know that the Eteoboutadai were using the lot to appoint their priest by 325 (ch. 20 n. 132), this text does not necessarily imply that the tribe was appointing its own annual priest.⁸⁹ In the third century Antisthenes of Lamptrai is praised by Erechtheis for seeing that all the sacrifices were duly

⁸⁷ Fines are mentioned in *SEG* 23. 78 A (26. 131; Reinmuth 1971 no. 1), Akamantis 361/0. Property, Finley 1952, no. 146 (*IG* ii² 2670, *APF* 9238); *IG* xii 6. 255 with Papazarkadas 2011, 109–10. Akamantis lends on Lemnos, Culasso Gastaldi 2006 no. 4.

⁸⁸ *Agora* XIX P 26. 498–530. This text covers the activities of the *pōlētai* in 342/1, 341/0, or 339/8, and it is not impossible that the confiscation of the property of the debtor, Nikodemos son of Aristomenes of Oinoe, was prompted by flight after Chaironeia.

⁸⁹ If the Philton who proposed *IG* ii² 1146 (cf. *SEG* 25. 140) was Ph. of Lamptrai, he was on Samos in 346/5 (*IG* xii 6. 261); *IG*'s date for 1146 (before c.350) may be too early. Cf. Blok and Lambert 2009; ch. 32 n. 26 on *SEG* 3. 117.

performed (*IG* ii² 1165, cf. 1150 = *SEG* 36. 178). So far we have no text that can be convincingly identified as a tribe's sacrificial calendar, and the lists may not have been long enough to warrant publication. *IG* i³ 246 (470–50) is considered by the editor, following Prott, to be the sacrificial calendar of a tribe, phratry, or *genos*, but any of these identifications would be problematic, the first especially. The text was acquired in Athens by Elgin, but this does not necessarily imply an association with the Akropolis, which might have suggested that the text was tribal. The names that can be deciphered show a decided preference for the more sinister side of Athenian religion: offerings to Tritopatores and unnamed heroes, a sacrifice on the day before the Thargelia, when the city was purified and scapegoats were expelled, and one to Athena in Thargelion at the Plynteria, another festival of purification.

Presumably tribes that used pre-existing sanctuaries will have made offerings to their deities, even when the tribe had added the altar of its own eponym to the cult complex. We would expect Aiantis to contribute to the cult of Eurysakes, whose priest was appointed by the *genos* Salaminioi, even if the tribe also appointed its own priest of Ajax; Antiochis possibly honoured Herakles as well as Antiochos at Kynosarges (n. 77). Oineis' relations with the deities of Acharnai are less clear; the tribe may also have made offerings at a tomb of Oineus in the Agora.⁹⁰

Pandionis, more ambitiously, seems to have constructed (on flimsy etymological grounds) an association with the Pandia, originally a festival of Zeus. It had come to be associated with the City Dionysia, presumably a result of the expansion of the programme of the latter, and this may have made it seem an appropriate occasion for a tribal assembly and celebration; Pandionis' monument recording the tribe's victories in choral competitions may belong to this complex of associations.⁹¹ It is tempting to suggest that the very generous honours awarded by Pandionis to Demon son of Demomeles of Paiania, who had served as priest of Pandion in 386/5—a gold crown and lifelong exemption from tribal liturgies, to be proclaimed in the assembly meeting (*agora*) held after the Pandia—may have been prompted by his celebration, at his own expense, of a particularly lavish sacrifice that established the tribe's rights in the festival. In any

⁹⁰ *Agora* XIX H 70 (missed by Kearns 1989) seems more likely to be the marker of a hero's tomb than that of a private individual (n. 77). On Acharnai see Kellogg 2013a, 172–4.

⁹¹ *IG* ii² 1138–9 + 2812 + *Hesp.* 1953, 177 no. 1. A later decree of (?) Pandionis (*IG* ii² 1266; Wilhelm 1942, 186–8), of the end of the 4th c., expresses concern that its epimeletai, in managing tribal affairs, ensure that every recipient gets the due *meros*. A share-out of cash income to individuals seems unlikely, and I doubt Wilhelm's restoration [Pandionidai] in line 7. It seems more likely that *merê* of the revenue are being allocated to deities, officials, or, conceivably, demes. On the date of the Pandia see R. Parker 2005a, 477–8.

case the text (*IG* ii² 1140) establishes that Pandionis and the Pandia were associated by 386.⁹²

As this last text indicates, tribes also used some of their revenues to pay for gold crowns awarded to benefactors. Such grants are common in the latter part of the fourth century, but Kekropis awarded a crown of 500 drachmas to a Pyrrhos in 376/5. It is frustrating not to be able to identify this benefactor, apparently father of a Sosibios, whose award was sufficiently controversial to require a secret ballot in the tribe's *kyria agora*, held on the Akropolis.⁹³

Kekropis also awarded gold crowns to its taxiarch in 339/8 (for victory in a small battle before Chaironeia; the value is unknown), and to its ephebes and their *sôphronistês* in 334/3 (500 dr. each). In 333/2 the ephebes and sophronistes of the tribe awarded gold crowns to the general in charge of Piraeus, the general in charge of the country-side, the sophronistes, their taxiarch, their seven lochagoi, and their two instructors (*didaskaloi*). It seems possible that the funds for the crowns were given to the ephebes by the tribe, but it is also conceivable that their fathers contributed.⁹⁴ Pandionis awarded a gold crown of 500 drachmas

⁹² In the 5th c. Plotheia (Aigeis) had contributed 72 dr. yearly to the Pandia (*IG* i³ 258, ch. 24 n. 49); perhaps this text antedates Pandionis' appropriation of the festival. *APF* 3597 II suggests that Demon had given the tribe property to endow future sacrifices. He was Demosthenes' FB, and at this time his brother Demosthenes I, the orator's father, made a questionable marriage to Kleoboule daughter of Gylon of Kerameis. Gylon seems to have been living in the Crimea as a client of the Bosporean royal family. He dowered his daughters generously (Kleoboule got 5000 dr.), but doubts concerning their legitimacy could be raised, and it could also be suggested that debts to the city were owed from his property (*APF* 3597 VII–VIII). Demon's generosity may have been an attempt to distract attention from this marriage, either on his own behalf or in solidarity with his brother.

⁹³ *IG* ii² 1141, *CEG* II 890; the honorands may well have been foreigners. Used in reference to city assemblies, the expression *kyria agora* denoted the principal meeting of each prytany, which was not the only regular meeting prescribed by law (M. H. Hansen 1987a, 25–6); in this text the expression perhaps denotes the meeting held by Kekropis on the Akropolis after its annual sacrifice to Kekrops. It does not imply that the tribe held no other regular meetings; cf. N. F. Jones 1999, 162–4. However, J.'s discussion of the relation between award and proclamation of crowns is problematic. If in *IEleus* 63 proclamation in the [*Hippothonti*]on is correctly restored, this perhaps need not imply that the decree was passed in another location, while the proclamation at *Lamp[trai?]* in *IG* ii² 1161 (ch. 23 s.v.) may well be due to the deme affiliation of the honorand. Aisch. 3. 41–5 (cited by J.) suggests that (additional) proclamations might be made in more (not, as J. argues, less) central locations. (P. Wilson 2010a, 49, implausibly suggests that the text shows the importance of the Rural Dionysia.)

⁹⁴ *IG* ii² 1155–6; Clinton 1988a; Lambert 2015b. The norms of crowning are not well understood. Henry 1983 shows that gold crowns were rarely awarded to citizens before the Lykourgan period. Earlier, crowns awarded by the city to foreigners were sent overseas (R/O 33), but by the late 4th c. foreigners were expected to follow the example of citizens and dedicate their crowns to local deities (D. M. Lewis 1988; cf. Faraguna 1992 on *IG* ii² 1496). After 335 each tribe annually held a meeting of the fathers of the ephebes (of the commencing year?), who elected candidates for the position of tribal *sôphronistês* for the two coming years (*A.P.* 42. 2, cf. P. J. Rhodes 1981a ad loc.; A. Chankowski 2014), and may also have passed resolutions commending sophronistai who had just concluded their term of office (cf. *IG* ii² 1159). On *SEG* 36. 155, restored by Traill 1986 as ephebic, see Humphreys 2010a, 78–81. On unpublished ephebic texts from Panakton see Humphreys 2009, 89.

to a choregos at some time in the second half of the fourth century; in 324/3(?) it praised its epimeletai and gave them 50 drachmas for a sacrifice, and on some other occasion towards the end of the century it did the same, and in addition gave each of the three epimeletai a gold crown worth 500 drachmas.⁹⁵ Leontis in 331 gave its sophronistes a gold crown worth 1000 drachmas, and its taxiarch and lochagoi crowns of 500 drachmas each (Reinmuth 1971, no. 9, see Alipherê 2015). In *c.*303/2 the value of gold crowns was regulated by law (Henry 1983); Antisthenes of Lamptraï got a gold crown of the permitted value from Erechtheis in the first half of the third century, and a *hieropoios* got the same from Akamantis (*IG* ii² 1165–6).

The money lavished on ephebic officials may have come in part from the Oropian territory granted to the tribes, though it probably also came from the ephebes' families and, in the case of subordinate officials, from sophronistai, who will have been wealthy men.⁹⁶ This was a new expense for the tribes, and one which they seem to have embraced with enthusiasm (Humphreys 1985*a*). In other cases crowns may represent the money saved by energetic management of tribal property and/or generous contributions from the honorand's own pocket. The money thus converted into gold was not totally lost to the tribe, since crowns would be dedicated in its sanctuary, and could eventually be melted down and re-used, certainly to make ceremonial vessels and perhaps even to pay for sacrifices.⁹⁷

So far, Kekropis' vote to set up an *eikôn* and stele of an unknown honorand in Kekrops' shrine (*SEG* 2. 8) is unique. The honorand, if not a foreigner, was perhaps a member of the tribe who had special influence at one of the courts of Alexander's successors.

OFFICIALS

The varied picture of tribal officials, other than the epimeletai and those responsible for the ephebes, presented by honorary decrees may well represent variation in practice, even though the evidence is scanty. A *tamias*, treasurer, is attested for Aigeis, and perhaps for Leontis and Kekropis; it is not entirely clear whether every tribe's councillors had to have a *tamias* while in prytany or, if so, whether he also acted as *tamias* for the tribe for the whole year.⁹⁸ The provision in 338

⁹⁵ *IG* ii² 1158, *SEG* 34. 101, *IG* ii² 1152. 50 dr. would buy a large pig (*hus*).

⁹⁶ The sophronistes of Kekropis in 334/3/2 was a parasite of Athena Pallenis: *IG* ii² 1156, Reinmuth 1971, no. 2, R/O no. 89.

⁹⁷ If tribes had other surplus income presumably it would be lent out at interest.

⁹⁸ Aigeis: *IG* ii³ 4. 76; *ibid.* 36. [*Ta*]mias in Traill 1978*b* no. 5, *c.*333, Leontis; but in Reinmuth 1971 no. 15 the tribe's epimeletai are to pay for the inscription. *Tamias* is restored in *IG* ii² 1158, Kekropis; the

that each tribe was to elect a *tamias* for its work on the walls (Aischines 3. 27) may suggest that the functions of the prytany-*tamias* were by that date limited to Council business, which included paying for sacrifices. *Hieropoioi* may also have been appointed for the prytany period rather than the whole year, as in Aigeis in 341/0, when the hieropoioi for the Eleusinian Mysteries were all drawn from the tribe's councillors and included the prytany-treasurer. The *syllogeis tou dêmon* also acted as hieropoioi.⁹⁹ Kekropis may have had a herald (*IG* ii² 1145); a secretary (*grammateus*) is restored for Akamantis in *SEG* 23. 78 B (330s) and for Kekropis in *SEG* 2. 8.

Tribes were also from time to time required to elect small colleges to undertake the organization of public works and other functions. An interesting early example is the provision of *IG* i³ 3 (ch. 22 n. 95) that a commission of thirty men, three per tribe, is to be elected from those present at the festival of Herakles at Marathon to supervise the proceedings, which probably included competitions. The festival was instituted to commemorate the victory at Marathon (the cult no doubt earlier), and tribal representation may have been rather uneven, Aigeis, Pandionis, Leontis, Hippothontis, Aiantis, and Antiochis being widely represented by residents of near-by demes, while representatives of the other four tribes perhaps came mainly from the horse-owning classes.

Aischines, arguing that Demosthenes' position in 338 as *teichopoios* for his tribe was an elected office subject to the usual procedures of accounting (*euthynai*, 3. 27–30), tells us incidentally that tribes had earlier been required to provide commissions to build walls, dig ditches, and construct triremes; the work was sometimes divided up by trittys. While the city presumably provided some funding for such enterprises, they undoubtedly had a liturgic component; Demosthenes, indeed, had donated 10,000 drachmas as *teichopoios* (*APF* 3597 XXII M). Work units in the building trades were usually small, and Athens did not have a large unskilled labour force waiting to be hired. To use the tribes as the organizational framework for such enterprises cast a glow of patriotic competition over them, and encouraged rich men to use their resources and personal connections in mobilizing labour and draught animals, while poorer members of the tribe would be encouraged to work by bonuses and a general atmosphere of festivity.¹⁰⁰

Tribes had also appointed the *dikastai kata dêmons*, a board of three judges per tribe, who travelled around Attika hearing minor cases, perhaps from 453/2

tribe of *IG* ii² 1168 has a *tamias* in the 3rd c. The position of prytany-*tamias* became more important, and more liturgic, in the Hellenistic period.

⁹⁹ *IG* ii² 1257; 1496. 82–3, 113–14; ii³ 4. 72. Akamantis honours a single *hieropoios* in *IG* ii² 1166.

¹⁰⁰ See Burford 1965 on the problems of transporting building materials. This use of the tribes casts a revealing light on the Athenian economy. It goes back at least to 394/2 (*IG* ii² 1658–61); perhaps to Themistokles?

to 403;¹⁰¹ in 411/10 they were required to appoint *katalogeis* to register the Five Thousand to whom citizenship was to be restricted under the oligarchic government of the Four Hundred (above, n. 44); at least in the fourth century each tribe every year appointed three *syllogeis* to supervise Assembly meetings. They could also be charged with the duty of punishing public slaves, and presumably were expected to help keep order during Assembly meetings. They also disbursed payment for attendance, and were presumably expected to see that non-citizens did not infiltrate Assembly meetings, although Aristophanes' *Congresswomen* suggests that controls were not always very strict. From time to time the city honoured the whole board; tribes also honoured their own *syllogeis*, who were apparently chosen without reference to *trittys*.¹⁰²

Tribal honours for *sophronistai* and *ephebic* officers have already been noted. The tribe's *sophronistes* was elected by the city Assembly from a panel of three candidates selected by the fathers of each tribe's *ephebes* (*A.P.* 42. 2), and its *ephebic* *taxiarch* and *lochagoi* were probably appointed by him from among the *ephebes* (ch. 16 n. 52). It is rather more surprising to find tribes honouring their own *thesmothetai*, a term by now probably used for the whole board of nine archons and a secretary (P. J. Rhodes 1981*a* 706, 715). There is perhaps a somewhat defiant tone in the decree of Hippothontis, c.350, honouring Metagenes son of Eukleides of Eroiadai for voting justly and without bribery that his tribe should win at the Thargelia; perhaps the vote was close and there had been some complaints.¹⁰³ A little earlier, Pandionis had crowned a *thesmothetes*, [Kalli?] as son of Lykophron of Kydathenaion, for not taking bribes while in office, perhaps in similar circumstances. Aiantis in 327/6 honoured Teleskopos of Rhamnous for his conscientiousness as *thesmothetes*, in allocating offices and selecting jury panels;

¹⁰¹ It has been assumed that one took responsibility for each *trittys*, but they may have acted as a group of three. The first *dikastai kata dêmons* were supposedly appointed under the tyranny, and it is possible that they continued to function during the period 507–453, having their terms of reference revised in the latter year. They may have ceased to travel during the Peloponnesian War (ch. 22 n. 15).

¹⁰² *IG* ii³ 4. 76 (the *syllogeis* are all councillors); M. H. Hansen 1987*a*, 88–9. We do not know when the *syllogeis* were first introduced; they probably functioned at least for a time as assistants to the six *lexi-archoi* (ch. 22 n. 54). There is no strong reason to restore *synl[ogean]* in *IG* i³ 135 (440–415), especially since the preceding *-tos* may be the name of the proposer of the main decree. Schwenk 1985, no. 18 argues against the view that *IG* ii³ 327 honours *syllogeis* (ch. 31 n. 62). On *syllogeis* as *hieropoioi* see P. J. Rhodes 1972, 129–30; they may have been responsible, among other duties, for obtaining the piglets used for sacrifice before Assembly meetings. It is conceivable that in the 5th c. they were public slaves, their status rising with the introduction of jury pay. Dedication by *syllogeis* to Meter Theon in 324/3, *IG* ii² 1257.

¹⁰³ *IEleus* 67; cf. P. Wilson 2007*b*, 159. The proposer, Polynikos son of Phokiades of Oion (Dekeleikon), probably a descendant of Phokiades of Oion, treasurer of sacred moneys in 425/4, should be the father of Phokiades son of Polynikos, councillor of Hippothontis in 335/4, *Agora* XV 43. 186–7; this section of that list should therefore belong to the inland *trittys* of Hippothontis, and Thrasykles son of Thrasyllus will be a member of the deme Dekeleieis (*APF* 7341; ch. 30 n. 50); the heading [*Dekeleieis*] should be restored in line 177.

the decree was proposed by a well-known figure, Demokrates son of Demokles of Aphidnai, an old man by this time, who occupied one of the two seats reserved for the families of Harmodios and Aristogeiton at the archon's table, and was thus peculiarly well placed to compare thesmothetai.¹⁰⁴ Antikrates son of Lysanias of Probalinthos was crowned by the Council, the demos, and his tribe (Pandionis) in 329/8, and another thesmothetes was honoured by Leontis or Aiantis c.325.¹⁰⁵

PROSOPOGRAPHY

Tribes, then, though they did not lead as full and vigorous a communal life as demes or even perhaps phratries, developed a perceptible *esprit de corps* (cf. Daverio Rocchi 1978). Some prosopographical sketches may provide a clearer idea of the stratum of Athenian society that kept this feeling alive by its generosity in tribal liturgies and conscientiousness in office. While conspicuous performance of tribal duties served for some ambitious men as a way of improving their public image when in difficulties, or as an entry to city politics, it also allowed rich quietists (L. B. Carter 1986; e.g. *APF* 6067, Xenokles of Sphettos) to give the impression of participating in democracy; at a less illustrious level tribal identity provided timid councillors with a sense of solidarity in performing their duties.¹⁰⁶

Those who had political ambitions or careers at city level probably concentrated their attention on the showy performance of tribal liturgies. Commemoration of choregic victories began early: a red-figure sherd of c.480–50 represents a victory monument with the inscription 'Akamantis tribe won' (BArch 212623). Choregoi paid singers while they rehearsed—the speaker of Antiphon 6 had adapted part of his own house for use as a rehearsal room—and presumably had to pay poets and flautists; they might have expensive costumes made, as Demosthenes did in 349/8 (21. 156). The speaker of Lysias 21 spent 5000 drachmas on a men's

¹⁰⁴ Schwenk 1985, no. 61 = *Agora* XVI 86; *APF* 12267 IV; ch. 19 n. 198.

¹⁰⁵ *IG* ii³ 4. 84 Antikrates; *Hesperia* 1946, 189 no. 35. Leontis provides the more promising identifications: he may be Timokrates son of Tele~~s~~onos of Halimous, councillor in 335/4, or Timokrates II son of Timokrates I of Leukonoion, *APF* 2092. Dow 1976 suggested that *SEG* 23. 78 A was a decree of Akamantis for an archon and his *paredroi*, but at present we have no other evidence for tribes honouring archons so early (361/0). *IG* ii² 1163, a decree of Hippothontis of 284/3 (n. 77), honours a thesmothetes who is also serving as priest of Asklepios; c.330 the tribe had honoured the historian Phanodemos (Bardane and Matthaïou 2013).

¹⁰⁶ Cf. Dow 1976; on the class position of councillors see M. H. Hansen 1985*b*. On the sense of solidarity developed among members of colleges drawn from all 10 tribes see Johnstone 2011. N. F. Jones 1999, 174–91, discusses prosopography of tribal officials, decree proposers, and honorands. Tribal affairs may have generated hostility as well as solidarity: for curse tablets possibly provoked by intratribal disputes see chs. 29 n. 135, 30 n. 52. On monuments commemorating victories by pyrrhichistai, another tribal event, see Ceccarelli 1998; ch. 27 n. 27; Appendix 3.

chorus for the Dionysia, 3000 on a tragedy, 2000 on a men's chorus for the Thargelia, 1600 on a comedy, 1500 on a boys' chorus, 1200 as gymnasiarch for the Prometheia (*APF* D 7). Costs must have varied considerably, and the order of expense in this list may not be representative. Victories with boys' choruses seem to have been commemorated more often than victories with adult choruses, perhaps because the choregoi were often older (at least 40) and the whole spectacle more attractive.¹⁰⁷

There may well have been historical as well as biographical fluctuations in such expenditure. When the city was at peace many rich men were free from the obligation of the trierarchy, and poor men were not earning salaries as rowers. By generous payments to his chorus or torch-race team a rich man could increase the cash income of some families in his tribe and escape some of the unpopularity his class earned in such circumstances. The comments on payments of the demos for singing and running made by the author of the *Athenian Constitution* attributed to Xenophon recognize this fact.¹⁰⁸ Close dating of choregoi in the fifth century is scarcely ever possible, but the surviving monuments cast some light on their background and possible motives.

Aristokrates son of Skellias won a victory for Kekropis (and Erechtheis) at the Thargelia c. 440–430. He was to serve as general in 421, and joined the Four Hundred in 411; he nonetheless held office after democracy was restored, being one of the generals executed after the battle of Arginoussai.¹⁰⁹

Pythodoros son of Epizelos of Halai Araphenides was appointed choregos in 415 for the Dionysia of 415/4. He had served as one of the peace commissioners in 421, and as treasurer of Athena in 418/7. His victory at the Dionysia may have preceded his election as general for 414/3.¹¹⁰

Kallias son of Telokles, Andokides' brother-in-law (ZH; *APF* 7840) won a choregic victory for Pandionis, probably in the last quarter of the fifth century. He may have been trying to re-ingratiate himself after being accused of involvement in the mutilation of the Herms (ch. 13 n. 40, Table 13.2).

¹⁰⁷ Koumanoudes 1970*b*; add *IG* ii³ 4. 494, a boys' victory for Pandionis and Akamantis in 344/3 (*APF* 3068). However, men's victory tripods were taller (Amandry 1976). On experiences and motives of choregoi cf. P. Wilson 2000, 87–95.

¹⁰⁸ This may be an argument for attributing the text to a period of peace. Note that Alkibiades' expenditure on horseracing in the period 421–416 came at a sensitive period, when he might well be criticized for not spending his money in a more public-spirited fashion (*APF* 600). Note also Edmonson 1982 on *SEG* 32. 329.

¹⁰⁹ *IG* i³ 964, *SEG* 61. 71; *APF* 1904; on the date of the choregia see also R. Thomas 1989, 133 n. 115.

¹¹⁰ See *AO*, s.v. 414/3; it is not entirely certain that Pythodoros had been formally elected general for this year, in which Aigeis was also represented by Nikias. Choregoi could not count on the elections taking place after the Dionysia, but they could in any case demonstrate their zeal before elections in rehearsing and ordering costumes. The choregic victory ascribed to a homonymous grandson of Aristeides of Alopeke is much more dubious (*APF* 1695; *BE* 1955, 68 on *SEG* 14. 26); ch. 32 n. 6.

Pandionis decided, on the occasion of the second victory by Nikias son of Epigenes of Kydathenaion as choregos, perhaps in the 380s, to erect a monument commemorating all the victories won by the tribe since 403, and to add further names to it when the tribe was victorious in future.¹¹¹ The period was one in which many rich Athenians had cause to feel uneasy; between 403 and 394 there was no fleet, and the demos was complaining of poverty while the rich recovered and restored their country estates; in addition, many of them were suspected of involvement, or at least sympathy, with the oligarchic regimes of 411/10 and 404/3. During these years the victorious choregoi of Pandionis included Andokides, who had been attacked in the courts in 400 for his involvement in the affair of the mutilation of the Herms and parody of the Mysteries (*APF* 828 VI), and Philomelos II son of Philippides I of Paiania, whose father had associated with sophists (*APF* 14670).¹¹²

Association with extreme democracy could also be an embarrassment; another of the choregoi of these years was Kleomedon of Kydathenaion, son of the demagogue Kleon, whose position cannot have been made easier by the circulation of Thucydides' history, in which his father was singled out as typical of the demagogues whose greedy pursuit of personal gain and power had caused Athens' defeat. Eurippides of Myrrhinous (*APF* 5949) may have had to serve because his decree of 393 proposing a heavy tax to finance the ships acquired by Konon made him unpopular with his own class.¹¹³

Similar motives can be identified in other tribes at the same period. Kritoboulos, son of Sokrates' friend Kriton of Alopeke, perhaps won a victory at the Dionysia for Antiochis (*IG* ii³ 4. 448, *APF* 8801, 8823). The speaker of Lysias 21, whose choregic expenditure was noted above, seems to have had to buy himself out of accusations of association with oligarchs both in the period after the fall of the

¹¹¹ *IG* ii² 1138–9 + *Hesp.* 1953, 177 no. 1; the latest dateable addition is the name of Antisthenes son of Antiphates of Kytherros, victorious at the Thargelia of 360/59 (Koumanoudes 1970b no. 4 = *IG* ii³ 4. 485). *Hesp.* 1942, 341–3 no. 1, is the base of this or of another large monument erected by Pandionis c.400.

¹¹² He won another victory in 366/5 or a few years earlier. The son of Eryximachos of Kydathenaion, whose victory (for boys) probably belongs in the years 410–404 (*IG* i³ 966; *APF* 11907 C), may be related to the Eryximachos who was accused of 'staying in the city' with the oligarchs in 404/3 (*PRyl* iii 489; ch. 14 n. 39). Cf. perhaps Lys. F 25b, 26 Carey 2007. On the expenditure and motives of choregoi see P. Wilson 2000, 87–95.

¹¹³ Another victorious choregos of Pandionis in this period was Demon III son of Demomeles of Paiania (*APF* 3737), probably a cousin (FBS) of Demosthenes' uncle (FB) Demon I son of Demoteles, priest of Pandion in 386/5 (*APF* doubts this relationship, but in any case an Athenian would tend to conclude from the names that the two men were related, and awareness of this is likely to have influenced their behaviour). Demon III cannot have felt closely affected by the marriage of Demon I's son to a daughter of Gylon of Kerameis (n. 92), but there may have been some competition between the two men for popularity in the tribe. Demon III's son Demochares may have been elected hipparch in some year between 375 and 369 (Bugh 1988, 226 no. 11).

Four Hundred in 410 and again after 403. He served five times as choregos in the years 411/10–409/8, acted as trierarch continuously from 411 to 405, and performed a gymnasiarchy and three more choregiai in 405/4–403/2, in addition to other liturgies.¹¹⁴

A well-timed and conspicuous choregia may well have played a role in other political strategies. Demosthenes, volunteering to serve as choregos for Pandionis at an assembly held probably in autumn 349/8,¹¹⁵ was already involved in the struggle to persuade Athens to send adequate forces to Olynthos; the choregia allowed him to return to the city in spring 348 from service in Euboia, and this too may have entered into his calculations. Chabrias, who perhaps won his victory as choregos in 359/8, had not been elected general for that year, and may have been trying to win back the favour of the electorate after his lack of success against Kersobleptes.¹¹⁶ Similarly, when Chares won a victory in boys' dithyramb at the Thargelia in 344/3, he may not have been general; he was elected again for 343/2.¹¹⁷ The speaker of Antiphon 6 was elected to the Council in the year after his (second) choregia; his energetic prosecution of officials for corruption shows that he had political ambitions.

Choregoi may also at times have been prompted by strategic demands of a more private nature. If Aisios son of Mnesiboulos of Sphettos, who won a victory as choregos at the Thargelia of 365/4, was the brother of Demosthenes' guardian Aphobos (*APF* 3597 VI), it may well be relevant that Demosthenes' suit against his guardian had been tried in the previous year. Apollodoros son of Pasion of Acharnai won a victory for Oineis in boys' dithyramb at the Dionysia

¹¹⁴ Trierarch for the boat-race at Sounion 402/1, *archetheōros*, expenses for (presumably) his daughter's service as *arrhēphoros*. *APF* D 7.

¹¹⁵ Dem. 21. 156. *A.P.* 56. 2–3 starts with the beginning of the archon's year, his proclamation of the security of property (ch. 1 n. 44) and his appointment of choregoi for tragedy. The account then moves to further duties concerned with festivals: hearing *antidosis* cases and excuses arising from the assignment of tribal liturgies, organization of processions, etc. Some time must be allowed for private negotiations (Gabrielsen 1987) and for processing cases in court before the Assembly meeting at which flautists were allocated to tribal choregoi.

¹¹⁶ D. M. Lewis 1955, 24 suggests that the nomination was punitive, but I suspect he arranged it, especially since he had *ateleia*. There is, however, some circularity in the argument, since the date of 359/8 is based on the assumption that Chabrias had to be in Athens to serve as choregos and therefore must have done so in a year when he was not general. This seems to be an unsafe assumption; Demosthenes' return from Euboia in 349/8 for the Dionysia provoked a charge of *lipotaxia* (desertion), and though the case did not come to court and Demosthenes probably stood on solid ground legally, his return was evidently morally questionable. (The prosecutor, identified as Euktemon son of Charias of Lousia, was *naopaios* at Delphi in the period 346–337, *CID* II 119, and was hardly as corrupt a creature as Demosthenes makes out: MacDowell 1990 on Dem. 21. 103.) We know that a choregos could delegate the supervision of rehearsals (Antiphon 6), and that trierarchs did not always serve in person (ch. 14, n. 39, ch. 5 n. 47).

¹¹⁷ Chares is attested as general in 347/6 but not 346/5, 345/4, or 344/3. This, however, is merely an argument from silence.

in 352/1, commemorated by *IG ii*³ 4. 445; the lease of the family's shield-factory and bank probably expired in 352, and although Apollodoros had no quarrel with the lessees he may already have been planning to sue his stepfather Phormion (the case came to court *c.*350).¹¹⁸

Xenophon in the *Memorabilia* (3. 4) portrays a disgruntled taxiarch, Nikomachides, complaining that despite his military experience he has been defeated in the election for the post of general by Antisthenes, a rich choregos who has never even served on campaign as a hoplite. The two names are aptly chosen: Nikomachides may have been victorious in battle, but Antisthenes has an alternate source of strength. It would be unwise to try to identify them with real people;¹¹⁹ the story shows, however, that both military office at tribal level and service as choregos were considered useful preparation for an election campaign at the higher level.

Aristokrates son of Skellias of Trinemeia (*APF* 1904), whom we have already met as choregos, served as taxiarch under the oligarchs in 411/10.

Sons and younger brothers of well-known generals turn up in subordinate military offices. If the story of Kimon leading his contemporaries to the Akropolis to dedicate their bridles to Athena before the battle of Salamis is true, he may have been serving as phylarch.¹²⁰ Phylarchs may well have been allowed to hold office in their twenties, although the only example so far available is fictional: Moschion, in Menander's *Samia*, held office as phylarch when very young (l. 15). Menexenos I son of Dikaiarchos I of Kydathenaion already had five children when he died on campaign as phylarch in 429, so he was probably in his forties (*APF* 3773); Theophon, who died childless and adopted his niece (ZD) by will *c.*369, may have served as phylarch at a younger age (*APF* 2921 XI). A relief commemorating a victory of Leontis in the *anthippasia* competition shows a bearded phylarch leading a beardless team.¹²¹ Demosthenes son of Demainetos of Paiania set up a monument with a sculptured base in the middle of the fourth

¹¹⁸ *APF* 11672 VII, XI–XII; cf. Trevett 1992. Apollodoros may also have been working his way towards appointment as councillor, perhaps not so easy to achieve in a deme as large as Acharnai; he succeeded in gaining appointment for 349/8. I am aware that all these arguments are thin, and I do not wish to start a fashion for wild conjectural explanations of choregic victories. I use these examples to show the kind of motives that might have led rich men to invest the time, money, and effort needed to secure victory, rather than as biographical facts.

¹¹⁹ Xenophon may possibly also be making a joke at the expense of Antisthenes the Sokratic, who was perhaps an illegitimate son from a wealthy and liturgic family (Humphreys 1974, but the identification with *APF* 1194 is far-fetched).

¹²⁰ Plut. *Kim* 5. 2. 3; Humphreys 1999. He was probably too young to have been hipparch at this time.

¹²¹ Bugh 1988, fig. 7 with p. 60; the beard may however be a mark of status as much as age (cf. Tillios 2010, 91–4). Theophilos son of Evangelos of Hermos, phylarch or taxiarch in 373/2 (*AO*; ch. 27 n. 12), had a son born by *c.*366 (Evangelos Theophilou, councillor in ? 336/5); the son of Antisthenes I of Kytherros who served as phylarch in 349/8 is quite likely to have been born before 380 (*APF* 1194 misses him; add also *SEG* 34. 101). See also chs. 23 n. 75, 24 n. 62.

century commemorating victories with tribal teams in the anthippasia by his father, his brother Demeas IV, and himself. Demainetos may possibly be the Bouzyges who served as general in the Korinthian War; the monument was conspicuously placed near the cavalry commanders' headquarters in the NW Agora (Bugh 1988, Appendix C and fig. 6), and no doubt the sons hoped to follow in their father's footsteps (chs. 12 n. 91, 20 n. 88).

An interesting example of a family perhaps too heavily compromised by oligarchic associations to achieve office in the fourth century is provided by Lysias 20. Polystratos of Deiradiotai (*APF* 12076) was accused in 410/9 of subverting the democracy, and his sons mounted a defence based on his age (seventy or over), his past liturgies, their own military service, and the claim that he had served under compulsion as councillor and tribal *katalogeus* during the rule of the Four Hundred, and had interpreted his duties as *katalogeus* very liberally, enrolling 9000 rather than the prescribed 5000 citizens. His sons had served in both cavalry and infantry; this is just the kind of family from which we would expect phylarchs and taxiarchs to be appointed. However, one of the sons probably left Attika to join the Ten Thousand, while a grandson, Philopolis son of Philopolis—whose brother Polystratos may have died during the Korinthian War—perhaps turns up later in the fourth century as a proxenos and citizen of Olbia (Dubois 1996, 21, absent from *APF*). Despite their patriotic names and strong military tradition, these men apparently had no chance of a career in Attika.

One would imagine that the young man who had served successfully as phylarch often went on to hold the office of hipparch, and we find some members of famous families beginning their careers in this office. Kimon's son Lakedaimonios may have been elected at about the time of his father's return from ostracism in 451; he had to wait until 433/2, according to current information, before he was elected general (*APF* 8429 XIII A). Xenophon son of Euripides of Melite (*APF* 5951) rose more rapidly; he was Lakedaimonios' colleague as hipparch (*IG* i³ 511) but was already general by 441/0. His daughter, who married the rich father of the speaker of Lysias 19, was probably left heiress to a considerable fortune when he died in 430/29. Pamphilos of Keiriadai was hipparch in 395 and general in 389/8 (*APF* 9667). Philokles (of Eroiadai?) had served three or four times as hipparch and more than ten times as general by the time Deinarchos prosecuted him in 323.¹²²

Other young men with military ambitions preferred to rise through service as taxiarchs. Mantitheos son of Mantias of Thorikos was taxiarch in 349/8, when

¹²² See Worthington 1986; Humphreys 2009 on the arguments for dating *IOrop* 353 (Reinmuth no. 15) to 330/29/8. The honorand of *IG* ii² 379 had led his tribe to victory in the *anthippasia* before serving as general in command of mercenaries in 321/0 or 318/7.

he was just thirty;¹²³ his father had been general in 360/59, in the middle of the scandal about the claims to citizenship of his son Boiotos, and Mantitheos was re-opening the affair in 349/8 by suing Boiotos for using the name Mantitheos. Eukrates son of Strombichos of Euonymon served as taxiarch in 356/5; the family had a strong tradition of military command in the late fifth century and again in the 330s; Autokles son of Strombichides, general in 368/7 and 362/1, may have been a cousin.¹²⁴

Families that had recently acquired citizenship had good reason to ingratiate themselves with their tribe by benefactions and service. Apollodoros son of Pasion of Acharnai, already mentioned above, whose father had risen from slavery to citizenship, seems to have concentrated most of his energy and expenditure on trierarchies, but won a victory as boys' choregos at the Dionysia in 352/1 commemorated with a conventional monument (*IG* ii³ 4. 445). Pheidippos II, grandson (SS) of the salt-fish-merchant Chairephilos, who had been enfranchized perhaps in the early 320s, served as tribal epimeletes towards the end of the century.¹²⁵ His uncles (FB) had been the target of many jokes in comedy; he may have been trying to establish a more respectable image.¹²⁶

Demades and Chares, both of whom commemorated choregic victories, may have been the first members of their respective families to reach political eminence (*APF* 3263, 15292).

Other families, however, may have enjoyed prominence at tribal level without making any serious attempt to rise higher. Antisthenes I son of Antiphates of Kytherros won a victory for Pandionis and Akamantis as choregos for boys' dithyramb at the Thargelia in 360/59 and served as priest of Pandion about the

¹²³ Dem. 39. 27; Humphreys 1989. A young man could also start to make a reputation by serving as trierarch on an especially well-equipped ship, which he hoped would be chosen as flagship (Dem. 51; ch. 16 n. 59), or in the elected post of tamias of the *Paralos* (*APF* 3773).

¹²⁴ FBS; *APF* 4386, cf. ch. 16 n. 31, Table 16.1. Nikias' brother Eukrates may well have served as taxiarch before succeeding Nikias as general in 412/11 (he had also won a choregic victory before 415; *APF* 10808 B).

¹²⁵ *IG* ii² 1152; Traill 1986, 87–8; *APF* 15187. I doubt the existence of the elder brother of Pheidippos II, Chairephilos II, postulated by *APF*; there is no reason why Chairephilos I should not have transferred sufficient property to his sons by the late 320s for them to serve as trierarchs (ch. 5 n. 47), especially if he had also equipped them to serve as hippeis, and it is unlikely that an heir with an immature brother would free a slave in his own name alone (*SEG* 18. 36 A 510–13). It is also likely enough that Chairephilos I's sons would not perpetuate their father's name, being tired of the jokes of comic poets about their origins—although they seem to have been insensitive (as were many other 4th c. Athenians) to the comic associations of the name Pheidippos. It should be noted that on the accepted chronology Pheidon II would have married before his father received citizenship, whereas his brothers clearly continued to lead the life of young bachelors about town after the grant. Comic references in *APF*, *loc cit.*; but the suggestion that Mnesimachos' hipparch Pheidon (F 4 K, 4 *PCG*) was one of Chairephilos' sons was rash: cf. Bugh 1988, 277 no. 40, Pheidon of Thria.

¹²⁶ Pamphilos, however, had perhaps served as councillor, and *proedros*, in 327/6 (*IG* ii³ 362; Lambert 2004b no. 22).

middle of the century. He owned land in the mining area in the 340s and is recorded as trierarch in the early 330s, by which time he was over sixty; he had died by 326/5. His sons Antiphanes and Antisthenes II paid off his trierarchic debts in that year, and jointly manumitted a slave, probably soon afterwards. Antiphanes had served as *hieropoios* for Bendis in 337/6; the office did not officially require personal expenditure, but we are already at the beginning of the Lykourgan age, and the feast was a showy one.¹²⁷ He may well have made some financial contribution. Antisthenes II was elected tribal epimeletes at some time in the 330s or 320s.¹²⁸

Saurias son of Pythogenes of Lamptrai had been chosen as arbitrator by Stephanos of Eroiadai in his dispute with Phrynion of Paiania (*APF* 3737) over the courtesan Neaira in the early 370s, when he was presumably a wealthy young man with a somewhat better reputation than his friends. He was honoured by Erechtheis at some time before the middle of the century, with an olive wreath and freedom from tribal liturgies for two years, for his victory as choregos and other services. The short period of *ateleia* suggests both that this was a difficult period (perhaps the time of the Social War in the 350s) and that Saurias was rich. He may have held minor office as epimeletes on Lemnos, but otherwise appears again in the sources only when persuaded to testify about the arbitration for Apollodoros of Acharnai, in the 340s ([Demosthenes] 59. 45, 47; *APF* 12612).

A later example of a rich family that had little ambition beyond the tribal level can be found in Dekeleia. Thrasykles I son of Thrasylos served as councillor in 335/4,¹²⁹ and his brother Thrasylos II was victorious as choregos in men's dithyramb at the Dionysia of 320/19. Thrasylos II was involved in the cult of Ploutos in the 320s, and his son Thrasykles II was elected phylarch for 282/1, serving later as agonothetes, the family's first major post (*APF* 7341).

A clearer view of this stratum of local notables will emerge through discussion of the demes.¹³⁰ First, however, we have to consider the role of the Kleisthenic trittys.

¹²⁷ Procession from the city to Piraeus, large sacrifice, torch-race on horseback: A. Mommsen 1898, 488–90; R. R. Simms 1988; R. Parker 1996, 170–5. The suggestion of O. Hansen 1985 that *IG* ii³ 449 concerns the Bendideia rests on no solid grounds.

¹²⁸ *APF* 1194 + Koumanoudes 1970*b* no. 4 + *SEG* 34. 101 = *IG* ii³ 4. 485.

¹²⁹ *Agora* XV 43. 184–5; cf. n. 103.

¹³⁰ I note here some revisions and additions to choregic entries in *APF* (see also P. Wilson 2000; Agelidis 2009):

IEleus. 66 = *IG* ii³ 4. 504, choregos for comedy, Athenodoros Go— (Hippothontis?).

APF 10798 + 12580 (cf. p. 599), *IG* ii³ 4. 487: Diodoros son of Satyros of Eroiadai won a choregic victory at the Thargelia in 355/4, Koumanoudes 1970*a*; on the service of his BS Satyros son of Nikias as councillor in 303/2 (*Agora* XV 62. 262) see Traill 1975*b*.

10814: see Table 29.4. There is no reason why both Euktaios II and Nikias I should not have been born c.380.

THE TRITTYES

There is not much evidence of activity at this level. Though epimeletai may have been chosen with reference to trittys at least in some tribes, we have at present no evidence that trittyes elected their own officials, or even that they held assemblies.¹³¹

Plato says that a man who failed to gain election as general or taxiarch would at least seek a position as trittyarch (*Republic* 475a); Sokrates at this point is apparently giving an example from Athenian life. But we never hear of trittyarchs as military officials in any other source, and they are not mentioned in the list of elected military posts in *A.P.* 61. If such an office existed it must have been short-lived, perhaps belonging to the period of the Korinthian wars in the early fourth century, when large numbers of Athenians were fighting on land.¹³²

Markers bearing the names of tribes and trittyes have been found in Peiraioi, in the Agora, and on or near the Pnyx. All of them date from the fifth century. They take two forms: some name a single trittys, others mark a boundary between two trittyes. The Pnyx markers are of the single trittys type. Since the 'single' trittys and the 'boundary' types co-exist, the difference should correspond to some difference in function, which tells against the view that the Pnyx was divided into seating areas reserved for specific tribes and trittyes.¹³³ Trittys-markers as mustering

7322: Thrasykles of Eleusis, trierarch before 325/4, is probably the son of one of the brothers Thrasylllos and Megakleides, who appear together as traders, in the early 360s, in [Dem.] 52. 20; his B or FBS Megakleides son of Megakleides won as choregos at the Thargelia of 349/8, *IG* ii³ 4. 493. Cf. ch. 30 at n. 106.

14997, *IG* ii³ 4. 469: Phrynaios son of Phrynichos of Hybadai won at the Thargelia of 352/1 with a boys' choir (see ch. 5 n. 59 on his age at his son's birth).

Add Phormisios son of Menekleides of Thymaitadai, victor with a men's chorus at the Thargelia of 380/79 for Hippothontis and Aiantis (Matthaiou 1991a).

¹³¹ Separate assemblies are not implied in the reference in Aisch. 3. 30 to election of trittys officials for construction projects.

¹³² The recent tendency to project the trittyarchs back to the pre-Kleisthenic army (Wheeler 1991, 135; cf. Lambert 1986, 111) is not an appropriate solution to the problem presented by *Rep.* 475a; nor can we postulate continuity from Plato's trittyarchs to those of the late 4th c., in view of the silence of *A.P.* On the lack of evidence for military division by trittys in the 5th c. see Sekunda 1992; above, at n. 36.

¹³³ Stanton and Bicknell 1987; see M. H. Hansen 1983a chs 4, 5; 1989, chs 5–7; Stanton 1994, 220–1. *IG* i³ 1117–31 does not seem to consider the use of 3- or 4-bar sigma for dating significant. Concordance with Traill (T) 1986: T1 = i³ 1120, T2 = 1117, T3 = 1118, T4 = 1119, T5 = 1126, T6 = 1122, T7 = 1121, T8 = 1123, T9 = 1128, T10 = 1125, T11 = 1124, T12 = 1127, T13 = 1131, T14 = 1130, T15 = 1129. On T14 *IG* i³ 1130 reads *Te*[- c. 5 - o]η; Traill 1986 says *Te*[*trakomo*]η is impossible. Epakreis must be a trittys of a tribe that set up its records on the Akropolis, probably Aigeis. The coastal trittys of Hippothontis is called *Peiraieis* on *IG* i³ 1129 (T15), but this is not the only example of variation in trittys names: the city trittys of Akamantis is *Kerameis* on *IG* i³ 1118 (T3), and *Cholargeis* on i³ 1131 (T13), and either the city (i³) or inland (T) trittys of Oineis is *Pedieis* on i³ 1123 and 1128 (T8–9), whereas the city trittys is *Lakiadai* on i³ 1120 (T1), and one would expect the inland trittys to be called Acharneis. (Pedieus is attested as a personal name in the 6th–5th c., but not later; see however ch. 25

points for members of the Assembly to collect the symbola that would entitle them to pay for attendance would not be improbable for the period after c.403, when pay was introduced, but this is too late for the surviving markers, and it is unlikely that symbola were distributed on the Pnyx.¹³⁴

‘Boundary’ markers present a somewhat clearer picture, of spaces both in Peiraios and in the Agora area marked off into stretches reserved for specific trittyes. Demosthenes may have had existing models in mind when he suggested setting up such markers by the ship sheds, in 354 (14. 22–3).¹³⁵

IG i³ 255 was once taken to be the sacrificial calendar of a trittys, but the dative *trittui* in A 9 (recipient of a payment? of sacrificial meat?) implies that it is not (cf. R. Parker 1996, 103 n. 4). Lambert 2000*b* suggests the Tetrapolis as issuing body; Rhamnous, which certainly had an *archégetés* (B 8; read [*ho*]tan rather than [*glôt*]tan), is another possibility. Since the stone was found in Chalkis it perhaps travelled (as a fragment, in ballast?) from one of the harbours in eastern Attika (Mattingly 1990 ascribes it to the same cutter as *IG i³ 256 bis*, Thorikos, and 258, Plotheia). Perhaps the stone’s most useful contribution is to confirm that Attic had no collective term (such as *phyletai*, *démotai*) for the members of a trittys.

Our only other evidence for trittyes concerns the trittys Epakreis, probably the inland trittys of Aigeis. *IG ii² 2490*, a text of the first half of the fourth century containing regulations for publication of a list, probably of tribal property, preserves the heading ‘*Epakreón trittuos*’. This however does not imply that the trittys itself owned land; it is more likely that tribal lands were listed by trittys. The officials mentioned in the text, who have something to do with the collection of money, are almost certainly [*démar*]choi and not [*trittuar*]choi.¹³⁶

n. 62.) Evidently trittyes had not been officially named; changes in the demographic importance of deme centres (Peiraios) or in the reputation of deme members (Perikles of Cholargos, Kimon of Lakiadai) will have affected conceptions of the ‘leading’ deme in each trittys. Ismard 2011, 169–71 thinks these horoi indicate that trittyes were more important in the 5th c. than later; but they do not prove that the t. acted as a corporate group.

¹³⁴ M. H. Hansen 1989, ch. 5 suggests an area below the Pnyx temporarily fenced off on Assembly days for checking by the syllogeis (but if temporary, why stones?).

¹³⁵ Raubitschek’s suggestion of a connection with grain distribution (1956) still deserves serious consideration. His model of ten entrances through which members of the ten tribes entered both to receive grain rations and to cast their votes in ostracism, with further markers inside each entrance to divide trittys from trittys, needs modification: the text of the markers (‘Here trittys A ends and trittys B begins’) indicates that they divide up a stretch of ground: they are not gateways. But we do hear of grain or flour distributions associated with citizenship, *FGH 328 F 119*; *Ar. Knights* 855–7, *Congresswomen* 686; cf. [*Dem.*] 34. 37; ch. 22 n. 18, whereas we have no evidence of military musters in the Agora (hoplites assembled in the Lykeion: Jameson 1980) and would not expect trireme crews in the fifth century to assemble by tribes. That permanent markers to be used in such distributions should have been set up in market areas in the city and Piraeus does not seem improbable.

¹³⁶ The text is not stoichedon and the length of line is unknown. *Epidekata* are to be handed over; in Attic texts the term elsewhere denotes tithes of confiscated property, given to the gods (Andok. 1. 96,

We are left with a decree recording honours granted to the archon of the Apollonia (no doubt a liturgic position) by a deme and the Epakreis. It belongs to the second half of the fourth century, and was found at Mygdaleza.¹³⁷ The combination of this text and *IG* ii² 2490 might suggest that the deme should belong to Aigeis, in which case it would be Plotheia, whose contributions to the Epakreis in the fifth century are documented in *IG* i³ 258. However, the fact that Epakreis is attested as a trittys name does not prove that the Epakreis who celebrated the Apollonia were a trittys. They may have been a phratry, uniting villages that in the Kleisthenic scheme were assigned to several different tribes. We should remember that Ikarion had a Pythion as well as a cult of Dionysos (ch. 24 n. 20); we have a dedication of c.520 from Ikarion to Dionysos which also mentions Apollo.¹³⁸

Finally, for a short period from 301/0 to 295, Athens had officials called trittysarchs (Henry 1984, 63–8). They work in conjunction with the *exêtastês*, and their duties are financial. They produce funds for the publication of decrees, and it seems likely that they replaced or supplemented the *syllogeis tou dêmou*.¹³⁹ The exetastes also pays mercenary troops (*IG* ii² 1270. 3, 298/7), but the combination of this text with the reference to trittysarchs as military officers in *Republic* 475a does not warrant the common statement that the trittysarchs of this period had military functions. The character of Athenian government at this date is

Xen. *Hell.* 1. 7. 10, [Dem.] 43. 71, etc.). In *IG* xi 161 A 79 it is used of the final payment on a building contract, held back until the completed work has been approved. See also Jameson 1998 n. 20.

¹³⁷ *SEG* 32. 144 (cf. 36. 189). Mygdaleza has been identified as Hekale, Anakaia (Traill 1986, 137, putting the trittys Epakreis in Hippothontis), or possibly Plotheia (Whitehead 1986a, 386–7). *IG* i³ 258, a decree of the Plotheieis of c.420, has no provenance. If the Epakreis are a phratry, the case for assigning *SEG* 32. 144 to Plotheia is weak, and the tribal affiliation of demes becomes irrelevant. On Papazarkadas' suggestion (2007b) that they were a pre-Kleisthenic trittys see ch. 18 n. 52, 19 n. 16.

¹³⁸ *IG* i³ 1015 (*Hesp.* 1948, 142 no. 2). Epakria is named as one of the 12 towns in *Lex. Rhet.* Bekker 1814–21 259. 9 (Epakria, located near the Tetrapolis). It remains puzzling, especially on Traill's view of the trittys-divisions in Aigeis, that the name Epakreis should have been chosen for a trittys mostly located in the Mesogeia, on the south side of Mt Pentelikon. However, in Traill's prytany-trittyes, above at nn. 25–7, Ikarion is added to the city trittys while Diomeia is taken out of it and put with the coastal demes, which seems an improbable scheme and is not particularly strongly supported by Council lists (Traill 1986, 107, 55; *IG* ii³ 4. 76 has Ankyle with the coastal demes, while the deme-list *IG* ii² 2362, which lacks most of the inland trittys and all the coastal trittys, has Diomeia and not Ikarion with the city demes). We do not know the precise location of Phegaia and Myrrhinoutta, and it does not seem impossible that they were associated with Ikarion and Plotheia, in the tribe's conception of space, as well as with Araphen and Halai Araphenides. This would give a coastal trittys Epakreis (Plotheia, Ikarion, Myrrhinoutta, Phegaia, Araphen, Halai) with 16–18 councillors, an inland trittys producing 18–22 councillors (Ionidai, Kydantidai, Gargettos, Teithras, Erchia, Philaidai), and variable arrangements for making up equal council-trittyes (the arrangement of demes in *IG* ii³ 4. 75–6 and *Agora* XV 42, 43, and 492 does not to me suggest any regular pattern).

¹³⁹ Traill 1986 suggests that they replaced the tribal epimeletai, but their duties seem closer to those of the syllogeis; neither syllogeis nor epimeletai are so far attested for the 3rd c.

controversial;¹⁴⁰ a modification of arrangements in the Council by which each trittys of councillors has its own leader, responsible for its share of the funds allotted to Council and Assembly, does not seem impossible.

Trittyes, then should probably be left out of our picture of the groups and group identities that shaped the local loyalties of Athenians. They were categories which for the most part lacked any formal organization (Stanton 1994, 169–70, rightly points out that they were ignored in the reorganization of 307/6). Some tribes allocated demes to council-trittyes more regularly than others; there were no rules. Kleisthenes' scheme for weakening regional allegiances was so successful that at least by the fourth century (when many Athenians no longer lived in their demes), trittys affiliation was of little interest. Tribes, on the other hand, did inspire some loyalty, above all through the variety of competitive events that pitted teams or choirs from one tribe against the rest.

Kleisthenes' success in unifying Attika must in large part be ascribed to developments he could not have foreseen—empire and wars that gave every citizen an interest in Assembly business. But the vitality of the new tribes also stemmed from a factor usually neglected in discussions of his aims and motives, the grafting onto his rationalistic numerical scheme of traditions of athletic competition and aristocratic patronage. The author of the *Athenian Constitution* ascribed to Xenophon was well aware of this: the rich pay for choruses, the demos has its singing paid for. The text leaves it unclear whether the demos sings or merely provides the audience. Did the tribes function like the circus factions of Constantinople, or did they become a framework within which music and athletics, as well as political activity, became democratized? And if so, was this an intentional or unintentional consequence of Kleisthenes' reforms?

The increasing incorporation of athletic and musical competitions into religious festivals was a characteristic phenomenon of the sixth century; in Athens the foundation of the Great Panathenaia preceded the tyranny, but the tyrants had extended the model of festival competitions, and had probably introduced the first torch-races (ch. 18 n. 87). Presumably the teams were initially recruited from the upper-class boys who frequented the gymnasia. We have no evidence that any systematic attempt to democratize the search for athletic (and musical) talent was made before the reform of the ephebate in the Lykourgan period; the exceptional enthusiasm of tribes for their ephebes may support the view that there was a real change in the recruitment of torch-race teams at this time. The situation in musical competitions may have been somewhat different, since choirs were also used in dramatic performances, where they were trained by playwrights in a milieu developing in the direction of professionalization, and since the contexts in which informal musical activity took place were not as distinctively

¹⁴⁰ T. L. Shear 1978, 52–5; M. J. Osborne 1979.

bounded as the gymnasium.¹⁴¹ Although there was an increase in specialization in athletic competitions from the fifth century onwards, the line between amateur and professional came to be more sharply drawn in drama and music than in athletics. In any case, tribal teams and choirs in the first half of the fifth century may well have been drawn from elite families; the popularity of *kalos*-inscriptions on vases in this period may be related to the tribal competitions that allowed these boys to become pop-stars on view to the whole city.

Any attempt to understand Kleisthenes' motives must examine both the conceptions of demography, space, and population distribution current among leading Athenians in 507, and their conceptions of their own relations to the rest of the citizen body. We shall now turn to look at the second question in a more intimate context, that of the deme.

¹⁴¹ However, we should recognize that symposia provided a context for displays of both amateur and—at least by the second half of the 5th c.—professional talent in singing and dancing.

PART SIX

The Demes

The Demes: Introduction

The Attic demes have been the focus of considerable attention during the last half-century. Exploration of Attika and search for demes and roads, which entered a new phase in the 1960s with the work of Eugene Vanderpool and others at the American School in Athens, later developed into programmes of more intensive survey accompanied by excavation, in which the Deutsches Archäologisches Institut for a time played a leading role.¹ Discovery and excavation of farm sites has exploded the view, once argued by Robin Osborne, that scattered farms were unusual; peak sanctuaries have been explored, and a large number of new rock-cut inscriptions in upland and coastal areas have been discovered; areas that were still relatively free from modern development (Atene, the Koundoura valley, the Skourta plain) were surveyed in detail.² More work on towers and fortifications has led to more secure dating and distinctions between ancient and medieval or early modern constructions, and to a lively debate on the varied functions of towers.³ Some comparative data on settlement size and agricultural production from the Ottoman period have been analysed (Kiel 1987; Zarinebaf a. o. 2005); nevertheless, it remains a serious drawback that we do not yet have in-depth studies of settlement history, place-names, and patterns of exploration (including the re-use of building materials) from antiquity to modern times. The location of demes will remain very insecure until we have a better understanding of the movements of population and of stones, especially the practices of the builders of medieval churches and monasteries and of the early collectors of antiquities.⁴

Intensive exploration (and development) of the countryside has uncovered a crop of new deme inscriptions which allow us to ask more detailed questions,

¹ See annual reports by H.-R. Goette in *AA* 1991–2003; *AR*; Bintliff 1994*a*. The earlier work of the 1880s and 1890s remains essential, as will be seen from references to it in this chapter; *AGC* is still worth consulting for early discoveries. See also Lohmann 2010*b*.

² See works by R. G. Osborne, H. Lauter, H. Lohmann, M. Brunet, M. Langdon, M. H. and M. L. Z. Munn, cited in Bibliography. Important new discoveries by Langdon of rock-cut inscriptions are yet to be published; see Langdon 2015, n. 52. Survey in the Oropos area, Cosmopoulos 2001.

³ See Lock 1986; Schattner 1990; Brunet 1992; Lohmann 1993*b*; Langdon 1995; Lock and Sanders 1996; Seifried and Parkinson 2014 on towers in the Karystos area. Lohmann is preparing a study of towers.

⁴ For examples of diachronic studies see Eliot 1962; Hatzesotiriou 1973; Alcock 1993 for changes in the Roman period. See also Forbes 1995; Chang 1994 on post-classical patterns of land exploitation. Lock and Sanders 1996, which deals with other parts of Greece, shows that much remains to be done.

especially about the demes' religious activities and responsibilities.⁵ John Traill's analysis of records of Council membership (1975*a*, 1986) has raised new questions about the purpose of Kleisthenes' reforms and the organization of his trittyes (ch. 21 at nn. 25–7). Some of this new material was already digested in R. G. Osborne 1985*a* and Whitehead 1986*a*. Nevertheless, more remains to be said; in particular, the availability of an up-to-date prosopographical base for Attica in the form of the *Lexicon of Greek Proper Names*, vol. II (1994), usefully supplemented by R. Develin's list of office-holders to 321 (AO), has made work on deme prosopography much easier. As will be seen, this has implications for dating deme documents and understanding the internal dynamics of deme politics.⁶

Until recently the main trend in research on the demes, originating in the nineteenth century, was to emphasize discontinuity between the deme system and the groupings that preceded it. Maine (1861), Fustel de Coulanges (1864), and L. H. Morgan (1877), saw Kleisthenes' reform as instituting an epoch-making change from kinship to residence as the principle of social organization, which extended to grass-roots level the territorial conception on which (they assumed) the state was based. They thus regarded the demes as 'municipalities', microcosms of the state in which citizens became familiar with civic procedures and absorbed the civic values and norms of the public sphere.⁷ 'La vie municipale est une école de la vie publique, de la vie politique': this Napoleonic idea was Haussoullier's justification for studying deme organization (1884). A radical break is still assumed in David Lewis' seminal article (1963), which claims that Kleisthenes deliberately tried to weaken earlier links based on regional cult associations, and in a valuable article by Jochen Martin (1974), in which the creation of the deme system is seen as a means of breaking earlier ties of patronage.⁸

With the discovery of new documents, and new evidence on settlement patterns, it has become clear that a more processual approach is needed. The effects of Kleisthenes' reforms were influenced by events that he could not have foreseen: the Persian invasions, the growth of the Athenian empire, the Peloponnesian War, etc. As Christian Meier has emphasized, the period between 507 and 450

⁵ Baumer 2004 collects references to rural sanctuaries (cf. also Vikela 2011). It would be interesting to compare the activities of demes on Kos (IG xii 4. 91–119), but I cannot do this here.

⁶ J. Traill's *Persons of Ancient Athens* (1994–2012) shares with LGPN the disadvantage (probably inevitable) of taking a very conservative attitude towards the identification of individuals and family reconstruction. The prosopography in Whitehead 1986*a* is limited to persons mentioned in deme inscriptions; the prosopographies for individual demes compiled by Lohmann (1993*a*, Atene), Giannopoulou-Konsolákē (1990, Aixone), and Antoniou (1980, Philaidai) too often rely on outdated references. C. Clairmont's *Catalogue of Attic Tombstones* (CAT, 1993, with supplement 1995, has also been very useful, as have AEE, AEE², SEMA, and the reprinted *KvA* (*Karten von Attika*, c.1995; cf. Lohmann 2010*b*).

⁷ Cf. L. H. Morgan 1877, 270–6; Droysen 1847.

⁸ Cf. also Chr. Meier 1993, 192: creation of new networks.

was crucial for the development of Athenian political practice and ideology.⁹ Previous studies of the demes have been organized by topic and have devoted relatively little attention to change over time and to local variation. The present analysis, consequently, stresses change, process, and variability. This introductory chapter summarizes the main historical events that affected the demes during the period from 507 to c.300, the articulation of the demes with other corporate groups (the state, tribes, phratries, etc.), and the main factors influencing local variation. It is followed by a deme-by-deme analysis (organized by tribe and, as far as possible, tritty)¹⁰ which focuses on local history and peculiarities and on evidence for communal activity, disputes, the distribution of power, and the residence patterns of leading local families.

HISTORICAL EVENTS

As I have argued in ch. 21, Kleisthenes did not create the demes *ex nihilo*. We may have a graffito of a resident of Attika who identifies himself as Eroiades from the seventh century; Peisistratos may have introduced ‘deme judges’, *dikastai kata dêmous*, and the system of naukrariai was probably formalized during the sixth century; Hipparchos set up inscribed stones (Herms) marking half-way points between some of the more important rural settlements and the city, using place-names and not phratry names.¹¹ The factional disputes of c.594–548 had already been based on local ties; phratries and other religious associations were centred on local sanctuaries. I have also argued, however, that Kleisthenes offered the smaller settlements a choice: they could opt for independent status as demes, or their inhabitants could register in a larger settlement nearby; this produced the range in the size of demes that is one of the major elements in their variability. Presumably there was some threshold below which neighbours would have considered it ridiculous for a hamlet to claim deme status; but some demes may have contained as few as thirty adult male citizens.¹² It is not at all improbable that

⁹ Chr. Meier 1980, 1993; for a different view of the development of democratic ideology, Humphreys 1999. Cf also Humphreys 1988 on changing conceptions of law and legislation, 1993*a* on the public sphere.

¹⁰ My trittys designations do not always agree with those of Traill or Stanton (1994), as will be made clear in individual instances.

¹¹ Storey 2003 has an appendix on the meaning of *dêmos* in the 5th c. (cf. N. F. Jones 1999, 311–13 on Solon’s law on associations; ch. 1 n. 56) Eroiades, Mastrokostris 1983; cf. *IG* i³ 1023–4. For *dikastai kata dêmous* see n. 15.

¹² Humphreys 2008; below, at n. 65, on size. The absence of a list of communities that were to be recognized as demes might also explain variations in behaviour in border areas, or borderline cases: inhabitants of Salamis (if they considered themselves Athenian) registered in the mainland communities with which they had ties, inhabitants of Eleutherai remained outside the system, while inhabitants of small villages in northern Attika affiliated themselves with Aphidnai (or Boiotia?). Cf. ch. 20 n. 52; Camp 1991, 199–207.

some fission and fusion took place in the early decades of the system, and also some adjustment in Council 'quotas'—the number of councillors each deme was entitled to appoint each year. Lohmann has argued that the three hamlets of the deme Atene were not yet settled in 507, and it seems likely that some migrants in the early years after the reform, especially perhaps those moving to the silver-mining region and to Piraeus, changed their deme affiliation when they moved. Quota-adjustment and even deme status may well have been negotiated at the tribe rather than the state level; we shall return to this question below, in examining the articulation of demes with the state and with their tribes.¹³

During the period from 507 to c.450, then, some adjustment of Council quotas will have been needed; some small settlements may have decided that deme status was more of a burden than a privilege, while others may have insisted on asserting their independence after disputes with other communities in the same deme. However, on current evidence it seems that fission and fusion were often only partial, resulting in the division of some demes for some purposes into upper and lower sections, or in arrangements for collaboration, rather than in fully institutionalized changes in status.¹⁴

In 453/2 the Athenians decided to re-instate or re-organize the panel of thirty travelling judges, the *dikastai kata demous*, whose function was to travel round the countryside hearing small claim cases. This move was perhaps prompted by the effects of the institution of jury courts in the city in 461, which may have tempted too many disputants from outlying areas to try their luck in reviving old grievances or local feuds.¹⁵ Experience of Council service (and service as hoplites or rowers) will also by this date have given many rural demesmen an introduction to the procedures of the public sphere in the city. However, the *dikastai* are hardly likely to have had a major impact on deme life. The demes were more directly affected by Perikles' citizenship law of 451, which instructed them only to admit

¹³ On quota-adjustment note P. J. Rhodes 1976; n. 63; ch. 32 n. 90 on Atene; the area is not entirely devoid of 6th century material and Lohmann's view (1993*a*) has been criticized by Bintliff 1994*a*. Lohmann's suggestion (*op. cit.*) that Piraeus was not yet settled in 507 (cf. Amelung 1995; ch. 30 n. 4) is much more dubious, but an increase in deme membership as well as population during the early 5th century seems very likely. Surface survey at Myoupolis (ch. 30 n. 115) has not so far produced evidence of habitation before the 5th c. (Edmonson 1966, 31–3).

¹⁴ See split demes, especially Lamptraí (ch. 23 nn. 64–5), with ch. 21 n. 9, and on the partnership of Ionidai and Kydantidai (ch. 24 n. 92); ch. 30 n. 4 on Peiraios; n. 63 on changes when new tribes were introduced.

¹⁵ *A.P.* 26. 3. See Humphreys 1983*b*; I thought then that the public arbitrators, who also handled minor cases, were Kleisthenic, but I now think they must be later than the jury-courts; they may have been introduced in the early years of the Peloponnesian War. Whitehead (1986*a*, 262; cf. Scafuro 2004), on the basis of *IG* i³ 2, suggested that demarchs judged some cases in their demes, but I think this would only be institutionalized where the case arose from deme affairs (cf. Kienast 2005); in other disputes, I assume that those who did not wish to travel to Athens chose a local arbitrator. P. J. Rhodes (1981*a*, 331) thinks that one *dikastês* served in each trittys, but it is perhaps more likely that a commission of three was assigned to each tribe (cf. Whitehead 1986*a*, 262–3).

to membership boys who were of citizen parentage on both sides. Discussion of the effects of this law has focused mainly on well-known aristocratic families, the sons of whose marriage alliances with peers in other cities would henceforth be classed not merely as *metroxenoi*—matri-alien, a term perhaps already carrying negative connotations—but as *nothoi*, bastards. I have argued elsewhere that some boys in this category who were not yet eighteen in 451 may have lost their right to citizenship.¹⁶ Less attention has been paid to the impact of the law at lower levels of the citizen body. By directing demes and phratries to require evidence that candidates were born in wedlock and that both parents were of citizen origin, it may well have had the effect of reviving the role of phratry membership (with sacrifice of the *meion* for infants, perhaps of both sexes, and of *gamelia* for wives) in the mechanisms for acquiring and validating citizenship, of imposing a more restrictive conception of marriage on all levels of society¹⁷ and, in the long term, of discouraging migrants within Attika from changing their deme affiliation (although there may well have been some attempts in the years immediately following the law to pass off boys whom it excluded by presenting them to demes where their background was unknown). If we can trust Philochoros' report of a general scrutiny (*diapsêphisis*) in 445/4, prompted by a distribution to citizens of corn from Egypt, in which many claimants were struck off the rolls,¹⁸ we may perhaps infer that some of these were *metroxenoi* who had been accepted by demes despite Perikles' law, while others perhaps were men who had changed demes on migrating, or even the sons of 'men of obscure descent',¹⁹ who had

¹⁶ See Humphreys 1974; Carlier 1992; Ogden 1996; C. Patterson 2005; Béarzot 2005; Bertazzoli 2003, 2005; ch. 19 n. 77; below, n. 45. In 403/2, when the Periklean rule was reimposed, it was specified that only boys born after this date were to be affected; but the situation was different, one of the concerns of the period being to limit 'backlash' attacks on oligarchs (cf. the attack on Theozotides' proposal to extend the benefits of war orphans to those whose fathers died in the civil conflicts of 411 or 403 (Matthaiou 2011a), on the grounds that the *dokimasia* he proposed would prejudice the question whether the boys concerned were legitimate or not: Lysias F LXIV Carey 2007, VI Gernet/Bizos 1926, with Stroud 1971; ch. 2 n. 75).

¹⁷ C. B. Patterson 2005, 282; cf. Brooke 1989 ch. 6; Duby 1978; Helmholz 1978.

¹⁸ FGH 328 F 119, with Jacoby's commentary; Plut. *Per.* 37. 4; Fantasia and Carusi 2004; Pébarthe 2006, 193–6. The grain distribution from Egypt clearly parallels events in Philochoros' own day (L. Pearson 1942, 123); his 5th c. source may well be comedy, often misinterpreted by ancient scholars. The figure of 4760 for those who lost citizenship is linked to a total of 19,000 citizens, and Philochoros is clearly influenced here by the disenfranchisement of 322 and the census carried out by Demetrios of Phaleron. The most we can deduce is that Philochoros has made sense in his own terms of *some* evidence about conflict, scrutiny, and disenfranchisement in 445.

¹⁹ A.P. 13. 5. The *diapsêphisis* after the fall of the tyranny is surely—*pace* many commentators—Kleisthenes' reform, not a separate operation (Pébarthe 2006, 180–3, also seems to take this view, but A.P. will not have known how formal the proceedings were; Welwei 1967, associating the report with the expulsion of 700 households in Hdt. 5. 72, points out that the term *diapsêphisis* would not have existed in the 6th c.). B. Strauss (1994) thinks that many immigrants who came to Attika during the 6th century were disenfranchised, then re-enfranchised by Kleisthenes. Bakewell 1997 suggests that the status of metics was only defined c.460.

entered demes in 507 but had never been admitted to phratries; yet others may indeed have succeeded in gaining citizen credentials merely to benefit from the grain distribution.

The idea of maintaining close control over admissions to the citizen body at all social levels was new in Athens and probably generally rare in Greek city-states with the exception of Sparta; phratries, even after Solon's legislation, had probably been less strict. The growing separation between Athens and her 'allies', coupled with the presence of large numbers of traders and rowers from allied cities in Athens and Piraeus, may well have contributed to this sense of a need for restriction.²⁰ While we do not hear of any further troubles between 451 and 431, the period of the Peloponnesian War disrupted life in most of the rural demes, and made the maintenance of controls problematic. In the Archidamian War of 431–421, the plains of Eleusis and Athens were regularly subjected to Spartan invasions, and there were also Boiotian raids in border areas;²¹ the inhabitants of many exposed villages took refuge, at least during invasion periods and often year-round, in local forts, in the hills, or inside the walls linking Athens and Piraeus. Since pay was regularly available for service in the fleet (and on quite frequent campaigns, also, in this period, for hoplite service), and since Spartan troops will often have damaged crops, trees, and buildings, in addition to killing any livestock they found, farmers whose land lay in their path may well have given up the struggle to continue even a part-time existence in the countryside.²² Those who migrated to the city had to find accommodation where they could, settling with kin or friends or camping out on open ground; members of a rural deme would thus be scattered, would have less knowledge of each other's affairs, and might well be too demoralized to put up a strong resistance to the registration of candidates with doubtful credentials. Losses in the plague years (430–426) would have exacerbated this situation; witnesses would be fewer, a blind eye might be turned, out of sympathy, if a man who had lost sons in the plague later presented a boy of dubious origin. Many rural demes probably took to holding their meetings in the city during this period; some of our fifth-century deme inscriptions

²⁰ Heavy Athenian losses in Egypt in the 450s may have contributed to public support for the law by generating attempts to pass off the children of unions between Athenian girls and metics as citizens (Ruschenbusch 1979*a*, 83–7), or creating anxiety about competition for husbands between Athenian and metic girls (Stewart 1996).

²¹ Note Aristoph. *Ach.* 1022–8, a farmer from Phyle has lost his plough to Boiotians; see M. H. Munn 1989 on Phyle and the Skourta plain during the war. On the question whether Plataians were assigned to demes in 427 see Trevett 1992, 188–9; Kapparis 1995; Canevaro 2013, 196–208.

²² Debate on the extent of war damage: V. D. Hanson 1983, Pritchett 1991, 198–203, 352–8; note that the question how long it took to build up farm operations again after 403 is not the same as the question of the psychological effect (on women as well as men) of yearly attacks. Aristophanes' *Acharnians* perhaps live in the city but return to the deme to make charcoal; market gardening near and inside the city walls would certainly continue. On the use of forts see Lauter 1992.

may have been set up when demesmen returned home in 421, after the Peace of Nikias, eager to make a fresh start on rural life.²³

The second period of war was even more disruptive, especially after the Spartan occupation of Dekeleia in 413, which put many more demes at risk of attack and protracted that risk over most of the year.²⁴ The war ended with civil strife between oligarchs (many of them wealthy landowners who resented the financial losses they had sustained during the war years) and the demos; the bitterness left by this episode was exacerbated and prolonged by the economic problems of the post-war years, in which men who had adjusted to living as wage-earners, paid for rowing and/or service as jurors, and finding part-time employment in the service sector of a money-flush economy (like Aristophanes' sausage-seller in the *Knights*) found themselves with no fleet and no empire, and consequently no wages and no customers. Members of this class who decided to return to rural demes and smallholdings will have found it harder than their wealthier neighbours to re-establish themselves on the land, and there must have been friction at deme meetings. On the one hand, commoners had gained confidence in the public sphere as a result of the war years, and the rich were under suspicion of collaboration (or at least sympathy) with the oligarchs; on the other hand, rich men may have acquired land, covertly or openly, from poorer neighbours, which they were unwilling to relinquish; and it was recognized that during the latter part of the war Perikles' law had not been strictly applied and some unqualified candidates had acquired citizenship.²⁵ Athmonon had conflict over liability to contribute to deme finances in the early years of the fourth century; Halimous held a deme scrutiny of all members' credentials in the 390s or 380s, on the grounds that the deme register had been lost; similar conflicts in phratries at Dekeleia and perhaps Paiania have already been noted.²⁶

In the fifth century, then, the demes went through a period of innovation and experiment from 507 to 431, during which their political culture was gradually modified as more members gained experience of Council membership and of the

²³ *IG* i³ 253–4 (Ikation), 258 (Plotheia), 256 *bis* (Thorikos); admittedly these are not the demes most obviously at risk before 421. Some influence of city institutions (eg. choregia) is also likely. Demes may also have acquired new cultic responsibilities due to the effects of the war and plague on other bodies (small local genê?). Archaeological evidence of reoccupation and rebuilding: Deme house, Vari house (J. Jones a. o. 1962, 1973). Effects of city residence on attitudes to exchange, Reden 1995*a*, 106–11, 131–5; squatting, Papazarkadas 2011, 217–18.

²⁴ Note the evidence in Eupolis' *Demoi*, probably produced in 412 (Rivier 1966; 418–11, Storey 1990, 2003) for hostility between members of rural demes and those of demes within the Long Walls.

²⁵ See ch. 19 at n. 81 on comic references to illegal entry to the citizen body, most of which come from the Dekeleian War (but *Wasps* 715–18 is earlier), and on the 'amnesty' of 403 concerning Perikles' law. Hostility to cavalry, Bugh 1988; Spence 1993, 216–24; see also ch. 24 n. 10 on Kolonos.

²⁶ *SEG* 24. 197, Athmonon; Dem. 57. 26, Halimous (generational calculation would suggest the 380s, but the precise date is unknown). Cf also chs. 7, and 14 at nn. 39–40 on the anti-oligarchic backlash.

procedures of the public sphere in the city, and more took part in military expeditions overseas.²⁷ We have very little direct evidence of deme activities from these years, and the little we have suggests a wide range of variation, with the character of deme initiatives, where they are attested, depending very much on local circumstances and pre-existing cult traditions. After 421 there was probably widespread eagerness to return to patterns remembered from pre-war days as ‘normal’;²⁸ but rural settlement was even more severely disrupted between 413 and 404. By the end of the war most Athenians were thoroughly familiar with the political norms and procedures of Council, Assembly, and courts, many of which were adopted in handling deme business. Thus while it may be true to some extent in the fourth century that young men got their first experience of public affairs in the demes, the idea of the deme as a miniature polis had to be constructed, and may well have had to make headway against a counter-tendency to contrast the relaxed and informal character of deme interaction with the more intimidating atmosphere of the city’s institutions. The development and internalization of the norms of the public sphere, and their subsequent adoption—perhaps only intermittently—in the more faction-ridden and more problematic context of smaller groups, was a gradual business. It may well be that it was precisely when they were appealing to, imitating, or trying to impose norms borrowed from the city that demes resorted to writing on stone—which never became a routine procedure for them.²⁹

Return to normality (of a new kind) in the demes, after the war, may well have taken some time, but was perhaps completed by c.380. After this it is hard to identify any event that would have had a widespread impact before the general scrutiny of citizens imposed on all demes in 346/5, the motivation for which still remains obscure.³⁰ Our evidence for negative votes comes only from a handful of

²⁷ Chr. Meier (1980) has stressed influence of war on conceptions of citizenship and the public interest; demes did not play any formal role in the organization of the army and fleet on campaign, but they may have played some role in recruitment, the army was divided into tribal contingents (ch. 21 nn. 37–9), and soldiers and rowers had considerable freedom to choose their own associates when not in action (ch. 16 nn. 64–8). Shared service may have formed the basis for alliances (especially between age-mates) that later influenced deme politics (cf. Whitehead 1986a, 224–6).

²⁸ Cf. Aristoph. *Ach.*, *Peace*, and perhaps *Dnitalis*.

²⁹ Imitation: form of decrees, from the first examples c.460 (*IG* i³ 244–5); euthynai in Thorikos c.420 (*i*³ 256 *bis*); choregia in Thorikos and Ikarion c.420? (*i*³ 258 *bis*, 254); antidosis in Ikarion, 254. V. Chankowski (2005) and P. Wilson (2015) suggest that in some cases deme innovations may have influenced state institutions, but I am sceptical (cf. Humphreys 1993a, xii).

³⁰ See now Fantasia and Carusi 2004; Pébarthe 2006, 196–200; Feyel 2009, 143–8; G. J. Oliver 2011, 128. Concern over the cost of the theoric distributions? Scandals could be cited (Dem. 57. 49), but someone must have worked them up into a case for reform (the affair of the basileus’ marriage to Neaira’s daughter was originally hushed up by the Areiopagos, [Dem.] 59. 80–4). What was the implication of introducing a major distraction of political attention in the year of the peace negotiations with Philip? Carlier 1992, 116 suggests that a law penalizing unions between Athenians and foreigners was passed at this time. Cf. ch. 19 nn. 76–7.

cases that went to appeal and produced speeches that have survived; it may be only the tip of a sizeable iceberg of bad feeling, which took some time to melt.³¹

Philip's advance southward may well have caused anxiety in some demes; Rhamnous issued at least two new leases of deme land in 339/8, possibly adopting a new system in which the risks of ensuring regular revenues for the deme were divided between a number of panels (*merê*) of the wealthier demesmen.³² Confidence was restored, however, under Lykourgos' administration, from 336 onwards, and the period between 336 and 322 probably produced a high proportion of the decrees passed by demes, many them honouring benefactors for their generosity. The introduction of formal training for epheboi, the young men who had just been admitted to demes, was a popular measure which stimulated a number of demes to pass decrees honouring the ephebic corps and its officers, especially those demes where epheboi were stationed or had played a role in cult.³³ The records of the hekatoistai sales—public auctions of land belonging to corporate groups, on which a one per cent tax was levied—may also belong to this period.³⁴

Restriction of citizen rights in 322 to those whose property was valued at more than 2000 drachmas, and the emigration of some of the disenfranchised to Thrace, may seriously have affected some of the smaller demes. There is evidence of depopulation and desertion of some rural areas in the late fourth or early third century, to which the insecurity of the years 319–317 and 268–262 may also have contributed.³⁵ Deme decrees were still passed and inscribed under the rule

³¹ Dem. 57, possibly Is. 12 (see ch. 24 n. 75); [Dein.] *kata Kerykôn* (F XXXI Conomis 1975) and *kata Moschiônos* (F XXXII) may come from such cases, as may Is. (?) *pros Boiôtôn* (F VI Thalheim 1903; but see ch. 30, n. 30); honours granted by demes to *syndikoi* in IG ii² 1205 (Epikephisia) and Aixone (ii² 1197) might have come from appeal cases on this occasion, but rejection and appeals could also occur in other years. Timarchos, Aisch. 1. 114–15, can hardly have been a prosecutor in 346/5; he made an initial denunciation in the deme assembly and perhaps subsequently appeared in court as a witness (Fisher 2001 ad loc.); it is not clear whether the oath he took was voluntary or was specifically required in cases of some kinds (e.g. when the defendant stood to lose his freedom if convicted?); cf. A. R. W. Harrison 1971, 150 with n. 7.

³² See ch. 31 n. 77; the dating may be coincidence, especially since the deme may have used an analogous system earlier for handling money lent at interest. Cf. also n. 102 below; ch. 25 n. 64.

³³ On demes and epheboi see Humphreys 1985*a*; on honorary decrees, Lasagni 2004. For a partial list of deme inscriptions of this period assigned to cutters working between 340 and 290, see Tracy 1995, 58–9: IG ii² 1176, 1187, 1189, 1192, 1194, 1195, 1196 B, 1198, 1260, 1274, 2493–4, 2500, plus SEG 21. 519, 28. 103.

³⁴ See below, n. 62; Appendix 2.

³⁵ On the disenfranchisement see Poddighe 2002; O'Sullivan 2009. Bintliff (1994*a*) suggests that soil exhaustion in marginal areas may have been a contributing factor. Atene (Lohmann 1993*a*); Azenia (Koundoura valley), Lohmann 1989, ch. 30 n. 119; Lamptrai (Kiapha Thiti), Lauter-Bufe 1990; Thorikos, ch. 27 n. 68. G. J. Oliver 2007*a*, 44–5 argues that the Sounion/Laureion area was not deserted. See also Moreno 2007, 28–32. Cf. the need for repairs at Brauron c.250, and the uncertainty whether they were carried out (Themelis 2002, 112–6). Possibly the book on demes of Diodoros the periegete, late 4th c. (FGH 370 F 4) indicates awareness of change. Small urban demes presumably continued to exist as neighbourhoods. SEG 38. 124 (Halai Axionides) is dated c.265 by Tracy 1988; ch. 29 n. 132. On the Roman period see D'Aco 2013.

of Demetrios of Phaleron (317–307), when the census qualification was lowered to 1000 drachmas, but in the third century only the ‘garrison demes’ Eleusis and Rhamnous remained consistently active. By this time many of the outlying smaller demes had probably de facto become city-based. As active corporate groups, therefore, the demes had a life of about two centuries.

ARTICULATION WITH OTHER CORPORATE GROUPS

The demes were given their new status by the state, and decisions of the state continued to affect them, as we have seen. The author of the *Athenaion Politeia* believed that Kleisthenes had also prescribed a change in Athenian naming practices: henceforth an Athenian citizen was to be known by his personal name and demotic, rather than his personal name and patronymic. It is unlikely that the writer had any documentary evidence for his statement; he was probably trying to account for the introduction of the demotic as an element in Athenian names. Whatever the background to his view, the question he raised is an interesting one. Use of the demotic as part of a citizen’s name would increase consciousness of the deme system and a sense of identification with one’s deme.³⁶ But how widespread was the use of demotics in the early years of the system? Ostraka provide some data on this point.

A large proportion of known ostraka come from votes held in the 480s and 470s. Since the candidates who received the largest number of votes were well-known men, use of demotics is probably under-represented in this sample; many voters wrote down only the candidate’s personal name, or added only abusive comments. Analysis of the evidence provided by ostraka for Athenian naming practices is still in its infancy; early research concentrated on identifying candidates, without paying any specific attention to the form of name used, and publications were erratic in the information they provided.³⁷ Only the publication of

³⁶ This is not a statement about Athenians’ subjective feelings but about the effects of being labelled in interaction with others. On *A.P.* 21. 2–4 see also ch. 18 n. 41. Note that Athenians buried in the 5th c. outside Attika (*IG* i³ 1503–1517) may identify themselves by both tribe and deme (ch. 21 n. 37). Restoration of tribe-name on the woman’s tombstone *IG* i³ 1294 *ter* (Agora) is highly questionable. *IG* i³ 1136, 425–400, tomb horos, *Glykēs Marathónothen en astē oikousēs*.

³⁷ Ostraka also provide useful information on writing skills and spelling (cf. Wachter 2007, Immerwahr 2007). An analysis of the correlation between writing skills and name forms (e.g. use of patronymics) might be interesting. Pébarthe 2006, pp. 65, 310–11, is rather disappointing on ostraka. Excellent analysis of the evidence from decrees, dedications, and ostraka in Winters 1993, suggesting initial enthusiasm for the demotic c.507–475 (evidence mainly from ostraka, which are not typical in all respects); demotics rarer than patronymics, no sign that the demotic took the place of the patronymic. E. A. Meyer 1993 studies the use of demotics on tombstones, but fails to compare use patterns in other contexts. Keesling 2009 compares dedications and ostraka; she notes that the same man may use various forms. See also Grouschin 2009. As on ostraka, the pattern of naming on tombstones in the 5th c. is irregular, and the three-name form is rare (cf. p. 785 on *IG* i³ 1260). Addition of father’s name and father’s demotic seems slightly commoner for women than for men, but the numbers are very small.

the ostraka from the Athenian Agora in 1990 by Mabel Lang (*Agora XXV*) has supplied a body of properly published material. This, together with what is known of the Kerameikos material, suggests the following conclusions:

1. Voters were not conscious in the 480s and 470s of any 'official' form of the citizen's name. The form used most commonly is personal name and patronymic; this probably reflects the use of patronymics, with and without personal names, in conversational address and reference attested all through the fifth century.³⁸ There is variation among individual candidates in the proportion of name/patronymic and name/demotic identifications. Use of all three names is rare in the period down to 470, and becomes more frequent on later ostraka.
2. The form of demotics was not yet fixed, and the early ostraka show a number of deviations from forms that later established themselves as canonical: *Acharnêthen*, *Agrylêthen*, *Amphitropaieus*, *Kerameus*, *Kollytôn*, *Konthyleus*, *Kriôthen*, *Lamprathen* (with *Lamptreus*), *ek Melitês*, *Oathen*, *Phlyêthen* (with *Phlyeus*), *Thoraiês*, *Thorikôi oikôn*, *Xypetaios*.³⁹
3. Voters made mistakes and jokes, and they also struggled with the problem of distinguishing homonyms. Mistakes might be revealing if we could be certain of identifying them correctly. The voters who ascribed Aristides son of Lysimachos to Koile (not Alopeke) and Agasias son of Arximachos to Agryle (not Lamptrai) seem to have been mistaken. In the first case it is conceivable that the voter was not sure where the boundary between Koile and Alopeke ran; in the second case it is possible that Agasias owned property in Agryle as well as in Lamptrai, which was further from the city. On the other hand, it is

³⁸ See, for example, Plat. *Laches* 180d–e (Sokrates addressed as 'son of Sophroniskos' by his father's friend Lysimachos) and discussion in ch. 8. Invented patronymics are used in comic abuse (e.g. Ar. *Wasps* 325 with MacDowell 1971, 178). Wilamowitz 1893, II ch. 7 noted that patronymic and demotic are often treated as alternative rather than complementary in the 5th century data, and that demotics are hardly ever used in address (Apollodoros of Phaleron, Plat. *Symp.* 172a, was presumably white-haired, cf. LSJ s.v. *phaleros*). My calculation on the Kerameikos data available to me (they are still not fully published) was: N/patronymic 84, N/Demotic 51, 3 names 27, N alone 21. Fraser 1995, using a sample of 143 candidates, has N/Patronymic 53, N/demotic 47. I think we have to count writers rather than candidates, though there are problems in either approach. For comparison, the Themistokles sherds from the Agora (omitting the mass-produced North Slope deposit) gave: N/Demotic 149, N/Patronymic 138, N alone 73, three names 5. In the mass-produced group, Hands A–I used N/patronymic and Hand K N/Demotic; Hands L–O were unclassifiable.

³⁹ Some of these forms still occur in the 4th c. when deme-identifications are given to women, see Linders 1972, 7–9 n. 5. It is possible that in some cases relatively frequent use of the demotic in writing and talking about ostraka and voting in ostracisms contributed to fixing forms such as *Alopekethen* that in other demes yielded to the spread of –eus as the appropriate demotic suffix (*Alopekeus* is also attested, cf. ch. 32 n. 6; *Amphitropaieus* in Lys. 13. 55; reverse development in Kerameikos from *Kerameus*, IG i³ 465. 123–4 (434/3), Wagner 2000, 284, to *ek Kerameôn*, presumably to distinguish demotai from potters). Boon son of Kason is identified as Thorikios on two Kerameikos ostraka and as 'living at Thorikos' on one. I take these as simple variants, the latter carrying no derogatory implications about Boon's status.

quite likely that there were two early candidates called Hippokrates: the son of Alkmeonides, who belonged to Alopeke, and another, identified either as the son of Anaxileos or as Hippokrates of Phaleron. But other cases are less clear. Is a single ostrakon naming Menon of Kolonos evidence that Menon of Gargettos had a house at Kolonos, or an expression of hostility towards another Menon? Were the two surviving sherds naming Isthmonikos of Skambonidai and Isthmonikos of Kothokidai directed against two men, or one man with two homes?⁴⁰

4. Meiggs and Lewis (M/L, p. 41), following Raubitschek, suggested that in the early period ‘country-demotics came more readily to mind as a means of identification than the new, artificial town-deme’; I doubt if the evidence now available allows us to say this. In any case, it is far from certain that city demes—even the five located wholly or partly inside the walls—were either new or artificial. It is more likely that they existed as loosely-defined urban districts with their own name and character before 507; and all the ‘city’ demes in this restricted sense are named on early ostraka. We would probably expect that politically ambitious men liked to acquire houses in or near the city, that voters who lived in or near the city turned out in higher proportions to vote than those who had to make longer journeys, that (consequently) men frequently seen in and around the city were more likely to be targeted, and (perhaps) that in 507 a man who had property both in the city area and in a rural deme would prefer to register in a city deme. The data in any case do not lend themselves very well to statistical analysis, since they tend to be polarized between very large numbers of sherds naming a few plausible candidates and a substantial scatter vote in which numerous candidates are represented by one or two sherds each.⁴¹

⁴⁰ Voters seem genuinely uncertain about Aristides’ demotic: the Agora has 3 sherds with Alopeke deleted (the only demotics in a total of 69 sherds); the Kerameikos collection one sherd with Alopeke deleted, one with Koile, 120 without demotic. The presence of another Aristides (Xenophilou) in Alopeke may have contributed to this situation. Alopeke and Koile were probably contiguous in the part of Koile outside the walls (see ch. 30 n. 33). Kerameikos has 2 sherds for Agasias Arximachou of Agryle, 17 for A. Arximachou of Lamptrai, 16 for A. Arximachou, 7 naming Agasias alone. Plutarch *Arist.* 13 names a contemporary Agasias of Acharnai (cf. F. D. Harvey 1984). Hippokrates Anaxileo, 8 Agora, 37 Kerameikos; Hippokrates Phalereus, 3 Kerameikos. Names referring to horse-racing victories such as Hippokrates and Isthmonikos were probably commoner in the archaic period than later. The Kerameikos collection also has one vote against Philokydes of Kolonos, 17 against Philokydes Pheideleou of Lamptrai. Note also one Kerameikos sherd naming Pausiades Salaminios, probably a reference to residence. Homonyms and/or erroneous demotics or patronymics must have presented a problem also to vote-counters; did they simply assume that the best-known candidate was the target? For a possible scene of ostraka-counting see the Pan Painter’s RF Kylix Ashm. 1911. 617 (BArch 206398).

⁴¹ The scatter vote illustrates a phenomenon also noted (*mutatis mutandis*) in the analysis of large curse tablets (ch. 14 n. 70), namely the tendency of a writer contemplating an act of hostility (cf. Kosmin 2015) to be distracted from his initial target into a more general consideration of grievances and enemies. The writer of a curse tablet could add names, whereas the voter in an ostracism could only name one man; but homonyms occur in both genres, and additional comments on ostraka convey the aggressive feelings mobilized in voting.

Such data as we have from other examples of name-writing c.507–470 tend to support the above conclusions. In informal writing, to judge from Immerwahr's analysis (1990), demotics are extremely rare in this period. Tombstones are uncommon at this time; only *IG* i³ 1260, of c.500–480, from the Marathon area, has a demotic (*Ἀπ ἡ[δ]ναῖος*). On dedications, patronymics are commoner than demotics in this period, while the full three-name form appears only at its end. The use of patronymics may well have been favoured by the tendency of fathers and sons to join in making dedications (ch. 12), and the conception of dedications as a contribution from a familial estate or enterprise; in the case of sculptors' signatures, it was favoured by the hereditary character of the professions (ch. 6).⁴² The demotic and not patronymic is used in the posthumous dedication to Athena after Marathon of Kallimachos of Aphidnai (*IG* i³ 784; cf. Keesling 2010*b*); a board of officials identifies its members by demotics (i³ 723); the dedication of Telesinos of Kettos (i³ 728) may have been made while he was serving as archon in 487/6. Other dedications dated between c.507 and c.480 that use demotics (Cholargeus, Acharneus, Lamptreus, Ikarieus, Kephisieus, Kollytides) seem to be more private in character, and we may have a woman identified as Athmonothēn.⁴³

The primary functions given to the demes in 507 were to admit new citizens, to appoint councillors, and to fill some minor offices.⁴⁴

Boys were admitted to demes at about eighteen years old; they had to be legitimate sons of Athenian fathers and (after 451) mothers. Candidates admitted by demes were paraded before the Council of 500, which could decide to compel a boy to re-apply to his deme the following year if he looked physically immature. There may have been an opportunity at this public *dokimasia* for other objections also to be made, but we do not have evidence of any cases; our evidence on appeals heard in court relates to candidates rejected by their demes.⁴⁵

⁴² On *Kerameus* see n. 39. The sculptor Lykios son of Myron, of the mid-5th c., describes himself as *Eleuthereus* (*IG* i³ 511, 892); this is taken to signify that he came from the border town Eleutherai, which did not have deme status. It is perhaps closer to 'ethnic' signatures by sculptors (cf. *IG* i³ 683, 756, 830 *bis* Chios; 752–3 Aigina; 952, 1018 Paros; 885 Kydonia) than to a use of the demotic (see Prandi 1987 on uses of *Eleuthereus*/*Eleutherathen*).

⁴³ *IG* i³ 695 (CEG 239), 698, 702, 704, 728, 742, 779, 800, 808; cf. also perhaps 622, 804*b*; 748, a Salaminios.

⁴⁴ Cf. n. 20. Just how demes were instructed to proceed in registering members (let alone how they actually proceeded) is unclear (cf. C. B. Patterson 1981), and there seem to have been rumours that freedmen and immigrants had crept in (Ar. *Pol.* 1275*b* 34–9; perhaps this, if true, might explain the high Council quota of Peiraios, cf. n. 13). However, in rural demes residents would know who belonged to a well-established family. The distribution of minor offices has already been discussed in ch. 21 at n. 67. On the statement in *A.P.* 22. 5 that in the early 5th c. 500 candidates for the archonship were selected by the demes see P. J. Rhodes 1981*a*.

⁴⁵ *Oktōkaideka etē gegonotas* seems (*pace* J. M. Carter 1967) to mean 'aged 18'; see P. J. Rhodes 1981*a* on *A.P.* 42. 1–2. But in any case Athenians did not celebrate childrens' birthdays (interest in birthdays seems to derive from astrology, though paradoxically commemorative birthday celebrations are first

It is not clear whether there was a two-year gap between admission to the citizen body and the acquisition of full legal capacity and the right to attend assembly meetings already from 506 onwards, or whether this liminal period was introduced only with the formalization of the ephebate in 335; it seems likely, however, that it existed from the beginning and was associated with a period of service in border areas, like the similar institution in Sparta.⁴⁶

Each deme also appointed members to the Council of Five Hundred. By the fourth century quotas had become fairly standardized, with some of the smaller demes taking it in turns to appoint a councillor every other year. It is likely, however, that this quota system—which was probably a matter of tribal norms and not of state regulation—took some time to emerge. Councillors were appointed by lot, presumably from a panel of nominees and/or volunteers; unsuccessful candidates perhaps formed a reserve panel of *epilachontes* from which replacements could be drawn if an appointed councillor failed his dokimasia or died during his term of office.⁴⁷

attested among the Epikoureans, cf. D. Clay 1986; Humphreys 1983*a*/1993, 88). It is not even clear by what date the boy would have had to have passed his 18th birthday. There was clearly some flexibility; see ch. 16 n. 53, B. G. Robertson 2000, on brothers serving together as epheboi. Moreover, the idea that the Council dokimasia was a control on age may be a later interpretation of an institution that initially had primarily ritual purposes (in this sense the view of Feyel, 2009, 73–81, that young orphans did not go through the usual dokimasia process—*sc.* in the Council—might be correct for the 5th c. Of course they had to be formally admitted with their coevals to demes. The re-institutionalization of a ritual parade of adolescents, at the end of the first year of the ephebate (ch. 21 n. 69) is a characteristic example of ritual change. It is now fairly widely agreed (*pace* Carawan 2008, 387) that nothoi did not become citizens even if they claimed that both their parents were citizens (Humphreys 1974; P. J. Rhodes 1978; C. B. Patterson 1990; Ogden 1996; Bertazzoli 2003); in any case, legitimate sons were likely to oppose attempts by their fathers to admit paternity of nothoi, and the male kin of Athenian women would also be unlikely to support claims made in this form (see ch. 7 Case 1; Dem. 39–40). If disputes over the age of candidates came to court, as seems to be implied by Ar. *Wasps* 578, it would perhaps be because a deme wished to avoid paying a penalty (*A.P.* 42. 2; but some of these rules may belong to the 4th c., see Diller 1935); it would not be in the interest of parents to appeal a Council decision on age (cf. Todd 2010). If there was an ephebic oath before 335 (see R/O 88; R. Parker 2005*a*, 397–8, 434–7; Sourvinou-Inwood 2011, 28–9; ch. 18 n. 89) it would presumably have been sworn after or at the end of the Council dokimasia (I do not find Siewert 1977's arguments for a pre-Peisistratid date compelling; see also Daux 1965 on the interpretation of *emphronōs* in clause V of the oath).

⁴⁶ Cf. chs. 19 n. 47, 21 n. 46; Vidal-Naquet 1968. In the pre-Kleisthenic system admission to the phratry might have come at the end of this period of border service, if that already existed (cf. A. Chankowski 2014).

⁴⁷ Cf. n. 13. The only 5th c. Council list, *IG* i³ 515 (408/7), does not conform to later quotas but in any case does not have room for all 50 councillors of the tribe (I). On variations even in the 4th c. see Traill 1975*a*. Stanton 1984*b* emphasizes that we have no evidence for continuity of quotas from the 5th–4th c (cf. ch. 21 at nn. 23–4). See Humphreys 2010*a* for arguments that *Agora* XV 492 does not list councillors and alternates, but kleruchs. On the clustering of kin in council service see ch. 17. For changes in Council quotas (no discernible pattern or principle of distribution, apart from the separation of ‘split’ demes) in 307/6 see Traill, *ibid.*

Some aspects of the adjustment of Council quotas may have been left to tribes even in 307/6, when two new tribes were created and the Council was increased in size from 500 to 600 members. Tribes were also responsible—after a period of experiment with nomination by demes—for the allocation within their membership of places on tribal boards of ten officials, although demes may have forwarded names of men willing to serve.⁴⁸

Demarchs had various responsibilities laid on them by the state, and it was perhaps a requirement from 507 that each deme had to appoint a demarch every year. The procedure of appointment in the fourth century was sortition, presumably from a panel of candidates who had volunteered their names or had been pressed into standing.⁴⁹ There were reasons for preferring that the demarch should be a deme resident, although there is no evidence that this was a formal requirement.⁵⁰ The demarch of Peiraios was by the late fourth century appointed by the state (*A.P.* 54. 8), presumably from candidates put forward by the deme. We do not know whether a man could hold office as demarch more than once.

In the classical period, demarchs were evidently expected to provide information about the ownership of property in the deme; they collected tithes (*aparchai*) of wheat and barley in the (?) 420s (*IG* i³ 78 = *IEleus* 28); they were also expected, at least in some cases, to report property owned by offenders whose estates had been confiscated by the state. They also needed to know which demesmen served as hoplites and which as rowers; and some demes collected taxes from residents who were not demesmen.⁵¹ These functions raise questions about deme boundaries and deme registers.

⁴⁸ *A.P.* 62. 1. According to Andok. 1. 82–4, 500 nomothetai were appointed by the demes in 403/2 to approve revisions of the law-code. Aisch. 3. 30 refers to the election by demes of commissioners for wall- and ship-building; ch. 21 n. 100; n. 13 above.

⁴⁹ On demarchs cf. Georgoudi 2007. It would, I think, be wise to assume that when sources speak of sortition they mean that if there was competition for a post the result was decided by lot. I do not imagine that small demes insisted on drawing lots if there were only just enough candidates, still less that sortition ever implied putting the names of all eligible candidates into the draw.

⁵⁰ This may explain the comparative obscurity of demarchs (Whitehead 1986a, 114–15); ch. 5 n. 19, see also below on Erchia (ch. 24). Pace Whitehead (*ibid.*), *hairesis* does not necessarily mean election rather than sortition (Aisch. 3. 29. 3, Is. 8. 20). On *FGH* 228 F 31 (Demetrios of Phaleron, *ap. schol. Ar. Clouds* 37) see *id.* pp. 12, 37.

⁵¹ See Whitehead 1986a, 130–4, with ch. 21 n. 46 on the hoplite katalogos, and Gabrielsen 1994. It may be a mistake to think of the demarchs' role in taxation as gradually being transferred to other systems. In the 5th c. peer pressure and the use of antidosis may have sufficed to provide a supply of liturgists, at least until the introduction of eisphora in 428 (Gabrielsen, p. 116). During and after the Peloponnesian War, as more rich Athenians acquired land outside their own demes, local information became more necessary. Apographai of confiscated property by demarchs is only attested for the religious offenders of 415 and the condemned oligarchs of 411 and 404/3; it is quite conceivable that demarchs did not play a role in reporting the property of state debtors. On metics see Whitehead 1986a, 81–2; Faraguna 1999, 89. This tax was kept by the deme. [Dem.] 50. 8 (Apollodoros' property reported in three demes) shows that demarchs continued to have responsibilities in 362, perhaps in relation to the proeisphora. *Aparchai*: see Cavanaugh 1996; Pritchett 2001, 171; Clinton 2010.

Archaeologists are discovering increasing numbers of rock-cut boundary marks (horoi) on ridges that may well have separated one deme from another. These inscriptions are, however, difficult to date, and on present evidence it still seems likely that they belong in most cases to the fourth century BCE, when we have some evidence for demes collecting dues for the use of pasture land (*IG* ii² 1196 = *SEG* 57. 120). The current evidence does not support the view that deme boundaries were marked, or even, necessarily, defined in 507.⁵² We have as yet no deme boundary-marker from the plains areas where deme boundaries ran through densely occupied agricultural land, and we have an explicit statement from Eratosthenes (Strabo C 65/1. 4. 7) that there were no markers inside the city between Kollytos and Melite. The second edition (1985) of Finley's *Land and Credit in Ancient Athens, 500–200 BC* (original 1952) lists 165 'mortgage' horoi from Athens and Attika, and we also have horoi marking sacred land and tombs, as well as trittys-markers from the city (ch. 21 at nn. 133–4). If deme boundaries in the city and agricultural areas had been marked, some of the markers should by now have been discovered. Since they have not, we should face the possibility that deme 'boundaries' in areas where demes were contiguous were defined only by the deme affiliations of property-owners, which may have produced a tendency to interdigitation of property and deme membership in border areas.

⁵² General discussions of horoi in Ritchie 1984; Ober 1995; Jameson 2004; Lohmann 1993*a*, 55–9, 2010*b*. In the 6th c. the Skourta plain still seems to have been a no-man's-land between Boiotia and Attika (M. H. Munn 1989, 2010). The question is how the demes' territoriality was conceptualized. It is clear that demes distinguished between property 'in the deme' held by demesmen and that owned by non-demesmen; both had to be reported for the eisphora tax, and Peiraios, at least, taxed the latter (*IG* ii² 1214. 25–8). I am not convinced by Faraguna's argument (2000) for land registers. Demes also owned property, which might be marked by horoi (cf. the Salaminioi). It seems likely (as noted by Papazarkadas 2011, 158) that property sold by them in the hekatostai sales would be so marked; the same may well be true of land on which a deme collected pasture dues (*ennomia*, *IG* ii² 1196 = *SEG* 57. 120; cf. Stanton 1984*a*, 1996; Krasilnikoff 2010; Papazarkadas 2011, 134, 157 n. 273). None of this, however (*pace* Papazarkadas 156–60) proves that demes marked their boundaries (as opposed to specific areas) with horoi—still less that this had been done in 507; nor, *pace* Steffebauer 2007, does the registration of metics by deme of residence prove this. (Note that the 'horos marking a boundary between Athens and Eleusis' of *PAAH* 1937, 37, recently rediscovered, *AD* 53 B1, 77, is an uninscribed stele base, cf. also ch. 29 n. 128; *SEG* 48. 163.) There was interest in measuring distances in the late 6th c. (Hipparchos' herms, *IG* i³ 1092 *bis*; Salviat and Servais 1964, in fathoms, Thasos; Sintès 2008), but definition of boundaries in the 6th–5th c. seems to refer only to landmarks. Rousset 2002 stresses that even when boundaries are defined they may not be marked or even identified continuously (and definition by reference to landmarks continues: *SEG* 36. 336, Argos 338?; Istros *FGH* 334 F 17; horoi on borders 183/2, *SEG* 58. 370). For general surveys of boundary-marking and territoriality see Gschnitzer 1994; Rousset 1994; Ager 1996; Gehrke 2000; Daverio Rocchi 2007; on terminology (Crete), Van Effenterre 2010. Note also references to *horistai* (boundary commissioners), *IG* ii³ 4. 36 (ch. 21 n. 86), Hyp. 4 *Eux.* 16, and to *orophylakes*, Chaniotis 2007, 139–42 (stationed on roads). 5th–4th c. deme horos in Euboia, *SEG* 41. 723, cf. *IG* xii 9. 78. Horoi from Akraiphia, dated late 4th c., *IG* vii 2792 and *AR* 1994/5, 28; Van Effenterre 1985, 182 dates Cretan horoi 2nd c. BCE and later. Possible boundary walls round (kleruchic?) farms at Karystos, classical period, Keller and Wallace 1988. Bibliography on boundary disputes, Arnaoutoglou 1998 no. 89.

Boundary-marking should not be seen as a ‘natural’ human activity with roots in animal territoriality (Olshausen and Sonnabend 1994), nor (at this period) as one of the ways in which the state inscribes its presence in the consciousness of subordinate administrative divisions, but as one of the means that may be adopted by a group already conscious of an inchoate identity in order to define more clearly at some points the distinction between its own members and activities and those outside it.⁵³

What of deme registers? In the fourth century it was probably normal, though perhaps not legally required, for there to be two lists of members for each deme: the *ekklesiastikos pinax*, assembly-list, used by tribal officials for checking the credentials of citizens in public contexts, and a list kept by the demarch in the deme. In Otryne, according to [Demosthenes] 44. 35–7, the demarch’s *grammateion* was only opened on the occasion of deme assemblies—perhaps only the meeting at which new members were admitted—whereas it was possible *de facto* (if not *de jure*) to get a name entered on the *ekklesiastikos pinax* on other occasions (the Panathenaia).

Since the two lists should have contained the same names, there was no need for a strict terminological distinction, and the name *léxiarchikon grammateion* may have been applied to both. It probably originated, however, in the city context, since it is derived from the title of the *lexiarchoi*, tribal officials who were concerned with the Assembly and, presumably, with the allocations of offices by lot.⁵⁴ It could apparently be assumed by c.440 that every deme had a

⁵³ Cf. Introduction; Luhmann 1984. It is unlikely that roads formed boundaries (in most cases): in the country, because they would lead from one deme centre to another (and demesmen would be buried on both sides), and in the city because communities might form round roads rather than being divided by them (n. 61).

⁵⁴ Hondius 1921 stresses looseness of terminology (*koina grammateia* in SEG 2. 7, cf. Dem. 57. 26, 60); gradual development of procedures is emphasized by C. B. Patterson 1981, 13–14, 25–8; cf. also Manville 1990. Halimous c.390 (?) had only one list, in the keeping of the demarch, or did not trust the Assembly copy (Dem., *ibid.*). Ogden’s wording (1996, 122–3) misleadingly suggests that the *lex. gr.* was given to each deme member. *Léxiarchoi*: this etymology was already argued by E. Koch 1894; the counter-arguments of Toepffer 1895 can, I think, be met by supposing that *kléroun* is used of the presiding magistrate, *lanchanein/léxis* of candidates, and *léxeôs archein* of the subordinate officials who manage the details of procedure. Confusion was introduced by Harpokration (s.v. *léxiarchikon grammateion*, repeated by Pollux 8. 104, Suda s.v., *Lex. Vindobonense* (Nauck 1867) p. 119 no. 14), who met the term in Aisch. 1. 103 à propos the registration at 18 of the orphan Timarchos of Sphettos and explained *léxeôs archein* as ‘control one’s inheritance’. However, most boys did not inherit property at 18, because their fathers were still alive (Photius s.v. *léxiarchikon grammateion* is better, but still partly wrong, since boys of 18 were not yet eligible for office; Pébarthe 2006, 183–5, following Van Effenterre 1976, is also confused; Faraguna 2015 is undecided). The number six may derive from association with the thesmothetai, but this does not necessarily imply that the office was pre-Kleisthenic. Pollux 8. 105–6 says that the *epheboi* were registered in the *lex. gr.* at 20, which might be true for the period after c.335. The account in [Dem.] 44. 35–7 (chs. 7 Case 12, 24 s. ‘Otryne’) is deliberately confusing, but the sequence of events seems to be: (1) Leostratos gets his name on the *ekklesiastikos pinax*, and starts to attend festivals

register;⁵⁵ the *diapsêphisis* of 445/4 is likely to have encouraged record-keeping and may even have required demes to set up registers of approved demesmen and add new members regularly in future. We should not, however, assume that checks were conscientiously made. Aristophanes' *Ekklesiiazousai* (of 392) suggests that it was conceivable for a group to pass into the Assembly without being challenged. Demesmen would normally attend Assembly meetings, city festivals at which meat was distributed, ostrakophoriai, etc., in groups, each of which would be likely to contain at least one man known to the officials in charge; it would be assumed that such clusters exercised their own control over membership. If an official queried a man whose face seemed unfamiliar, it would be enough for his companions to vouch for him. Athenians trusted witnesses rather than documents.⁵⁶

Demarchs also had cultic responsibilities towards the state. They organized their demes' contingents in the Panathenaic festival, and may have had similar duties at the Hephaistia; they collected the tithes of grain due to the Eleusinian goddesses, and were responsible for some other payments.⁵⁷

It is possible that a state-wide cult of Herakles, organized by demes, was introduced in 507 or at some later date.⁵⁸ Krates, in his work on the Attic dialect, preserved part of the

(*metechein tôn koinôn*) as a member of Otryne; (2) his opponents protest, and raise the issue at the deme's election assembly (the 'archons' agora'); (3) nevertheless, Leostratos secures agreement from the demarch and a few demesmen that he will be entered in the lexiarchikon grammateion (the speaker implies that this meeting was completely informal, but it may have been a deme assembly or small sacrifice attended by only a few men); (4) Leostratos claims his share of the theorikon at the Great Panathenaia but is thwarted by his opponents; (5) as a result of their protests, he is not entered in the lexiarchikon grammateion (presumably, when the 18-year-olds are examined).

⁵⁵ *IG* i³ 138; the fact that demarchs were to collect dues for Apollo only from cavalrymen and hoplites, while toxarchoi were to collect from archers, does not imply that only those of hoplite census and above were entered on deme registers (in the 'Themistokles decree' M/L 23. 21–30, the names of Athenian rowers are to be taken from the *lêx. gr.*); nor should we assume that all registers contained notes on census class and obligations to military service. When a hoplite call-up was made 'by eponyms' (ch. 21 at nn. 44–5) a demarch had to know not only who was liable for hoplite service—probably a matter of common knowledge in the smaller demes—but also their age-class, which could be derived from the register, on which each new age-set of demesmen would be entered under its eponym (*A.P.* 53. 4; cf. schol. Dem. 21. 83 Dindorf 1851, Dilts 1983–6, where we are told that *diaitetai* are taken from the *lex. gr.*, although the age is corrupt in the MSS).

⁵⁶ Humphreys 1985*b*; cf. R. Thomas 1989 on the absence of an 'archive mentality'. Informal subgroupings of demesmen had by the 3rd c. been formalized in Peiraios, where the deme was divided into *triakades* (*IG* ii² 1214).

⁵⁷ Whitehead 1986*a*, 134–7; *IG* i³ 78, 138, 258 (ch. 24 at n. 47). Deme contingents also travelled to Athens (Agrai) for the Diasia, but this seems to have been a less formal occasion: cf. Jameson 1965, 159–72; Humphreys 2004, 180, 186; Henrichs 2005. The demarch's responsibility to inter the unburied dead may perhaps derive from the plague years; at other times cases must have been very rare (it is not certain that in *Agora XIX* P 5. 25–30 Isarchos of Xypete was acting as demarch). See Makres 2014*a* for a possible role of deme representatives in the Theseia (*IG* i³ 82).

⁵⁸ Perhaps in association with the reorganization of the Herakleia at Marathon after 490, attested in *IG* i³ 3 (n. 95; ch. 31 nn. 45–6).

‘law of the basileus’, which required him to supervise the appointment of ‘archons’ and the election by the demes of parasitōi who were to collect barley-offerings to be used for a feast ‘in the sanctuary’. Kleidemos and Philochoros both mentioned parasitōi of Herakles, possibly referring to the cult at Marathon; Diodoros of Sinope, in his comedy *Epiklēros*, claimed that the city had instituted sacrifices to Herakles in all the demes, for which twelve parasitōi (per deme? per tribe?) were selected from propertied men of citizen parentage on both sides. Diodoros regarded this as an ancient institution, and contrasted it with the use of the term *parasitos* to denote freeloaders at private dinners. It is possible that Aristophanes’ *Daitaleis* has a chorus of parasitōi of Herakles, and that a fragmentary decree of the late fourth century passed by a group of Daital[eis] is connected with the same institution.⁵⁹

The attraction of postulating a state-wide cult of Herakles instituted in the late sixth or early fifth century and organized by demes is, firstly, that it would show the innovators of the early period of ‘Kleisthenic democracy’ responding to a recent Peisistratid innovation by restructuring it (parasites appointed by demes and not by personal patronage, reference to Marathon instead of Pallene?), and secondly, that it would provide a plausible background to the concession to nothoi (in 451?) that they could pay their dues (*telein*) to Herakles at Kynosarges. The sources, however, are problematic.⁶⁰

The state could, and did, affect the life and resources of individual demes in a variety of ways: by building fortifications, stationing garrisons, regulating the exploitation of mines, stimulating production at quarries, or intervening in the management of local cults. It is unlikely, however, that there was any consistent

⁵⁹ Krates (1st cent. BCE) *FGH* 362 F 7, cf. 374 F 1. This ‘law of the basileus’ contained both a resumé of the basileus’ traditional duties and provisions for building repair. It may come from the ‘codification’ of 410–399. The feasters are perhaps *tous <par>ontas* (or *<epidēm>ontas*, cf. *IG* i³ 3) *Athēnaiōn*; see the apparatus criticus in *FGH*. I suggested in ch. 20 (n. 57) that the parasitōi of Athena Pallenis were instituted by Peisistratos, and thus were not tied to the deme system; however, a reorganization by Kleisthenes is not impossible, and Wilamowitz’s suggestion (1893 II, 43) that *Themisōn en Pallēnidi* should be emended to *thesmion en Pallēnidos* (sc. *hierōi*) has to be taken seriously. Kleidemos, *FGH* 323 F 11; Philochoros, *FGH* 328 F 73, from the Tetrapolis; Diodoros (3rd c.), *PCG* 5. 27 F 2. 21–30 (‘doubtless an exaggeration’, R. Parker 2005a, 473). Aristophanes: *PCG* III 2, 122–48, Cassio 1977; cf. Solders 1931. The association of the play with Herakles comes from the lexicographic tradition and not from the preserved fragments, which seem to concern the contrast between traditional and sophistic education, and a prosecution for *xenia* in the court of the *nautodikai* (F 32 Cassio, 237 *PCG*; related to the requirement of legitimacy and citizenship for parasitōi?); there is also mention of Erechtheus and Aigeus (F 15 Cassio, 217 *PCG*), acting as witnesses, suggesting an involvement of the tribes.

⁶⁰ Nothoi: Humphreys 1974; Bertazzoli 2003 suggests (implausibly in my view) that there was a similar registration system at Kynosarges for nothoi similar to that of the demes. *Telein*, however, may be a kind of metaphor (de facto contributions rather than formal registration). It is a difficulty that the Herakleia at Marathon have not left much trace in our sources after their early decades, and that we are unclear about the relation (if any) of the parasitōi of Herakles to such local shrines as that of Herakles at Porthmos, run by the genos Salaminioi with some public funds *ek kyrbeōn*, ch. 20. It is likely that the sources contain some antiquarian speculation, and possible that there was some re-institutionalization under Lykourgos or Demetrios of Phaleron.

overall conception of a division of responsibilities between central and local government. We know nothing about responsibility for roads; when a new aqueduct for Athens was constructed in the late fourth century, the work was contracted out to a partnership of private entrepreneurs, who made individual agreements with the owners of land through which they wished to run their pipes. There is no evidence that the demes in which this land was situated played any role.⁶¹

At some date (or dates) in the Lykourgan period or later the state encouraged demes and similar corporations (phratries, *genê*, *orgeones*) to sell some of the land that had come into their hands. Evidently they were not compelled to sell all their property, since we find some of them leasing land or buildings later. Since the state benefited only by collecting a tax of one per cent on sales, which was given to Athena, the operation was perhaps designed to help the sellers rather than to raise revenue. By organizing a public sale and recording payment of the tax, the state offered the sellers a chance of attracting buyers outside their own membership, and guaranteed buyers security of title; in addition, the public nature of the sale may have put some pressure on buyers to offer a fair price. The device of levying a tax on sales and making a public record of the payments is paralleled by requirements laid down in the Lykourgan period and later that liturgists, and perhaps the parties involved in manumissions, should dedicate silver cups on the Akropolis; Theophrastos' *Nomoi* (F 97 Wimmer 1854–62) referred to a one per cent tax levied on all property sales in Attika; such a scheme would not be inappropriate for the Lykourgan era.⁶² Proponents of the scheme could no doubt at any date have cited evidence of irregularities in the management of deme property (cf. Demosthenes 57. 63–4); most demes' financial affairs were probably run by a small oligarchy of 'benefactors' who saw little reason to draw strict lines between public and private property so long as they paid their share of deme expenses (ch. 24 n. 125). Deme inscriptions about property leases and financial management will have been produced by crises in which this gentlemen's agreement broke down. It is more difficult to reconstruct the specific occasion and motives that made conversion of property into cash (which would produce revenue in the form of interest on loans) seem desirable. It seems possible, however, that since many

⁶¹ Lauter 1992 argues that some fortifications may be due to local initiative. Cult: it is hard to discern any principle in state policy, even in the case of the valuables moved to Athens and stored under the care of the Treasurers of the Other Gods (Linders 1975; below, nn. 98–100), where proximity to Athens seems to be more of a determinant than exposure to attack. See discussions of individual demes, chs. 23–32, and R. Parker 1996. Roads: see D. M. Lewis 1990, 249 (= 1997, 64); Korres 2008; Y. Y. Lolos 2002 for terminology. Aqueduct: *IG* ii² 2491, 2502; *SEG* 19. 181–2, 21. 643, 54. 80; Koerner 1973; Camp 1979; Matthaiou 2009*b*. More evidence is now emerging about deme water supplies: see *AD* 46 B1, 1991 (1996), 49 (Halai Aixonides), 64 (Euonymon); Georgousopoulou 2013.

⁶² See Appendix 2.

of the properties sold were outlying parcels (*eschatai*) the disenfranchisement and emigrations of 322 had created anxiety about controlling lessees in remoter areas, and recruiting resident demarchs to collect rents; the sales, that is, may be a symptom of the tendency of many rural demes, after 322, to transform themselves *de facto* into city-based associations. Further survey and excavation in rural areas might give us a clearer idea of the extent of rural depopulation in the late fourth and early third century.

It was probably inevitable that scholars of the late nineteenth and the twentieth century would tend to overestimate the extent of ‘government’ interference in municipal affairs. Correlatively, the extent of regulation by the Attic tribes has perhaps been underestimated. Each tribe was responsible for sending fifty councillors to the Boule every year, and thus had to arrive at a viable quota system for its constituent demes. While there may have been some adjustment in the allocation of demes to trittyes and tribes in the first years of Kleisthenic system, it seems unlikely that further modifications—the arrangements by which small demes appointed councillors in alternate years, ‘split’ demes made separate appointments, or a deme’s failure to fill its quota in a specific year was made up—were referred to any central authority. Such details were surely worked out when tribes met to finalize their appointments for the coming year. If in the early years of the system some communities acquired or relinquished deme status, this may also have been approved by the tribe.⁶³

A new form of involvement of the demes in tribal decisions was introduced with the ephebic system, in which the fathers of boys about to serve as epheboi voted in the election of the tribe’s short list of candidates for the position of *sophronistes* (*A.P.* 42. 2). Ephebic monuments also record tribe and deme decrees in honour of ephebes on the same stone.⁶⁴

VARIETY AND DEME INDIVIDUALITY

The range of variation among demes is startling. In size, they ran from Acharnai, which regularly appointed twenty-two councillors, to small villages that could only

⁶³ Some cases of quota irregularity may be due to use of the panel of *epilachontes* to fill gaps. The decision to ‘split’ for the purpose of appointing councillors—or to merge for other purposes, as in the case of Ionidai and Kydantidai (ch. 24 n. 92)—was probably taken at deme level (n. 14). There was presumably some consultation of tribes when 100 councillors for the two new tribes were added in 307, although the figures—especially the absence of any contribution to the new units from IX Aiantis—suggest that a state commission was involved.

⁶⁴ *IG* ii² 1156 = R/O 89, a dedication by the epheboi of Kekropis citing decrees from the tribe, from Athmonon, and from Eleusis. One might also expect that demes would contribute to tribal cult expenses (ch. 21 n. 78), but *IG* i³ 258 (Plotheia) does not support this view.

field a candidate in alternate years.⁶⁵ Physically, they ranged from Kydathenaion, the deme of ‘ancient glory’, which probably had its centre in the early core of the city east of the Akropolis, to Atene, a collection of hamlets occupying three small plains and an island in southeast Attika, perhaps only settled in the early years of the deme system; or from Skambonidai, ‘Crooktown’⁶⁶ which probably started as an artisan quarter and rose in status when the centre of political activity shifted from Kydathenaion to the new Agora, to Rhamnous with its well-established cult of Nemesis and Themis; or from the mining demes of the Laureion area, with a high proportion of slaves among their residents, to Eleusis with its periodic influx of visitors from all parts of Greece for the Mysteries.

Deme names themselves provide good examples of the variety of factors that gave demes their individual identities. Some were named for characteristic economic activities: Halai, Kerameis, Aigilia and Aixone, Krioia, and perhaps Boutadai, Pambotadai, and Keiriadai; many for features of the countryside, local plants, or animals—Auridai, Besa, Potamos, Deiradiotai, Phrearrhioi, Koile, Poros, Prasiai, Rhamnous, Phegous and Phegaia, Ptelea, Thria, Myrrhinous and Myrrhinoutta, Korydallos, Acherdous, Elaious, Alopeke; some perhaps for man-made landmarks (Kolonos and Kolonai, Hermos?). Some had euphemistic or self-advertizing names—Euonymon, Eupyridai (?), Epeiekidai, Lamptrai, Kydathenaion; more names, however, were derogatory: Skambonidai, Aithalidai (smoky, sooty), Cholleidai (ch. 26 n. 54), Hybadai, Sybridai. Eponymous heroes are attested for 44 demes, but many of the sources are very late, while in other cases the hero is associated with a *genos* or *phratry*. Heroes and heroines worshipped in demes were, as we shall see, often nameless. Some demes were named for deities: Anakaia, Hestiaia, Paionidai and Paiania, and perhaps Pallene and Iphistiadai.⁶⁷

⁶⁵ Halimous, with 3 councillors, had about 80 demesmen in 346/5 (Dem. 57. 9); Myrrhinous, with 6–7 councillors, has a deme quorum of 30 (*IG* ii² 1183, see ch. 25 n. 46), while Paiania, with 12 councillors, had a quorum of 100 (*IG* i³ 250). P. Wilson’s suggestion (2015, 122) of a quorum of 100 in Ikarion seems to me unlikely. The quorum for city decisions (6000) seems to have been calculated as one-fifth of the citizen body, but demes may not have been aware of any norm (cf. Feyel 2007, 23 n. 14). Lohmann (1993) estimates that Atene, appointing 3 councillors in the 4th c., had about 50 farms on deme territory; however, these may not all have belonged to deme members, and there will have been deme members resident elsewhere. The society of Plato’s *Laws* has an average of 35 households per deme (W. Thompson 1965). If the ratio of councillors to demes had been constant (which is unlikely except in very broad terms), on the conventional figure of 30,000 for the citizen population c.507, demes would have ranged from c.1320 members (Acharnai) to c.30 in the smallest demes. Note that the problem of finding enough men to fill Council places would not arise immediately, and we do not have enough Council lists from the classical period to determine how many men served twice. On the figure of 3000 Achaean hoplites in Thuc. 2. 20. 4—perhaps to be emended to 1200—see Whitehead 1986a, Appendix 5; ch. 28 n. 28.

⁶⁶ *Skambón* means bow-legged and would be associated via the relation between diet and rickets with poverty, menial occupations, and thus low morals (cf. Humphreys 1999).

⁶⁷ See ch. 20 n. 4 on the variety of names using the suffix -idai or -(i)adai, not all of which are derived from the names of heroes; Kearns 1989, 92–102, with useful list, on deme heroes and cults. Kearns misses the hero Angelos, *MDAI(A)* 1937, 9 no. 8, and the *archégèteion* mines at Thorikos (*Agora* XIX P 5).

By 507 demes were already diverse in their history as well as in size, resources, and topography. Some—among them the ‘twelve ancient towns’ discussed earlier (ch. 18 s. ‘Twelve Towns’)—had their own historical myths. Many had Bronze Age remains; in some cases the Bronze Age akropolis had become a sacred space, while in others the rediscovery of tombs had prompted a hero-cult.⁶⁸ Centres with long-established cults were likely to be phratry bases, and might also have priest-hoods held by aristocratic genê. The Eumolpidae and Kerykes of Eleusis provide a particularly well-known and illustrious example, but they were not alone; a number of the smaller demes may owe their existence to the residence in them of aristocratic families who insisted on independent deme status. Boutadai was the home of a leading branch of the genos Eteoboutadai, who probably distinguished themselves as ‘the true descendants of Boutes’ only after the creation of the deme. Ionidai and Kydantidai, small demes probably located in the neighbourhood of Erchia (Spata: see ch. 24 n. 90), show a rather high proportion of names attested in the archaic period and rare later (Philoitios, Melieus, and Ilioneus in Ionidai, Spinthon in Kydantidai), and may perhaps have opted for independent deme status because of the presence of ‘old’ families; the archaic tomb monuments of Vourva may belong to one of these demes. In contrast, Sounion may not have acquired its resident genos, a branch of the Salaminioi, until the introduction of coinage in the sixth century generated interest in silver-mining; the cults of Athena and Poseidon on Cape Sounion, which had perhaps originally served passing ships and a small local community engaged in fishing and small-scale trade, may have attracted attention from the city authorities when the system of *naukrariai* was formalized.

We have no reason to assume, however, that all deme cults and myths were pre-Kleisthenic. Kleisthenes’ reforms encouraged ambitious politicians to create new foci for deme activity: Themistokles founded a cult of Artemis Aristoboule in Melite (though it was not his own deme), Kimon reshaped myths and cults round the figure of Theseus at Phaleron and in his own deme Lakiadai, Sophanes of Dekeleia perhaps exploited the legend of Theseus’ capture of Helen. The early fifth century was a key period for reinterpretation and rationalization of mythical traditions in texts on local history. Mycenaean tombs could be rediscovered at any date, and not all offerings would leave archaeological traces. Thorikos’ sacrifices to Zeus Kataibates were presumably prompted by lightning-strikes, one of which may be mentioned in Aristophanes’ *Clouds* (l. 461). The special relation

65–6) and at Besa (*Agora XIX* P 5. 72–3, 75–6); the term *archégêtês* seems to be used of deme eponyms (cf. *SEG* 41. 21; ch. 31 n. 70); however, Phegaia terms Meneleos and Herakles *archégêtai* in *IG* ii² 1932 (ch. 24 n. 117).

⁶⁸ Akropolis: Erchia, Vanderpool 1965*a*; Lamptrai (Kiapha Thiti), Hagel and Lauter 1987, 1989; cf. (though much lower) Marathon, Plasi (Themelis 1974, 233). Tomb-cult archaeologically documented at Acharnai; literary references to heroes’ tombs (Kearns 1989) may indicate traditions arising from other discoveries. See Polignac 1995.

of Dekeleia with Sparta, based on the tradition that the deme and genos eponym Dekelos had helped the Dioskouroi in their search for Helen, may have been developed only in the 470s or 460s.⁶⁹ Skambonidai by c.460 has a deme programme of religious activities that seems to have had little or no local traditional basis. The major cults of Peiraios were fifth-century foundations.⁷⁰ Other demes may have taken on cultic responsibilities gradually, as the leading families in local *genê* died out, became impoverished, or moved to the city and began to neglect their rights and obligations. Demes, in most cases, were not developing a communal identity and pattern of collective activities in a vacuum, but in interaction with other groups that shared their territory—or a part of it—and had their own agendas. Balances of power shifted over time and were affected by conflicts and factional alignments, and by the success or failure of individuals and lineages. Initiatives and opportunities varied from deme to deme.⁷¹ It is a mistake to generalize. However, it may be worth pointing out here that one source of deme festivals seems to have been the festivals of the city. Demes ‘recognize’ that it is appropriate for them to celebrate on the occasion of city festivals (Skambonidai), or that local cultic activities are ‘related’ to city festivals (Dionysia, festival of Demeter, Plynteria); a new dialogue between countryside and city begins, of which theatrical performances at the Rural Dionysia are the clearest instance (n. 103). Initiatives could also come from individuals who became possessed or had dreams or visions, as in the case of Archedemos of Thera, who was ‘seized by the nymphs’ and made a garden and dancing place for a cave cult in Anagyrous (Vari),⁷² or the mother of Sostratos in Menander’s *Dyskolos* (260 ff.), who frequently made sacrifices in response to her dreams (ch. 12 s. ‘Women’).

Clearly the larger and older deme centres were more likely also to serve as phratry bases. Phratry documents from the countryside have been found at Dekeleia, Myrrhinous, Paiania, Kephale, Alopeke, Charvati, and Kypseli; horoi naming phratries as creditors suggest that there were phratries at Rhamnous and (?) in the Anavyssos area. The phratry Thymaitis was presumably based in Thymaitadai, and may perhaps have served more than one of the four villages of the Tetrakomoi (the others being Peiraios, Xypete, and Phaleron). The Dekeleia phratry included members of the deme Oion Dekeleikon, and the Alopeke phratry also had members in neighbouring demes, as well as members who had moved further afield

⁶⁹ See chs. 19 n. 39, 20 n. 46, and Humphreys 1999.

⁷⁰ See ch. 30 n. 12.

⁷¹ Cf. Geertz 1964, Geertz and Geertz 1975, for exemplary analysis of such articulations in Balinese villages.

⁷² *IG* i³ 977–80; Connor 1988*b*, Schörner and Goette 2004; Jim 2012; Graf 2013, 123–7. Archedemos did not start the cult (there is evidence of worship from c.600), but he probably made it more widely known.

before 507, including perhaps the Sounian members of the *genos* Salaminioi. Phratries are likely to have retained control of the altars at which they celebrated the *Apatouria* throughout the classical period, but some of them may in pre-Kleisthenic times have controlled other cults, responsibility for which in some cases passed sooner or later to the demes. This would perhaps be most likely to happen where there was a large overlap between deme and phratry membership; Rhamnous may be an example.⁷³ It is noteworthy that the sanctuary of Apollo Zoster in Halai Aixonides, which seems to have been managed by the deme in the fourth century, shows little sign of activity before c.500; it may never have been a phratry centre.

Even this small collection of examples illustrates the range of variations in the articulation of demes with phratries and *gene*. Aphidnai was a large deme on the northern frontier of Attika containing several constituent villages that retained a sense of independence, sold property separately in the public sale of (?) c.321,⁷⁴ and eventually became demes; two of these villages, Titakidai and Thyrgonidai, may have been the bases of the local phratry and/or *genê*. Another *genos*, the Gephyraioi, had become prominent in the city as a result of its relations with the Peisistratidai. Its prestige, and the peripheral position of Aphidnai and its villages, may have influenced the latter in their decision not to seek independent deme status. On the other hand, Kleisthenes' reforms encouraged the division into independent demes of other clusters of settlements—the Tetrapolis of Marathon, Oinoe, Trikorynthos and Probalinthos, the Tetrakomoi Peiraios, Phaleron, Xypete, and Thymaitadai, and some smaller groups. This did not put a stop to the activities of such local *amphiktyonies* (if any were destroyed by Kleisthenes' reforms, we would not know about them), but it encouraged a sharper division of financial responsibilities between their constituent demes, and may have accentuated other lines of cleavage created by phratry and *genos* affiliations.⁷⁵ Questions of articulation between demes and other bodies still seem to leave their traces in the politics of the early fifth century. When (as argued in ch. 20) Kimon incorporated the *Oschophoria*, a *genos* festival of the Salaminioi, into his cult of Theseus in the 470s, he strengthened in the large city demes Alopeke and Phaleron a group that had been weakened by the migration of many of its members to Sounion in the late sixth century, and had lost ground in Alopeke to

⁷³ See however ch. 31 n. 72.

⁷⁴ N. 62. Lambert 1997*a*, Stele II F 7 B, col. 2. 3–26, sales by the *komarchoi* (n. 89) of Hyporeia and Petalidai; ch. 31 n. 19.

⁷⁵ See ch. 24 nn. 47, 70, on Plotheia and Erchia and 26 n. 48 on Eupyridai. Probalinthos may have been in conflict with Marathon over access to the sea and control of the Herakleion; Phaleron may have been drawn away from the other members of the Tetrakomoi, to some extent, by rivalry with Peiraios and by its relations with the *genê* Phoinikes and Salaminioi and perhaps with the phratry based at Alopeke.

the prestige of the Alkmaionidai and of the Kallias/Hipponikos family of the Eleusinian Kerykes.⁷⁶

Demes were differentially affected by processes of migration that continued after Kleisthenes' reforms, as well as those that preceded it. An early process of migration from the city to the countryside had in the ninth to eighth centuries repopulated areas left empty after the crisis at the end of the Bronze Age; the leaders of this movement probably continued to look towards Athens as the prestige centre of the region, and the development of formal competition for political office in the seventh and sixth centuries had drawn many ambitious men back to establish themselves in or near the city.⁷⁷ A second outward movement took place in the second half of the sixth century, as the introduction of coinage and the discovery of sources of silver in south-east Attika encouraged settlement in the narrow valleys of that area. The growth of trade in the sixth century probably also encouraged internal migration to Phaleron and Piraeus. These two movements were still continuing at the time of Kleisthenes' reforms, and persisted throughout the classical period, as did the tendency of ambitious men in rural demes to move to the city, or at least acquire second homes there. Themistokles—who belonged to the *genos* Lykomidai, was a demesman of Phrearrhioi, and lived in the city, in Melite—perhaps illustrates this double movement of migration, his father having moved from the Phlya area (the *genos* base) to Phrearrhioi as a base for mining operations, which were successful enough for the son to compete successfully in politics and acquire a town house.⁷⁸ Purchase of land in the mining demes and of town houses in Piraeus and the city continued throughout our period; movement from the urban area to rural demes, and from one rural area to another, was rarer but by no means unknown. Surprisingly, we find upland Ikarion obliging resident non-demesmen to undertake choregiai in the later fifth century.⁷⁹ Both migration to the

⁷⁶ See the arguments in Humphreys 1999 and ch. 19 s. 'Oschophoria'. I recognize that parts of this reconstruction are built on thin ice. What I would stress here is that we should expect discrepancies in the boundaries of demes, phratries, and *genè*, migrations of phratry and *genos* members, and competition between leading families with varying sources of prestige, to play an important role in politics in the early decades of the deme system (cf. Sourvinou-Inwood 2011, 5).

⁷⁷ See the discussion of movements of *gennetai* in ch. 20 at n. 57. D'Onofrio 1995 remains valuable on migration.

⁷⁸ We do not know that Themistokles' father engaged in mining, but Themistokles was clearly well-informed about the discovery of new lodes of silver at lower levels c.483 (A.P. 22. 7). Again, I am more interested in probable patterns than in biographical facts. Family success in mining might explain the characterization of Themistokles as a *novus homo* picked up by Hdt. (7. 143).

⁷⁹ IG i³ 254, cf. P. Wilson 2015. There are a number of studies of internal migration in Attika, based on literary evidence and on tombstones: see R. G. Osborne 1985a (p. 60, Table 5), Damsgaard-Madsen 1988; Etienne and Muller 2007; C. Taylor 2011. They construct their own regional categories, which makes comparison impossible. It should be recognized that burial in the Kerameikos does not necessarily imply residence in or near the city, and (in studies of marriage) that some in-deme marriages take place between families from rural demes that form part of the same diaspora community in the city or Piraeus,

urban area and the purchase of rural land by outsiders evidently intensified during the Peloponnesian War. The wealthy young men condemned in 415 for mutilating Herms and parodying the Mysteries had property scattered both in Attika and overseas.⁸⁰

There was thus a range of variation from demes with a high proportion of incomers—metics as well as citizens in the case of urban demes, slaves in the mining demes—to rural demes that were much more homogeneous in population. There will also have been a difference between rural demes whose leading families had mostly migrated to the city area, keeping up at best a tenuous and intermittent participation in deme affairs—as we shall see, Paiania may be an example—and others in which there was a solid core of well-to-do resident demesmen (Rhamnous). Some demes were flooded with temporary visitors on the occasion of festivals: Eleusis is the most conspicuous case. A deme that put on theatrical performances for the Rural Dionysia could probably expect to draw part of the audience from neighbouring villages, and might well bring in playwright-producers and actors from outside. Most demes would probably have at least one assembly meeting in the deme, perhaps timed to coincide with a major festival,⁸¹ and could expect a fair proportion of non-resident demesmen to attend. However, a small deme like Philaidai, which hosted a major festival only once every four years (the Brauronia) may have been (at least from a man's point of view) a sleepy little place the rest of the time. A building programme could also create a period of heightened movement, bustle, and economic activity, both in the deme where construction was taking place and in others where high-quality stone was available.⁸² The regular presence of garrisons of epheboi and other troops became a significant element in the life of Eleusis, Peiraios, and Rhamnous; smaller detachments were also stationed elsewhere.⁸³

No deme in Attika could really be termed isolated. Demesmen served their term in the city as councillors, and travelled as hoplites or rowers; wealthy men

while some marriages between families from different demes are endogamous from the point of view of residential community. Osborne (*ibid.* ch. 6 and appendices 8–10) also studies land-ownership in the mining demes (cf. Bissa 2008). The stories of large slave forces owned by rich men in the 5th c. (Hipponikos, Nikias) may imply that there were fewer landowners in the mining area in that period.

⁸⁰ *IG* i³ 418–430; individual cases are discussed below under the owners' demes (see especially ch. 24 n. 32). The landowners among the accused had presumably already inherited from their fathers, but may also have acquired some plots themselves.

⁸¹ See below nn. 115, 117 on dates of deme meetings.

⁸² Quarries on Mt Pentelikon were exploited for marble used in city projects, but demand for stone was always erratic, and there was little attempt to exploit quarries systematically; hence the question of 'ownership' may not—*pace* Papazarkadas 2011, 229–30—have arisen. Good quality building stone was available in many parts of Attika, and deme projects mostly used local stone. See Goette 1991; ch. 30 n. 75. Tracy's work on stone-cutters shows that some of them worked for rural demes as well as carving inscriptions in the city.

⁸³ Whitehead 1986*a*, Appendix 6; see also Aphidnai (ch. 31 n. 20).

walked or rode to and fro between their town houses and country estates; poorer men, or slave mule-drivers, carried charcoal from Acharnai, firewood from Kytherros, salt and fish from coastal demes, and farm produce from all over Attika, to the urban area; pedlars and craftsmen travelled round the countryside. Wealthy young men went on hunting expeditions in the hills, and references to the game available in city markets suggest that hunting may also have been a profitable part-time occupation for poorer inhabitants of upland demes.⁸⁴

The individuality of a deme came from a combination of its topography and ecology, settlement pattern, cults, sacred and public buildings (on *leschai* see ch. 20 n. 3, 32 n. 98), inscriptions and monuments, myths, the occupations of its population, and the character of its leading families. Rhamnous has recovered some of its distinctive identity through excavation of the fortified town by the shore, the tomb-lined street leading from it to the temples of Nemesis and Themis, and the extension inland of this monumental road. At Halai Aixonides the layout was different: the deme's inhabitants lived in at least two separate hamlets, both separated from the coast by the lagoon from which the deme got its name, while its religious centre, used for the publication of deme documents and perhaps for deme meetings, was the sanctuary of Apollo Zoster on the narrowest part of the peninsula on the west side of the bay of Vouliagmeni, where the harbour would also have been (map, Goette 2001 fig. 51). There were also burials by the road from the settlements to the sanctuary. Ikarion, where archaeologists in the 1890s found the deme centre more or less untouched by post-classical activity, was situated on the north slopes of Mt Pentelikon; the centre of the settlement contained an area used for theatre performances (with a row of marble seats for dignitaries, probably donated in the fourth century), a colossal archaic statue of Dionysos, monuments commemorating choregic victories, and a Pythion, containing other monuments recording participation in ceremonial embassies to Delphi. The deme claimed that its eponymous hero Ikarios had learned to make wine from Dionysos and had introduced the drink to Attika, and also that the earliest Attic theatrical performances had taken place here. The settlement, scattered over the hillside above and east of the main square and along the Plotheia road, may have looked a good deal less formal in its layout than Rhamnous or even Halai. The main route across Pentelikon from the Athenian plain probably passed further west and north. Nevertheless, grave monuments were set up along the tracks that

⁸⁴ Xenophon, *Econ.* 11. 15–18; *Lys.* 1. 11, 20; R. G. Osborne 1985*a*, 16. Discussion of types of residence in rural areas—year-round home of proprietor, bailiff's house, temporary occupation—in R. Game: e.g. Ar. *Peace* 1149–50, 1195–7, 1313. Salt was not only produced in the two demes called Halai: see chs. 26 n. 90; Langdon 2010. Whitehead 1986*a*, ch. 11 collects references to deme products in comedy. *SEG* 35. 229/38. 51b, Timarchide[s] Anaphlystios on a tile at Rhamnous, a travelling craftsman?

linked Ikarion with neighbouring demes.⁸⁵ It may well have been normal to approach a deme centre along a road lined with tombs. On might also, however, see tombs perched above the road at conspicuous points in hilly areas, tomb-terraces on hillsides, or even walled enclosures not unlike modern cemeteries.⁸⁶

Family and community histories were embodied in the landscape. Classical Athenians were almost as distant in time from the oldest structures visible in Attika as we are from them, and had their own ways of domesticating the past. Hills, some perhaps with visible remains of Bronze Age settlement, might be reserved for the use of the gods (the Pagos and Polis at Erchia, Kiapha Thiti and Thiti at Lamptraí, perhaps the low mound of Plasi at Marathon). This was also, of course, the pattern in Athens itself. Primitive-looking archaic statues became a source of pride, as at Myrrhinous, and were repaired, as at Ikarion. The hero-tombs pointed out to Pausanias and other tourists had probably contained Mycenaean burials. Cult was attracted to peaks and caves by a numinousness we would class as natural; we would perhaps come closer to Greek culture by thinking of a felt affinity between the work of interpretation of the remarkable and the possibility of communicating with its level of reality (or indeed of telephone cable-posts in remote areas where mobile phone reception is poor).⁸⁷ Mines, too, received names linking them to the protection of deities and heroes, Artemis being considered especially appropriate.

Sub-settlements within demes, and even farms, had their own cults. Archaeological research has identified three settlement areas in Sounion: on the promontory, by the sanctuaries of Athena and Poseidon; in the Agrileza valley, exploited for silver and stone; and at Pasa Limani, perhaps the Porthmos where the *genos* Salaminioi had its cult of Herakles. The balance of population seems to have shifted between these settlements over time, Pasa Limani becoming more important in the Hellenistic and Roman periods, while the Agrileza valley probably reached its greatest density in the fourth century BCE; but even here, where the motives for settlement seem strictly economic, one of the farms had its own sacred calendar, and there surely must have been some cultic activity in the agora.⁸⁸ The use of *kômachidês* as a term of address for a country neighbour in

⁸⁵ For more detailed topographical discussion and references see e.g. chs. 24 n. 20, 29 n. 129. A good collection of air photographs in Vlachopoulos 2010. The Suda's statement (s.v. *Thespis*, 282) that Th. was a demesman of Ikarion probably derives only from an attempt to reconcile conflicting traditions on the origins of tragedy.

⁸⁶ Tomb enclosure at Anagyrous, Humphreys 1983a/1993, 100, fig. 2; terraces at Vari and Thorikos; conspicuous isolated tombs in Ikarion area (Buck 1892, 43, 50) and mining district (Salliora-Oikonomakou 1985, 132). For possible burial areas shared by demes cf. Paiania (ch. 25 n. 18) and Erchia (ch. 24 n. 67).

⁸⁷ Cf. ch. 14 n. 68 on communication-points for powers of the underworld.

⁸⁸ See below, ch. 26 s. 'Sounion'; on the movement of population centres over time, S. B. Sutton 1994. Multiple-centre demes: see also Prospalta ch. 27 n. 45; Kephale *ibid.* n. 53; Azenia ch. 30 n. 119; Atene ch. 32 n. 90; Phrearrhioi ch. 26 s. 'Phrearrhioi'; Halai Aixonides ch. 29 n. 129.

Aristophanes' *Peace* (1142) suggests that residential (political?) identity was often anchored in a hamlet rather than a deme-centre.⁸⁹ Villages and hamlets, too, may have varied in form, some clustering relatively tightly round a sanctuary or cross-roads, while others consisted of farmhouses spread out along a narrow valley or scattered over a small plain. Archaeologists engaged in survey work increasingly emphasize that all forms of settlement can be found in Attika, from an isolated building on an *eschatía*—at the end of the track, perhaps only used intermittently—to a densely-packed urban warren of streets.⁹⁰

Specialization also meant that the cultic map of Attika was a network of overlapping local *amphiktyonies*. Deme calendars not only show us that demesmen moved round their territory in the course of the cultic year, sacrificing to different gods in different sanctuaries; they also, explicitly or by their gaps and omissions, tell us that on various occasions demesmen left their deme, either to visit sanctuaries in neighbouring demes or to attend festivals in the city. Some deme texts might almost be classified as treaties, specifying the mutual obligations of the deme and the cult personnel of a sanctuary that it does not control (see ch. 25 n. 19 on *IG* i³ 250). 'Control' is perhaps in any case a misleading term. Sanctuaries were owned by gods.⁹¹ It was the responsibility of their mortal managers to see that priests or priestesses succeeded each other without any hiatus, that a regular pattern of sacrifices was kept up, and that perquisites from these sacrifices were duly apportioned. Groups responsible for management, in this sense, were hardly entitled to exclude outsiders from participation, and may well have had some ambition to attract visitors, if their funds could provide a sufficiently generous

⁸⁹ Cf. the division of Peiraios into triakades, 'thirties', in *IG* ii² 1214; N. F. Jones 2000; Kakavogiannes 2001 on the mining area. The term *kômarchos* is sometimes difficult to interpret, because it seems to have been influenced both by *kômê*, village, and by *kômos*, dance/revel (see P. Roussel 1941, and ch. 29 n. 28); however, the two meanings were probably linked because in demes containing more than one settlement centre demesmen would tend to group themselves by village and hamlet at festivals. We do not know whether the trikomai (and trikomarchos) of *IG* ii² 1213, found at Spata (Erchia) were subordinate hamlets of a single deme or separate demes. The dedication by an Acharnian komarchos *IG* ii³ 4. 234 seems to be related to a komos competition; see ch. 28 n. 28, on the absence of evidence for subordinate villages in this deme. Komarchos occurs as a personal name in *IG* i³ 1160. 8 (c.450) and elsewhere.

⁹⁰ Cf. R. G. Osborne 1992; Lohmann 1992a, 35–8; Lohmann 2010b; Steinhauer 1994a.

⁹¹ See the discussion of sacred property in Papazarkadas 2011, 240–3. The relation between sanctuaries and territory is more complex than some versions of Polignac's hypothesis (1984, revised 1994) suggest. Ritual boundaries shift over time (ch. 20 n. 20; Jameson 2004), and communities may reach out to centres of numinous energy beyond their borders before they (in some cases) appropriate them. In Attika there is considerable evidence of cultic activity in the 8th–7th centuries at peak sanctuaries (Langdon 1976), which can hardly have figured in territorial claims at that date, and attracted less attention in later centuries (although Erchia continued to send an annual deputation on Thargelion 16 to the sanctuary of Zeus Epakrios, probably on Hymettos, *LS* 18, E 58–64). In the emptier landscape of the early archaic period the counter-attractions of incorporated and unattached divine power may well have been more distinctly felt than in later ages (cf. Fowden 1988 for parallel phenomena in late antiquity).

supply of meat.⁹² In some cases neighbouring demes were expected to contribute: the small deme Plotheia (one councillor), which perhaps had its own sanctuary of Herakles and cult of Aphrodite, also made financial contributions for the Apollonia celebrated by the Epakreis, perhaps a local phratry, and for the Anakia, perhaps celebrated in the neighbouring deme Anakaia; in addition, contributions were sent to Athens for the Pandia, and to the centres where penteteric festivals were held; and a contingency fund was set up to cover any irregular demands, perhaps to buy victims for sacrifices made in crisis situations.⁹³ The expectation that many demesmen will travel to Athens or Eleusis for major festivals such as the City Dionysia and the Mysteries is also visible in calendars in cases where sacrifices in the deme before and/or after such festivals bracket a gap in which there is no cultic activity in the deme (cf. Mikalson 1977). Silences in calendars are as significant as prescriptions. For example, the absence of any reference to a local cult of Demeter in the Erchian calendar requires us to ask where Erchian women celebrated the Thesmophoria (more research on women's amphiktyonies is needed; cf. chs. 12 n. 31, 31 n. 50).

As I have argued elsewhere (Humphreys 2004, 134–5), the attribution of agency in the development of cult to the gods left space for negotiation in the relationship between cult activities at deme level and at 'state' level, with many of the initiatives perhaps coming from below. Collective participation by demes in city festivals is unlikely to have been regulated by law in any detail, if at all. Distributions of meat at the annual Panathenaia were made by deme, in proportion to the size of the deme's contingent in the procession; this arrangement probably relates not only to the variations in deme population but also to some freedom for a deme to determine the size of its contingent each year.⁹⁴ Such negotiation seems to be visible in the arrangements for celebration after 490 of the Herakleia at Marathon,⁹⁵ for payments to the sanctuary of Poseidon at

⁹² At the Apatouria each phrater was expected to travel to his own phratry centre, although there may have been some use of city altars (cf. ch. 19 n. 124). There was, however, no comparable festival for demes. Deme festivals varied in importance and in the number and size of sacrificial victims, some perhaps being attended only by the demarch, other officials, and a few cronies (R. Parker 2005a, 66), others more like rural fairs (P. Wilson 2012; ch. 25 n. 46).

⁹³ *IG* i³ 258, c.420; see ch. 24 nn. 47–51. Cf., for other examples of deme calendars including sacrifices made outside the deme, Thorikos and Erchia; deme calendars on Kos, Kokkorou-Alevras 2004. It seems conceivable that the 500 she-goats sacrificed to Artemis Agrotera on Boedromion 6 to commemorate the battle of Marathon (Xen. *Anab.* 3. 2. 12) had originally been contributed by demes in proportion to the number of councillors they appointed.

⁹⁴ *IG* ii³ 447. 50–53 (see Rosivach 1991); Whitehead 1986a, 137 assumes that the deme determined the size of its deputation. [Dem.] 44. 37 implies that a cash theorikon paid to Athenians who attended the Greater Panathenaia was distributed by demarchs (Whitehead 110 in my view misinterprets this passage, which surely does not refer to a formal deme assembly, but to an ad hoc meeting of a substantial number of demesmen in the city). Cf. *IG* i³ 82. 12.

⁹⁵ *IG* i³ 3; [*phylē*]s in l. 5 is restored but seems clearly right. Cf. ch. 31 n. 45. Aleshire 1994a points out the problematic character of the concept 'state cult'.

Sounion,⁹⁶ and for the use of the Nymphs' spring at Porto Loumbardo.⁹⁷ There must also have been consultation over the collection of the *aparchai* for Eleusis.

Demes may also have decided, or at least influenced, the selection of sanctuaries whose funds came to be stored on the Akropolis and managed by the Treasurers of the Other Gods.⁹⁸ It does not seem to be determined by fear of military attack; since we have other evidence that deme sanctuaries lent money in the fifth century,⁹⁹ it seems quite possible that demes (and/or other groups responsible for cult) had seen an opportunity in the state's need for cash, and had themselves decided to lend the money, which was being repaid but kept on the Akropolis for future use.¹⁰⁰

The variation in the relations of demes to other cult-managing bodies, which has already been noted, implied variation in their financial responsibilities and means of paying for them. We know very little about how demes initially built up capital. The most that can be said at present—based mainly on texts from Rhamnous and Ikarion—is that demes which in the fifth century took over management of local sanctuaries (perhaps because there was a large overlap between deme membership and membership of the body previously responsible) were able to increase their capital quite rapidly. Two factors perhaps contributed especially

⁹⁶ *IG* i³ 8. Sounion would be a convenient place for ships to wait out a strong Meltemi, either if they were headed from Athens out into the Aegean or if they had come south inside or outside Euboia and their destination was Piraeus. Athena may also have been concerned (l. 5). The names of the proposers of decree and rider (Kallimachos, Antibios) are not so far attested for Sounion, but this proves nothing about the source of the original initiative. Details of interpretation are controversial, but do not affect the point made here. R. Parker 1996, 149–51 points out that visiting ships would not all be Athenian. *IG* i³ 130, perhaps concerning a cult of Apollo at Phaleron, may be a parallel (ch. 31 n. 6).

⁹⁷ Porto Loumbardo: see Humphreys 2004, 135–6 n. 15; Bultrighini 2015. On the deme-affiliation of the bay see ch. 23 s. 'Lamptrai'. There was a large farm (?) and a small settlement on the east side of the valley (Lauter 1980), but the spring may not have been in sight of any residential community; the nymphs were expected to use their own powers (of possession) to enforce their rights (see Humphreys 1988, 470–3). Eleusis: *IG* i³ 78 = *IEleus* 28. See also ch. 28 n. 35 for Acharnai's appeal to Delphi in the 4th c. for support concerning innovations in its cult of Ares and Athena Areia; ch. 26 n. 48 for *IG* ii² 1362; and ch. 20 n. 69 for the tax for the cult of Theseus, collected by tax-farmers possibly from families claiming descent from Minotaur victims.

⁹⁸ Humphreys 2004, 137–9. Kennelly 2003 argues for a date after the Samian revolt; not 434/3. See also Samons 2000, 212–29.

⁹⁹ *IG* i³ 52 was found at Charvati, in the church of Agios Athanasios (see now P. J. Rhodes 2015); the same cutter inscribed *IG* i³ 255 (ch. 21 p. 767), 256 *bis* (Thorikos), and 258 (Plotheia), but also 1179, a casualty list found in the Akademy. Jameson (*per. ep.*, 1998) and Matthaïou (2005, 100) thought that there would have been two copies, one on the Akropolis and another perhaps in the sanctuary of Athena Pallenis (ch. 32 n. 40). However, stones definitely travelled from the city to the Charvati area (Goette 1998) and one does not see why a single extra-urban sanctuary should be privileged in this way. It is even possible (certainly for i³ 258, which is small) that a deme might get an inscription cut in the city.

¹⁰⁰ Cf. chs. 29 n. 127, 30 n. 11, 31 n. 6. Once instituted, these treasurers started to acquire other functions: they receive rent from the temenos of Neleus, Kodros, and Basile, *IG* i³ 84 (418/7). Collection of valuable objects in their care might also have developed after the use of coin for loans. Cf. Humphreys 2004, 138 n. 22.

to this increase: a tradition of *noblesse oblige* which encouraged office-holders to pay deme expenses from their own resources rather than use the funds made available to them, and a shortage of cash in rural areas which led relatively wealthy and ambitious men to take loans in order to pay for their expenses as trierarchs and choregoi, and for the other cash demands of city life.¹⁰¹ Plotheia (*IG* i³ 258) seems to have collected contributions from demesmen and built up funds that were used to defray the deme's obligations to other bodies, as well as its own expenses; one of these funds was actually called the *ateleia* (freedom from dues) fund. This deme also received income from rents, either of land attached to sanctuaries or of land that had been pledged as security by borrowers who were unable subsequently to pay off debts; however, it is noteworthy that on present evidence, such as it is, we have more testimony of demes drawing revenue from cash loans than from land in the fifth century, while in the fourth century the balance is reversed.¹⁰²

Starting from varied bases, demes also reacted in individual ways to new opportunities for collective activity that presented themselves during the fifth century. Imitation at the Rural Dionysia of the dramatic performances staged in the city seems to have started near the beginning of deme existence at Thorikos, where the retaining wall of the theatre area is dated to the early fifth century; Ikarion too must have had dramatic performances from early in its existence as a deme, even if we reject its claim to have preceded the city itself in staging tragedies. The fashion spread, perhaps only gradually, to a number of the larger demes, though by no means all of them; many of these, however, perhaps staged performances in the deme agora, with temporary seating for spectators. Purpose-built deme theatres may have been relatively rare.¹⁰³ Theatrical performances are likely in some cases to have increased interest in deme heroes whose stories figured in them: Kephalos is the obvious example. This is a clear field where dialogue took place between city culture and local culture; it is sometimes hard for us to

¹⁰¹ See ch. 24 n. 24 on Ikarion and ch. 31 s. 'Rhamnous' on Rhamnous. They may have taken over management from locally-based phratries (it is also not inconceivable that in some cases sanctuaries had been managed by naukrariai, or that some *genê* voluntarily transferred financial management to demes, while perhaps retaining rights to priesthoods). Cf. also ch. 24 n. 89 on Kydantidai (*IG* i³ 247), ch. 29 n. 51 on Sypalettos (i³ 245); V. Chankowski 2005.

¹⁰² It is unclear whether the practice of dividing deme funds among a number of individuals or boards as managers (see Jameson 1982; Papazarkadas 2011, 115) is in any way related to the structure of the demes concerned and their articulation with other bodies that had claims on sanctuaries, or was merely a security precaution. See Plotheia (ch. 24 at n. 47), Kytherros (Table 25.4), Erchia (ch. 24 n. 70), Athmonon (ch. 29 n. 66), and Rhamnous (ch. 31 n. 77).

¹⁰³ On the evidence for theatrical performances at the Rural Dionysia see Whitehead 1986*a*, 212–22; Pickard-Cambridge 1988, 42–56; Csapo and Slater 1995, 124–32; A. Martin 1995; Csapo 2010*a*, 2010*b*. Add to Whitehead's list Lamptraï (*IG* ii² 1161), Euonymon (ch. 23 n. 5), Myrrhinous (ch. 25 n. 46), and Halimous (ch. 26 n. 12). Kollytos (ch. 24 p. 848) is the only urban deme (apart from Peiraios) for which performances are attested. On funding see P. Wilson 2010*a*; note the guardian's claim in Lys. 32. 21 to have provided a sacrificial lamb for himself and his wards at the Dionysia.

decide whether choregic monuments set up in the demes record victories won in the deme or in the city.¹⁰⁴

Ambitious choregoi in the demes evidently tried to attract well-known playwrights and actors for their productions, and this is likely to have encouraged some variation in the dates on which demes celebrated their Dionysia. Dates in any case need not have been closely fixed, until or unless they were specified in a written deme calendar; there were some obvious advantages to flexibility in deciding the date of outdoor theatrical performances in the month Posideion (December–January). Thus, when the influence of the city and the desire to attract non-resident demesmen (and non-demesmen) led in some cases to a fixed date, the dates chosen varied. Myrrhinous had a deme meeting to deal with business arising from the Dionysia on Posideion 19; Ikarion possibly held its equivalent meeting two days earlier.¹⁰⁵

Greek religious festivals were not like saints' days, their dates fixed by a central church authority. Some of them were tied to the order of months because months were named for them, but even here there are some variations between one polis and another in the location of months in the solar year (ch. 18 n. 56). The construction of a central Athenian calendar with fixed dates for festivals did not automatically provide a model for the demes (or the communities from which they emerged), because the central calendar produced centrifugal as well as centripetal impulses. Major city festivals tended to displace the corresponding deme celebrations. Erchia sacrificed to Dionysos and Semele on Elaphebolion 16, just after the City Dionysia; Thorikos' sacrifice to Demeter in Boedromion was presumably connected with the Mysteries, celebrated on Boedromion 13–23, but may not have coincided with them. The Erchians went to Athens on 12 Metageitnion, very probably for a deme assembly, and sacrificed there to Demeter, Apollo Lykeios, Zeus Polieus, and Athena Polias; the Eleusinia may have begun on the following day.¹⁰⁶

Differences of scale between Athenian and local celebrations may also have led to creative reinterpretations and modifications of the latter. The Plynteria, celebrated in Athens on Thargelion 25, occurred in Thorikos in the following month,

¹⁰⁴ See Anagyrous (ch. 23 n. 53); Eleusis (ch. 30 n. 69); Csapo 2004, 57–66, 2010*b*.

¹⁰⁵ Myrrhinous, *IG* ii² 1183. 36–7 (P. Wilson 2012); Ikarion, *IG* i³ 254. 28, 7th, 17th, or 23rd (month is uncertain; ch. 24 n. 29). *SEG* 43. 26 B was probably passed at an equivalent meeting in Acharnai. Plat. *Rep.* 475d does not necessarily imply visits to more than one Rural Dionysia per year. See Csapo and Slater 1995, 124–32; P. Wilson 2010*a*, 39.

¹⁰⁶ See discussions of individual demes; also ch. 31 n. 50, for sacrifices 'before' (*pro*) the Mysteries and Skira, and the sacrifice of a black goat to Gê on the first day of the City Dionysia. Cf. Mikalson 1977, and objections in Whitehead 1986*a*, 187–8 n. 63. I would not claim to find a 'clear pattern' of avoidance by demes of major city festival dates (in any case, one would expect topography and history—of both festivals and demes—to affect any pattern); I am concerned to identify factors that generated variation in deme calendars.

Skirophorion; Erchia too may have celebrated local Plynteria, on Skirophorion 3. The festival linked the purification of sacred space to the turn of the year, both solar and civic; sacrifices were made to Athena and Aglauros, the latter associated with epheboi as well as with the cult of Athena on the Akropolis. In Athens the tabooing of the Akropolis and the cessation of public business is likely to have made the ritual seem more gloomy and awesome than in a village, where the separations of sacred and secular, public and private space and roles were less marked. At Thorikos, the euthynos and paredroi appointed to examine the accounts of outgoing magistrates swore their oath at the Plynteria; the sinister associations of the festival, even if more marked in the city than in the deme context, may have influenced the choice of date.¹⁰⁷ The recognition that local and city festivals are ‘the same’ does not necessarily lead to conformity in date or in all details of ritual, but to a process of dialogic innovation.

A similar process may perhaps be seen, at least in some demes, in the case of the festival variously called *Prérosia*, *Plérosia*, *Proérosia*. *Proérosia* is the term used in the fourth-century sacred calendar from Eleusis; the hierophant and a herald formally announced the festival on Pyanopsion 5, and it probably took place on the following day. The forms *pro-érosia* or *pro-éresia* were interpreted as ‘before the ploughing’; in the Lykourgan period Athens claimed that the initial sacrifice, in mythical times, had averted plague from the Greeks. The sacrifice at Eleusis may (as is usually assumed) have been associated with the ritual ploughing of the ‘Rarian field’; however, we should not assume that a link with ploughing was self-evident or accepted by all groups in Attika. Names, dates, and deities all varied. Paiania celebrated Prerosia in an Eleusinion (possibly that of the city) early in the Attic year, offering a ‘prerosia-beginning’ lamb to Daira, an adult female prerosia-victim, presumably to Demeter, a male piglet, and two pigs, one male and one female, ‘for the prerosia-barley’. Myrrhinous, in the late fourth century, sacrificed Plerosia [*sic*] to Zeus on the fifth day of an early month in the year (Metageitnion?) and held its main deme assembly, at which the meat was distributed, two days later. Thorikos seems to have sacrificed Prerosia in Boedromion (possibly also in Hekatombaion), the recipient being (?) Zeus Polieus, perhaps in associations with Kephalos and Thorikos. My suspicion is that the Prerosia, perhaps once a festival of the beginning of the phratry year held early in Pyanopsion, while at Eleusis it had kept this date and accumulated agricultural associations appropriate to the cult of the two goddesses, had in some demes kept its association with turn-of-the-year assembly meetings and had thus

¹⁰⁷ IG i³ 256 bis (SEG 33. 147). Cf. Humphreys 2004, 162 n. 80; R. Parker 2005a, 479; Sourvinou-Inwood 2011, 135–40; Burkert 1970b on turn-of-year purification festivals and the myths associated with them. There may also be an association between Aglauros and preparations for the admission of new epheboi, who would perhaps already swear an oath in the precinct of Aglauros after parading before the Council (n. 45 above; Siewert 1977; ch. 21 n. 69; cf. R. Parker 1996, 253–4).

moved to earlier months; the form *Plérosia*, related to the adjective *plérês*, ‘full’, might derive from an association with assembly meetings, as a corruption or, from the point of view of its users, correction based on folk etymology, and Zeus Polieus might replace Demeter, as a more appropriate patron of assemblies.¹⁰⁸

It will be clear from the above discussion that demes did not all hold their assembly meetings on the same dates; nor, presumably, did they all hold the same number of meetings in a year. There were some uniform constraints: every deme had to produce a panel of potential councillors before the final steps in the process of selecting and approving the new year’s Council were taken; appoint a new demarch; and scrutinize the year’s eighteen-year-olds before they appeared in front of the Council for their dokimasia (probably in Boedromion).¹⁰⁹ Most if not all demes will have had some procedure for scrutinizing and approving the accounts of outgoing deme officials. Variation was introduced, in the first place, by size; all these tasks took longer in a large deme than in a small one. Furthermore, additional tasks were introduced, on an ad hoc basis, in response to crises and problems as they arose. Demes decided to impose oaths on office-holders, divide responsibilities by appointing treasurers, secretaries, or other officials in addition to demarchs, call extra meetings to deal with specific matters (such as the Rural Dionysia), etc.¹¹⁰

Scrutiny of new members and elections seem to have taken place at the same meeting in Leukonoion, but not in Otryne, where the election meeting took

¹⁰⁸ Eleusis: *IEleus* 175. 3–7; cf. N. D. Robertson 1996*a* (probably not a deme calendar, ch. 30 n. 70). As R. Parker notes (1996, 47), ‘announcing’ may be a survival from a period when the festival did not have a fixed date; id. 2005*a*, 198 n. 23, proerosiai in demes only after the Eleusinian one (I am not so sure). However, I resist the view that the agricultural associations of the festival are primary. Festivals mark conjunctures in time (social, agricultural, astronomical); if these conjunctures are destabilized, groups may vary in their reactions. Eleusis propagated agriculturalizing interpretations of ritual, which were subsequently incorporated into the discourses on primitive religion of Greek rationalists, Christian polemicists, and 19th-century anthropologists. See Humphreys 1993, xxiii–xxv; 2004, ch. 5; Foxhall 1995*b*. In Peiraios (*IG* ii² 1177) the *Plerósiai* [*sic*] is a festival of women, dated after the Thesmophoria if the order in the text follows the calendar year (but see ch. 30 n. 6). Interpretation of the Paiania text *IG* i³ 250 is very problematic. Threatte (1980, 479–80) does not find any certain examples of R–L dissimilation, and doubts if Plerosia and Prerosia are related; my assumption of a folk-etymology connection may mitigate this difficulty. Cf. Humphreys 2004, 142–4, 157. Paiania, *IG* i³ 250; Thorikos, *IG* i³ 256 *bis*. Zeus: however, in Lykourgos F XIV 4 Conomis 1970 and in Harpokration (Dindorf 1853, II p. 3) *ton Dia* is (rightly) emended to *tēi Dēōi*.

¹⁰⁹ The date of the beginning of the Council year fluctuated (between Skirophorion and Hekatombaion, P. J. Rhodes 1972, 224) until ? 407/6 (Pritchett 2001, 181), when it was tied to the lunar year. It should not be taken for granted that all demes held assembly meetings to select potential councillors; possibly a deme oligarchy might organize this without a formal meeting. Aixone appears to have held an *agora kyria* towards the end of the archon-year, *IG* ii² 1202 (ch. 29 n. 114). See also A. Chankowski 2015.

¹¹⁰ See discussion of variation in the number of deme officials appointed, and their functions, in Whitehead 1986*a*, 139–47 (add tamias and epimeletes of the Dionysia in Acharnai, *SEG* 43. 26). Some of the named offices in his list pp. 140–3 were only filled on an ad hoc basis (syndikoi, horistai), as were kleteres (cf. ch. 21 n. 86). For paredroi, associated with euthynoi in Halai Aixonides (*IG* ii² 1174) and Thorikos (*SEG* 33. 147) see Whitehead 117–19.

place before the Panathenaia and the introduction of new members after it.¹¹¹ Erchia, which probably held its election meeting in the city on Metageitnion 12 (see below), may perhaps have admitted new deme members on Skirophorion 3, on which date Aglauros received a sacrifice.¹¹² The speaker of Lysias 21 was admitted to his deme early enough in 411/0 to be appointed choregos.¹¹³ Thorikos, which held a meeting in Skirophorion at which an oath was administered to the deme euthynos and his paredroi, seems to have held another meeting in Metageitnion at which they presented their findings, and may have had further assemblies in Hekatombaion(?) and in Boedromion on the days on which the deme sacrificed Prerosia (in Boedromion to Zeus Polieus). We do not know the date of admission of new candidates; elections presumably took place in Hekatombaion at the latest.¹¹⁴ Halai Aixonides conducted euthynai in Hekatombaion; Ikarion granted honours to an outgoing demarch c.330 on Hekatombaion 10; Peiraios, Eleusis, Aixone, and Kytherros all received rent payments in Hekatombaion, probably at assembly meetings. On the other hand, Eleusis held its election meeting in 331/0 in Metageitnion, in the Theseion in the city, and the rent payment for the quarry of Herakles was to be paid on that occasion; Prasiai collected a rent payment on (?) 6 Metageitnion, and had an election meeting in that month; Erchia's sacrifices in the city on 12 Metageitnion may well have been associated with an election meeting held there. The advantage of meeting in the Theseion was that the allotment machines located there could be used for sortition.¹¹⁵ The diapsephisis in Halimous in 346/5, which was

¹¹¹ Otryne (1 councillor), [Dem.] 44. 35–7, see n. 54; Leukonoion (3 councillors) Is. 7. 15, 26–7. The speaker's adoption was approved by the phratry at the Thargelia of (?) 354; he subsequently left Attika to take part in a Pythais to Delphi. During his absence his *pater* informally announced the adoption to the deme, and it was subsequently ratified at the deme's election meeting, by which time the speaker may have returned. Although both cases were adoptions, the deme's vote seems to have taken place at the meetings when the deme also voted on 18-year-olds. Cf. ch. 19 at nn. 140–2.

¹¹² Ch. 24 s. 'Erchia'.

¹¹³ Lys. 21. 1 with *APFD* 7. *A.P.* 56. 3 lists the appointment of choregoi for drama as the archon's first duty in the year after his initial proclamation, but this does not necessarily imply that choregoi were appointed at the first assembly meeting of the year. The speaker of Lys. 21 entered his deme, he claims, just after the rule of the 400, in the archonship of Theopompos (411/0), when there may have been procedural irregularities; the oligarchy lasted through the first two months of 411/0 (*A.P.* 33. 1).

¹¹⁴ *SEG* 33. 147. The ox sacrifice to Thorikos in Maimakterion may also have been associated with a deme meeting.

¹¹⁵ There is no guarantee that meeting dates given in deme documents never changed, although several of the dates given below (more often by month than by day) were intended to be valid for the foreseeable future. Dates of rent payments were variable, but at least sometimes linked to deme assemblies or festivals (Papazarkadas 2011, 116–19; see also Pernin 2014); there would be some advantage for lessees, demarchs, and the deme in having payments made before numerous witnesses at a deme assembly. Halai: *IG* ii² 1174. 10–12; Ikarion, *SEG* 22. 117. Rents: Peiraios, *IG* ii² 2498, Hekatombaion and Poseideion (Papazarkadas, 121–2); Eleusis, *IEleus* 176, perhaps Hekatombaion 10 (Poseideion 10?), Mounichion ? 10, Elaphebolion 8 (but see ch. 30 n. 84, on the problems of interpreting this document, which may not

conducted at a meeting in the city at which other business was also transacted, may have taken place at an election meeting.¹¹⁶

An air of formality could be conferred on deme assemblies by holding them in the city, in a public space where the machinery of democracy was available for use; on the other hand, demesmen resident in the deme—including, perhaps, the demarch—may have been reluctant to travel to the city for meetings. The balance between the competing attractions of deme and city will have varied according to the distance between the two, date (before, during, or after the Peloponnesian War), the season, and the occasion of the meeting—meetings associated with the Rural Dionysia were no doubt always held in deme theatres, and other deme meetings may well have been timed to coincide with local festivals.¹¹⁷ At local meetings associated with festivals it may have been difficult to achieve a level of formality comparable to that of the public sphere in the city. For city-dwellers, such festivals were occasions for country outings with children or grandchildren. In Menander's *Sikyoniōs* (183–92), Bleps introduces the plot by explaining that he was on his way to his deme, Eleusis, ‘to find a demesman who would be sacrificing a skinny little ox and getting criticized by those entitled to a share’, when he ran into a crowd gathered round a girl: ‘all at once it turned into a deme meeting.’ An interesting argument could turn a milling crowd of festival-goers into an assembly; conversely, there might well be a danger at local assembly meetings that those not interested in the business under discussion would drift away.¹¹⁸

It is important to recognize that until honorary deme decrees became commoner (in the Lykourgan period) all record of deme decisions on stone was initiated by crisis; the resulting documents represent attempts to institute formal procedures and regularities that had previously been absent, or had lapsed. Deme documents arise from disorder and conflict and project utopian visions of order.

be a lease); Aixone, *IG* ii² 2492; Kytherros, *IG* ii² 2496, Hekatombaion and Poseideion; Eleusis quarry, *IEleus* 85. 27–8; Prasiai, *IG* ii² 2497, Metageitnion 6 and either Mounichion or Thargelion; *SEG* 51. 153, Metageitnion, at election meeting. Payments in Poseideion may have been made at meetings connected with the Rural Dionysia; cf. *IRb* 180. 13–15 with *SEG* 54. 239 (Rhamnous; payment to *ς[yllogo]ς*, cf. Papazarkadas 2011, 117 n. 81). Rent payment in Teithras in Elaphebolion, *SEG* 24. 151. 32–4. with Behrend 1970, 79. Theseion: see Makres 2014.

¹¹⁶ Dem. 57. 9; the speaker tries to suggest that this other business was unnecessary, but we need not believe him. A large deme would have had to hold extraordinary meetings for this scrutiny of all members, but small demes need not have done so.

¹¹⁷ See ch. 27 n. 71 on Thorikos.

¹¹⁸ Ethnographic films of ritual illustrate the varying rhythm of attentiveness of participants; the discipline of the Protestant church service is cross-culturally very peculiar. Country outing: Is. 8. 15–16. At the Halimous diapsephesis meeting, demesmen who had been scrutinized left before the meeting ended (Dem. 57. 10); presumably parents and kin of boys being admitted to the deme might do the same once their own candidate had passed. Small demes were thought to be easily bribeable (Whitehead 1986*a*, ch. 11 and index s.v. ‘bribery and corruption’ and ‘intimidation’); low turnout and manipulation of agenda order, as well as size, may have played a role.

Hence the survival or absence of written texts is not an index of the regularity of deme activity, but of irregularities.¹¹⁹ Even honorary decrees in some cases demonstrably represent action or generosity going beyond the normal call of duty.¹²⁰ The relation of deme documents to crisis is most explicitly displayed in the dossier from Halai Aixonides (ch. 29), but the detailed regulation of the conduct of euthynai at Myrrhinous surely indicates similar problems; Aixone's decree about payments for pasture rights specifies procedures for dealing with disputes. Local sacrificial calendars also illustrate the utopian aspect of deme legislation, reassuring both gods and men that in future all obligations will be regularly met; this utopian impulse is also shown by deme leases, which specify in minute detail how deme land is to be farmed.¹²¹

In addition to providing glimpses of conflict within demes, and images of deme procedure as demesmen would have liked it to be, deme inscriptions also provide valuable prosopographical information, which in some cases allows us to deduce relative datings and, with the help of other prosopographical data, reconstruct deme factions and the ties of kinship and affinity that linked their members.¹²² Prosopographical analysis also enables us to go some way towards reconstructing, at least for the wealthier families, patterns of residence, property-owning, and economic activity in the deme, in the city, and elsewhere in Attika; the choice of burial-place, in the deme, in the Kerameikos, or elsewhere (n. 79);

¹¹⁹ Cf. Whitehead 2010. The same is true of written law in other contexts: see Humphreys 1991, 17; Hölkeskamp 1992. Of course the survival of deme texts is affected by patterns of excavation, re-use of stones, etc. But we should not assume (especially for any period before the 330s) that demes routinely published texts on stone. Moreover, it is probably not accidental that deme accounts on lead and stone are inscribed only for a few years. See J. K. Davies 1994*a* on the publication of accounts on stone by boards of city magistrates, and the exceptional character of the confiscations of 415 and 402/1 in the records of the poletai. It is also important to remember Andreades' fundamental observation (1933) that the normal procedure in public finance was to earmark specific sources of revenue for particular boards and expenditures. A form of accounting different from the normal presentation of euthynai was perhaps more likely to be adopted if money was diverted from one sphere of activity to another, as in the loans of temple funds to the Athenian state in the 5th c.

¹²⁰ Representing the deme in a court case (n. 31), *IG* ii² 1197 (Aixone, c.330), 1205 (Epikhephisia, late 4th c.); replacing demarch, *SEG* 2. 7 (Halimous, early 320s, ch. 26 n. 21); extraordinary expenditure, *SEG* 24. 153 (Teithras, mid 4th c.), *SEG* 22. 116 (Melite, c.330, ch. 29 n. 3).

¹²¹ Leases have been studied for their evidence on law (Behrend 1970), and on agricultural practice (Jameson 1982, 1987; Burford 1993; Pernin 2014), but not for their place in the history of writing practices. On present evidence there are no obvious precedents in more central organization, although it is possible that Teithras' decision to list all its perpetual leases (*SEG* 24. 151–2) was influenced by the compilation of a similar list for its tribe Aigeis (*IG* ii² 2490, see ch. 21 at n. 138); detailed specifications occur in city building contracts but not, so far, in leases of land by the poletai. Papazarkadas 2011, 59, suggests that 10-year leases in demes were imitating state practice (but not all demes did this).

¹²² As will be seen below in the case of Halai Aixonides (ch. 29 s. 'Halai Aixonides'), the absence of names from lists where one would expect to find them has to be taken into account in setting documents in chronological order. On evidence for intra-deme conflict from curse tablets see chs. 23 n. 76, 24 n. 97. Scheid-Tissinier 2011 uses only literary evidence.

marriage within or outside the deme, both among deme residents and among those living elsewhere; and the relation between such patterns and political activity, both at city and at local level.

In the following chapters I examine deme documents, archaeological evidence, and prosopographical data, tribe by tribe and deme by deme. The deme was a part of every Athenian's identity, in the sense that his demotikon, his deme-affiliation, was part of his name. It was the place where he lived, or where his forefathers had lived: a familiar, distinctive conglomeration of buildings, open spaces, and significant landmarks, each of which set off trains of association with families, events, gods and myths, or personal experiences. In the larger demes, one would not know all one's fellow-demesmen; but one recognized the deme notables, one was close to one's own age-mates,¹²³ one was linked to networks of kin and affines, of neighbours, or men with whom one had served on the Council or on campaign. Many Athenians slip through the coarse mesh of our processes of retrieval, appearing in our records only once, or not at all. Nevertheless, it is possible by detailed analysis to recover something of the significance of kinship in the local community, something of the dialectics of local residence and migration, higher and lower status, physical setting and personal careers, from which the individual character of each deme emerged, and which contributed to changes in that character over time.

¹²³ For example, in Plato's *Laches* 180d–e, Lysimachos does not know Sokrates, but was an age-mate of his father.

I Erechtheis

In the city trittys, Euonymon is firmly located in the area of Trachones, and Lower and Upper Agryle are approximately located east of the city and south of Ardettos. In the inland trittys, Kephisia is firmly located in the area that still bears its name. The coastal trittys of Anagyrous and Lamptraí stretched, it is generally agreed, along the coast from Vari to Porto Loumbardo, and inland as far as Lambrika; there is, however, still some disagreement about the precise location of deme centres and hamlets, and the division of the area between the two demes. The location of the smaller demes in this tribe is less certain. Kedoi is placed by Traill (1986, 125) at Kareia; however, the decree *IG ii² 1212*, which awards crowns of 1000 drachmas each to two benefactors, must have been passed by a large group. If it was indeed found at Kareia, it may have travelled there from Trachones or elsewhere.¹ Milchhöfer's suggestion that Kedoi should be located in the area of Lambrika (where *IG ii² 6383* was found) should not be ruled out. Traill places Upper and Lower Pergase in the inland trittys, west of Kephisia, but this location—like many others—is influenced by the belief that Kleisthenes both intended his trittytes to be more or less equal in population and had relatively accurate ideas about the number and size of settlements in each trittys area. If, instead, we think that villages and hamlets could choose whether to assume deme status, and that there was some flexibility also in the definition of trittys boundaries, it becomes conceivable that Kephisia turned out to be a smaller deme (and trittys) than anticipated, but that this was compensated by the unexpectedly large size of Euonymon and Lamptraí.² In any case, presuppositions about trittys equality do not seem to be a very safe guide to deme location. The other evidence for the location of Pergase consists only of the complaint of Demosthenes of Aphidnai in Aristophanes' *Knights* (321) that he was swimming in his shoddy new footwear before he got to Pergase; this indicates a site

¹ See Whitehead 1986*a*, 392 no. 135. This may not be a deme decree, and Eliot (1962) states that it was found in the neighbourhood of Vari (but cites no evidence; see Matthaiou 1999 on the various areas designated by this term). Pittakes attributed it to Kareia. Stones accumulated on the Louriotis estate, at both Trachones and Kareia, some from as far afield as Aixone (*IG ii² 1196–7*, 1200): see Eliot, *op. cit.*, Matthaiou 1999, and below, n. 14.

² However, if Lambrika had been expected to join Sphettos in the inland trittys of V Akamantis, we might have to abandon Milchhöfer's suggested location for Kedoi (in any case, the report of Langdon 1988 discourages hopes of finding another deme-site in this area).

north or north-east of the city, but the joke is not improved by assuming that he was halfway home before he noticed the problem. A suburban site on a route taking him east of Lykavettos and Tourkovouni fits this passage better.³ This area would also be a possible placing for Themakos, given the location of the properties of Pherekles of Themakos in the late fifth century, although admittedly he had widespread interests (see below in section *Themakos*). About Phegous, Pambotadai, and Sybridai we can only say that the two latter may have been neighbours, since they seem to have alternated in supplying a councillor.⁴

In the discussion below, I have grouped all these small demes at the end of the city trititys.

CITY TRITTYS

Its name was perhaps Euonymeis; we have no specific evidence, but in terms of size Euonymon, with ten councillors, was certainly its dominant deme.

Euonymon

Finds, including the deme's theatre, have been reported from the centre of the old Louriotis estate at Trachones (with the chapel of Eisodia Theotokou). Geometric graves have been found in the area, and a riverside building, perhaps public in function, has been reported from the *revma* about a quarter-kilometer east of Trachones; a fourth-century fountain may also belong to this deme.⁵ Euonymon burials were also found on the site of the Elleniko airport.

³ This point was already made by Milchhöfer 1892; cf. also Stanton 1984*b*, 32 (*SEG* 34. 208). Tombstones do not help. In *IG* ii² 7205, found (in re-use) at Varibopi, the demotic is restored on the assumption that the —phemos son of [Kephi]sodoros commemorated here was related to Antiphemos son of Thersias of Pergase, ephebe in 333/2/1 (*IG* ii³ 4. 336), but the name Antiphemos also occurs in Eiresidai, while there was a Lysiphemos in Erechtheis in the 5th c. (*IG* i³ 1191. 12). *IG* ii² 7213 was found at Menidi.

⁴ We do not know that such arrangements were based on contiguity; see ch. 24 on Ionidai and Kydantidai. *SEMA* 541, a Pambotadai tombstone, was found at Draphi, on the southern slopes of Mt Pentelikon, but this can hardly have been the location of a deme of Erechtheis; *IG* ii² 7141, of the same deme, is said to be from Chasani, near Trachones (*KvA* IV/VIII), under the old airport (where the Halimous deme decree *SEG* 2. 7 was also found); *SEMA* 543 (Hildebrandt 2006 no. 147) belongs to the same family, Apollodoros son of Opsiades I P. with his three sons Opsiades II, Hyperbolos, and Pythodoros (Hyperbolos was still alive as ephebe in 333/2/1, *IG* ii³ 4. 336); this may suggest a more plausible location, in terms of general area, but isolated finds of tombstones even of the classical period prove nothing (later stones should in my view be completely disregarded in discussions of deme location). *Mes.-Arg.* 267 says that Sternizes, W of Lambrika, has been suggested as a site for Pambotadai or Kedoi, but it may be too close to Lambrika. (Lauter 1993 suggested putting Pambotadai at Thiti.) Stanton 1994 has Pergase and Sybridai inland, Kedoi and Pambotadai coastal.

⁵ Geom. graves, Geroulanos 1973 (cf. 1981), with useful maps and information on Louriotis estate (see also Eliot 1962, 8). On the theatre (still not fully published) and other finds see Van Looy 1994, with

The association of the Trachones theatre with Euonymon is assured by the discovery of the dedicatory inscription of Olympiodoros II son of Diotimos II; there were also inscribed marble seats (Goette 2014), and a deme decree of (?) 313/2 (Steinhauer 2007, *SEG* 57. 125). A relief from Trachones representing De[mos?] crowning an honorand may belong to another deme decree, perhaps even the decree referred to in a city dedication by [?Char]inos son of Charon[ides] of (?) Euonymon, but several uncertainties are involved. We do not as yet have other evidence of deme activities.⁶ The tradition that the deme's eponymous hero Euonymon was the son of Kephisos was evidently post-Kleisthenic, based on the tribal association of Euonymon and Kephisia. No deme cults other than that of Dionysos, associated with the theatre, are known at present.⁷

With the exception of these dedications, the evidence for the activity of prominent families in Euonymon leads away from the deme. Olympiodoros' family, which had been

photo p. 29; *AD* 46 B I, 1991 (1996), 62–4; Goette 1995*b*, 2014; Tzachou-Alexandre 1999. The theatre area had two colossal archaistic statues of (?) Dionysos (Tzachou-Alexandre 2007), and a Hellenistic skene; it was abandoned during the second half of the 3rd c. There was 5th c. material on the site, and the stone theatre of the late 4th c. (2500 capacity, Kaza-Papageorgiou) was probably preceded by wooden structures. For material from Euonymon and neighbouring Halimous see Kaza-Papageorgiou 2006; ch. 26 n. 11–12. G. Finlay (quoted by Matthaïou 1999, 150) reported remains of a temple on Mt Pani, c.1 km SW of Trachones village.

⁶ If the name of the demarch of 313/2 honoured in *SEG* 57. 125 is correctly restored as [Ktesi]kleides, he was a kleruch on Samos in 346/5, *IG* xii 6. 261, cf. 262 I 11. Relief, M. Meyer 1989*a* A 182. [Char]inos: *IG* ii³ 4. 61 from the Street of Tripods, records that he was crowned by his fellow-councillors and by his *d[emotai]*. The restoration of name and demotic derives from the appearance of (1) [Cha]rias son of Charonides of Euonymon in *SEG* 18. 36 A 462 (manumitting a slave resident in Peiraios) and (2) a Charinos son of Charonides in a list of dedications made by theoroi sent to the oracle of Ammon in Libya (*IG* ii² 1642 = *SEG* 21. 562. 36). However, the dates of these theoriai are quite uncertain (see below, n. 31). The strongest link in this chain of reasoning is the rarity of the name Charonides; nevertheless, there is no reason to attach Charonides son of Pank—, who participated in a military dedication in 307/6 (*IG* ii³ 4. 319. 4), to this family. If the above identifications are valid, Charinos II son of Epichares II, councillor for Euonymon in 304/3 (*Agora* XV 61. 168), should be the grandson (SS) of the honorand, and may be a descendant of the Epichares E. who was one of the treasurers of Athena and the other gods in 398/7 (*IG* ii² 1388, 1391–2) and first owner of the class V dikastic pinakion Kroll 1972, 103. Epichares II was councillor in (?) 336/5 (*Agora* XV 42. 4) and is probably the Epichares E. cursed at about the same date with 6 others, most if not all citizens (*AG* II no. 205 = Jordan 1985 no. 12, Lopez Jimeno 1999 no. 12); the name Moschion is attested in Oa in 333/2 and in Thria on a 4th c. tombstone, *IG* ii² 6263; [Eu]medon is a perfectly possible citizen name, though spacing would probably allow [Dio]medon. The 5th c. grave context provides only a terminus post quem.

⁷ Steph. Byz. s.v. *Aulis*, Euonymos son of Kephisos, father of Aulis; s.v. *Euonymeia*, Euonymos son of Ge and Ouranos, or of Kephisos. Lysandros son of Lysis E. was a member of the phratry based at Alopeke (*IG* ii² 2345. 37, with Humphreys 1990*a*; cf. ch. 19 at n. 173 f.; his tombstone *IG* ii² 6180 was found close to the city); one would expect a deme of the size of E. to be itself a phratry base, but possibly the local phratry was based in Halimous. The dedication of Tellias of E. to a Herm (*FGE* 494, pp. 136–7) does not imply a public cult; the prayer for acceptance by the deme need not imply that the dedicant had newly become a citizen. He may be a son (or adopted son) who has just inherited. Telesias son of Tellias E., who guaranteed a contract for waterworks at the Amphiarion in the Lykourgan period (*IOrop* 292. 37), may be the dedicant's son.

conspicuous in the city, especially in military commands, at least since the 430s, had mining interests by the fourth century, owning land and an *ergasterion* in Laureion, and land at Thrasymos; this activity may well have gone back to the fifth century. The dedicant Olympiodoros II, who paid his father's naval debts in 325/4, may have been the Olympiodoros who emerged into prominence as general and archon/dictator in 294/3/2.⁸

The oligarch Anytos son of Anthemion of E. inherited a tannery and shoemaking business, entertained Menon of Thessaly, and was a lover of Alkibiades: all this suggests a base in the city. He came through the reign of the Four Hundred with enough credit to be elected general for 410/9 or 409/8, perhaps helped by the connection with Alkibiades, but was linked to Theramenes at the time of the Thirty, perhaps escaping into exile shortly before Theramenes' death. He subsequently joined Thrasyboulos at Phyle, and played a role in the early years of the restored democracy, but apparently at some date left Athens again; he allegedly died at Herakleia Pontika. Descendants stayed in Athens, or returned there: an Anytos II and Anthemion II of E. served as councillors in (?) 336/5, and the former is attested as *syntrierarch* on three ships in 322.⁹

Anytos' politics were shared by his fellow-demesman Euandros son of Erithalion, who was attacked at his *dokimasia* for the archonship of 382/1 by a client of Lysias. Both father and son had been conspicuously generous in city liturgies.¹⁰

Theophemos E., opponent of the speaker of [Demosthenes] 47, lived relatively near the city or Piraeus, close to a road on which there were passers-by, and not far from the speaker's farm near the Hippodrome; it is possible that his land was in the deme, but perhaps more likely that it lay closer to the city. Theophemos' brother Euergos may have lent a talent in 347 on the security of a mining *ergasterion*, but this does not necessarily imply that he had mining interests himself.¹¹

⁸ *APF* 4386; see Table 16.1; *Agora XIX* P 5. 53–5, 78 (cf. P 43. 10?) Diopetithes I; P 9. 15–16, 24, P 26. 231–3, Diotimos III (cf. P 10. 12, P 33. 1–6). Diotimos III's naval debt of almost 3800 dr., *IG ii²* 1629. 539–41, 622–9. On Olympiodoros' career and Aitolian contacts see Habicht 1995, s.v.; G. J. Oliver 2007a, 56–63; Paschidis 2008, A 44. His dedication to Dionysos (*SEG* 32. 267), probably connected with expenditure on the deme theatre, may have been made shortly after he came into his inheritance c.325/4. The rock-cut seating in the theatre has been dated to mid-century, but we have no proper publication as yet. On the question whether this family belonged to the phratry based in Alopeke see Lambert 1999a (reading *Leptines* not [Dio]timos in *IG ii²* 2345 = *SEG* 47. 187. On Autokles son of Strombichides E. see chs. 27 n. 40, 32 n. 26).

⁹ *APF* 1324; P. J. Rhodes 1981a on *A.P.* 7. iv, 27. v, 34. iii. On Anytos' role in Sokrates' trial see ch. 13 at n. 14. Anytos II and Anthemion II, *Agora XV* 42. 3, 7; Anytos II was perhaps a grandson of Anytos I, with rather long generations in the family (it is not clear whether Timokles F 15 *PCG* 7 implies that Anytos II was still young enough to dine with a hetaira in the (?) 330s, or only that he was known for his obesity).

¹⁰ *APF* 5267, Lys. 21. Resentment at the success in democratic politics of Diotimos I and Strombichides I E. may in part explain the oligarchic sympathies of other ambitious men in the deme (cf. ch. 16 s. 'Erechtheis'). Kallippos E., whose grandson (SS) served as trierarch in 322 (*APF* 8070) appears in *IG i³* 1048. 18 (*IEleus* 49), a mysterious list of prominent men of c.425–405 found at Eleusis (they are not all oligarchs, since Strombichides I E., killed by the Thirty in 404, is among them).

¹¹ *APF* 7094; note that Theophemos was unmarried c.356 ([Dem.] 47. 38). The Hippodromion (§§ 53, 76) may have been at Phaleron; the speaker went from the city to Th.'s house, taking a public slave

Another family that belonged to the wealthy elite of Athens in the fourth century was that of Theoxenos I and his sons. Arkesilas son of Theoxenos was one of the guarantors of the triremes sent to Chalkis in 341; his nephew (BS) Theoxenos II son of Theokles served as syntrierarch before 325/4. The Arkesilas son of Theuxenos of Athens who was granted honorary citizenship at Ephesos *c.*306 (with a grandson of the historian Xenophon) was probably a grandson of Arkesilas I.¹²

In the cavalry, we have Sokles son of Aleximachos E., serving with his son Char<a>mantides on Salamis *c.*320 (see Table 23.1); Nikogenes II son of Arkesas I, hipparch in 282/1, and his (?) son Arkesas II, attested *c.*250; Dioskourides III son of Theophanes, and Philokrates II son of Batrachos, both in the same period. Sokles' grandson, —on son of Aleximachos II, is attested as ephebe in 305/4 (*IG* ii² 478 col. III 49). Arkes(s)as I, son of Nikogenes I and father of Nikogenes II, was buried in the city (*IG* ii² 6160); he lent 4000 dr. on security of land and a house in the Trikorynthos area (*SEG* 19. 184, Finley 1952 no. 17A). There may have been an affinal link between this family and that of Dromokles son of Arkesas of

Note: *LGP*N has Sokles I as brother of Aleximachos I, but chronology and naming patterns favour the reconstruction here.

TABLE 23.1. Euonymon: Alexias

with him, and invited him (if he denied having any of the city's trireme gear) to come to the Council to make a statement (§ 34–7). Euergos seems to have lived in the city (*ibid.*); his (?) loan, *Dem.* 37. 2f.

¹² *APF* 6990; *SEG* 33. 932. 7, Ephesos; Table 5.7. Theoxenos I served as trierarch in (?) 366/5, *IG* ii² 1609. 100. In *IG* ii³ 4. 33. 3 we should probably restore [Antix]enos rather than [Theox]enos, since it is unlikely that Theoxenos would serve as diatetes in 330/29 if his son was already able to act as guarantor in 341 (see for Antixenos E., perhaps son of Theoxenos I, *Agora* XIX P 26. 247). A later Theoxenos (III) was councillor at the end of the 3rd c., *IG* ii³ 1232.

Oa, who proposed the cavalry decree honouring the officers of 282/1, among them Nikogenes II son of Arkesas of Euonymon).¹³

The family of Dioskourides III can be traced back to two sons of Dioskourides I: Theophanes, father of Dioskourides III, who was agonothete in 270/69, and —ios, who served as ephebe in 305/4, and whose son [Diosk]ouri[d]es II was commemorated by a kioniskos that may have been set up in the deme. Dioskourides III may have served as ephebe in the early third century, dedicated a statue of his father (*IG* ii² 3851), and was appointed proxenos of Oropos.¹⁴ The family also appears in cavalry records.

The cavalryman Philokrates (II) son of Batrachos was presumably the grandson (SS) of the Philokrates of E. who owned an ergasterion at Besa. Kleochos the actor (*technitês*), son of Philokrates of E., commemorated by a kioniskos dated to the end of the third century, may be the cavalryman's son.¹⁵

Other members of the deme with outside interests include Are—, son of [Tlepo?]lemos, who bought land at Thria confiscated from one of the Thirty, and Euthymenes E., who owned property in Aphidnai, and lent 900 (?) drachmas secured on property in the city.¹⁶

Antiphates son of Antiphanes and Thrasymedes son of Thrasyllus were both buried on Salamis; the former served as councillor in (?) 336/5, and his father is attested as proedros of the Council in 337/6 and 330/29.¹⁷

¹³ *IG* ii³ 4. 323. 9, 22 (Salamis); Bugh 1988, II A 19, 83; I B 25; II B 35, 69, 204. See also below at nn. 18–19. Dromokles of Oa, *SEG* 21. 525. 1; he is missing from Bugh 1988. Dionysios I E., son of Autonomos I, was commemorated by a large lekythos found in the city (*SEMA* 242); his son Epiteles is named on a rosette-stele from the deme area (*IG* ii² 6167, Chasani). Epiteles' son [Epain]etos (rather than [Euain]etos as *IG* ii² 478) served as ephebe in 305/4, and may be the Epainetos E. attested later in the cavalry (Bugh 1988, no. 76). Epiteles probably had an elder brother, Autonomos II, whose son Dionysios II held office in the council in 265/4 (arch. Euboulos, *IG* ii³ 922).

¹⁴ Theophanes was agonothete in the archonship of Sosistratos (*IG* ii³ 4. 532–3). [Diosk]ouri[d]es II's stone *IG* ii² 6201: the father's name is given as —gios (or —ios). The stone was recorded at Agios Nikolaos at Pirnari (Peck 1942, no. 368); this was the deme centre of Aixone (ch. 29 n. 91), but stones were brought there from elsewhere (Eliot 1962, 8). Dioskourides III, ephebe in the early 3rd c., *IG* ii³ 957. 8 (the deme is uncertain); *IOrop* 108, Dioskourides son of Theophanes of Athens, proxenos at Oropos.

¹⁵ *Agora* XIX P 13. 75 (c.350); P 27. [21]. Kleochos: *IG* ii² 6179, provenance unknown; 'actor' seems the most likely translation of *technitês* without further qualification.

¹⁶ Are—, *Agora* XIX P 2 f–g. 10, cf. *APF* 12888 (the restoration of a descendant in *IG* ii² 1231 is to be rejected, *SEG* 41. 81); he perhaps had oligarchic sympathies, cf. ch. 14 pp. 460–3. The names Aresias and Tlempolemos appear on a casualty list of (??) 411/0, *SEG* 52. 60; cf. Aresias son of Phanomachos E., *IG* ii³ 4. 54 (*SEG* 59. 167), and possibly ii² 10686, from the deme area; but see also Kephisia (n. 37), Lamptraí (Table 23.3). [M]n[e]siphilos son of Mne— of E. buys land for 8000 dr. in the hekatomastai sales, we do not know where (Lambert 1997a, F. 12 B 5); Lambert suggests that he may be the Mnesiphilos whose son appears in *IG* ii³ 4. 429 as [gym]nasiarch (*APF* p. 394), but the name is very common, and if the stone only listed four men (as is usually assumed), they cannot have belonged to a commission of representatives from the 10 tribes; they might be successive victors in II Aigeis. The Phanyllos who bought confiscated property at (?) Myrrhinous c.342/1 (*Agora* XIX P 26. 386 f.) may be Phanyllos E., diaitetes in 325/4, *IG* ii³ 4. 35. 13. Euthymenes: *Agora* XIX P. 26. 501–4, 520; Finley 1952, 51 A. Cf. Papazarkadas 2011, 305 no. 28 on the lessee Eume[los] E. of *Agora* XIX L 6. 88–9.

¹⁷ Antiphates, *IG* ii² 6159, *Agora* XV 42. 11; Antiphanes, *IG* ii³ 322. 6, ii³ 321. 5, ii³ 352 (R/O 94). M. C. Taylor's suggestion (1997, 267) of a link with *SEMA* 1541 is far-fetched.

Antikles son of Kallias of E., who was a kleruch on Samos in 346/5 (Aischines 1. 53),¹⁸ had allegedly lived in the city in his youth, ‘owning’ Timarchos of Sphettos for a time; it may have been convenient for Aischines to use the name of a man who was not in Attika to be called as witness, but the prosopographic record suggests that he belonged to a well-known family. Kallias I E. served as hellenotamias in 410/9 (*IG* i³ 375. 26); a child of his, or of Kallias II, was buried in the city (*SEMA* 244). Kallias III son of Kallias (II?), perhaps Antikles’ brother, made a dedication to Asklepios after the middle of the fourth century (*IG* ii² 4442); —us son of Kallias E., possibly epilektos in the mid fourth century (*SEG* 21. 617), will be a son of Kallias II or III, and the Kallias E. who appears on a horos found in the Agora (*Agora* XIX H 114) will probably be Kallias III. The Kallias E. who served in the cavalry c.250 (Bugh 1988, II B 119) was probably a grandson of Kallias III.¹⁹

In comparison with this record of men with interests outside the deme, demesmen buried in or near the deme appear undistinguished. Epiteles son of Dionysios E., whose stele was found at Chasani, had a son, Epainetos, who served as ephebe in 305/4 (n. 13); —stratos son of Euktemon, who served in the same year, was commemorated on a stone found near Vari. Later members of Epiteles’ family were buried in Piraeus. Philades son of Nisaïos I was commemorated by a stele with a relief loutrophoros, found at Vourvatsi near Koropi, to which the names of his brother and sister-in-law (BW) and their two sons were added. Philodemos son of Philodemos also died young; his stele bore a relief representing him as a nude youth with a strigil.²⁰

¹⁸ —os Kalliou of I Erechtheis, kleruch to Samos or Lemnos in (?) the 360s, *IG* ii² 1952. 5, may be related, if, as is likely, the demotic in l. 4 is to be restored [*Euónym*]és; the Eunomos of l. 6 may be the father of the hieropoios of *IG* ii³ 416 (*SEG* 53. 92, Lambert 2004b no. 10, early 330s); a possible later descendant of Lysimachos, l. 7, on Lemnos, Culasso Gastaldi 2010, 363 n. 105. Also on Samos, Ktesikleides E., *IG* xii 6. 261, 262. Cf., on Imbros, dedication of Agasikrates and Agasikles sons of Agasippos E., *IG* xii 8. 67 = *CEG* 845. Also on Imbros, son of Menestratos E., *IG* xii 8. 99. 3–4. Agakles son of Phry[nich]os, represented on his stele from Chasani as a statue of a pankratiast (*IG* i³ 1317 = ii² 10561; Neer 2010 fig. 120) perhaps belonged to E. (rather than, as *LGP*N, Halimous), since we have these related names from Imbros and a Phrynichos E. in the early 4th c., *IG* ii² 1928. 33, *APF* 15012.

¹⁹ See the prosopographical discussion in Aleshire 1991, p. 140; since the name Kallias is very common and Euonymon was a large deme, these postulated connections are uncertain. *SEG* 21. 619 is taken by Reinmuth (1971, no. 16) as ephebic, but appears to list members of a commission containing six representatives from each tribe; Humphreys 2010a n. 30 tentatively suggests epilektoi of the early 340s. Identifiable members seem to have been born c.360, which in my view would rule out identification as a list of ephebic lochagoi (see below, n. 56, on Timostratos son of Timophon of Anagyrous; Table 24.4 for Dexikrates son of Hegesias of Erchia; ch. 24 n. 131 for Lykomedes son of Smikythos of Teithras). Also buried in the city, [Thras]y[cl]>[o]ch[o]s (?) son of Xenokles E., *APF* 11221, *IG* ii² 5712 = *Agora* XVII 81 (handle of unidentifiable vase); Xenokles served as trierarch before 356 (*IG* ii² 1613. 311) and may be the speaker of Isaios F XVI Thalheim 1903, in which case he was an associate of a metic banker. Thrasyluchos’ son Xenokles II served as councillor in 274/3, *IG* ii³ 922. 45 (arch. Euboulos).

²⁰ *IG* ii² 6167 Epiteles; 478 = Reinmuth 1971 no. 17, Epainetos and —stratos; 6186, —stratos; 6164–5, later members of Epiteles’ family; 6193, Philades (the stone may commemorate Philades with his

A family buried at Euonymon but also active in the city is now attested on two naiskoi and a stele from a peribolos found at the east end of the old airport site at Elleniko (*SEG* 56. 260; Kaza-Papageorgiou 2006, 443–4). Evidence for the family begins with Elpines I, councillor in 408/7 (*Agora* XV 1); a son served as secretary to a tribal commission in the early fourth century (*IG* ii³ 4. 66). The naiskoi probably commemorated the secretary's sons (or nephews) Elpines II and Mnesiph[ilos?], sons of Mnesitheos, the latter perhaps the Mnesiphilos Mne— of Lambert 1997*a* F 12 B 5–6.

Polymnestos E. was cremated and his ashes buried at Elleniko in a stone *kalpê* with his dikastic pinax (*AD* 49 B 1, 82 + pl. 36a; *SEMA* 246, *SEG* 47. 238/48. 85). Since bronze pinakes were introduced only in 378/7 (Kroll 1972), he should perhaps not be identified with the Polymnis E. attested as secretary in 405/4 (*IG* i³ 127) even if the difference in name-forms could be overlooked.

The site where the peribolos of Elpines' family was found produced another dikastic pinax, of Class VI (*SEG* 56. 320); 130 tombs were excavated, dating from the end of the eighth century to the fourth, mainly from the first half of the fifth century (*AD* 56–59 B 1, 473–4 and 476–8); the burials perhaps spread along a road leading southeast from the deme site.

Agryle

The sanctuary of Herakles, Pankrates, and Palaimon, on the Ilissos, which so far has not produced any interesting prosopographical data, may have been in this deme, which probably occupied an area to the north and east of Alopeke, north of Euonymon, and south of Ardettos.²¹ A location adjacent to Alopeke is suggested by the appearance of six members of Agryle on a phratry list from Alopeke. Two of them, Demon son of Demaretos and Stratophon son of Straton, also belonged to the genos Salaminioi and appear as oath-takers for the Salaminioi of the Seven Tribes in 363/2. Demon owned land in Anaphlystos, in the mining area, and is also recorded as leasing a mine. Hippon, another phratry member, served as councillor for Agryle in (?) 336/5.²²

parents and two brothers; Nisaïos Nisaïou E., either Ph.'s father or a brother, married within the deme); 6196 = *CAT* 1. 342 Philodemos, from Ag. Nikolaos Pirnari. Cf. also 6158, 6182, 6195, 6189, 7141 (from Chasani? Hildebrandt 2006 no. 357). The only other attested bearer of the name Nisaïos in Attika is Andokides' second cousin (FFSibSS, 1. 47), son of Taureas, but a connection is unlikely.

²¹ Travlos 1971, 278–80; Vikela 1994; *SEG* 41. 247; R. Parker 2005*a*, 419–22. Decrees of (citizen) orgeones, a thiasos, and (non-citizen) eranistai remain to be published. According to *IG* ii² 2776. 51–8, Agryle adjoined Ankyle and stretched to Hymettos.

²² *IG* ii² 2345 = *SEG* 47. 187; *Agora* XIX L 4a (Salaminioi); P 5. 58, Demon leases; P 9. 10, he owns. Hippon, *Agora* XV 42. 21. Note also that the name Alkmeonides appears in this deme, *APF* 9688 XII A with *IG* i³ 1147 (459) and *SEG* 52. 60 (? 411/0).

Archeptolemos son of Hippodamas A., whose names indicate aristocratic pretensions in his family, was condemned with the oligarch Antiphon of Rhamnous in 410; it was assumed that both owned houses in their demes.²³ [Hippo]damas A, named on a late fifth or early fourth century list of ships' crews, with a Thracian servant (*IG* i³ 1032. 284, 391), may be Archeptolemos' son.

The son of Euthymachos A. bought land in the deme, adjacent to that of his father, at the sale of the estates of the Thirty and those condemned with them; friendly relations with a neighbour may have played some part in this purchase, though clearly self-interest was also involved.²⁴

Papazarkadas 2009c, 105–7, suggests that the trierarch [...]isthenes Kleisthenous of [Agr]yle (or Ankyle),²⁵ *SEG* 54. 226, was the homosexual frequently attacked in comedy and called trierarch in Aristophanes *Frogs* 48–50. If so, the choregos K. son of Autokrates (Erechtheis) of the 440s–430s (*APF* 8524, *IG* i³ 965) might be his father.²⁶

Pausanias son of Philemon I A. incurred heavy expenses as a trierarch before 334/3, and may have re-emerged as an elderly man after the liberation of Athens in 307/6 to serve as proedros and put to the vote a decree for a Macedonian proposed by Stratokles c.303/2. His son Philemon II had served as ephebe in 333/2/1.²⁷

Mnesitheos son of Proteas A., councillor in 367/6, was named on a curse tablet found in a Kerameikos grave of c.360–350. Another unpopular (and more prominent) member of the deme was Teisis, cited as a well-known sycophant in the Lykourgan period by Hypereides.²⁸

²³ Caecilius F 102 Offenloch 1907; the text (*apophênai te oikian es ton*) is corrupt, but Franke's *tô oikia autoin* seems better than Westermann's *tên ousian autoin*, given the provisions for razing houses earlier in the decree (Augello 2006 does not discuss readings). Archeptolemos' father may be the Hippodamas of I Erechtheis who died in action in 459, *IG* i³ 1147. 63 (though the name also occurs, in the 4th c., in Kephisia).

²⁴ *Agora* XIX P 2 d 5f. The original owner was a demesman of —ettos, whose name is lost.

²⁵ If *Erechtheidos* is the name of a ship the trierarch would not necessarily come from the tribe and could be [*Ank*]ylê(then); however, the fact that the epibatai all seem to come from Erechtheis may support the attribution to Agryle (cf. ch. 16 n. 58).

²⁶ The name Autokrates is attested in Lamptrai, *Agora* XV 42, ?336/5; Kleisthenes is not a very common name but might have been commoner in the 6th–5th c. than later (the notoriety of the comic poets' target could have discouraged people from using it?).

²⁷ *APF* 11711, to be corrected in light of the new date for *IG* ii³ 4. 336. The Lysippos (II) A. who served as councillor c.336 (*Agora* XV 42) was probably a brother of Lysis, to whose loutrophoros (*SEMA* 14, from the city area) the name of his father Asopios son of Lysippos I A. was added. The name Asopios is rare, and there may have been a connection with Asopios of (?) Paiania and/or A. of Hermos, *IG* ii² 6072.

²⁸ Mnesitheos, *IG* ii³ 4. 54. 29; *Kerameikos* XIV 142 (*SEG* 40. 265). Teisis, Hyp. 4 *Eux.* 34.

Themakos

Pherekles son of Phe[ren]jika[ios] Th. (another pair of aristocratic names), who was condemned in 415 for mutilating Herms and parodying the Mysteries, owned a house in his deme in which parody-rituals took place (Andokides 1. 17); it must have been close to the city. He also owned a house and land in Bate (perhaps a neighbouring deme), a chorion and a plot of marsh (?) and unfarmed land near the Pythion, worth 1200 drachmas, and another chorion by the Herakleion; he perhaps leased, rather than owned, half an orgas inside the Pythion, the water-rights connected with it, and another half-parcel of land in Kykale. Diodoros son of Pherekles (II?, son of Pherekles I?) Th., who registered and leased a mine on his father's land in 339/8, may be a grandson.²⁹

Pergase

As noted above, Traill locates this deme in the inland trittys,³⁰ but Aristophanes *Knights* 321 suggests a location closer to the city. The deme may have contained a family of the Eteoboutadai, if [Oinocha]res son of Soinautes P., theoros to Ammon, is, or is descended from, the Oinochares son of Soinautes who made a dedication to Poseidon Erechtheus with his brother Epiteles I c.450; Epiteles II son of Soinomos P., councillor in (?) 336/5, epimeletes of the Amphiaraia in 329/8, naopoios at Delphi in 328–5 and 324/3, proxenos there 327/6 (Kaphis), and proposer of honours for Lapyris of Kleonai in 323 for his reception of Athens' theoria to the Nemean games, presumably belongs to the same family.³¹

²⁹ Pherekles, *IG* i³ 426. 83–97. On the location of the Pythion see A. P. Matthaiou 2011c; this Herakleion may be either that of Kynosarges (see ch. 24 n. 8) or of Pankrati. We do not know whether leases of sacred property held by condemned men were sold by the poletai on this occasion, but it does not seem unlikely. It is not clear that the half-orgas in the Pythion was linked to the half-parcel in Kykale (one could read [*gēpedō t*]o *ēmisu* in 426. 96). Diodoros, *Agora* XIX P 28. 13–18. Pherekles was probably unmarried in 416 (see ch. 13 at n. 2 on symposium hosts), and may have married late, having taken some time to re-establish himself, but we need another generation between him and Diodoros, unless the estate continued to be known as 'Pherekles' property' long after his death.

³⁰ Cf. *AGC* 21 X7/Y6 nos. 9–10 on the suggested sites, which may have belonged to other demes of Erechtheis, or to unlocated demes of Leontis. The suggestion of a location for Upper (not, as Platonos-Giota, Lower) P. between Acharnai and Kephisia (Steinhauer a. o. 2005, 54 nn. 18–21; Platonos-Giota 2013, 145–6, cf. Kellogg 2013b, 160) is based only on an unpublished herm dated 1st–2nd c. CE which appears to mention the deme (*AD* 56–59 B 1, 414 fig. 182). *IG* ii² 7141, a rosette-stele commemorating Apollodoros son of Opsiades I P. and his sons (added) Hyperbolos and Opsiades II (n. 4 above), was found at Chasani, which would suggest a position close to Euonymon (*KvA* has Chasani c.1 k. S of Trachones). The mid 4th c. stele *SEMA* 543 (Peek 1942, 180, Hildebrandt 2006 no. 147), commemorating Pythodoros son of Apollodoros P., may record a third son (conceivably from the same site: Bergemann 1997, 214 no. 58). Hyperbolos may have served as ephebe in 333/2/1 (*IG* ii³ 4. 336).

³¹ See chs. 12 n. 72, 20 n. 79. Epiteles II, *LGNP* no 11 (*CID* II 32. 33, 38; 95. 11; 97. 22; 102 II B 25; 119. 26). *LGNP* s. Oinochares 2, Soinautes 6, identifies the dedicant of *IG* i³ 873 with the theoros of

There may have been a link between this family and that of [?] Nikoxenos] son of [H]agnonides I P., who also took part in a theoria to Ammon (*IG* ii² 1642. 34), and Hagnonides II son of Nikoxenos, a patriot of the Lamian War period, who proposed a decree concerning equipment for Miltiades' colonizing expedition to the Adriatic in 325/4 (*IG* ii² 1629. 14–15, etc.) and was exiled for his dealings with Harpalos. On his return, he took part in the embassy to Polyperchon of 319/8, proposed the death penalty for Phokion when it returned, and prosecuted Theophrastos (D. L. 5. 37). He proposed honours for Euphron of Sikyon in 318 (*IG* ii² 448. 39–40), and was honoured by the demos of Troizen (ii² 2796 with Peek 1942, no. 49); he was subsequently punished for his attack on Phokion, presumably by Demetrios of Phaleron (Plut. *Phok.* 33ff., 38. 2; Gehrke 1976, 118–19; Paschidis 2008, A 13; on the politics of Miltiades' expedition see Cargill 1995, 31–4). The name of Hagnonides' father Nikoxenos provides a possible (albeit tenuous) link with Nikias P., famous for his wealth (Herakl. Pont. F 58 Wehrli, 42 Schütrumpf 2008, Ael. *V.H.* 4. 23) but otherwise unattested in our sources (cf. also Nikomachos P., councillor in (?) 336/5, *Agora* XV 42. 40, and Table 12.3). Note that in *LGP*N Xenophantos 4 the Aristophanes reference should be corrected to *Nub.* 348.

It is possible that the Konnos P. named in a diadikasia record of 383/2 was, or was related to, the musician Konnos son of Metrobios who was proverbial for his low reputation in the late fifth century (Sokrates is told that if he takes music lessons, at his advanced age, even Konnos would lose face by taking him as a pupil); Konnos' father was a *grammatikos* and friend of Kimon. The name is not attested in any other deme.³²

Another family may also be conjecturally reconstructed on the basis of rare names. It may begin with the Telenikos (I) who was kalos in the early fifth century and died in action in 459. Teleas son of Telenikos P., treasurer in 415/4, was perhaps his son; the Telenikos who was denounced by Teukros for mutilating Herms (Andokides 1. 35) may have been Teleas' son Telenikos II. This man's son

IG ii² 1642 = *SEG* 21. 562. 12, but the number and date(s) of the theoriai recorded in the latter text are very problematic, and the earliest other prosopographical matches for theoroi belong to the last quarter of the 5th c., whereas the dedication is dated c.450. Zorat 1990 does not discuss prosopography. Epikrates son of Epiteles P., councillor in 367/6, *IG* ii³ 4. 54. 32, presumably belonged to the same family; he was perhaps the brother of Soinomos and uncle (FB) of Epiteles II. Either the Epiteles of Erechtheis who died in 459/8, *IG* i³ 1147. 150, or the Epiteles of the same tribe who died as strategos in 447/6, i³ 1162. 4, might be the dedicant, but the name is fairly common and occurs in Euonymon in the 4th c. It is not clear whether the Athenian plumbing contractor Epiteles of *CID* II 97. 38, 109 A 1, 7 was the naopoios and proxenos (*CID* II p. 209 = *FD* III 1. 408+).

³² *APF* 8698; Ar. *Wasps* 675, Plat. *Euthyd.* 272 c, *Menex.* 235 d–236 a; Ameipsias *Konnos* (423) *PCG* 2 p. 202 F 9. Metrobios, Kratinos *Archilochoi*, *PCG* 4 p. 122, F 1. Cf. ch. 20 n. 45.

is perhaps attested as registering a mine in the middle of the fourth century, and may have had a son who served as ephebe in 333/2/1.³³

Pambotadai and Sybridai

As noted above, we have no evidence on the location of these demes, and cannot even be sure that ‘sharing’ a council position (perhaps an over-formal description) implies that they belonged to the same trittys (n. 4 above). The name of Eumelides son of Lysinos of Sybridai, ‘rich in sheep’, may suggest that his family owned flocks, but almost any deme in Erechtheis could have had access to pasture-land, west or east of Hymettos or on Pentelikon; he was buried in the Kerameikos, and may have registered and leased a mine c.320/19. The only well-known members of Sybridai were the sculptors Kephisodotos and Praxiteles, who clearly lived in the city.³⁴

Kedoi

See above, n. 1, on problems of location. The relief stele of Python I son of Pythodoros I, whose family is the most prominent in our evidence for the deme, was found at Lambrika; the name of one of his sons, Python II, was added to it. Python I, represented as a priest on his monument, served as councillor (and chairman of the Assembly) in 403/2 (*IG* ii² 1. 57) and probably died early in the following century. Python II lived long enough to produce a son, Pythodoros III, who served as naopoios at Delphi in 334/3 and c.325; Python II’s brother Pythodoros II is probably recorded in a diadikasia list of c.380, and served as diaitetes in 356/5. His son Pythokles II is attested as syntrierarch before 357, and was eponym of a naval symmory between 356 and 340; he had a public career, as an opponent of Demosthenes, and may have been condemned in 318 as an associate of Phokion. It is not clear whether his homonym, Pythokles son

³³ The *kalos* on a lekythos probably by the Sappho Painter, BArch 306473, Brussels, may be too early for this reconstruction. The inscription *Teleô* of Immerwahr 1990, 747 may belong to our Teleas, as may references in Ar. *Peace* 1008, *Birds* 168 with schol., 1025. Telenikos of Erechtheis (a seer), *IG* i³ 1147. 128; Telenikos (?) II, Andok. 1. 35; son of Telenikos II registers (and leases?) a mine, *Agora* XIX P 9. 34–[5?] ([Tel]enikos; [Arch]enikos, [Pher]enikos also possible). Telenikos III son of Tele[as?], ephebe 333/2/1, *IG* ³ 4. 336. If all these men belonged to 5 generations of a single line, the generations are unusually long (ch. 5 n. 58). Aleximenes P., father of Charikles who served as ephebic gymnasiarch in the same year, is recorded probably as landowner in the mining area, *Agora* XIX P 44. 16 (*APF* 15418).

³⁴ Eumelides: *IG* ii² 7476, *Agora* XIX P 38. 35, 39. Two undated Sybridai stones (one a kioniskos with a relief loutrophoros *AEE* 1157, ii² 7478; cf. 7479) were seen in Mandra, north of Eleusis, but this is not a possible site for a deme of Erechtheis. Kephisodotos and Praxiteles, *APF* 8834; Kephisodotos owned an ergasterion in Thorikos, *Agora* XIX P 27. 94–5. On Lauter’s suggestion (1993) that PM on the Lathoureza horoi stands for Pambotadai see Goette 2004, 13–14; Krasilnikoff 2010; n. 60.

of Euthykles I of Kedoi, owed his name to a marriage between two deme families. He served as Treasurer of the Other Gods in 375/4, and his nephew (BS) Euthykles II son of Eukles K. was councillor in 342/1.³⁵ It seems possible that Python I served as priest in the sanctuary of Apollo at Lambrika, which may have belonged to a phratry drawing members from both Lamptrai and Kedoi. This is an interesting and exceptional case in which a small deme is dominated by a priestly family.³⁶

Phegous

The deme has one liturgist, *APF* 2180, trierarch in 307/6, but otherwise no member who made any mark.

INLAND TRITTYS

Kephisia

A location in the general area of modern Kephisia is supported by the discovery of a deme decree honouring a Phro— for repairing and fencing the deme's palaistra and concerning himself with its water-supply, and with deme sanctuaries (*hiera*). It seems likely that his activities were related to the introduction of the ephebate. He may have been a descendant of the Phrouros and Phourarchos who appear on a fifth-century casualty list of Erechtheis.³⁷ Another deme decree, not yet fully

³⁵ *APF* 12444; *IG* ii² 6383 (Python I) = *CAT* 1. 269; Scholl 1996, no. 249. The Athenian who worked on the temple at Delphi in 341/0 (*CID* II 32. 5) was called Pythodelos, not (as *APF*) Pythodemos (Byrne 2010), and there is no reason to connect him with Kedoi. The trierarch Pythodoros of c. 350, *IG* ii² 1622. 776, may be Pythodoros III rather than Pythodoros II (ch. 5 n. 47). Pythodoros III may be the man of that name who owned property near the Leokoreion in the Agora area (Dem. 54. 7, c.341). Pythodoros III at Delphi, *CID* II 32. 33, 79 A I 14, 97. 29, 119. 24 ?; [Pythodoros E]uphronos Athenaios, 102 B 26–7, is thought to be an error for Pythonos (p. 227). The family can be traced into the 3rd c. Lambert 1997*a*, F 16 A 13, reads Nikomachos Polyilaiou *ek Kē[don]* as the name of a purchaser of land at Kephalē in the hekatomtai sales; he may conceivably be a brother of Nikodemos Polyllou (Polylao?), whose tombstone *IG* ii² 11630 (= *CAT* 3. 343. *SEG* 33. 225) was found at Grammatiko (cf. Nikodemos K., councillor in 281/0, *Agora* XV 72. 82).

³⁶ Even if Python I's tombstone was not originally set up at Lambrika, we know that he held priestly office and that the family had a long-standing interest in the Delphian Apollo. On the sanctuary at Lambrika see below, n. 61, on Lamptrai. Langdon 1988*a* reports that there is no settlement evidence in the valleys W of Lambrika, where one would have liked to place Kedoi. Note that Chairephon K., member of the orgas commission in 352/1, may have belonged to the Eumolpidai or Kerykes (Humphreys 2017*b*).

³⁷ On the topography of the deme see Goette 2010; Skilardi 2011*b*. Deme decree, *SEG* 36. 188/50. 159, cf. *BE* 2001, 193. Casualty list *IG* i³ 1147. 49, 177; cf. Phourarchos as candidate for ostracism, Brenne 2001 no. 231. Note also the Tlempolemos of *SEG* 52. 60 (411/0?), perhaps the father of

published, awards a crown to a Dionysios (perhaps *APF* 4159, trierarch in 338/7 and mine lessee *c.* 350; *Agora XIX* P 18. 68) for planting trees on the deme's instructions in the sanctuary of Dionysos; we may also have a fragment of his funerary inscription. Kephisia may have been the base of a phratry or genos Elasidai (*IG* ii² 2602; ch. 20 n. 45).

Several tombstones in *IG* ii² came from the deme area. Two represent horsemen, which suggests ownership of land. Phrynion son of Kallippides is represented with his horse and his wife Paregoria; his father's name suggests a family tradition of horse-owning.³⁸ Pistokles son of Antimenes I is shown with his wife Olbia, daughter of Kallaischros of Phegous, two dogs, and a slave leading his horse. The names of his son Antimenes II and Peisikrateia daughter of Pleistias of Kephisia, presumably Antimenes' wife, were added later. Antimenes in the (?) 320s freed a slave donkey-driver living in Diomeia, a suburban deme, and (with Hagnon son of Euthykritos of Kydathenaion) a *paidion* living in Kerameikos. Probably he had just inherited his father's estate; the donkey-driver may have been employed in carrying produce from a farm in the deme to the city.³⁹ Pleistias' family seems to have had aristocratic pretensions: a later Pleistias, son of Dionysios, served on the Pythais of 128/7, and as ephebe in the following year, and a (?) great-granddaughter (SSD) served as arrhephoros in the first century BCE.⁴⁰ Another horseman, whose tombstone has no provenance, is Philochares son of

Tlethymos, councillor in 367/6 (*IG* ii³ 4. 54). Sanctuaries of Dionysos and (?) Aphrodite plus (?) dedication in Kato Kifissia (K., Acharnai, or a small deme between them? cf. n. 30), Platonos-Giota 2004b n. 5 (*A to Z* 13 A–B 3); *AD* 56–59 B 1 406 fig. 165; Steinhauer a. o. 2005, 49 with map p. 21 (3A).

³⁸ *IG* ii² 6449–50 (probably one stone) = *CAT* 2. 430a; Scholl 1996 no. 322 (340–320). For horsey names in K. cf. also Onesippos son of Aitias, basileus *c.* 400, *SEG* 32. 239; Antidorippos, buried in the 4th c. in the Marathon area, *SEMA* 305; Telesippos son of Straton, peripolarch in (?) 338/7, *IRb* 94, *SEG* 41. 148 (*SEG*'s date *c.* 350 seems too early for the general Deinokrates of Acharnai with whom Telesippos served; Deinokrates is known to have served as general in 338/7, *IRb* 93 (ch. 16 s. Oineis); Hippodamas, whose son Smikythos served as archon's paredros in the mid 4th c. (*IG* ii³ 4. 208, ch. 15 n. 2). Euetion son of Pythangelos K. served as hipparch in (?) the Lykourgan period and perhaps as nauarch in the Lamian war, *APF* 5463.

³⁹ *IG* ii² 6437 = *CAT* 2. 959; Scholl 1996 no. 255 dates this monument *c.* 320. Olbia's father served as diaitetes in 325/4, *IG* ii³ 4. 35. 22. The proedros Antimenes of *IG* ii² 554. 3, *c.* 306/5, may be Antimenes II. If the Peisist[ratos] son of Pistok[les] of Ke[phisia?] commemorated on *IG* ii² 6436 = *SEG* 13. 98 (recorded in the 'Theseion') belonged to this family, and if the Hagnonides son of [Pe]lisis[t]ratos K. who freed a slave georgos living in Skambonidai in the 320s (*SEG* 18. 36 A 246–50) was his son, Hagnonides should have been a first cousin (FBS) of our Pistokles I (cf. also Pistion K., cursed with a fellow-demesman, D. R. Jordan 1985 no. 17, from Wilhelm 1904). There may be some affinal link with the family of Antimenes II's wife Peisikrateia daughter of Pleistias K., but there is no obvious way of reconstructing it. The slave paidion living in Kerameikos (*SEG* 18. 36 A 546–554) may have been a hetaira, and Hagnon—perhaps the grandson (SS) of the Hagnon of Kydathenaion whose married daughter Nausistrate was buried in the Koropi area *c.* 350, *IG* ii² 6588 = *CAT* 269—may have been her lover, or a fellow-client.

⁴⁰ *FD* III 2. 24. 38; *SEG* 15. 104. 150; *IG* ii² 3497 (cf. ch. 12 n. 109). (On the family of Mikion and Eurykleides K., prominent in the Hellenistic period, see ch. 20 n. 141.)

Philonides K., commemorated with his wife Timagora daughter of Hephaistodoros in the first quarter of the fourth century.⁴¹

Aristodemos (II) son of Amynomenos K. was commemorated with his wife by a stele found in the deme.⁴² His father was trierarch in (?)365 (*APF* 743), and seems to have had a brother, Philophron I (son of Aristodemos I?) whose sons Aristodemos III and Philophron II dedicated a statue of their sister Chairippe, priestess of Demeter and Kore, perhaps c.340 (*SEG* 51. 215, cf. ch. 12 n. 92).

Five demesmen of K. can be identified on *IG* i³ 1048 = *IEleus* 49, a list of wealthy Athenians set up at Eleusis in the late fifth century. Apsephes and Koroibos have unusual names that appear also on the casualty list of Erechtheis for 459/8, *IG* i³ 1147; an Apsephes also figures on the Marathon list *SEG* 56. 430. Pytheas appears also as trierarch, and owner of two slaves, on *IG* i³ 1032, possibly a list of survivors of the battle of Aigospotamoi; his son Demochares was one of the guarantors of the triremes sent to Chalkis in 341/0 (*APF* 12350). Euphiletos I served as one of the treasurers of Athena in 420/19 and as one of the commissioners for Eleusis in 409/8.⁴³ One of his two sons, Euphiletos II and Aristeides, dedicated the choregic monument *IG* ii³ 4. 474. Aristeides testified for Aischines (2. 153) in 343 that Aristophanes of Olynthos had told him he had refused a bribe offered by Demosthenes; he is recorded as trierarch in 341/0 and in the 330s. Euphiletos II proposed honours for Euphron of Sikyon late in 323, and his son Pamphilos added a rider to the decree; either Euphiletos II or Euphiletos III, son of Aristeides, served as trierarch in 322. Euphiletos III proposed honours in 302/1 for two metics who had loyally supported Athens ever since 347/6 in her efforts to maintain independence and naval strength (*IG* ii² 505; G. J. Oliver 2007*a*, 95–6). In view of this anti-Macedonian stance (after Chaironeia), it is perhaps unlikely that Phokion's friend Euphiletos belonged to this family.⁴⁴

Satyros K. was one of the Thirty; the deme will have suffered from Spartan raids, especially after the occupation of Dekeleia.⁴⁵ His fellow-demesman Epikrates emerged as one of the leaders of the democrats in Piraeus and led an active and profitable diplomatic life

⁴¹ *IG* ii² 6446 = *CAT* 2. 216, Hamiaux 1992, no. 193 (both *CAT* and Hamiaux express doubts about the date 410–390 assigned on the basis of Möbius' 1929 anthemion study; Scholl 1996, no. 467 dates it to the 370s). Other tombstones from the deme area: *IG* ii² 6405–6, from a liturgic family, *APF* 743; 6411/12; 6430, with an intra-deme marriage, cf. perhaps Wunsch 42. 12 (Wilhelm 1904); 6440.

⁴² To the list at *IG* ii² 6405 of tombstones found in the deme add 6437 and 6440.

⁴³ *APF* 6067 unnecessarily introduced a second Euphiletos, son of Euphiletos I and father of Aristeides and Euphiletos II (here, III for *APF*), who would be listed on *IG* i³ 1048. The remaining demesman on the list, Protarchos, is not attested elsewhere.

⁴⁴ Nepos *Phoc.* 4. 3. The identification is accepted by *APF* 6067 and *LGP*N; Gehrke 1976, 152 points out that the historicity of the story is doubtful. Euphiletos II's decree for Euphron (*IG* ii³ 377, cf. ii³ 378 with Lambert 2006 no. 12) was republished in 318 when democracy was restored (G. J. Oliver 2003; E. A. Meyer 2013).

⁴⁵ A later Satyros (grandson?) is now attested as a kleruch on Samos c.350, *IG* xii 6. 262 I 25. Note also the name of Theramenes K., ephebe in 333/2/1 (*IG* ii³ 4. 336; correct *APF* 7233), choregos in 330/29 (ii² 2318. 355–7), and councillor in 320/19 (*IG* ii² 380); possibly his grandfather (FF) had been named c.411 by an ally of Theramenes of Steiria. On Euandros (son of Erithalion?), another oligarch, see *APF* 5267.

for the next ten years, before being sentenced to death in absentia after rejection of the peace terms he and his fellow-ambassadors had negotiated with Sparta in 392/1. He may be the Epikrates K. named on a tombstone of the early fourth century from the Kerameikos with a fellow-demesmen, Philoneos II son of Philoxenos. Philoneos II will have been a descendant of Idomeneus K., named in a dedication on the Akropolis probably made by a board of magistrates c.510–480, and his son Philoneos I, who served as treasurer in the 440s.⁴⁶

Euktemon K., whose estate was claimed by his grandson (DS) Chairestratos son of Phanostratos, also of Kephisia, in the case for which Isaios 6 was written, had a farm in the neighbouring deme Athmonon, and another, unlocated chorion (which his son Philoktemon was willing to relinquish), but most of his wealth was in city property and slaves. He lived in the city; so probably did his rich son-in-law Phanostratos. We meet Phanostratos' homonymous grandson taking an evening stroll in the Agora with Agathon, speaker of Demosthenes 54, c.341. Euktemon had a kinsman in the deme (relationship unspecified), Pythodoros son of Aristion, who was also in the trierarchic class, and served as councillor in 367/6. He or a brother may be the son of [Ari]stion who made a dedication (?) on Delos.⁴⁷ Euktemon and his son Philoktemon had sufficient influence in their phratry to register a candidate whose legitimacy was patently dubious (ch. 19 n. 136); they and Phanostratos probably had comparable authority in the deme, due to a combination of wealth and a network of ties of kinship and affinity. They had no attested interest, however, in deme affairs.

The family of Glauketes I and his sons Kleochares and Glauketes II also seems to have been city-based, although a descendant served in the cavalry in the third century. They belonged to a phratry based in Alopeke, and thus had apparently moved from that area to Kephisia at some date before Kleisthenes' reforms. Glauketes II, as a *neaniskos*, acted c.370 as a guarantor for Neaira; this seems to imply that he already owned some property, and that he lived in the city. His brother Kleochares was one of the guarantors of the triremes sent to Chalkis in 341/0, served as hieropoios at Delphi c.330, and was one of the elder statesmen of the Lykourgan regime who took part in the Pythais of (?) 326/5.⁴⁸

Euthydemos I was buried in the city c.400; his (?) grandson Euthydemos II contributed naval equipment before (?) 366/5, and he or a homonymous son served as one of the parasites of Athena Pallenis in the Lykourgan period. This, however, does not

⁴⁶ *IG* ii² 6444 (cf. *APF* 4859, Bruce 1966); possibly the two families were affinally linked and Epikrates was commemorated after dying in exile. Idomeneus' dedication is *IG* i³ 762.

⁴⁷ Euktemon: *APF* 19164, cf. ch. 7 Case 1. Phanostratos II was an age-mate of Agathon, Dem. 54. 7–8; Philoktemon II, secretary of his tribe's prytaneis in 319/8 (*IG* ii² 388. 3–4), and debtor on a horos, *SEG* 63. 157, was probably his brother. Their father Chairestratos served as secretary of a commission perhaps concerned with dramatic festivals c.350 (*IG* ii³ 4. 63; see below, n. 57). Son of [Ari]stion, *ID* 47 II (perhaps not attached to 47 I, may belong with 48, see *BCH* 78, 1954, 292, *CEG* 742 = 179 a).

⁴⁸ *APF* 2954; phratry, *IG* ii² 2345, cf. ch. 19 n. 176; Glauketes II, [Dem.] 59. 40; Kleochares, *FD* III 1 511 = Jacquemin a. o. 2012 no. 54; see D. M. Lewis 1955; Humphreys 1985a. A later Kleochares (III) served in the cavalry c.250, Bugh 1988 II B 135; Glauketes III served as councillor in 221/0 (arch. Thrasylphon), *IG* ii³ 1154.

necessarily imply that he had interests in the deme area. The brothers Hippokrates and Thrasyllus, buried in the city with Hippokrates' son Philiskos, were the sons of a Samian immigrant, and probably never had any residential connection with the deme area. Automenes son of Proteas, councillor in 367/6, was cursed on a tablet of c.360–350 found in the Kerameikos, inspired by a lawsuit; the tablet also names Demonstratos K., in addition to members of other demes. Those named were probably city residents.⁴⁹

Antimenes I K. is named in a list of (?) kleruchs sent to Samos in the 360s (*Agora* XV 492, cf. Humphreys 2010*a*).⁵⁰ His homonymous son or grandson served as ephebe in 333/2/1 (*IG* ii³ 4. 336, *IRb* 98); it is probably *his* son Ameinias who appears as an elderly kosmetes in 266/5 (*IG* ii³ 917. 24–5). Ktesias K. is attested as councillor on Samos in mid-century, *IG* xii 6. 262 I 26; his daughter and a son of Philostratos K., also a kleruch on Samos (xii 6. 261, 346/5) are both named on *SEMA* 311. Philostratos son of Philostratos, proposer in 303/2 of *IG* ii² 498 (Paschidis 2008, A 3), was probably another son of the kleruch.

The general impression conveyed by the material on this deme is that by the fourth century its more ambitious and energetic members had moved to the city and were concentrating their interests elsewhere.

COASTAL TRITTYS

It is generally agreed that this trittys covered the valleys and bays of Vari and Porto Loumbardo, the inland plain north of Keramoti that links them, and the upland plain of Lambrika, from which we have a dedication to Apollo made by members of Lamptrai, and Lamptrian tombstones. Opinions differ, however, over the assignation of habitation sites in the area to the three deme centres of Anagyrous and Upper and Coastal Lamptrai. It is generally assumed that Anagyrous is to be placed at Vari, while Lamptrai controlled Lambrika, Kitsi Pighadi in the inland valley, and Porto Loumbardo. The order of names in Strabo's list of coastal demes favours placing Anagyrous west of Lamptrai,⁵¹ and a number of dedications by demesmen of Anagyrous have been found in the Vari area. I therefore assume

⁴⁹ Euthydemos: *IG* ii² 6415 (if correctly dated), *APF* 5538; dikastic pinax, *SEG* 57. 292, from a tomb in the deme. Hippokrates and Thrasyllus, *IG* ii² 6417, cf. ch. 11 n. 20 and M. J. Osborne 1983, 38–9; Automenes, *IG* ii³ 4. 54. 29, *SEG* 40. 265 = 42. 217. The poet Menander seems to have belonged to K. (Mette 1977, 215); his father Diopeithes was diaitetes in 325/4 (*IG* ii³ 4. 35), the year of M.'s ephebate (ch. 5 n. 58).

⁵⁰ The restoration [Kephisieis] in XV 492. 2 is far from certain as is [Ant]ik[leides] in l. 3; there is little reason to connect Leonteus son of Antikleides K—, guarantor for a lessee in 343/2 (*Agora* XIX L 6. 16; see ch. 24 n. 93) with the Antikleides K. who dedicated medical equipment in the Asklepieion in the mid 3rd c. (Aleshire 1989 Inv. V 155 = *IG* ii³ 1010).

⁵¹ Strabo 9. 21/C. 398. It is generally agreed that Thorai is misplaced in Strabo's list, where it appears between Anagyrous and Lamptrai, and that there are some other textual problems (see chs. 24 at n. 116; 32 n. 60). This however does not mean that the text can be disregarded at will.

here that Anagyrous should be placed at Vari; I discuss the other sites more fully in the section on Lamptrai. On Lauter's argument (1982) that since the Bronze Age settlement on Kiapha Thiti, at the west end of the inland valley, must have controlled the bay at Vari, Coastal Lamptrai should be placed at Vari see Goette 2004, 2–4.

Anagyrous

The Vari valley has yielded a conspicuous grouping of archaic burials, and an early sanctuary (of a female deity?) and settlement on the hill Lathoureza; a cave sanctuary of the Nymphs, further north on the slopes of Hymettos, was in the third quarter of the fifth century elaborated by a devotee, Archedemos of Thera, and was apparently used earlier; a farm below the cave has been excavated. The deme centre (or centres) has apparently been located, *AD* 64 (2009) B1–2, 189–94. It seems to have had a theatre, in which the marble seat *IG* ii² 4906, the deme decree *IG* ii² 1210, and the dedications discussed below may have stood. Horoi on the hill between Vari and Vouliagmeni may have marked a boundary between Anagyrous and Halai Aixonides. Pausanias (1. 31. 1) records a sanctuary of the Mother of the Gods at Anagyrous (the cave?), and there may also have been local cults of Athena Hephaistia and of the Dioskouroi.⁵²

Sokrates A. was general in 441/0, and perhaps again in 439/8, and was prominent enough at this time to be a candidate for ostracism. He was presumably the Sokrates who dedicated a bronze statue (of Dionysos?) whose base was found at Varkiza, with an inscription of c.440–30 commemorating a choregic victory with a tragedy by Euripides, and listing fourteen tragoidoi, two of whom can perhaps be identified as demesmen of Anagyrous. Sokrates' victory was probably won at the Rural Dionysia. However, a fourth-century choregic dedication from the same area, commemorating victories in comedy won by a son and subsequently

⁵² The general discussions of archaeological evidence and the maps of Eliot 1962 and R. G. Osborne 1985*a* (22–9) are still useful. Archaic burials, Humphreys 1983*a*/1993, 99–100; Whitley 1994*a*; Alexandridou 2012*b*. Later periboloi, Garland 1982, U 1–13. Nymphs (and Pan), Connor 1988; Goette 2004 (with map of area); *IG* i³ 974–982 (possibly Pausanias' Metroon, Vermaseren 1982, 115, but Connor doubts this; cf. also *MDAI(A)* 1879, 302 ff.; Schörner and Goette 2004, 116–17; Jim 2012; Graf 2013, 123–7). Theatre, Goette 1995*b*, 2014. Athena Hephaistia (?) and Anakes, *IG* ii² 4980–1. Dedication to Hermaphroditos from the Vari area, c.385, *MDAI(A)* 1937, 7–8. Lathoureza: Lauter 1985*a*, Ober 1987, Mazarakis-Ainian 1994, 1995; Goette 2004; cf. *AD* 64 (2009) B1–2, 182–5. According to Mazarakis-Ainian, there would be a hamlet here in the 8th c., and a cult building for a goddess, in use c.700–300. Farms lower on the slopes of Lathoureza, *BCH* 1994, 777 (*AD* 42 B I, 1987, 92–6; cf. R. G. Osborne 1985*a*, 76–7); farms below the cave of Pan and the Nymphs on Hymettos, occupied until c.300–276, J. Jones a. o. 1973. Horoi of Sotimedes, 6th c., from Kaminia between Anagyrous and Halai, Goette 1994*a*; 2004, 9–10. On deme (?) boundary horoi see ch. 22 n. 52. Small sanctuary on the E side of the Kaminia promontory, overlooking the bay of Varkiza, Goette 2004, 2, 11 (Lauter and Lauter-Bufe 1986).

by his father (*IG* ii³ 4. 507, *CEG* 773; Agelidis 2009 no. 63), may refer to the competitions in the city; possibly by this date Sokrates' dedication too was thought to have commemorated a city victory.⁵³

Twelve members of Anagyrous appear on *IG* i³ 1048 = *IEleus* 49, the late-fifth-century list of wealthy men found at Eleusis, among them Demodokos, father of Sokrates' associate Theages and his brother Paralios; the latter was present at Sokrates' trial (Plato, *Apology* 33e), and the family probably lived in the city. So, presumably, did the sykophant Agoratos, who according to Lysias (13. 73) had been illicitly enrolled in the deme.

In the fourth century one of the richest men in the deme must have been Demosthenes' opponent Meidias son of Kephisodoros (*APF* 9719). His father is probably attested as trierarch; so is his brother Thrasylochos, who owned an ergasterion in Thrasymos, at Sounion, and leased mines in his youth. Meidias too appears both as landowner and as lessee in the mining records. He built himself an imposing house at Eleusis (Demosthenes 21.158), and served as cavalryman and hipparch, although Demosthenes (21.174) claims that while acting as hipparch he had no horse. Meidias' son Kephisodoros II financed the eutaxia competition for his tribe in (?) 333/2 or 332/1 (*IG* ii³ 550 with Lambert 2001, *SEG* 51. 80). The family made several dedications at the Amphiaraion of Oropos.⁵⁴

The trierarch Polykles son of Polykrates A., with whom Apollodoros of Acharnai had difficulties in 361/0, was clearly to be found in the city. The family had a substantial liturgic record stretching at least from the 360s to the 330s; Polykles

⁵³ *APF* 13102; generalship, *AO* s. 441/0, 439/8; ostrakon, Brenne 2001 no. 246 (from 443/2?); dedication, *IG* i³ 969 (cf. P. Wilson 2000, 131–2, with photo). The number of 14 *tragoidoi* (chorus plus actors?; see P. Wilson 2015, 120–1) seems more appropriate for the Rural than for the City Dionysia (cf. Pickard-Cambridge 1988, 361; Csapo 2010*b*). A 4th c. descendant of the tragoidos Son, Son II son of Sostratos, is now attested as buried in the deme, *SEMA* 102 (c.350; *IG* ii² 7418, from Piraeus, same date, may commemorate his sister). The tragoidos Euthykritos is probably the demesman listed (as kleruch? Humphreys 2010*a*) on *Agora* XV 492. 18; his son Ekphantides (named after the comic poet? cf. *IG* ii³ 4. 498) was buried on Samos, *IG* xii 6. 272. The 4th c. dedication is *IG* ii³ 4. 507, *CEG* 773; cf. P. Wilson 2000, 248 (probably city victories), *APFA* 21. *IG* ii³ 4. 498, also from the deme area, records local victories; cf. Goette 2007*a*, 125–6. On ii³ 4. 439 see *SEG* 59. 194.

⁵⁴ Mine records, *Agora* XIX P 5. 47–9 (367/6), Thrasylochos leases at Nape; (?) P 9. 12, his ergasterion at Thrasymos; P 26. 208–11, Meidias owns land in Sounion; 245–9, he owns in Laureion (cf. perhaps P 25. 76); P 26. 393–4 (?), more property of Thrasylochos (cf. 407; *SEG* 60. 197). Meidias' actions as hipparch are discussed by Knoepfler 1981 and by Bugh 1988, 160–6. It is perhaps worth relating M.'s negative report on the behaviour of the Athenian cavalry under Phokion's command at Tamynai (Dem. 21. 132) to the tradition in [Plut.] *Mor.* 850b that his son Meidias II proposed Phokion's 'rehabilitation' (the MS date is *epi Xenion*; A. Schaefer 1854, 163 emended this to *ep' Euxenippou*, 305/4, but Phokion should have been 'restored' under Demetrios of Phaleron—see Bearzot 1985—and attempts to construct a historical context in 305/4 are implausible); it does not seem impossible that in his report as hipparch Meidias, in addition to defending himself, was also acting as spokesman for Phokion (cf. Knoepfler, *op. cit.*), and that Meidias II (councillor in 304/3, *Agora* XV 61. 177) was continuing an earlier alliance. Dedications; ch. 12 n. 79. Kephisodoros' son Euthydikos was councillor in 302/1 (*Agora* XVI 123).

served as councillor in 367/6.⁵⁵ Archenomides son of Archedamos A., with whom a trading contract was deposited *c.*351, probably lived in Piraeus, where his daughter, who married into a family from Prasiai, was buried. Kallimachos A., whose daughter married into the family of Kallippos of Aixone, may also have lived in Piraeus. Kallimachos is now attested as trierarch *c.*355. Oinostratos A., who served as one of the dockyard supervisors in 373/2 and acted as one of five guarantors for a large building contract on Delos in mid-century, may also have lived in Piraeus, or in the city. His (?) son Diodoros was honoured at Rhamnous for his service in 303/2 or 255/4 as chiliarch under the general Diomedes.⁵⁶

Evidence of interest in the deme, however, is not entirely lacking. Archeneos son of Archemachos (possibly related to Archenomides) dedicated a marble theatre seat in the deme (*IG* ii² 4906). He was a member of a tribal commission of well-known men who made a prominent dedication in the city, perhaps also connected with the theatre, in about the middle of the fourth century.⁵⁷ *IG* ii² 1210, also found at Vari, is a deme decree honouring a benefactor (not necessarily a demesman) for concerning himself with protection (*phylak[ē]*); he is awarded an olive crown and, probably, a seat of honour at deme festivals. The decree may have been passed *c.*318. An Antikrates son of [Eu]kolio[n] bought land that may

⁵⁵ Thekrates of *IG* i³ 1048. 29 is likely to be either [Poly]krates, father of Polykles (so *APF* 11988) or [Euthy]krates, father of Polykles' colleague in the Council in 367/6, Euthykles (*IG* ii³ 4. 54. 15–16). The trierarch Polykrates A. who served in 357 (when Polykles also served) may have been a brother of Polykles (ch. 5 n. 47). The Polykles of Erechtheis who died on campaign in 459/8 (*IG* i³ 1147. 84) could have been the grandfather (FF) of our Polykles, but the name is also attested in Euonymon. The Teisimachos of *SEG* 52. 60 may have belonged to A., cf. *IG* i³ 1048. Cf. also *APF* 4605, Dorotheos (I and II?) A.; tombstone of daughter (of D. I?), *SEMA* 101 (city). Kerameikos naiskos of Mikion son of Aiantodoros A., *IG* ii² 5633.

⁵⁶ Archenomides, [Dem.] 35. 14; *IG* ii² 7277. Kallimachos, *SEG* 45. 147. 45; below n. 58. Oinostratos, *IG* ii² 1607. 1, *ID* 104-4a. 31; Diodoros, *IRb* 1 + *SEG* 56. 202; cf. *Ergon* 1996, 13–19, Brun and Couvenhes 2006 (date revised since publication of *LGP*N). Note also the problem of the relation between *IG* ii² 5636, a loutrophoros of (?) the 320s commemorating Timophon son of Timostratos A., and the [Timostrat?]os son of Timophon who appears in Reinmuth 1971, no. 16. 2. Since the latter text may not be ephebic (above, n. 16; ch. 11 n. 19), they may be son (ii² 5636) and father (Reinmuth 16); given the loutrophoros, they can hardly be father and son. Other demesmen with interests outside the deme: Aristhetairos, secretary of the amphiktyons on Delos in 345/4; Nikokles son of Hegesippos, trierarch in 342/1, commemorated by his son Apemon with a statue on Salamis (*IG* ii² 3830, *APF* 10898); Nausigenes son of Na[usikles?], who guaranteed a lease of property on Salamis (*IG* ii² 1590a 6–7), and whose son Nausikles II served in the cavalry on the island *c.*320 (ii³ 4. 323. 10); Antirrhotos, official on Imbros in (?) 352/1, *IG* xii 8. 63. 5 (see Cargill 1995); Alkiades, who supplied six pairs of shoes to the sanctuary at Eleusis in the 330s, *IEleus* 159. 48.

⁵⁷ Dedication, *IG* ii³ 4. 63; it came from the church of St Demetrios Katephores and may originally have been set up in the Street of Tripods (on which see Goette 2007a, with earlier bibliography); Sophokles' great-grandson (SSS) Iophon II served as under-secretary. Possibly ii³ 4. 63 should be dated to the Lykourgan period. The Archemachos who was trierarch in 322 (*APF* p. 69) may be Archemachos II A., son of Archeneos. Archeneos is now identified in *Agora* XIX P 18. 72 as owner of an ergasterion (*LGP*N no. 12).

have been in the deme in the hekatostai sales; Eukolion II son of Pyrrhakos A., who served on the Council in 367/6, and as juror, may be his father. Tombstones from the deme area are surprisingly rare, but one commemorates Choirine daughter of Euboios A.; her father served as trierarch in 338/7.⁵⁸

Lamptrai

As we have seen, there has been some debate about the number and size of settlement sites in the coastal trittys of Erechtheis, and their assignment to demes. The area of Kitsi Pighadi, which is generally recognized as a deme site, has produced a deme decree of Lamptrai of the late fourth century, *IG* ii² 1204.⁵⁹ On the Thiti ridge west of it there are remains of a sanctuary, in use from c.700, and two sets of horoi; Kiapha Thiti, further west, which was a fortified settlement in the Bronze Age, was used for cult purposes at least from the seventh century (female deity? Christiansen 2000). A building in use from c.330–285 may have served as a hestiatorion; after it was abandoned the site seems to have been deserted until the Roman period.⁶⁰

⁵⁸ Antikrates, Lambert 1997*a*, F 9a 13, 15. Eukolion, *IG* ii³ 4. 54. 18; Kroll 1972, no. 23 b (class VI); *APF* p. 196. The metec labourer (*misthôtês*) Euk[o]lion who was granted citizenship in 401/0 and registered in Erechtheis (*IG* ii² 10+ = R/O 4 col. vii 8) may have been a freedman of the family; it seems to me (*pace APF*) unlikely that he is the Euko[lion] of the diadikasia text *IG* ii² 1928. 35, who may be the councillor. Euboios, *APF* 5313, *IG* ii² 5639, cf. perhaps ii³ 344. Cf. also *IG* ii² 5642, also from Vari (any attempt to restore the names is rash), and *SEG* 41. 191. The newspaper article reported in *AR* 2005/6, 12 seems to have been confused. The choregos for Euripides was Sokrates, and the demarch dedication of a Theophilos son of O—, *IG* ii³ 4. 238, was probably found in Aixone (Matthaiou 1998, 166) and may belong to that deme. Kallimachos A., whose daughter Alkimache perhaps married into the family of Philon and Kallippos of Aixone (*IG* ii² 5450 with Table 29.17), trierarch *SEG* 45. 147.

⁵⁹ *IG* ii² 1204 may well have come from the sanctuary at Thiti, see Eliot 1962, 52–3. *AGC* 21. X7/Y3 no. 9 reports Geometric sherds as well as classical material from Kitsi Pighadi. On the text published by Linneman 1993 from the church of Panagia on Thiti see Goette 1995*b*, suggesting that it may be the epistyle of a naiskos. The only inscribed tombstones attributed to the area are *IG* ii² 6654 = CAT 1. 837, and *SEMA* 378, Paralos (perhaps a significant name) son of Pausanias L. However, some of the material seen by Gell and by Eliot (1962) may have come from the grave periboloi noted by Goette 2004.

⁶⁰ See the maps and description of the area in Goette 2004, with Goette 1995*b*; Andronikou and Doune 2000; Kakavogianne and Andrikou 2009; and *Mes.-Arg.* 260. Goette reports 4 hamlet sites in the valley N of Keramoti, and a classical watchtower on the headland E of Porto Loumbardo. On Kiapha Thiti see Lohmann 2010*a*. 6 horoi running along the ridge and through the temenos area which have letters *PM* in addition to *ORS* (*horos*), have been interpreted as marking the boundary between Coastal (Paralioi) and Inland (Mesogeioi) Lamptrians, possibly after the transfer of Upper Lamptrai to Antigonis in 307/6 (Traill 1982, cf. 1986). We have, however, no evidence that the term Mesogeioi was ever used of Upper Lamptrai, and there is still doubt whether any of these markers are classical in date; the similar horoi of *IG* v 1. 1371 a–c are dated to the 1st c. CE. (*BE* 2014, 180; ch. 22 n. 52). Goette's suggestion of a connection with the pre-Kleisthenic tribes seems to me most improbable. The sanctuary has been attributed to Dionysos on the basis of the reference to sexual pleasures in *SEG* 18. 93 (3rd c.); Traill 1982 suggested that it might be the Dorykleion of Athena (*IG* ii² 1035. 50, see Culley 1975, *SEG* 61. 128; but Kiapha Thiti is another possibility). A Doric capital dated c.470–430 may have come from a small temple

Lambrika was the site of a village inhabited from the medieval period to the eighteenth century, and it is not very clear how much ancient material is concealed beneath its remains, nor whether some stones were brought here from elsewhere by the later settlers (see Kakavogianne and Andrikou 2009, 206). The location of a sanctuary of Apollo here is supported by architectural material as well as the Lamptrian dedication *IG ii³ 4. 233*. In addition, two archaic and five classical Lamptrian tomb monuments, and a base representing Herakles of *c.*500, are said to come from this site.⁶¹ Since Coastal Lamptrai, with nine councillors, should have had a larger population than Upper Lamptrai, with five, the balance of evidence still seems to be in favour of placing Upper Lamptrai at Lambrika and assigning Kitsi Pighadi and Porto Loumbardo to Coastal Lamptrai. The ‘salty’ spring (*halykô*) sacred to the Nymphs, from which we have a fifth-century inscription, was at P. Loumbardo; the valley leading to the bay and to Aghia Marina had a large farmhouse of the classical period, and perhaps a small settlement.⁶²

On present evidence, the area of Lamptrai has not produced any concentrations of rich archaic burials like those of Vari-Anagyrous and of Anavyssos. However, its sanctuaries were in use by *c.*700, and there may have been a settlement at Kitsi by this time. Porto Loumbardo (smaller, but better protected, than the bay of Vari) may have been the coastal base of a naukraria. Lambrika was perhaps the base of

on this site. Kiapha Thiti: see Hagel and Lauter 1989; Lauter-Bufe 1990; Lohmann 2010*a*. The tomb of Kranaos pointed out to Pausanias (1. 31. 3) at Lamptrai was perhaps one of the LH III chamber-tombs at Vourvatsi (*Mes.-Arg.* 260). See R. Parker 1996, 318 for a possible genos Charidai responsible for the cult of Kranaos. Periboloi along the valley north of Thiti, Bergemann 1997, V 1–3.

⁶¹ *AGC 21 X7/Y3* no. 3 (Lambrika; Kitsi Pighadi is here erroneously located ½ mile SW of it) notes some 5th c. sherds; *AD 44 B 1*, 1989 (1995) reports classical settlement remains (cf. also *AR* 1995–6, 6); *AD 45 B 1*, 1990 (1995) 87 reports on the later settlement. Lauter 1982 suggests that there may have been a small hamlet here belonging to Lamptrai, but the grave material—if not in some cases transported from the Kitsi Pighadi area, which is possible, since 4 churches at Lambrika used ancient stones—suggests something larger. Cf. *Mes.-Arg.* 268, house in L. area with possible ritual functions. Tombstones (incomplete list in Linneman 1993): *IG ii² 6656*, 6686, 6702; *SEMA* 1977, Hieron Hieronymou, end of the 4th c.). Note also *IG i³ 1247*, 7th (?) c. grave slab from fill of the Vari cave, *Epicharido* (cf. possibly Epichares L. and Epicharides Lysippou L., below, at n. 81 with n. 81), and the relief stele of an armed warrior of *c.*530, *AAG* no. 46; the archaic cavetto capital Boardman 1978 fig. 229 also came from Lambrika (Jeffery 1962, 138 compares *CEG* 48, a base from Agios Panteleimon SE of Koropi). Gardikas 1920, 35–6, reported the illegal excavation of an archaic (?) statue at Vourvatsi. Herakles base, *LIMC* 1877, *c.*500 (Wrede 1941). Linnemann 1993 notes the remains of a grave peribolos in situ. *IG ii² 10750* = *CAT* 2. 375d, Bergemann H 50 (from near Karea; cf. *IG ii² 6693a* = *CEG* 542, *CAT* 3. 382a, Scholl 1996 no. 305) may have come from the deme area, as may *ii² 12491* = *CAT* 1. 929, cavalryman, from Trachones (cf. Polymedes L., ephebe in 333/2/1, *IG ii³ 4. 336*).

⁶² Spring, *IG i³ 256*; cf. Humphreys 2004, 135–6; G. Meyer 2004*a* (a well marked on map, Kakavogianne and Andrikou 2009, 205; note that *KῶA VIII* has a lagoon in the bay); Bultrighini 2015; small settlement (?) and farm, Lauter 1980. *AGC X8/Y3* reports the unpublished excavation of a classical peribolos on the E side of the valley (stou Patsa). The dedication of Geisias to Apollo was found in the Loumbardo valley (see below, n. 70). *AD 56–59 B 1*, 344, possible A.–Cl. sanctuary, Agios Ioannis.

the local phratry;⁶³ this would help to explain the decision of the area's inhabitants, in 507, to register as a single deme. Announcement of honours at the Dionysia seems to imply at least a makeshift theatre (*IG* ii² 1161).

We do not know the date of the 'split' between Upper and Coastal Lamptrai. By 414 its existence was sufficiently well known for Aristophanes to make a joke in his *Amphiaraos* about Nether Lamptrians, and it is the only split deme from which we have the division attested (once) in an official use of the demotic: Thoukydides, probably the son of Theokydes who served as councillor for Upper Lamptrai in 367/6, identified himself on his dikast-ticket as an Upper Lamptrian.⁶⁴

However, the division appears to have based on residence rather than descent. Philokrates son of Philinos served as councillor for Coastal Lamptrai in 367/6, but another son of Philinos appears in (?) the 360s as a kleruch from Upper Lamptrai. They may well have been brothers, or members of the same agnatic lineage. The Apollo dedication from Lambrika was made by members of both divisions of the deme, and we should probably assume that the two segments shared all the deme's sanctuaries. It is quite possible that they held joint meetings and elected a single demarch.⁶⁵

Lamptrai fielded a surprising number (five) of apparently unrelated candidates for ostracism in the 480s–470s, surpassed only by Alopeke (ch. 32). Three of them collected a substantial number of votes. Agasias son of Arximachos, for whom we have 43 ostraka (Brenne 2001, nos 2–3), may be the Agasias who is named as kalos in 480s; it is also possible that in Plutarch's notice of a conspiracy at the time of Plataia organized by 'Agasias of Acharnai and Aischines of Lamptrai' some confusion has occurred.⁶⁶

⁶³ See ch. 19 n. 5 on the relation between Apollo and phratres. Archaic material was seen in the area by Milchhöfer and other travellers; by the time of Gardikas' report in 1920 there had been much illegal excavation. However, Phoryskides L., whose son Chai[r]ēstratos was buried in the city with a dikastic pinax of the 360s (class I; *SEG* 50. 275, *City* 2000, no. 137), may have belonged to the phratry based in Alopeke (ch. 19 at n. 173 ff.).

⁶⁴ Ar. *Amphiaraos* F 27 PCG; Thoukydides, Kroll 1972 no. 78 (four other L. dikasts did not make the distinction); *IG* ii³ 4. 54. 54. Upper and Lower L. (like other 'split' demes) are not distinguished on *Agora* XV 42; Erechtheis is poorly represented in other 4th c. prytany lists. Note that some neighbouring settlements that shared a name may have been assigned to different tribes in 507: see Oion (chs. 26, 30) and Kolonai (chs. 26 nn. 30, 68; 32 n. 35).

⁶⁵ There seems no reason to follow Byrne 2008, 122 in thinking that the dedicants were orgeones rather than demesmen. Philokrates Philinou, *IG* ii³ 4. 54. 37; —as Philinou, *IG* ii² 1952. 11. Cf. *APF* 14329, with n. 71 below. *IG* ii³ 4. 233, the Apollo dedication, has 4 columns, the last containing only the name Geisia[s] and at least one further line. The dedicant Lysanias (line 21), *pace* Whitehead (1986a, 440 no. 269) should be either Lysanias II, councillor for Lower L. in 367/6, or his father L. I (*IG* ii³ 4. 54. 41); Demetrios, son of Lysanias I or II, (who died young) was buried in the Kitsi area, *IG* ii² 6654 = *CAT* 1. 837. Possible [komarch] of Upper L., ch. 21 n. 10.

⁶⁶ Figures from Brenne 2001. It does not seem to me impossible for a man young enough to be *kalos* (BArch 9009456) also to be a candidate for ostracism; the possibility that Kimon was a candidate in his 20s has to be left open. The story in Plut. *Arist.* 13 is influenced by the events of 404/3; the name Aischines does not occur otherwise in Lamptrai and is attested in the Hellenistic period in Acharnai.

Habronichos son of Lysikles (37 ostraka, Brenne no. 88) commanded a thirty-oared ship, probably privately owned, at the battle of Artemision, and acted as liaison between the Athenian fleet and the land force at Thermopylai; he went as ambassador to Sparta in 479, and was perhaps a target for ostracism as a friend of Themistokles.⁶⁷ Philokydes son of Pheideleos is not otherwise attested, but is represented by 20 surviving ostraka; another sherd names Olympiades son of Pheideleos, presumably his brother.⁶⁸ Kannonos son of Siburtios (5 ostraka) has no demotic, but his name is rare, and he may be an ancestor (FF?) of the Kannonos whose son Kleinias served as councillor for Coastal Lamptrai in 367/6.⁶⁹

Later in the fifth century Lamptrians seem less conspicuous, but Bion, victorious choregos in 448/7 and 447/6 (*APF* 2866), must have been prominent in his day. Oikoteles son of Geisias I, secretary to the epistatai of 421/0 responsible for the statues of the temple of Hephaistos (*IG* i³ 472. 4), was perhaps the father of the Geisias II who (?) contributed to the collective dedication to Apollo at Lambrika. Geisias' sister Timarete married within the deme; her husband was probably Amoibichos III, son of Gorgythos and grandson (SS) of Amoibichos I, who had served as epistates in the middle of the fifth century. Geisias made an individual dedication also (*Polemon* 1948). Amoibichos I's descendants over three generations were commemorated on a stone found at Koropi, which had probably been taken there after being illegally removed from a site in the Lambrika area (see Table 23.2), and by two lekythoi of unknown provenance. Kallippos and Diopeithes II, sons of Diopeithes I (who belonged to the latest generation commemorated on the stone) served together as epheboi in 333/2/1; their brother Nikokrates was councillor in 304/3. Both Kallippos and Nikokrates bore names that occur in other families of Lamptrai; their father may have married a daughter of Kallippos L., a pupil of Isokrates and opponent of Apollodoros of Acharnai in a banking case, who claimed to be proxenos of Heraklea Pontika, and/or a

Agasias is called *onos* on one sherd (Brenne 2002 T I/35), is given the patronymic [Ph]an[o]mach[o] (a near-synonym of Arximachou) on *SEG* 36. 44 c, and is attributed by two voters to Agryle, where perhaps he had a house.

⁶⁷ Brenne 2001 no. 227 Philokydes, 205 Olympiades. Hdt. 8. 21, Thuc. 1. 91. 3, *APF* 20; dedication on the Akropolis, *IG* i³ 749. One ostrakon accuses him of Medism, and the 4th and 10th letters attributed to Themistokles claim that his son Lysikles II married one of Themistokles' daughters.

⁶⁸ Philokydes of Kolonos, named on one sherd (Brenne 2001, no. 226), may be the same man, attributed to a city deme where perhaps he had a house. The names of both brothers imply aristocratic ambitions.

⁶⁹ Brenne 2001 no. 125; *IG* ii³ 4. 54. 38. The proposer of the 'decree of Kannonos' which regulated procedure in trials on the charge of deceiving the demos (Ar. *Ecd.* 1089; Xen. *Hell.* 1. 7. 20, 34), may be this man (acting in the context of Miltiades' trial in 489?) or a descendant; but the name occurs also, in the 4th c., in Philaidai (*IG* ii³ 4. 288). The final candidate is Pantaleon L., who is probably to be identified with Pantaleon Hegesiou (one sherd each, Brenne no. 210); he may be the Pantaleon of Erechtheis who died in 459 (*IG* i³ 1147. 7), or a relative, and may conceivably be an ancestor of the Hegesias L[amptreus?] of *IG* ii² 1251. 14 (late 4th c.).

Notes: On SEMA 386, 1523, and 1565 see ch. 11 p. 364. LGPN does not connect 1523, 1565, and 1524 with this family, and s. Teisias 15 does not recognise Kotsias' reading of IG ii² 2967 (ii³ 4.233 suggests Peisias).

TABLE 23.2. Lamptrai: Amoibichos and Geisias

daughter of Nikokrates son of Nikostratos, who was commemorated on a lekythos found at Vari and whose (?) brother Nikostratos II was buried in the middle of the fourth century).⁷⁰

Some other contributors to the Apollo dedication deserve comment. [Hi]e[r]o[n]y[mos], if his name is correctly restored (l. 3) is attested as trierarch, and was dead by 342/1, when his debts were paid by Philokrates L., perhaps acting as guardian of Hieronymos' son Hieron. The latter served as ephebe in 333/2/1 and was commemorated by a stone of the late fourth century found at Lambrika. His (?) guardian was probably Philokrates son of Philinos, who served as councillor for Coastal Lamptraí in 367/6; his father Philinos is attested as trierarch in the (?) 360s, and another son, —as Philinou, is listed as a kleruch in the same period.⁷¹

Eudemos . . o and Eudemos Epi (ll. 4–5), who were given abbreviated patronymics to distinguish them, may have been cousins (FBS); one of them served as councillor in (?) 336/5 (*Agora* XV 42. 61). Other possible kin groupings in the list are ll. 13–14, Kleitekton and Kle(i)tippos; ll. 18–20, Antiphilos, Aristophilos, and Aristophanes.

Kallikrates (son of Charopides; l. 6) proposed decrees in 346/5 and 340/39; he was serving as councillor at least in the former year. In 340/39 he was working to ensure the repayment of funds loaned to Athens by Tenedos, perhaps for operations against Philip in the Hellespont in the summer of 340. He seems to be one of the deme's businessmen, who perhaps had trading connections in the area.⁷²

The dedicant Euthynos (l. 8) served as one of the naval treasurers in 346/5; the stele of his daughter Theano, found at Koropi, may have moved from the deme

⁷⁰ Geisias: *IG* ii³ 4. 233. 35 (emendation from Teisias suggested by Kotzias 1948, cf. *BE* 1950, 100, rejected by M. J. Osborne 1988, 13 and hence ignored by *LGPN* Geisias 2, Teisias 15; 4. 233 suggests Peisias); see also *BE* 2014, 158. Kotzias, *ibid.*, also published a dedication to Apollo re-used in a chapel of the 10th–11th c. 'near Varkiza, on the western slopes of Mt Agios Demetrios', i.e. on the E side of the Porto Loumbardo valley. Tombstones: *SEMA* 386, 1523, 1565; *CAT* 4. 271; 4. 326; since the name Amoibichos is only attested in L. (*SEG* 33. 220), *SEMA* 1524, from the Kerameikos, may belong to the same family (cf. ch. 11 n. 12). The proxenos Kallippos appears in [Dem.] 52 (not 55 as stated in *LGPN* no. 41); cf. Isokr. 15. 93, and Trevett 1992, 9. His son Kalleas was one of the epistatai for Eleusis in 332/1–329/8, *IEleus* 158. 6–7. Nikokrates Nikostratou I L., *SEMA* 376, lekythos from the remains of a peribolos at Vari; his (?) brother Nikostratos II Nikostratou I, *SEMA* 377, *CAT* 2. 843 (provenance unknown), with a wife also from Lamptraí.

⁷¹ *APF* 14329; this entry, like that of Whitehead (1986a, no. 260) needs revision to take account of the new date for *IG* ii³ 4. 336. Hieron's stele is *SEMA* 1977. Philinos, *APF* *ibid.*, with J. K. Davies 1969; on the date of *IG* ii² 1609 see Gabrielsen 1989. Philokrates, *IG* ii³ 4. 54. 37, ii² 1622. 589 (erroneously taken in *APF* and in *LGPN* no. 103 as son of Hieronymos); kleruch, ii² 1952. 11 (Culasso Gastaldi thinks these kleruchs went to Lemnos; above, n. 18). (Most of the entries below relating to *IG* ii³ 4. 233 either supplement or correct those of Whitehead.)

⁷² *IG* ii³ 301. 5–6, ii³ 313, R/O 72; the name of the proposer of the Council decree on the latter occasion, ii³ 401, is lost. Cf. below at n. 76, on Kallikrates son of Anaxikrates, possibly of L.

area. Euthetos (l. 10) may have had a son Euthymachos I who served as councillor in (?) 336/5 and is named on a curse tablet. Euthymachos' son Poulydamas was commemorated in the city and his daughter in Kephale, her husband's deme. Euthymachos II son of Euthetos II, praktor on Imbros in (?) the later third century, may be a grandson (SS) of Euthymachos I.⁷³

Hagnon (l. 15) had a son Timotheos, commemorated by a lekythos found in the city area; they will have been related to Timokles and Mnesis, children of Timotheos L., commemorated by a trapeza (?) found in the church of Agia Trias at Lambrika, and to Timokl[es] II son of (?) [Ti]mok[les] I, councillor for Upper Lamptrai in 408/7 (Table 23.3).⁷⁴

For Nikeratos (l. 16) we perhaps have two grandsons: Nikeratos II, son of Theodotos, proposer in 298/7 of *SEG* 45. 134, and his brother Xenophon, ephebe in 333/2/1 (*IG* ii³ 4. 336).

Note: Conjectural reconstruction. *LGP*N separates the Hagnon of *IG* ii³ 4.233 from Timotheos' father.

TABLE 23.3. Lamptrai: Timokles

⁷³ Euthynos, *IG* ii² 1622. 387; his daughter Theano, ii² 6671. Euthymachos I, *Agora* XV 42. 51; L. Robert 1936 no. 11. 26 (*c.*340?); Polydamas, ii² 10530 + *SEG* 35. 175, from the Akropolis; Euthymachos' daughter Timarete, ii² 6363; Euthymachos II, *IG* xii 8. 51. 16, with Clinton and Dimitrova 2009.

⁷⁴ Timotheos Hagnonos, *SEMA* 383 (Peck 1942 no. 401A); Timokles and Mnesis, *IG* ii² 6686 (the first name on the stone may be that of their father, [Timotheos Timokl]eous L., or possibly of Mnesis' husband if she married within the deme). Note also Mnesidemos son of Mnesistratos L., named on a mid-4th c. list found in the Agora (*SEG* 19. 174. 11); his daughter Philoumene made a dedication to Artemis Brauronia in or before 344/3 (*IG* ii² 1514. 62–3 and repeats), and he should be the —demos son of Mnesistratos L. whose name was added to the tombstone of two women found in the Agora (*SEMA* 373).

Lysanias (l. 21) should probably be identified with Lysanias II Lysaniou I, councillor for Coastal Lamptrai in 367/6, whose son Demetrios was commemorated by a loutrophoros found at Kitsi (*IG ii² 6654*, see n. 59); *pace* Whitehead, there is no reason to suppose that all the dedicants lived in Upper Lamptrai (see above, n. 65).

K[ine]as, if correctly restored (l. 33), belonged to a long-lasting and distinguished family. His father, the insensitively-named Stephanos Thallou L., was reputed to be fabulously rich; even the eleven talents which, according to the family (see Table 23.4), was all he left at his death was no mean sum. He had made generous dedications on the Akropolis; the source of his wealth is unknown, and the family does not appear in the mining records. Kineas' son Thallos II served with Phokion in Euboia in 348 and perhaps as secretary of the orgeones of Bendis in 337/6. The family can probably be traced down to the end of the third century. The brothers Demetrios and Kineas (II), sons of Phileas, who distinguished themselves at the battle of Mantinea in 362, where Demetrios died, were perhaps nephews (BS? ZS?) of our Kineas. Kineas III, trierarch before 323/1, begins a line in which the names Kineas and Nikomachos alternated. The Kineas Nikomachou L. who appears as creditor on a late fourth century horos (*SEG 63. 157*) may be Kineas IV son of Nikomachos I, who won a victory as hipparch in the anthippasia contest; the hipparch's son Nikomachos II is attested as a cavalryman in the middle of the third century, and his son Kineas V was given the status of proxenos by the Boiotian league at the end of the third century.⁷⁵

A Kineias, perhaps of this family, is named on a curse tablet from Piraeus, evidently provoked by a legal dispute, with other men who may also have been members of the deme. Eudidaktos may be the Lamptrian who was sent with two other men to consult the oracle at Delphi in 352/1 concerning use of the sacred organs

⁷⁵ Stephanos I's wealth, *Lys.* 19. 46; Demetrios (who died at Mantinea) and his brother Kineas (II), sons of Phileas, *Polyainos* 2. 32. Demetrios L. served as councillor for upper L. in 367/6, *IG ii³ 4. 54a. 56*. Kineas III may be the son either of one of these brothers or of Thallos II (son of Kineas I?). Thallos II, *Plut. Phok.* 13. 5; he may be the Th. who served as secretary of the citizen orgeones of Bendis in 337/6, *IG ii² 1255. 17 = SEG 59. 155* (there is much less reason to associate with this family the Stephanos honoured by the same orgeones as epimeletes in *IG ii² 1324*; the name is common and the text, now lost, was dated to the early 2nd c. by Kirchner). Thallos may also be named on the curse tablet *Wünsch* 1897, 42. 14 (but Thorai is equally possible). Repetition of names makes reconstruction of later generations problematic; the dedication of [?Kineas Nikom]achou L., commemorating victory in the anthippasia competition and crowns awarded for service as hipparch and general (*IG ii³ 4. 265*), was probably set up by Kineas IV (see *Bugh* 1988, II A 23; B 181 for Nikomachos II, hippeus c.250). *IG ii² 737* seems to have honoured (or been proposed by) Nikomachos II; the [Kineas] Nikomachou (II) L. and [Niko]machos (II) Kineou L. who appear in ll. 3–4 of a late 3rd c. list, perhaps of members of Erechtheis (*Hesp.* 1934, 60, no. 49), may be his grandson and son. Raubitschek's argument (1942) for taking *IG ii² 737* and the *Hesperia* text as parts of a single decree proposed by Nikomachos II, who would also be named (below his son) in the body of the text, seems dubious. The Nikomachos named on *IG ii³ 4. 282. 21* should probably be Nikomachos II. Kineas IV or V as proxenos, *SEG* 1. 111. Kleidikos Kineou L., 4th c., *Keesling* 2010c, 312.

Note: IG ii² 737 is dated early 3rd c. by LGPN, following Kirchner, late 3rd c. by Raubitschek. Dates of the *Hesperia* texts uncertain. APF suggested that Phileas I and his sons might belong to Anaphlystos. *I Rh* 6, 263/2, Kineas IV or V.

TABLE 23.4. Lamptrai: Thallos APF 12883 (revised)

between Eleusis and Megara (cf. Humphreys 2017*b*); the Eudidaktos who served as priest of Asklepios at some date before 275/4 may be a descendant. Kallikrates son of Anaxikrates bears names both of which are attested for Lamptrai in the classical period; if he belonged to L., he may have been related to Kallikrates son of Charopides, discussed above. The names [Lysi]machos, Philokles, Demophilos,

Antiphilos, Menakles, and Nikokrates also occur in Lamptrai, but they are common names.⁷⁶

A number of the wealthier Lamptrians seem to have lived in the city or in Piraeus. Archebiades was a local friend (*xenos*) of Lykon of Heraklea and an associate of the banker Pasion; he clearly lived in Piraeus (or possibly the city), where he would be available to introduce Kephisiades of Skyros, another friend of Lykon, to the banker ([Demosthenes] 52. 3–4). Archebiades' son Archebios served as trierarch in 373/2, during his father's lifetime, and again in 355/4; he funded his tribal team in the eutaxia competition in (?) 333/2 or 332/1.⁷⁷ Philomelos I L., son of Theodoros, who served as diaitetes in (?) 371/0, was commemorated with his daughter on a stele found in the city. Philomelos II, who proposed a decree in 318 in the hope of persuading Phokion to resist Nikanor, may be a grandson, and Philon son of Theodoros II, ephebe in 333/2/1, may also be related. The (common) name Theodoros, however, also occurs in the deme in the family of Krates son of Naupon I, secretary to the treasurers of Athena in 434/3, and his grandson (SS) Theodoros son of Naupon II, buried northwest of the city.⁷⁸

The bankers Sokles I and his son Blepaios also belonged to Lamptrai. Sokles I, like the better-known Pasion of Acharnai, may have started his career as a slave, since he is said to have bequeathed his wife to a freedman (Demosthenes 36. 29). Blepaios appears on a list of (?) councillors c.350; as leader of a group of eranistai responsible for a loan of 1300 drachmai; as a banker, in forensic speeches and in comedy; and as a contractor supplying bronze for the portico at Eleusis in 337/6, with Kephisophon son of Kephalion of Aphidnai (*APF* 8410). Stration, daughter of Sokles L., whose tombstone was recorded by Fourmont and by Ross at Lambrika, was perhaps Blepaios' sister; the Sokles L. who appears as creditor for 800 drachmai on a horos may be either Sokles I or a homonymous grandson.⁷⁹

Melesias son of Aristokrates L. was one of the lessees of the Peiraios theatre in 324/3, and may have lived in or near that deme. His father appears in a diadikasia list of c.380,

⁷⁶ Wunsch 1897, 103, cf. ch. 14 n. 83; Wilhelm 1904, 122 read Pa[s]i[on] in l. 6 and identified this man as Pasion II of Acharnai, grandson (SS) of the banker; he dated the text c.323, taking Kineas to be the trierarch Kineas III (so also Malouchou 2013*a*). Eudidaktos: Aleshire 1991, no. 5413. The name is also attested in Pandionis, in the 5th c. Lysis Dorotheou, Wunsch 103 b 1; Dorotheos L. on Samos c.350, *IG* xii 6. 262 I 22.

⁷⁷ Archebiades, *APF* 2308 (the 50 dr. sums in *IG* ii³ 550, represent dedicated phialai, not liturgic expenditure). Archebiades may be the target of Lys. F XXI (50–1) Carey 2007, XIX (16–16A) Thalheim 1913, XXXVII Gernet/Bizos 1926.

⁷⁸ Philomelos, *IG* ii² 6709 = 10046, *CAT* 186 (the daughter 's name cannot be recovered). This text comes from a lost anthemion stele in Fauvel's collection (see *CAT*), probably from the church of St John Mankoutes NE of the Akropolis (*AEE* 775, see A. Mommsen 1868, 17, no. 6). It is dated to the early 4th c. on the basis of a drawing (Conze 1893–1922, 262), and we do not know whether Philomelos' name was inscribed with that of his daughter or later. Philomelos' service as diaitetes, *IG* ii³ 4. 24 (*CEG* 891–2; Lambert 2004*b* n. 5). Philomelos II, Plut. *Phok.* 32; Philon Theodorou, *IG* 4. 336. Krates Nauponos, *IG* i³ 292, etc. Theodoros Nauponos, *IG* ii² 6672, mid-4th c., *AEE* 755, from the Sepolia/Levi area.

⁷⁹ Blepaios: *Agora* XV 21. 4; *Agora* XIX H 94; Dem. 21. 215, 40. 52; *PCG* 2. 150, no. 229 (Alexis, *Titthê*); *IEleus* 157. 31–3. Stration: *IG* ii² 6702. Horos: *IG* ii² 2733 = Finley 1952, no. 74 (no provenance).

and served as syntrierarch at some date between 356 and 346/5. [Aris]tokr[ates] II, councillor in 304/3, was probably Melesias' son; the patronymic of Aristokrates III son of Antiphanes (II) L., ephebe in 246/5, suggests a possible affinal connection with descendants of Antiphanes I, attested as steward of 'Philippos the Merchant' in 373.⁸⁰

Epicharides son of Lysippos L. freed a female woolworker, perhaps a domestic slave (but see E. E. Cohen 2003), living in Melite, in the 330s or 320s; there may be some connection with Epichares L., a member of the board of ten who succeeded the Thirty in 403.⁸¹

Endios son of Epigenes I testified for Phormion against Apollodoros of Acharnai in 349/8 concerning an encounter in front of a diaitetes ([Demosthenes] 45. 8); he was probably a city resident. His brother Kallias served as councillor in 367/6, and may be the Kallias L. who owned a tower and house in Besa at about the same date. [Kal]li[as]? served as trierarch in 353/2 and is named on *IG* ii² 2398, perhaps a list of diaitetai from Erechtheis. Endios' son Epigenes II bought an eschatia at Phlya in the hekatostai sales for 1875 drachmai; the Epigonos son of Endios who appears in a lease of the orgeones of Zeus Epakrios, *IG* ii² 1294 = *SEG* 50. 462, should be a kinsman. Epigenes II's brother Kritodemos is attested as trierarch in 325/4, and heads the list of members of a commission selected by the Eleusinian hierophant, responsible for entertaining Plouton in the 320s.⁸²

⁸⁰ *APF* 1916; *IG* ii² 1928. 31, 1622. 627, 634, Aristokrates I; *Agora* XIX L 13, Melesias; *Agora* XV 60. 12, 61. 38, Aristokrates II; *IG* ii³ 1008 I 10, Aristokrates III; [Dem.] 49. 14 f., Antiphanes I. Cf. Themistios son of Antiphanes L., sent as praktor to Imbros in the 3rd c., *IG* xii 8. 51 with Clinton and Dimitrova 2009.

⁸¹ Epicharides, *SEG* 18. 36 A 215, cf. *IG* i³ 1247 (above, n. 61); Epichares, *Lys.* 12. 55 (Krentz 1982, 92–7).

⁸² *APF* 7873. The Endios of Erechtheis named on a casualty-list of (?) 411/10 (*SEG* 52. 60) may be the father of Epigenes I (Endios of Agryle was still alive in 408/7). Kallias, *IG* ii³ 4. 54. 40, *IG* ii² 1613. 209; 2398. 2 (diaitetai?, Dow 1983); *Agora* XIX P 5. 62, 73 f. Epigenes II, Lambert 1997a, F 11a 3 (orgeones: W. S. Ferguson 1944, Langdon 1973, 195–6; Langdon 1985 doubts whether they were connected with the shrine on Hymettos). Lambert thinks the orgeones of Zeus Epakrios may be the sellers of the hekatostai records (ch. 19 n. 167). Kritodemos, *IG* ii² 1629. 3; 1933. 4. The seated Epigenes and standing Kallias (both bearded) on a lekythos of c.400 from Omonia Square, *IG* ii² 11279 = *CAT* 2. 392, if they belonged to this family, would have to be placed in an earlier generation (*CAT* thinks that Kallias looks older than Epigenes, but since the latter is seated he should be senior: ch. 11 n. 36); since the names are common, the case for attribution is weak (cf. Habicht 1990a). There is a somewhat stronger case for linking *IG* ii² 11725 (*CAT* 2. 227) a stele of c.400, naming a Kallias and a Hippomachos, and 11646 (*CAT* 21) from Piraeus, bearing the same names but dated to the first half of the 4th c., with *IG* i³ 1511, a stone of 429–404 from Potidaia naming Kallias and Ischomachos, sons of Hippomachos L., with a Pallenian. (Cargill 1995, 87–9, would like to date this stone in or after the 360s. but both lettering and associated cemetery finds tell against him.) It does not seem impossible that Kallias was commemorated with his father in Attika after the expulsion of the kleruchs from Potidaia, although the absence of Ischomachos from the Attic monuments would remain to be explained. A Kallias L. on Samos c.350, *IG* xii 6. 262 I 18. Other possible Lamptrians on *SEG* 52. 60: Aresias (cf. Table 23.2; or Euonymon, n. 16); Myrmex and Opsios (homonyms in *Agora* XV 42); Charopides, perhaps father of the proposer of *IG* ii³ 301, 346/5, and ii³ 313, 340/39 (but the name is not all that rare).

Saurias L., who served as a private arbitrator for Stephanos of Eroiadai in the late 370s ([Demosthenes] 59. 45, 47; *APF* 12612), was probably also an urban resident.⁸³

Other Lamptrians ranged further afield. Diphilos II son of Philotades served in the cavalry on Salamis c.320; part of his father's tombstone was found in the city area.⁸⁴ Euxenippos son of Ethelokrates L., client of Hypericides in the early 320s, who served as trierarch before 334/3, developed a special relationship with the sanctuary of Amphiaraos near Oropos, where he made a dedication to Hygieia, and became involved in a dispute concerning the sanctuary's lands in Oropian territory; he had also had some responsibility for the reception of the dedication to Hygieia by Alexander's mother Olympias in the Athenian sanctuary of Asklepios.⁸⁵

⁸³ Lamptrians buried in the city area, about whom we have some further information: Kleomedon L., *APF* 8587, is probably the son of Diogeiton whose dikast-ticket *SEG* 34. 147a was found in the Kerameikos; Hegesippos Kephisodorou L., whose tombstone *IG* ii² 6669 was found either in Piraeus or on Aigina, may be the father of Kephisodoros II, proposer of the deme decree *IG* ii² 1204: Nik[andros] Eun[ikou] L., if his name is correctly restored on *SEMA* 375, served as treasurer in 343/2 and is listed as (?) diaitetes on *IG* ii² 2398. 5. He may be the father of Antisthenes L., honoured by his tribe for financial services c.300 (? cf. Papazarkadas 2011, 104, n. 22, *IG* ii² 1165; later date in Tracy 2003); Antisthenes at that date had an epikleric daughter, probably not yet of marriageable age, so should have been in his 40s. Euthykrates (II) son of Euthykles (II), commemorated by an ornate loutrophoros dated c.325 (Hamiaux 1992, no. 189 = *IG* ii² 6667) said to come from the city, should be the grandson (SS) of Euthykrates I son of Euthykles I, who served as councillor in 367/6 and as trierarch between 356 and 346/5 (*APF* 5602; *IG* ii³ 4. 54. 42; *IG* ii² 1622. 617; *LGP*N no. 31, following *APF*, ignores the shape of the grave monument and identifies Euthykrates I and II). Euthykles II served as parasite of Athena Pallenis, *SEG* 34. 157. 22. Note also that Satyros Satyrou and Satyros Timolaou L., commemorated by Hellenistic monuments (*IG* ii² 6698–9; further kioniskoi for Satyros Satyrou, *SEMA* 381, Peek 1942, 219 no. 5 and (?) [Saty](ros) Saty(rou) [Lamp]treus, Peek *AG* II (1957) 15, no. 27), now have an ancestor, Satyros L., attested in a (?) diadikasia text of the early 4th c. (*SEG* 44. 85, perhaps part of *IG* ii² 1929). Demostrate daughter of Archias L., kioniskos from the city, *SEMA* 367 (*BCH* 84, 1960, 642); her father councillor in (?) 336/5, her brother Archedemides in 304/3, *Agora* XV 42. 56; 61. 36.

⁸⁴ *IG* ii³ 4. 323. 4, ii² 6710 with *SEG* 29. 211. Identifiable cavalry families in L. are rare but note Komeas II son of Chairias, ambassador to Seleukos in 281/0 and hipparch to Lemnos in the following year (Bugh 1988, 216–17; Cargill 1995, 351 no. 831; Culasso Gastaldi 2010, 350 n. 19; G. J. Oliver 2007a, 71; Byrne 2007; Paschidis 2008, A 53; *IG* ii³ 884, archon Telokles), and perhaps named on a 3rd c. list (*SEG* 21. 637. 5, Kome[as] or [ou]); his (?) grandfather (FF) Komeas I served as councillor c.350, *Agora* XV 21. 3, and since the name is very rare they may have claimed descent from the eponymous archon of 561/0. Chairion L., recorded as hippeus c.250 (Bugh 1988, II B 51), may be the hipparch's son. Sostratos L., who served in the cavalry c.250 (Bugh 1988, II B 243), may be a descendant of Sostratos (II) Deinippou L., *APF* 13362, who is recorded as trierarch in 325/4 and 323/2 (*IG* ii² 1629. 752–3, 850; 1631. 120–1; heirs, 205). Sostrate daughter of Sostratos I L., represented with her parents on *IG* ii² 6705 = CAT 3. 359, Scholl 1996 no. 119, should be the cousin (FBD) of Sostratos II. CAT's date would put this monument in the 360s (Möbius 1929: 390–365); Scholl's later date and suggestion that the names over the figures were added when Sostrate's parents died appear to be influenced by the assumption that her father was Sostratos II. Theophrastos and Thrasykles (Bugh 1988, II B 263, 272) are mere names.

⁸⁵ *APF* 5886, *IG* ii² 1623. 6–13, Hyp. 4 *Eux.* (see De Falco 1947; Whitehead 2000, 154, 215–16, 261–2); *SEG* 15. 291. The father's name, Ethelokrates, suggests some philosophical interests in the family. The eponymos archon Euxenippos of 305/4 may be his son or another relative. Note also the dedication to Asklepios of Hegemachos son of Krataimenes L., probably the Hegem[achos] who served as

Lamptrians serving in the kleruchs' council on Samos *c.*350 (*IG* xii 6. 262 I 18–23) included Kallias (? son of Epigenes; n. 82) and Hygiainon son of Chairedemos, both still in Athens as councillors in 367/6 (*IG* ii³ 4. 54. 40, 55), Charisios, who was back home as *diaitetes* in 325/4 (*IG* ii³ 4. 35), and a Sokrates, buried on Samos (*IG* xii 6. 270), perhaps treasurer in 399/8 (*IG* ii² 1375. 21, etc.) if the latter did not belong to an earlier generation. See also n. 76.

Archedikos son of Naukritos L., anagrapheus in 320/19, and proposer of *Agora XVI* 104 in 318/7, may be the pro-Macedonian comic poet (*PCG* 2. 553–6); he and his father may be named on a curse tablet found in a grave in Piraeus, concerned with a lawsuit.⁸⁶ A more distinguished role was played two decades later by Aristeides son of Mnesitheos L., who served as general in (?) 280/79 (*IG* ii³ 4. 7, arch. Telokles, Byrne 2007) and again in 267/6 (*SEG* 56. 288) and was honoured at Orchomenos in Arcadia with Kallippos son of Moirokles of Eleusis and Glaukon son of Eteokles of Aithalidai, in connection with their visit to that city to mobilize support for the Chremonidean War. He was also a proxenos of Oropos.⁸⁷

The deme had a final burst of life in the late fourth century, perhaps after the restoration of democracy in 307; the deme decree *IG* ii² 1204 honoured Philokydes son of Aristarchos of Acharnai, who is attested as a member of the Areiopagos in 305/4 and presumably owned property at Lamptraï, for his contributions to sacrifices. The cult building on Kiapha Thiti seems to belong to this period.

councillor in (?) 336/5 (*Agora XV* 42. 48), with an addition by his son Eurymedon *c.*300, *SEG* 23. 124; see ch. 12 n. 75 on familial relations with Asklepios.

⁸⁶ Archedikos, Paschidis 2008, A 1; curse tablet Wunsch 67, also naming a Krates, perhaps of Sphettos; see Habicht 1993a, Bayliss 2011, and ch. 27 n. 28.

⁸⁷ *IOrop* 26, cf. Habicht 1976; Byrne 2007; *SEG* 52. 124. His father [Mnesi]theos Ar[i]s[teidou] may have proposed *IG* ii² 592 *c.*300 (*SEG* 32. 104); Aristeides son of Hermokydes L., commemorated by a stele of the early 4th c. found in Piraeus, may be an ancestor (*IG* ii² 6645 = *AEE*² 210 = 744c). Note also Diokles son of Dionysios L., commemorated with his wife and daughter on *SEMA* 368 (*CAT* 3. 388a), from Dafni. Add to *APF* 10810 that either Nikias I or Nikias II L. is now attested as trierarch *c.*355, *SEG* 45. 147. 49.

II Aigeis

This tribe had a number of small demes, both in its city trittys and in the contiguous inland and coastal trittyes; there are problems of location and also in the trittys-assignment of inland and coastal demes. The possibility that one of the tribe's trittyes (presumably the inland trittys, containing Ikarion and Plotheia) was called Epakreis is also disconcerting.¹

CITY TRITTYS

There are some arguments for placing Diomeia (n. 8) north rather than south of the city, which would produce a more coherent trittys. Kollytos lay inside the city walls, and an arc of suburban demes may have run from Diomeia and Kolonos northwest of the city to Ankyle and Hestiaia on the slopes of Hymettos.

Kollytos

The deme adjoined Melite (Strabo C 65/1. 4. 7; see Lalonde 2006*b*), and also included or ran to the border of the Aiakeion, which seems to have been situated in or next to the Agora, probably at its southwest corner. Kollytos may have stretched southwards from the Agora along the valley between the Akropolis and the Areiopagos. In 327/6 the deme passed a decree that was published on the same stone as a decree of the state, both concerned with the cult of Agathe Tyche; the deme decree seems to call for demesmen to lend funds secured on deme property so that money can be raised quickly. It is not clear whether Kollytos was involved in this programme of extraordinary sacrifice because the sanctuary of Agathe Tyche was located in the deme or because some catastrophe or ill-omened event (such as a lightning-strike, earthquake damage, abnormal birth) had taken place in the deme or had affected it particularly severely.² The deme's revenues were estimated at 2000

¹ See ch. 21 at nn. 25–7 for objections to Traill's reconstruction of the trittyes of this tribe, and ch. 21. nn. 133, 137–9 for arguments in favour of assigning *IG* ii² 2490 to Aigeis.

² Aiakeion: *IG* i³ 426. 6–9; Stroud 1998. Agathe Tyche: *IG* ii² 1195 + 620, see Matthaïou 2008, *SEG* 58. 108/61. 10; the text mentions the archon of 327/6. Matthaïou suggests the corn shortage of this period, but possibly a more specific reason for the deme's involvement is needed (there was already an

drachmai; one wonders what produced them. N. F. Jones 2004, 133 notes literary evidence for theatrical performances at the Rural Dionysia (using the city theatre? P. Wilson 2010*a*, 42).

Kollytos was the residence in 507/6 of Hipparchos son of Charmos, eponymos archon in 496/5 and ostracized in 488/7, perhaps a grandson (DS) of Peisistratos (*APF* 11793 IX B). Other well known demotai were the democrat Thrasyboulos son of Thrason; the sculptor Iasos, who worked on the Erechthion;³ Plato; the politician Agyrrhios son of Kallimedon; Misgolas, who was notorious in his youth, if we can believe Aischines; and the orator Hypereides.

Plato's father Ariston son of Aristokles allegedly descended from Kodros and Melanthos; his wife Periktione (Plato's mother) was a cousin (FBD) of the oligarch Kritias, and her uncle (MB) was the wealthy Pyrilampes, famous for his peacocks. Despite these impressive connections, Ariston apparently emigrated to Aigina as a kleruch, perhaps *c.*427. His wife Periktione had married Pyrilampes before *c.*413. Plato, at his death, owned the site of the Academy, and land in Eiresidai and Iphistiadai; at least the two former properties had been purchased by him.⁴

Agyrrhios' economic activities seem to have been cash-based; he is said to have headed a ring of tax-farmers in 402/1, and was an associate of the banker Pasion. His (?) grandson (SS) Kallimedon son of Kallikrates K. is attested as leasing a mine *c.*320/19, but there is no evidence of a long-standing family tradition of mining interests.⁵

Misgolas and his brother Naukles freed a female paidion living in Skambonidai, perhaps a domestic slave, in (?) the late 320s; Aischines' account of Misgolas' youth implies urban residence. Misgolas' appearance on *IG* ii³ 4. 63, a list of

annual sacrifice to Agathe Tyche by the late 330s: *IG* ii² 1496. 76, 107, 148, in late winter/early spring: rain for crops?; cf. ii³ 445. On the possibility that there was a sanctuary and cult statue of Agathe Tyche in the SW Agora see Palagia 1994; however, a dedication has been found in the fill of the medieval fort Rhizokastro, near the parodos of the theatre of Dionysos, on the opposite side of the Akropolis (*AD* 21, 1966, B 39). There was a sanctuary of Eileithyia in K., near a house belonging to Artemis Agrotera rented by Kephisophon of Aphidnai, *Agora* XIX L 6. 98–100 (ch. 31 n. 32).

³ *APF* 7305 Thrasyboulos; his sister made an intra-tribal marriage into Erchia. Iasos, *APF* 7423.

⁴ *APF* 8792 VII B; D. L. 3 1, 3, 41–2; Table 5.3; chs. 4 n. 27, 5 n. 23. D. L. 3. 3 reports an alternative tradition (Favorinus, *VHF* 64 Barigazzi 1966) that Plato was born on Aigina (and that Ariston returned to Athens in 405), in which case Periktione will have accompanied her husband to the island before Plato's birth (428/7? *c.*424/3 Nails 2002) and returned (with her sons but without her husband?) not long afterwards. Her marriage to Pyrilampes and the birth of their son Antiphon II cannot be precisely dated, but perhaps belong to the late 420s. Pyrilampes' deme is unknown; his son Antiphon is represented as living in Melite in Plat. *Parm.* 127a. Pherekrates K. (probably the son of Philokrates, councillor in 341/0) owned land, but we do not know where: *Agora* XVI 84. 100, 102 (= *Agora* XIX L 8), dated *c.*330.

⁵ *APF* 8157 III; Table 8.7. *Agora* XIX P 38. 12; Paschidis 2008, A 6. Agyrrhios was still active in 374/3, when he proposed R/O 26. Pythodelos I K., diaitetes in 330/29 (*IG* ii³ 4. 33), may have married a daughter of Agyrrhios' son Kallikrates. [P]ytho[delos?] son [K]all[i]k[rates] I? was perhaps buried in the city in the late 4th c. (the date in *SEMA* 326 is too early); Kallikrates II son of Pythodelos II was councillor in 265/4 (*IG* ii³ 921. 49, Euboulos) and 259/8 (ii³ 983. 56, Philinos).

members of a tribal commission to which well-known men seem to have been appointed, should indicate that he was wealthy, but neither he nor his brother has yet appeared in any liturgic record.⁶

Hypereides owned houses in Athens and at Eleusis, leased a mine at Besa, and at one time leased the Rarian plain, a sacred estate near Eleusis. His parents were buried near the Hippades Pylai, north of the city; his own bones, according to a rather confused tradition, were brought back to Attika and interred there by a kinsman called Alphinoos. An impressive Kerameikos grave monument, which included a bull statue, probably commemorated Hypereides' cousin (FBS) Dionysios II son of Alphinoos I of K., who is attested as one of the treasurers of the sanctuary of Hera on Samos in 346/5. This peribolos seems to have been robbed in the 330s, after Chaironeia, and not restored. Dionysios II died childless, leaving only his mother and sisters to mourn him, so the Alphinoos (II) who buried Hypereides will probably have been the son of one of these sisters, possibly adopted posthumously into Kollytos to continue the oikos of his maternal grandfather.⁷

Loutrophoros-base of Apemantos K. from Moschato, *SEG* 56. 262 (ch. 11 n. 37); he was perhaps hieromnemon at Delphi between 328 and 326, *CID* II 71. 43, 72. 6, 94. 4, 96. 6 (*SEG* 58. 217).

Diomeia

In the aitiological myth explaining the name of the sanctuary of Herakles at Kynosarges, a white dog runs off with meat sacrificed by Herakles to Diomos son of Kollytos. This does not necessarily imply either that Diomeia was adjacent to Kollytos or that the sanctuary at Kynosarges lay in Diomeia. The Mesogeioi

⁶ The reconstruction [Misgo]las in *SEG* 23. 81. 5 (= *IG* ii² 1370) is doubtful; in any case our M. cannot (*pace* *LGP*N) have held office in 403/2. Manumission, *SEG* 18. 36 B 335–42; for references in comedy see *LGP*N s. Misgolas (1). E. M. Harris 1988b suggests that Misgolas, Timarchos, and Aischines were all born c.390; M. H. Munn 1993 argues that Misgolas and Aischines were born in 395/4. Naukles I perhaps had a great-grandson Naukrates II son of Naukles II, attested as councillor in the 250s, *IG* ii³ 983. 54.

⁷ Table 2.3 (correcting Habicht 1991); *APF* 13912; *Agora* XIX P 21. 13–14. Hippades Pylai, Garland 1969, Matthaïou 1983. Hermippos (F 68b Wehrli 1974, *FGH* 1026 F 47, from [Plut.] *Mor.* 849c) reported that Hypereides was buried by Alphinoos, his *anepsios*; the alternative tradition that Alphinoos was a grandson (SS, son of Glaukippos) is probably worthless (the textual corruption in [Plut.] loc. cit. suggests interpolation). The testimony of Diodoros the Periegete (*FGH* 372 F 34; c.300) that H. was commemorated in his parents' burial plot was (perhaps unnecessarily) taken by biographers to imply that he was buried there; their attempts to reconcile this datum with the tradition of death in exile may have little factual basis apart from the name of a known kinsman. Dionysios: *IG* xii 6. 261; ii² 11169 = *CEG* 593 = *SEG* 41. 197 (Bergemann 1997, 184 A 3); see Stichel 1984; Knigge 1988 (1991, 123–5); Engels 1994. He possibly served as toxarch (his grave contained numerous arrowheads and two statues of archers may have formed part of his monument); Samos (presumably) is referred to as his second fatherland. Hypereides is cursed on *SEG* 40. 269. Lease of the *Raria*, *IEleus* 177. 382 with Papazarkadas 2011, 315 no. 80.

(ch. 20 at n. 130), whose centre seems to have lain northwest of the city, had a priest of Diomos, which suggests that their sanctuary may have been in Diomeia; the myth would then link the two sanctuaries of Herakles, with the implication that the sanctuary in Diomeia was the older of the two. The genealogical link between Diomos and Kollytos would be sufficiently explained by membership of the same trittys.⁸

The most prominent family in the deme was that which produced the orator Stratokles, who became prominent at the time of the Harpalos affair and re-emerged in 307/6 when the city was liberated by Demetrios Poliorketes, representing himself as the political heir of Lykourgos. His fellow-demesman Nothippos proposed a decree in 331/0, and Nothippos' son Lysias served as secretary in 307/6.⁹

Kolonos

The location of the deme, north-west of the city, is not in doubt. Its cult of Oidipous may have been inspired by Sophokles' play, but there was presumably already a cave or cleft in the hill that could be regarded as a point of entry to the underworld and associated with the descent of Theseus and Peirithoos. By Pausanias' day these two heroes shared a heroon at Kolonos with Oidipous and Adrastus. Oidipous' instructions to Theseus, in Sophokles' play, not to reveal the place of his death (1522–3), may well imply that the poet was innovating. The *Oidipous at Kolonos*, written towards the end of Sophokles' long life (he died in 406), and produced after his death in 401, was written after Kolonos had become notorious as the site of the 'Assembly' meeting at which the Four Hundred had taken power in 411. Sophokles had served as a member of the commission of

⁸ Diomos: Kearns 1989, 98 n. 92, 156. Porph. *de abst.* 2. 29 associates him with the Dipolieia. Hdt. 5. 63 says that Kynosarges lies next to Alopeke; he does not mention Diomeia (but see Billot 1992, 1994; S. Privitera 2002, Eliopoulos 2010; ch. 32 n. 2; Greco 2011, 503, 508–9). There was a Diomeian gate, so the deme ran up to or included part of the city wall. Traill (1986) removes Diomeia from the city trittys, and groups it with the coastal demes, but I find this kind of manipulation implausible: see ch. 21 at nn. 25–7. Hegesandros (*FHG* IV 412–22 F 3; a collector of anecdotes and curiosa of the mid-2nd c. BCE) attributed to the Herakleion of Diomeia the anecdote about Philip of Macedon and jokers associated by other sources with Kynosarges. Cf. S. Privitera 2002; R. Parker 2005*a*, 272–3, suggesting a deme location next to Melite.

⁹ *APF* 12938; Paschidis 2008, A 19. Stratokles I, the orator's grandfather (FF), was already wealthy. Possibly this family was responsible for the sculptor Sthenis' registration in the deme (Habicht 1998)? The boys' pentathlon victor Stratokles of *Iorop* 520. 26 is dated in 329/8 by Knoepfler 1993*b*, which is too late for the orator. Nothippos' decree, *IG* ii³ 351, Lambert 2007*a* no. 97, concerned relations with the Thracian royal family, but it is not clear that they were already in revolt against Alexander in 330 (see Schwenk 1985, ad loc.). The Thracian representative Rheboulas is described as son of Seuthes (III) and brother of Kotys, of Angele, which seems to imply that he was by this time resident in Attika; chs. 14 n. 11, 17 n. 24, 25 n. 61.

probouloi appointed in 413 to exercise control over the city's democratic institutions, and he may well have sympathized initially with the Four Hundred. Subsequent disillusionment would have left a trauma, interfering with his earlier memories of peaceful cultic activities in the deme. To locate the death and burial of the polluted Oidipous at Kolonos was, I suggest, a way of urging himself, his fellow-demesmen, and the other citizens of Athens to bury these traumatic memories and re-sacralize the deme. Seen in this light, the play may provide important evidence that for a religious thinker his deme could be a site of communication between contemporary life and the other worlds of the past, childhood, the dead, and the gods.¹⁰

Kolonos had an important cult of Poseidon Hippios, patronized by the cavalry; this relationship may partly explain why the sanctuary's resources came into the hands of the Treasurers of the Other Gods. The area may have been popular with wealthy men who needed a base near Athens in addition to their rural estates; both Menon (of Gargettos ?) and Philokydes (of Lamprai?) are attributed to Kolonos on a few ostraka.¹¹

Erikeia

The deme has been tentatively assigned to the Kypseli area but the main evidence for a deme-centre there is the deme-inscription *IG ii² 1215*, which gives no indication of the identity of its deme. It is dated in the early third century and praises a benefactor for restoring deme sanctuaries and managing deme funds,

¹⁰ On topography see Kirsten 1973, Alabé 1987, Edmunds 1993; on cults, Jouanna 1995; speculations on Sophokles' political role, Jameson 1971. Hero cult, Büttner 1911; Kearns 1989 (50–52, 189, 193–4, 208–9); Calame 1998; Connolly 1998; see also *FGH* 324 F 62 comm. The prophecy of Eur. *Phoin.* 1707 that Oidipous would die at Kolonos may be a later insertion, or evidence of communication between poets (cf. Bárány 1995; Mills 1997, ch. 5). The tradition of a tomb of O. under the Areiopagos (Paus. 1. 28. 7) may have been influenced by Sophokles' reference to a sanctuary of the Semnai/Eumenides at Kolonos (see *SEG* 38. 265). Aristophanes' *Frogs*, perhaps partly written before Sophokles' death (Dover 1993, 73), also pleads for reconciliation (687–99). I am not arguing for a crudely 'political' interpretation of *OC*, but for a complex relation between emotion and religious metaphor, based on an association of Kolonos with the 400 surely present in the minds of the imagined audience of 406. (Calame, 1998, 344, allows for the possibility of a political reference, but his paper explores other aspects of the play.) Euripides (of Phlya) uses references to deme cults in a similar way, especially in *IT*; see Humphreys 1986*c*. For Sophokles' family see ch. 6 n. 7.

¹¹ Poseidon Hippios: possibly the road to Kolonos led through the Hippades Pylai (Bugh 1988, 81 n. 5, cf. 27–8); on the Treasurers of the Other Gods see ch. 22 n. 100. P. J. Rhodes 1981*a*, 377–8 suggests that the assembly at Kolonos may have been legitimized by linking it to a festival of Poseidon. Decree for hipparchs and phylarchs of 282/1, copy to be set up in sanctuary, *SEG* 21. 525. Remains of a burial area on the road to K., *AAA* 18, 1985, 39–50. See also Siewert 1979; he notes the name of Poseidippos son of Kallippos K., known from the mid-4th c. stele *IG ii² 6528* (*AEE* 689, 'Ath.'; *CAT* suppl. M 5). Menon, Brenne 2001, 189; Philokydes, Brenne 226. Despite the favourable position of his deme close to the city, Anaxikles [- c. 5 -]jeous K. bought land in Aphidnai in the hekatostai sales, Lambert 1997*a*, F 7 B 17–18.

both sacred and secular; he has promised to pay out of his own pocket for the restoration of sanctuaries and the dedication of statues, on the understanding that the deme will repay him from the contributions required of officials appointed to building commissions. Evidently the deme-site had suffered some serious damage, perhaps from fire or earthquake rather than enemy action; the text, rather than demonstrating the continuation of vigorous deme life, indicates the dominant position of the benefactor, who uses the deme emergency to put pressure on the other members of the deme to make contributions. The honorand was not necessarily a member of the deme, and might indeed have been the prominent man whose dedication, commemorating honours awarded by the demos, the Council, the cavalry (?), and the phratry Medontidai, was found in the same area.¹²

Bate

The location of this deme at Ambelokipi is also based on very slender evidence (the assumption that the modern toponym Vatheia derives from the ancient deme's name), although the evidence for a deme site in the area is slightly more solid than in the case of Kypseli. Bate was the deme of at least two prominent old aristocratic families. The family of Drakontides belonged to the *genos* Eteoboutadai and supplied several of the *genos*' priestesses of Athena Polias; it can be traced from the service of Drakontides' son Lysikles as secretary to the treasurers of Athena in 416/5, and of his sister Lysimache as priestess from c.420–360, at least down to the third century. The family of Kallias and Habron of B. probably belonged to the *genos* Apheidantidai. An early Kallias son of Habron dedicated a bronze vase on the Akropolis in the first half of the sixth century; after this we lose track of the family until Kallisto daughter of Habron (II) appears as wife of the statesman Lykourgos, who belonged to the other leading line of the Eteoboutadai, which appointed priests of Poseidon Erechtheus. Kallisto's brother Kallias II, attested as trierarch, served as treasurer of military funds in 338/7. Descendants played a significant role in the revival of the *genê* in the late second century BCE.¹³

¹² Destruction by enemy action so close to Athens seems unlikely. On the Medontidai text *IG* ii² 1233 see ch. 19 n. 153. Rangaves (1855 II, 806) says ii² 1215 was found in a well in Patissia; *IG*'s provenance (first in *CIG* 588) comes from Pittakes? Sculptural material, including reliefs of Athena and Tyche, was seen by early travellers in a church at Ambelokipoi (Wolters 1894), and more recently a Roman collection of small copies of classical works of art was excavated, possibly in the same area (*AD* 20 B I, 1965, 103–7, cf. *BCH* 1968, 72–5); Wolters saw no evidence of a deme site.

¹³ Lysikles: *IG* i³ 306–8, 330–2, 370. See *APF* 4549, and ch. 20 n. 130, Table 20.4, on this family and on Amynomachos I son of Philokrates I B., councillor in (?) 343/2, *IG* ii³ 4. 75. 30, whose son Philokrates II and grandson (SS) Amynomachos II were associated with the Epicurean school (D. L. 10. 16; Cic. *de Fin.* II 101); Amynomachos II proposed the decree of the Mesogeioi honouring Polyuektos II son of Lysistratos B. c.275/4 (*IG* ii² 1245, arch. Olbios). The rare name Amynomachos, which suggests membership of the Amynandridai, occurs in a Eumolpid family of Halai Aixonides in the 2nd c. BCE, probably

Hestiaia

A site east of Ambelokipi is suggested by a possible association of Hestiaia with Ankyle in a fragment of Isaios, but the identification is far from solid.

Poseidippos son of Kallikrates H. served as councillor, treasurer of his tribe, and hieropoios in 341/0, and as councillor again in 335/4; his brother Polyuktos made an apographe in the interests of Sopolis son of Smikythos of Kydathenaion, who had naval debts, in 325/4.¹⁴

Ankyle

The villages of Upper and Lower Ankyle seem to have lain north of Agryle, on the eastern slopes of Hymettos. Polystratos son of Diodoros A., convicted in 415 of parodying the Mysteries, owned land in his deme near a sanctuary, a house in Kydathenaion, another house ‘under Mounichion’, and half of a plot ‘near the wall’ (of Piraeus?).¹⁵

Otryne

There is growing consensus that Otryne was a city deme, though the grounds for this view are tenuous: a joke in Antiphanes about Otryne and fish probably implies distance from the sea rather than easy access.¹⁶

The family whose quarrels are narrated in [Demosthenes] 44 (ch. 7 case 12), which provides most of our information on the deme, apparently had land on Salamis (§§ 19, 32), and perhaps also in the Laureion area, where the tombstone of Leokrates II O. was found, bearing reliefs of a young horseman and of

due to an intermarriage at some point with this line in Bate; ch. 20 n. 141, Table 20.3. Habron and Kallias, *APF* 7856; Sokrates and Archippos, sons of Archias, of Athens, granted proxenia in Aitolia *c.* 240, *IG* ix 1² I 25. 37–42, may have belonged to Bate.

¹⁴ Is. F X 12 Scheibe 1859, reference to a 3-headed Herm in Ankyle by the *Hestian hodon*, emended to *Hestiaian*. Note however *IG* ii² 2776, 81–2 (S. G. Miller 1972) an estate *Erch[ia]si pros tōi Tri[ke]ph[a]loi*. Poseidippos: *IG* ii³ 4. 76. 32, 74, 85; *Agora* XV 43. 34. Polyuktos: see ch. 14 n. 41.

¹⁵ *IG* i³ 426. 65–71; 424. 5–9; it is not clear whether the crops in 421 A 26–30 came from these properties or from elsewhere. Hygiainon A. in (?) the 320s manumitted a slave living in Kollytos (*SEG* 18. 36 A 335–8; Habicht 1994*b*); he has disappeared from the large curse tablet *SEG* 58. 265. Nikokrates son of Phrynion A., buried on Salamis, *SEMA* 8, served in the Council in 281/0, *Agora* XV 72. 68 (if the tombstone can be dated 3rd c.); Nikokrates son of Dion, *ibid.* no. 85, and Kallikrates son of Phrynion, *IG* ii² 5250 (no provenance, 3rd.–2nd c.), should be related to him. See also ch. 12 n. 87 on *SEG* 21. 752.

¹⁶ *PCG* 2 F 204, cf. Schaps 1982. *IG* ii² 2776. 96–8 (cf. S. G. Miller 1972), where Otryne appears in proximity to Aphidnai, might suggest a site north of Plotheia. *IG* ii² 8409, now re-read as commemorating Aristomen[es] son of Bios of O[t]ryn[e], *SEG* 24. 244, was seen by Milchhöfer at Spata, but may have been taken there by a collector. *SEMA* 503, Kallikrates O. (city); he was on Samos *c.* 350, *IG* xii 6. 262 II 13. On the family of Apollodoros O. (Hellenistic) see Paschidis 2008 A 61.

a loutrophoros.¹⁷ The speech derives from a suit between Leostratos of Eleusis/Otryne (father of Leokrates II) and his third cousin (FMMBDSS), the son of Aristodemos of Pallene, over the estate of Archiades son of Eutymachos O., who had probably died in the early fourth century, some sixty to seventy years before the lawsuit. It supplies some interesting evidence on deme procedure (ch. 22 n. 54). Leostratos' father Leokrates I had been adopted into the oikos of Archiades, his mother's brother, perhaps shortly before the latter's death (§ 19). Leostratos had been admitted to the deme Otryne at the age of eighteen but, when his son Leokrates II had followed him into deme membership, had returned to his deme (Eleusis) and family of origin, as the law permitted (and as his father had done earlier). When Leokrates II died without leaving an heir, his father approached the demarch of Otryne—whom he naturally knew well, having grown up as a prospective member of the deme and remained a member of it for some thirty years, from his own introduction at eighteen until that of his son—and asked to be reinstated. He was inscribed forthwith on the deme's *ekklēsiastikos pinax*, the list used in the city for controlling rights to citizenship and deme affiliation; this made no difference to his civic status (merely transferring him from Eleusis in Hippothontis to Otryne in Aigeis), but provided some kind of presumption that he had resumed his position as adoptive heir of Archiades, and gave him opportunities to associate again with Otrynians as a member of the deme. His opponent protested, but Leostratos persuaded a few demesmen and the demarch to agree that he would be inscribed on the register when it was officially opened. He then lined up as a member of Otryne to take part in the Panathenaia, but the rival claimant to the estate objected again; he protested once more, successfully, when Leostratos asked to be reinscribed on the deme register at the deme election meeting (*archairesiai*). Leostratos then changed his tactics, and, according to the opponent, got his second son Leochares onto the deme register as adopted son of Archibiades before the dokimasia of the deme's new members. The situation was an unusual one, in which there cannot have been any clear-cut rules for demarchs to follow; the fact that Leostratos was well known in the deme, whereas his opponent, in Pallene, had never had any dealings with it, is likely to have influenced deme opinion in Leostratos' favour, particularly since he had recently lost a son in the prime of young manhood.¹⁸

¹⁷ IG ii² 7016 = CAT 1. 435, Hamiaux 1992 no. 187 (missed by APF 5638, and not connected by LGPN, which has this stone under Leokrates 20 and Leokrates II with the rest of the family under Eleusis, Leokrates 9). See Table 2.2.

¹⁸ It is not clear whether the *archontōn agora* of § 36 (before the Panathenaia) and the *archairesiai* of § 39, after the festival, were both deme meetings; possibly the former was the tribal meeting at which councillors and other officials were appointed (ch. 21 n. 68). The small meeting of § 37 was perhaps a minor deme sacrifice at which the victims were not sufficient to feed a large crowd. It is also unclear

In the third century Apollodoros son of Apollodoros O. served as general of the countryside in the 250s (*IRb* 8) and Apollodoros son of Sogenes, perhaps a kinsman, contributed to the epidosis of 248/7; one of them is attested in the cavalry. An ancestor was councillor on Samos, *IG* xii 6. 262 II 14 (tombstone from Athens, *SEMA* 503).

INLAND AND COASTAL TRITTYES

As noted above, there is considerable room for doubt about the grouping of demes in these two trittyes, and it seems better in the present state of our knowledge not to try to separate them.

Ikarion

Ikarion and Plotheia, securely located at Dioniso and Palaio Stamata, north of Pentelikon, seem to form a quasi-enclave detached from the other villages of the Epakria region and attached to the Mesogeia south of the mountain. It is perhaps worth noting that Buck, who explored the area in the 1880s, remarked that in addition to lines of communication leading westward into the plain of Athens and eastward (over mountainous country) into the Marathon plain, the area was also connected to the Mesogeia by a route leading through the Rapentosa valley.¹⁹

The early explorations of the American School allow us to form a relatively clear picture of Ikarion as a deme. It had a central square in which dramatic performances took place; a row of marble theatre seats for privileged persons, and the Pythion, also in the central area, date from the fourth century, but a sixth-century colossal seated marble statue of Dionysos (repaired in the fourth century) and a text referring to it, and to a dedication to Apollo, also sixth-century, indicate that both cults were already in existence before the village claimed deme status. Deme records were inscribed and set up in this area from about the middle of the fifth century, and choregic monuments were erected from the early fourth century; there were also further dedications to Dionysos and Apollo. Houses perhaps spread over three terraces east of the deme centre, along the ridge of Mt Pentelikon

whether the dokimasia of § 41 is that of the deme or Council, but the latter seems more likely, since the opponents would surely have protested at a formal deme meeting (see A. Chankowski 2014, 43–4, on the order of events). The opponents presumably also had some allies in Otryne, who would act on their behalf in meetings of the deme, but Leostratos' support was stronger. The Archiades (II) of Otryne once read on our largest curse tablet has now been assigned to Thorikos (*SEG* 58. 265 A I 16).

¹⁹ For the possibility that Otryne was also in Epakria see above, n. 16. Buck 1889, map opposite p. 158; see ch. 26 n. 73 on the route to Vrana and Marathon. A Plotheian served as parasite of Athena Pallenis, *SEG* 34. 157. 28.

above it to the south, and along the road leading northwest to Plotheia; graves lined this and other roads, while others were perhaps placed in conspicuous positions above them. There may have been small subsidiary hamlets at Kokkino Chorafi, between Ikarion and Plotheia, and possibly in the Rapentosa valley.²⁰

Ikarion may have been the base of a phratry, although we have no direct evidence on this point; the absence of any reference to funds of Apollo in the deme accounts of the fifth century suggests that his cult was managed by some other body.²¹ In addition to the sixth-century statue of Dionysos and inscription already mentioned (*IG* i³ 1015), Buck and his colleagues found two other archaic statues, one perhaps representing Apollo. An inscribed base of c.510–500, *IG* i³ 1259, originally carried a statue of Bulos son of Eutelionides.²²

Myths gave Ikarion status as the origin-site of the cult of Dionysos in Attika. His first visit was to the deme, where he taught the eponymous hero Ikaros how to make wine. This reference to wine-making, and the association of the use of swings at the Anthesteria with the fate of Ikaros' daughter Erigone, link the cult at Ikarion to the Anthesteria, but celebration of the Rural Dionysia was probably also important from an early date. The tradition that Thespis came from the deme implies that Ikarion claimed to have a long tradition of dramatic performances.²³

IG i³ 253, dated c.450–425, is a record of funds managed by the demarch, divided into three categories: property of Dionysos, property of Ikarios, and 'public' (*hosion*) moneys. It covers six years, not necessarily consecutive: the three upper entries on the stone (IV–VI) are written, in different hands, in Ionic lettering, and are probably later than the three lower entries, written in Attic lettering, I–II in one hand and III in another. The sums involved are large, Dionysos probably having a capital of over 4000 drachmai and Ikarios of over 2000, while the

²⁰ Buck 1889; the deme centre was re-explored by Biers and Boyd (1982; cf. P. Wilson 2015, 100–2), but they provide no information about the surrounding area. On the theatre see Goette 2014. The Dionysos statue (*LIMC* 437 no. 134, c.520; repairs, *IG* ii³ 4. 222) is analysed by Romano 1982 and Despines 2007. Statue of seated goddess c.420, Kaltzas 2002 no. 253 (NMA 3076). Pythion inscription, *IG* ii² 4976; there was also a stoa-like building opening onto the central space. Apollo, *IG* i³ 1015, c.525 = *CEG* I 303 + II p. 302. *IG* ii² 7239, a rosette-stele commemorating Chairimenes son of Diodotos Ik. with Pantakles of Plotheia, came from Kokkino Chorafi NW of Dioniso (*KvA* XIX, 38. 6 + N, 41. 32 + E; cf. *AD* 27, 1972 B I, 153); Chairimenes (Chairemenes) was also named with an Archippe on a marble lekythos found in the deme (*AD* 58 B I, 60; Valavanis 2007). He will have been related to (father of?) Diodotos Ik., chairman of the proedroi in 320/19, *IG* ii² 380. 7. For remains of a peribolos 800 m NW of Dioniso (= Kokkino Chorafi?) containing sculptured monuments including 3 lekythoi and loutrophoros fragments, plus a large funerary pillar, see Valavanis 2007 (Bergemann 1997, 201, O 2–3).

²¹ The Ikarieis of *IG* ii² 1178, distinguished from the demesmen, are probably local residents rather than phrateres: see ch. 19 n. 17. Alternatively, Ikarians may have belonged to the phratry Epakreis, the base of which cannot yet be identified (19 n. 16).

²² For the spelling see Threatte 1980, 260–1.

²³ On the myth of Ikarios and Erigone see Hollis 1992; Luppe 1996; Humphreys 2004, 242–4; Borgeaud 2011; Brogiato 2014.

‘public’ fund contained almost four and a half talents (27,000 dr.).²⁴ On the back of the stone is a decree concerning the conduct of the Dionysia (P. Wilson 2015).

I summarize here the detailed discussions in Humphreys 2004, 146–51, and Wilson, *op. cit.* Deme inscriptions should not be seen as chance survivors from a regular process of recording decisions, accounts, etc. on stone; on the contrary, we have examples of decisions to publish regular records that soon ceased to be observed.²⁵ Records on stone were generated when normal procedures were interrupted, either by internal disputes or by external events such as war, plague, invasions, revolution, or similar circumstances. Normal procedures presumably included a degree of cronyism (demarchs did not put pressure on their friends), tolerated provided that there was enough turn-taking in office.

The sums recorded in *IG i*³ 253, totalling over 30,000 drachmas, can hardly have been stored unused in the village; presumably Ikarion, like other demes, employed its capital in interest-bearing loans.²⁶ Thus the sums recorded were nominal amounts, not cash in hand. It is rather surprising to find no reference to the lending process on the stone. On present evidence it seems that each year’s demarch was responsible for collecting interest and issuing new loans as needed (more cronyism?). We may assume that security or guarantors were required (cf. Plotheia, at n. 47); we cannot tell whether loans were short-term, long-term, or even perpetual.

The largest item in deme expenses seems to be the Dionysia, for which the demarch as well as two choregoi had responsibility (*IG ii*² 1178), while the choregoi were responsible for training choruses (*tragôidoi*), the deme will have paid for sacrifices, probably for temporary seating, and possibly even for protagonists. Resident demarchs may have provided sacrificial victims, wine, timber, and labour²⁷ from their own land; non-resident demarchs could call on city experience and contacts to improve the quality of performances.

²⁴ See *IG i*³ 253 commentary; *SEG* 54. 57–8 (Makres 2004); Humphreys 2004, 146–51 (misrepresented by Ismard 2010, 293 n. 68); P. Wilson 2015 (new text with longer lines). On the meaning of *hosion* see Connor 1988*a*, Blok 2010*a*, Peels 2016; on its etymology, Willi 2008, 166–7. Ionic lettering can be found early in deme texts (Matthaiou 2009*a*); *IG i*³ 248, from Rhamnous, dated in the 440s, has a similar combination of Attic and Ionic scripts. *IG i*³ 253 IV–VI would have been inscribed above I–III because the reverse of the stone was already occupied by *i*³ 254, which like 253 I–III is in Attic script. The proposer is a Menestratos, possibly an ancestor or relative of the [Men]ekr[ates] Ik. whose wife, a priestess of Kybele, was buried in Piraeus in the second half of the 4th c. (*IG ii*² 6288 = *CEG* 566; Mantes 1990, pl. 13a). A later Menestratos served as councillor towards the end of the 3rd c., *IG ii*³ 1231.

²⁵ *IG ii*² 1138, ? 2490 (chs. 19 n. 16; 21 nn. 133, 137–9); *SEG* 24. 151–2 (see below, Plotheia at n. 47; Teithras at nn. 123–8).

²⁶ Plotheia, Rhamnous, and perhaps Kydantidai (see entries s.v.) all lent money during the 5th c. Rather than moving from land income to loans, the deme finance system may have developed in the opposite direction. There was no shortage of Athenian coins (Kroll 2009), but not all rural Athenians will have been heavily involved in a cash economy.

²⁷ Or rewards in kind for labourers. Cf. P. Wilson 2010*a*.

IG i³ 254 = *SEG* 54. 58 specifies that the two choregoi are to be selected from those demesmen and resident non-demesmen who have not served before (there is clearly a hint here of conflicts and resentments). The demarch is to make a list²⁸ of those available to act as tragoidoi; both choregoi and tragoidoi can excuse themselves by oath from duty.²⁹ The *prótochoroi* who appear in l. 17 are probably young men who have not previously been eligible for the role.³⁰

The texts in Attic lettering on this stone (i³ 253. 11–24, and 254) have often been dated to the period before the Peloponnesian War, but this dating does not seem to rest on specific letter-forms.³¹ The argument (repeated by Makres 2004, 137) that such decisions would not be taken in wartime is doubtful and in any case does not exclude a date between 421 and c.415. Indeed, disruption during the Archidamian War, followed by conflict and reorganization, seems to be a plausible scenario. One might even suggest that the rich resident (or at least landowning?) non-demesmen now being pressed into service as choregoi had acquired holdings in this relatively safe area during the years of plague and Spartan invasions.³²

Further information about deme society comes from three deme decrees of the fourth century and from monuments set up in the deme centre by men commemorating service to the deme. *IG* ii² 1178, which may belong to the first half of the fourth century, honours the demarch Nikon and the choregoi Epikrates and Praxias for organizing the Dionysia. Epikrates' daughter Epikrateia was commemorated by a stele found in Piraeus, which does not mention a husband, so Epikrates may be a non-resident choregos.³³ *IG* ii² 1179 honours a demarch, whose name is lost, for representing the deme in lawsuits;³⁴ *SEG* 22. 117 (c.325) honours another demarch, —aios son of Sosigenes, for his management of deme

²⁸ *Katalegein*, the term used for lists of hoplites, cf. ch. 21 at nn. 44–5.

²⁹ On Makres' reading *mē* for *de* in 254. 12 (2004), see P. Wilson 2015. The fact that 4th c. choregic dedications by demesmen do not give demotics does not mean (*pace* Whitehead 1986*a*) that resident non-demesmen were no longer liable; demesmen did not need to identify themselves as such in their own deme. For a possible date of the Rural Dionysia or a related deme meeting on Poseideion 17 in i³ 254. 28 see P. Wilson 2015. It is unclear what happens in the Python in l. 30.

³⁰ At age 16 (ch. 19 n. 37) or 18? Another view in Wilson 2015.

³¹ Certainties about letter-form dating in the 460s–420s are becoming fewer; see recently Papazarkadas 2009*b*, Matthaïou 2011*a*, Tracy 2014. P. Wilson 2015 argues strongly for a pre-war date for these texts.

³² Cf. perhaps some of the scattered parcels in Attika held by men condemned for mutilating Herms and/or parodying the Mysteries: Nikides of Melite in Potamos, *IG* i³ 422. 212–15; in Kettos, 426. 179, 181; Axiochos of Skambonidai in Tho[rikos or -rai?], 422. 201; Alkibiades (?) of Skambonidai at Athmonon, 427. 24–6, 33 (cf. 421. 22–3); Euphiletos of Kydathenaion at Semachidai, Gargettos, Myrrhinoutta, and Aphidnai, 430. 15–18.

³³ Epikrateia's stele, *IG* ii² 6279, is dated to the second half of the 4th c., but if she died unmarried (which is not a very secure inference) this stone and ii² 1178 should not be too far apart in date. On ii² 1178–9 see *SEG* 61. 12.

³⁴ Since this text is dated *med. s. IV* the lawsuits may have been associated with the diapsephsis of 346.

finances.³⁵ This demarch's brother, Peithon, had served as one of four boy Pythaistai from the deme earlier in the century, and was councillor in (?) 336/5. The incoming demarch mentioned in *SEG* 22. 117/63. 105, Thoukydides, served as diaitetes in 330/29. Thoukydides II son of Antidoros and Charidemos II son of Thoukydides, who served as councillors for Ikarion in 304/3, may have been the demarch's grandson (SS) and son;³⁶ a son of Charidemos II acted as guarantor for two of the contractors involved in rebuilding the city walls in 307/6 (see Table 24.1).³⁷

The earliest surviving choregic dedication seems to be that of Archippos son of Archede[ktes?], dated in the early fourth century; the others are dated in mid-century. Archippos might possibly have been related to Archenautes I son of Archenikos of I., buried in Piraeus in the middle of the fourth century, and his son Archenautes II, who served as councillor in 341/0.³⁸ Two choregic monuments bear the names of three persons: *IG* ii³ 4. 501 commemorates the victory

³⁵ The son of Sosigenes presented his accounts on Hekatombaion 10. He is praised for offering all due sacrifices and announcing a propitious outcome, after which (?) crops were good all over Attika; this may be a reference to the end of the grain shortage of c.329–324. Probably this prosperity enabled him to collect some arrears of revenue due to the deme; his accounts showed a surplus of income over expenditure (perhaps equivalent to the 1000-dr. crown he was awarded). The decision to repair Ikarion's archaic statue of Dionysos may belong to the same period. The epimeletai responsible for the repairs were crowned with ivy, and they commemorated this award with a dedication (*IG* ii³ 4. 222; see Romano 1982). In *SEG* 22. 117, the demarch's decree (cf. Alipheré 2013), it seems possible from the *IG* squeeze in Berlin to read *kai hoi karpoi* in l. 3 for the printed *KMÓI karpoi* (and *ta th'* for *TAO* at the end of the line?).

³⁶ Thoukydides, *IG* ii³ 4. 17 (ch. 17 p. 526). Identification with the Th. of *CID* II 74 col. I 46–7, cf. 77 col. I 8, was proposed by D. M. Lewis 1955; if it is correct, Thoukydides may well have played some role in the deme cult of Apollo. However, the names of two younger kinsmen of the Ikarian Th., who served as councillors in 304/3, Thoukydides II Antidorou and Charidemos Thoukydidou (*Agora* XV 61. 44, 47), do not provide any support for the attribution to this family of the amphiktyonic treasurer, who is presumably to be identified with the politician Thoukydides of [Dem.] 58. 23, 36–7. (It seems also conceivable that the beginning of the Ikarian Th.'s patronymic may be lurking in the letters *TÓPEËON* of *SEG* 22. 117. 7; this would exclude identification with the amphiktyon, son of M—d . t . .). The name Thoukydides is attested also in the 4th c. in Lamptrai (see ch. 23 n. 64) and Aphidnai, and may also have continued in use in Halimous, Gargettos, or Alopeke. The exact relationship of the councillors of 304/3 to the demarch-diaitetes cannot be reconstructed; however, there seems to be a reasonable possibility that Thoukydides II son of Antidoros was the demarch's grandson (SS), and Charidemos (II) a son, named after his maternal grandfather Charidemos I of Ikarion, who had another daughter, Hediste, who married Gnathios son of Euphiletos I of Atene and was commemorated with him on a sculptured and painted stele reported from a house in Odos Evangelistrias, just north of the ancient city (*SEMA* 122).

³⁷ Maier 1959 no. 11, III 128.

³⁸ Archippos: *IG* ii³ 4. 497. The tombstone of Kleitopolis daughter of Archippos (II) Ik., *IG* ii² 6282, is dated to the 2nd c. BCE by *AG* I, 11, no. 24. Archenautes I, *IG* ii² 6274; Archenautes II, *IG* ii³ 4. 76. 28. Develin *AOP*. 100 suggests that the general Archena[utes] of 433/2 might have belonged to Ikarion, but the name may have been commoner in the 5th c. than our mainly later records suggest, and it is attested in Marathon (tribe so far unrepresented among the strategoi of this year) in the 4th c. (*SEG* 50. 168 B 3; cf. Lambert 2000a).

TABLE 24.1. Ikarion:
Charidemos

of Ergasos son of Phanomachos with his sons Phanomachos II and Diognetos,³⁹ and ii³ 4. 506 commemorates the victory of Hagnias (or Deinias), Xanthippos, and Xanthides. The two latter should be brothers, and Hagnias (or Deinias) was probably their father, or conceivably their guardian. These dedications are not evidence for shared choregiai or for an increase in the number of choregoi, but show victors sharing their kudos with younger kin who are not yet (fully) financially independent.⁴⁰

Mnesilochos son of Mnesiphilos Ik., who made an independent dedication as victorious choregos, was probably related to Gorgiades II son of Mnesikleides, who served as treasurer of his tribe in (?) 340/39. Gorgiades' brother Diokleides was commemorated *c.*350 (?) with his wife and her father He[r]akleides of Keiriad(ai), on a sculptured lekythos. Mnesikleides son of Gorgiades I, presumably the treasurer's father, appears in *Agora* XV 492. 72, possibly a list of kleruchs from the 360s. Gorgiades may have owed his name to an affinal connection with the family of Gorgoinos I son of Oineides Ik., treasurer of the Other Gods in

³⁹ Agelidis 2009, no. 96, *IG* ii³ 4. 501. An Ergasos Ik. supplies bundles of reeds (*kalamides*) to the sanctuary at Eleusis in 329/8 for small sums (*IEleus* 177. 189, 8 dr.; 194, 2 dr.); he can hardly have found them in his deme.

⁴⁰ Agelidis no. 61, *IG* ii³ 4. 506. Hagnias has a trierarchic record stretching from (?) 362/1 to some date before 323/2, *APF* 131; possibly more than one man is involved. Hagnodemos son of Hagnotheos, *IG* ii³ 4. 632 may be related. On shared choregiai see also ch. 28 n. 44. Jordan and Curbera 2008, 138 read *Dēnias* for Hagnias (*SEG* 58. 188), but Takaeuchi 2013 defends Hagnias (see *IG* ii³ 4. 506). The texts explicitly attribute the choregia and victory to all 3 dedicants, but this is justified if the expenses are paid from a shared patrimony. It is more doubtful whether the attribution could be made in the case of a minor, although it is tempting to think that a non-resident might make such a dedication in order to dispose his fellow-demesmen favourably towards sons who would soon be presented for registration. On the question of liturgic service by fathers and sons see ch. 5; on shared choregiai, P. Wilson 2000; 2015, 116.

TABLE 24.2. Ikarion:
Gorgiades

423/2, and his descendant Gorgias son of Gorginos II, councillor in 304/3 (Table 24.2).⁴¹

We also have a dedication to Dionysos from Ikarion, made in fulfilment of a vow, by Kephisios son of Timarchides Ik., who may have been related to Timokritos son of Timokrates Ik., who was one of the deme's boy Pythaistai and served as councillor, holding the related offices of syllogeus and hieropoios, in 341/0 (*IG* ii³ 4. 76. 26, 82, 85). *IG* ii² 12791, found in the deme centre, may be a dedication by Timokritos, whose father is attested as syntrierarch at some date between 356 and 346/5.⁴²

Timokritos' fellow-Pythaistai, recorded on a dedication with a relief representing the four boys at Delphi, accompanied by a bearded man (a Delphic priest?) were Peithon son of Sosigenes (brother of the demarch discussed above), Ameinokles

⁴¹ Mnesilochos, *IG* ii³ 4. 508. For the interpretation of *Agora XV 492* as a list of kleruchs see Humphreys 2010a; for the service of Gorgiades II as tribal treasurer (313/2) see ch. 21 at n. 86; for Diokleides' monument (possibly erected before his death to commemorate his father-in-law) see *IG* ii² 6309 with Peek 1942, no. 348 (*CAT* 3. 891 gives the lekythos a city provenance). Another Ikarian kleruch was buried on Imbros with his wife (from Paiania), daughter, and son-in-law (from Aphidnai, ch. 31 n. 42), *IG* xii 8. 100. On *SEG* 32. 248/44. 131 (c.360), another Ikarian choregic monument, with reliefs of actors' masks, the choregos' name is lost (two of the masks would have been used in a satyr-play, according to J. R. Green 1982); cf. P. Wilson 2015.

⁴² *APF* 13768 (the reference for the [?] dedication is erroneous); see ch. 5 n. 46. As *APF* notes, the family (belonging to a local genos?) may have reemerged at the end of the 2nd c. BCE, claiming Eupatrid status and taking part in the Pythais of 107/6. Note also, apparently belonging to an Eleusinian genos, Lakrateides son of Sostratos Ik., *IEleus* 239, perhaps a descendant of the 4th c. hierophant L. (Is. 7. 9, *APF* 1395, Clinton 1974, *FGH* 328 F 155) and the L. who prosecuted Perikles in the summer of 430 (Plut. *Per.* 35); ch. 20 n. 99.

son of Ameinippos, and Hagnodemos son of Hagnotheos. Hagnotheos served as councillor (with Peithon) in (?) 336/5; he may have been related to the trierarch and (?) choregos Hagnias. Ikarion had its own Pythion, where the Pythaists' dedications were probably set up, and like Erchia and Oinoe (IX) probably had its own Pythaistai.⁴³

An individual dedication commemorating services as Pythaistes was made later, perhaps in the 320s, by Peisikrates son of Akrotimos I, who belonged to a well-attested medical family (see Table 24.3). His brother Aischias I served as councillor in 304/3 and had a son, Akrotimos II, who in (?) 268/7 (archon Diogeiton, see Byrne 2007) proposed a decree concerning the traditional sacrifices of doctors to Asklepios and Hygieia; he also served as tamias, and made a cash dedication (54 dr.) in the Asklepieion. He should be the Akrotimos son of Aischias of Athens who was made proxenos by the Aetolians in 238/7. However, if so, the [Aisch]ias son of Akrotimos of Pergamon who was granted hereditary isoteleia by Athens in 256/5 can hardly be his son; if related, he is perhaps a cousin (FBS), son of the third son of Akrotimos I, Akrotimos III (another doctor?), who had emigrated to Pergamon in the late fourth or early third century. Members of the family in Attika presumably lived in the city.⁴⁴

TABLE 24.3. Ikarion:
Akrotimos

⁴³ IG ii³ 4. 632, the record of the 4 boy-Pythaistai, made its way to Rome (see Voutiras 1982), but should probably be attributed to Ikarion. Since two of the boys (Timokritos and Peithon) can be attached to deme families, it seems more likely that this was a deme embassy than that the dedication was made by a (deme?) contingent in an embassy organized by the state such as is attested in 355, Is. 7. 27 (*contra*, R. Parker 2005a, 84 n. 20; see also Rutherford 2004b, 2013).

⁴⁴ The name Akrotimos is not otherwise attested in this part of coastal Anatolia. Peisikrates' dedication, IG ii³ 4. 638, was found *in situ* in the Pythion (Buck 1892, 471–2). Voutiras 1982 attributes it to Lykourgos' Pythais of (?) 326/5, but I do not think we can decide between state and local embassies in these cases. Aischias I, *Agora* XV 61. 45; Akrotimos II, IG ii³ 914 (date, Tracy 1988, 319); Aleshire 1989 Inv. V. 148, 141; IG ix I² I. 25. 72–5. [Aisch]ias, IG ii³ 989 (SEG 53. 130 B; G. J. Oliver 2007a, 204–6), 256/5 (Antimachos). In view of the Pythais associations and related name-roots, there may be a link between Peithon son of Sosigenes and Peisikrates; note also Theopeithes Ik., leader of a group of eranistai who lent money on a chorion and oikia in the Spata area in the late 4th c., IG ii² 2701 = Finley 1952, no. 32.

A dedication to Apollo was also made in the deme by a group of hebdomadistai, worshippers who made sacrifices on the seventh of the month. Since they recorded the date of their service they were perhaps liturgists, but we do not know whether they were appointed by the deme or by another group (orgeones?).⁴⁵

Plotheia

The deme lay next to Ikarion, to the north-west, and seems to have occupied the area round Palaio-Stamata (Bala). An altar dedicated to Aphrodite, and another Plotheian dedication, were re-used in a church at Palaio-Stamata, and other finds of sculpture were reported from the site.⁴⁶

Our main source for deme affairs is a small stone (broken at the bottom), now in Paris, bearing a record of financial arrangements in Ionic script, perhaps to be dated *c.*420. It is headed by a list of *kephalaia*, capital sums, which were evidently entrusted to different officials for management; this list was erased and recut at some date not very long after the inscription of the rest of the text, which contains regulations governing the conduct of the fund-managers.⁴⁷ We thus have in Plotheia, as in Ikarion, a system of periodic registration of accounts on stone, which did not last for long. Since neither of the texts can be precisely dated, we cannot tell whether this resemblance is due to chance, or whether both demes were affected by the same historical circumstances.

It is also possible that Plotheia was influenced by the example of its larger neighbour. However, it had its own system for managing deme finances, which gave much less responsibility to the demarch than that of Ikarion. Earlier decrees

⁴⁵ *IG* ii³ 4. 639, found in 1982 in the Pythion and dated *c.*350–325; both the archon-date and the dedicants' names are lost. For similar groups named for month-days see ch. 19 n. 152; the 7th was associated with Apollo. Daïtes Hestiodorou Ik., honoured at Rhamnous in (?) the 4th c. for service as peripolarch (*IRb* 95), bears a name that suggests cultic liturgies. Note also that Eraton son of Eratation Ik., superintendant of the dockyards in 369/8 (*IG* ii² 1617. 73) and councillor in 341/0 (*IG* ii³ 4. 76. 29) may have belonged to the wealthy family with which Lysias 17 is concerned. They were traders (§ 5), and had land in Sphettos and Kikynna. If this identification is correct, we should perhaps emend the name of Eraton II in *Lys.* 17. 3 to Eratation. However, a good case can also be made for Agryle, where we have an Erasiphron in 304/3 (*Agora* XV 60. 3, 61. 29). There is also an Eraton of V Akamantis in the casualty-list *IG* i³ 1186. 31, *c.*411 (Sphettos or Kikynna?). Dowry horos for daughter of Xenotimos Ik., *SEG* 56. 227.

⁴⁶ *IG* ii² 4607, 4885, and 4916 were found on the site; see Waldstein and Tarbell 1889, 1892, Buck 1889. The deme decree *IG* i³ 258 had left the site earlier; it was acquired by the Louvre in 1818 as part of the Choiseul-Gouffier collection, and was probably brought to Fauvel in Athens in the late 1780s and purchased by him for Choiseul (see Bracken 1975). The relief of Aphrodite seen by Milchhöfer at Koukounarti (*KpA Text* III 57–8) may perhaps have travelled there from the Plotheia sanctuary. Archaistic statue of (?) Dionysos (or a *koré*?) from Stamata NMA 3070, Tzachou-Alexandre 2007, 31 (*Papers of the American School* 5, pl. 13). Buck 1892, 161 puts the Ikarion–Plotheia boundary at the highest point on the road between the two demes.

⁴⁷ I summarize here Humphreys 2004, 151–4. See also Migeotte 2010 with *BE* 2011, 234; Whitehead 2010; Papazarkadas 2011, 144.

had specified the period for which money should be lent and the interest to be charged; money not covered by these was to be lent in annual loans at the best rate of interest the archon was offered, with a proviso that each loan must be covered by adequate security in the form either of land or of a personal engagement by a guarantor. There was a general fund (only 1000 drachmas) for use by the demarch; 7000 dr. 'for the Herakleion' (presumably a building project), 1200 dr. each for the Aphrodisia⁴⁸ and Anakia, 110 for the Apollonia; 600 dr. for the Pandia, probably celebrated in Athens;⁴⁹ and 5000 dr. for tax exemption (*ateleia*). This last fund probably covered periodic or occasional demands for contributions both in the deme and outside ('the Epakrians', 'the Athenians').⁵⁰ A final item of income from rents (134 dr. 2½ obols) probably refers to land owned by deities.⁵¹ Fund managers had to provide sweet wine at deme festivals (c.1½ litres per head) and c.40 litres for a *didaskalos*.⁵² One has the impression that at the date of this inscription Plotheian contacts were still mainly local, cult-sharing with neighbouring demes more prominent in their experience than visits to the city.

Plotheia, like Ikarion, seems to be a well-funded deme. It may have been less active in the fourth century, although three dedications are preserved, one a large altar for Aphrodite. Another, a statue (?) of which only the base survives, was dedicated by Kallias son of Kallias; either he or his father dedicated a bronze phiale to Athena on the Akropolis in or before 382/1.⁵³ The other identifiable wealthy members of the deme seem to have been based in the city. Apollodoros II son of Olympichos P., who appeared as a witness for Euxitheos of Halimous in 346/5, probably had an uncle (FB) whose gravestone was found in the Agora; Protokles P. and his son Prokles II were also buried in the city. Prokles served as a parasite of Athena Pallenis.⁵⁴ Kleidemos son of Meidon P., who dedicated a

⁴⁸ Cf. the altar dedicated to Aphrodite in the deme by Kallippos P. in the late 4th c., *IG* ii² 4607. The statue dedicated by Kallias (n. 53) was found in the same church.

⁴⁹ Pandia: cf. R. Parker 2005*a*, 477–8. Presumably celebrated by those demesmen who were in Athens for the City Dionysia.

⁵⁰ See ch. 21 nn. 133, 137–9 on the Epakreis; 30 n. 57 on the Epakreis and Apollonia (*SEG* 32. 144) and on Anakaia. 'The Athenians' presumably refers to at least primarily to city festivals. Anakia were celebrated in the city (R. Parker 2005*a*, 457) but Plotheia's festival was probably local. Wilson's view that the fund covered payment for theatre seats at Ikarion (2010*a*, 70, cf. 2015) seems to me improbable.

⁵¹ There were also other leases. The *ateleia* fund may i.a. have covered *eisphora* on land leased by the deme (first *eisphora* of the war, 428, Thuc. 3. 19).

⁵² He probably trained choruses. On what occasion(s) would they perform?

⁵³ *IG* ii² 4885; 1421, 102–3, cf. 1412. 6, see D. Harris 1995, V no. 313. Since most dedicated phialai were gold or silver, but this object was still being recorded (but never weighed) after c.50 years, it must have been special in some way (exotic decoration?).

⁵⁴ Apollodoros: Dem. 57. 38, *APF* 3126; [...]or[os] son of Apollodoros I, *SEMA* 574. Protokles and Prokles II *APF* 12234, *IG* ii² 7240–1; *SEG* 34. 157 (the provenance of Protokles' tombstone is uncertain). Cf. Aleshire 1991, no. 12235 on Prokles III son of Chabrias P., who proposed the appointment of *exetastai* (assessors) for the Asklepicion in 248/7 (arch. Diomedon; *IG* ii³ 1010 = Inv. V 3). Since Chabrias of Aixone (*APF* 15086) married late, it is possible that he had an otherwise unattested daughter who married

tripod commemorating his victory with a men's chorus from Erechtheis in (?) 364/3, was perhaps a dithyrambic poet.⁵⁵

Gargettos

A location in the area of modern Garito, in one of the main valleys on the south side of Mt Pentelikon, is supported by the survival of the name and by a deme decree found at Garito conferring honours on Epikydes son of Philokydes, which was to be set up in the temenos of Dionysos; architectural fragments in the church of Agios Georgios at Garito, and at Ieraka, may have come from a deme temple. The deme had a treasurer, *tamias*, who paid for inscription of the decree from deme revenues (*koinai prosodoi*).⁵⁶

Gargettos contained families belonging to the phratry Medontidai—represented also in several other demes—and of the (?) genos Philaidai, but it is unlikely that either group had its base in the deme.⁵⁷

The first prominent demesman known to us is Menon son of Menekleides, also characterized on ostraka as 'Menon the Lemnian', 'Menon who held office' (*hos érchsen*), 'Menon the innocent' (*aphelês*), 'Menon the most-bribed' (*dôro-dokôtatos*), and (on four sherds) '*Menon Garg. thes.*' He may be the Menon who served as eponymos archon in 473/2; the references to bribery and (protestations of) innocence suggest the period leading up to Ephialtes' reforms in 461, when corruption of magistrates was an issue. It seems to me very unlikely that he was the Menon of Thessaly who brought twelve talents and three hundred cavalry to help Kimon at the battle of Eion.⁵⁸

Prokles II; although this gives us rather long generations also in Prokles' family (ch. 5 nn. 58–9), it is the simplest way of accounting for the name Chabrias in P. (the only other, questionable, classical example is Chab[ri]as of Oion, *SEMA* 494, where the restoration of the name is very uncertain. If *LGPN* s. Chabrias 7 is right in dating Wunsch 1897 no. 2 to the 3rd c. it should be directed against Chabrias of Plotheia).

⁵⁵ *IG* ii³ 4. 439, cf. *SEG* 26. 214.

⁵⁶ Peek 1942, 7–8 no. 5, dated to the second half of the 4th c. As Peek saw and *LGPN* has repeated, the honorand must (*pace* Whitehead 1986*a*) belong to the deme; he may have been related to Diodoros son of Philokles G., councillor and syllogeus in 341/0 (*IG* ii³ 4. 76. 12, 82), and conceivably to Smikrias son of Philokedes G., councillor in the same year (*ibid.* 14). On the location of the deme see Kotzias 1949.

⁵⁷ Medontidai, Kichonides son of Diogeiton G., *Agora* XIX P 5. 17 (367/6), cf. ch. 19 n. 153. The family of Epikouros, whose father became a kleruch on Samos, D. L. 10. 1; cf. ch. 20 n. 128.

⁵⁸ For a full discussion of the ostraka see Brenne 2001, nos 183–190; Siewert 2002. Menon is *Lemnios-Gargettios* on 10 Kerameikos ostraka and had presumably spent some time on Lemnos as a kleruch (cf. Marchiandi 2008*a*, 23–7). The only possible references to Thessaly are the 4 ostraka calling him *Gargthes*; one would however expect *thes.* in Attic (Threatte 1980, 537–41), and these sherds may well refer to the office of thesmothetes—in which case M. was perhaps not the eponymous archon of 473/2. Interpretations of *thes* as *thês* (Siewert, *op. cit.*) or of *Garg.thes* as a variant of Gargettothen seem less likely. (There are also some variations on the ostraka in patronymic—Menandridou or Menekleidou—and deme; see n. 11 above on Kolonos, and Siewert, *ibid.*; Brenne 2001 no. 190, M. of Rhamnous, may be a homonym.) The ostraka are dated to periods I (?)–II, i.e. before 460. For bribery as an issue in this period see *A.P.* 25. 1–2

Later members of the deme are less colourful, although one would like to know how Sybarites G., hieropoios in (?) the early 330s (*IG* ii³ 416, cf. *Agora* XV 43), got his name. The oligarchic family of Andron (who was involved in the rule of the Four Hundred) and his son Androtion presumably had a base in the city, although Androtion wrote a book on farming (*Geórgika*), and his father's political attitude may have been influenced by loss of revenue from land during the war as well as by association with philosophers.⁵⁹ Pantakles son of Ariston, buried in the deme area in the second half of the fourth century, may be the father of the Ariston G. who appears on a horos found in the Agora.⁶⁰ Kteon son of Mikon G. was commemorated with his sons Mikon II and Nikon and (presumably) their mother on a stone found at Charvati, which may have travelled there from the deme; the Kteon who served as councillor from Gargettos in (?) 336/5 may be either the same man or a grandson (SS), and Nikon son of Nikomachos, councillor in the 250s, may be a descendant.⁶¹ Epilykos son of Nikostratos I G. served as parasite of Athena

(Ephialtes is *adódokétos*). *Apheleia* (with *pra(i)otés*, leniency) is used of Kimon in Plut. *Kim.* 5. 5. The term usually has positive connotations (cf. Eust. *Il.* 22. 451, p. 1279. 40); the altars of Aidos and Apheleia on the Akropolis, first mentioned by Istros in the 3rd c. BCE (*FGH* 334 F 25 with comm.), seem to promote values current in the period from Solon to Ephialtes: respect for one's elders and betters (*aidós*) coupled with an accessible and uncondescending, man-to-man attitude towards inferiors (*apheleia*). Apheleia is also, at least later (Hegesandros, *FHG* IV F 34, see also Kurke 1992 on *habrosyné* in the archaic period), associated with a simple and frugal lifestyle, as opposed to *tryphé*, luxury; later still, the Christian *aphelēs* is unworldly, thus innocent. As used on ostraka, especially in the striking phrase 'King of the Apheleis' employed once against Menon, it must surely have an ironic tone. Menon's defensive claim that as a magistrate he was *aphelēs* (fair-minded, acting without any social prejudice or concealed agenda?) were rejected, at least by some voters. Hsch. s.v. Menonidai, 'a euphemism, "one of the M."; some say Menon was ostracized' (*tōn euphēmōn, ek Menonidōn*; cf. LSJ *euphēmos* I. 2) seems to preserve a contemporary reference, presumably from comedy, to 'Menon-types', i.e. corrupt magistrates (it would be even better if Menon had belonged to the phratry Medontidai). Raubitschek's attempt (1955) to bring Menon of Pharsalos into this picture is implausible. Although Dem. 23. 199 says he received citizenship, [Dem.] 13. 23 says he was only granted ateleia; there is no evidence in any case that he ever became resident or registered in a deme. He is Menon of Pharsalos in Thuc. 2. 22. 3, at the beginning of the Peloponnesian War, and his son Thukydides is a proxenos, not a citizen, in 411 (Thuc. 8. 92. 8). The Thucydides-biography (*Vita Marc.* 28–30, following Praxiphanes but with additional material from Polemon; see Wehrli *Schule* IX, 1957, F 18) calls him Pharsalian (a descendant in the Lamian War, Tracy 1995, 90). Complications were introduced into discussions of the historian's 5th c. homonyms by Theopompos' statement in his excursus on the Athenian demagogues that the politician Thukydides was the son of Pantainos of Gargettos and not of Melesias of Alopeke; this, however, was probably derived from some joke or slur in comedy (*FGH* 115 F 91 with comm.; see further Krentz 1984; Philips 1991; Mattingly 1971, 15–17; Scheidel 1994).

⁵⁹ Andron I son of Androkles G., named on 43 Kerameikos ostraka of the early 5th c. (all with demotic, 6 with patronymic; Brenne 2001, no. 19) was presumably the grandfather (FF) of the oligarch. The latter appears in Plato's *Gorgias* (487c) and *Protagoras* (315c) as a hanger-on of sophists. He proposed measures against the leaders of the 400 after the restoration of democracy (Krateros *FGH* 342 F 5 = [Plut.] *Mor.* 833c), attacking his former associates in the hope of clearing his own name (cf. Nippel 1997, 105). On Androtion see *APF* 913 and Jacoby's introduction to *FGH* 324.

⁶⁰ *IG* ii² 5947, *Agora* XIX H 109 = Finley 1952, 85c face B; the family became prominent in the late Hellenistic period. *IG* iii¹ 1642, recorded by Lüders in the city, may not be the same stone as ii² 5947, attributed to the deme area (cf. *AEE*² no. 105, note).

⁶¹ *IG* ii² 5936; *Agora* XV 42. 121; *IG* ii³ 983. 38. Also, found on different sites, in re-use, near the deme area, two rosette stelai commemorating Prokl[es] son of Prokl[eides] G., councillor in (?) 336/5 (*Agora* XV 42. 122) and his father or son [Prokl]eides Prokl[leous], *SEG* 57. 213–4 (cf. Pologiorge 2009, no. 7).

Pallenis, and as hipparch or phylarch in the 330s or 320s; Theopantos son of Nikostratos II, taxiarch in 281/0, will be his grandson (SS).⁶² Charinos son of Demochares G. served as parasite with Epilykos; his father Demochares was councillor in (?) 343/2, his younger brother Epicharinos is attested as secretary of the Council in 304/3. Menestratos son of Straton G., councillor with Demochares, is probably the Menestratos Ga[rgett]ios named on our largest curse tablet.⁶³

Despite the above indications of connections with the deme, land-ownership, or the Mesogeia (Athena Pallenis), the wealthier demesmen on the whole seem to have derived their resources from outside activities. The families of Diophanes and Apollodoros (*APF* 1413), Diphilos (4477), and Arcestratos and Phanostratos (14100) all had mining interests. Epikrates (4889), whose dikast-ticket was found on the Pnyx, had a son who manumitted a female slave resident in Kydathenaion; Kallikrates son of Demokrates freed one male and two female slaves resident in Melite. A family group that used the name Kallimachos left tombstones found in Piraeus.⁶⁴ Thaumarete wife of Timonides, who dedicated a group of objects (mainly jewellery) on the Akropolis in 398/7 (D. Harris 1995, II no. 71) may well be the wife of Timonides G., *APF* 13858, trierarch c.373/2.

Erchia

The deme's agora seems to have been at or near Pousiri, south of Spata, a site with a good source of water which produced the deme's sacred calendar (*SEG* 34. 111, *LS* 18); it has settlement remains and evidence of a 'substantial temple' of the (?) early fifth century,⁶⁵ possibly the Pythion or Delphinion. Between this site and Spata are two hills, Tsoumba Sideri, with no significant remains, which Vanderpool (1965*a*) identified with the Pagos of the calendar, and Magoula, with evidence of

⁶² Epilykos, *APF* 8429 XVII, Athen. VI 234f (the Nikostratos listed as parasite in *SEG* 34. 157. 14 is unlikely to be from Gargettos, since this would leave only c.5 letters for his patronymic); Peek 1942 no. 117, found in the church of Panagia Vlassara or Vlastara in the Agora (A. Mommsen 1868, 97 no. 114, see *IG* ii³ 4. 248). Peek notes that there were further blocks to the right which would have carried additional names, so the honorands were perhaps phylarchs rather than hipparchs (this point is missed by Bugh 1988, Spence 1993, and *AO*). The ephebe Dionysios G. of 305/4 (*IG* ii² 478) may be the D. son of Pythokritos attested as phylarch in 282/1 (*SEG* 21. 525. 28), probably father of the Pythokritos G. who served as councillor c.210–200 (*IG* ii³ 1231). The Pythokritos son of Diosk[ourides] of *IG* ii² 7850 (kioniskos) may belong either to G. or to Sypalettos.

⁶³ Athen. 6. 234 f (= Polemon F 78); *IG* ii³ 4. 75. 39–40; for Epicharinos see *LGPN* no. 6. Curse tablet, *SEG* 58. 265 B 118.

⁶⁴ Epikrates, Kroll 1972 105c; his son Polykrates, *IG* ii² 1571. 6. Kallikrates, *ibid.* 1570. 10–17 (a slave 'family', cf. ch. 6 n. 14). Kallimachos, *IG* ii² 5932 = *CAT* 2. 351 (Piraeus); cf. perhaps 5949 = *CAT* 2. 874a (no provenance) and 5955 (Piraeus). Apollodoros (*APF* 1413) may possibly have been named on the curse tablet Wunsch 1897, 103 (Wilhelm 1904, no. 7, a 7; ch. 14 n. 83). Loutrophoros of Hierokles son of Hieron G., from the city area, *SEMA* 184/5 = *CAT* 2. 380c (Bergemann 1997, 192, peribolos F 14). The restoration of [Garget]tos on the Totenmahlrelief *IG* xii 8. 98 as the deme of Ktesichares and Pythodoros is doubtful, but note *IG* ii² 2679, dotal apotimema for a daughter of Pythodoros G., 305/4 and 303/2, 2700 + dr.

⁶⁵ Vanderpool 1965*a* with *BCH* 1965 p. 1009, Doric capital dated c.490.

Early Helladic and Mycenaean occupation, and two Mycenaean chamber-tombs, which he identified with the Polis of the calendar. As at Lamptrai, a hill occupied in the Bronze Age would have been used only for cult purposes in the classical period.

Spata seems to have been a collecting-point for inscriptions in post-classical times, and texts found there are not necessarily to be attributed to the deme (indeed, three fragments of one of the casualty-lists from the Kerameikos found their way to the area).⁶⁶ However there are Erchian tombstones from Agios Georgios Kokla; others (plus dikast-tickets) were recorded in Spata and Liopesi, and may have come from the Kokla burial area or another.⁶⁷ Since Erchia, with six or seven councillors, was the largest deme in the area, there is also a possibility that some of the smaller inhabited sites in the surrounding countryside may have been affiliated to the deme.⁶⁸

The ‘calendar’ was (like most ‘religious’ documents from demes) a record of required expenses and perquisites, concerned only with the obligations of deme officials; it was not a complete record of the cultic activities of demesmen (let alone their wives and daughters).⁶⁹ It seems now to be generally agreed that the

⁶⁶ *IG* i³ 1144 b–d: b–c were copied by Fourmont and by Ross in the ruined chapel of Panagia Mesosporitissa, d by Milchhöfer in the new church of Evangelistria. Both were apparently on the large hill Burani between Papangelaki and Spata (Milchhöfer, 1887 and *KvA Text* III–VI, gives this name to the whole hill; *KvA* map VII marks ‘Bura’ on a northern spur). The Evangelistria church was apparently on its E end, above Bala (so *KvA Text*; ‘west’ in Milchhöfer 1887 seems to be an error). Milchhöfer thought that Panagia Mesosporitissa (at ‘Amburakia’ according to Ross’s notes, *IG* i¹ 432b–c; i² 928 gives ‘Burani’, from Lolling) might have been on the Evangelistria site (cf. also *Polemon* 1, 1929, 40–42 where frag. d is attributed to Mesosporitissa; *AGC* 21 X8/Y4 no. 7, placing the Mesosporitissa site on the NW end of Burani, perhaps follows Milchhöfer 1887). Illegal excavations by villagers are noted by Milchhöfer 1892, 18, and J. Papademetriou 1956 (in the 1930s). *IG* ii² 1213, referring to a *trikómia* (see Lambert 2000b, 78–80) and i³ 247 (n. 89) both came from Spata.

⁶⁷ *IG* ii² 6097, 6100–1, 6109, 6120, and 5867 (see below, n. 79), came from Kokla, as against only 2 stones from the Spata area; ii² 7020 is the only Paianian stone from this site, which casts some doubt on Bicknell’s suggestion (1976) that it was a burial area shared by Erchia and Paiania. It is unclear, in any case, whether in antiquity tombs clustered at Kokla rather than lining the whole road from Paiania to Erchia. Kokla has been explained as an Albanian village-name, but may come from Gr. *kokkala*, bones. *IG* ii² 6132 is now attributed to Eiresidai. The dikast-tickets of Eupolemos I E. and his son Timodo[t]os (Kroll 1972, 16c, 37b) presumably came from a single burial plot. Eubios son of Eupolemos II E., councillor in the 250s (*IG* ii³ 921. 32), may be a grandson (SS) of Timodotos. Paianian stones from Spata: *IG* ii² 6834, 7039, 7087, (?) 12665.

⁶⁸ See n. 90 on Kydantidai and Ionidai.

⁶⁹ I summarize here Humphreys 2004, 177–88. Updates: Horos of Zeus Epopetes Nephaios (no provenance) *IG* ii² 2616 with Papazarkadas 2009c (*SEG* 59. 185); Pirenne-Delforge 2011. Epops is discussed in Harder 2012 vol. 2, 920–33; she doubts whether Kallimachos knew anything about Erchian cults. Leukaspis, Habicht 1994b, 222 no. 9. Apollo Apotropaios, Di Nicolò 2012, 32–6. Takeuchi 2013 reads *e|n Aulóni* (not *Pylóni*) in A 20. N. D. Robertson 1996 suggested that Erchia’s Basile was Daira, to whom Paiania sacrificed; this would give the Eleusinian goddesses more of a presence at Erchia. On the Erchian Plynteria see now Sourvinou-Inwood 2011, 138–9; on the Tritopatores ch. 10 nn. 124–5. Lykeion: Ritchie 1989, [Plut.] *Mor.* 841d–e, 843f, 852c, *AD* 51 B 1, 1996 (2001), 46–8 (cf. *AR* 1996–7, 8–10).

arrangement of the text in five columns more or less equal in expense was designed to spread the burden among a larger number of liturgists/officials.⁷⁰

It is noticeable that Erchians sacrifice only sheep and goats (and piglets), though one offering is designated *antibous*;⁷¹ this might suggest that most of the deme was hilly, stretching north and west of the centre at Spata rather than south and east; if Erchia-by-Paiania was the name of a hamlet, perhaps it was to the southwest, near Kokla where Erchian tombstones have been found.

The ‘calendar’ is one of our main sources for sacrifices marked *ou phora*, ‘to be consumed on the spot’ (and related terms). The very useful discussion of G. Ekroth (1999) shows that this was not a traditional norm related to the characteristics of certain gods or heroes and the offerings made to them, but concerned the distribution of meat among worshippers.⁷² She suggests that where meat was designated for a limited group of worshippers consumption on the spot would be appropriate; this fits the Erchian sacrifices given to women and to the Pythaistai (ch. 20 n. 45), but it is also noticeable that sacrifices made by the deme on the same occasion may be treated differently. When the Erchians went to Athens in Metageitnion the sacrifices to Zeus Polieus and to Apollo Lykeios were *ou phora*, but those to Athena and Demeter were not. One might imagine that some of those who travelled from the deme camped in the Lykeion and shared meat not available to fellow-demesmen who had homes or kin in the city, but this will not explain the *ou phora* sacrifice to Zeus.

It is generally assumed that shares of meat taken away from sacrifices, where this was permitted, were distributed raw, but we have no explicit evidence on this; nor do we know whether in classical Athens meat-shops sold raw or only cooked meat.⁷³ I had wondered whether *ou phora* sacrifices were spit-roasted whole, but again there seems to be no evidence, although it is conceivable for small animals eaten by limited groups, such as the

⁷⁰ The suggestion that the ‘greater demarchy’ was the more expensive version of two lists of biennial sacrifices (Mikalson 1977) does not account very satisfactorily for the term *démarchia* (nor does Papazarkadas 2011, 145–6) or the division into 5 sections; I prefer my idea that Erchia was appointing additional ‘demarchs’ (not unlike the division of funds among ‘archons’ in Plotheia, n. 47).

⁷¹ Note however Rosivach 1994, 81–2 on the general rarity of cattle-herds in Attika. Jameson (*per ep.*, 1999, cf. Brulé 1987, 35–6) thought ‘a sheep, in place of the ox sacrificed in the city’—yet why should this be specified?

⁷² Ekroth 1999 demolishes the suggestion of Scullion 1994 that *ou phora* sacrifices were ‘chthonic’. Her own view that the provision was introduced when sacrificial programmes were reorganized is open to the objection that written evidence tends generally to come from such reorganizations. Useful list of references in Lupu 2005, 275–6 (cf. also Scullion 2000, 165). Jameson 1999 points out that some of the *ou phora* rubrics were *added* to the Erchia list (see Dow 1965); he suggests that one reason for selling meat (he assumes that it was sold raw, by office-holders) was that the victim was too small to feed all participants; also, elite participants might prefer to consume it at home.

⁷³ Theophr. *Char.* 9. 4 may suggest that raw bones were available (Diggle 2004, 295). The term *hephthopôleion* for shops selling cooked meat is first attested in the 3rd c. Note *IG* ii³ 4. 214 (Steinhauer 1994b), a list of prices for (probably) cooked meat from Piraeus, perhaps late 1st c. BCE. When *IG* i³ 82. 23–4 specifies that meat is to be distributed raw to metics, and *Agora* XIX L 4a 23–4 has raw meat divided between the two sections of the Salaminioi, the implication is a restriction of communion. See also Jameson 1998, 178–9; R. Parker 2010a; Naiden 2013, ch. 6. Useful discussion of sale of meat in Berthiaume 1982.

Apatouria lambs (ch. 19 n. 34). Georgoudi 1979, an important study of modern Greek village festivals in which ‘sanctified’ meat is boiled, shows that there is much variation in whether meat is eaten on the spot or taken away, and in the latter case whether it is removed raw or cooked.

The deme’s most important festival, probably associated with an assembly, was almost the last of the year, on Skirophorion 3rd. Athena Polias received a sheep ‘in place of an ox’, and sacrifices were also made to Kourotophos, Aglauros, Zeus Polieus, Poseidon, and probably one other recipient. The festival may have been parallel to the local Plynteria celebrated in Skirophorion in Thorikos, at which that deme sacrificed an oath victim, sheep to Aglauros, Athena, and Poseidon, and an ox to [Kepha]los; a deme meeting was held at which euthynoi and their paredroi were appointed and sworn in. Erchia probably made similar preparations for the transition to the new civic year, although we do not know their exact form. Presumably demes had to appoint their councillors before the end of the year.

Erchia had at least one priestess, probably more than one; skins from the sacrifices to heroines on Hekatombaion 19 and Pyanopsion 14, to Hera on Gamelion 27, and to Semele and Dionysos on Elaphebolion 16, were given to ‘the priestess’. The only male religious officials mentioned in the calendar, apart from the five ‘demarchs’, are the Pythaistai and the herald. Possibly a phratry priest officiated at other festivals in the Pythion (and Delphinion?), but if so he did not get perquisites from deme sacrifices.

The calendar and the new demarchy-system may have been introduced because the deme had experienced problems in recruiting demarchs who would conscientiously carry out their religious obligations;⁷⁴ moreover, the financial provision for cult seems modest for a deme of Erchia’s size (note however Steinhauer 2009a, 71). One does not get an impression of active commitment to deme activities on the part of the wealthier families (though, as we shall see, some of these probably retained property in the deme). Some evidence of tension is provided by a speech attributed to Isaïos (12), from an appeal following a deme diapsephisis.⁷⁵

⁷⁴ Demarchs or their substitutes are honoured for carrying out all the sacrifices prescribed for the deme in SEG 22. 117 (Ikaron; cf. SEG 2. 7, Halimous); it may not have been uncommon for demarchs to omit some of the smaller offerings at peripheral sites.

⁷⁵ Cf. Table 7.13. D. H. Is. 16–17; the case is here ascribed to the general diapsephisis of 346/5, but we do not know whether D. H. found explicit evidence of this in the fuller text of the speech available to him. 346/5 seems to us late for Isaïos (cf. Develin 1991), but he is also credited with a speech against (*pros*) Boiotos in an appeal from a deme (F. VI Thalheim 1903), again attributed to the general scrutiny of 346/5 (ch. 30 n. 30). The Euphiletos case, however, also has procedural irregularities that might be less problematic if his rejection had been the result of a local scrutiny or an exceptional reconsideration of his qualifications. The case had apparently been heard by arbitrators, who had given judgment in favour of E., at an earlier stage (§ 11); Paoli (1950) plausibly suggested that E. and his kin had brought a private suit for damages (*blabê*) against the deme (we know of two such suits against genê, [Din.] F 11a *Against (kata) the Kerykes*, and the threatened suit of Phrastor of Aigilia against the Brytidai, [Dem.] 59. 60, ch. 20 n. 113, in which Ph. was challenged to take an oath before the arbitrator; probably there was no formal appeal against the decisions of genê, which had no official role in the system of citizenship). It seems more

The appellant was vigorously supported by his father, his paternal half-brother, the husbands of his half-sisters, his half-siblings' mother's brother, and other kin whose exact relationship to him is not specified; the affair may well have mobilized two opposing factions in the deme. The name Euphiletos is attested later in Erchia, so he may well have won his case.

The speaker of Isaios 12 was one of Euphiletos' half-brothers, probably the oldest; he was thirteen years older than Euphiletos, and may be the Hegesias (II) son of Hegesippos who dedicated the statue of a Lysias (*IG ii² 3843*; his brother?) in the city area (see Table 24.4). Nikoxenos son of Hegesias E., who with two men from Pallene manumitted a woolworker living in Iphistiadai in the (?) 320s, may be the son either of Euphiletos' half-brother or of Hegesias III son of Anthippos E., probably a cousin (FBS) of Euphiletos and his siblings, who was buried in the deme area in mid-century (*IG ii² 6112*).⁷⁶ Dexikrates son of Hegesias E., who appears on a mid-century list of (?) epilektoi, and whose son Dexis was commemorated by a

TABLE 24.4. Erchia: Isaios 12

likely, however, that the appellants should resort to this strategy in an affair concerning only one deme than that they could do so in a case arising from the general diapsephisis, when one might expect procedure to be less fluid. Euphiletos' mother's offer to take an oath before the arbitrator in the Delphinion, noted by Gernet 1937*b* as another procedural irregularity, should also in my view be seen as an example of fluidity—arbitrators are not likely to have kept to strict rules—and not as a reason for rejecting the speech (an oath was also taken at the Delphinion in the Mantitheos-Boiotos case, [Dem.] 40. 11).

⁷⁶ Nikoxenos and his co-manumittors (*SEG 18. 36 B 104–8*) were perhaps acting for a prostitute (see E. E. Cohen 2003), since they do not seem to be related to each other.

stele also dated to the middle of the century, found in Piraeus, may belong to the earlier generation.⁷⁷ The names of Lysikrates (II?) E. and his son Euphiletos (II?) who served together as councillors in the 250s, suggest that Euphiletos or a descendant may have married into the family of Lysikrates I E., commemorated by a relief stele of the early fourth century found in the city, and his son Kydias, who served as councillor in 341/0. Euphiletos' early experiences might well have persuaded him to seek influential allies in the deme. Euphiletos II's brother Philostratos, commemorated by a kioniskos found in the Agora, may have married into the wealthy and conspicuous deme family of Dromeas; Philostratos' sons Diokles and Philostratos II served as ephebes in 205/4.

The better-known Erchians were on the whole conservative in their politics—Isokrates' family (15. 161) will not have been the only one to suffer financially during the Peloponnesian War—and several of those who successfully recovered their status in the fourth century may, like Isokrates himself, have relied on sources of wealth outside the deme. Among those who retained a base in Erchia a prominent position will have been held by two families that married into the old Athenian aristocracy. *IG* ii² 6097, 6109, and (?) 6135, all found at Kokla, may have come from a single peribolos. Apolexis son of Euaion, commemorated on 6097 (*CAT* 819) with his son Eualkides, his (?) wife, and his (?) cousin (FBS) Eualkos II son of Eualkos I, probably married Delias, daughter of Nikias of Kydathenaion (*APF* 10807) (see Table 24.5). Nikias' family later appears prominently among the Mesogeioi, and married into a wealthy family of Kerykes from Koile. Apolexis' grandson (SS) Phrasisthenes son of Eualkides married the daughter of a fellow-demesman, Hierokles E., and they were buried in the deme.⁷⁸ The names Eualkos and Eualkides suggest an affinal connection also with Alkias E., whose son Timotheos was commemorated on a stone also found in the deme area, to which the names of Timotheos' wife (from Phlya) and his son Euxitheos were added (*IG* ii² 6131). A descendant, Euxenos son of Euxitheos, served as councillor in the 250s (*IG* ii³ 921. 28, 983. 72).

Chrysogone, daughter of Xanthippos of Erchia, married into the Eteoboutadai family descended from Drakontides of Bate, which provided priestesses of Athena Polias (*APF* 4549); she was commemorated with her husband, a son of Polyeuktos I of Bate, by a stone found in the deme. She may have been an epikleros, in which case it is possible that the two families were already related; however, the father of an epikleros could marry her as he wished during his lifetime. The Xanthippos son

⁷⁷ Dexikrates: see ch. 23 n. 19. Hegetor E., councillor in (?) 336/5 (*Agora* XV 42. 115), whose daughter Glykera was commemorated by a stele recorded by Sterling Dow on the Athens market in 1965 (Dow Nachlass, file 'Attic Grave Monuments in Attike; fragments'), may have belonged to this family, as may Hegemon, mentioned in Is. 12. 6 as one of Euphiletos' supporters. Note also Euphiletos son of Straton 'Erx' (= Erch.?), Piraeus Mus. 3577 = *CAT* 4. 445 (Schmaltz 1998, 182–5, pl. 33) and [Strat]ophon son of Straton E., *SEMA* 234.

⁷⁸ *IG* ii² 6135, recorded by Milchhöfer in private possession in Spata; it could have come from Kokla (Bergemann 1997, 204, peribolos Q 16).

TABLE 24.5.
Erchia: Euaion

of Aristophon I E. who was made proxenos at Olbia was perhaps her BS; the Xanthippos (II), Aristophon (II), and Drakontides of E. who contributed to an epidosis in 248/7 should be descendants.⁷⁹

A substantial group of funerary monuments from the deme may indicate a projected or short-lived intra-deme marriage between the family responsible for them and a daughter of the trierarch Lysis E. (APF 9576). Kallikrates I E., the first attested member of this family, seems to have had four sons (their birth order cannot be deduced): Kallistratos I, Antikrates I, Kalliphanes, and Kallisthenes. Kallistratos I was commemorated in the city early in the fourth century (IG ii² 6122). His son Polykleides served as councillor in 341/0; Phile daughter of Kallikrates, buried near the city, will be either Polykleides' sister or more probably

⁷⁹ IG ii² 5867, Chrysogone with [5–6] Polyeuktou Batethen (note by M. Crosby with IG squeeze in Berlin; this seems to exclude [Lysikles]). The stone was recorded in the chapel of Agios Georgios 'about ½ hour's walk south of Spata' (SSW), in an area where *KvA* records graves, c.1km W of Kokla. Habicht (1979, 151) suggested that Xanthippos I, *Inscr. Olbia* 5 (Dubois 1996 no. 21, 340–330), was the father of Xanthippos II (and ? Drakontides) and Aristophon II (IG ii³ 1011 col. I 58, II 33–4). Dubois' date seems to exclude identification of the second honorand in *I. Olbia* 5, Philopolis II son of Philopolis I of Deiradiotai (Table 26.11), as a brother of Polystratos II (APF 12076), unless the grant was being renewed for a descendant. If so, Xanthippos I, like the sons of Polystratos I of Deiradiotai, and his fellow-demesman Xenophon E., may have travelled during the decade(s) immediately following the end of the Peloponnesian War, both to escape the backlash against those associated with oligarchy and to improve his economic position. See ch. 20 n. 131, Table 20.4; the spacing of the dedication, IG ii² 3455 = Marcadé 1953 I, 57–8, seems to require a longer name than Xanthippos, although since the base is round the lettering may not have been entirely symmetrical).

the daughter of his son Kallikrates II, whose stone was found at Moschato.⁸⁰ Descendants of this branch of the family can be traced into the third century. Antikrates I had two sons, Kallikrates II and Aristaios; the latter served as treasurer of Athena in 351/0. Kallikrates II's son Antikrates II was commemorated c.360 in the deme by a loutrophoros and a lekythos, both of which represent him with his mother Archestrata; on the loutrophoros they are accompanied by Aristachme daughter of Lysis E., who was perhaps Antikrates II's fiancée, or his wife in a brief marriage that did not produce offspring. Antikrates II's father Kallikrates II and his brother Theophilos are commemorated on a stele from the same area. The kioniskos of Kalliphanes son of Kallikrates (I) is also dated c.360; the stele of Kallikrates III son of Kallisthenes E., recorded at Liopesi, may have come from the family peribolos.⁸¹ With the exception of the branch descended from Kallistratos I, this seems to be a family resident in the deme.

Many of Erchia's more prominent demesmen, however, at least by the fourth century, had external interests.

Isokrates (*APF* 7716) is said to have served in the cavalry in his youth, so the family may have owned land, possibly in the deme; he claimed that property had been lost during the Peloponnesian War. However, his father already owned a workshop of slave flute-makers, presumably in the city, and most of Isokrates' own very considerable wealth probably came from students' fees. His parents were buried in Kynosarges.⁸² Isokrates wrote an *enkomion* for Gryllos II, son of his fellow-demesman Xenophon, who died in 362 on the Mantinea campaign; there was perhaps some similarity in their views on politics (interest in Persia). Xenophon himself, despite his taste for farming, horsemanship, and hunting, had met

⁸⁰ See *APF* 9576, with table; Bergemann 1997, 204, peribolos Q 15. Kallistratos I, *IG* ii² 6122 = *AEE*² 134, painted stele, 'NW of the palace'. Polykleides, *IG* ii³ 4. 76. 10; since the name is comparatively rare, and the demes were probably adjacent, there may be an affinal relationship with the family of Polykleides of Kydantidai, who is named on a curse tablet of (?) the 320s, *SEG* 58. 265 A III 86. Damasistrate daughter of Polykleides, commemorated by a relief naiskos of c.350–330 from (?) Piraeus (*IG* ii² 11037 = *CAT* 4. 430), may well be the daughter of one of these two men. Phile, *SEMA* 235 (second half of the 4th c.); Kallistratos II, *SEMA* 229.

⁸¹ Antikrates II, *IG* ii² 6100–1 = *CAT* 4. 371, 2. 371b. Loutrophoroi—at least those represented in relief on stelai, Dehl 1981—do not universally commemorate unmarried persons; Kerameikos P 663 represents a young mother, apparently the deceased, handing her baby to another woman. However, one should not conclude too rapidly that the shape had no association with unfulfilled expectations. A brief and childless marriage—or even perhaps one cut short in the infancy of the first child—would perhaps barely have counted as 'marriage' in Greek eyes (cf. ch. 11 n. 36). Kallikrates II and Theophilos, *IG* ii² 6120 (Ag. Georgios near Kokla); in my view Kallikrates II must be the father of Antikrates II and not, as stated by Kirchner ad loc., his son. Kalliphanes, ii² 6123, no provenance; Kallikrates III, ii² 6121.

⁸² See Humphreys 1983a/1993, 116 on the funerary monuments (Bergemann 1997, 192 G 1). The connection to Isokrates' family of Theodoros son of Theodoros E., *IG* ii² 6115 (kioniskos, 3rd c.) and his (?) brother or son Pheidon II son of Theodoros (cf. Tuplin 1980), 6133 (kioniskos, 3rd c.?) is doubtful, given the frequency of the name Theodoros; they should however be related to Euthykrates son of Pheidon I E., commemorated on Salamis c.350 with his (?) wife Nikostrata by a relief stele (ii² 6111 = Hamiaux 1992, no. 195, *CAT* 2. 254). Euthykrates' children were orphaned: Finley 1952 no. 126 B (no provenance; 'Eleusis' in M. C. Taylor 1997, 280 no. 113, seems to be an error).

Sokrates in the city as a young man and seems to have been heavily compromised by association with the Thirty; he was condemned to exile *in absentia* in the 390s and spent much of his life outside Attika. His grandson Xenophon III son of Diodoros was granted honorary citizenship of Ephesos in or after 306/5.⁸³ Thrason and Thrasyboulos E., who took the opposite line in foreign politics, were active in military service and public affairs, and presumably had a base in the city.⁸⁴

Aristolochos son of Charidemos E. was a banker ruined in a major bank crash perhaps at the time of the Social War in the 350s; he must have operated in the city or Piraeus, though he also owned some land (*APF* 1946). Deinias E. may be the Deinias who donated land to the city for the Lykourgan stadium.⁸⁵ Euandros son of Euainetos I is recorded as registering and leasing a mine in the 350s; the Euainetos (II?) E. who lent money secured on land on Lemnos may be his son.⁸⁶ Pheidestratos son of Autodikos E., commemorated on two lekythoi of the beginning of the fourth century as a young cavalryman, was buried just outside the city.⁸⁷ Theogenes, who served as dikast and basileus, and belonged to the genos Koironidai, was probably also resident in the city.⁸⁸

Kydantidai and Ionidai

The recently discovered decree issued jointly by these two small demes (*SEG* 39. 148) should imply that they were neighbours, and that a certain degree of fusion had taken place. It is also possible that they ‘shared’ three seats on the Council.⁸⁹

⁸³ D. L. 2. 54, Table 5.5. Gryllos (II) had one son, Xenophon II; Diodoros, his younger brother (named after their mother Diodora; or perhaps her father was a Diodoros) had two sons, Xenophon III (*SEG* 33. 932. 14) and Gryllos III. On Xenophon I’s exile see Tuplin 1987. Develin *AO* p. 314 reports a suggestion of D. M. Lewis that the hipparch Kratinos of 349/8 was of E. (*APF* 8760), but the name is not uncommon.

⁸⁴ *APF* 7305; Thrason was active in the alliance of Athens with Thebes against Sparta; both he and his son Thrasyboulos evidently saw Macedon as a greater threat than Persia.

⁸⁵ See Humphreys 1985*a*. Another Erchian prominent in the Lykourgan period is Tharriades son of Tharriades, councillor in 341/0 (*IG* ii³ 4. 76. 5, 74, 82; he served as syllogeus and proposed two honorary decrees) and tribal sophronistes in 331/0/29 (*IG* ii² 1181 = *SEG* 34. 151). Hagnias son of Dromeas I E. is attested as trierarch in 326/5 (*APF* 126); for his descendants, very prominent in the 3rd c., see Habicht 1982*a*, 183–5; ch. 15 n. 13.

⁸⁶ *APF* 5247, *Agora* XIX P 9. 32, [33]; Euainetos II?, Finley 1952 no. 105 (Culasso Gastaldi 2006, no. 2).

⁸⁷ *IG* ii² 6103 = *CAT* 219*a* = *AEE* 467 (Pheidestratos’ name is lost); 6117 = *CAT* 4. 219 = *AEE* 473, both from the junction of Kolokotronis and Stadiou streets. Schmaltz 1970 dated ii² 6117 to the second half of the 4th c.; *CAT* follows the earlier dating of *IG*. Thereus, represented on 6117 with Pheidestratos and Ph.’s parents, may perhaps be an adolescent brother, or Ph.’s squire (would a squire wear the petasos?).

⁸⁸ Kroll 1972, no 163, [Dem.] 59. 72, cf. ch. 20 n. 122. The Koironidai are an Eleusinian genos, but members of several Eleusinian genê had settled in the Mesogeia and other areas E of the city by 507.

⁸⁹ Traill 1975*a*: in 343/2 Ionidai has 2 councillors and Kydantidai 1; thereafter, until 307, Kydantidai has 2 wherever attested, Ionidai 1 in (?) 336/5, perhaps 1 and a vacant line in 341/0. Note that *Agora* XVI 68 may be a deme decree of K. rather than Kyd[athenaion], ch. 25 no. 10, and that *IG* i³ 247 may be a decree of [Kyda]ntidai (ch. 19 n. 11); it seems to deal with deme funds lent out at interest, cf. i³ 243, Sypalettos, ch. 29 n. 51.

The new text was brought to Liopesi by men from Koropi; there is no further information on provenance, but *prima facie* this does not favour the location earlier assigned to Kydantidai on the southern slopes of Mt Pentelikon. A better indication is now provided by the (still unpublished) excavation of the funerary peribolos of Praxiteles K. near junction 15 of the Attike Odos.⁹⁰ There are a number of sites in the Mesogeia east of Spata to be assigned either to small demes or to hamlets; two of these may have belonged to Kydantidai and Ionidai.⁹¹

The Herakleia were apparently celebrated twice each year, the festivals being known as the libation-Herakleia and the summer Herakleia (*spondeia*, *therina*); the latter may have been the more important festival. Arrangements were the responsibility of the priest of Herakles and two kolokratai, the latter apparently liturgists appointed for the year. In 331/0, the year of our text, all three men belonged to Kydantidai; the obligation to provide liturgists may perhaps have alternated between the two demes.⁹²

The decree awards crowns to the priest and kolokratai, and provides for publication in the sanctuary of Herakles. Its proposer, Leonteus son of Antiphanes of Kydantidai, may have been a cousin (FBS?) of one of the liturgists, Leonteus

⁹⁰ Peribolos, Steinhauer a. o. 2005, 171–2, cf. Steinhauer 2009*d* n. 63; stones name Konon son of Konon K. and Chairias son of Praxiteles. This location may be Matringou, supporting Traill's position (1975*a*) for K. at 'Kato Charvati', a term that seems to cover the settlement sites marked by *KvA* VII E of Charvati (Vlichos) and XII ENE of it (Matringou). Ionidai may perhaps have been at Vlichos; this would fit Pausanias' statement (6. 22. 7) that Ion was son of Gargettos, although such genealogical statements do not seem necessarily to imply contiguity (ch. 23 n. 7; above at n. 8). Traill 1986 put Ionidai at Draphi (n. 121 below) and Kydantidai at Mendeli, but the fact that Teithras (Pikermi) had its own Herakleion may be a reason not to put Ionidai and Kydantidai too close to it. *IG* ii² 2609, horos of a temenos of Herakles, was reported by Milchhöfer (1887, 88 no. 28) from 'Tschulundra, WSW of Spata'; it should perhaps be attributed to Kydantidai-Ionidai rather than to Erchia (Whitehead 1986*a*, 203) or Teithras (Möbius 1924). However, it may have travelled. On Ion's tomb at Potamos (Paus. 1. 31. 3) see ch. 20 n. 92. P[er]axiteles K. was named on the curse tablet *SEG* 58. 265 (A col. II 57; a whole group from the deme in col. III, some re-listed on side B); his son A[ischas?] was anagrapheus in 305/4, *Agora* XV 58. 85, and his grandson Praxiteles II Aischeou councillor in 259/8 (*IG* ii³ 983, Philinos).

⁹¹ From north to south: Vourva (cf. Vanderpool 1965*a*), Lappari-Mazareika (assigned by Traill to Konthyle on the basis of *IG* ii² 6533, but one stone commemorating a woman is very weak evidence [ch. 25 n. 43], and the inland trittys of III Pandionis should not have stretched so far east; note that Mazareika, where this monument was found, is SE of Spata and not where *KvA* VII marks Lappari), and the two sites at the N and S ends of Karababa explored by Steinhauer (1982, 1994*a*); the N site seems to be Milchhöfer's Vathy Pigadi, Merkuri on *KvA* VII (Milchhöfer 1887, 87–8). Steinhauer (1994*a*, n. 8) assigns all these sites to Myrrhinoutta except the site on the S end of Karababa, which he takes to be a hamlet of Philaidai; these identifications, however, seem very questionable (Myrrhinoutta was probably coastal, n. 116).

⁹² Did the offerings at the *spondeia* consist only of libations? It is not certain that both festivals were annual. Matthaïou (1989) suggests alternation in the appointment of liturgists; R. Parker (1996, 332) is reluctant to envisage any form of fusion. *Kolokratai* (cf. Whitehead 1993) seems to be a variant of *kolakretai*, itself perhaps a form of *kolagretai*, thigh-collectors (P. J. Rhodes 1981*a*, 139; Masson 1997, 90; Matthaïou, op. cit.; Van Wees 2013*a*, 40–4; ch. 21 n. 66).

son of Menestratos K.⁹³ The other liturgist, Phormos II son of Prokleides II K., came from a well-attested family which set up a stele over four metres high in the Kerameikos commemorating Phormos I and his sons Prokleides II and Deinias. Deinias acted as witness for Apollodoros of Acharnai in the Neaira case, and is named (more than once) on a curse tablet of the Lykourgan period. The liturgist is presumably his nephew (BS) Phormos II, son of Prokleides II (see Table 24.6).⁹⁴

Notes: The size of the stele implies that it was intended to become a family monument, but it is not certain that any names other than those of Phormos I and Stratonike were cut before it was set up. Theodosia could be a second wife of Phormos I, but Phormos II seems more likely.

TABLE 24.6. Kydantidai: Prokleides

The most prominent family in Kydantidai was that of the fifth-century general Nikias and his descendants, which may have died out with Nikeratos III, who served as diaitetes in 330/29, as hieropoios of the Amphiaraia in the following year, and as a member of Lykourgos' Pythais in (?) 326/5. Their wealth came mainly from owning land, workshops, and slaves in the mining district.⁹⁵

⁹³ Lambert 1997a (F 16 A 8) and Papazarkadas 2011, 308 no. 44 suggest a connection also with Leonteus Antikleidou K[-5-] of *Agora XIX* P 26. 16, but here Kydathenaion is more likely, since he acts as guarantor for a Kydathenaieus leasing property in Kydathenaion; cf. Antikleides son of Antikles Kydath., ephebe in (?) 333/2/1, *IG ii³* 4. 342 (cf. also *APF* p. 36, Antikleides Kê). See also ch. 26 n. 44.

⁹⁴ *IG ii²* 6609 = *AEE²* 203, 230; *AEE²* has fr. a (203) still *in situ* in or near Agia Triada in the Kerameikos. See also *APF* 14962; Hildebrandt 2006 no. 348, pl. 111 (his date c.410 must be too early). In [Dem.] 59. 123 the text should be emended from (*Deinias*) *Phormidou* to *Phormou*. See n. 97 on the curse tablet *SEG* 58. 265. Additions were made to the stele ii² 6609 (at least from line 11, probably from line 5) as further members of the family died (ch. 11 n. 28). Mnesiptoleme daughter of Theoxenos of Marathon, perhaps the wife of Deinias, had a sister who married into a prominent family in Sounion (*IG ii²* 7414, Table 26.10).

⁹⁵ *APF* 10808. Nikeratos III owned land at Maroneia, *Agora XIX* P 28. 24, cf. 26 (339/8); P 25. 15, 46. The Kleistrate daughter of Nikeratos who in 405/4 (or earlier) dedicated a silver incense-burner

By the Lykourgan period, although Nikeratos III was still respected as a symbolic link with Athens' golden age (Nikias I had been one of Perikles' leading successors, his son Nikeratos II had been murdered by the Thirty), the most active figures in the deme were the politician Polyeuktos and, probably, Nikokles son of Lysikles (*APF* 10903), who performed the eutaxia liturgy for his tribe *c.*330, served as parasite of Athena Pallenis, and bought an eschatia in the deme for 162½ drachmas in the hekatostai sales. Two larger parcels were also bought by demesmen, Nikochares son of Theophilos paying 1000 dr., and Antikleides son of Antig[ne]s 1875.⁹⁶ Nikokles appears with about seven other members of the deme in a cluster on a curse tablet of the Lykourgan period; the writer may have been a member of the deme, and the clustering suggests conflict over deme affairs or a question (such as rights to citizenship) in which the deme was involved.⁹⁷

We know less about Ionidai, but some archaic-sounding names among its better-attested families perhaps suggest that the decision to claim independent deme status was based on the presence of elite families in the village in the sixth century.⁹⁸ Chremes son of Philoitios, secretary in 351/0 and councillor in 343/2, and his son Ph[iloi]tios, who served on a tribal board *c.*325, may be descended from the Philoitios commemorated *c.*500 by *IG* i³ 1231, found in the city, and/or the Chremes whose father dedicated *IG* i³ 783 with him on the Akropolis *c.*500–480; and Melieus son of Ilioneus, councillor and tribal hieropoios in 341/0, may descend from the Melieus who was kalos *c.*525.⁹⁹ Chionides I. on Imbros in 352/1, *IG* xii 8. 63.

weighing 1300 dr. with bronze supports (D. Harris 1995, V no. 274), was presumably the daughter of Nikeratos II.

⁹⁶ Eutaxia, *IG* ii³ 550; Athena Pallenis, *SEG* 34. 157. 16 (with comm.); hekatostai, Lambert 1997*a*, 16 A 3–8. Lambert also restores the name of [Pheid]oleos Phe[i]do[stratou] K., councillor in 335/4 (*Agora* XV 43. 48), in F 16 A 2.

⁹⁷ Polyeuktos (on whom see M. H. Hansen 1983*b*) does not appear on the tablet *SEG* 58. 265 and may perhaps have written it (Humphreys 2010*b*). Of the 12–14 demesmen named on this tablet, 5 are attested elsewhere: Praxiteles, whose son was buried in an impressive peribolos near junction 15 of the Attike Odos (n. 90); Deinias and Nikokles, with Xenokles and Kalliteles, both of whom were councillors *c.*336, *Agora* XV 42. 128–9. Kalliteles (whose father Kalliphanes appears in A III 78) was crowned in 337/6 (Lambert 2004*b* no. 20, *IG* ii³ 325; this stone is probably a dedication), and served as diaitetes in 325/4 (*IG* ii³ 4. 35. 28).

⁹⁸ There were archaic graves at Vourva, and an archaic sphinx was found at Vathy Pigadhi (n. 91). Cf. perhaps, in Kydantidai, Spinthon son of Lamedon, councillor in 335/4 (*Agora* XV 43. 46), who may have been a descendant of the Spinthon who dedicated *IG* i³ 684 on the Akropolis *c.*510–500.

⁹⁹ Chremes, *IG* ii³ 293 with *SEG* 14. 51; ii³ 4. 75. 7; Philoitios, *Hesp.* 15, 1946, 117–18 no. 25 (the name is not so far attested in any other deme before the Roman period; Chremes is less rare). The Ilione whose 4th c. relief lekythos was found in the Agora (*SEMA* 1979 = *CAT* 3. 250) may possibly be related to Melieus son of Ilioneus of I., *IG* ii³ 4. 76.

COASTAL TRITTYS

Philaidai

The approximate location of the deme, inland from the sanctuary of Artemis at Brauron, is not in doubt,¹⁰⁰ but information about its activities and members is disappointingly scarce. Since the Brauron sanctuary is fairly well explored (though not well published), it appears that Philaidai either inscribed no deme decrees or set them up elsewhere. It is in any case doubtful whether the deme ever had any responsibility for the sanctuary. Herodotus' story of a Pelasgian raid on Brauron from Lemnos implies that by his day it was believed that Brauron already in the sixth century attracted visits and offerings from women living in other parts of Attika; and the tradition associating Peisistratos with Brauron may have derived from developments in the sanctuary under the tyranny.¹⁰¹ The name of the deme, Philaidai, suggests that the sanctuary was controlled by the *genos* Philaidai which claimed descent from Ajax of Salamis, but by the middle of the sixth century the leading family in this *genos* was evidently already settled near the city.¹⁰²

Of the deme's three trierarchic families the descendants of Deinias son of Euages, *tamias* in the middle of the fifth century, seem to have derived their wealth from mining.¹⁰³

¹⁰⁰ AGC 21 X8/Y4 no. 31, archaic temple remains inland from Brauron; nos. 33–35, settlement; AD 26, 1971, B 1 37–8, tombs dated c.400, with traces of roads and periboloi (*KvA* VII remains SW of Palaio Vraona?) in the area Kepoi. Cf. also W. Thompson 1969*b*, Antoniou 2002. Steinhauer 1994*a* suggests that his site on the S end of Karababa belonged to Philaidai. See also Goette 2005 (map p. 34).

¹⁰¹ Photius (ed. Theodorides 1982) s.v. *Brauronia* ascribes the sanctuary to Peisistratos. Hdt. 4. 145, 6. 137–40. Evidence for cult on the site goes back at least to the 8th c.: Themelis 2002, cf. Mitsopoulos-Leon 2009, Despines 2010, Kalogeropoulos 2010*b* (Mycenaean tomb, AR 2014–15, 18). Pace P. Wilson 2010*a*, the Dionysos dedications IG i³ 1407/SEG 54. 330 and SEG 61. 175 do not necessarily imply theatrical performances (cf. Goette 2014). On Sourvinou-Inwood's view (1988*a*) that 'bears' were selected representatively from the Kleisthenic tribes see ch. 21 n. 73. Brauron is said to have building remains from the 7th–6th c. (*Archaiologia* 39, 1991, 15ff.); the small early temple is dated c.500 by Mylonopoulos and Bubenheimer 1996*a*. The date of the Brauronion on the Akropolis is uncertain. See also Ekroth 2003; R. Parker 2005*a*, 228–30 on the problems of interpreting the site at Brauron. Several important texts, one dated 416/5, remain unpublished (Peppas-Delmousou 1988, 330; cf. Lawton 1995, no. 73; a new 4th c. text from the area of the Library of Hadrian, AR 1996/7, 7). Good air photograph, Vlachopoulos 2010, 67 fig. 89.

¹⁰² Cf. ch. 20 at n. 130. The Pelasgian story, which justified the conquest of Lemnos by Miltiades IV, may indicate that he had some knowledge of the Brauron area.

¹⁰³ APF 5232, *Agora* XIX P 19. 25, Ktesias Euagido[u Ph.] leases a mine in 346/5. The other liturgic families are APF 1792 and 6347 (a Brauronian prosopography is published by Antoniou 1980). It is suggested in *Hesp.* 64, 1995, 333–6 that the creditor Aristogenes on a *horos* from the Teithras area is APF 1792, but the name is fairly common. Patrokles son of Hierokles, who served as *hipparch*, probably in the second half of the 4th c. (SEG 12. 145. 4) might be related to the [3–4]kles who proposed an unpublished law of the 3rd c. from Brauron (SEG 52. 104). The Melanthios commemorated on two *lekythoi* of the second half of the 4th c. from Agia Triada, between Markopoulo and Porto Rapti (SEMA 2156–7, CAT 1. 873–4), may be an ancestor of Diotimos Melanthiou, councillor from Ph. in the 250s (IG ii³ 921. 59; Kephale is an alternative but topographically less plausible possibility).

Halai Araphenides

This deme was the neighbour of Philaidai to the north, and had its own sanctuary of Artemis, associated like that of Brauron with the myth of Iphigeneia; at Halai she was Tauropolos, the bull-tender. The name formed the basis for Euripides' story in the *Iphigeneia in Tauris* that Iphigeneia had been transported to the Crimea by Artemis and brought back by Orestes.¹⁰⁴ According to Euripides there was a mock human sacrifice, with a male victim, at the Tauropolia; for Menander (*Epitrepontes* 451–2, 470–90) this was an all-night festival attended by women, at which young men got drunk and a girl who left her companions (both slave and free) was in danger of being raped.

The area of Aliki, where presumably the lagoon approximately marks the site of the saltpans of the ancient period, and the bay of Loutsa, has produced a considerable amount of archaeological material and three deme decrees. Two of these were to be set up in the sanctuary of Artemis, and seem to have been found *in situ*. Excavations in 1956–7 and 1976 uncovered the foundations of a poros temple dated to the fourth century, with associated earlier material, and further buildings (with a fifth century phase) about forty metres south of it; this seems to have been the area of the sanctuary of Artemis. A site half a kilometre to the west produced the third inscription, which refers to competitions (*agónes*) at the Dionysia, and was to be set up in the deme's sanctuary of Dionysos.¹⁰⁵

This decree (*SEG* 46. 153/49. 143), passed in 341/0, names a Phormos as demarch; since the name is rare and the demes perhaps relatively close, an affinal connection with Phormos of Kydantidai (n. 94) is possible. The proposer Philokles son of Philokydes and the two choregoi honoured, Antimachos son of Archemachos and Soinautes son of Nausistratides, are not otherwise attested, but Antimachos' brother Kallimedes served as councillor in the year of the deme decree (*IG* ii³ 4. 76. 53); Demoteles son of Antimachos, polemarch c.330 (*IG* ii² 1578) may have been the choregos' uncle (FB; ch. 29 n. 147). Nausistratides was probably related

¹⁰⁴ Some emulation of Brauron in the elaboration of the cult, or at least its myths, seems likely. Terracottas from the site apparently go back to the 6th c.

¹⁰⁵ Kotzias 1925–6 published Whitehead 1986*a*, no. 59, which was found in a Roman house, and discussed the topography of the area, providing a map. *SEG* 34. 103 (Whitehead no. 60), according to a note on *IG* ii² 5501, was found near the chapel of St Spyridon south of Loutsa. Excavations in 1956–7 on a site where there had earlier been excavation by Kyparissis and illegal digging found a poros temple, 4th c., with altar perhaps earlier; terracottas 6th–5th c.; many sherds 5th–4th c., tiles, dedication base, perhaps choregic; also the inscription concerning the Dionysia, and a fragment of a relief of the end of the 6th c. representing a woman (funerary?) from a site c.200 m south of the temple. Further excavations 1967–76: site 40 m S of temple, 2-room building with 5th c. and Hellenistic periods, and other classical/late classical material. See now Bardane 1998; Kalogeropoulos 2010, 2013 (with maps); Goette 2014, 85–7. *IG* i³ 1255–8 considers Velanideza a hamlet of Halai, but see below n. 116, Phegaia. On salt-production see Langdon 2010.

to the Nausistratos H. whose son or daughter was named on *IG* ii² 5508 = 5518a (cf. below at n. 112).

A decree published by Kotzias (1925–6) praises two benefactors and awards them olive crowns, proedria, and a share (*meris*) of sacrifices, to be given to them by the hieropoioi; the honorands may not have been deme members, since demesmen presumably all shared in the sacrifices (at the Tauropolia?). The demarch named in this text, Archias, should be the father or son of Apollodoros Archiou H., who served as councillor in 341/0.¹⁰⁶ *SEG* 34. 103, now dated in the 320s, honours Philoxenos son of Phrasikles for his choregia of a team of pyrrhichistai (dancers), and his performance of other deme liturgies, and awards him a crown of 500 drachmas with a further 20 dr. for sacrifice. The honours are to be announced at the *agon* of the Tauropolia; Philoxenos is to have *proedria* at all competitions in the deme, and is to be invited by the herald to take his seat. The demarch is to have the decree inscribed, and the treasurers of sacred funds (*tôn theiôn*) are to pay 20 drachmas for the stele.¹⁰⁷

Tombs of Halaieis have been found at Vraona and Velanideza, and may have moved there from the deme area. The descendants of Mnesippos I of Halai evidently formed a large lineage in the deme, which can be traced into the third century. Two of its members may have won victories in the Amphiaraia Megala of (?) 329/8. Pythippe, daughter of Mnesarchos IV, had a dowry of 1100 dr. secured in 273/2 on land in the Laureion area owned by her husband (see Table 24.7).¹⁰⁸

The trierarch Nikostratos son of Nikeratos H., whose stele was recorded at Spata, may have belonged to Halai Araphenides rather than Halai Aixonides; if so, he will have been related to Nikostratos son of Nikomenes H., listed as (?) a kleruch on *Agora* XV 492. 67.¹⁰⁹

¹⁰⁶ *IG* ii³ 4. 76. 51 (the reference in *LGPNA* Archias 33 should be to *PAAH* not *PAA*). Since Tracy 1995 (124) down-dates *SEG* 34. 103 to the 320s, Kotzias' decree should perhaps follow it, and the demarch should be taken to be the councillor's son.

¹⁰⁷ See Tracy 1995, 124, 128 for the date and confirmation of the reading 20 dr. (not 50) in line 32. The tamiai (responsible for all the deme's sacred funds, or only those of Artemis?) are also to provide the money for sacrifice, but not, apparently, for the crown.

¹⁰⁸ Earlier table at *IG* ii² 5501; cf. Humphreys 1983a/1993, 112. See also *APF* 10242; however, the trierarch of *IG* ii² 1609. 80 and 1612. 364 might be Mnesarchides son of Mnesikles of Laki(adai), attested as choregos in 361/0, *IG* ii³ 4. 484; cf. the [Mne]sarchides of VI Oineis in *IG* i³ 1144. 63 (Stephen Lambert, who kindly examined ii² 1609 for me, reports that it is very worn; it still seems to read ΑΙΛΑΙ, but ΛΑΚΙ is just possible). He may also be the M. who served as archon's paredros in the late 340s (the date 340/39 suggested in *AOP* p. 338 is unlikely, since [Dem.] 58, where he is mentioned, § 32, was probably delivered in 341/0 or before: see Gernet 1960). Pythippe, *SEG* 44. 82 (archon Glaukippos; Kiteza Kalybiou, a farm site on the road from Kalyvia to Anavyssos); her father Mnesarchos was councillor twice in the 250s, *IG* ii³ 921. 43, 983. 51. The Mneson Hal. of Finley 1952, no. 14 probably belonged to Halai Aixonides; the Mnesistratos Hal. who freed a slave living at Melite in the (?) 320s (*IG* ii² 1569. 27f.) could belong to either deme. Note also Korias daughter of Mnesikrates Hal. and Lysimache, Piraeus Museum 11725, late 4th c., Pologiorge 2009, 213 = *SEG* 59. 279.

¹⁰⁹ *APF* 11019; see however Whitehead 1982. The name Nikomenes reappears in the 3rd c. in the Mnesippos family.

Notes: IG ii² 5502 = CAT 2.448b represents Mnesarchos (standing, bearded) with a seated woman, his mother or wife: 5503 = CAT 2.407a shows Mnesippos II seated, with a standing woman who may be his daughter. It seems likely that the name Nikomenes came into the Mnesi- family through alliance with that of Nikomenes I, a fellow-demesman. Mnesarchides and Mnesippos of Halai, victors in the Amphiarraia Megala of (?) 329/8 (Knoepfler 1993), may be Mnesarchides II and Mnesippos IV (IG vii 414).

TABLE 24.7. Halai Araphenides: Mnesippos

Noumenios son of Kallias H., who appears on the same list (l. 66), should be, or be related to, the man of the same name who bought some of the property of Eumathes of Phaleron, in that deme, at the sale of property confiscated from the Thirty; the Noumenios of Halai named on a curse tablet of (?) the third century may be a descendant.¹¹⁰ Eukritos son of Daitarchos H. also appears on *Agora XV* 492 (l. 61); he may have been related to Daisios son of Euthias and his sons Euthias II and Euthykritos, commemorated on a stele of 340–317 found at Vraona.¹¹¹

Two men in the deme who achieved some prominence in the fifth century may have traceable descendants. Sokrates son of Antigenes H., who served as general in 432/1 and 431/0, may have been the grandfather of Sokrates II son of Habron, who was councillor in (?) 343/2 (*IG* ii³ 4. 75. 14), made a dedication in the city to the nymphs (*IG* ii² 4592), and was commemorated with his (?) wife by a relief naiskos to which the name of a son or daughter of Nausistratos H. was later added (*IG* ii² 5508 = 5518a). The Epizelos H. whose son Demophanes served as councillor in 259/8 (Philinos) and sitophylax in 239/8 (Athenodoros), and proposed *IG* ii³ 1029 in 234/3 (Lysanias), may descend from Pythodoros son of Epizelos, who served as hipparch, and (later) as general in the Peloponnesian War.¹¹²

¹¹⁰ *Agora XIX* P 2 abc 10; *Agora XV* 492 is usually dated c.370, but is probably a list of kleruchs from the 360s (Humphreys 2010a). Chairephanes H., who was a kleruch on Samos in 346/5 (*IG* xii 6. 261) had a homonymous descendant who contributed to the epidosis of 248/7 (*IG* ii³ 1011). The curse tablet Wünsch 1897, 11 may belong to the 3rd c., and the name Noumenios, which could be given to any boy born on the first of the month, is not a reliable basis for family reconstruction. Chairippos son of Chairedemos H. served as diaitetes in 330/29 (*IG* ii³ 4. 33) and headed an eranos-group that freed a slave living in Melite around the same date (*SEG* 18. 36 A 140 ff.); trapeza commemorating his wife, to which his name was added, from Piraeus, *SEMA* 267.

¹¹¹ *IG* ii² 5468; the sons' names were added later. The question whether stones found in the Mesogeia but not in the deme area should be attributed to H. Araphenides (rather than H. Aixonides) recurs with *IG* ii² 2701 (Finley 1952, no. 32) marking land mortgaged for 500 dr. to dekadistai led by Hieromnemon H., and for 130 dr. to eranistai led by Theopeithes of Ikarion; the Lysistratos with whom the agreement was deposited could be the L. of Halai of *Agora XIX* P 42. 5, but the name is common. Cf. the loutrophoros of Euboulos son of Timarchos of Halai *SEMA* 63, found with the lekythos of a Euktemon, *SEMA* 1860, at Velanideza: the provenance suggests H. Araphenides but the names Euboulos and Euktemon are found in H. Aixonides (Table 29.21). The stele and loutrophoros of Hieron son of Hierokles H., on which he is represented as a bearded warrior, with his father and a squire, came from the Kato Charvati area (Peppa-Delmousou 1975; *SEG* 24. 253 = *CAT* 2. 883 the loutrophoros, *SEMA* 65 = *CAT* 2. 882 the stele, attributed to Pallene in *SEG*, and to Pikermi in M. J. Osborne 1988 no. 10, where Kaineus son of Hierokles is mistakenly attributed to the same family, cf. Humphreys 1990a). See also ch. 25 n. 39 on the family of Philokrates of Oa and Deinias of Halai, commemorated at Velanideza; *IG* ii² 5486 = *CAT* 1. 879, the boy Theophrastos son of Theomnestos H., from Laureion. Note also that the monument of another boy, Arrileos (II) H. (no provenance) was, as Peek 1942, no. 363 pointed out, duplicated in *IG*: ii² 5465 = *CAT* 0. 914 is the same stone as 5526 = *CAT* 238. Eupolis son of Arrileos I H., councillor in (?) 343/2, *IG* ii³ 4. 75. 12, should be his father.

¹¹² Sokrates II: *IG* ii³ 4. 75. 14, *IG* ii² 4592, 5508 = 5518a (cf. ch. 5 nn. 58–9). Pythodoros (*APF* 12402) choregos in 415/4 (*IG* i³ 960), general in the following year; his service as hipparch (i³ 999; Spence 1993, 265 no. 30 with pl. 12) was presumably earlier, perhaps in 422/1 when he was one of those who took the oath for peace (*AO* pp. 138–9). Epizelos II as sitophylax, *IG* ii³ 1029 + Kritzas 2015.

Araphen

The deme was evidently located in or near modern Rafina.¹¹³ We would know little about it if a fight between two brothers over the division of an inherited plot of land (*chôrion*) in the deme, after which one of them died, had not led eventually to a court case for which Isaios wrote a speech. The value of the half-plot to Thoudippos, the survivor of the fight, may have been more symbolic than financial; he and his sons seem to have been resident in the city. Thoudippos proposed the Council's list of increased tribute assessments in 425/4, and presumably already had some political experience by that date.¹¹⁴ His two sons held office, Kleon as treasurer of Athena in 377/6 and Anaxippos as supervisor in the dockyard in 356/5; Thoudippos II, son of one of them, is attested as trierarch, and was executed in 318 as an associate of Phokion. Astyphilos, son of the brother who died, Euthykrates, was very young when the fight took place; this may imply that the brothers did not divide their father's estate until both of them had sons, and that Euthykrates had been farming the land in the deme.¹¹⁵ After Euthykrates' death his widow's second husband farmed Astyphilos' share of the land, both during his childhood and later, when Astyphilos left the deme in the 390s to serve as a mercenary, a career he pursued for about twenty-five years. The case provides an interesting example of the tensions generated when absentee deme members asserted formal legal claims to land in the deme with which they did not on a regular basis concern themselves.

Phegaia and Myrrhinoutta

As possible locations for these two demes we have several small sites on the E side of the Mesogeia plain, plus a coastal site at Agios Andreas Zouberi (Nea Makre). Early discussions put Phegaia at Velanideza, on account of the name (both indicate an area with oak trees); there is also some probability that in Strabo's list of coastal demes (C 399/9. 22) Myrrhinous (between Halai and Probalinthos) should be emended to Myrrhinoutta, which would put it at Agios Andreas (cf. Traill 1986, 146–7). Stephanos (s.v.) puts Halai between Brauron and *Phegaia pros Marathoni*, but it is not clear to me whether *pros* + dat. in his text has to mean 'near' or can be a vaguer indication of direction with reference to a

¹¹³ R. G. Osborne (1985*a*, 194) notes a site at Kioupia, NW of modern Rafina, and argues that the remains identified as those of Araphen by Eliot (1962) are post-classical. It should be noted that the Rafina bay provides little natural shelter for shipping. It had apparently become the site of an industrial establishment by the later 19th c. (*KvA* IX), and perhaps on that account subsequently acquired a jetty, as a result of which it became a terminus for ferry traffic from Attika to Euboia and Andros.

¹¹⁴ The suggestion that Thoudippos had married a daughter of Kleon of Kydathenaion (Wade-Gery and Meritt 1936, 392, followed by *APF* 7252) is controversial; ch. 4 n. 46.

¹¹⁵ Bourriot (1982) dates the fight after 404, on the grounds that Araphen would have been more or less deserted during the Spartan occupation of Dekeleia, but a date c.414 seems preferable (ch. 7 Case 7).

well-known place; he (also?) uses *plésion* and *engys* for ‘near’. A possibility remains that Agios Andreas was part of Probalinthos (ch. 25 n. 14), but current opinion puts Probalinthos at Vrana (and Marathon, ch. 31 n. 44, at Plasi). Pending further discoveries, the evidence favours assigning Agios Andreas to Myrrhinoutta and three or four hamlet sites along the eastern side of the plain to Phegaia.¹¹⁶

Phegaia

The deme had temene of Menelaos archegetes, Herakles archegetes, and the Dioskouroi (R. Parker 2005*a*, 71); at some date in (?) the fourth century it made a loan of 300 or 700 dr. secured on a house in the city.¹¹⁷ It probably sold some land in the hekatostai sales; the Hierok[les] who appears as purchaser, and

¹¹⁶ Leake, Loeper, Kirsten, Vanderpool (1974), and Traill put Ph. at Gerotsakouli, c.2 km SE/SSE of Xylokerisa (assigned to Probalinthos). Two Ph. tombstones were found at different places in this area, that of [P]ythangelos son of [P]ythodoros (*APF* 12432) at Kako-Melisse near the path leading to the monastery of Daou Pendeli (*SEMA* 674), and that of Antiphates son of Kephisodoros (*APF* 8386) at Agios Andreas near Nea Makre (*SEMA* 669 = *CAT Suppl.* 44 PE 71). Milchhöfer put Ph. at Velanideza, known for its archaic grave monuments (*IG* i³ 1255–8); Aristion (1256, c.510) might be an ancestor of [A]risti[o]n son of Philistides Ph. councillor in (?) 343/2, *IG* ii³ 4. 75. 18, but otherwise these stones provide no very obvious clue to the deme affiliation of Velanideza (Ross 1855, 227 noted that the name has the same meaning as Phegaia). Kotzias (1925–6) put Ph. at Gourilache, NW of Aliki. Draphi was suggested in *BCH* 1956, 246–7 (repeated in *SEMA* 673), but the gravestone of Polykles Ph., on which this suggestion was based, seems to have come from the Araphen area (*SEG* 41. 205). Steinhauer 1994*a* (map p. 176) assigns 3 sites to Myrrhinoutta: one round the N end of Karababa (including Milchhöfer’s Vathy Pigadhi), the second round Vourva (including Lappari and Mazareika?), and the third round the early Christian basilica of Agios Vasileios (where *KvA* VII marks ‘verfallenes Kapelle mit Säulenstrumpfen’, at the beginning of the Skemphthis valley?). This seems a large area even for Phegaia, particularly since there is an argument both from etymology and from Stephanos for including Velanideza in Phegaia rather than in Halai. The Vathy Pigadhi site might have been an outlying hamlet of Erchia (but see above at n. 71); Konthyle is another possibility, but on current locations it would be separated from other demes of III Pandionis by Philaidai. *AD* 56–59 B I 382–4 and *Mes.-Arg.* 281 (see *SEG* 54. 254 *bis*/55. 71) report a large site at Ag. Andreas Zouberi, but there was little excavation. See also Oikonomakou 2004. *Mes.-Arg.* 281 still has Probalinthos here. Burial area near Nea Makre with material of Geometric period and late 5th c., *AD* 40 B, 1985 (1990), 72–3; *AR* 2005–6, 14, from *AD* 54 B 1 (1999), 96–7. For Stephanos cf. § 319 Anthedon: *estí kai hetera plésion Gazés pros tói paraliói meri*.

¹¹⁷ *IG* ii² 1932, c.380; tax obligations are being shifted, perhaps from tenants to the managers of cult property (cf. Gabrielsen 1987). Nikostratos Ph. (*APF* 11055, see Culasso Gastaldi 2011), whose obligation is transferred to the Dioskouroi, may be the grandfather (FF) of Nikostratos II son of Archedemos Ph., who proposed a decree c.350 for the hieromnemes of the sanctuary of the Kabeiroi on Lemnos and was honoured as treasurer towards the end of the 4th c. (Culasso Gastaldi 2010, 360), of Polyphilos son of Archedemos H., named on a horos (eadem 2008, no. 3), and of Akeratos son of Archedemos, councillor in 341/0 (*IG* ii³ 4. 76. 60). The relation of the Lemnian N. to the N. Ph. who appears on *Agora* XV 492, a list of kleruchs possibly sent to Samos in the 360s (Humphreys 2010*a*) is unclear. Archedemos II, probably son of Nikostratos II or Akeratos, served as councillor in the 250s (*IG* ii³ 983. 89). This family may conceivably have been connected with that of Archemachos I Ph., whose sons Autoboulos and Diodorokles were commemorated by monuments of the mid-4th c., at least one of which, *IG* ii² 7633, was found in Athens, near the Acharnian gate (*AEE* 1228). *Pace CAT suppl.* PE 41 (= ii² 7635), the Archemachos who was syntrierarch in 322 (*APF* p. 69) more probably belonged to Anagyrus, ch. 23 n. 57. For 3rd c. descendants of Archemachos Ph. see Habicht 1976.

perhaps also as one of the selling officials, may be the Hierokles Ph. who registered a mine in (?) 341/0.¹¹⁸

Kephisodoros son of Eschation Ph., attested as syntrierarch in the middle of the fourth century, may well have owned property in the deme; his father's name suggests that the family owned an *eschatia* (hill farm), and the tombstone of his son Antiphates was found near Nea Makre.¹¹⁹

Pythangelos son of Pythodoros Ph. was buried in the late fourth century at Rhamnous (*SEMA* 674); his father was councillor c.336, and syntrierarch on two ships in 322 (*APF* 12432; *Agora* XV 42. 76, *IG* ii² 1632. 182, 334).

Myrrhinoutta

We know little about its demesmen; Alkimachos, who as a councillor proposed decrees in 335/4 and 325/4, and served as *diaitetes* in 330/29, may have been a minor political figure.¹²⁰

Teithras

The south-east part of Mt Pentelikon should have belonged to a deme of II Aigeis, which may have controlled (?) Mendeli, Draphi, and Charvati in addition to Pikermi, where epigraphical material belonging to Teithras has been found, including part of a sacrificial calendar.¹²¹

¹¹⁸ Lambert 1997a, F 2. 28, 33; Hierokles, *Agora* XIX P 27. 96. Another selling official, Polyk[—], may be either Polykles Ph., whose daughter's dotal horos (*IG* ii² 2664, Finley 1952 no. 138) was found at Trachones and whose tombstone (*SEMA* 673) was found in the approximate area of the deme, or Polykrates son of Polyeuktos, councillor in (?) 343/2 and perhaps again in (?) 336/5 (*IG* ii³ 4. 75. 19; *Agora* XV 42. 78, without patronymic). Kallimache daughter of Polyeuktos Ph., commemorated by a stele (*AEE*² no. 374), was probably Polykrates' sister; the family can be followed into the 3rd c. A Theolaos of Phegaia served as councillor on Samos in the mid 4th c., *IG* xii 6. 262 II 32; probably the name Theollos on the early 4th c. *Ioutrophoros* *SEMA* 671 is a variant (or error), and it should be attributed to a kinsman.

¹¹⁹ *APF* 8386; Antiphates, n. 116 above, buried with two women, one possibly of Phegaian origin. The *lektythos* of Kephisodoros and his wife Pheidylla, *IG* ii² 7636 = 7640, *CAT* 2. 394c; Eschation and Kephisodoros, *SEMA* 670, *CAT* 2. 445b.

¹²⁰ *SEG* 21. 272 + 39. 82, *IG* ii² 1629 = ii³ 370, R/O 100; ii³ 4. 33.

¹²¹ The sources are translated in N. F. Jones 2004, 117–21. Pentele, perhaps at Mendeli, is attested as a deme of Ptolemais in the Roman period and may earlier have been a hamlet of Phlya, which was transferred from VII Kekropis to Ptolemais in the 3rd c. (see Traill 1986, 128 n. 17). Material from Draphi (*BCH* 1956, 246–7) does not so far suggest that the site was more than a hamlet. Charvati was the site of a large estate in the 19th c. at which stones collected (Priptis 1988, Milchhöfer 1887, 85–6), but two deme-sites are marked near it on *KvA* VII (one S, one E by S, see n. 90), and Vanderpool is said to have seen a burial site in the area of (Kato) Charvati (*AD* 29, 1974 A 194ff.; Traill 1986, 128 n. 17 says there is more material at Mendeli than at Charvati). *KvA Text* III–VI, 37, suggests a sanctuary site at Kalisia N of Draphi; Steinhauer 2001, 86 takes Draphi to be part of Teithras. It is not clear where the boundary between Gargettos and Teithras (if there was no intervening deme) should be placed. *SEG* 24. 151–3 came from the church of the Metamorphosis at Pikermi, and the calendar fragment *SEG* 21. 542 (*LSS*

The calendar, inscribed on both sides, preserves only dates in Boedromion; the deme sacrificed a male sheep to Zeus on the 4th or 14th, and a sheep to Athena on the 27th, with a piglet and prothymata for Zeus. It is not certain that it was set up in the Koreion, devoted to the worship of Demeter and her daughter, where the stele containing *SEG* 24. 151–3 (see 57. 131) was erected.¹²²

A lease granted by the deme (see below) mentions a temenos of Zeus and property of the hero [Da?]tyl[os] and (?) of Aigeus, a heroon in the Agora (?), a Herakleion, and a heroon of (?) E[pi]go[nos]. All these properties seem to have lain close together, in the centre of the deme; the hero in the Agora may have been the deme eponym Teithras son of Pandion, attested in the Aristophanes scholia.¹²³ Teithras probably sold some property in the hekatoistai sales, one parcel apparently fetching more than 9050 dr.¹²⁴ At the date of its list of leases granted in perpetuity (*SEG* 24. 152), it owned at least four pieces of property leased in this fashion.

The sequence of events represented by the texts on the stele *SEG* 24. 151–3/57. 131 is difficult to reconstruct. We start with a date, the demarchy of Euthippos, and a proposal by Eudikos that the perpetual leases granted by the deme should be listed. This is followed by a decree proposed by Pandios: a perpetual lease is to be granted to Xanthippos and his heirs. The lessees' tax liabilities are also specified, as are the circumstances in which they may claim relief from their obligations (enemy action), and the date on which payments are due (Elaphebolion). The proposal for a list of perpetual leases is repeated: it is to be drawn up by the demarch and three commissioners, and is to specify the rent due in each case. Anything on the stone contrary to Pandios' proposals is to be erased. This is followed by a list of three leases, which does not include the lease granted to

132) was found c.2 km to the N; the dedication *SEG* 21. 520 = *Agora* XV 45 also came from the area (about 4 km E of the church), as perhaps did a horos marking land mortgaged to an Aristogenes (*Hesp.* 64, 1995, 333–6). Finlay and Leake saw remains at Pikermi (Möbius 1924); cf. also Pollitt 1961.

¹²² Dow (Nachlass, file 'Teithras') dates side A c.350, and side B, inscribed in a different hand after the stele was set up, not much later. For another possible deme Koreion see ch. 27 n. 68. See Whitehead 1986*a*, 186–7, and Humphreys 2004, 184, for sacrifices on Boedromion 4 and 27 in Erchia. The linkage of Athena and Zeus on the latter date suggests that they were the deities of the Polis (as at Erchia) or of a phratry. See now Papazarkadas 2007*a*.

¹²³ Restorations here are obviously very uncertain (Möbius 1924; Wilhelm 1935; Papazarkadas 2007*a*, *SEG* 57. 131, removes Datylos). Kearns 1989 ignores this text, but notes that Datyll[os] appears in the records of the Treasurers of the Other Gods, *IG* i³ 383. 76 (429/8). On the temenos of Herakles *IG* ii² 2609, attributed by Möbius to Teithras, see above, n. 90. Hero Teithras, Schol. Ar. *Frogs* 477; Kearns, op. cit; BArch 215562. On the sons of Pandion see *FGH* 328 F 107–8 with comm.; Teithras perhaps appears as an alternative to Pallas, indicating rivalry with Pallene (ch. 18 at nn. 48–9). However, on BArch 215562 he is an ally of Theseus. Lambert's suggestion (2004*a*) that the name of the father of the lessee should be P[yrrho]s rather than P[yrthea]s and that he might be connected with the trierarch Demokles and councillor Demophilos rests on very late evidence.

¹²⁴ *IG* ii² 1580b, see Lambert 1997*a*, F 3. 2–3 (Whitehead 1986*a* followed *IG* in erroneously attributing this text to the poletai records).

Xanthippos, and gives no information on properties or rents. Finally, we have a decree in honour of the demarch Euthippos, praising him for organizing the commissioning of a statue, larger than originally prescribed, and for paying some of the expenses out of his personal resources. This evidently left a surplus in the fund raised by contributions from demesmen, from which Euthippos is granted 100 dr. for a sacrifice.

My impression is that we have here a process in two, if not three, stages, which are unlikely all to have taken place in a single year. In the first stage, presumably set off by some conflict over rights to property and the deme's rent claims,¹²⁵ Eudikos proposed to tighten up the system. Subsequently there was renewed trouble over at least one plot, and Pandios proposed to lease this to Xanthippos and his heirs;¹²⁶ he revised Eudikos' proposals, and his decree was perhaps inscribed in place of that of Eudikos.¹²⁷ Later still, perhaps—because it proved difficult to reach agreement on the deme's claims to ownership and rents?—a decision was taken to commission a new statue for the Koreion. This was perhaps Euthippos' way of extricating himself from a difficult situation; it allowed him to extract money from demesmen who were thought to owe back payments of rent, without a full legal investigation.¹²⁸

The stele is dated before mid-century by Lambert (1997*a*, 176–7), but 'early' spelling in deme documents is not a reliable index, and the reference to enemy action in Pandios' decree might suggest a date either *c.*340–335, when there was a risk of Macedonian invasion, or—since remission of rent in years of poor harvest seems to be envisaged and excluded—during or after the corn famine of *c.*330–325. Blepuros, who proposed the decree for Euthippos, served as one of the dockyard supervisors in 349/8 and as one of Teithras' councillors in 331/0 or 330/29. On the latter occasion he and his colleagues were awarded gold crowns for having taken care of sacrifices during their year of office, and thus evidently lessening the financial obligations of their fellow-demesmen; this suggests that there was conflict in the deme during their year of office. One might then date Euthippos' demarchy

¹²⁵ Public property let on long or perpetual lease was apt to become privatized, either because boundaries shifted or because rents were not regularly collected; cf. ch. 19 n. 152.

¹²⁶ The phrase *ep' amphotera* may imply that either Xanthippos or his son has only female heirs at this date.

¹²⁷ This implies that in addition to the *rasura* noted by Möbius (1924) under the sum of 200 dr. due as Xanthippos' rent, Euthippos' name in the demarchy-date would also be inscribed *in rasura* (cf. Hedrick 1990 on *IG* ii² 1237, Demotionidai), as would Pandios' decree (Pandios' decree, ll. 6ff., is cut stoichedon, ll. 2–5 are not). It then becomes possible that the list of leases *SEG* 24. 152, which does not correspond to Pandios' provisions, had been inscribed earlier, in response to Eudikos' decree.

¹²⁸ The state's decision in 326/5 that contributions to the grain-fund in this and the preceding years could be credited against the debts of the guarantors of the triremes sent to Chalkis in 341/0 (cf. Gabrielsen 1994, 166–7) is not dissimilar. Cf. also ch. 29 n. 134, on the dedication of a statue of Aphrodite Pandemos by members of Halai Aixonides after a dispute over deme funds. It is not impossible that Euthippos and Xanthippos were related.

in the following year.¹²⁹ The Phyleides son of Blepyros who bought land in the deme in the hekatostai sales is probably the councillor's son; Blepsides T., whose class III dikast-ticket survives, perhaps belonged to this family.¹³⁰

Teithrasians were also active outside their deme. Proxenides, whose son Prokleides may have served twice as councillor, is recorded as a guarantor on Delos; Smikythos, whose son Lykomedes appears in a list of (?) epilektoi, made a loan of 150 dr. secured on a house in Alopeke; Mantikles, councillor in 331/0 or 330/29, was perhaps buried in Acharnai.¹³¹ Stele commemorating [Andri?]as son of Kalliades T. and [Kalli?]ades son of Andrias T. found in the Kerameikos area (Thespieôn and Thermopylôn) with a loutrophoros (no inscription preserved) and a kioniskos, *SEMA* 641. Polyeuktos T., whose heirs' dispute is recorded in Demosthenes 41 and whose daughter Kleokrateia dedicated *SEG* 17. 83 with her husband Spoudias of Aphidnai (ch. 31 n. 41) in the city Eleusinion (*Agora XXXI* no. 7), probably also lived in the city.

¹²⁹ *Agora XV* 45. It is not clear whether these sacrifice payments relate to Council sacrifices for which councillors or their demes had to contribute, deme sacrifices in the city, or the whole of the deme's annual calendar; to put the question in Plotheian terms, are the councillors taking over payments normally made from the ateleia fund, or from the demarch/tamias fund? The prosopography of Pandios is too controversial to provide a firm basis for dating. He must belong to the same family as Pandios I and his son Pandios II T., the latter commemorated as a boy athlete on *SEMA* 645, *CAT* 2. 776, a naiskos-stele of the early 4th c. now on Salamis, but it is doubtful whether he can be Pandios I, and he may well be a grandson, child of a brother or sister of Pandios II. Lambert 1997*a*, 176–7 no. 105, arguing for an early date and identification of the proposer Pandios with P. I, notes that one of the lessees of *SEG* 24. 152, Apollodoros son of One[siphon?] (cf. *IG* ii³ 921. 6, 22), may be the father of Themisto, commemorated with her husband (Phlya) on a stone of the second half of the 4th c. from Piraeus. This however does not exclude a date *c.* 330 for Pandios' proposal, particularly since we do not know when Apollodoros' lease was granted. Cf. Tracy 1995, 125 and ch. 25 at n. 75, on *SEG* 21. 644, where invasion is also mentioned. Knoepfler (1986*b*) suggested that the proposer P. was the sculptor of that name (*IG* ii² 4024), who perhaps served as councillor in 369/8, and proposed the decrees *IG* ii² 103 (R/O 33), 105 + 523 (R/O 34), and *SEG* 36. 442, the latter concerned with repairs to the Amphiaraion. The councillor may however be [Pan]dios (or [Rhai]dios) son of Sokles of Oion (VIII), secretary in 355/4 (see *AO*); even if Knoepfler's argument for association with Teithras were stronger, the councillor might be Pandios I.

¹³⁰ Lambert 1997*a*, 176–7 (unlike *IG* ii² 1580 and Whitehead 1986*a*) takes the purchaser to be Blepyros' son. See ch. 22 n. 62, on the date of these texts, and ch. 5 n. 42 on the purchase of land by young men. Blepsides, Kroll 1972, 30b.

¹³¹ Proxenides *ID* 104-26 A 15; Prokleides *IG* ii³ 4. 76. 58, 341/0; 42. 82 (no patronymic), ? 336/5; Smikythos, *Agora XIX* P 5. 15, 38 (367/6); Lykomedes, *SEG* 21. 617, on which see ch. 23 n. 19; Mantikles, *Agora XV* 45, *SEMA* 644. Demo— son of [K]tesiph[on], whose tombstone was found in the deme (*SEMA* 1698; not in *LGP*N), may have been related to Demosthenes son of Demophon T., councillor in 341/0, *IG* ii³ 4. 76. 55.

III Pandionis

Prytany-lists from this tribe regularly group the ‘enclave’ Probalinthos with Kydathenaion, and the small demes Oa and Konthyle with Paiania, to produce three trittys of almost equal size. However, we do not know the location of Oa or Konthyle, and Angele and Myrrhinous, grouped with Kytherros, Steiria, and Prasiai in the coastal trittys by this arrangement, were not coastal in the literal sense. It is not clear whether the inland and coastal trittyes, as defined above, were contiguous.¹

CITY TRITTYS

Kydathenaion

The connotations of nobility in the deme’s name, which raises interesting questions—were the inhabitants of ‘old Athens’, which included the centre of the early city east of the Akropolis, already in the habit of using this name before 507?²—are to some extent borne out by evidence for Eupatrid families and alliances in the deme. Andokides’ family may have belonged to the Kephallidai; Dikaiogenes’ family was linked by marriage to the Gephyraioi; the family of Epigenes belonged to the Mesogeioi and may have had affinal ties to the Kerykes family of Metagenes and Epigenes of Koile; either Epigenes’ family or that of Metrodoros of Kydathenaion (linked by intermarriage) belonged to the Eumolpidai.³

¹ The position of Kytherros is also somewhat uncertain. See the discussion of individual demes below, and ch. 21 at nn. 25–7 for the organization of tribal lists.

² Does the name imply resistance to the development of an alternative ritual and political centre in the ‘new Agora’ in the second half of the 6th century? Cf. Sourvinou-Inwood 1994*a* for some possible implications of this development; Kenzler 1997.

³ Ch. 20 (n. 81); Table 13.2 on Andokides (*APF* 828); n. 10 below on Dikaiogenes. The reconstruction in *APF* 10807 of Epigenes’ family is problematic. His son Metagenes, who married the daughter of a fellow-demesman, Telokles (perhaps the brother-in-law, ZH, of Andokides, see *APF* 7840), was represented with her and with an unmarried daughter on the Bildfeldstele *IG* ii² 6587 + add. = *CAT* 3. 414a, dated mid-century. This should put Metagenes’ date of birth after 400; he can hardly be a brother of Nikias son of Epigenes I, who won a victory as boys’ choregos in the 380s (*IG* ii³ 4. 540 with D. M. Lewis 1955) and may have been a son of Epigenes II and brother of Epigenes III, who is attested as an elderly councillor in 304/3, *Agora* XV 61. 67 (Table 20.2). G. J. Oliver 2011 suggests that the son of a

Other families used names that have an aristocratic ring: Isonomos, Echepolis, Astyochos. Isonomos K. may have been the man of that name denounced for parodying the Mysteries.⁴ His fellow-demesman Euphiletos son of Timotheos was condemned both for Mystery-parodies and for mutilating Herms; he had a house that sold for 1500 dr., perhaps in the deme, but also owned a house at Semachidai, land at Gargettos, a house, garden, and land at Myrrhinoutta, and land at Aphidnai.⁵ The poet Aristophanes, who moved in the same social circles and parodied rituals on stage, also belonged to Kydathenaion.⁶ [E]ryxias son of Eryximachos K., who made a dedication as victorious choregos between c.425 and 404, may have been somehow related to the doctor Eryximachos son of Akoumenos (who appears with Aristophanes in Plato's *Symposion*, and was accused of mutilating Herms), but can hardly have been his son. The choregos, in any case, must have been a man of some standing; his son Eryximachos II married a daughter of

Metrodoros Ky—honoured in *IG* ii³ 484 for helping Athenians overseas, perhaps c.320, was Konon son of Metrodoros K., councillor in 335/4 (*Agora* XV 43), or his brother, and was a kinsman of the Epigenes honoured by the Mesogeioi (*IG* ii² 1247, ch. 20 n. 138).

The names Lysistrate and Lykophron occur in the family of Dion K. (note that Schmaltz and Salta 2003 no. 9 consider the inscription on *IG* ii² 6572 = *CAT* 3. 390 to be secondary, related to the added figure of the woman in the middle of the group). Platthis (perhaps daughter of Dionysios I K., hellenotamias in 410/9, *IG* i³ 375) made a dedication at Eleusis c. 420 (*IG* i³ 1000 *bis* = *IEleus.* 44); her brother Euagoras served in the council in the early 4th c., *IG* ii³ 4. 21. 48. The Dionysios II K., who served as Treasurer of the Other Gods in 375/4 (*IG* ii² 1446 = *SEG* 21. 551. 6) may be Evagoras' brother rather than his son.

⁴ Isonomos K. was commemorated with his (?) wife Myrtale in the city in the early 4th c., *IG* ii² 6580; the name of his daughter Archestrate, wife of Kephisodoros of Phlya, was added in mid-century. The relation of her husband to Kephisodoros son of Athenophanes K., secretary in 346/5 (*IG* ii³ 502, 503) is unclear, since they cannot be identical and a putative grandfather (FF) of the secretary should have been a contemporary of Isonomos, if the latter was still a young man in 416. The name-pattern and demotic suggest that Isodemos son of Isodemos K., councillor in (?) the Lykourgan period (*Agora* XV 32) and (?) Isiphilos son of Isodemos, epebe in (?) 332/1/0 (*IG* ii³ 4. 342) may belong to this family. (None of the photographs of the squeeze of this text shows any clear reading.) Antikles K., whose sons Antichares and (?) [An]tikleides (lochagos, demotic not preserved) were epebes in this year, was Council treasurer in 343/2 (*IG* ii³ 306); his father Aristokrates son of Phanokles was commemorated by a circular grave monument (lekythos?) found at Trachones, Peek 1942 no. 171 = *SEMA* 344. *IG* ii³ 4. 342 reads the following additional names (in *LG* online): Antigene son of ...ôn; Protarch[os] son of AIXIPA; Phanoma[ch]os son of Aion, who reappears as proedros in (?) 307/6 (*IG* ii² 358 + *SEG* 21. 326. 6, Tracy 1995, 152; his brother Aion II was councillor in 304/3, *Agora* XV 61. 73); and Meg.ôn [*sic*] son of [Ph]ormion, perhaps descended from Phormion son of Aristion K., secretary to the treasurers of Athena in 418/7. Echepolis, *APF* 6176 (perhaps an ancestor of Isandros son of Echedemos, Echedemos son of Mnesitheos, and their descendants, prominent in the 3rd–2nd c., Habicht 1982a, 189–93). Astyochos, *APF* 8828; ch. 14 n. 60.

⁵ *IG* i³ 426. 78–80, 430. 14–18. The scatter of dispersed holdings in N Attika is interesting, and one would like to know when they were acquired. In contrast, the family of Dikaiogenes (*APF* 3733) seems only to have owned city property.

⁶ *IG* ii² 6566 (with p. 891), of the early 4th c., apparently commemorates the poet with a homonymous (?) kinsman, Aristophanes son of Hephaistokrates, a somewhat surprising conjunction given that the tradition credits the poet with four sons, none of them called Hephaistokrates. One of these, P̄hilippos II (named for his FF) probably served as councillor c. 360 (*IG* ii³ 4. 55. 13, Philippos); the councillor Aristophanes of ii³ 4. 48. 26 may be the poet himself in old age, or the son of Hephaistokrates, or a grandson, depending on the date of the list.

Polyaratos of Cholargos, sister of the daughter-in-law (SW) of his fellow-demesman Kleon; a daughter of Eryximachos II married the general Chabrias.⁷

Kydathenaion was also, however, the deme of Kleon, whose populist style of oratory becomes a more interesting phenomenon in view of his origins in this enclave of privilege. He was not a *novus homo*; his father Kleainetos may already have served as choregos in 460/59, and ownership of a slave-staffed workshop (in this case, of tanners) was probably not unusual for city residents. It was Kleon's insistence on presenting himself as a man of the people that allowed his fellow-demesman Aristophanes to present him as a typical specimen of the urban proletariat, and as such obnoxious to elegant young members of the horse-riding upper class.⁸ Kleon's son Kleomedon seems to have returned to a conventional upper-class lifestyle, marrying (as we have seen) a daughter of Polyaratos of Cholargos and winning a victory with a boys' chorus at the Thargelia. Kleomedon's son Kleon II is attested as syntrierarch in 356.⁹

We have the ends of two deme decrees of Kyd[athenaion], both on the same stone, and both prescribing publication in the sanctuary of the Herakleidai. The stone was found (re-used) in the Agora and is dated c.350–330, most probably in the Lykourgan period. The honorand or honorands had also been crowned by the Council and Assembly, and by the Athenian kleruchs on Samos and Lemnos

⁷ APF 11907 C. The choregic dedication (IG i³ 966) is lost, and reports of the name vary: Vernon (*Hesp. suppl.* 8, 225 n. 34) read [Er]yxias, Fourmont (*CIG* 216) II/ZIAS. [Ale]xias—for which one might compare Alexippos, adelphidous (BS or ZS) of Akoumenos, Andok. 1. 18—may not be excluded. (Eryxias, doctor in Piraeus c.325, [Dem.] 33. 18, should be added to the list of bearers of the name on APF p. 464, though we do not know whether he was a citizen: ch. 6 n. 2). A 3rd c. Eryxias in K., *SEG* 58. 207. For the possibility that the gymnasiarch Kallias son of Telokles of IG i³ 969 *bis* belonged to K. (Angele and Myrrhinous also possible) see APF 7840.

⁸ APF 8674; the nickname 'Paphlagonian' was perhaps based on Kleon's deliberately plebeian style of speaking and manners rather than on any specific regional association (cf. Dover 1993, 69–71). On the suggestions that Kleon married a daughter of Dikaiogenes of Kydathenaion and that he had a daughter who married Thoudippos of Araphen see ch. 8 n. 56. D. M. Lewis (*SEG* 60. 197) suggested that the Kleon K— of *Agora* XIX P 26. 35, landowner in Haginos, was a descendant. Kleon's democratic politics were perhaps shared by a family that from c.440–30 used the name Strepheneos, ship-turner. Aristides son of Strepheneos I served as secretary of the Assembly in 369/8 (*ID* 88); Strepheneos II, son of Eudoros, was councillor in 304/3 (*Agora* XV 61. 65); the Strepheneos (III) attested in the cavalry c.250 (Bugh 1988 II B 246) was probably the councillor's grandson. If there is a connection with Aristides and Biote, children of Pamphilos K., commemorated by two stelai found together in the area of ancient Xypete (*IG* ii² 6565, c.350, and 6567, c.360; Bergemann 1997, L 6a), it may have been affinal.

⁹ APF 8674 with 3773. Kleainetos son of [-c. 5-]dros K., ephebic lochagos in (?) 332/1/0 (*IG* ii³ 4. 342), presumably bore some relation to Kleon's family, but the link is hard to reconstruct; he may be a son of [Me]nandr[os] [Al]exand[rou] K. (*SEMA* 350, 4th c.; a Men[and]ro[s] K. is now attested c.350 on Samos, *IG* xii 6. 262 III 31), and his mother could have been a member of the lineage of Kleon I who married within the deme. The Kleomedon whose fine of 50 talents Demetrios Poliorketes, at the request of K.'s son Kleainetos, asked the Athenians to remit (*Plut. Dem.* 24. 6–7) was presumably a descendant of Kleon. Cf. Paschidis 2008, 96–7. P.'s insistence (109 n. 2) that Kleainetos cannot have been ambassador in 306/5 (*IG* ii² 675 + 525, 1492 B 100, cf. D. M. Lewis 1988) may be mistaken.

(Hephaistia), as well as by the deme, and must have been prominent. Dikaiogenes IV, general for Piraeus in (?) 330/29 and 323/2, or a member or members of the family descended from Charias I (*APF* 5604), seem possible candidates.¹⁰

IG ii² 2343 (Gill 1991 no. 12, c.400) is an offering-table dedicated by the priest of Herakles Simon K. and a group of thiasotai, of whom at least Lysanias (below) and Philonides (*PCG* 7. 363ff.) may also belong to the deme. It has been associated with Aristophanes, whose *Daitaleis* had a chorus of thiasotai of Herakles, and with two fifth-century horoi from shrines of Herakles, *IG* i³ 1058 = *Agora* XIX H 6 from the southwest Agora, and 1059 from north of the Agora (Agiou Philippou 5; Dow 1969; Lind 1985; Kostake 2008, 154). These provenances however would *prima facie* suggest Melite (Herakles Alexikakos? cf. Lalonde 2006*a*, 2006*b*) and Skambonidai. Other records lead outside the deme.

Among demesmen who travelled we may note Kallaischros son of Philaios, naopoios at Delphi before 310 and proxenos in Boiotia, with his brother, perhaps before 338 (their father was councillor c.360), and Kephisodoros son of Hippeus, granted honorary citizenship at Ephesos towards the end of the century. Hippeus is attested as guarantor of a lease in 343/2 and as councillor in (?) 336/5; Hypereides' speech *On the kleros of Hippeus* may have dealt with his estate. Hippeus' nephew (BS) Kephisodoros son of Smikythos leased sacred property in the deme in 343/2; his guarantor Leonteus son of Antikleides may have been a fellow-demesman.¹¹ On his service as treasurer of the dockyards in 325/4 see ch. 14 n. 42, Table 5.6.

We can trace a number of other K. families in records of the council, other minor offices, and the ephebate. Olympichos, killed by oligarchs in (?) 411/0 (*SEG* 28. 46 with Matthaiou 2011*a*) left two orphan sons, Lysanias and Hippon, the latter possibly commemorated by *SEG* 29. 210 = *SEMA* 349 (L for A?). Lysanias' son Demostratos was councillor in the early fourth century (*IG* ii³ 4. 21); Demostratos' son Kratinos served c.360 (*IG* ii³ 4. 55) and had a daughter, Timokrateia, represented with her husband on a Bildfeldstele of c.350;¹² Kratinos' brother Demetrios was councillor c.336 (*Agora* XV 42). Philostratos son of Philinos, councillor with Demostratos (*IG* ii³ 4. 21), may be the Philostratos K. who was secretary to the epimeletai for Eleusis in 422–418 (*IG* i³ 391 = *IEleus* 45; but the name is common). Straton son of Stratios, also listed on *IG* ii³ 4. 21, may be the father of Stratokles

¹⁰ Decree, *Agora* XVI 68; Kyd[antidai] is also possible (ch. 24 n. 89) since the stone should be a dedication rather than a decree. The missing crowns may however have been inscribed *hoi dêmotai*, possibly implying a city deme. On Dikaiogenes' family see ch. 7 case 2; his generalships, *IOrop.* 353 (see Humphreys 2009), *IG* ii² 1631. 380 f. Round base for a funeral monument (pillar?), names of son and wife added, *IG* ii² 6569. On the descendants of Charias K. see also Habicht 1979, 16–21, 129. *IG* i³ 426. 66–9 mentions a sanctuary of Artemis Amarysia in K.

¹¹ Kallaischros, *CID* II 119. 28, *SEG* 28. 466; Philaios, *IG* ii³ 4. 55. 6. Kephisodoros son of Hippeus, *SEG* 33. 932. 11; Hippeus, *Agora* XIX L 6. 144 (Papazarkadas 2011, 306 no. 33), *Agora* XV 42. 155, Hyp. F xxv–vi; Table 5.6. Kephisodoros son of Smikythos, *Agora* XIX L 6. 16 (Papazarkadas 307 no. 38), cf. Habicht 1987. Leonteus, ch. 24 n. 93. Eudemos K., executed in 382/1 (Dem. 24. 138) now has a descendant (SS) on Samos, *IG* xii 6. 262 III 33.

¹² *IG* ii² 6598; Timokrateia seated, with standing bearded man, so probably husband rather than father.

son of Straton K., commemorated by a kioniskos at the end of the century.¹³ Archikles son of Ain— K., also councillor on ii³ 4. 21, may be the grandfather (FF) of —otes son of Ainesias K., ephebe in (?) 332/1/0, *IG* ii³ 4. 342.

Another list of Pandionis councillors, *IG* ii³ 4. 26, is attributed by Tracy (1995, 131) to the same cutter as *Agora* XV 52, working c.330–317. If this date is correct, and if Iophon II son of Lysis K. was the nephew (BS) of Prokles son of Iophon I, secretary in 394/3 (*IG* ii³ 4. 42, *Agora* XVIII 35), he will have been a relatively elderly councillor. Teisamenos son of Pythionikos, who freed a slave living in Piraeus c.320 (*IG* ii² 1570. 49–50) will have served a second term as councillor in 304/3 (*Agora* XV 61. 69). Aristokles son of Hierokles (*IG* ii³ 4. 26. 54) may be the son or nephew of the son of Aristokles who was victorious in a diadikasia c.380 (*IG* ii² 1929). Antiphon III son of Pytheas and his (?) cousin (FBDS) Archias son of Aresias, who served together (ii³ 4. 26. 50, 55), belonged to a well-documented family: Pytheas (son of Antiphon I) had been councillor c.336 (*Agora* XV 42) and his nephew (BS) Antiphon II son of Archias was one of the dockyard supervisors in 349/8 (*IG* ii² 1620. 48f.).

Antikles son of Aristokrates K. was councillor in 343/2 (*IG* ii³ 306c); his father, son of Phanokles, was buried in mid-century near Trachones (*SEMA* 344) and his son Antichares was ephebe in (?) 332/1/0 (*IG* ii³ 4. 342). Antikleides son of Antikles, ephebe in the same year (demotic lost), may be Antichares' brother (on brothers in the ephebate see ch. 16 n. 53).

I have argued elsewhere (Humphreys 2010a, 81) that *IG* ii³ 4. 31 may be a list of diaiteitai from 343/2 or 336/5. Tachyllos I K. (l. 14) had a son, Ameinokles I, who was councillor in 304/3 (*Agora* XV 61. 64); he will be the grandfather (FF) of Ameinokles II son of Tachyllos II, proposer of a soldiers' decree perhaps in the 240s (*IEleus* 193; cf. Habicht 1982a, 60; G. J. Oliver 2007a, 178 n. 32; Paschidis 2008, A 67). Pyrrhos (II ?), another son of Tachyllos I, was commemorated with his daughter (name added) on *IG* ii² 6592 (aetoma of a lost stele or naiskos). Tachyllos I (?) son of Pyrrhos (?I) seems to be named on the manumission record *SEG* 18. 44. 8 (*IG* ii² 1570).

Since the name is rare, and not certainly attested in other demes in the fourth century (the reading of *SEG* 25. 220 is far from clear), the Aion commemorated on *SEMA* 215 = *CAT* 3. 386 may be the father of Phanomachos K., ephebe in (?) 332/1/0 (*IG* ii³ 4. 342) and councillor/proedros in 307/6 (*IG* ii² 358 + *SEG* 21. 326, cf. Tracy 1995, 152). Aion II, councillor in 304/3 (*Agora* XV 61. 73) will be Phanomachos' elder brother.

On Moirippos (another rare name) son of Moiragenes K., guarantor for the lease of a house in the deme and son of an epistates of Artemis Brauronia in 350/49 (*IG* ii² 1524 with Walbank 1983, 125) see Papazarkadas 2011, 310 no. 52.

Probalinthos

The site of the deme—separated from the other demes in the tribe—is approximately given by its membership in the Tetrapolis of Marathon; Strabo places it on the coast between (?) Myrrhinoutta (ch. 24 n. 116) and Marathon. This

¹³ *IG* ii² 6595 (misdated at *LGP*N Stratokles 28; correctly dated at Straton 75).

suggests a territory covering the north-eastern side of Mt Agrieliki, between Vrana and the coast and perhaps also the Aulona valley which runs inland in a north-westerly direction from Vrana.¹⁴ A horos marking a temenos of Athena, dated c.440, is said to have been found *in situ* at a site between Vrana and the Marathon soros which also produced a dedication made by Theogenes son of Gyles I P., of the beginning of the fourth century. There may also have been tombs in the area, perhaps lining the road to the temenos; two marble Panathenaic amphorai representing Gyles II with his father, a priest, may have come from here. Theogenes was evidently known in Athens, and not only in his deme; Demosthenes (27. 58) cited him in 363 as having leased an orphan's estate for six years and almost doubled its value (see Table 25.1).¹⁵

Probalinthos' best-known demesman in the fourth century, doubtless resident in Athens, was the 'economist' Euboulos son of Spintharos, whose father's name may suggest that the family was already prominent in the fifth century.¹⁶

¹⁴ See discussions in Vanderpool 1966*b*; Berthold 1976; Traill 1986 147; Travlos 1988, 219 fig. 313; ch. 24 n. 116. The Vrana area has a BA burial area with tombs dating from MH to LH II, and one burial of LH III A 2. Geometric finds, *AD* 47 B 1, 1992 (1997) 57. The current location of the 'Marathonian' Herakleion at the Gates of the plain, i.e. where Mt Agrieliki is closest to the sea, leaves some doubt whether Probalinthos had any coastal territory. A possible solution to this problem may be to assume that there was friction between Marathon and Probalinthos over the control of the sanctuary, which lay in Probalinthian territory but was popularly associated with Marathon after the battle of 490. In this case it seems also possible that the 'enclaving' (D. M. Lewis 1963) of Probalinthos was due to local conflict within the Tetrapolis and not to central planning. It was perhaps Probalinthos' copy of the Tetrapolis calendar (*IG* ii² 1358 = *SEG* 50. 168) that found its way to Koukounarti, in the mountains above Vrana (chs. 26 n. 74–5, 31 n. 44). It is not clear whether Probalinthos' territory also included Xylokerisa, south of the 'Gates', where two P. tombstones were found (*IG* ii² 7292 = *SEG* 41. 200, Hildebrandt 2006, no. 331; ii² 7304; cf. *AEE* 1072, noted at ii² 7292); these stones may have moved. On the finds from Ag. Andreas Zouberi see ch. 24 n. 116.

¹⁵ The stele *IG* ii² 7296 (cf. *Polemon* 3, 1948, 132; *SEG* 29. 278; Traill 1986, 147) is undoubtedly a dedication and is not to be confused with the Panathenaic amphorai of the 340s serving as funerary monuments (*CAT* 4. 781–2, *SEMA* 269, 1960; cf. Valavanis 2000; Goette and Weber 2004, 97, 118–19; Steinhauer 2009*e* 268–9) representing Theogenes as priest (Mantes 1990) with his (?) wife Pheidistrate, his (?) daughter-in-law Thrasyboule (from Ikarion), a small child, and his son Gyles (both men bearded). A naiskos naming the daughter of a [Probalis]ios and a lekythos of the first quarter of the 4th c. (*CAT* 3. 268) came from the same site (Bergemann 1997, 202 no. P 2 with pl. 10. 4; *SEG* 29. 278; Valavanis, op. cit.). Pologiorge 2003*a* insists that the class III dikastic pinax of Theogenes (or Theagenes) P. found on Salamis should be dated c.300, but *Agora XXVIII* provides no support for the view that bronze pinakia continued in use for jurors after c.350. Theogenes II son of (?) Halios, councillor in (?) the Lykourgan period (*Agora XV* 32. 63) and Theogenes III son of Klearchos P., commemorated by the kioniskos *IG* ii² 7297 (no provenance) may be grandsons of the priest. If the orphan Antidoros who benefited from Theogenes I's management of his estate belonged to Phaleron (*APF* 1024, 1036), the lease ended before (?) 366/5 and the estate may have consisted largely of shares in a banking business. However, the name Antidoros is attested in the 4th c. in 12 other demes.

¹⁶ A Phalanthos Spintharou is named on an ostrakon of the 480s from the *Agora* (*XXV* 657), a Spintharos on another (662), and Melanthios Spintharou on three (640–2); however, a [*Spin*]tharos [*? ek Ko*]ilés is named on a Kerameikos ostrakon (cf. Brenne 2001, nos. 175–6, 219, 248); ch. 30 n. 34, ch. 15 n. 27). Euboulos' son Spintharos II, a drinking-companion of Konon (Dem. 54. 7), is probably the Spintharos who bought a house in the city in the 340s, [Dem.] 59. 39. *IG* ii² 11370 = *CAT* 3. 335a, a relief lekythos of c.370 (no provenance) apparently commemorates Spintharos I with his (?) wife Boulete and son Euboulos.

TABLE 25.1.
Probalinthos: Gyles

Elpines son of Elpinikos P., who served on a board of ten magistrates (hieropoioi? *AO* p. 353, *IEleus* 77) perhaps soon after 350, was buried in the deme area with his brother Eunikos I (*IG* ii² 7292, see n. 14); the kioniskos of the latter's grandson Eunikos II son of Olympiodoros, *IG* ii² 7295, has no provenance.

Two Probalinthians named Endemos served on the council, Endemos I son of E.demos (?) *c.*370 (*IG* ii³ 4. 21, see *AO* p. 300) and Endemos II son of Eudemides (?) in the Lykourgan period (ii³ 4. 26. 61); [Eudem?]ides son of Endemos, councillor in 304/3 (*XV* 61. 235) was probably son of Endemos II.

Lysanias I son of Kallias P. served as archon of the Tetrapolis in a year in which his son Antikrates was one of the hieropoioi; Antikrates also, in 329/8, served as thesmothetes. Another son of Lysanias, Aristokleides, is attested as leasing sacred property *c.*330; his sons Lysanias II and Kleomedon served together in the Council, at approximately the same period. The Lysanias P. who served as priest of Asklepios in (?) 276/5 may be either Lysanias II, at an advanced age, or a descendant. The family seems successfully to have combined local ambitions with office in the city.

Phaidimides P., son of Protarchos (hellenotamias in 407/6), who made a dedication before mid-century on or near the Akropolis with a prayer for wealth, decided to seek his fortune in the kleruchy on Samos.¹⁷ Theophilos son of Philistides I P., councillor in (?)

¹⁷ Tetrapolis, *IG* ii³ 4. 224; thesmothesia, ii³ 4. 84; Aristokleides, *Agora* XIX L 9. 52 (Papazarkadas 2011, 302 no. 10); Lysanias II and Kleomedes, *IG* ii³ 4. 83. 38–9 (dated *c.*330 by Traill; col. III. 58–9 in his new arrangement of the text, 1986, 41–7; it remains, however, doubtful whether this list can be fitted into anything like a normal quota pattern, and the possibility that it should be dated between 322 and 307 should perhaps be left open; cf. n. 83). See ch. 17 on kin serving together as councillors. For the priest of Asklepios see Habicht 1982*a*, 71 (date); Aleshire 1991, 151 (undateable). Another Probalinthian, Telesias son of Telestes, leased sacred property in (?) 343/2, when he was 46 (*Agora* XIX L 6. 112–3, Papazarkadas 315 no. 76; he served as diatetes in 330/29, *IG* ii³ 4. 33. 57–8); he or a younger brother may be the 'neaniskos of Telestes' of Dem. 22. 60 (see *APF* 13519; the term may be applicable to any unmarried young man. Note also that *IG* ii² 4914—not 5914—was a painting and not a statue of Telesias' daughter Alkippe). Phaidimides, *IG* ii² 4319 = *CEG* 760; *IG* xii 6. 262 III 11; Protarchos served as hellenotamias in 407/6, *IG* i³ 377.

336/5 (*Agora* XV 42) was buried on Salamis with his wife and his son Philistides II, who was councillor in 304/3 (*Agora* XV 61. 236, [Philis]tides; *IG* ii² 7299). A new out-of-deme tombstone, *SEMA* 583a.

INLAND TRITTYS

Paiania

The deme clearly lay in the Liopesi area, but it is hard to reconstruct a clear picture of the ancient settlement pattern. There were at least two inhabited centres (possibly more): Upper Paiania, perhaps on the Hymettos side of the deme's territory, appointed only one councillor but may have been the base of the local phratry, which perhaps explains its insistence on a degree of independence. The main deme centre, Lower Paiania, was large, appointing eleven councillors in the period before 307 and twenty-two thereafter.¹⁸

We have only one deme decree, dated c.450–430 (*IG* i³ 250); it is rather poorly preserved, and difficult to interpret. In my view it regulates relations between the deme and an Eleusinion that it does not control, either the City Eleusinion or a sanctuary managed by a *genos* or a neighbouring deme (cf. Ismard 2010, 221). Side B has additional material on the cult of Hekate. The festival with the largest sacrifice on side A (two piglets, two pigs, a lamb) is the Prerosia.¹⁹

¹⁸ Stones moved to churches in the area (see Hadzesotiriou 1973, with map; map also *AD* 55 B 1, 138), and to Liopesi. *IG* ii² 2344, a list of phratores, came from a hill (*lōphos*) with evidence of ancient habitation at 'Kapsospiti, between Liopesi and the foothills of Hymettos' (*AE* 1901, 157–62), i.e., according to *AGC* 21 X7/Y4 no. 31, south of Liopesi, where *KvA* has the area Chalidu (on one of the two hills to the west of it?). Vekres 1994, 414, seems to agree: Kapsospiti at Bourboutsana NW of Ag. Nikolaos, where Milchhöfer placed Cholleidai (but p. 410 says SW at Chalidou). *AGC* 21 attributes settlement remains to X8/Y4 no. 21 Kantza, no. 22 Agios Andreas, and no. 28 Karela (5th c. house), and a sanctuary (?) to no. 29 Agios Georgios o Sklepios (SE of Liopesi); a settlement on Myrteza, N of Kokla, is reported at no. 4. *AD* 25 B 1970, 126, reports excavation of archaic burials (2nd half 6th c. and later) near Ag. Athanasios, E of Liopesi. Sanctuary of Dionysos (horos, *SEG* 57. 162) at Leontari, *Mes.-Arg.* 429; we do not know to which deme it belonged; cf. Kakavogianne 2010. For the phratry see ch. 19 nn. 116–17. We do not know how consistently the separation of Upper and Lower Paiania was maintained (they are distinguished in *IG* ii³ 4. 29 and *Agora* XV 43, not in ii³ 4. 48 and XV 42), or which aspects of deme life, apart from the appointment of councillors, were affected by it (it is a mistake to assume, as Whitehead 1986*a* does, that the sections must have passed independent deme decrees). *AD* 25, 1970, B 1, 126–7, reports excavation of part of a burial area on the E side of Liopesi, later 6th/early 5th c.

¹⁹ I summarize here the more detailed discussion in Humphreys 2004, 154–5. The stone is attributed to Paiania only because it was recorded by Peek at Liopesi; however, the quorum of 100 demesmen in ll. 11–14 implies a relatively large deme (Myrrhinous, *IG* ii² 1183. 22, with a quota of 6–7 councillors, has a quorum of 30). On the Pr(o)erosia see ch. 22 at nn. 107–14; N. D. Robertson 1996*b*; R. Parker 2005*a*, 195, 479.

Paiania had a family of Eumolpidai,²⁰ which may in part explain its interest in the Eleusinian festivals in which men could participate. The Bouzyges Demainetos, general in the Corinthian War, and his predecessor Demostratos, may also have belonged to Paiania.²¹ The Paianian family in which the names Demainetos and Demostratos occur was, in any case, active both in the tribe and in the deme. Demosthenes II son of Demainetos, who served as tribal phylarchos, also set up a dedication in the deme commemorating a victory as choregos for tragedy; it is not clear whether Demain[etos] son of Demosth[enes], commemorated in the deme by a stele dated to mid-century, is his father or a son who died young. [D]emophil[os] son of [D]emeas, buried in the deme, and Demophilos son of Demophanes, who manumitted a slave vine-tender living at Oe or Oa in (?) the 320s, should belong to the same family; one of them served as councillor for Lower Paiania in 348/7.²²

We have a good collection of tombstones from the deme area, some of them clearly from families of some standing. *IG* ii² 7020, a rosette-stele from Kokla,

²⁰ Hierokleides son of Teisamenos P. served as hierophant at some date in the 4th c; *IEleus* 72; *IG* ii² 7057, a stele dated to mid-century (no provenance) may be his tombstone. Cf. ch. 20 n. 99. Teisamenos P., one of the treasurers of Athena in 414/3, may be Hierokleides' father, and may be one of the targets of Aristophanes' reference in *Ach.* 603 to rich Teisamenophainippoi who get an allowance of 3 dr. per day on a trip (as ambassadors?) to Thrace (Teisamenos son of Mechanion, who served on the commission to revise the laws in 403–399, *Lys.* 30. 28, cf. *Andok.* 1. 83, perhaps belonged to Erechtheis, since the name Mechanion occurs in the casualty-list *IG* i³ 1147. 22; cf. also i³ 841; either man could be the proposer of *IG* i³ 179. 6, 415–405). Teisamenos II P., crowned by the demos (*IG* ii² 1496. 60), may be the hierophant's son, and a later descendant, Teisamenos III, served as ephebe in 266/5 (ii³ 917 II 44–5, arch. Nikias of Otryne). Sostratos son of Teisandros and his sons (see n. 27 below) may be related.

²¹ *APF* 3273, 3276; ch. 20 at n. 30, nn. 32, 88. Demainetos son of Timasitheos of Kerameis (3273) will not have been old enough to serve in the Corinthian War, since his father was diaitetes in 371/0 (*IG* ii³ 4. 24; cf. ch. 16 s. 'Pandionis'). Euegoros son of Philoinos P., who perhaps married a daughter of Plato's Lysis (*IG* ii² 7045, from the Kerameikos; cf. *APF* 9574, ch. 20 n. 89, but the relationship of the persons named on this stone is far from clear) may also have been a member of some genos; he held priestly office and concerned himself with ritual matters (*PCG* 5, 231 F 71, *Euboulos*, *Odysseus*, or *Panoptai*; *Dem.* 21. 10). Lykomedes son of Lykophron [Paia]n[i]e[us], whose stone *IG* ii² 7064 was seen by Ross between Liopesi and Kokla, bore names used by the Eteoboutadai (Mattingly 1997, 142 suggests that Archestratos son of Lykomedes, general in 433/2, may have belonged to Pandionis and not Kekropis). Note also that Herodotus' Phye (priestess of Athena Pallenis?) came from Paiania. Euphrosynos P., ambassador to Keos c.350, belonged to a phratry based in Alopeke (*IG* ii² 2345 = *SEG* 47. 187. 14; ch. 19 n. 173).

²² *APF* 3276. Dedication, *IG* ii³ 4. 503, from Kokla; tombstone, ii² 7033, Liopesi; both dated mid 4th c. Cf. *SEG* 53. 240, unpublished marble lekythos of a Demainetos Dē— 'Palleneus', from a peribolos SE of Paiania that also contained remains of a late 5th c. marble sphinx (ch. 32 n. 48). *IG* ii² 7039, Demophilos son of Demeas, seen by Ross (1855, 214) at Spata, is classed by *AEE* 952 (following Ross) as (?) part of a sarcophagus (larnax); by Kirchner as (?) part of a mensa. Demophilos son of Demophanes, *SEG* 18. 36 A 485–8; on the question whether *Oēsi* must imply residence in the Thriasian plain, cf. below n. 39. Councillor, *IG* ii³ 4. 29. 12 (*AO* p. 317–18 has confused Upper and Lower P.; cf. ch. 26 n. 111). A close relation between this family and that of Demades (*APF* 3263) seems unlikely, but note that the Delian text cited at *APF* p. 104 (B 1) is now as *ID* 104–33 attributed to Demades. On the descendants of Demostratos I P., one of whom married a priestess of Aglauros (*IG* ii³ 1002) see Table 17.1.

commemorated Agonochares son of Epichares I; his name suggests aristocratic interests, and his son Epichares II appears in distinguished company on the commission set up to organize the Amphiararaia in 329/8.²³ Demokedes son of Archekomos I was commemorated with his wife Chairestrate (daughter of a fellow-demesman, Eubios) and his son Archekomos II on *IG* ii² 7095, found at Karela; the names suggest local loyalties and perhaps membership of one of Paiania's subsidiary villages, Upper P. or another hamlet. Demokedes served as councillor in the first half of the fourth century. Philokomos P., who served as trierarch in the 320s (*APF* 14654), may belong to the same family.²⁴

Arestorides son of Aresandros II P., whose stele of the first half of the fourth century was recorded in Liopesi, may be a descendant of the Pistoxenos I son of Aresandros I who appears as kalos on a vase of the first third of the fifth century, since the name Pistoxenos also appears in Paiania (see Table 25.2).²⁵

A family that can more certainly be traced back into the fifth century, and continued into the Hellenistic period, begins with Aischylos I son of Pytheas I P., who dedicated a statue on the Akropolis c.440. His grandson Aischylos II son of Pytheas II was one of the lochagoi of Pandionis' ephebes in 333/2/1, an indication of continuing prosperity; descendants can be followed into the second century.²⁶

Polykrates son of Sostratos P., buried in the deme c.360, and his (?) brother —doros son of Sostratos, councillor for Upper Paiania in c.385 or c.355, may be the sons of Sostratos son of Sosippos, who appears in the list of phratores, perhaps from Upper Paiania, of the early fourth century.²⁷

²³ *IG* ii³ 355. They perhaps belonged to the type of wealthy quietist family to which the Lykourgan regime appealed (Humphreys 1985*a*). Autokrates son of Aischines I P., who appears at the end of the deme's councillors in the Lykourgan list *IG* ii³ 4. 26 (16) and was buried in the city (*SEMA* 505), will also have belonged to Upper P., since his son Aischines II appears as an ephebe of Antigonis in 305/4 (*IG* ii² 478. 37).

²⁴ *IG* ii³ 4. 48. 45, see Traill 1986, 31ff., Lower P. (for associations of komai and komoi cf. R. Parker 1996, 328–32; ch. 22 n. 89). The Demokedes son of Demonstratos who made a dedication to Hermes found at Koukouvaia-Philiati (Sphettos), *IG* ii² 4628, bears two names attested in P., but since a Demistrate and a Demonstratides are known in Sphettos he may well belong to that deme. *IG* ii² 13034 = *CAT* 2. 381b, from Karela, may also commemorate Eubios' wife Chairestrate; cf. ii² 11361, from Spata, early 4th c., Eubios Onesimou (but he may not have been a citizen).

²⁵ The kalos (BArch 213946) may possibly be the Pistoxenos of Pandionis who died on campaign in the late 5th c., *IG* i³ 1193. 46 (though it is a long stretch, and these names were perhaps less rare in the 6th–5th c. than later); he might also be the Pistoxenos named in Is. 6. 13. Arestorides, *IG* ii² 7025; his father might be the Aresandros who attacked a client of Lysias (F XIII Thalheim 1913, XV Carey 2007); an Aresandros possibly among the Praxiergidai c.350, *SEG* 49. 188 (doubts, Jameson *per ep.* 1999). Pistoxenos II son of Archippos I, *IG* ii² 7078, in Piraeus museum; the names of his sons Pausanias, Archippos II, and Polykrates were added. The connection with Polykrates son of Sostratos (ii² 7080), if any, is unclear.

²⁶ *IG* i³ 891; the base was re-used in the (?) early 4th c. by a woman, daughter of Kteatos (of Sphettos? *Agora* XVII 318). *IG* ii² 4336, punctuation suggesting early date? Lochagos, *IG* ii³ 4. 334, Reinmuth 8. Descendants, *LGPN* s.v. Aischylos, Pytheas (A. Martin 1989, 174 no. 50, 213/2), Chares.

²⁷ Polykrates *IG* ii² 7080, —doros *IG* ii³ 4. 48. 56–7; cf. Traill 1986, 31–7 (I do not know why the restoration [Theo]doros, with connections to *IG* ii³ 4. 21. 12, and 42. 147, is not considered). Phratores,

TABLE 25.2. Paiania:
Aresandros

Anthippos son of Praxiboulos P., buried in the deme in the middle of the fourth century, may be a son of the Praxiboulos P. who served as hellenotamias in 421/0, and had a slave recorded on *IG i³* 1032. Praxias son of Anthemion, councillor (?) c.330, and Oinanthe daughter of Anth—, buried in the deme in the middle of the fourth century, might have belonged to this family. Oinanthe married a Paianian, Ka— son of Kalliades I; Kallias son of Kalliades (II?), who manumitted a leather-worker living in Kollytos in (?) the 320s, seems to be a younger member of the husband's family.²⁸

Nevertheless, many of the better-known Paianian families had interests in the city. The family of Rhinon—who made a relatively successful transition from

IG ii² 2344, ch. 19 n. 117. Sostratos son of Teisandros, ii² 7090 = *CAT* 1. 825 (dated at beginning of 4th c. by Dow, 'Grave monuments outside Athens', *Nachlass*; attributed by *CAT* to Salamis) died as an adolescent. There is also Sostratos son of Pantenor P., councillor in 304/3, *Agora XV* 61. 57.

²⁸ Anthippos, *IG ii²* 7021, Liopesi area. Praxiboulos I, *IG i³* 285; since the name is not known so far in any other deme, the eponymous archon Praxiboulos of 315/4 may be related, though the generations would be long if he were the grandson (SS) of Praxiboulos I. Praxiboulos' slave, *IG i³* 1032. 110. Praxias, *IG ii³* 4. 83. 5 (see above, n. 17 for the possibility that this text belongs after 322, although if Oinanthe, *IG ii²* 7060, was a daughter of Anth[emion]—Lolling read Anthi—, see *AEE²* 272, and Anthip[pou] may be a possibility—she would have died rather young in that case). Kallias, *SEG* 18. 36 A 251–4. The Praxi- names here may possibly indicate membership of the Praxiergidai. Among further tombstones found in or near the deme area note (1) the naiskos and lekythos of Straton son of Kallistratos, represented with his wife Theomede, daughter of Mnesinos of Oe or Oa (see below, n. 39), and his father (*IG ii²* 7087 and 12665, both recorded at Spata; cf. Kirchner's note on 12665, and Etienne 1975, 384 = *SEMA* 469). Straton served as councillor in 335/4, *Agora XV* 43. 76. (2) *IG ii²* 7056 and 7096, both in the church of St Athanasios, rediscovered *AE* 1956 *Chbr.* 27–31, and the stone of [Ari]staichme daughter of [—]ikrates P. from the same site, *SEMA* 586, late 4th c. (conceivably the father is [Ep]ikrates son of Philodemos P., Aischines' brother-in-law, WB). (3) *IG i³* 1266–7. (4) *IG ii²* 7082, Liopesi, mid 4th c., Satyros P.; cf. Satyros son of E— P., ephebic lochagos in (?) 332/1/0, *IG ii³* 4. 342.

collaboration with the Thirty to the restored democracy—is attested as active in the Paiania phratry, but clearly had a base in the city, and perhaps elsewhere.²⁹ Rhinon's fellow-demesman Kephisophon, whose political stance was perhaps similar, married a daughter of Menexenos of Kydathenaion; the family has a continuous record of political activity lasting into the Lykourgan period, and must have been city-based. We now have fragments of a dedicatory base with a decree dated between 342 and 322 honouring Kephisophon II son of Kallibios (*APF* 3773 D) for his services as councillor (*IG* ii³ 402). He is probably the Kephisophon involved in the Harpalos affair (Deinarchos 1. 25); *IG* ii² 7062, representing a seated old man, Kephisophon Paianieus, probably commemorated Kephisophon I. We cannot tell why the interests of the latter's wife and her sister were represented, in the suit for which Isaios 5 was written (*c.*390?), by Kephisophon's son Menexenos III rather than by Kephisophon himself or Kallibios.³⁰

Charmantides P. is represented in Plato's *Republic* as living in Athens or Piraeus; his grandson (SS) Charmantides II was a pupil of Isokrates, and became prominent enough to be crowned by the city. Philippides I P. and his son Philomelos belonged to the same circle.³¹ The twins Nausimachos and Xenopeithes II, sons of Nausikrates P., inherited an estate in which there was very little landed property; their guardians invested in land (*chôria*) and apartment blocks (*synoikiai*), but there is no reason to assume that these were in deme territory.³² When Phrynion son of Demon of Paiania bought the prostitute Neaira in the 370s he was clearly living in the city, though it is possible that his brother Demochares served as hipparch.³³

Demosthenes I P., father of the orator, owned only city property when he died in 376/5, and the same may well have been true of his brother Demon I; if their

²⁹ *APF* 2254, cf. ch. 19 n. 121; possible tombstone of a son (Agora), *SEMA* 2366. Arrheneides II leased sacred land (a swamp) near the city in (?) 333/2, *Agora XIX* L 10. 40–4 (Papazarkadas 2011, 303 no. 13), and was paid 7½ dr. for hauling three loads of earth from Skiras to Eleusis in 329/8 (*IEleus* 177. 258), which might indicate that he had a farm, with draught animals, in that part of Attika; his son Kallikles was resident in the city in 324, *FGH* 115 F 330.

³⁰ *APF* 3773 D, ch. 7 Case 2 (we do not know which was the elder son); Cobetto Ghiggia 2005. Base, Malouchou 2009 (*SEG* 58. 99, *IG* ii³ 402). Tombstone, *IG* ii² 7062; Kirchner's date may be based on prosopography. For city interests, see also Keesling 2007, 150–2, on *IG* ii² 3443/4129 (with 4566).

³¹ Charmantides, *APF* 15502; *IG* i³ 1328 *bis* (425–400, no provenance) may be the gravestone of Charmantides I. Philippides, *APF* 14670; Paschidis 2008, A 38; on the suggestion made there that the area Philomelidai at Thorikos had once been owned by this family see ch. 20 n. 45.

³² *APF* 11263. Orsimenes P., one of the dockyard superintendants in 334/3 (*IG* ii² 1623 + *SEG* 28. 140) and commemorated with his father Euktimenos and his mother (or wife) on *SEMA* 513, may also have been city-based.

³³ *APF* 3737, with *AO* p. 241 (375/4). A connection with Phrynon son of Eukleides P., named on a dikast-ticket (Kroll 1972 no. 61b, Class IV), does not seem particularly likely. Note also the monument set up by Polystratos son of Polyllides P. to his brother Polyllon on the Akropolis, *IG* ii² 3838 = *CEG* 780, ch. 12 p. 416.

father was the Demomeles recorded as architect for a bridge on the road to Eleusis in 421 (*IG* i³ 79 = *IEleus* 41), the move to the city may well have taken place in his lifetime or earlier. Demon (II?) son of Demomeles (II?) gave his house and garden to Asklepios, and in return was appointed priest; this again implies city residence.³⁴ Demon I, Demosthenes' uncle (FB), served as tribal priest, but the family does not seem to have been active in the deme. When Demosthenes came of age, he was supported for deme membership by a Philodemos P. At this date Demosthenes was already preparing to sue his cousin (FBS) and guardian Demophon, which would explain why he was not sponsored by a close agnate, but he perhaps also passed over his third guardian, Therippides P., with whom he seems to have been on relatively friendly terms; it seems possible that Philodemos was selected because he was resident in the deme and well known to its members.³⁵ We now have evidence that a Philokrates and Philodemos P. were serving as kleruch councillors on Samos c.350 (*IG* xii 6. 262 III) (see Table 25.3). Although the names are common, this Philokrates may well be Philokrates I, who lost a diadikasia case c.380, his father presumably being dead by this time (*IG* ii² 1929 with *SEG* 44. 85). The genealogical reconstruction by which Aischines (born c.390? Ch. 24 n. 6, 26 n. 96, 28 n. 8) married a daughter of the Philodemos son of [. .]mokydes, who served as councillor in Athens c.336 and was commemorated with his brother [Phi]lokydes on *SEMA* 523, is unsatisfactory. By normal marriage patterns Aischines' wife and her brothers Philon and Epikrates should have been born c.375–365 (*APF* 14625 II suggests from the ages of his children that Aischines married c.350). It seems more likely that Aischines' father-in-law is to be identified, with the kleruch, as Philodemos II son of Philodemos I P., who appears in the early fourth century phratry list *IG* ii² 2344 (ch. 19 n. 117). If the name of the councillor Philodemos came from a link with Philokydes' family—which is hardly a necessary assumption—his mother may have been a sister of Aischines' wife.

³⁴ *APF* 3597 (Demon II would be Demosthenes' FBSS); Aleshire 1989, 163–4, Demon's priesthood perhaps 330/29. We do not know which of the Athenian Demons was associated with 'Demon's syn-oikia' at Kolonos, Aisch. 1. 125. Nikomachos son of Ainiades P. served in 215/4 (Diokles) on a board supervising cleaning and repairs in the Asklepieion (*IG* ii² 1539 = Aleshire 1989 Inv. VII 7); as general for the paralia in 222/1 (Archelaos) he had founded a sanctuary of Aphrodite Hegemone at Rhamnous (*IRb* 32, 35). For religious activity see also two dedications by Nikagora wife of Philistides P., *IG* ii² 1472. 13–15 (D. Harris 1995, VI no. 40) in 325/4 to Athena on the Akropolis, and *IG* ii² 4602 to Zeus Soter in Piraeus *kata manteian*.

³⁵ For Demon I see ch. 21 n. 92. It is generally assumed that Philodemos was Demosthenes' principal sponsor, but the phrase *di' hon eis tous Paianeas enegraphēs hōs isasin hoi presbyteroi* (Aisch. 2. 150) may only mean that Philodemos was a witness. (Therippides perhaps had mining interests, *SEG* 28. 205, 29. 155.) Tombstone, *SEG* 17. 104 = *SEMA* 523 (Table 4.7). Demostratos son of Demokydes, commemorated by a kioniskos found at Eleusis (*SEMA* 510), may be a descendant, but names in Demo- are common in this deme. Philodemos as councillor, *Agora* XV 42. 143.

TABLE 25.3.
Paiania: Philodemos
APF 14625

Demades seems, like Demosthenes, to have grown up in the city area, perhaps in Piraeus rather than Athens, since hostile traditions—presumably derived from insulting remarks in speeches—characterize him as a sailor, shipbuilder, or ferryman; he seems to have made his money through politics, and had interests both on Delos and at Delphi.³⁶

Another family that was clearly city-based is that of Chairephilos the salt-fish-seller and his sons, who were granted citizenship on the proposal of Demosthenes. The sons may have joined the cavalry, but there is no reason to suppose that any land acquired by this family lay in the deme.³⁷

³⁶ APF 3263; cf. Brun 2000; Paschidis 2008, A 2, A 7 (I do not think references to Demades' interest in food need imply a deprived childhood). Delos: the context of the reference in *ID* 104-33 B 9 is lost, but D. wrote a book on Delos and the birth of Leto's children, *FGH* 227. Delphi: D. was made proxenos, perhaps on the occasion of the Lykourgan Pythais, in which he took part: *FD* IV 6. 49-57, no. 14 (= III 4. 383, Jacquemin a. o. 2012 no. 54). Note that Byrne 2010 suggests that *IG* ii³ 929 was proposed by D. and later reinscribed. Charidemos II son of Charidemos I P., also proxenos at Delphi, may be the Ch. attested as syntrierarch in 322, and son of the diaitetes of 330/29 (*APF* 15392 identifies them; his proxy was renewed in 324 (Achaimenes) according to Pouilloux 1951. The diaitetes Ch. I appears as a kleruch on Samos, *IG* xii 6. 262 III 6.

³⁷ *APF* 15187. On the date of the citizenship grant see M. J. Osborne 1981-3, III p. 75-6, Worthington 2000; references to the sons in the comedies of Antiphanes may imply a date before the dramatist's death c.333-30. *Pace APF*, there seems to me no reason why the Chairephilos son of Pheidon P. who manumitted a slave working in the salt-fish business in the late 320s (*SEG* 18. 36 A 510-13) should not be Chairephilos I, who would have been born c.380 (for performance of liturgies by sons during their father's lifetime see ch. 5 nn. 46-7). Two of his sons were young bachelor hangers-on of the hetaira Pythionike in the 330s or earlier (*PCG* s. *Antiphanes* dates the *Halieuomenê*, F 27, soon after 345); the oldest, Pheidon II, was perhaps already a married man. Pamphilos son of Chairephilos performed the eutaxia liturgy for his tribe c.330, *IG* ii³ 550, and may have served as proedros in 327/6, ii³ 362; his brother, [-9-] Pheidonos P., was tribal epimeletes of Pandionis before the end of the 4th c. (*SEG* 36. 299 = *IG* ii² 1152. 5-6; ch. 21 nn. 125-6);

Diodoros P. and his descendants apparently maintained some foothold in the deme, since one of Diodoros' sons was buried there, but the family developed mining interests.³⁸

Another family with mining interests is that of Phanotheos son of Lysippos P., who registered a mine in 341/0 (*Agora XIX* P 27. 60). His son Thallos is recorded as *tamias* on a dedication perhaps of the Lykourgan period (*IG ii²* 3208). Lysippos son of Philinos, who appears on the council list *IG ii³* 4. 83. 10 (see n. 17) may be Phanotheos' nephew (BS or ZS). Since the name Phanotheos appears in no other deme, and Phanokles is otherwise only attested in Rhamnous (*IG xii* 6. 262 IX 10), the early fourth century tombstone of a Phanokles (I), to which the name Phanotheos was added in (?) the third century, probably belongs to this family (*IG ii²* 12870, *CAT* 139). The councillor Phanokles of c.336, *Agora XV* 42. 137, should be a grandson, brother of Phanotheos.

New epigraphic discoveries may still surprise us any day, but the area of Paiania has been fairly thoroughly explored, and the absence of any honorary deme decree from the Lykourgan period is noteworthy, especially since we have such a text from the local phratry. Paiania may have been a deme in which collective activity was inhibited by the concentration of the interests of most of its wealthier members elsewhere and at higher levels of political activity.

Oai/Oa

A location in the area of Papangelaki, north of Liopesi, is rather feebly supported by reports on two tomb monuments, and may perhaps be called into question by

since he might have been called after his MF there is no strong reason to restore his name as [Pheidippos]. (The Pamphilos and Demosthenes of the curse tablet *SEG* 58. 265 are now attributed to Phyle.)

³⁸ *APF* 3953; tombstone *IG ii²* 7040 ([Paia]neus), recorded at Liopesi (probably not Simos, since this man married a daughter of Aristomachos of Alopeke, and the names of Simos' sons were Diodoros and —ides). Simos owned an *ergasterion*, *Agora XIX* P 23. 7 (c.350); he and his son —ides are both recorded as leasing mines (P 26. 164–5; P 13. 27–8). Simos' *kaminos* appears on the mortgage *horos* *SEG* 32. 236; another *horos*, *SEG* 32. 233, marked a mine leased by him. Diodoros I may have served as councillor for Upper P. c.385 or c.355 (*IG ii³* 4. 48, *SEG* 36. 218. 57). Note further on Paiania: Paus. 1. 23. 10 reports that the well-known 5th c. general Phormion P. had land in the deme; it is unclear what his source was. The rare name of his father Asopios is attested in Agryle and Hermos. Andron II son of Alkimachos P. and Kallippides II son of Timonax P. manumitted a slave woolworker living in Kollytos in (?) the 320s, *SEG* 18. 36 A 427–32, possibly acting for a prostitute (E. E. Cohen 2003), since they do not seem to be closely related; on Andron see *APF* 623 (*IG ii³* 4. 48, in which Alkimachos appears as councillor, l. 54, is now dated c.385 or c.355, Traill 1986, 31–7; *IG ii³* 4. 83, where Alkimachos son of Andron is listed l. 8, is dated by Traill, *ibid.* 41–7, c.330, but see above n. 17 for the question of a later date). Kallippides (II) was perhaps a cousin (FBS) of Medon son of Kallippides I P., buried with his daughter Kallippe in the city, *IG ii²* 7065, and—since the father's name, Timonax, is rare—possibly a brother of Eukrit[os] son of Timonax, commemorated by a stele of unknown provenance of the mid 4th c., *ii²* 11428. Stephanos P. acted as guarantor for a lessee of sacred property on Salamis in (?) 343/2, *Agora XIX* L 6. 139f. (The Stephanos cursed on *Kerameikos III* 6. 4 is probably from Paionidai, cf. ch. 14 n. 83; but Polymnestos P., *APF* 12048, may possibly be cursed on this tablet (c.350). Kirchner's suggested attribution of the grave frieze *IG ii²* 11646 (no provenance; see also Schmaltz 1978, 90 f.) to P. is very dubious.

finds of tomb monuments with the demotic Oêthen/Oiêthen along the road from Paiania to Markopoulo, between Koropi (Sphettos) and Spata (Erchia). Although Dow 1963*a* insisted that Oai in the Mesogeia and Oe in the Thriasian plain were clearly distinguished in the classical period by their demotics, the terms Oathen, Oiathen or Oaieus being used in the case of Oai, whereas Oêthen and Oiêthen were used by Oê, it is hardly possible to locate Oê so far from the rest of VI Oineis; either some demesmen of Oê moved west at some date (later 5th century?), or the spelling of demotics was less consistent than Dow believed (cf. ch. 30 n. 42; however, Threatte 1980, 227–8 provides little encouragement for this case). There is also a family from Oê further east, in the area of Angele (*SEMA* 469, n. 60 below), but it seems consistently to have intermarried with families of that deme. The prosopographical evidence is not decisive. Menon son of Menios Oêthen and his son Menoitias (*SEG* 48. 296) could have been related to the dockyard supervisor of 356/5, Menios Oiêthen (*IG* ii² 1622. 479–80), and to Menon Oêthen, the treasurer of Athena and the other gods in 390/89, but we also have a Menon son of Menios of Oa recorded on a list of kleruchs perhaps sent to Lemnos or Imbros (*IG* ii² 1952c + *SEG* 15. 129, cf. Cargill 1995), and the names are common. Other identifications link the group more definitely with Oineis (ch. 28; Lambert 2000*c*).³⁹

The deme may have contained some landowning gentry: there are aristocratic names (Aridelos; Euthoinos and Klearistos, sons of Philarchides) and a family prominent in the cavalry in the third century.⁴⁰ Otherwise we hear of demesmen

³⁹ There seem to be no textual reports of settlement remains in the immediate vicinity of Papangelaki, but see n. 18; ch. 24 n. 90 (though *KvA* map VII, Spata, has a settlement between Papangelaki and Charvati); if Oai (or Oa) is to be located in this area, the deme-site at Vlichou ESE of Charvati may be a candidate. Tombs: *IG* ii² 7820 = *CAT* 3. 843; 5600 = *CAT* 3. 349a (attributed to Spata). *CEG* 518, from Charvati, might belong to the family of Pausanias I and II O., councillors in the early 4th c. (*LGPn* nos. 30–2), but the name is also known in this period in Paiania. The stone mentioned in *KvA Text* III–VI 6 (attributed to Papangelaki by a MS note in the copy of the DAI library in Berlin) seems not to have been published elsewhere. In Philochoros (*FGH* 328 F 28) Oie is a daughter of Kephalos, which might support a location for Oai closer to Kephale; see however ch. 28 n. 77 on Oe. Cf. Habicht and Hallof 1995, 290, on Kolonos/Kolonai. References to Oe in the Mesogeia are collected by Etienne 1975, Kakavogianne 1998, *Mes.-Arg.* 399–406; cf. also n. 22 above on Demophilos of Paiania, who owned a slave *Oési*. Xenokrateia daughter of Eukleides Oiethen was perhaps commemorated on *IG* ii² 6958 = *CAT* 172 and 12250 = *CAT* 3. 341, both attributed to Velanideza (Vierneisel-Schlörb 1988, 79; however, 12250 may be Xenokrateia daughter of (?) Sosibios of Halai Aixonides, Table 29.24, cf. *CAT* 3. 396, Petrakos 1992). On the monuments of Deinias O. and family from Velanideza see ch. 24 n. 111. *SEMA* 726 attributes the tombstone of Sostrate daughter of Amphikedes and Kalliades son of Deinias (*CAT* 2. 349c) to Oa, not Oinoe. Note that the Euonymides son of Pytheides —(?)eus buried in the city (*SEMA* 725) must owe his name to descent from Pytheides of Euonymon, councillor in 367/6 (*IG* ii³ 4. 54); the evidence for the demotic is not at all clear. The daughter of Mnesinos Oiethen, who married a Paianian (*IG* ii² 7087) had a brother, Charmeides, who appears with other members of Oineis demes in western Attika on *IG* xii 9. 1242 (l. 9).

⁴⁰ Aridelos, *APF* 1615; Euthoinos and Klearistos, sons of Philarchides councillors in (?) the 340s, *IG* ii³ 4. 26. 20–1, ch. 17 n. 18. Eupolemos son of Makareus O., councillor in the Lykourgan period (*IG* ii³ 4.

elsewhere: Moschion of Oai appears as a contractor supplying *ixon* (birdlime or gum?) to the sanctuary at Eleusis; Charidemos son of Sosikleides O. frees a slave woolworker living in Keiriadai; Pythilos O. leased deme land at Teithras with a member of that deme.⁴¹

Konthyle

The suggested location at Mazareika, south-east of Spata, rests only on the find of a single tombstone of a woman, which is not a reliable indication.⁴² Demesmen have left remarkably little trace; the Opsi[ades] who dedicated *IG* i³ 740 to Athena at Brauron in the early fifth century may have belonged to K. or to Potamos, since these are the closest demes in which the names recur.⁴³ Eucharis son of Euarchos K. was honoured by the Council for organizing the publication of laws in 304/3 (*IG* ii² 487), and as an elderly man proposed *IG* ii³ 911, honouring Kallias of Sphettos, in 270/69; a younger demesman, Lykomedes son of Diochares, seems to have been pro-Macedonian (Paschidis 2008, A 54 and A 64).

COASTAL TRITTYS

Kytherros has been conjecturally located at Pousi Kaloyerou, north-west of Porto Rapti (see below); the locations of the other demes are fairly securely fixed.

Myrrhinous

This deme, located at Merenda, was the largest in the trittys, represented by six councillors. Rescue excavations on the site of the Olympic equitation centre, for which we only have preliminary reports (Kakavoianne 2003, 2009; legends in 2009, 193 not legible even with magnifying glass; *Mes.-Arg.* 103–26, 177–244), uncovered prehistoric material (Neolithic to Mycenaean), remains of a classical

26. 55) may be the grandson (SS) of the Eupolemos O. of ii³ 4. 21, if that list is dated relatively early. Dromokles son of Arkesas O. proposed the cavalry decree *SEG* 21. 525 in 282/1; he may have been affinally linked to Nikogenes son of Arkesas of Euonymon, one of the hipparchs, and possibly also to the Erchian family in which the names Dromeas and Dromokleides occur (ch. 23 n. 13, 24 n. 85).

⁴¹ Moschion, *SEG* 34. 122. 63 (*IEleus* 159); Charidemos, *SEG* 25. 180. 26; Pythilos, *SEG* 24. 152 with Papazarkadas 2007*a*; 2011, 154. The musician Damon may have belonged to Oa (*APF* 9688 XIII, cf. P. J. Rhodes 1981*a*, 341–2).

⁴² *IG* ii² 6533 = *CAT* 2. 431; Kallisto (daughter of Philokrates K.) seems to be represented as a young married woman (seated). Mazareika, where the stone was seen, is placed $\frac{2}{3}$ of the way from Vathy Pigadi ('Merkouri' *KvA* VII) to Spata by Milchhöfer, *KvA Text* III–VI, 5; SE of Spata by *AGC* 21 X8/Y4 no. 25.

⁴³ Opsiades K. councillor in the first quarter of the 4th c., *IG* ii³ 4. 21. 15; on the location of Potamos see ch. 26 n. 111. The names Opsios and Opsiades were perhaps commoner in the 5th c. than later.

poros temple (Artemis Kolainis?), sanctuaries of (?) Aphrodite and of Zeus Phratrios (dedication by priest, Xenophon son of Philoxenos M.), a public building of the late fourth century with later stoa (agora?), another building with stoa, two buildings close to burial areas thought to have ritual functions, houses, farms, roads, and graves.⁴⁴ It had a famous ancient statue of Artemis Kolainis (Pausanias 1. 31. 4), in whose sanctuary the deme decree *IG ii*² 1182 was published. It was also the base of the phratry Dyaleis.

This deme decree, which cannot be closely dated, honours a benefactor who has paid money on behalf of the deme and is expected to continue his payments. He was presumably crowned (the beginning of the text is lost), and is to have an honoured seat at all spectacles (*theai*) organized by the deme. Pheidippos—possibly the deme’s tamias—and the secretary (*antigraphus*) Meixias are to pay 30 drachmas from deme revenue for publication of the decree. The honorand seems to have made payments on behalf of the deme, which perhaps had been unable to meet a demand for tax (eisphora) on its land-holdings.⁴⁵

*IG ii*² 1183 (R/O 63, *SEG* 54. 205), reassigned by Traill 1986, 132 from Myrrhinous to Hagnous, has been reattributed to Myrrhinous following discovery of a horos marking property of Artemis Kolainis (*SEG* 63. 156; cf. P. Wilson 2015 n. 138). The beginning of the decree is lost; the preserved portion starts with an oath to be taken by the deme’s euthynos, logistes, and synegoroi, before they scrutinize the performance and accounts of the previous year’s demarch. If all appears to be in order, the ten officials vote by secret ballot; if a majority approves, the scrutiny is ended. If not, the matter is referred to the deme assembly; a quorum of thirty is required for the hearing. This scrutiny would be part of the

⁴⁴ *SEG* 63. 169–70, new text of *Hesp.* 19, 1950, 25–6, a dedication by a Xeñophon to Apollo Pythios, said to have been found at Merenda (Feyel 2011; *BE* 2014, 144; cf. the oath by Apollo in *IG ii*² 1183); eadem 2015. *SEG* 63. 156, horos of land and house mortgaged to the *koinon Myrrhinousiôn*, loan from money of Artemis Kolainis, from Kalyvia Thorikou. Cf. also *IG ii*² 4817 (Roman); Vivliodetes 2005, 2007. *SEG* 60. 197, a copy of a letter from David Lewis to E. Vanderpool, 22. 9. 78, with suggested readings in *Agora XIX* P 26. 365–417 of which Langdon was apparently unaware, convincingly restores ll. 399–403 as referring to the sale of the property of Philokrates of Hagnous (cf. 446–460); the sale probably began at l. 365 (ch. 27 n. 41). Philokrates would have owned land both in his own deme and in Myrrhinous (ll. 372, 383–5, 396, references to temple of Artemis and to Eikadeis).

⁴⁵ The text of *IG ii*² 1182 is lost and is known only from copies made by Koumanoudes, Lolling, and Velsen. Koumanoudes (*ap. IG ii*¹ 575) classed the lettering as *bonae actatis*. The restoration to *a[n]a[lóm]a* in l. 22–3 can hardly stand, since *merisai* usually occurs either with a precise sum (as here) or with a more general expression such as *to analóma*; perhaps *ton [t]a[mia/n]*? The Pheidippos of l. 23 (the honorand?) is presumably Pheidippos son of Apemon M., *APF* 1350. Apemon won a victory with a boys’ chorus at some date before c.370 (*IG ii*² 1138. 16–17), so Pheidippos should have been born by c.380; he was still alive in 328/7, when he contributed as a non-councillor to a dedication commemorating the Amphiarraia of the previous year (*IG ii*³ 360. 37). Habicht 1993*b* suggested that the secretary may be the Meixias named on the curse tablet *SEG* 40. 269, perhaps from the period of the Lamian War; this identification is fragile, but a date for the deme decree in the Lykourgan period seems likely. The deme may have sold land in the hekatostai sales, Lambert 1997*a*, 185–6 no. 11. P. Wilson 2010*a* attributes the theatre token *SEG* 53. 227, found S of Markopoulo, to M.

business of the first deme meeting of the year; the purpose of the decree appears to be to specify the responsibilities of deme officials, proceeding through the year. The beginning of the year is also the date on which loans are made from the funds of the deme's sanctuaries; the decree specifies that the priests who grant loans are to take security in the form of land, houses, or multiple dwellings (*synoikiai*), and are to mark the pledged property with a horos bearing the name of the god whose money has been borrowed. If a priest fails to do this, he is penalized. On the fifth day of the month in which this first deme meeting is held (Hekatombaion or Metageitnion?) the demarch is to sacrifice a plerosia-victim worth (?) 50 dr., and he is to distribute the meat on the seventh to those present at the deme assembly. On Poseideion 19 the deme holds another meeting, to deal with the Dionysia; this may be a meeting after the festival to honour choregoi. The end of the text is lost; there will presumably have been at least one further meeting, perhaps in Skirophorion, at which councillors and (?) other officials for the coming year were elected and new deme members were admitted. The text was dated c.340 by Koehler; it gives the impression of a decline in deme life, with anxiety about the control of deme officials and creditors and about attendance at deme meetings.⁴⁶

A liturgic family that showed interest in local affairs is that of Diopieithes II son of Diophantos, who served as one of the two phratriarchs of the Dyaleis in 300/299. Their interests, however, were not confined to the local area.⁴⁷

⁴⁶ On the analogy of the quorum of one-fifth usually accepted for the Athenian Assembly (cf. Feyel 2007, 23 n. 14), this figure would give Myrrhinous, which appointed 6–7 councillors in the 4th c., a membership of c. 180 adult demesmen, comparable to the c.80 of 3-councillor Halimous. The ten chosen men who are to vote by secret ballot to decide whether the demarch has passed his euthynai (ll. 16–20) are in my view the euthynoi, the logistes, and 8 synegoroi (for other views see Whitehead 1986a, 119; Haussoullier 1884, 81; R/O 63; SEG 54. 205; Magnoli 2005). In l. 20 *ephesis* should mean 'referral' (by the euthynoi), not 'appeal' (by the outgoing demarch): see ch. 19 n. 94. The commentary of R/O 63 is confused. The ballot was secret because voting in a small community was riskier than in the Athenian Assembly. A demarch would be a powerful figure, whose actions might arouse resentment leading to the formation of factions. The curses in this text are a normal part of oath-taking and not 'public curses' of the type known from M/L 30 + SEG 31. 984–5 (on which see ch. 20 n. 31). It is not clear whether appeal would be heard immediately, at an assembly meeting associated with the euthynai, or at an extraordinary meeting convened later. The horos, IG ii² 2767 (connected with ii² 1183 by Wilhelm 1909, 50–1; missed by R/O), may also document a cult of Dionysos in M. P. Wilson 2010a suggests that the horos marked land serving as security for a theatre lease, but has to assume that it secured rent rather than capital value; there is no certain example in which rent is not specified, and the horos is better explained by ll. 27–30 of the deme decree. On the dates of deme meetings and the association of plerosia with them see ch. 22 n. 117. The cost of the plerosia-victim can hardly have been [500] dr. as restored in l. 33; [50] dr. would have paid for an ox, sufficient for a well-attended assembly, but in view of the low quorum a sheep costing [10] dr. may have been adequate (P. Wilson 2012 accepts the restoration and argues that there must have been a market at the Plerosia). The meat was presumably taken home by demesmen after the meeting (ch. 24 n. 73). On the Dionysia see also Wilhelm 1906, 238; P. Wilson 2012; ch. 22 n. 103.

⁴⁷ On liturgies see APF 4435; Diophantos II son of Phrasikleides councillor in 337/6, IG ii³ 324, 325, (?) ii² 1623. 210–12. Tomb of Diopieithes I son of Diophantos I, SEMA 446 (city). Eutaxia (Diophantos III son of Diopieithes I) IG ii³ 550; dedication at Eleusis (Diophantos III) IEleus 88. On the phratriarch Diopieithes II see ch. 19 n. 189. Lambert 1997a also suggests that the purchaser of land at (?) Prasiai for

The family descended from Meidon, known from a large group of tomb-monuments excavated at Merenda, clearly maintained a distinctive local presence; two of them claimed expertise as manteis.⁴⁸

Myrrhinousians active in the mining district may have maintained a foothold in the deme. Mnesidamas son of Aristodamas I M. appears as a mine lessee c.340; his brothers Kallisthenes and Poulydamas both served as councillors, and his grandson Aristodamas II son of Kallisthenes served as one of the tribal epimeletai in the late fourth century.⁴⁹ Aristogeiton M., who acted as arbitrator for the Salaminioi in 363/2, may possibly have belonged to this family; in any case he and his fellow-arbitrator Stephanos M. are likely to have had mining interests.⁵⁰

We can also, however, identify in Myrrhinous, as in other demes, prominent families based in the city or elsewhere for whom no interests in the deme are attested. Eurymedon M., who married Plato's sister Potone, probably owned land at Eiresidai in the plain north of Athens; his son Speusippos became head of the Academy.⁵¹ Eurippides son of Adeimantos M., a conspicuously wealthy friend of Konon attested as ambassador and choregos in the 390s–380s, presumably had a base in the city. His daughter Kallistomache was buried at Cholargos.⁵² Menelaos son of Menelochos M., who contributed 1000 dr. towards the payment of the debts of Konon III, Onetor IV, and others in 326/5, and perhaps served as ambassador to Persia in the 340s, seems likely also to have had a base in the city, although Menalkes M., whose son was buried in the deme, may have belonged to the same family.⁵³

500 dr. (F 4. 2–3) may be a son of [Ch]arikleides [M.], *APF* p. 572 (cf. *APF* 4435). Mnesitheos son of Tachyboulos M., *APF* 10297, bought land at Sphettos from Timarchos of that deme in (?) the 350s, *Aisch.* 1. 97–8. Phaidros M., although clearly resident in the city, owned land in the deme; since it was leased when his property was sold (*IG* i³ 426. 104–5), his family may have recovered control.

⁴⁸ *SEMA* 449, 452–4; the excavation has never been published. See also Despines 1998. The name of Kleoptoleme in this family may suggest a connection with the family of Kleoboulos (Table 8.5). Simos M., represented on his grave stele of c.410–390, *IG* ii² 6902, as a priest, was buried in the city. For other M. tombstones from the deme area see below, nn. 52, 53; *IG* i³ 1315 *bis* (without demotic); *SEMA* 11, 445, 447; *SEG* 53. 210/57. 217.

⁴⁹ Mnesidamas, *Agora* XIX P 26. 356–63; Kallisthenes *Agora* XV 42. 179, ? 336/5; Polydamas *IG* ii³ 4. 83. 27 (c.320?, cf. n. 17 above). Aristodamas II, Traill 1986, 88 (either SS or DS). Cf. possibly Agesidamas son of Alexis M., buried in the Kerameikos after 317, *SEMA* 444.

⁵⁰ *Agora* XIX L 4a 6–7; Stephanos is attested as a member of a naval symmory between 356 and 340, *APF* 12891, and may have had mining interests: see ch. 26 n. 66, on Kephisodotos of Aithalidai.

⁵¹ Strictly speaking, ownership of the land at Eiresidai (D. L. 3. 42) is attested only for Eurymedon II, either a brother of Speusippos or a son, left by Speusippos in his paternal oikos when S. was (de facto) adopted by Plato. Against the view that Eurymedon I M. was the 5th c. general E. son of Thoukles see *APF* 8792 XI; the name may well have been given to a number of unrelated boys born in Athens after the battle (though E. of M. is rather young for this).

⁵² *APF* 5949 plus *SEG* 38. 208 (horos of property securing lease of his son's 4000-dr. estate, *IG* ii² 2646 = Finley 1952 no. 157). Kallistomache, *SEMA* 450.

⁵³ Cf. also Chairigenes I son of Chairephon M., epistates at Eleusis 332/1–329/8 (*IEleus* 158. 7), whose (?) grandson Chairigenes III son of Chairigenes II was secretary in 256/5 (Antimachos: *IG* ii³ 987, 989). Menalkes, *APF* 9963; loutrophoros of his son, *IG* ii² 6898. Menalkes' father seems to have married a daughter of Menalkes of Sphettos; her dowry horos *SEG* 21. 563, Millett 1982, 146 B (1500

In the third century the leading family in the deme was probably that of Thoukritos son of Alkimachos, hipparch and general in the 250s–240s.⁵⁴ The family can be traced back for four generations to Kleoboulos I M., whose sons Kleomachos, Epipseithes, and (?) Kleopeithes were commemorated by a stele of the first half of the fourth century, found east of the city. The lekythos of Kleopeithes' son Kleoboulos II may have come from the same peribolos. Kleoboulos II's (?) grandson (SS) Kleoboulos III would be the father of Alkimachos (in turn, father of the general Thoukritos) who served as hipparch and as paredros of the eponymous archon Nikias in 282/1. Since the names Alkimachos and Thoukritos also occur together in the neighbouring deme Angele, it is possible that Kleoboulos III married a descendant of Alkimachos son of Kephisios of Angele, who was appointed as ambassador to Byzantion in 378/7 and died c.340, the name of his son Thoukritos being later added to his stele. In turn, Thoukritos of Angele may have owed his name to a marital link with Thoukritos of (?) Myrrhinous, commemorated with his wife Philte and son Antigenes on two monuments of the early fourth century found at Merenda.⁵⁵

Sosigenes III M. also served as hipparch, or as phylarch, at some date between 288 and 262; his homonymous father or grandfather, Sosigenes II son of Sosigenes I, served as councillor c.330 or c.320.⁵⁶ Diokles of M. served as priest of Asklepios in 340/39, and is represented with his father Dieuches on a lekythos perhaps commemorating the death of the latter. The Die[uches Myr]rhinos[ios] named on a horos of the late fourth or early third century was probably Diokles' son. This family may have been affinally linked with the medical lineage of Dieuches of Phrearrhioi.⁵⁷

dr.) was found at Merenda. Aischylides son of Aristarchos M., who served twice as councillor (*IG* ii³ 4. 26. 30, *Agora* XV 42. 178), and may be the —des Aristarchou who manumitted c.320 (with Gorgathos son of Sosistratos of Kydathenaion) a labourer living in Alopeke (*SEG* 18. 36 A 398f.), might be another city resident.

⁵⁴ *IRb* 10 (c.252, Kallimedes), 11 (Kleomachos, Kallimedes, Thersilochos, + 1), c.255/4–247/6. He was honoured by the garrison at Rhamnous, dedicated a seat there (*IRb* 130), and had a portrait set up in the sanctuary of Nemesis (*SEG* 41. 86; *IRb* 10; cf. *IG* ii³ 4. 293). It is not clear whether the Thoukritos Alkimachou M. who proposed a decree in 226/5 (Ergochares, *IG* ii³ 1147), and served as councillor in 219/8 (*IG* ii³ 1155. 88) is the general, in old age, or a grandson (SS); see Paschidis 2008, A 76 (Gauthier, *BE* 1994. 300, identifies the general with the proposer; the fact that he heads the list of Myrrhinous councillors in ii³ 1155 also provides some support for the view that the councillor was an elderly man). The Thoukritos attested as hipparch (?) and in the cavalry c.250 is probably the same man (*IEleus* 183, Thou[kritos?]; Bugh 1988, I B 33, II B 268); also perhaps the Thoukritos who contributed to the epidosis of 248/7 (*IG* ii³ 1011 II 71, Diomedon).

⁵⁵ See Table 8.5. There seems to be a possibility here of reconstructing a network of local families of Myrrhinous and Angele, linked also to a lineage from Athmonon resident in the coastal trittys of Pandionis. Further stones found at Merenda by Papademetriou, published by Mastrokostas 1961 and thence in *SEG* 21 and *SEMA*, do not connect with other records.

⁵⁶ Sosigenes III, *IG* ii³ 949; Sosigenes II, ii³ 4. 83 (n. 17).

⁵⁷ Diokles, Aleshire 1991, 106 no. 3992 = 4041; Stele III 3. 8–9, *IG* ii² 4391. Diokles and Dieuches I, *IG* ii² 6889 = *CAT* 2. 342b (no provenance; *CAT* takes them to be brothers but since Dieuches is seated and Diokles standing this is less likely; ch. 11 n. 36). Dieuches II, Finley 1952 no. 114, from the Pnyx. Dieuches of Phrearrhioi, ch. 6 n. 3; 26 n. 84. The Dieuches of *IG* ii² 11144, a lekythos of the first half of the 4th c., should belong to M. or to Phrearrhioi.

At a slightly less distinguished social level, three members of the deme are attested as neighbours in Piraeus in 341. Euthykles son of Euthymenides M. reported to the poletai a synoikia owned by Meixidemos M., who had incurred debts to the state through acting as guarantor for five tax-farmers who had defaulted on their payments. Meixidemos' building adjoined plots owned by Euthykles and by Euthymachos M., who was probably related to Euthykles. Although Meixidemos' land was bought by Telemachos son of Theangelos of Acharnai, and not by Euthykles, it is quite likely that the whole process was cooperative and that Meixidemos continued to occupy his property, paying rent (or interest) to Telemachos until he could afford to pay off a debt which could be seen as an irregular form of mortgage (*prasis epi lysei*).⁵⁸

A family of perhaps similar status and interests commissioned two relatively ambitious funerary monuments: a stele found in Piraeus, with a relief of two sphinxes flanking a loutrophoros on which the young hoplite Athenodoros M. is represented with his father Telesiphron, and a naiskos, perhaps set up in the city, commemorating Telesiphron's daughter Nikarete. Athenodoros II son of Telestratos, probably a grandson of Telesiphron, is attested as a guarantor on Delos in mid-century.⁵⁹

Angele

The deme should have lain approximately in the area of modern Angelisi, north-east of Markopoulo. One tombstone is said to have come from this area; a horos marking land owned by the eponymous hero Angelos (*SEG* 61. 157) was recorded at Markopoulo, as was a stele commemorating four generations of a lineage from Oe whose members took two of their wives from families in Angele. The last of these wives, Archestrate daughter of Meletos I A., who was perhaps responsible for setting up the stone, came from a well-attested family (Table 5.2). Her brother Menestratos served as priest of Asklepios in the third quarter of the fourth century;

⁵⁸ *Agora XIX* P 26. 463–98; cf. ch. 5 n. 87. R. G. Osborne's analysis of this incident (1985*a*, 1–5) exaggerates the degree of connection between the persons involved (the Pausistratos Philistidou of *IG* ii² 2385 I 10 belongs to Athmonon, not Aixone; Telemachos son of Hermolochos may have been an immigrant metic whose onomastic link to Telemachos of Acharnai was coincidental; the son of Hermolochos farmed a tax given to Theseus, not Asklepios). Meixidemos may have been related to the deme-secretary Meixias. Since it hardly seems likely that his activities as guarantor were consistently unsuccessful, he may have been a banker. Euthykles II son of Euthykles I M[yrrhin]o[usios], commemorated *c.*350 on a stele from Piraeus (*IG* ii² 11396 with Peek 1942 no. 163), may be either Meixidemos' neighbour or his father; Eupolemos son of Euthykles I, who served as one of the amphiktyons on Delos *c.*342/1 (*ID* 42. 5, *ID* 104-28. 4, *IG* xii 5. 113), and as one of the treasurers of dockyard funds in the late 330s, *IG* ii² 1627. 73, will then be either the neighbour's son, or his brother. Euthykates son of Euthykates M., councillor *c.*330 or *c.*320, *IG* ii³ 4. 83. 32 (n. 17), probably belongs to the same family.

⁵⁹ Telesiphron and Athenodoros I, *IG* ii² 6905, *c.*400 = *CAT* 2. 813; Nikarete ii² 6901 (*AEE* no. 880 gives 'Athens' as provenance); Athenodoros II (whose father Telesistratos may have been either a second son of Telesiphron or a kinsman who married Nikarete when she became an epikleros; since Athenodoros I is represented on his tombstone as bearded, the former alternative is perhaps more likely, because Nikarete probably would not have been married when her brother died), *ID* 104-8 B 10, *c.*360–330 (*LGPN* no. 93 conflates Athenodoros I and II).

Menestratos' son Meletos II is attested as councillor c.330 or c.320, and as a dedicant in the Asklepieion. Menekles son of Menestratos and Menandros son of Menes, both councillors in the first quarter of the fourth century, should belong to the same family, as should Menekleides (whose daughter Nikopatra married a demesman of Anaphlystos and was commemorated with him on a stele of the mid-fourth century), and Menippos, recorded as contributing naval equipment before (?) 366/5. The trierarch Melesandros A., active c.366–340, *APF* 9804, was probably the M. son of Menippos whose grave stele (*SEMA* 5) has been found in the city (cf. son of Melesippos A., honoured at Rhamnous, *SEG* 47. 160). There may also be a relationship with the family descended from Prokleides I son of Menekrates, who married his daughter to a fellow-demesman, Thoukritos son of Alkimachos A.⁶⁰

The deme's most prominent member in the fourth century, the general Chares, is hardly likely to have spent much time there. He was presumably responsible for arranging that the honorary citizenship granted to the Odrysian royal family led to registration of at least one of its members in his deme.⁶¹ Other members of the deme who left their mark in the city are the son of [P]edieus, perhaps represented on his stele as a priest, and Philagros, who set up an imposing grave monument for his daughter Hegilla.⁶²

⁶⁰ Stele, *SEMA* 469 (all one hand), c.350. Cf. Table 5.2, and for further links of this group to other local families Table 8.5. Marchiandi 2011*a*, 151 asserts without evidence that the stone came from a 'family peribolos' of Archestrate's kin; Etienne 1975 thinks it was set up by her husband. Thoukritos' family *IG* ii² 5228, from Markopoulo. *IG* ii² 5230 = *CAT* 2. 331b is said to have come from 'south of Spata' (Milchhöfer 1887, 91 no. 41; *KvA Text* III–VI, 11). The stone commemorates Epichares and Ergochares A., probably father and son (Epichares seated, Ergochares standing), and also names their wives (the name of Ergochares' wife Demostrate added in a different hand, *CAT*). Theogenes son of Ergophilos A., councillor c.330 or c.320, *IG* ii³ 4. 83. 24 (n. 17), may belong to this family (the son of a Theogenes A. who made a dedication to Aphrodite at Daphne, *IG* ii² 4585, if related to the councillor, is more likely to be his uncle, MB, than his son). Cf. also *IG* ii² 11124, boy Ergokleon (?) with standing man, seated woman (Demos[trate?]), from the same area, Milchhöfer no. 42. Horos, Kirchner and Dow 1937, 9 no. 8 (missed by Kearns 1989). The lekythos commemorating Hippostrate daughter of (H)ip(p)omachos A. (seated, with standing hoplite—her son?—and 2 servants), found in a peribolos near Glyka Nera (*SEG* 57. 209; Iakovos 2008; *AD* 60, 176–8), seems to be that of Hippostrate daughter of Promachos A., *SEG* 61. 181 = 57. 209/63. 177.

⁶¹ Chares made a dedication commemorating a victory as choregos in 344/3 which gives the name of his father Theochares (*IG* ii³ 4. 494; *APF* 15292; Agelidis 2009, no. 85; perhaps named on *SEG* 38. 31 = D. R. Jordan 2000*b* no. 12). He is now also attested as trierarch c.355–3, *SEG* 45. 148 (cf. Pritchett's remarks criticizing the view of him as a 'condottiere', 1974, 77–85). Rheboulos son of Seuthes of Angele, *IG* ii³ 351, 331/0, cf. M. J. Osborne 1981–3 III 66–7; also Lambert 1997*a*, 174–5 no. 99, on Teres, possibly a member of the same Thracian family. Cf. ch. 21 n. 117.

⁶² [P]edieus (*AEE* 21), *IG* ii² 5236 = 5240 = *CAT* 1. 336 (*SEG* 26. 276). Hegilla, *IG* ii² 5239 = *CEG* 590 = *CAT* 3. 369b; the epigram mentions her husband (*posis*), but she died at the age of 25 and Philagros, represented with her, seems to be her father (cf. *CEG*; Schmaltz and Salta 2003, 75, poem added later). On the trierarch Telokles A. see *APF* 13584 and above, n. 3. On the horos *SEG* 21. 655 the creditor's name is read as Polydeukes of Angele (not Polydeukios) in Dow Nachlass, file 'Horoï'.

Kytherros

This deme is located conjecturally by Traill (1986, 47–51) at Pousi Kaloyerou, which would place it between Angele and Steiria. There are remains of a small classical temple. If this identification is correct, the presence of Kytherros in the list of the twelve ancient towns of Attika might perhaps be due to traditions associated with the flourishing late Mycenaean site on the coast at Perati. So far, however, there is no epigraphic evidence to support the location.⁶³

The only record of deme activity is *IG ii*² 2496, a lease of three buildings in Piraeus—a workshop, a dwelling attached to it, and ‘the shed on the dungheap’—granted by a board of eight meritai to a tenant from Aphidnai. The lease was granted in perpetuity, at a rent of 54 dr. per year, 7.5% of the property’s taxable value, which was rated at 7 minai; the tenant was to be responsible for taxes and was required to make repairs to the workshop and house in the first year of his lease. He was also to set up a record of the lease in an adjacent hero-sanctuary, by whose priest, Philippides, the document is dated. The stele bears a relief of the hero (seated) and a standing female figure, which suggests that the business to be carried on by the tenant was connected with the sanctuary.⁶⁴ The meritai, a group of eight demesmen responsible for managing part of the deme’s property, came in the main from only two families, possibly linked by marriage, which may suggest that the division of the deme’s capital into *merê* (or at least the creation of this group of meritai) had taken place one or two generations earlier (see Table 25.4).⁶⁴ The meritai do not appear elsewhere in our records; however, Chaireas and Pheidostratos, sons of Mnesichares, may have been related to Mnesistratos K.,

⁶³ The spelling of the demotic, at least in private texts, fluctuates between Kytherrhios and Kytherios (Kytherios e.g. *IG ii*² 7093). On the Twelve Towns see ch. 18 at nn. 43–8; Mycenaean tombs south of the deme-site are noted by Traill 1986 (with map; cf. also Diamant and Traill 1986). Some of the tombstones attributed by Koehler and Kirchner to immigrants from the island of Kythera may belong to members of the deme: see *IG ii*² 9110, Piraeus, early 4th c., Diokleides Kytherios, seated, shaking hands with Minakos, standing, and an armed man behind Diokleides (only the name Minakos raises doubts about an Attic attribution, and this is a name attested—only once—elsewhere in Greece, in Amphissa, W. Lokris; Minako in *ii*² 12141, *SEG* 58. 241); 9111 Epiktesis daughter of Onasos or Onasas K. (cf. Onasas of Athmonon, *SEG* 24. 197. 8), relief stele dated early 4th c., Conze 1893–1922, 669; 9113, kioniskos, Philoxenides son of Philokrates K. All these are listed in *AEE* (724–5, 728) among citizens, together with no. 723, Demophon son of Demonikos K., known only from a report by Lenormant (1866, 68) and presumably omitted by Koehler and Kirchner owing to doubts of his reliability (*AEE* 11–12; since the stone is said to be a kioniskos, the appearance of Demonikos son of A(d)metos K. as councillor in the first quarter of the 4th c., *IG ii*³ 4. 21. 42, does not provide much support). Note also the conjecture D?amios in *AEE* 722 = *IG ii*² 6612.

⁶⁴ *IG ii*² 2496 = M. Meyer 1989a A 145, Lawton 1995 no. 129. We do not know for certain whether the priest was a demesman; it is of course possible that a demesman of K. resident in Piraeus had ‘discovered’ a hero and given the deme a shrine with an endowment for its upkeep. On meritai see Jameson 1982. Provision for war damage need not imply an imminent threat (Jameson, *per ep.*, 1999). See Papazarkadas 2011, 124–5.

Note: The name of Ktesichares suggests a link with the family of Mnesichares. Unrelated *meritai*: Antimachos son of Amphilachos, Demaratos son of Leosthenes.

TABLE 25.4. Kytheros, *meritai*: IG ii² 2496

recorded as general on Skyros in 329/8, and to Mnesige[ne]s son of Kalliteles, who served in the council in (?) the 320s; the three sons of Ktesiphon and their (?) cousin (FBS) may have been descended from a brother of Ktesippos son of Simulos K., who escaped a liturgic obligation early in the fourth century.⁶⁵

Some of the deme's territory may have lain in the hill country of the inner part of the Perati peninsula, which separates the bay of Porto Raphti (Steiria–Prasiai) from that of Brauron. This may have been the location of the eschatia of Phaidippos of Kolonai, which produced a significant quantity of firewood, although there was also enough farmland to yield over 1000 medimnoi (c.5250 litres) of grain and over 800 metretai (c.3950 litres) of wine; there was also grazing for horses.⁶⁶ Phainippos, who had been adopted into Kolonai, had apparently inherited this estate from his natural father Kallippos, since he claimed that part of it was attached as security for his mother's dowry.

The speaker of [Demosthenes] 42, who had challenged Phainippos to antidosis, had done well out of mining but had recently run into financial difficulties. He had a brother (42. 22), and seems to have been familiar with the estate in Kytheros; after delivering his challenge he left slaves on the property to look after his interests, and he had taken kin and friends with him on his tour of inspection (§§ 5–7). He may have been a member of one of the two wealthy

⁶⁵ Mnesistratos, *IEleus* 177. 404; Mnesige[ne]s (or -te[le]s?) *IG* ii³ 4. 26; Ktesippos I *IG* ii² 1929. 20, *APF* 8889. His family may have been linked to that of Timokrates K., whose son Timon served as tamias in 377/6 (*IG* ii² 1410. 4–5).

⁶⁶ *APF* 14734 (add Kroll 1972 no. 158). The speaker of [Dem.] 42, whose aim is to show that Phainippos is richer than himself, no doubt exaggerates the size of the estate, but eschatiai containing woodland may often have been of considerable acreage. The dowry claim was specious (§ 27). It appears that Phainippos' MF Philostratos had married his daughter to Kallippos with a dowry at a date when he had, or still hoped to have, a son. By the time Kallippos died it had become clear that his widow was an epikleros, and Philostratos had decided to make Phainippos his heir; formal adoption did not take place until after Phainippos had come of age and inherited his genitor's property.

families of Kytherros for which mining activities are attested—perhaps one of the brothers Antiphanes and Antisthenes II, sons of Antisthenes I K.⁶⁷

Steiria

The deme-site was in the north-western part of the bay of Porto Raphti. Two gravestones have been found in the area; one is illegible, the other commemorated Komos (?) son of Nausias. Apart from this, evidence for the activities of demesmen comes from outside the deme.⁶⁸

Hagnon S., honoured as founder in Amphipolis, was notorious for his wealth and and evidently well-known in the city; he is named in Kratinos' comedy *Fat Cats* (*Ploutoi*) as a man who claimed to have old money, although his father Nikias was the factotum (*phortêgos misthôtês*) of Peithias. Hagnon's son Theramenes, the oligarch, was also a target of comedy, as an associate of sophists. No descendants are attested.⁶⁹

Thrasyboulos son of Lykon S. may have derived his democratic politics in part from rivalry in deme and tribe with Hagnon and Theramenes. He married his daughter to Nikias II son of Nikeratos II of Kydantidai, after the execution of Nikeratos by the Thirty had given him the status of a martyr. Confiscation of Thrasyboulos' property by the Thirty evidently did the family no lasting harm; his son Thrasyboulos II was fined ten talents shortly before 343 (*APF* 7310, 10808).

Evidence for ownership of land by Steirians is scanty. Oulias S., councillor in 328/7, may have bought land sold by the Melaineis, on the north-east end of Mt Parnes, in the hekatostai sales.⁷⁰ Kallikratides II son of Kallikrates S. lent 1000 dr.

⁶⁷ *APF* 1194; on this family, active at tribal level, see ch. 21 n. 121. Antiphanes is attested as trierarch before 330 ([Dem.] 42 is dated to the early 320s); he and his brother freed a slave living in Agryle in (?) the 320s, *SEG* 18. 36 B 329. The puzzling aspect of the speech is that it concerns only the eschatia in Kytherros, although Phainippos must surely have had other property. Selective publication of the arguments delivered in court may explain this, but only if we assume that the speaker wished to justify himself to readers who knew Phainippos in this local context. (The other wealthy mining family in Kytherros is that of Aspetos and Demostratos, *APF* 3623.) D. M. Lewis 1994 noted that an Autophon, perhaps son rather than father of Hegemon Autophontos K., councillor in the early 4th c. (*IG* ii³ 4. 21. 41) is probably attested three times as landowner in the mining area: *Agora XIX* P 13. 51–6, P 24. 4, P 27. 86 (here at Thorikos).

⁶⁸ Site, Lauter-Bufe 1989; market (?) building, Kakavogianne 2009, 186. Tombstones, *IG* ii² 7462, 7464 = *SEG* 21. 925 (Komos or Kophos Nausio[u] *LGPN* no. 5; Kothos Nausitho[ou] *IG*).

⁶⁹ *APF* 7234, Kratinos *PCG* 4 F 171 ll. 67–71, performed in 429? *LGPN* s. Peithias (1) suggests a possible identification with Peisias (1), father of the kitharoidos Meles, but Peithias (9), father of Leon of Salamis, seems more likely. Cf. ch. 26 at nn. 88–9. Pesely 1989 notes that Hagnon founded a cult of Artemis Tauropolos, worshipped near Steiria at Halai Araphenides, in Amphipolis.

⁷⁰ On Isaïos F 22–3 Thalheim 1903, a suit about guardianship, see A. R. W. Harrison 1968, 97–8 n. 1; *APF* 8242; ch. 3 n. 27. Property seems to have been in dispute, but its location is unknown. On *IG* ii² 7456, found Piraeus (?), commemorating Diokles son of Dionysodoros S. with his father, his sisters and a (?) ZH added later, see Bergemann 1997 31 n. 272, 213 no. 26.

with Philon of Rhamnous secured on a house in the Agora area; he served as one of the epistatai of Artemis Brauronia in 335/4 and as anagrapheus *c.*330, and his father Kallikrates son of Kallikratides I was a lessee of land at Eleusis in 331/0. They presumably lived in the city.⁷¹ Kalliades I son of Aristophon S. served as phylarch in 282/1 (*SEG* 46. 167, cf. Habicht 1997); his elder brother Aristodemos II was taxiarch in the following year (Ourias, *IG* ii³ 882. 24), and their father, son of Aristodemos I, was councillor in 335/4 (*Agora* XV 43). Later descendants are attested.

Prasiai

This deme seems to have occupied the south and southwest sides of the Porto Raphti bay, including the Korone peninsula, on which the deme lease text *SEG* 21. 644 was found. *IG* ii³ 4. 237, a dedication to Artemis by a man who had been crowned by the deme, also came from Korone; a second lease, *IG* ii² 2497 (*SEG* 21. 645) was also found in the Porto Raphti area, and a third at Natso.⁷² A cult of the Herakleidai in either Prasiai or Steiria is attested by the marker of an eschara found in this area (*IG* ii² 4977, 4th–3rd century). Prasiai also had sanctuaries of Apollo—perhaps located at Natso—and of Athena Pronaia, and the tomb of Erysichthon. Theoriai to Delos left from its harbour; as we shall see, several demesmen had interests on the island. A head of Apollo dated *c.*490, and a base signed by the sculptor Pythis, dated *c.*510–500 (*IG* i³ 1018 *ter*), perhaps came from the Apollo sanctuary.⁷³

⁷¹ Oulias, Lambert 1997a, F 10 B 20; *IG* ii³ 360. 7. Kallikratides' loan, *Agora* XIX H 98; Artemis, *IG* ii² 1524 col. III 127 (ii³ 4. 63 may relate to this or another board on which K. served); anagrapheus, ii³ 469; Kallikrates, *IEleus* 177. 373 (cf. Papazarkadas 2011, 307 no. 36). Theoxenos son of Kallikrates, dikastic pinax *SEG* 39. 181, correcting *AG* II no. 44 (Class I or II? from a grave near the junction of the Sacred Way with Peiraios St), may be a brother of Kallikratides I. Cf. also Kallikrates son of Kallikrates S., *SEMA* 621, kioniskos (date uncertain). Note also the stele, crowned by a siren and two mourning women, commemorating Proxenides S. with his daughter Menippe and wife Aristodike, confiscated by the police in Piraeus, *IG* ii² 7452 = *CAT* 3. 397 (mid-4th c.); ii² 7470, naming a Proxenides S. alone (Piraeus), is not closely dated. Zopyros son of Kratynon (?) S., who served in the council *c.*330 or *c.*320 (*IG* ii³ 4. 83. 36, n. 17) might be the Zopyros (?) who appears on a curse tablet (Wünsch 1897, 103, cf. Wilhelm 1904, 122) if we could be sure of either reading, but the Wheeler transcript of ii³ 4. 83 has Sôpros (Traill 1986, 42; names in Sôti- ?), and the only other 4th c. attestation of the name Zopyros, in *IG* ii³ 4. 342 col. I 15, is equally dubious (there is no basis for the restoration [Pras]jeis at the head of this column, where a longer demotic would be preferable). *SEMA* 623, monument of Myrtilos son of Cha[ir?]-eleides S. and wife, found in the city; Myrtilos served as councillor in (?) 336/5, *Agora* XV 42. 187. There may be an affinal link with Myrtilos of Prasiai, *IG* i² 1072.

⁷² See also Camp 2015. The temple is marked on the map of Kakavogianne 2009, 183. *SEG* 21. 780 is missed by Whitehead 1986a and Lauter-Bufe 1989; possibly the *IG* lease text found on Korone came from the deme's sanctuary of Artemis rather than—as Lauter-Bufe assumes—from the leased plot. The third lease, *SEG* 51. 153, specifies that half of the rent is to be paid at the election meeting in Metageitnion.

⁷³ Paus. 1. 31. 2, Apollo (a phratry altar?) and Erysichthon; Phanodemos *FGH* 325 F 2, theoriai (ch. 20 n. 36); Bekker 1814. I 299. 6, Athena Pronaia, allegedly founded by Diomedes. Natso: Apostolopoulou-Kakavogianne 1986, cf. *AR* 1991–2, 9; Stewart 2008, 591; head and base re-used in Early Christian

The Korone peninsula had houses, and was fortified in the early third century, perhaps in the years after 287; the fort seems to have been occupied by Ptolemaic troops during the Chremonidean War.⁷⁴

Tracy (1995, 125) points out that the lease *SEG* 21. 644 (11–14) makes provision for the possibility of an invasion of Attika, which suggests a date in the period preceding Chaironeia, in the Lamian War, or in 318.⁷⁵ The previous tenant, Polysthenes, whose name is erased, may have defaulted.⁷⁶ The tenant in the other deme lease, Kirrhias son of Poseidippos, is named with his father and at least two other persons on a base recorded at Markopoulo. Poseidippos is attested as syntrierarch at a date between 356 and 346/5; another son, —phos, perhaps leased temple land at Delos. They seem to have maintained a strong interest in the deme.⁷⁷

Another demesman who appears in the Delian records (as a guarantor) is Demochares III son of Nikolaos. Alkiades son of Demochares I, buried in Piraeus with his wife, two sons, and (?) a daughter-in-law, was probably the uncle (FB) of Demochares III (see Table 25.5). One of Alkiades' sons seems to have married Demokrateia, daughter of Archedamas of Anagyrous; her brother Archenomides appears as a witness in [Demosthenes] 35. 14, testifying that a loan agreement about a trading voyage was deposited with him, which indicates that he was a resident of Piraeus. Alkiades of Anagyrous, who supplied six caps (*piloi*) for the public slaves at Eleusis in (?) 333/2, may have been a son of Demochares and Demokrateia, adopted by his mother's kin into Anagyrous.⁷⁸ Elpon son of Elpon P. travelled further afield, settling on Imbros as a kleruch; his son or brother Eusthenes served as a councillor in Athens c.330.⁷⁹

additions to a Hellenistic building, sherds ranging from Mycenaean to late Roman, Geometric strata. There were grave terraces along the road between Prasiai and Steiria.

⁷⁴ Houses, Lauter-Bufe 1989, cf. N. F. Jones 2000; fort, G. J. Oliver 2007*a*, 153–5, with references to earlier discussions.

⁷⁵ Text ascribed to the cutter of EM 12807 (= *SEG* 34. 103, Halai Araphenides), who worked c.340–290. See also *SEG* 62. 80.

⁷⁶ Polysthenes had held a lease in perpetuity; no new tenant's name was inscribed. The text is interesting because it shows that there had been deme-owned farm equipment on the plot, which was handed over to the lessee.

⁷⁷ Kirrhias, *IG* ii² 2497. 3, 10; 7286 (the stone is inscribed on both sides and is therefore unlikely to be funerary; however, Kirrhias' name is accompanied by that of a woman on side B). Stones from Steiria in Markopoulo, *IG* ii² 7464, 7472. Poseidippos, *APF* 12132; Kroll 1972, 100b doubts whether *IG* ii² 1898 (no provenance) belonged to this P. —phos, *ID* 104-8 B 33 (the demotic is uncertain). Papazarkadas 2011, 291–3, suggests that Kirrhias was related to Theodoros son of Kiron P., guarantor for a lease of sacred land in 343/2 (*Agora* XIX L 6. 13–14; note that the Kiron of *SEG* 58. 265 is now assigned to Pithos, not Prasiai); the leased plot was called the Theodoreion and may have been donated by or confiscated from Theodoros.

⁷⁸ Names on *IG* ii² 7277 added successively.

⁷⁹ Elpon, *IG* xii 8. 63a 11 (352/1); *ibid.* 99, his tombstone, where if the reading in line 2 is Pra[s]ie[os] he was perhaps commemorated with his sister and brother-in-law (ZH; Menestratos of Euonymon). The name of Eusthenes suggests that Elpon I or II may have married a daughter of Elpon (I?)'s colleague in 352/1, Eusthenes of Kolonai (X).

TABLE 25.5.
Prasiai:
Demochares

A Demokrateia is also named as daughter of Demoteles P. on a group of tomb monuments dispersed by the antiques market.⁸⁰ Thymokles P., whose daughter Sostrate's monument *IG* ii² 7287 apparently came from the same dealer, was (or was related to) the Thymokles P. who is recorded as trierarch in 356 and as boys' choregos in 331/0 (*APF* 7401 with *SEG* 25. 177. 6).

Prasiai may have sold land in the hekatostai sales; at least two, and perhaps four or more, properties at Prasiai, plus one at Paiania, were sold by a single group. One of the purchasers, the son of Lykinos, who perhaps paid over 1300 dr., may have been a demesman, a brother of Lykophron son of Lykinos, named on a list of unknown purpose.⁸¹

One of the wealthiest families ascribed to the deme is that of Pronapes son of Pronapides, who won victories with four-horse chariots at the Nemeia, Isthmia, Panathenaia, and perhaps elsewhere, and served as hipparch, at some date in the 450s–430s. He is attributed to Prasiai on the basis of a statement in the letters of Themistokles (viii p. 747 Hercher 1873) that a Pronapes of Prasiai was one of the prosecutors at Themistokles' trial. There are however, some chronological difficulties in this identification.⁸²

Habronichos son of Aristokles I P., whose names may suggest upper-class ancestry, was councillor probably in the Lykourgan period; the service of his (?) nephew (BS) Aristokles II son of Aristokleides may possibly date to the period after 322.⁸³

⁸⁰ *IG* ii² 7287, 11118 = *CAT* 3. 319, 12023 = *CAT* 4. 850, *SEMA* 581 = *CAT* 3. 846; Richter 1954, 83–4.

⁸¹ Lambert 1997*a*, F 4. 9–10, [-10-]s Lykinou pays ΤΤΧΔ†††. Lykophron, Reinmuth 1971, no. 16. 13; this may be a list of epilektoi of c.350 (Humphreys 2010*a*).

⁸² *IG* i³ 880 (victories), 511 (hipparchy); *APF* 12250. The hipparch Pronapes was a colleague of Lakedaimonios son of Kimon, born in the 480s or 470s, and is unlikely to have been old enough for identification with the prosecutor. The latter may be an ancestor of Pronapes of Erchia, treasurer of sacred funds in 433/2 (*IG* i³ 293. 14, 344. 16), or of Pronapes of Aixone (*APF* 1395).

⁸³ *IG* ii³ 4. 26. 41, ii³ 4. 83. 19. Traill 1986, 41–7 argues that the irregular quotas here are due to mis-copying by Wheler.

IV Leontis

This tribe contained a large number of small demes, only Phrearrhioi having more than four councillors, and they are oddly scattered (see ch. 21 pp. 728–9, and the discussions of individual trittys below). Many demes have not been located with any certainty, and even trittys affiliation is doubtful in some cases. Here I have grouped Leukonoion, Kettos, Cholleidai, Oion Kerameikon, Hybadai, and Aithalidai with the demes assigned to the inland trittys by Traill (1986), and Upper and Lower Potamos with the coastal trittys. Stanton 1994 has Kettos, Leukonoion, and those two Potamos demes in the city trittys.

CITY TRITTYS

The arrangement adopted here leaves Leontis with a very small city trittys, consisting only of the two demes Skambonidai and Halimous, which moreover were widely separated from each other. Skambonidai may have turned out to be smaller than expected because, although densely settled, it had a high proportion of metics among its residents; furthermore, some Athenians living near the borders of the area popularly known by this name may have preferred to register in the more respectable-sounding Kydathenaion or Kerameikos (or Diomeia, ch. 24 n. 8).¹

Skambonidai

This deme is generally placed north of the Agora, although the arguments for the location are rather weak. The deme decree *IG* i³ 244 was found ‘in a house near the Theseion’, i.e. on the west side of the Agora; the identification of a

¹ Traill allocates Upper and Lower Potamos to the city trittys, placing them in the upper reaches of the Ilissos, but the arguments are weak, and this location merely intensifies the geographical incoherence of the city trittys. Note that the situation now revealed in the Voula area—several hamlets belonging to Halai Aixonides (ch. 29)—suggests that there were probably a number of hamlets also in the north-western part of the same coastal plain (much of which was occupied by the old airport); these hamlets could have been occupied by unlocated demes of Leontis, or they might have opted for affiliation to Aixone rather than Halimous.

sanctuary with a well, in the northern part of the Agora, as the Leokoreion, the shrine of the daughters of Leos, and the deductions (1) that this would have been the cultic centre of the tribe Leontis, and (2) that it must therefore have lain in or close to a deme of Leontis, are open to question. We have a dedication by tribal epimeletai of Leontis from Daphne, *IG* ii³ 4. 207 (see n. 29).²

Be that as it may, *IG* i³ 244 is our earliest deme decree, and it provides valuable evidence for Athenian ideas about deme identity and activities in the first half-century after Kleisthenes' reforms.³ It starts with sacrifice of an adult victim to Leos, the meat (?) from which is to be distributed both to demesmen and to metic residents *en agorâi têi Skambonidôn*—either a location or a date. This is followed by a sacrifice [-5-]ois, possibly at the [Kroni]a; then we have a sacrifice on the Akropolis at the Synoikia, the meat from which is to be distributed raw. The same specification is made for the sacrifice of a lamb in the Pythion at the Epizephyria, and for another sacrifice, the details of which are lost. Column A starts with specifications for a sacrifice, the meat from which is to be distributed until sun[set] or sun[rise]. After some regulations that seem to concern perquisites, we have possible references to the [Dipoli]eia and the [Panath]enaia; the meat from the latter festival is to be distributed in (or at) the agora of the deme. Side B contains an oath to be taken by a deme official.

It seems likely that the deme had constructed, or was constructing, a programme of cultic activity by attaching deme sacrifices to festivals celebrated by its tribe or by the city. This was clearly an option most likely to appeal to demes situated in or close to the city centre. The freedom of demes to innovate in cult is significant; the sacrifices of this calendar have no parallels in other demes. It is also very interesting to find metic residents of the deme allowed to share in sacrifices; attitudes may perhaps have hardened after Perikles' law of 451 on citizenship.

Although the name 'Crooktown' suggests a population engaged in the lower urban trades, Skambonidai had some aristocratic residents by 507.⁴ In the fifth century the leading family was obviously that of Kleinias and Alkibiades, which

² The Leokoreion is located 'in the Kerameikos' by Phanodemos *FGH* 325 F 8; this probably relates to the part of the Kerameikos that lay inside the walls and included the NW Agora (see *Agora III* 108–13, nos. 317–38; Papadopoulos 1996; ch. 27 n. 1). On the possible location see Kron 1999, 79–81; *Agora XIV* 123; Camp 2010, 84–5 (the discovery of curse tablets in the well does not seem to be an obstacle to the identification, since the daughters of Leos died young; cf. D. R. Jordan 1980). Note N. D. Robertson's suggestion (1992, cf. Brunnsåker 1968; Batino 2001) that the name Leokoreion was derived from *leós*, army (cf. perhaps the association of the nearby area 'by the Herms' with the cavalry?); if this is right, one might argue that the association with the hero Leos and the myth of his daughters had arisen only in post-Kleisthenic times when Leontis—perhaps prompted by Skambonidai—began to take an interest in the sanctuary. Alipherê 2015 restores a dedication to Leos in Reinmuth 1971 no. 9, found in the Agora (see Appendix 1).

³ Cf. Humphreys 2004, 145–6. M. H. Jameson (*per ep.*, 1999) read [*τ?*]imía in C 1.

⁴ On the contrast between shapely, well-nourished members of the upper class and misshapen commoners see Humphreys 1999, 126–7.

probably belonged to the *genos* Salaminioi (and thus, on my view, to a *phratry* based in Alopeke). They were already conspicuously wealthy in the sixth century; Alkibiades I made a dedication at Delphi, probably commemorating victory in a chariot-race, and his son Kleinias I fought at Artemision in 480 with a privately-owned trireme. The location of their town house in Skambonidai may suggest a move to the city during the Peisistratid years, when the area of the classical Agora was beginning to be developed. Other possessions in Attika, attested in 415, may have been acquired during the fifth century. Alkibiades III had land at Thria and Athmonon, and may have had a house in Skambonidai; his uncle (FB) Axiochos owned a *synoikia*, and had a *chorion* at Tho— that was leased, as well as other property in Attika that cannot be located, and estates overseas. Descendants can be followed into the third century.⁵

The family of Alkibiades' friend and fellow-demesman Adeimantos son of Leukolophides must also have been prominent. He owned land at Xypete and in 'Ophryneion', and had a large estate on Thasos. Leukolophos of Skambonidai, attested on Imbros in the 350s, was presumably a descendant.⁶

Kallias S., commemorated in the early fourth century by a poem claiming that as archon he chose Justice (*dikaio synē*) as his *paredros*, is generally assumed to have been the eponymous archon of 412/1, in which case some defence of his reputation may well have been felt necessary. He was apparently buried somewhere in the area of modern Hekale.⁷

Archestratos I son of Xanthippides I S.—an upper-class pair of names—was buried on the northeast side of the city in the first quarter of the fourth century. Two men called Archestratos, presumably grandsons, served as councillors for Skambonidai in (?) 336/5; Archestratos II son of Xanthippi[des] II S., who was presumably one of them, owned land that was sold by the *poletai* at the end of the fourth century because it had not been declared for tax assessment. Xanthippides III S., who commemorated his wife in the late fourth or early third century with a poem praising her virtue, was presumably the son of Archestratos II; Theoxenos

⁵ *APF* 600; property, *IG* i³ 421. 20–3, 424. 10–11; 422. 200–1, 424. 27–9, 426. 125–6. Tombstones of this family are found in the Kerameikos (*pace APF*, no indication of residence: Humphreys 1983/1993, 118 table 4).

⁶ *IG* i³ 422. 187–8 Xypete; 430. 10–11 Ophryneion, probably a local toponym in Attika (cf. *LSJ* s.v. *ophrys* II); 426. 45–51 Thasos, see Salviat 1986. Imbros, *IG* xii 8. 63a 13; since both names are rare, there is probably a connection with the Leukolophos 'from Salamis' who denounced two houses on Salamis belonging to Theomenes of Xypete, in 402/1 (*Agora XIX P* 2 fr. d 8–21; M. C. Taylor 1997, 291 no. 201, suggests he was the archon for Salamis), and the L. who was well known as a young tart in 393 (*Ar. Ekkh.* 645 with schol., *aischros*); one of these (if they are not identical) will be the Leukolophos to whom the speaker of *Is.* 2 married his elder sister at some date before c.383.

⁷ *IG* ii² 7404 = *CEG* 484. The suggested connection with Hierokleides S. and his son Hierokles, commemorated on a stone of unknown provenance with the son (?) of a Kallias, ii² 7410, is doubtful.

TABLE 26.1. Skambonidai: Xanthippides I of Skambonidai
Xanthippides

son of Archestratos S., who perhaps served as councillor in the late fourth century, may be a brother or cousin of Xanthippides III (see Table 26.1).⁸

Members of Skambonidai seem to have liked to commission poems for their gravestones. Archippos' stone, dated c.360, bore a representation of a gold crown and a poem recording that he had been crowned by the city and died a happy man, leaving grandchildren to succeed him.⁹

Halimous

The deme contained several sanctuaries: one dedicated to Aphrodite Genetyllis on Cape Kolias, with which the genos Kolieis was presumably connected;¹⁰ one of Demeter and Kore, where rites connected with the Thesmophoria were performed on the day preceding the three-day festival in the city;¹¹ the deme's sanctuary of

⁸ Archestratos I, *SEMA* 608, near the NE corner of Syntagma square. Archestratos II and III, *Agora* XV 42. 221, 223 (no patronymics); *Agora* XIX P 42. 8. Xanthippides III, *IG* ii² 7406. Theoxenos, *Agora* XV 56 = *SEG* 34. 127. 24 (deme lost). Olympichos son of Diodoros S. was commemorated by an elegant loutrophoros preserved with its base in the Kerameikos (Knigge 1988 fig. 134, *SEMA* 610); his father was presumably the Diodoros son of Olympiodoros S. who was secretary to the Amphiktyonic board on Delos in 377–373, and his sister the Hippo[*strat?*]e daughter of Diodoros S., married to a K<l>[*eo*]pompos (possibly of Thria, but the stone, *IG* ii² 7401, was found near Koropi). Cf. *AG* II 20, no. 43.

⁹ *IG* ii² 7393 = *CEG* 524 (Kerameikos). Gold crowns for citizens are said by Henry 1983, 23 to be unusual before mid-century; cf. however Isokr. 15. 93–4.

¹⁰ R. Parker 1996, 304–5; ch. 20 n. 45. Plutarch's story (*Solon* 8. 4–6) of Aiginetans who hoped to capture prominent Athenian women celebrating at Kolias, and instead found themselves confronting young men in disguise, presumably refers to this sanctuary, for which see also Ar. *Lys.* 2, Hdt. 8. 96.

¹¹ Schol. Ar. *Thesm.* 80; perhaps an all-night festival followed by a procession to the city next day. Sanctuary, Paus. 1. 31. 1. A. Mommsen assumed that women from the city would go to Halimous to

Dionysos in which the deme decree *SEG* 2. 7 was to be set up, and a theatre;¹² and sanctuaries of Athena and Herakles mentioned in Demosthenes' speech *Against Euboulides* (57. 46, 62, 64).

We are told in Demosthenes' speech that in 346/5 the deme contained c.80–85 members, 63 of whom attended the meeting at which the diapsephisis (general scrutiny of members) was carried out. Its quota of three councillors may have been rather generous for this size.¹³ The speech was written for an appeal against the deme's decision to expel Euxitheos son of Thoukritos, a former demarch. The meeting was held in Athens; Euxitheos claims that his name was the last to be put forward, on the first of two days of voting, and that since most of the demesmen lived in the deme, they had already left for home.¹⁴ Euboulides, who was one of the deme's councillors in 346/5, presided over the meeting; it is not clear whether he did so in his capacity as a councillor, or was also serving as demarch.¹⁵ His father had served as demarch earlier; according to Euxitheos, he had conducted a scrutiny of membership on the grounds that the deme's records had been lost, in which ten men had been expelled, nine of whom had subsequently been reinstated by the courts. This is a good example of the type of unsupported statement that an Athenian could make in court without much risk of being challenged, but a revision in the first or even the second decade after the Peloponnesian War is not unlikely

purify themselves in the sea (1864, 298, with a note on Turkish ladies' bathing expeditions). A site on the Agia Anna hill, where W. Wrede excavated in 1929 (*AA* 1930, 100, cf. Arvanitopoulos 1960, 51–5; *AGC* 21 X6/Y4 no. 30) is identified as the Thesmophorion (destroyed in WW2); however, the Herakles dedication *IG* i³ 1008 (c.470) came from Wrede's site, and Hesychios (cf. Schol. Paus. 1. 1. 5) put the Thesmophorion at Kolias. For archaeological material in this area see also Geroulanos 1973; *AD* 44 B 1, 1989 (1995) 56–7, 59 (Halimousian burial, c.½ km from the Agia Anna site); 46 B 1, 1991 (1996) 35, 65, the latter site, producing 2 marble lions and a fountain, Odos Eptanesou, perhaps in Euonymon); Simpson and Hagel 2006 on Bronze Age.

¹² Hondius, *SEG* 2. 7, suggested locating the Dionysion at Chasani, but it is not clear whether there was an ancient site there as well as a collection of material brought from elsewhere (see ch. 23 n. 5). In any case, there is no evidence to link the stone to Cape Kolias. See now Kaza-Papageorgiou 2006 (her article of 2009 is unfortunately rendered more or less unusable due to the lack of a map). Theatre (Odos Roma) with stone seats, Kaza-Papageorgiou 82–5, Goette 2014; P. Wilson 2010*a*, 41 n. 12.

¹³ See Lambert 1993, Appendix. The quota stayed at 3 after 307/6.

¹⁴ Dem. 57. 10; the speaker probably exaggerates the proportion of demesmen still resident in the deme, but it is likely enough that kin-clusters whose members had already passed scrutiny would leave (cf. ch. 22 n. 118). Euxitheos' claims in §§ 58–9 that Halimous had become notorious for the arbitrariness of its decisions at this scrutiny are suspect, but note Hyp. 4 *Eux.* 3, Din. F XVI 1 on Agasikles (n. 23).

¹⁵ Develin 1991 argues that he was not demarch; certainly the fact that he led the deme's syndikoi in the appeal case proves nothing, and the relation between the deme's register and the lexiarchikon gram-mateion/ekklesiastikos pinax in Athens (ch. 22 n. 54) might well provide an excuse for a councillor to play a leading role in a diapsephisis. However, Euxitheos' claim that Euboulides had wasted much of the day in making speeches and passing decrees (57. 9) seems to suggest that regular deme business was conducted at this meeting in addition to the scrutiny.

(ch. 21).¹⁶ Euboulides is attested as proposer of *IG* ii³ 302, an honorary decree for exiles from Abdera drafted by the Council, in the ninth prytany of his year of service as councillor; the decree—with a rider by Diopeithes of Sphettos—was motivated by indignation at Philip's capture of Abdera shortly after the peace of Philokrates, which puts Euboulides in the same camp as Demosthenes in terms of public policy.¹⁷ He had unsuccessfully prosecuted Plangon, sister of Lakedaimonios of Alopeke (ch. 32 n. 21), for impiety; on this occasion Euxitheos had testified for the defendant in court, and he claims that Euboulides' attack on his citizen rights was an act of revenge (57. 8). Euxitheos had also, however, made himself unpopular during his year of office as demarch by insisting on collecting rents for deme property (§ 63). He and Euboulides were perhaps rivals for influence in the deme; both had been in the panel of well-born candidates from whom the priest of Herakles—presumably an appointment held for life—was selected by lot.¹⁸ Euxitheos, however, does not seem to have been resident in the deme, although he had land and an *oikidion* (shed?), attacked, he claims, immediately after the vote against him (§ 65). He had perhaps been under some pressure to take office as demarch, as a wealthy non-resident member of the deme,¹⁹ and had failed to respect an unwritten agreement by which wealthier members of the deme farmed deme land without paying rent, on the understanding that each would finance deme sacrifices when his turn came to hold office.²⁰ His dedication of arms to Athena in the deme sanctuary was perhaps considered pretentious; he claims that they were removed after the vote against him, and that the honorary decree voted by the deme (presumably after his year of office as demarch) was erased (§ 64).

Euxitheos' family made a comeback in the Lykourgan period when Charisandros I, son of Euxitheos' witness and second cousin (FFBSS) Charisiades, stepped in to take over management of the deme's financial affairs on behalf of the demarch Ischyrias, who seems to have been unable to meet the expenses of his office.²¹

¹⁶ Dem. 57. 26–7, 60–2; witnesses testify that Euxitheos' father Thoukritos had passed an extraordinary scrutiny, but the other information is unsupported (Thoukritos' title to deme membership was not in question: see ch. 7 Case 14). Cf. also ch. 19 nn. 93, 122 on conflicts in the postwar years.

¹⁷ *IG* ii³ 302; Lambert 2007a no. 64. However, it is not certain that Demosthenes wrote the speech for Euxitheos; in any case Euboulides was politically small fry (cf. Daverio Rocchi 1978 on councillors as proposers of decrees).

¹⁸ 57. 46–8; 48 seems to me to imply that both men had been candidates at the same sortition. Emphasis on the noble birth of the candidates would be somewhat absurd in a small deme if a new priest was appointed every year (see ch. 20 at n. 112 for the argument that this was a *genos* priesthood).

¹⁹ About whom, moreover, there were some rumours that he was a bastard born to or conceived by his mother while his father was a prisoner overseas (a variant on the Martin Guerre story); ch. 7 Case 14.

²⁰ Interest on deme capital on loan may be concealed under the reference in § 63 to 'other deme property that people had stolen'.

²¹ *SEG* 2. 7; the proposer, Theophilos, had served as councillor and acted as epistates in 347/6, *IG* ii³ 503 (R/O no. 64, Lambert 2006 no. 3), ii³ 299. Charisandros son of [Dio]nysiades H., *hoplomachos* in 246/5 (arch. Philoneos; *IG* ii³ 1016. 18) is probably the grandson (SS) of the honorand; cf. also Charisandros son of Exekastos, councillor in 371/0, *IG* ii³ 4. 53. Hondius *ap. SEG* 2. 7 suggests that the

Kybernis I, who took office as demarch in the following year, produced a line of distinguished descendants. His son Kydias I died fighting against the Gauls at Delphi in 279; his shield was dedicated on the Akropolis by his kin (*prosēkontes*, Pausanias 10. 21. 5). Kydias' (adopted?) son Kybernis II proposed the Athenian decree concerning the institution of the commemorative Soteria at Delphi, in 250/49; both he and his son Kydias II may have served in the cavalry. A kioniskos commemorating the wife of Kybernis I or II has been found in the deme area.²²

There was further trouble in the deme in the Lykourgan period; Agasikles, admitted as a demesman, was prosecuted as being the son of a public slave, and a public slave himself.²³

Distinguished families in Halimous included, of course, that of Oloros and his son Thucydides, the historian, perhaps allied by marriage with the family of Miltiades and Kimon; they had interests in Thrace. Thucydides had a son, Timotheos, but he does not seem to have played any role in public life. Lysis son of Timo[theos] H., who proposed a decree of the garrison at Sounion in 298/7, may be a descendant.²⁴

The family of Peithias, Aristion, and Presbychares (see Table 26.2) may have been resident in the deme, since a set of three tomb monuments commemorating Aristion son of Peithias with his wife (daughter of a fellow-demesman), and his (?) stepdaughter (WD), the name of his grandson (SS) added to one of them, are said to have been found in the Trachones area. Aristion's son Presbychares I served as councillor perhaps c.370, and the councillor's (?) son Presbychares II is recorded as ephebe in 333/2/1.²⁵

Another family buried in the deme is attested by a stele, with a lekythos on top, found with its base. The base had an epigram (no text supplied), the stele a list

demarch Ischyrius was the target of Lykourgos' speech *Kat' Ischyrian* (F VIII Conomis 1970; the case was perhaps concerned with building operations), but the name is attested in six other demes at approximately this period.

²² Kydias I, Paus. 10. 21. 5, cf. *FGE* 1636–9, Habicht 1985, 84–5; 1995, 138. Kybernis II, *IG* ii³ 1005, arch. Polyuktos. He was granted proxeny at Delphi c.250–245, *FD* III 2. 159 (arch. Kraton); cf. ch. 12 n. 89, raising the question whether Kydias I lived long enough to father an heir. The sources may have exaggerated his youth, but it is also possible that Kybernis II was a kinsman adopted by will or posthumously. Kioniskos, *SEMA* 230, from a site in the deme; the letters reported (Phem—nikos) do not suggest any recognizable name for her father. Cavalry: Bugh 1988, II B 142–3 (no demotics).

²³ Eisangelia (M. H. Hansen 1975, no. 115, A. R. W. Harrison 1971, 50 n. 2); the prosecution speech was attributed to Deinarchos (F XVI Conomis 1975). Hyp. (4 *Eux.* 3) calls him 'Agasikles from Peiraiaios', presumably his residence; he and his father Skythes had allegedly been employed to check grain measures (Dein. F XVI 4–4a).

²⁴ *APF* 7268 IV. Timotheos, Polemon F IV Preller 1838, Suda s.v. *Thoukydides*. Lysis, *IG* ii² 1270. 1–2; cf. *SEG* 45. 134, from the same year but with another proposer.

²⁵ *IG* ii² 5533, 5541, 5579 (two matching lekythoi), plus *SEMA* 80 (*SEG* 22. 172). Presbychares I, *IG* ii³ 4. 25. 11. The name of Presbychares I perhaps suggests a younger son born to an elderly father; this would explain why his son Aristion III could be added to the monument of Aristion II. The father of Presbychares II was [–9–]es, possibly [Presbychar]es I. Astinos, father of Aristion II's (?) wife Kallistomache, was himself commemorated in the deme area by a naiskos (*SEMA* 80). Presbychares II, Reinmuth 1971, no. 9 (Alipherê 2015) II 29, with *Agora* XV p. 444.

TABLE 26.2. Halimous:
Peithias

of names said to have been added successively; the lekythos had labelled representations of a seated male (?) figure, Leon, a child, and a standing woman, Aristomache. The stele names Leokrates I son of Leostratos I H., Leokrates' wife Nikagora, their son Leon, Leostratos II son of Leostratos I, his wife Aristomache, and perhaps a further woman. Nikeratos son of Leokrates H., councillor *c.*370(?), may be a brother of Leostratos I. An epistyle reused in a church near Spata commemorated Demostrate daughter of Leokrates H., with Leok[rates]. Another Leok[rates], perhaps son of Leon or of Leostratos II, was councillor in 304/3.²⁶

For Kettos, Leukonoion, Oion Kerameikon, and Potamos, assigned to the city trittys of Leontis by Traill (1986),²⁷ see the sections below.

INLAND TRITTYS

This trittys certainly included Eupyridai, Pelekes, and Kropidai, a trikomia located in the area of the Aigaleos–Parnes gap,²⁸ with Paionidai, on the slope of Mt Parnes, and Hekale and Kolonai north of Mt Pentelikon. Cholleidai, whose demesman

²⁶ Peribolos, *SEG* 56. 255, Kaza-Papageorgiou 2006, 91–100 (cf. *Mes.-Arg.* 441–3). Nikeratos, *IG* ii³ 4. 25; Demostrate, naiskos frame, *IG* ii² 5536 = *CAT Suppl.* PE 6/RSE 7 (*IG* and *CAT* disagree on the position of the church); Leok[rates], *Agora* XV 61. 284.

²⁷ Traill 1986 (as Loeper 1892) assigns Leukonoion (placed at Peristeri) to the city trittys on the basis of *IG* ii³ 4. 207, a dedication by epimeletai of Leontis found at Daphni, in which the three epimeletai come from Leukonoion, Aithalidai, and Deiradiotai. However, we do not know the site or trittys of Aithalidai, nor do we know whether Leontis appointed its epimeletai by trittys (see ch. 21 nn. 25, 71). If, as argued here, Leontis had a small city trittys, it is certainly possible that for some purposes Leukonoion and Kettos, closer to the city than the tribe's other inland demes, were counted as part of the city trittys; but other arrangements can be imagined. It seems to me still an open question whether the demes of Leontis can be sited so that they produce a contiguous, albeit straggly, inland trittys.

²⁸ St. Byz. s.v. *Eupyridai*. For arguments against associating *IG* ii² 1213 with this group see Lambert 2000b, 78–80.

Dikaiopolis was on bad terms with the Acharnians in Aristophanes' play of that name, may well have lain in this area, perhaps west of Acharnai, since Dikaiopolis trades with Boiotians and Megarians. Leukonoion and Kettos may have extended the line of Leontis demes along the eastern side of Mt Aigaleos as far as Daphne, although the evidence is flimsy: the dedication to Hermes of a phylarch from (?) Kettos found at Daphne, and the dedication of Krates of Leukonoion to Apollo and the tombstone of the sons of Laches of Leukonoion, both found at Peristeri, may have travelled.²⁹

There is also the question of the location of Oion Kerameikon. A site near the Kerameikos would add to the incoherence of the city trittys. There may however be a case for placing this deme near Oion Dekeleikon, in an area near a site tentatively assigned to Hybadai or Aithalidai; this would imply that a two-hamlet settlement going by the name Oion had become two separate demes which had then been allocated to different tribes.³⁰

Leukonoion

This was one of the larger demes in the trittys, having (like Kettos and Paionidai) a quota of three councillors.³¹ It is also the deme about which we have the most prosopographical information.³²

The family of Apollodoros I, known from Isaïos 7, can be traced back into the early fifth century, when Thrasyllus and Gnathios, sons of Mneson L., dedicated a bronze statue of Athena, which remained visible on the Akropolis and was re-used in the Roman period. The family belonged to a *genos*, we do not know which. A son or grandson of [Gn]athios served as secretary to the treasurers of Athena in 407/6, and Philoneos, son of Gnathios (II?) was one of the *epimeletai* of Leontis in 357/6, and is named on the curse tablet *SEG* 58. 265 (A I 7). Thrasyllus II died

²⁹ Phylarch, *IG* ii³ 4. 328; dedication *IG* ii² 4674, early 3rd c. Leukonoe is said by Hyginus (*fab.* 161; another genealogy *ibid.* 200 and in Conon *narr.* 7) to be the mother of Philammon by Apollo, which might suggest a cult of Apollo in the deme (as we shall see, the name Apollodoros was used in one of its leading families). The dedication had been re-used. Tombstone, *SEG* 24. 238. 4th c. tombstones of L. men were also found at Chalandri (*IG* ii² 6736), Menidi (ii² 6748), and Markopoulo (ii² 6718)).

³⁰ Kolonai (see ch. 32 n. 35) may be a parallel for the situation suggested here for Oion. Traill 1986 assigns Oion to the inland trittys but does not suggest a location. Even the location for Oion Kerameikon suggested here would hardly, in terms of modern mapping, make it contiguous with Hekale and Kolonai, on the NE end of the trittys, but there were no maps of Attika in 507. See further below on individual demes for archaeological evidence, and ch. 21 pp. 728–9, on the general problems of this trittys.

³¹ On the reasons for rejecting a suggested location in the mining area see Traill 1986.

³² Rapke 1974 raises the possibility that Kallias son of Didymias (a prominent target of ostracism usually assigned to Alopeke) belonged to L., citing the Didymias L. who served as *diatetes* in 325/4 (*IG* ii³ 4. 35. 55) and as parasite of Athena Pallenis (*SEG* 34. 157. 31, perhaps Kr[atetos], since this name is attested in the deme; perhaps cursed, *SEG* 49. 322); there is also a Didymias in Leontis in the late 5th c., *IG* i³ 1193. 88. However, the name may have been given to survivors of twin births.

while serving as trierarch on the Sicilian expedition; his son Apollodoros II seems to have been born in the 420s, since he successfully sued his uncle (FB) and guardian Eupolis, with the help of his stepfather Archedamos, before the latter was taken prisoner at some date before the end of the Peloponnesian War. He ransomed Archedamos, and gave him further financial aid; by the time of the Korinthian War in the late 390s Archedamos seems to have died. Apollodoros conditionally betrothed his half-sister to the Eumolpid Lakrateides of Paiania when he left to fight in this war, but apparently made other arrangements for her marriage on his return.³³ He himself married also, and had a son, who however died in 356/5, whereupon Apollodoros adopted the son of his half-sister, who perhaps took the name Thrasyllus on his adoption. Thrasyllus was probably already a prominent and wealthy man; he had served as thesmothetes, and was one of the Pythaistai sent to Delphi in 355. Apollodoros had died before the end of 356/5; he had presented Thrasyllus to his genos and phratry in Pyanopsion 356, but admission to the deme had to wait for the election meeting in late 356/5 or early 355/4. At that meeting a protest was made on behalf of Pronapes of Aixone, who had presumably already given notice of his intention to claim Apollodoros' estate on behalf of his wife, Apollodoros' cousin (FBD), daughter of the guardian Eupolis; however, the deme voted in Thrasyllus' favour. His appointment to serve as tribal gymnasiarch for the Prometheia in 355/4 may have been an astute move made with the aim of winning public sympathy before the case came to court.³⁴

Both of Apollodoros' female cousins (FBD) married wealthy men, one husband belonging to Aixone and the other, Aischines, to Lousia. Aischines' son Thrasyboulos was adopted by Hippolochos son of Thrasymedes of Lousia, perhaps his uncle (ch. 2 n. 56).³⁵

The astronomer Meton son of Pausanias also belonged to Leukonoion. Aristomedes son of Meton, councillor in 371/0, may be his son, serving at a

³³ *APF* 1395 (there is an error in the stemma, Archedamos' child was a daughter and not a son). Cf. ch. 19 n. 140. Gnathios I, *IG* i³ 833; the secretary of 407/6, *IG* i³ 316. 64, 340. 21. Philoneos, *IG* ii³ 4. 207. Apollodoros: see chs. 2–3, 19 n. 140, 20 n. 99. He had won two victories as choregos, at the Dionysia in an unknown year (ii³ 4. 442), and at the Thargelia in 362/1 (ii³ 4. 483), both commemorated by dedications. Wyse (1904, 557) thought that Lakrateides had married Apollodoros' half-sister and then divorced her when he became hierophant, but the view that the hierophant could not have a wife is more than doubtful (R. Parker 1983, 87–8).

³⁴ It seems possible that Thrasyllus' father, the husband of Apollodoros' half-sister, belonged to the same genos (conceivably Kephallidai, if they had a base at Daphne; ch. 20 n. 81) and phratry as Apollodoros (cf. Is. 7. 17), although if Thrasyllus was also already a member of Leukonoion before his adoption he was being very disingenuous in §§ 27–8.

³⁵ The name Thrasymedes occurs also in Leukonoion: Thrasymedes son of Kedeides L. freed a slave leather-worker living in Melite in (?) the 320s, *SEG* 18. 36 A 217–20, and his son Kedeides II served as ephebe in 333/2/1 (Reinmuth 1971, no. 9 II 33; Alipherè 2015). The dithyrambic poet Kedeides, active during the Peloponnesian War (*IG* i³ 965; Kratinos *PCG* 4. 204, F 168; Ar. *Clouds* 985 with emendation), seems too early to be Thrasymedes' father, and the name Kedeides also occurs in Phrearrhioi. If Thrasymedes was related to Apollodoros' family, the connection must have been a fairly distant one.

rather advanced age; however, Pausanias II L., whose dikast-ticket was issued in the 360s or 350s, should perhaps be assigned to another branch of the family. Pausimachos I L., trierarch in 356, and his (?) grandson Pausimachos II son of Ion, commemorated as a boy, in the city, by a relief stele, may also be related to the Pausanias lineage.³⁶

In the later fourth century one of the leading families of the deme was presumably that of Demosthenes' uncle (MZH) Demochares and his descendants. Demochares I will have received a generous dowry with his wife Philia, daughter of Gylon of Kerameis; the dowry of her sister, who married the elder Demosthenes, was 5000 dr. Demochares I's ambitiously named daughter Hippokleia married a member of the deme Phlya and genos Lykomidai, who owned land in or near his deme, and brought him a dowry of at least 6000 dr. A funerary lekythos represents her with her mother and perhaps her father and with Thymokles of Leukonoion, possibly her second husband.³⁷

Hippokleia had two brothers: Thymochares, who served as sophronistes for his tribe in ?330/29/8, (*IOrop* 353) and Laches (I). Laches married his cousin (MZD), sister of the orator Demosthenes, and had three sons: Demochares II, followed by his son Laches II, made a career in politics, partly on the strength of his relationship to Demosthenes (ch. 17 at n. 28); Megakleides and Menaichmos were commemorated on a lekythos, perhaps from the deme area, with a Chairestrate (Megakleides' wife?); the name of Megakleides' daughter Phyloi (?) was added later. Megakleides may have served as one of the treasurers of Athena in 354/3; he freed a slave woolworker in (?) the 320s.³⁸

A wealthy family that can be followed into the third century begins with [Arist]omenes I L., whose son [Phory]skos is named on a large base (originally at least three stones) from the Propylaia area, *IG* ii² 6750. Since the surviving stone was used as an architectural member the original form and function of the monument cannot be reconstructed (see Table 26.3). Aristomenes I had a (?) brother, Timokrates I, whose son Phoryskos II

³⁶ Aristomedes, *IG* ii³ 4. 53. 29; Pausanias II, Kroll 1972 no. 102, Class V; Pausimachos I, *APF* 11742; Pausimachos II, *IG* ii² 6743 = *CAT* 0. 866 (*CAT* thinks the stone too early for a grandson, SS, of the trierarch, and suggests that he was a nephew, BS, but see ch. 5 nn. 46–7 on ages of trierarchs; Scholl 1996, no. 131, does not decide). A connection between Aristomedes and the Leukonoian family of *APF* 2092, in which the names Aristomenes and Aristophanes occur, is a slender possibility. On the assignation of Phoryskides son of Aristomenes to Leukonoion and not Alopeke see M. J. Osborne 2009b, Appendix I; ch. 32 n. 16.

³⁷ *APF* 3716; Paschidis 2008, A 49. Dowry, *IG* ii² 2670 = Finley 1952 no. 146 (cf. ch. 20 n. 125); lekythos (mid 4th c., no provenance) *IG* ii² 6737a (p. 891) = *CAT* 4. 324: Thymokles (bearded, seated), Hippokleia and Philia (both standing); the 4th figure, paired with Philia (Demochares?) is lost. If Thymochares (see below) was Demochares' elder son, it is possible that Thymokles was agnatically related to Hippokleia, perhaps as her FBS (for women making second marriages within their kindred see ch. 4 n. 29).

³⁸ *SEMA* 397. [Mega]kleides, *IG* ii² 1442. 5 (date, *AO* p. 286); ii² 1560. 16–19 (reading [Lachetos] as patronymic). An earlier Megakleides of L. served as secretary in 426/5, *IG* i³ 61. 33, 369. 5, 468. 3; possibly Laches II married within his deme.

Note: *IG* ii² 6750 must have supported an imposing monument; this suggests that Phoryskos III died young. It is possible that Aristomenes II acquired his name through adoption to Phoryskos or to his father.

TABLE 26.3. Leukonoion: Phoryskos (*APF* 2092, revised; *IG* ii² 2382, as ii³ 930, downdated)

was ephebe in (?) 330/29/8 (*IOrp* 353), and councillor *c.*280 (*IG* ii³ 930), followed by his son Timokrates II in the 250s (*IG* ii³ 1030. 29). Astophanes I, trierarch in 322, was probably connected with the family, since his son was also an Aristomenes. He in turn was the father of Aristophanes II, general in the 230s (*IEleus* 196), and of Phoryskides, secretary in 248/7 (Diomedon, *IG* ii³ 1010. 1, 1011).

We can also assemble a set of families of L. between whom there were probably ties of kinship, but it is difficult to reconstruct precise links. (1) Kallimachos son of Alkias I, councillor perhaps *c.*370, was commemorated by a stele found on Salamis, with his son Alkias II and with an Aristomache (*SEMA* 395). (2) The names of the two sons of Soteles I L., Alkimedon and Kallistratos (II), suggest a link with the family of Alkias I. Kallistratos served as ephebe in (?) 330/29/8 (*IOrp* 353), and his brother Alkimedon was councillor *c.*280; the latter's son Soteles II served as councillor about thirty years later.³⁹ (3) Chairephon son of Kallistratos (I), who served as ephebe with Kallistratos II, may have been affinally related to Soteles' family. The Theochares son of Chair— who served as councillor with Soteles II in the 250s will be either a cousin (MBS?) of or identical with Theochares son of Chairias L. (in *LGNP* online), who proposed an honorary decree at Rhamnous for Thoukritos of Myrrhinous in 253/2 (*IRb* 10). Chairias and Theochares, in turn, may have been related to Philippos son of Chairias L., commemorated by a lost monument of uncertain date bearing a relief of a vase, and possibly also to Chariades son of Chairokles L., councillor in 370/69, who perhaps appears also in a record of leases of sacred land of 343/2.⁴⁰

³⁹ Whether Kallikrates son of Pamphilos L., councillor in 371/0 (*IG* ii³ 4. 53), had any connection to this family is much more doubtful (see n. 43).

⁴⁰ Chariades, *IG* ii³ 4. 25. 36; lease *Agora* XIX L 6. 18–19, cf. Papazarkadas 2011, 318 no. 90, cf. 91. Philippos, *IG* ii² 6749. Note also the intra-deme marriage of Phanistrate daughter of Leosthenes L. with Lysis L., commemorated by *IG* ii² 6748 (mid 4th c.), recorded at Menidi, so perhaps originally from the deme area. (Byrne 2010 reads Eratoxenos for Kratoxenos in *IG* ii³ 930).

A cluster of interconnections within the tribe Leontis can be reconstructed in a family of L. descended matrilineally from the general Alkibiades III of Skambonidai. His granddaughter (SD) Hipparete II, daughter of Alkibiades IV, seems to have married Phanokles of Kettos, and their daughter Kritolea married Andromachos of Leukonoion. The tomb monuments of their descendants, one of whom bore the name Alkibiades, were all found in the Kerameikos. Leontis daughter of Eucharides L., who may belong to this family, bore an appropriate name, since nearly all her ancestors came from the tribe.⁴¹

City residence is clear in the case of Lysikles son of Lysiades L., who held on deposit the deed of sale of Athenagoras' perfume-shop, which caused such trouble to Hypereides' client Epikrates. Lysikles, and a Lysiades who may be either his father or a brother, both served as trierarchs in the 320s, and Lysikles served as choregos at the Dionysia of 331/0.⁴² Hypereides' client may also have belonged to Leukonoion; an Epikrates son of Pamphilos L. dedicated a statue to Asklepios at Eleusis in the late fourth century. Epikrates' brother Kallikrates son of Pamphilos was councillor in 371/0; a son, Krates, appears as a contractor for stonework at Eleusis in 354/3, guaranteed either by his father Epikrates or by a son of that name, who made a dedication to Apollo at the beginning of the third century, perhaps in the deme.⁴³

Kettos

As noted above, arguments for locating this deme at Daphne are not strong, but a site somewhere near the east side of Mt Aigaleos is probable enough. There is no convincing evidence of deme activity.⁴⁴

As we have seen, Phanokles of Kettos seems to have married a daughter of Alkibiades IV of Skambonidai. Lysippos II son of Lysippos I K., who must have

⁴¹ Knigge 1988, 107–10 no. 17; Bergemann 1997, A 19: *IG* ii² 6719, 6722–3, 6746 + 5434. Leontis, 6738 with 6732, 6747 (her brother Phanomachos).

⁴² *APF* 9437, Hyp. 3 *Ath.* 9. Choregos, *SEG* 25. 177. 23–4.

⁴³ Epikrates, *IEleus* 681 (last quarter of 4th c., *Hesp.* 72, 2003, 460); Krates, *IEleus* 141. 21–22, *IEleus* 145. 9 (Table 6.1). Kallikrates, *IG* ii³ 4. 53. 28; [Epi]krates, ii² 4674. Cf. above, n. 32 on Didymias Kr[atetos?]. The date in *LGPN* Krates 17 should be corrected.

⁴⁴ Vanderpool 1965*b*, on the strength of evidence that Anthemion of Kettos owned land on the line of the 'Acharnian' aqueduct (*SEG* 19. 182), suggested placing Kettos east of Menidi, on the site assigned by Traill (1986) to Hybadai or Aithalidai. *IG* ii³ 4. 328, dedication of phylarch [Dio?]δοτος [Ke]ττ[ιος] found at Daphne (ch. 21 n. 76). *APF* p. 36 discussed (and rejected) the suggestion that *IG* ii² 1173, a deme (?) decree proposed by a Leonteus, should be assigned to Kettos; the name Leonteus is now attested in Kydantidai (*SEG* 39. 148), and since the name Antikleides is also known from that deme there is a strong case for restoring K[ydant.] as the deme of Leonteus son of Antikleides, guarantor of a lease in *Agora* XIX L 6. 16 (see Lambert 1997*a*, 150 no. 3). The argument for taking ii² 1173 as a deme decree is that as currently restored the text has no room for a demotic after the honorand's name, but an association with ii² 1267, a decree of the Daitaleis also proposed by a Leonte[us], does not seem impossible (the date *ante med s.* IV of ii² 1173, presumably based on some examples of *o* for *ou*, is too early both for the award of a gold crown and for this type of text in which honorary decrees and crowns are combined; the *IG* restorations also do not explain why the text was headed by two crowns, which should imply that there were only two honorands).

been another prominent member of the deme, served as trierarch in the 360s and 350s; Lysippos IV son of Lysippos III, who served as phylarch in 282/1 and as councillor *c.*280, may be the trierarch's grandson (SS), providing an unusual example of the repetition of the same name over four generations.⁴⁵

It is worth noting that the brothers Amphiteles and Philokrates, sons of Amphitelides I K., may have served in successive or close years in the Council *c.*370 (?), perhaps at the earliest possible age, since Philokrates' son Amphitelides II served as ephebe in (?) 330/29/8.⁴⁶

Eupyridai

As noted above, this deme belonged to a trikomia with Pelekes and Kropidai; the latter (see section below) was in the area of the Aigaleos/Parnes gap. Eupyridai has been tentatively assigned to a deme site near Kamatero on Mt Aigaleos.⁴⁷ *IG* ii² 1362, found at Kamatero, is a proclamation by the priest of Apollo Erithasios, on his own authority and that of the local deme (unnamed) and of the Athenian demos, prohibiting the cutting and/or removal of wood, *kouros* (branches?), twigs, or leaves from the sanctuary, which was evidently in a wooded area. It was issued with the support of a decree of the Council and Assembly (and presumably of the deme), and the names of offenders or, in the case of slaves, their owners, were to be reported to the archon basileus.⁴⁸

There is little prosopographical information for this deme, but Euktimenos III, who served in the cavalry in the third century, came from a family that evidently took pride in its landed estate: Euktimenos II son of Euktimenos I served

⁴⁵ Lysippos II, *APF* 9560; *IG* ii² 2382 is as ii³ 930 redated to *c.*280, so Lysippos IV (line 7) will be the phylarch of *SEG* 21. 525. 30 and 46. 167. Other names using the root Lysi- in Kettos possibly belong to kin: Euboulos Lysiou councillor 371/0, *IG* ii³ 4. 53, perhaps grandfather (FF) of Stratokles Lysiou, councillor *c.*280, ii³ 930. 6; Lysistratos Euxenou, ephebe in 330/29/8, *IOrop* 353 I 36, left side 11 (apparently a leading figure in his deme's cohort; probably father of Euxenos Lysistratou K., *IG* ii² 6388); Myronides Lysitimou, ii² 6392 = *SEG* 29. 226, early 4th c., from Sepolia; Lysagoras son of Melas, ii² 6390 (from the Akropolis, *AEE* 632), and his brother Melanopos, ii² 6391, from Piraeus. The last two may be related to Melankomas son of Hierokles K., councillor in 371/0, *IG* ii³ 4. 53. 32, and Melanopidas K., councillor in (?) 336/5, *Agora* XV 42. 225 (cf. also *IG* ii³ 1030. 25).

⁴⁶ On brothers serving together in the Council see ch. 17 n. 18. The date *c.*370 for *IG* ii³ 4. 25 (l. 4 Amphiteles) is uncertain, see *SEG* 29. 148. Philokrates, ii³ 4. 53. 31 (371/0); Amphitelides II, *IOrop* 353 I 37. The Hagnotheos (II) K. who appears on *IEleus* 77. 7, may be the son of Hagnodemos son of Hagnotheos I, commemorated on *SEMA* 301 = *CAT* 2. 382e (mid-century).

⁴⁷ *AGC* 21 X6/Y5 nos. 10–11; R. G. Osborne 1985a, 194; Traill 1986. *IG* ii² 6146, cited by Traill, is of Roman date and came from Acharnai (Agiol Saranta, Menidi; see ch. 28 n. 29); the only clearly 4th c. grave monument of E., ii² 6151, was found in the city. On the trikomia see Lambert 2000b.

⁴⁸ The text is dated to the end of the 4th c.; on its evidence for the relations between sanctuaries, demes, and the state see ch. 22 n. 97.

as ephebe in (?) 330/29/8, and Polyktemon son of Euktimenos, secretary in the 240s, may be the ephebe's son and the cavalryman's father.⁴⁹

Theodoros son of Theodotos is now recorded as ephebe at Panakton (1992-400); his father was councillor in (?) 336/5, *Agora* XV 42. 253.

Kropidai

This deme should have been located in the Aigaleos–Parnes gap, since the Spartans came through 'Kropia' when they invaded Attika in 431 (Thucydides 2. 19). It has one recorded liturgist, with the aristocratic name Hippocharmos.⁵⁰ The stele of Polyphilos Phanou Kropidou, found 'on the road to Daphni', probably commemorated a boy who died before he had become a member of the deme.⁵¹ Endemos son of Arrheneides, who served as councillor c.370 (?), may have been related affinally to the family of Rhinon of Paiania, the only other deme in which the name Arrheneides occurs; Endemos' own name, also rare, may imply that he or an ancestor was born in the deme or belonged to a family proud of residing there.⁵²

Pelekes

The deme should have been near Eupyridai and Kropidai, and there is a good case for assigning to it the family of brothers whose land lay next to that of Apollodoros son of Pasion of Acharnai; one of these brothers bore the rare name Arethousios, and an Arethousios son of Aristolaos P. was one of four men who leased the deme theatre of Peiraios in 324/3. Arethousios, therefore, may have lived in Piraeus, while his brother Nikostratos looked after land in or near their deme. A third brother, Deinon, is known only by name.⁵³

⁴⁹ Euktimenos II, *IOrop* 353. 81. Polyktemon son of Euktimenos, secretary in (?) 245/4 (arch. Kydenor), *IG* ii³ 1016; *IG* ii³ 1017; ii³ 1020 (Tracy 2003, 102–3, arch. Lysiades). Polyktemon son of Euktemon, whose demotic is lost in *SEG* 21. 636. 3 (a 4th c. list of uncertain character) may possibly be an ancestor, but this is the kind of combination that may occur in any family; Euktimenos III, Bugh 1988 II B 88. For another possible ephebe, in Reinmuth 1971 no. 9 (Alipherê 2015), see Appendix 1.

⁵⁰ *IG* ii² 1930. 13, 383/2 (he was avoiding payment); *APF* 7671.

⁵¹ *IG* ii² 6557 (*AEE*² 192, 'para tōi Koliniatēi'), second half of the 4th c. Other stones commemorating boys give them the demotic in the nominative (e.g. ii² 5783). The Phanēs of *IG* i³ 1151. 2 may be an ancestor if this part of the list belongs to Leontis; cf. 4 Ktesippos (Aithalidai?), 11 Aischylion (Oion? but Oion Dekeleikon also possible), 12 Euthydikos (Cholleidai?), 14 Endemos.

⁵² Endemos, *IG* ii³ 4. 25. 91–2; a possible grandfather, *IG* i³ 1151. 14, c.450. Arrheneides of Paiania, ch. 25 n. 29.

⁵³ [Dem.] 53, c.366. Apollodoros owned land in three demes ([Dem.] 50. 8), all of it acquired after his father became a citizen, so it is not certain that the land next to that of Nikostratos and his brothers, which seems to have been Apollodoros' principal rural residence (53. 4), was in Acharnai. Arethousios P., *Agora* XIX L 13/ XVI 93; *SEG* 57. 130; if the lessee is Apollodoros' opponent he will have been around 70 by

Philotheros P., whose son Phileas served as councillor (?) c.370 (*IG* ii³ 4. 25. 75–6) has a name worth noting in view of the possible location of the deme on the lower slopes of Mt Parnes; Philotheros son of Philis—, councillor for a deme in Leontis c.280 (ii³ 930. 3), may be a descendant.

Cholleidai

As noted above, this deme should possibly be somewhere near Acharnai and the Aigaleos–Parnes gap, since in Aristophanes’ *Acharnians* the choleric Dikaiopolis trades with Megarians and Boiotians, and his deme, like Acharnai, produces charcoal (also vinegar and oil: *Acharnians* 35–6).

None of the prosopographical evidence about demesmen connects them with the deme. Philippos of Ch. owned land to the west of Plato’s property in Iphistiadai (Diogenes Laertios 3. 41). Kallidamas son of Kallimedon lived in Peiraios, and was honoured by that deme c.280 (*IG* ii² 1214); his father perhaps served as tamias in (?) 325/4 (*AO* pp. 415–16). Ariston and Aristoteles Ch. are attested as carpenters working at Eleusis in (?) 333/2.⁵⁴

The sister of Alkisthenes son of Alkibiades Ch. married Pandaites II of Prospalta, and was commemorated with his family in an imposing monument on the Akropolis. Their father Alkibiades should have been born before 430, so if there is any intra-tribal connection with the family of Alkibiades of Skambonidai it would have derived from Alkibiades II.⁵⁵ A sister of Aristaichmos Ch. married Nausikrates son of Nausimachos of Paiania, who seems to have lived in the city; this marriage involved Aristaichmos and his four sons in a dispute over the guardianship of Nausikrates’ twin sons.⁵⁶ Mikon Ch., who became involved in a series of disputes with his fellow-tribesman Theokrines of Hybadai, was a merchant and probably lived in Piraeus. His son Meixigenes served as priest of

324/3. The Aristoleos who appears in a list of prominent residents of Peiraios who (?) dedicated a statue and repaired the shrine in which it stood (*IG* ii² 2329. 11, c.350?) may be the lessee’s father. For Arethousios note also [Dem.] 53. 20, where he acquires a slave from Archepolis of Peiraios in payment of a debt; however, his slaves worked as agricultural labourers (§ 21). He was richer than his brothers (§ 28; ch. 14 p. 461).

⁵⁴ *IEleus* 159. 34–6; Aristokritos Ch. hauls stone, *ibid.* 89. Dikaiopolis’ demotic may come only from *cholê* (surely not, as suggested by Olson 2002, 180, from *chôlos*).

⁵⁵ *IG* ii² 3829; see *APF* 643 and n. 118 below; ch. 12 n. 103. Alkisthenes served as councillor c.(?) 370, *IG* ii³ 4. 25. 40–1, so was perhaps born by 400. He had a brother called Alkidamas (*SEG* 19. 174. 9), so the name Alkibiades may have derived from an independent family tradition of using names based on the root Alki-. Cf. perhaps *SEMA* 395, Kallimachos son of Alkias L. (and daughter), Salamis.

⁵⁶ *APF* 11263, [Dem.] 38; cf. ch. 3 n. 8. *AG* II no. 44 suggests an association with a naiskos fragment from the Agora (*SEMA* 3411) where Peek reads [Aris]taichme [Niko]kleous [Cholleidou]. This might link Aristaichmos (affinally?) with the family of Nikokles I Ch., his son Nikoxenos I (secretary in some year before 353/2, *IG* ii² 159), the latter’s sons (?) Nikokles II and Nikarchos (councillor c.370?, ii³ 4. 25. 43), and Nikokles II’s son Nikoxenos II, ephēbe and lochagos in 333/2/1, Reinmuth 1971 no. 9 (Alipherê 2015) I 26, II 20 (*IG* ii² 7804, commemorating a Nikokles son of Demetrios Ch., may be considerably later). On Empedion Ch. and his athlete sons see ch. 12 n. 90.

Dionysos c.330 and probably as tamias of the *Paralos*. Epichares I son of Mikon Ch. and Epichares II son of Epichares I. who served as (?) councillors, perhaps between 322 and 307, may be Mikon's son and grandson.⁵⁷

Paionidai

This deme was certainly located on the lower slopes of Mt Parnes (Hdt. 5. 62, A.P. 19. 3). It was the deme of the Konon who as a result of a fight in the Agora became involved in a court case for which Demosthenes wrote a speech (54). Konon and his son Ktesias were commemorated by a stone found at Kephisia, although it seems likely that they had a town house.⁵⁸ Hippiskos son of Aischylos I P., who served as trierarch and dedicated to Athena a crown awarded to him by (?) the demos, probably appears as a landowner at Thorikos in the mining records. His son Aischylos II, attested as a naval synteles and as a choregos, rented temple property from the Eleusinian goddesses; Aischylos II's sister made a dedication to Artemis Brauronia in 334/3. It is unlikely that they lived in the deme.⁵⁹

Two curse tablets found in the Kerameikos probably refer to members of the deme: *Kerameikos III* no. 3 has the demotic in full five times: Timotheos Paionides, Mnesippos, Mnesias Paionides, Mnesias' sister Plangon, her brother Kallippos (no demotic), an illegible name, and Peithandros Paion(ides). No. 6 has only *Pai*, which could refer either to Paionidai or to Paiania, but some names occur on both tablets. The excavator (Kübler) insisted that the tablets were contemporary with the graves, dated to the mid-fifth century; but it is hard to see how a curser could drop tablets during a funeral (indeed, two funerals, since the tablets, though apparently relating to the same affair, were found in different graves); links with a Lycourgan list of epheboi found at Panakton (1992-400) support both the attribution of all the names to Paionidai and a date in the middle of the fourth century.⁶⁰

⁵⁷ [Dem.] 58, *APF* 1904. Meixigenes, *IG* ii³ 416. 16–17 (Lambert 2003*b*); ii³ 1254. 2, 6–7; Epichares I and II, *Agora XV* 56 = *SEG* 34. 127. 36, 38–9. If this is a list of councillors (from a period of restricted citizenship) there is no pressing reason to regard Epichares I and II as cousins. *APF* gives good reasons for thinking that the speaker of [Dem.] 58, also called Epichares according to the speech's *hypothesis*, was not a kinsman of Mikon, despite the coincidence of names (the name is rather common).

⁵⁸ *IG* ii² 7103; Konon I and Ktesias, or perhaps Ktesias and a son Konon II.

⁵⁹ *APF* 450. Hippiskos' dedication, *IG* ii² 4330. Land, *Agora XIX* P 18. 34, P 26. 241–2, P 27. 44 (Papazarkadas 2011, 301 n. 2); sister, *IG* ii² 1524. 214–15. None of these records gives a demotic, but no other Hippiskos is attested and the indications of date and status are consistent.

⁶⁰ I am grateful to Mark Munn for information on the ephebic texts. [Heg]eſtratou may be a possible reading on *Kerameikos III* 3; the restoration [Pha]n[ō]ſtratou was based on *Agora XV* 61. 294, Phanostrato[s . . .]inou. Euteles, father of the third ephebe Euthykritos (II 9), is named on a dedication of 339/8 by small contingents from (probably) all 10 tribes, *IG* ii³ 4. 77 (epilektoi? cf. Humphreys 2010*a*, 80). Matches for *Ker. III* 6, where the demotic is only *Pai*, are rather better for Paiania than for Paionidai, but this may reflect only the difference in deme size: it seems unlikely that the curser had grudges against members of the two demes that begin with those letters. Cf. ch. 14 n. 83. On Antigene see Lambert

Specifically: Hegemachos [Pha]n[o]stratou (no. 3. 3; Hegemachos Pai, no. 6. 3) should be the father of the ephebe Hegestratos Hegemachou (Panakton 1992-400 II 7); Polymnestos Pai (no. 6. 1) may be the father of the ephebe Blepyr[os] Polymnestou, Panakton 1992-400 II 8. Blepyros son of Peithandros P., who served as secretary to the council and demos in (?) 343/2 (*IG* ii³ 4. 75. 16-17, cf. 37) and proposed *IG* ii² 189 before 353/2, could be the father of Polymnestos and grandfather (FF) of the ephebe. Antigenes, no. 6. 2, may be the father or son of Phileas son of Antigenes P., councillor in (?) 336/5 (*Agora* XV 42. 244), possibly proposer of ii³ 436, and hieropoios perhaps in the early 330s (*IG* ii³ 416).

Hybadai

There is no solid evidence on location.⁶¹ The best-known demesman is Theokrines, who became engaged in a series of lawsuits involving Mikon of Cholleidai. Either Theokrines or a homonymous grandfather had been condemned before c.341 for embezzling or mismanaging tribal property while serving as epimeletes or tamias. Theokrines was councillor in 328/7. He probably lived in Piraeus or in the city.⁶²

Diognetos and Hypsimos II, sons of Hypsimos I H., dedicated on the Acropolis crowns awarded by their tribe and other bodies. There were 3 crowns, *IG* ii³ 4. 231, ch. 12 n. 85; a dedication to Herakles seen by Ross at Kato Vraona, reading [Hy]psi[m]os Hy[—]|Diog[n]etos —|Hêrakl[ei] may have been made by the same pair if we restore Hy[bades] rather than Hy[psimou] in ll. 1-2. In that case the Hypsimos son of Diognetos H. who was councillor c.333 (*SEG* 28. 52. 51) and tamias of the *Paralos* shortly before 334/3 (ii² 1623. 225) will be H. II and not a hypothetical H. III (*LGP*N's entries anyway are confused, and *APF* 13915 is out-of-date).

Daisiades H. went to Samos as a kleruch, but was buried in Athens.⁶³

2008*b* no. 9 (*IG* ii³ 436), 2001, 2004*b* no. 10 (ii³ 416, *SEG* 53. 92/54. 153). Cf. possibly Antigenes Ant [-c. 6-] Pai, *IG* ii² 1570 + *SEG* 18. 44. Panakton has produced 2 Leontis lists of the Lykourgan period (see below at n. 112); possible dates are 334/3/2, 332/1/0, or 328/7/6 onward. There was also a post-Lykourgan dedication by Hippothontis (Humphreys 2009, 89).

⁶¹ *AGC* 21 X7/Y6 no. 9 is a deme-site on the left (E) bank of the Kephisos between the streams Adamis and Chelidonou, extending on both sides of the latter; no. 10, S of the Tatoi aerodrome, a fairly large deme site, Vanderpool 1965*b*, 174-5, just NE of the three red asterisks marking *Wasserleitung* on *KvA* sheet V; no. 11, a small village site north of the aerodrome, where inscriptions relating to the aqueduct (Vanderpool, *ibid.*) were found. It is not clear how many small demes these sites represent.

⁶² [Dem.] 58. 14-16; Theokrines alleged that the debtor was his grandfather, and his opponent seems to concede this point. *Pace* *AO* 356, it seems to me more likely that he was a tribal epimeletes than that he was tamias of the tribe's councillors.

⁶³ *IG* ii³ 4. 23; the dedication of the tribal crowns was not made in a tribal sanctuary, unless it found its way to the Akropolis from elsewhere; *APF* 13915, with *SEG* 28. 52. 51. On *APF* 13946, note that the

Aithalidai

Like Hybadai, this deme cannot be securely located, although it may have occupied one of the small deme-sites south of Dekeleia.⁶⁴ One of its families rose to a leading position in Athens in the early third century. Its first attested member, Eteokles son of Chremonides I, served as agonothetes of the Dionysia at the end of the fourth or beginning of the third century, and was responsible in the late fourth century for entertaining Plouton. One of his daughters, Pheidistrate, served as priestess of Aglauros, and his sons Chremonides II and Glaukon played a leading role in Athens' preparations for the 'Chremonidean' War, Glaukon travelling round Greece to negotiate alliances while his elder brother (who may have stayed longer in Egypt) remained in the city.⁶⁵

A family in A. with mining interests is known from several records (see Table 26.4). Kephisodotos I appears in 367/6 as lessee for 20 dr. of a mine at Besa bordered by his own ergasterion and by land owned by Kallias of Lamptraï (*APF* 4810, ch. 23 n. 82), and in 363/2 as one of the arbitrators in the dispute of the Salaminioi. His son [Apolexi]s registered and leased (for 20 dr.) a mine in (?) the 350s and appears again, probably also as registrant, c.345–340. The Konon A—who appears in the early 340s, possibly as a landowner, and probably again, as landowner, in the 340s, and as the owner c.340 of an ergasterion near the 'lophos Bambideos', if he did not belong to Anaphlystos (ch. 32 at n. 75) may be Apolexis' brother; Konon's homonymous son registered a mine at

suggested connection of Phaidrippides H. with Phaidrippos, priest of Asklepios in the second quarter of the 4th c., is doubted by Aleshire (1989, 213). *APF* 14997, add the choregia for boys at the Thargelia of 352/1 of Phrynaïos son of Phrynichos I H. (*IG* ii³ 4. 489, Koumanoudes 1970*b* no. 7). His son Phrynichos II served as ephebe in (?) 330/29/8, *IOrp* 353 col. I 22. Daisiades: *IG* xii 6. 262 IV 22, *IG* ii² 7585; ii² 11014 = 11033 may be his daughter.

⁶⁴ The grave-stele *IG* ii² 5396 and dikast-ticket Kroll 1972 no. 68d of Paramonos Phanodemou A. (mid 4th c.) were found at Kypseli, but this carries little weight.

⁶⁵ The family fell just outside *APF*'s chronological net; it remains surprising that we hear nothing of them earlier in the 4th c. Eteokles: *IG* ii² 3845, 3458 (on the latter text see Humphreys 2007); ii² 1933. 11. The latter text records men who 'strewed the couch and ornamented the table' for Plouton in successive (?) years; Epikrates son of Peisianax of Sounion, who served six (or more) years before Eteokles (l. 5), was ephebic lochagos in 333/2/1 (Reinmuth 1971 no. 9/Alipherè 2015 col. I 24, II 17–18; *AO* 384; in *LGN* Epikrates 126, reference to the year 365 seems to be an error). Pheidistrate, *IG* ii² 3459. Chremonides was young enough for Zeno to fall in love with him in or after 306, when the philosopher arrived in Athens, if we can believe D. L. 7. 17. Ferguson's argument (1911, 197 with n. 2) that Chremonides' service as commander of a Ptolemaic fleet must be dated to 242/1 and not before or during the Chremonidean War, because Teles (*peri phugês* p. 23 Hense 1909), writing in the 230s, refers to his command as 'in our time', may be invalid; 'old' (*palaia*) events for Teles are those of the period before Alexander. On the other hand, Teles seems to refer to a period when both Chremonides and Glaukon were in Egypt. Lykinos' phrourarchy in Megara, mentioned with Chremonides' command, is dated to the 260s in Hammond and Walbank 1988, 270. On Glaukon see Humphreys 2007, 70–2; Goette 2007, 125; G. J. Oliver 2007*a*, 243 n. 72; Paschidis 2008, A 55–6 and 510–13; M. J. Osborne 2015, 2016. Lambert 1999*a* 115, XX suggests that they belonged to the Salaminioi.

TABLE 26.4. Aithalidai:
Kephisodotos

Amphitrope *c.* 320.⁶⁶ The family is also known from two dedications, one expensive, and two funerary monuments; given their obvious wealth it is likely that the trierarch of *c.* 330, *APF* 8316, was [Apolexis Ke]phisodoto[u Aithalides]. Apolexis' son Kephisodotos II made a dedication to Athena on the Akropolis base *IG* ii² 4324; it may once have stood near the large, curved monument bearing bronze (?) statues by the sculptor Demetrios of his grandfather Kephisodotos I son of Kyna[rbos] and his uncle (FB) Konon I son of Kephisodotos. Demetrios' work seems to belong to the first half of the fourth century, so this monument may have been set up in the 350s, perhaps by Apolexis. Kephisodotos I (seated) and Konon I (standing, bearded) probably also appear on *IG* ii² 10653 (*CAT* 4. 258, giving the provenance as Odos Acharnon) with two women, perhaps Kephisodotos' wife and daughter. The Kephisodotos son of Konon represented as a beardless cavalryman on the lekythos *IG* ii² 5391 will be K. III son of Konon I.⁶⁷

Pythodelos A. is attested as making a dedication to Asklepios before the middle of the fourth century, *IG* ii² 4361, but cannot be identified with the dedicant of ii² 4360 which belongs to Keos (*IG* xii 5. 575, see *SEG* 42. 181; *CEG* I 346 = *SEG* 24. 387 comes from Delphi, and we do not know the city of the Pythodoros son of Pythodelos named there).

⁶⁶ Kephisodotos I (N[ame], D[emotic], *Agora* XIX P 5. 72-6, L 4a. 8; Apolexis (N, P[atronymic], D) P 9. 18-21, P 25. 23 ([N], P, D); Konon A— P 20. 88, P 22. 8, P 26. 225, 300 (all N only); Konon III (N, P) P 38. 14. The name Konon is not uncommon, but the other bearers are not connected with mining.

⁶⁷ *IG* ii² 5391 = *CAT* 3. 430a (with an erroneous provenance) is dated early 4th c. by Kirchner (followed by *LGN*), but 3rd quarter by Proukakis-Christodouloupoulos 1970 and Stupperich 1977 (I, 178; II, 162 no. 145; the similar relief *SEMA* 438 is dated mid 4th c., *ibid.* II, 166 no. 239, see ch. 29 n. 16). Since the name Kynarbos is rare (otherwise only perhaps *IG* ii² 2345. 83 with *SEG* 47. 187, in Agryle), there is a good chance that our family (and that of Agryle?) descended from a daughter of the Kynarbos who dedicated *IG* i³ 745 on the Akropolis *c.* 500-480 (cf. ch. 12 n. 93). Zinserling 1968 argues that the career of the 5th c. sculptor Demetrios should not be extended to include *IG* ii² 3828, but see now Keesling 2010a, 196; 2012. Hurwit 1999, 251, erroneously calls Kephisodotos a general.

Oion Kerameikon

*IG ii*³ 4. 53 places this deme in the inland trittys of Leontis (Diakris), and it seems possible that a community called Oion which contained more than one settlement centre was split in 507 (or on some subsequent occasion) between the inland trittyes of two tribes, Oion Dekeleikon being assigned to Hippothontis and Oion K. to Leontis. There is still a site in the area called Keramidi, near Baffi, where Byzantine remains may cover an earlier deme settlement.⁶⁸

As in other homonymous demes, we are frequently unable to determine the tribal affiliation of men from one or the other Oion.⁶⁹ However, the well-known family whose disputes over the estate of Hagnias gave rise to Isaios 11 and [Demosthenes] 43 belonged to Oion Kerameikon, as did Hagnias' matrilinear half-brothers Glaukon and Glaukos, sons of Glauketes I. O. There is no evidence that anyone in this group was resident in the deme. Hagnias II's estate contained a large olive-grove at Araphen; Stratokles owned a house in Melite and another in Eleusis, and land at Thria; Stratokles' brother Theopompos had land at Oinoe (we do not know which) worth 5000 dr., and a town house. They had a (minor) record of public service: Hagnias II had apparently died while serving as ambassador, perhaps to Macedon; his cousin (FBS) Euktemon had served as archon basileus; Phanostratos II son of Stratios II was councillor in 371/0, and his cousin (FZS) Glaukos son of Glauketes I (Hagnias' half-brother) served not long afterwards. Glaukos' son Glauketes II was one of the hieropoioi appointed for the Pythais of (?) 326/5, and was given the title of proxenos by the Delphians. Hagnias III, son of Makartatos, served as ephebe and lochagos in (?) 330/29/8; he (or a descendant, Hagnias IV) was phylarch at some date between c.288 and 262.⁷⁰

⁶⁸ If the situation is ascribed to post-Kleisthenic adjustment the mechanism might have been that a hamlet whose inhabitants had initially registered in Dekeleia later claimed separate deme status. Baffi-Keramídi, *AGC* 21 X7/Y6 nn. 1–2, is closer to Dekeleia than Bugiati (nn. 4–5), which is usually ascribed to Oion Dekeleikon; the name Keramídi might perhaps be explained as modern and derived from the remains of ancient tiles on the site (cf. possibly Kokla, 'bones?', between Liopesi and Spata, ch. 24 n. 67). Even if Oion K. is located in this area it does not seem possible to construct a trittys that stretches continuously from Oion to Hekale.

⁶⁹ *IG ii*² 6990 and 7009, apparently the same stone, from Bugiati, may belong to either Oion; the same is true for Alexias O., *APF* 529, who married a woman of Oion, ii² 7000, and his son Alexandros, *SEMA* 485 (from Bugiati), but since the case mentioned in Hyp. 4 *Eux.* 12 may have concerned the rights of Hippothontis, they perhaps belonged to Oion Dekeleikon (ch. 30 n. 52). On the name Opsiadēs in Oion and in Potamos see n. 114 below. *IG ii*² 7005 (? = *SEG* 22. 173 + *AD* 25 A, 1970, 82 no. 6), from NW Hymettos, wife (?) and daughter of Xenophilos O.; the name Philoxenos occurs in O. Kerameikon later, *LGP*N no. 40.

⁷⁰ See ch. 7 Case 9; *APF* 2921; Humphreys 1983*a*, 1986*a*, 2009 (*IOrop* 353). Hagnias (?) IV, *IG ii*³ 949. 27; Bugh 1988, I B 16. The council service of Phanostratos (*IG ii*³ 4. 53. 60, 371/0) and Glaukos (*IG ii*³ 4. 25. 85) may have been connected with the efforts of Hagnias' and Glaukos' mother (Phanostratos' aunt, FZ) to secure Hagnias' estate for Glaukos' brother Glaukon (ch. 7; 17 n. 15).

TABLE 26.5. Oion Kerameikon:

Lysiades

The Oion family that used the names Astynomos and Lysiades, which perhaps started with Lysippides son of Lysiades of *SEMA* 491, *c.*375, and may have produced the archon Lysiades of 244/3, is now attached to Oion K. by the record of Theotimides son of Astynomos (I) as ephebe at Panakton (1988-1 = *SEG* 38. 67; see Table 26.5). His father was probably the Astynomos I son of Lysiades I who dedicated *IG* ii² 3831, found in the theatre of Dionysos, and freed a woman slave living in Piraeus in (?) the 320s.⁷¹ The Lysiades O. who acted as guarantor for Xenokles of Sphettos perhaps about the same date⁷² may have been the ephebe's elder brother Lysiades II. The latter's son Astynomos II dedicated *IG* ii² 3832, probably set up near his grandfather's stone (ch. 12 n. 91), and was made proxenos of Thermoi in Aitolia *c.*262 (*IG* ix 1² 17. 64, *SEG*

Glaukippos O., whose son Glauketes (III) was buried in Piraeus shortly before 317 (*IG* ii² 6987/8) and probably served as diaitetes in 330/29 (ii³ 4. 33. 52-3), may have been an older brother of Glaukos. *CAT* 2. 861 = *SEMA* 2134 (lekythos, no provenance) may commemorate Makartatos son of Theopompos (Prospalta) with his wife. Marchiandi 2011*a* misreports me as saying that there was a mantis in this family (only a basileus).

⁷¹ Astynomos I may have been a brother of Lysippides son of Lysiades of Oion, recorded on *SEMA* 491, *c.*375, but in this case we do not know the tribe. On the family see Habicht 1982*b*.

⁷² *IG* ii² 1593. 18 with *SEG* 52. 142 (Lambert 2002*a* with 2001 n. 29), attributed by Tracy 1995, 104, 107, to the cutter of *IG* ii² 354 = ii³ 359, whose dated work ranges from 337 to 324. One might think that the manumission (*IG* ii² 1553. 19-20) took place shortly before the death of Astynomos and the guarantee was given soon after it, but this is not a necessary assumption.

32. 559). His son Lysiades III, the archon of (?) 244/3, contributed to the epidosis of 248/7 (*IG* ii³ 1011), and Astynomos III was made thearodokos and proxenos at Epidauros c.225 (*SEG* 11. 414. 35–6). Several members of the family are recorded in the third-century cavalry.

Another ephebe of Oion K. in this list, Pasion son of Pasion, was presumably an ancestor of Theokrisios son of Pasion, councillor in 228/7 (*IG* ii³ 1139).

Antiphanes son of Phaidrias A., listed on the other ephebic dedication from Panakton (1992-400), had a brother Exopios who served in (?) 330/29/8 (*IOrop* 353).

Hekale

We can deduce from the story of Theseus' visit to Hekale, known from fragments of Kallimachos' poem, that Hekale lay on a possible route from Athens to Marathon via Mt Pentelikon (Brilessos), at a point from which the traveller descended into the Marathon plain. Trinemeia, Kolonai, Aphidnai, Melainai, and Dekeleia figured in the story.⁷³ The most likely location seems to be the upland plain at Koukounar(t)i, where a considerable amount of classical material has been recorded, although some of it may have been moved there for use in the medieval monastery buildings.⁷⁴

On the question whether Koukounar(t)i was a deme site or only a sanctuary it is worth quoting the report of Waldstein (1895, 29), since it has been little consulted: 'The whole plain is so full of tile fragments as to make it certain that this valley, the only one of any extent between the upper nooks of the plain of Athens and the plain of Marathon, a high valley of rich loam seldom seen in Attica, must have been the seat of a deme of some magnitude and importance.' In addition to the Tetrapolis calendar *SEG* 50. 168 and votive material he found tombstones and eight 'cisterns' perhaps used for wine. *KvA Text* III–VI, 57–8, and Milchhöfer 1887, 313, nos. 376–7, also note the fertility of the plain; Milchhöfer saw a dedication to Aphrodite. Smith and Lowry (n. 74) found material perhaps suggesting another small deme (or

⁷³ *FGH* 328 F 109; Pfeiffer 1949; Barigazzi 1963; Hollis 1990 on Kallimachos' *Hekale*. F 88 (Hollis) Trinemeia; F 169, 238, Theseus' route; F 253 Aphidnai, 266a Melainai, 272 Dekeleia, 300 Kolonai. Note Skempis 2008, 13, on the links between Hekale and Marathon, implying that the deme lay towards the E side of Pentelikon.

⁷⁴ See also *AGC* 21 X8/Y6 no. 35; Buck 1889, 162–3; R. B. Richardson 1895; Lock 1986, 493; ch. 31 n. 44. Report by Smith and Lowry (1954) in the ASCS in Athens, which Ron Stroud kindly copied for me; sherds preserved there, A 28 box 76. Modern Ekale seems to have been named on the basis of Milchhöfer's location of the deme; there was no corresponding village at the date of *KvA*. D. M. Lewis's argument for a site 'at or near' modern E. (1963, 32; followed by Ismard 2010, 215: 'sans doute') is imprecise and has to be seen in the context of his rejection of Koukounari.

hamlet?) site apparently on a hill marked Makri Buri on *KpA* XIX, with a possible smaller site nearby.⁷⁵

Lambert (2000*a*) argues that Koukounar(t)i was a sanctuary of the Tetrapolis and not a separate deme; he noted that Richardson and Jameson saw stele bases there, but there is no proof that the calendar stele stood on one of them. Its present height is over 65 cm, so the whole stone must have been over 2m high even if Marathon had the lion's share of column II; such a slab was well worth transporting for re-use, perhaps carried up on the (ancient?) road between Koukounar(t)i and the Marathon plain described by Ober 1982. If the source was one of the Tetrapolis demes it was presumably Probalinthos (Vrana: ch. 25 n. 14).

Hekale was the site of a festival of Zeus, the Hekalesia, attended by members of neighbouring communities (we are not told which).⁷⁶

Onomakles H., attested as syntrierarch before 356, became the heir of the politician Leptines of Koile (*APF* 9046), which suggests city residence. Philokles son of Prokles I H. was honoured at Rhamnous in 255/4 (or 301/0; see *SEG* 56. 202) for services to the general and garrison while acting (with Diodoros son of Oinostratos of Anagyrous) as chiliarch. [Philokom?]ides, who served as councillor c.250, was presumably Philokles' brother, and father of Prokles II son of Philokomides.⁷⁷

⁷⁵ I report here a letter sent to Stephen Lambert and to me in 1999 by Jameson (cf. Jameson 1999):

'I should record that in 1965 a stele base was visible at the site of the excavations (Richardson [1895]), which rather argues against the inscription having been brought to Koukounari for a secondary use. My notes read: Ample ancient marble ashlar blocks built into near ruined church, just W of 5-year old Ayia Paraskevi; chisel marks. I noted the base size as 0.13 x 0.50. Unfluted column. Round altar in front of church. In fields c.200 m. S of church some large marble blocks including (1) large euthynteria? block [0.60 x 0.49, I suppose refer to this block, as does a drawing of what looks like a projecting moulding]. Evidently too large and unwieldy for moving to the old church. (2) stele base, width ca. 0.13 m. [max. preserved?] (c.0.10 max, pres. thickness of the FS stele [0.114 SL]). Black glaze sherds here (not found around church). Milchhoffer AM 12. 1887. 313 mentions at Kukunarti, Klosterruine n.ö. Stamata, 2 votive reliefs goddess throned 'mit Schemel'. Cf. text for Karte von Attika, Heft III–VI, pp. 57–8, Aphrodite seated with dove, another in two pieces showing 2-horse chariot etc. He thought of the Aphrodisia of Plotheia. Kukunarti not only a sanctuary but a settled deme. [All old notes—not checked. Not impossible that I have confused things.] Authority for this area being the site of the old ASCS dig was Vanderpool. For some reason I recorded the place as called Koukounarthi. Of course, I may be wrong and perhaps both stele and base and other useful blocks were brought here for some Christian construction [the monastery?]. Stele bases don't travel as easily as stelai, it seems to me.'

However, if the place was a deme site it could have had its own stelai. The 0.60 x 0.49 figure reported by Jameson may have been a note taken from *IG* ii² 1358 of the dimensions of that stone. Note also Goette and Weber 2004, 39, horos of a Herakleion, said to have come from Koukounarti. For re-use of ancient stones in later buildings on Pentelikon see Goette 2001, 264–5 on Penteli Monastery. Tsophopoulou-Gkine 1982 puts Hekale at Mygdaleza, but this seems to me too far W (see ch. 30 n. 57).

⁷⁶ Plut. *Thes.* 14. 2; the association of the festival with Theseus probably post-Kimonian, R. Parker 1996, 169 (but based on earlier relations with Marathon?).

⁷⁷ *SEG* 56. 202 = *IRb* I, archon Kle[omachos] or Kle[archos]. [Philokom?]ides, *IG* ii³ 1030; Prokles II, *IOrop* 102 (no demotic), 240–215, proxenos.

Kolonai

In Kallimachos' *Hekale* the heroine had married a man from Kolonai, which suggests that the demes were neighbours, Kolonai presumably lying north of Hekale (ch. 32 n. 35). The best known liturgist from this deme or Kolonai (X), Philostratos, clearly lived in Athens. Metaneira and Neaira stayed in his house c.380; he was known as a rhetor, and acted as witness for Apollodoros of Acharnai shortly before 340. He adopted his grandson (DS) Phainippos.⁷⁸ Konon son of Menekrates K. was buried on Salamis; he will have been related to Menestratos son of Menekrates, councillor c.370, and Menestratos' son Menes, councillor in 304/3.⁷⁹

APF 12231, [—]os (?) son of Prokles I K., challenged in a diadikasia in 383/2 (*IG* ii² 1930 with *SEG* 54. 223), whose son Prokles II served as a dockyard superintendent in 369/8 (ii² 1617. 75), now has a grandson, Therikles son of Prokles, recorded as ephebe at Panakton (1992-400).

COASTAL TRITTYS

This trittys contained Phrearrhioi, Sounion, Deiradiotai, Potamos Deiradiotes, and (in my view) the other two Potamos demes (Upper and Lower). The location of Sounion is not in doubt, although it evidently included more than one settlement. The trittys did not form a continuous stretch of territory; Sounion was separated from Phrearrhioi (at Olymbos or Mokrisa) by Anavyssos, Atene, Besa, and Amphitrope, and from Deiradiotai and the Potamos demes by Thorikos. It does not seem unlikely that some adjustment to the tribe-trittys-deme structure took place in this area, perhaps as a result of population growth in the early fifth century, when new silver-bearing levels were discovered in the mining area and production expanded.⁸⁰

⁷⁸ APF 14734; [Dem.] 59. 22-3; 42. 21. Cf. ch. 25 n. 66.

⁷⁹ *IG* ii² 6526 (*AEE* 687, following *CIA* 664, calls this stone a k(ioniskos)—Pittakes said it was a stele—so it may belong to the late 4th or the 3rd c.). Menestratos, *IG* ii³ 4. 25, *SEG* 29. 148. 111; Menes, *Agora* XV 61. 305 (long generations; cf. ch. 17 n. 15).

⁸⁰ On settlement sites see below, under individual demes. If we want to maintain the assumption that in the original Kleisthenic scheme each trittys was conceived as a territorial block (I admit, a problematic enterprise), we would probably have to assume that Sounion-Phrearrhioi and Thorikos-Kephale were trittys-centres in the original scheme and that Sounion-Phrearrhioi in subsequent adjustments lost Besa, Amphitrope, Atene (Lohmann's identifications, 1993*a*, see ch. 32), and the coastal plain of Anavyssos, but was compensated by acquiring Deiradiotai-Potamoi from Thorikos. It would also be necessary (and to me quite plausible) to assume that in the first decades of the reform internal migrants tended to change their deme affiliation, and that some attempt was made to adjust the system to internal migration at least in SE Attika, where the process might well have been much more visible than elsewhere. Of course, by

Phrearrhioi

A *lex sacra* of the deme (mid third century) was found in the Olymbos area, and this provides some basis for location; however, there is no ancient material at the site where the stone was found, and it might have been set up in a sanctuary of Demeter that the deme did not control. In any case, the deme may have contained more than one settlement; it seems to have stretched from the inland plain behind Mt Olymbos across the inland part of the Anavyssos plain into mining country, and Ary may have belonged to it.⁸¹ It was a large deme, appointing nine councillors in the fourth century.

The *lex sacra* concerns the cult of the Eleusinian goddesses and refers to an altar and *aulê* in the Eleusinion, an altar of Plouton, and a torch and torch-holder (*lampadeion*). It seems quite likely that the text regulates the deme's relations with Eleusis or with the City Eleusinion; in any case the Eleusinion with which it is concerned does not seem to have been used exclusively by members of the deme.⁸²

Phrearrhioi was the deme of Themistokles, a member of the *genos* Lykomidai, whose main centre was in Phlya. In his period of political prominence he owned a house in Melite, but he seems to have been well informed on mining issues; possibly his family had moved from Phlya to Phrearrhioi in the second half of the sixth century to become involved in the developing mining industry. Mnesiphilos, linked with Themistokles on ostraka, belonged to the same deme. Themistokles' descendants returned to Attika at some date after his exile; one

the 4th and even the later 5th c. rich Athenians who bought land in the area did not change their deme affiliation, but this does not tell us about the silver-rush of the 480s–470s. Alternative explanations of the discontinuity of this tritittys (still maintaining the assumption that continuity was the aim) would be that it derived from the earlier *naukratic* structure or that the authorities in Athens had only vague ideas of the relative positions of settlements in this area and hence accepted patterns produced by local alliances and rivalries (ch. 21 at nn. 21–2) or by political manipulation in the interest of dominating elections (Stanton 1984*b*, 1990, a view I reject except possibly for X Antiochis, ch. 21 n. 31).

⁸¹ See Lohmann 1984, 1993*a*, and ch. 32 nn. 55, 69. On the view suggested here, the archaic settlement at Agios Panteleimon would have belonged to Phrearrhioi rather than Anaphlystos. Cf. also the topographic discussion in Vanderpool 1970*b* (V. puts Phrearrhioi SE of Olymbos, Lohmann puts it in the N part of the Anavyssos plain at Mokrisa); AGC 21 X8/Y2 nos. 12–15; Traill 1982, 170 (Phr. at Ag. Panteleimon, Aigilia at Olymbos); Lauter 1993 (Korres 2009, 209 refers vaguely to Pheriza and Ary). A peak sanctuary on Mt Olymbos and a terrace-sanctuary at Trapouria (Lauter 1980) may have belonged to Phrearrhioi (or perhaps to the Eleusinion of SEG 36. 206, since there is a church of St Demetrios in the area); it was apparently constructed in the 3rd c. Mining at Ary, AD 60 B 1, 183–8.

⁸² Vanderpool 1970*b*; Lupu 2003 = SEG 53. 170; 2005, 159–70. The reference in line 7 to [*dēm*]otai and others, and the use of the name *Phrearrhiôn* in line 12, imply that the text does not deal with purely internal affairs (cf. N. D. Robertson 1999 n. 87). Cf. the relations with the City Eleusinion of Erchia and possibly Paiania (Humphreys 2004, 154 n. 61). The name of Eumolpides Phr., now attested as a *kleruch* on Samos c.350 (IG xii 6. 262 IV 3), is suggestive. The argument for a local Eleusinion in Wijma 2013 does not seem to me conclusive. See also Bultrighini 2015.

of his sons, Kleophantos, is mentioned by Plato in the *Meno* (93d) as an undistinguished member of the cavalry. However, any land he owned had probably been purchased with funds brought from Persia.⁸³

One of the relatively prominent families in the deme in the fourth century—doubtless city-based—was that of the doctors Dieuches and his sons Epeuches and Diakritos, who followed their father's profession and were crowned by the city with three other men in the Lykourgan period. Epeuches' daughter —ippe made a dedication at Brauron; Diakritos served as councillor c.(?) 350,⁸⁴ and Dieuches II son of Demarchos Phr., perhaps his nephew (ZS?) served as secretary in 349/8 and as diaitetes in 330/29.⁸⁵

On Jacoby's suggestion (*FGH* III B b I, 57) that the atthidographer Philochoros was related to Kleidemos of Melite see ch. 29 n. 10.

⁸³ *APF* 6669; ch. 20 n. 66 on Lykomidai (I do not wish to imply that gennetai were not mobile before the 6th c.). For Phrearrhian mining activity cf. Epizelos Phr., who owns an ergasterion in Besa, *Agora* XIX P 13. 76, (?) P 30. 14, and [A]genor Phr., who registers a mine shortly before 350, P 10. 13 (*APF* 13374). Phaidrias, one of the Thirty, should on Loeper's hypothesis have belonged to the coastal trittys of Leontis, but this is not a secure indication (cf. P. J. Rhodes 1981*a*, 435); he could conceivably (with a textual emendation) be Phaidimos of Phrearrhioi, whose son Kallaischros appears in *IG* i³ 1040. 20, and whose (?) descendant appears as host of a dinner-party c.347 as 'Xenophron the (offspring) of Phaidimos of the Thirty' in Dem. 19. 198 (hardly son, perhaps a grandson, or a collateral relative; cf. possibly the Xenophon Phr., son of Teisis, who served as councillor in 371/0, *IG* ii³ 4. 53. 9). If any of this very conjectural reconstruction is valid, Phaidimos may have married a sister of Kritias (son of Kallaischros).

⁸⁴ Diakritos, *Agora* XV 23; the date c.350 may be too early. Spelling -*as* for -*ous* appears only at the end of l. 6, where the cutter may have wanted to save space (*LGP*N Kalliades 50 has the date c.350–325, elsewhere mid 4th c.). Lysanias in l. 6 may be the L. who manumitted slaves living in Thymaitadai and Skambonidai c.(?) 330, and perhaps had a sister who made a dedication to Artemis Brauronia in or after 343/2 (*IG* ii² 1524. 176–7). Kalliades (l. 10) may be an error for -*ous*, since the text has patronymics in ll. 6, 8, and 12; in any case he should be the father of Eupolis, ephebe in (?) 330/29/8, *IOrop* 353, and of Diognetos (*SEG* 57. 227). There are unexplained lacunae in the text (the position of the secretary would be very odd if col. II belonged to Akamantis), and Phrearrhioi may not have its full complement of 9 councillors; this might point to a date between 322 and 307, earlier rather than later. Also one would rather expect that Demarchos (II) son of Dieuches (I) (named after his grandfather, councillor in (?) 336/5, *Agora* XV 42) would have served before his presumably younger brother Diakritos, listed in XV 23.

⁸⁵ *IG* ii² 4359, see ch. 6 n. 2. Epeuches' daughter, *IG* ii² 1517. 214; Dieuches II (born too early to be BS, of an intra-deme marriage?), ii³ 294. 2; ii³ 296. 3f.; ii³ 297. 2; ii³ 4. 33. 50. The place in this family of *Dieuchos Theophilos Phrearrhios* (an error for Theophilou?) and *Lysimachē Theophilou Phrearrhiou* [*thug*][*a*][*t*][*ē*][*r*] (?), commemorated on *SEMA* 700, a stele of unknown provenance dated after 350, is unclear (cf. also Theophilos Phr., liturgist in 331/0, *SEG* 25. 177. 36–7; erroneously 23. 177 in *LGP*N). *IG* ii² 11144 = *CAT* 3. 872, a lekythos representing a seated woman, Lysimache, with a standing bearded man, Dieuches, and a younger woman, Chrysanthis, dated before 350 by *IG*, later by *CAT* (no provenance), should be connected. There is probably also a relationship with Dieuches of Myrrhinous, represented with his (?) son (Dieuches sitting, Diokles standing) on the lekythos *IG* ii² 6889 (no provenance); Diokles served as priest of Asklepios in 340/39 (Aleshire 1991, 3992/4041), and his son (?) Die[uches?] II M. appears as member of an eranos on a horos of the late 4th or early 3rd c., Finley 1952 no. 114. Possibly the father of Dieuches I M. married a sister of Dieuches Phr. and called his son after the boy's MB rather than his MF? Ch. 25 n. 57.

A group of families in the deme may possibly be linked by use of the name Sostratos (see Table 26.6). The most prominent was probably that of Archestratos I, who died at Mytilene while serving as general in 406/5; as an adolescent in the 430s he had associated

with Perikles' son Paralos. Archestratos II Phr., who in 348 owned land bordering that of Plato at Iphistiadai, was probably a grandson (SS).⁸⁷ Autokleides son of Sostratos I Phr. was secretary to the treasurers of Athena in 412/1; a sister may have married Philokrates I son of Philokomos Phr., whose (?) grandson (SS), Philokrates II son of Sostratos II, served as one of the ephebic officials *c.*330⁸⁸ and as diaitetes in 329/8. His (?) nephew (BS) Sostratos IV son of Philokedes was ephebe in (?) 330/29/8. A daughter of Sostratos II may have married Olympiodoros I son of Phantias I Phr.; Olympiodoros' brother (?) Aganor/Agenor is attested between 356 and 346 as eponym of a trierarchic symmory, and as registrant of a mine *c.*350. Sostratos III son of Olympiodoros served as councillor *c.*350, and Phantias II son of Agan[or] *c.*325.

The appearance of Charias son of Peithias Phr. as a guarantor at Eleusis in 354/3 (*IEleus* 141. 63–4) suggests that the family of Peithias son of Leon 'Salaminios' commemorated on *IG* ii² 10208, from the Dipylon area, which names a Plangon wife of Charias (names added successively) may belong to this deme (the guarantor would probably be the brother of Leon II). Peithias I may have been the son of the Leon Salaminios recorded by Plato (*Apology* 32c; cf. Xenophon *Hellenica* 2. 3. 39, Andokides 1. 94) as a victim of the Thirty; this history would give them a good reason for perpetuating the *cognomen* Salaminios, which seems to have derived from the island rather than the genos (cf. Lambert 1997*b* n. 34). Peithiades son of Diodoros I Phr., councillor in (?) 370/69 (*IG* ii³ 4. 25), since his name is rare, may have come from the same family. The Diodoros (II?) Phr. who was the second owner of the Class V dikast-tablet Kroll 1972, 92b (360s), may have been Peithiades' son rather than his father; if so, he would be the father of Eubolos son of Diodoros Phr., councillor *c.*(?) 325 (*Agora* XV 52. 21). The mother of Diodoros (III) son of Kallimachos Phr., ephebe with his brother Alkimachos in (?) 330/29/8 (*IOrop* 353) may have been a daughter of Diodoros II, married within the deme.

A number of Phrearrhians made their way out into the Aegean. Philokles was on Samos as a kleruch in 346/5, but served as councillor in Athens in (?) 336/5. Eteochares son of Leochares appears as secretary of the naopoioi on Delos in 346–344. Lykon son

⁸⁷ Note also Pasiphon I Phr., attested as secretary of the Council and Assembly in 413/2 (*IG* i³ 136, *AO* 156), as (?) general in 410/9 (*AO* 165–6), and as archon of the fleet in 409/8 (*IG* i³ 1191. 117); see ch. 16 s. 'Leontis' on competition for high military office in Leontis *c.*420–405. Since the names are rare, and since we have another family of doctors in Phrearrhioi (n. 85), there is some argument for attaching to Pasiphon I (as grandson, SS?) Pasiphon II, who witnessed for Demosthenes (30. 34) as a doctor in 362/1, and his sons Iatrokles and Ergochares, who probably followed his profession. Iatrokles was taken prisoner at Olynthos in 348/7, promptly released without ransom by Philip, and appointed as ambassador in 347/6; Aisch. 2. 15 (cf. §§ 20, 126) describes him as 'brother of Ergochares', which implies that E. was well known, though we have no further information on him. Given this professional background, it is also likely enough that the Iatrokles of *IG* ii³ 455 (Lambert 2007*a* no. 91; Tracy 1995, 126) is the same man, having left Athens for Macedon after Chaironeia—or even sooner—but retained some goodwill towards his (de facto ex) fellow-citizens. In that case Pantenor Phr., whose sons Pasiphon (III?) and Archeptolis served as ephebes in (?) 330/29/8, *IOrop* 353, and whose daughter Patrokleia had a dowry of 1500 dr. (*Agora* XIX H 82, 'late 4th c.'—or earlier, *c.*330?) will have been the brother of Iatrokles and Ergochares; perhaps the oldest of the three, given the birth-date of his sons.

⁸⁸ *IG* ii³ 4. 342, 8 (332/1/0?). Peek's suggested reading [*loch*]agôn (1942, 21 no. 24) is excluded both by the structure of the text and by Philokrates' age and tribal affiliation; [*ex epimele*]étôn might epigraphically be possible, but the history of the office of epimeletes at Rhamnous is very unclear.

of Thersias held local office as polemarch on Imbros towards the end of the fourth century; he may be the Lykon Phr. who served as councillor in Athens in (?) 336/5, and may be descended from the Lykon Phr. recorded on a list of ships' crews of (?) c.400.⁸⁹

Sounion

The deme area has been intensively explored, and we now have a thorough study, Goette 2000 (for the Hellenistic period see also G. J. Oliver 2011, 44–6). It seems clear that S. had at least three habitation centres, although emphasis may well have shifted from one to another over time. The Sounion promontory had a sanctuary of Athena from the eighth century and settlement from c.700; there are finds from the seventh and sixth centuries in the areas of the sanctuaries of Athena and Poseidon, and Herodotus mentions a penteteric festival at Sounion in the early fifth century. There was possibly also a heroon of the hero Phrontis. The cape was fortified in 413/2; houses, surveyed in 1994 after fire had cleared the cape, were built in a technique similar to that of the walls, but their orientation corresponds to that of the temple of Poseidon, built in the 440s. In 220/19 Theomnestos of Xypete, strategos of the shore, added a temple and temenos of Asklepios to the existing sanctuaries. A building described as agora-like was constructed on the beach west of the cape in the Hellenistic period. The road from the fort to the sanctuary of Athena was lined with graves.⁹⁰

⁸⁹ Philokles, *IG* xii 6. 261. 3, *Agora* XV 42. 216 (cf. Euangelos, n. 86 above). Eteochares, *ID* 104-23. 5, 104-24. 15 (cf. Leochares and Epichares of ? Phr. on *IG* i³ 1040, a list of ? councillors; Ianbos ? Phr., i³ 1193. 140); his daughter Aischylis married Polymnestos son of Kallimachos of Gargettos, and is represented with him and a small girl on *IG* ii² 5949 = *CAT* 2. 874a (no provenance; dated before 350 by Kirchner, later by *CAT*). Polymnestos' father may be named on ii² 5932 = *CAT* 2. 351 (Scholl 1996 no. 292, 370s), now in the Piraeus Museum. Polystratos of Gargettos, who appears on a list possibly of diaitetai of 343/2 or 336/5, *IG* ii³ 4. 31. 9 (Humphreys 2010a), may be their son, and father of Polymnestos Polystratou G., councillor in 304/3, *Agora* XV 61. 50. Lykon son of Thersias (omitted by *LGN* Thersias 2), *IG* xii 8. 47, between 318 and 307?; cf. *Agora* XV 42. 215, *IG* i³ 1032. 198 (ch. 21 n. 41).

⁹⁰ Useful maps and plans in Goette 1999, 2000 (no bibliography, no index) and Goette 2001, 202–7. See also Stanton 1996; Goette 2003; Salliora-Oikonomakou 2004; Blackman a. o. 2013, 231–53; Theodoropoulou-Polychroniadis 2015. The first Athena temple is dated to the late 6th c.; it was apparently destroyed in the Persian wars and replaced in (?) the 440s; the Poseidon temple was begun in (?) the 490s, destroyed by the Persians, and replaced in 444–440, with temenos walls and a propylon (Travlos 1988, 404–29). There was presumably an earlier cult of Poseidon on the site (cf. ch. 18 n. 6), perhaps mentioned in Homer *Od.* 3. 278; there was also a peak sanctuary with finds of the 7th–6th c. on Gur-i-Kuki, NNW of the cape. Penteteris, Hdt. 6. 87; cf. perhaps the bronze Wappenmünzen die from S. published by Kaligas 1997. Phrontis, Kearns 1992, s.v.; Antonaccio 1995, 166–8 (but see Goette 2003). Altar of Apollo, *SEG* 50. 208/53. 213. Fort and houses, Lauter a. o. 1989; Goette 1995a, 2000 (cf. earlier plan *AE* 1917 pl. 4, reproduced in Pouilloux 1954b, pl. 32. 2). Asklepios, *IG* ii² 1302, cf. 2857; beach site, *AGC* 21 X9/Y1 no. 28 with *Hesp.* 7, 1938, 75–6. Tombs: Lauter a. o. 1989, cf. Lauter 1992. Langdon 2010 suggests that the saltmarsh (*halê*) of the Salaminioi was at Pasalimani or Panormos (ch. 20 n. 108).

As mining activity intensified, settlement spread up the Agrileza valley, where the deme inscription *IG ii*² 1180, thanking Leukios S. for his gift of land for an agora, was found (not *in situ*). The question whether this was the deme's main agora and, if so, where the stone originally stood, is controversial; it remains possible that the text refers to a secondary marketplace needed by the inhabitants of the valley, who would have included slaves working in the mines both singly and in gangs. Several substantial farm buildings and mining establishments have been explored in this area, including the 'Princess's Tower', so named from the luxury of its architecture; inscriptions have allowed us to identify its probable owners, Timesios S. and his descendants, who are also attested as landowners in the mining records of the poletai and were perhaps affinally linked to other local families. There were burials along the road leading up the valley, which was probably known as Nape in antiquity.⁹¹ We do not know whether the property (*ousia*) of Euphronios S., squandered by the guardians of his son Theaitetos (Plato *Theait.* 144c–d), lay in the deme.

The genos Salaminioi had a centre at Sounion with a shrine of Herakles, at a place called Porthmos, generally taken to be one of the harbours facing Makronisos, Panormos or Pasa Limani. A stoa was built on the north side of the latter bay in the late fourth century, and perhaps extended in the third century; an agora complex may date to the second or first century, and there are also Hellenistic houses and graves in the area. Since Strabo places 'Sounion' east of the cape, this area may have become the main settlement centre in the Hellenistic period.⁹²

⁹¹ Plan of Agrileza valley, *AGC* 21 figs. 29–30; Goette 2000; 2001, 208. *IG ii*² 1180 was not found *in situ* and Lauter 1988 (*SEG* 40. 127), Lohmann 1993*a* (106–7), and Goette 1995 think the stone may have been moved from the cape in modern times; Goette 2000, 112–13, argues strongly against the idea of an agora in the Agrileza valley. However, his claim that interest in mining was decreasing by mid-century seems unsubstantiated, and he does not explain why the stone should have been moved from the cape to the valley. *AD* 49 B 1 (1994 [1999]) 67 reports a settlement centre with a public building in the valley. See also Sekunda 2010. Kakavogiannes 1982; Lauter a. o. 1989; Lauter 1992; Lohmann 1993*a*; and Goette agree that the deme centre in the classical period was at the cape. Tombs: Bergemann 1997, 208 X 1–7; X 7, opposite the Princess's Tower (see *AD* 44 B 1 1989 (1995) 83–4) may belong to the family of Sounion in which the rare names Timesios and Semonides were used (Langdon and Watrous 1977, *SEMA* 1672). A Timesios (I) son of Antipatros appears, without demotic, as a landowner at Nape in 367/6, *Agora XIX* P 5. 57, and again (with demotic) *c.*345/4, P 24. 9–10 (cf. perhaps P 14. 5–6). Semonides I, recorded as owning land at Thrasymos *c.*341 (P 26. 328) may be his son, and may be the father of Timesios II, who served as ephebe and lochagos in (?) 330/29/8 (*IOrop* 353. 5 II 27, see Humphreys 2009). Grave of (?) Timesios' wife (from Thorai), *SEMA* 249, *SEG* 54. 337. For further material on this family see Table 26.8. See also Goette 1991, Vanhove 1994 (quarries); Kalcyk 1982, Lohmann 1984, 1993*a* (roads; identification of Agrileza valley as Nape); Salliora-Oikonomakou 1985, 2004 (burial areas); Goette 1994*c* (farm).

⁹² Agoras at Sounion, Kakavogianne and Anetakis 2012, 195–8; Salaminioi, J. H. Young 1941; *AGC* 21 X9/Y1 no. 18, relief of *c.*360, victorious athlete and three tripods, with labours of Herakles, found at Punta Zeza. Lauter a. o. 1989, 29 puts the Salaminian sanctuary on Gur-i-Kuki and the rest of their property on the beach W of the cape; Kakavogiannes 1982 and Goette 2000, 72–4, following Young,

A kouros was dedicated at Sounion c.550 to Zeus Archegetes by the Sounieis (*AR* 2014–2015, 111), perhaps at that date a naukraria. We do not really know how temple-building on the cape was financed; c.460–450 the city Assembly passed a decree concerning dues to be paid to Poseidon by ships anchoring at Sounion. The only known deme decree is the text from the Agrileza valley, mentioned above, which honours Leukios son of Theokles for his gift of land to be used by demesmen and non-demesmen as an agora. The provision that no one, whether demarch or private citizen, is to build within the area of the new agora suggests that the buildings which had encroached on the former agora may have been erected in at least one instance by ambitious demarchs. Leukios is also attested as a landowner and mine lessee from 367/6 to 340/39 and as paying for his tribe's eutaxia team c.330. His father Theokles was perhaps one of the 'heroes of Phyle', i.e. one of the democrats who had accompanied Thrasyboulos of Steiria in his invasion of Attika in 403; the Theokl— who bought land at (?) Thorikos in the hekatostai sales could conceivably be a son of Leukios, Theokles II, but there are many other possible identifications.⁹³ The deme had a dubious reputation for laxity in its scrutiny of candidates for citizenship.⁹⁴

The genos Salaminioi contained a substantial number of Sounians, enough to produce a partial division of the group in 363/2, which by the third century had hardened into a more complete separation (ch. 20 at n. 111). The archon of the Sounian Salaminioi in 363/2 was Diphilos I son of Diopeithes I; his brother Diophanes I is recorded as owning land in or near the deme, at Maroneia, in 367/6. Diopeithes III, son of Phasurkides S., one of the oath-takers from the Sounian Salaminioi in 363/2, may be either a cousin (FBS) of Diphilos I or a nephew (ZS), son of a marriage between a sister of Diphilos and another Sounian

identify Punta Zeza as Porthmos (cf. *AD* 53 B 3, 1998, 1029–30), and report evidence of habitation at Pasalimani from the 5th c. For possible temple foundations (c.500?) on Punta Zeza see Goette 2000, 63. Agora, Salliora-Oikononakou 1985, 2004; cf. Traill 1986, 144 (Str. 9. 1. 22/C. 398). Lambert 1997*b*, n. 24 suggested that this was the agora of *IG* ii² 1180, but see ch. 20 n. 108. The 5th c. dedication *IG* i³ 1026, by a Euphoros, came from Pasalimani. 4th c. *horos hodou* on road to Panormos, *SEG* 54. 241 (Salliora-Oikononakou 2004, 71–2). If the importance of herding increased in the Hellenistic period (see however Forbes 1995) Makronisos may have attracted interest as a pasture area (cf. Jameson 1989, n. 8); the use of the island as a prison in recent times has inhibited archaeological exploration.

⁹³ *IG* i³ 1024; Papathanasopoulos 1983 catalogues remains of over 13 kouroi found at Sounion. See chs. 18 at nn. 96–101, 21 nn. 5–6 on naukrariai; ch. 22 n. 96 on 'state intervention' in cult (*IG* i³ 8). Deme decree, *IG* ii² 1180; it is dated c.350 on the basis of spelling, but since this is not necessarily a reliable indicator in rural areas it might perhaps be later. (*IG* ii² 1181 is now identified as an ephebic decree from Rhamnous, *IG* ii³ 4. 339.) Leukios, *APF* 9057, *IG* ii³ 550 (50 dr. is the cost of his phiale, not his liturgy); owns land at Sounion, *Agora* XIX P 5. 46, 80; P 13. 5; [Leuk?]ios Theok[leou]s S. leases a mine, P 29. 5–6 (340/39). Theokles I, Raubitschek 1941; Theokl[es?] II?, Lambert 1997*a*, F 8a 31 (no identification suggested).

⁹⁴ Anaxandrides *PCG* 2 p. 240, *Anchises* F 4, 370s–360s (one may be a slave today, Sounian tomorrow, in the agora the next day; I take 'the agora' to be a reference to activity as a rhetor, not—as *PCG*—to resale). Sounion's Council quota was raised from 4 to 6 in 307, whereas that of Phrearrhioi remained unchanged. See also Lambert 2010*a*. Goette 2000 has a list of Sounians (apparently taken uncritically from *PAA*).

family. Diphilos I's son Diopeithes II was active as a general in the Hellespont area c.343/2–341/0; the general's son Diphilos II is attested as syntrierarch in 325/4. Diophanes II Diopeithous, who served as councillor in the 320s, may be the son either of Diopeithes II or of Diopeithes III.⁹⁵

Aischines (1. 63) insinuates that Diopeithes II had been the lover of his fellow-demesman Hegesandros, for whom he later acted as arbitrator in a case involving the public slave Pittalakos, c.360.⁹⁶ Hegesandros was one of three brothers, sons of Hegesias of Sounion; he married an epikleros, which might imply that he was the oldest. However, his brother Hegias acted as one of the oath-takers for the Sounian branch of the Salaminioi in 363/2, and there are prosopographical arguments for regarding him as the oldest of the three brothers.⁹⁷ Hegias is not attested as playing any role in politics, and may perhaps have taken care of family interests in Sounion while his brothers made a career in the city. Hegesandros had, on Aischines' account (1. 111), been the 'wife' of the 'actor' Leodamas (II) of Acharnai; he and his brother Hegesippos, nicknamed 'Krobylos' were well known in the city, perhaps even notorious in their youth,⁹⁸ but had serious political ambitions. Hegesandros proposed a decree concerning the provision of pay for the Athenian garrison on Andros in 357/6. Hegesippos may be the author of [Demosthenes] 7 and 17; he was one of the ambassadors (with Demosthenes, Lykourgos, and Polyeuktos of Sphettos)

⁹⁵ APF 4487. Diophanes I, *Agora* XIX P 5. 59; cf. P 20. 67; Diophanes II, *Agora* XV 52. 25, c.325 (it is possible that his father was another Diopeithes (IV), son of Diophanes I); —es Diophanous S., councillor c.250, *IG* ii³ 1030. 5, is presumably a son of Diophanes II. The ephebe [. . .]phanes S. of the early 3rd c., *IG* ii³ 957. 26, may be either another [Dio]phanes or a [Theu]phanes, descended from the Theuphanes son of Sophanes S. who appears as a Salaminian oath-taker in 363/2 (*Agora* XIX L 4a 72, *LGPn* Theophanes 28). Diopeithes II (*AO* 343/2ff.), see *FGH* 328 F 158 comm. Diphilos II: it has been suggested that he is the Diphilos for whom Demosthenes proposed the honour of sitesis in the prytaneion (Dein. 1. 43); M. J. Osborne 1981a, 165 n. 39 suggested that Demosthenes proposed a posthumous award for Diopeithes II after his death in (?) 340/39, from which Diphilos benefited.

⁹⁶ *AO* (269–70) dates this episode in 361/0, but recognizes that Hegesandros can hardly have served as tamias to the general Timomachos in a year when he was also acting as councillor and tamias of Athena. Either Timomachos had been general earlier (*APF* 6351, following A. Schaefer 1885–7 II, 331 n. 6) or the text of Aisch. 1. 109–10, dating Hegesandros' service as tamias and councillor in Athens and his involvement with Timarchos of Sphettos, must be emended (cf. W. Thompson 1970e, 2 n. 4; this has the advantage of solving the problem of the date of Aischines' birth, cf. ch. 24 n. 6). Cf. M. H. Munn 1993, 188–9 n. 5; Fisher 2001, 357–62.

⁹⁷ Aisch. 1. 95; however, Hegias' son Hegesias II served as tamias of Athena in 349/8, which should imply that his father was born by c.410, and if Hegesandros was older he can hardly have been an age-mate of Diopeithes II; so perhaps we should assume that Hegias was already married when the epikleros became nubile, and did not wish to divorce his wife. Hegesias II made a dedication to Asklepios in 339/8 (Aleshire 1991, no. 6331, *IG* ii² 1533. 22).

⁹⁸ Aischines' account (1. 56–65, 109–11) is evidently over-coloured; Leodamas II (*APF* 13921, cf. Table 28.4) was a pupil of Isokrates who had a political career. The krobylos was linked by Thucydides (1. 6. 3–5) with the 'oriental' style of dressing that had been fashionable in the late 6th and early 5th c., but by the 4th c. was considered effeminate (Kurke 1992; however, Kurtz and Boardman 1986 suggest the term *mitra* for the headdress associated with this fashion; J. K. Davies 2011 thinks it signified nostalgia for the 5th c.).

who travelled in the Peloponnese in 343/2 seeking to arouse resistance to Philip; he proposed a decree apparently concerning an abortive coup in Eretria c.342, and was one of the guarantors of the triremes sent to Chalkis in 341; in 338/7 he proposed a decree granting privileges to two Akarnanians who had fought with Athens at Chaironeia and were in exile from their own country. He was still alive in 325/4, when he paid the debt arising from his guarantee in 341.⁹⁹ The two brothers were Athenian patriots in the Demosthenic style.

Among the other Sounian Salaminioi known to us from further records, Ameinias son of Philinos may be the Ameinias who leased a mine c.350; the Philinos S. who leased a mine in Maroneia in 367/6 for 20 dr. will be Ameinias' father or brother, and they may have been related to Philoneos son of Ameinonikos S., another of the oath-takers of the Sounian Salaminioi, who served as councillor in 371/0. Philoneos' parents were commemorated by a lekythos now in the Piraeus museum; his mother came from a Lamptrian family.¹⁰⁰ Chalkideus son of Andromenes I S., another oath-taker, probably served as trierarch in the 370s; his son Andromenes II is attested as councillor c.325. Theuphanes son of Sophanes, also an oath-taker, may possibly have been related to Theodelos S., who proposed the decree for Leukios. Chariades son of Charikles, the last oath-taker, may possibly have been the brother of a well-known actor called Polos.¹⁰¹

Further Sounians can be identified (as one would expect) in the mining records. Kimon is attested as a landowner c.350; his son Nausiphilos served as ephebe in (?) 331/0/29. The father may well be the Kimon son of Spoudip[pos?] of Leontis whose victory (victories?) with a men's chorus c.365–345 was

⁹⁹ *IG* ii² 123 (boule and demos); 125 (demos: date, *SEG* 34. 67, Knoepfler 1984, *BE* 2013, 193); ii³ 316; *APF* 6351; J. K. Davies 2011. Hegesandros may have been dead by 341. The [Heges]andros Hegesandrou S. who served as councillor c.250, *IG* ii³ 4. 1030, can hardly be his son and is probably a grandson (SS). Cf. also Aisch. 1. 64 (Hegesandros attacks Aristophon). Hegesippos was already active in the courts in 365 according to D. L. 3. 24, but the story is not very reliable. He proposed alliance with Phokis in (?) 356/5 (Aisch. 3. 118, cf. *AO*); on his activities in 344–342 see Knoepfler 1984, 159; *AO*. Hegesippos is called Salaminios by Tzetzes *ad* Lykophr. 883 (Scheer 1908, II p. 286), presumably an allusion to genos membership; the Hegesandros Salaminios of *Et. Mag.* s.v. *Argo* may be the (Delphian?) 2nd c. BCE antiquarian *FHG* 4. 412–22.

¹⁰⁰ *Agora* XIX P 13. 41 (no demotic) Ameinias; P 5. 60 Philinos (if he was Ameinias' father perhaps he died between 367/6 and 363/2, the date of the oath of the Salaminioi?); *IG* ii³ 4. 53. 12 Philoneos; *IG* ii² 7415 = *CAT* 2. 352, Ameinonikos, with Hegesippe daughter of Hegesarchos of Lamptrai. Hegesippe was presumably related to Hegesippos son of Kephisodoros L., commemorated c.350 by a stone found either in Piraeus or on Aigina (*IG* ii² 6669), whose son Kephisodoros II proposed the deme decree *IG* ii² 1204; to Hegemon L., trierarch in some year before 325/4 (*APF* 6300); and perhaps to Pantaleon son of Hegesias L., a candidate for ostracism, and his (?) descendant Hegesias L[amptreus?], member of a college of treasurers and synegoroi honoured by the city perhaps in the Lykourgan period (*IG* ii² 1251. 14, ch. 23 n. 69).

¹⁰¹ Chalkideus, *APF* 15281 (ch. 20 n. 104); Andromenes II, *Agora* XV 52. 24; Theuphanes, cf. n. 95 above; a Polos son of Charikles S. is mentioned as a 4th c. actor in Lucian *Nekr.* 16, cf. Stephanes 1988, no. 2188. Note that the name of Archedeipnos son of Nikodemos S. (*IOrop* 353 II 31) may suggest membership of the Salaminioi.

commemorated by a monument supporting three tripods.¹⁰² Diokles also owned property in the mining area, perhaps at Thrasyomos; –i[d]es Diokleous S., who bought property at Anaphlystos for 800 dr. in the hekatostai sales, is probably his son (see Table 26.7).¹⁰³

Horsy interests (suggested by the name Spoudippos) are otherwise rare in this deme, but Sosistratos S. served as phylarch at some date between 286 and 261 (*IG* ii³ 949. 24); he may be Sosistratos III son of Sosistratos II S., who served as ephebe and lochagos with his brother Sosikles in (?) 330/29/8 (*IOrop* 353. 3–5; II 25–6; *LGPN* Sosikles 15 has the patronymic wrong). Nikesion son of Sosistratos I, member of a board of magistrates *c.*350, *IG* ii³ 4. 63. 4, may be the ephebes' uncle (FB), and may possibly be the father of Nikesias Nik[esionos??], ephebe in Leontis in 333/2/1, Reinmuth 1971 no. 9 (Alpherê 2015) III 9 (Appendix 1). Sosikles' son Sosibios served as councillor *c.*250, *IG* ii³ 1030. 7.

TABLE 26.7. Sounion:
Sosistratos

The impression given by the Salaminioi inscriptions and the mining records, of a deme in which many of the elite retained local interests, is perhaps reinforced by evidence for a relatively high proportion of intra-deme marriages. Menekydes I S. married Kallippis, daughter of Aischron S., and either his son Menestratos I or his grandson Menekydes II married Demagora daughter of Ephodion S.; both couples were buried in the deme, and Menekydes II's son Lysistratos may have married into the family of Timesios S.¹⁰⁴ *IG* ii² 7448, found at Megale Vigla between the

¹⁰² *Agora* XIX P 13. 18; *IOrop* 353 II 28; *IG* ii³ 4. 446. The left-hand tripod was set up on a different occasion from the two to the right of it, although the chronological order cannot be determined (see Matthaiou 1994).

¹⁰³ *Agora* XIX P 13. 17, 30; P 18. 62; Lambert 1997*a*, F 13 B 12. [Athen]ophantos son of Diokles S., councillor *c.*250, *IG* ii³ 1030. 6, perhaps represented with his father or son on *IG* ii² 7413, may be a descendant. Mnesilochos S. registers a mine, *Agora* XIX P 10. 11; Meixiades S. owns property, P 26. 294 (possibly connected via Polyxenos son of Meixias S., *IG* i³ 1515, to Polyxenos son of Polykrates, councillor *c.*370, *IG* ii³ 4. 25. 65, and his sister Kleitaichme, *IG* ii² 7440).

¹⁰⁴ *IG* ii² 7442 (Menekydes I) was found 'north of Sounion', ii² 7425 (Demagora a. o.) in the Agrileza valley. Demagora's sister however married a man of Aphidnai and was buried with him in the Kerameikos, ii² 5725. R. G. Osborne 1985*a*, 140 suggested that Sounians were more inclined to record the origin of

Agrileza and Legraina valleys, may record two intra-deme marriages, between [Lyko]phr[on] (?) S. and —lis daughter of Charias I S., and between Lykophron's son Ergomedes and Glykanthis (III) daughter of [Phra?]sikles S. Glykanthis III may have had a cousin (FBD) Glykanthis II daughter of Euphradion S., who was buried in the nearby deme Atene. Charias II had a son attested in a Delian financial record of the late 340s; he may be Pos[eidippos], whose son Charias IV served as councillor *c.*333. Charias III son of Chairias S., who was one of the treasurers of Athena in 343/2, was perhaps also a grandson (SS) of Charias I.¹⁰⁵

TABLE 26.8.
Sounion: Charias

Timesios' family can probably be traced for five generations (see Table 26.8). The first bearer of the name (which is otherwise attested only in Sphettos) Timesios son of Antipatros, appears as creditor on a horos found in the Agrileza valley (*SEG* 26. 227). Antipatros (II) son of Chairippos S., commemorated with his wife (from Euonymon) on a stele found in Piraeus, *IG* ii² 7418, may be Timesios' nephew (BS). Timesios I seems to have had two sons: Semonides I, whose son is named as a landowner in the mining area *c.*340 (*Agora XIX* P 26. 328), and Doros, who made a dedication to Artemis in the valley with Timesios (III), son of Lysistratos

their wives on tombstones than members of other demes because of the number of non-demesmen who owned land in the area, but I am not sure that the numbers are statistically significant. *IG* ii² 7412, from Piraeus, another in-deme marriage between the son of Kleo[krit]os (Kroll 1972 no. 95a, 360s) or of Kleo[phrad]es (*Agora XV* 42. 198) S. and the daughter of Hierokleides (cf. *IG* ii² 7437).

¹⁰⁵ Bergemann 1997, 208 X 5; *IG* ii² 11985, commemorating the son of a Lykophron, came from the same site as 7448. Glykanthis II, *SEMA* 611, ch. 32 n. 67. *ID* 104-22a 2, [Posei]dippos Chariou S. (d doubtful, no evidence for s); *SEG* 28. 52. 69, Charias Pos[eidippou?]; he may be given a patronymic to distinguish him from his homonymous (?) cousin Charias II son of Chairias (*IG* ii² 1443. 7). Ergomedes' name may suggest mining interests. For another Sounian family, resident in Piraeus, with Delian connections see Phanomachos 19 (and 18?) *LGP*N.

S., perhaps his nephew (ZS; *SEG* 26. 226). Timesios II, ephebe in (?) 330/29/8 (*IOrop* 353) would if the poletai record is correctly dated be a younger son of Semonides I; the ephebe's son Semonides II served as secretary in 272/1 (*LGP*N Semonides 4, *IG* ii³ 903–4, 906). Lysistratos, the father of Timesios III, was probably a son of Menekydes II.

Note: If the Semonides of *Agora* XIX P 26. 328 is the father of Timesios II he should be appearing as a landowner, cf. *ibid.* 232 *peribolos Diotimou*. *SEMA* 611: *SEG* 54. 337 reads Pamph[ile].

TABLE 26.9. Sounion: Timesios

One of the more distinguished families in the deme, for which there is no evidence of local interests in the classical period, is that of Peisianax S., which was probably connected in the fifth century with the Alkmeonidai. The Peisianax who in the 520s set up the grave monument *IG* i³ 1243 at Anavyssos is probably the first known member of the family, which apparently by 507 had moved into Sounion (Table 26.9). Peisianax II S., the first for whom a demotic is attested, was sent in 356/5 to the area north of the Aegean as leader of an embassy whose mandate was to make alliances with the rulers of Thrace, Paionia, and Illyria; references to him by name alone in the decree passed on his return suggest that he was a well-known personality. His son Epikrates served as ephebe and lochagos in (?) 333/2/1, and later as ‘host’ of Plouton.¹⁰⁶

¹⁰⁶ *IG* i³ 1243 = *CEG* 40. *APF* 9688 VIII–IX makes the (reasonable) assumption that a daughter of Peisianax I married Eurypolemos I son of Megakles III of the Alkmeonidai; it does not follow, however, that Eurypolemos became a demesman of Sounion. Peisianax I’s marital alliance with the Alkmeonidai may rest on a previous political association, since his family was presumably prominent among the *paralioi* of 6th c. Attika, but one need not try to place Alkmeonidai in every deme in the area. It seems quite

Another family for which evidence may go back to the fifth century used the relatively rare name Pataikos. Its first bearer may have been [Pat]aĩkos I, perhaps proposer of *IG* i³ 35 (Mattingly 2007). His son Polycharmichos was councillor in 371/0 (*IG* ii³ 4. 53), and Epichares son of Pataikos (II), councillor *c.*333, may well have been Polycharmichos' grandson (SS, *SEG* 28. 52. 70; Mattingly's more complicated reconstruction seems unnecessary).

The ephebic taxiarch in Epikrates' year was another Sounian, Philokles II, whose father Philotheos was elected sophronistes for the year by his tribe. The Philylla daughter of Philokles whose statue, one of a pair by the younger Kephisodotos, was dedicated to Demeter and Kore in the city by her [*mēt*]ér or [*thugat*]ér Philia, was probably the daughter of Philokles I (see Löhr 2000, no. 151). Philokles II, the taxiarch, seems to have had a brother called Diodotos, whose son Philotheos II served as taxiarch of his tribe in 271/0.¹⁰⁷

Another prominent but non-resident demesman of the Lykourgan period was Alexos son of Stratokles I S., represented as an elderly man, probably with his wife, his son (Stratokles II), and a daughter on an unusually large naiskos of *c.*320, found at St John Rentes in the area of Xypete (see Table 26.10). Another daughter was commemorated by a naiskos of about the same date which is said to have come from Glyphada (Aixone).¹⁰⁸ Alexos' wife Philoumene was a daugh-

TABLE 26.10. Sounion:
Stratokles

conceivable that Peisianax II was an agnatic descendant (SSSS?) of Peisianax I. Embassy, *IG* ii² 127. Epikrates, Reinmuth 1971 no. 9 I 24, II 17 (Alipheré 2015), cf. n. 65 above; Appendix 1; *IG* ii² 1933. 5 (the date in *LGNP* Epikrates 126 should be *c.*325–320).

¹⁰⁷ Reinmuth 1971, no. 9 (Alipheré 2015) I 4, 15–16, 20–2; II 13–16; III 11–12, 14–15 (Philotheos, Philokles II; Petrakos 2004 = *SEG* 54. 227 reports, without text, another Leontis dedication of this age-set); *IG* ii² 4025, Philylla (the date should be towards the end of the 4th c., since she will have been born *c.*320); *IG* ii³ 907. 44, Philotheos II (arch. Pytharatos). Amphikleides III son of Amphikleides II S., who in 259/8 (Phil[i]nos) proposed a decree of the Eleusis garrison, *IEleus* 183, may be a grandson (SS) of Sophokles son of Amphikleides I S, proposer in 307/6 of a decree putting philosophers under state control, D. L. 5. 38 (Habicht 1995, 81–2). Cf. perhaps Amphikles S., diaitetes in 325/4, *IG* ii³ 4. 35. 69.

¹⁰⁸ *IG* ii² 7414 = *CAT* 4. 471, *SEG* 31. 211 (Karouzou 1981), Bergemann 1997, 174 no. 625. Archestrata, ii² 7423 = *CAT* 3. 471, Bergemann 176 no. 694 ('Voula' is inaccurate; cf. Beschi 1975). *CAT* 4. 471 suggested that Phanostrate's name was a later addition to ii² 7414, but it may be better to assume that as a daughter of the family (the resemblance of her name to that of Archestrata supports this identification) she did not need to be given a patronymic. Antikles son of Proxenides S. and Antikles son

ter of Theoxenos of Marathon; her sister Mnesiptoleme married into the family of Phormos of Kydantidai (ch. 24 n. 94), and was commemorated on a stele found in the Kerameikos (Table 24.6).

Deiradiotai

This deme has been located on the coast at Daskaleio/Kake Thalassa, but Strabo (9. 1. 22/C.399) has an entry for Potamos as a coastal deme and not for Deiradiotai; *deiras* means a hollow or ravine, which does not strongly support a coastal location (did the deme include the ravine marked on *KvA XI* running NNE from Ag. Nikolaos towards Korone?). Six tombstones of members of the deme, and a horos, made their way to Keratea, and four of these (three from a single peribolos) may have come from the burial area of Senkini–Roudseri along the road leading from Keratea to the coast; this does not necessarily mean that Deiradiotai lay north of the river Potamos. The classical and hellenistic deme-site at Plaka, on the route from Thorikos to Kephale, may be a possible location.¹⁰⁹

Note *IG* i³ 1400, a rock-cut inscription in the Agrileza valley dated c.500–475 naming Lysan[ias] Chairephon[os]; both names are attested in D. in the fourth century.

One of the leading families in the deme in the late fifth century was clearly that of Polystratos, who was a member of the Four Hundred, probably recruited—despite later disclaimers—by his fellow-demesman Phrynichos son of Stratonides, who as general in 412/1 played an important role in preparations for the coup (see Table 26.11). Polystratos was prosecuted twice after the restoration of democracy, hiring Lysias on the second occasion to write a speech delivered by one of his sons in his defence; he was by this time over seventy, and the family apparently felt that his age and his sons' impressive military record gave him a good chance of getting off—if not with an acquittal, at least with a fine that they could afford to pay. They probably had both a town house and a country estate, the latter abandoned, according to Lysias' speech, after the Spartan occupation of

of An—(S?) freed slaves living in Peiraioi (*IG* ii² 1567. 18, 20) and may have lived there themselves. They should be related to Autoboulos son of Antikles S., named on a dedication by (?) officials (at least three different tribes), ii² 3840.

¹⁰⁹ There may have been a sanctuary of Dionysos in the bay. Deiras (cf. Besa): Van Effenterre 1942; Bingen 1953, 621–2. Horos, *IG* ii² 2650 (security for rental of estate of orphan son of Kallias D.; the lessee may not have been a demesman). Tombstones, *IG* ii² 5977 = *CAT* 145, Philainetos D. with Kallistomache daughter of Amyntas of Oe (or Oa? ch. 25 n. 39), Philopolis added (?), from Senkini (?); 5978, a son of Charias D. ('Keratea'); 5965, Apatourios son of Astyphilos I and his son Astyphilos II ('Keratea'); 12967 (Senkini), 12499, 12658, and *CAT* 3. 364c all perhaps from the peribolos of Polystratos D. and his family. Cf. also ii² 5971 (a woman), from Markopoulo. It is not clear how far we can trust statements by the Antoniou brothers (Leonardos 1892) that all the stones in their collection were found on or near their own land at Rudseri.

TABLE 26.11.
Deiradiotai:
Polystratos *APF*
12076

Dekeleia (due to loss of its slave workforce?). Polystratos may well have had some experience of military command before 411, when he was put in charge of a garrison in Eretria; his three sons were all active in the last decade of the Peloponnesian War, mainly in the cavalry, and they probably supported the Thirty. Lykios son of Polystratos, who commanded the cavalry in the retreat of the Ten Thousand in Asia, is generally agreed to be one of them; and contacts with Olbia, which resulted in the grant of privileges (later renewed?) to Lykios' nephew (BS) Philopolis II son of Philopolis I, may go back to travels that began in the years immediately following the restoration of democracy, when life in Athens was difficult for ex-oligarchs.¹¹⁰

Hermodoros son of Straton D., councillor in 371/0 (*IG* ii³ 4. 53. 18), may have been a collateral relative of the oligarch Phrynichos son of Stratonides.

¹¹⁰ *APF* 12076; *Lysias* 20. Polystratos had been condemned and fined on the previous occasion. The speech (11–12, 23) claims that he had grown up in the city but had retired to lead a quiet life in the country, whereas Phrynichos had been a shepherd in his youth (indicating that the deme contained mountainous areas?) but had moved to the city to engage in politics; all this is clearly tendentious, and should not be taken to imply either that Polystratos lacked political ambition (the name of his son Philopolis may be significant) or that Phrynichos' family did not own land. The doubts expressed in *AO* p. 161 about Polystratos' office-holding are probably unjustified. For desertion of slaves to the Spartans after 413 see *Thuc.* 7. 27. 5. Lykios, *Xen. Anab.* 3. 3. 20 etc.; Philopolis II, *Inscr. Olbia* 5 = Dubois 1996, no. 21 (on the date see ch. 24 n. 79). Tomb peribolos, Bergemann 1997, 207 V 4; ch. 11 n. 16. *IG* ii² 12967 = *CAT* 3. 235 is definitely attributed to Senkini/Rudseri, where there seems to have been both a burial area, used also by demesmen of Kephale, and a farm with a tower (*AGC* 21 X9/Y2 no. 4; Buchholz 1963; *AD* 46 B 1, 1994, 66 for the farm). *IG* ii² 12499 = *CAT* 2. 258 and ii² 12658 = *CAT* 4. 237 were confiscated from dealers, and *CAT* 3. 364c emerged in a Sothebys sale in 1990; it cannot be proved that all these vases came from a single peribolos, but it is relatively likely in the case of the 3 vases published in *IG* (see Bergemann 1997, pl. 13. 2); *CAT* 3. 364c is very similar, but the older man portrayed with the armed Polystratos is called Polykrates. If this vase belonged to the same family, we would have to assume that the third son of Polystratos I was called Polykrates and that he, like his brother Philopolis I, had a son called Polystratos (IV) who died in battle; in this case the Polystratos portrayed with Philopolis I on *IG* ii² 12499 would be Polystratos I. On the other hand, it is possible that the workshop responsible for the vases produced two similar lekythoi for different clients.

Potamos

The demotic Potamios was used by members of three settlements, distinguished in some lists as Upper Potamos, Lower Potamos, and Potamos-Deiradiotai. It is not certain whether they all lay in the same area or whether Upper and Lower Potamos were situated near the city on the Ilissos.¹¹¹

A family from Potamos Deiradiotai, which by the second half of the fourth century was probably based in Piraeus, can be traced over three generations (see Table 26.12). Pyrrhos I son of Pankles I was commemorated on a lekythos of the early fourth century; his son Pankles II was perhaps buried with his wife's family in Piraeus. Pyrrhos III son of Pankles II served as ephebe in (?) 330/29/8; a cousin (FBS or FZS), Pyrrhos II son of Euthymachos, served as councillor in the Lykourgan period and had two sons who served together as epheboi in that period.¹¹²

Antikles son of Philoxenos I P., named in a diadikasia list as taking on a liturgy c.380, was probably the father of Demokles son of Antikles and the uncle (FB) of Philoxenos II son of Lysistratos, who both served as councillors for Upper Potamos in 371/0.¹¹³ Aristoteles I son of Opsiades I, who registered and leased

¹¹¹ Traill (1986) places Upper and Lower Potamos in the city trittys. This view is supported by the occurrence in both *IG ii*³ 4. 53 (371/0) and *IG ii*³ 4. 25 (c.370?) of the sequence Phrearrhioi–Sounion–Deiradiotai–Potamos D. (Traill's coastal trittys) and (in variable order) of the group Skambonidai–Leukonoion–Kettos–Upper Potamos–Lower Potamos–Halimous–Cholleidai (his city trittys). Note that *AO* p. 250 has misidentified Upper and Lower Potamos. However, in *Agora XV* 42 (336/5?) all three Potamos demes are grouped under a single heading between Deiradiotai and Phrearrhioi, and in *SEG* 28. 52 (c.333) Upper Potamos appears between Phrearrhioi and Sounion, while Lower Potamos is between Skambonidai (?) and Kropidai, and Potamos Deiradiotai between Eupyridae and Aithalidae; in *Agora XV* 43 (335/4) Upper Potamos appears between Cholleidai and Oion. In any case, Traill is prepared to admit that trittyes of councillors did not always correspond with topographical trittyes (cf. ch. 21 at nn. 25–7). The discovery of two Potamos tombstones (*IG ii*² 7259, 7272 = *CAT* 3. 932, see Schmaltz and Salta 2003, 52), both commemorating women (one married to a Paianian, 7259), in the Upper Ilissos area is not a strong argument for location (another Potamos stone now found at Panepistemioupolis north of Athens, between Kypseli and Patissia, *AD* 25 B 1, 1970, 123 = *SEMA* 577, kioniskos of Amyntas Amyntou, but it is dated to the late 2nd c. BCE). The tribal reorganization of 307/6 (Traill 1978a, 107–9) in which Potamos Deiradiotai was transferred to Demetrias and Lower Potamos to Antigonis, while Deiradiotai and Upper Potamos remained in Leontis, shows that the pairs Deiradiotai/Potamos D. and Lower/Upper Potamos could for some purposes be thought of as 'split demes', but this is not a strong argument for a geographical separation of Upper and Lower Potamos from Potamos Deiradiotai. The mining activity of Aristoteles of Upper Potamos (below, n. 114) also lends some support to a location in SE Attika.

¹¹² Pyrrhos I, *CAT* 3. 777 = *SEMA* 297 (*Pyrrholés* on stone; name added later to lekythos of c.380 representing a daughter of Sostratos of Kephale; a sibling, Sosi-, *SEMA* 296; *CAT* misread Pyrrhos' patronymic); Pankles II, *IG ii*² 7269, found with ii² 5524, Bergemann 1997, 195 L 12 (family of Philophron son of Kephisokles of Halai Aixonides, whose descendants achieved some prominence in the Hellenistic period); Pyrrhos III, *IOrop* 353; Pyrrhos II (perhaps a DS of Pyrrhos I, from an intra-deme marriage, given his age) *Agora XV* 52. 29 (on the date see Tracy 1995, 131; his sons, Panakton 1992–400).

¹¹³ *APF* 1073; *IG ii*² 1932. 16–17, *IG ii*³ 4. 53. 35–6 (ch. 17 n. 15).

TABLE 26.12.
Potamos
Deiradiotes:
Pankles

a mine at Amphotrope *c.*340, also perhaps belonged to Upper Potamos, since his grandson (SS) appears as one of its councillors in 303/2.¹¹⁴

The family of Simulos P. had early contacts with the city, but nevertheless is also attested in the mining records in the fourth century. Its first known member may be the Simulos (I) who with a Dorotheos dedicated a bronze statue (*IG* i³ 834) on the Akropolis soon after the Persian wars. His son Demochares I served as one of the treasurers of Athena in 445/4 or 444/3, and made a dedication with his brother; Demochares II, who served as trierarch in the 370s and was

¹¹⁴ *Agora* XIX P 26. 252, 259; the appearance of Aristoteles II in *Agora* XV 62. 25 (ch. 17 n. 15) shows that the demotic of the mine lessee should be restored as [Potami] and not [ex Oiou] (so *LGP*N Aristoteles 53, but with an erroneous reference to Polystra[te], wife of Opsiades of Oion and presumably mother of his daughter Hierokleia; *LGP*N Polystrate (2) repeats the erroneous relationship with Aristoteles, who does not appear on *SEMA* 492; at Opsiades (5) the mine lease is attributed to the fictive Aristoteles of Oion, who should not be restored in *Agora* XIX P 28. 37). It is possible that the mother of Opsiades I of Potamos was a daughter of Opsiades I of Oion, but the name is attested in other demes. Since we do not know the tribe of the Oion family, I note the monuments here: (1) *SEG* 26. 296 = *CAT* 3. 405 = *SEMA* 492, naiskos (after 360, Bergemann 1997, 171 no. 504) in the Getty Museum, [O]ψιαδης Opsiadou ex Oiou with Polystra[te?]; heads of man and two women, perhaps daughter and wife; (2) *IG* ii² 7711, anthemion stele from Piraeus *c.*390–365 = *CEG* 512, monument for Telemachos of Phlya (ch. 29 n. 87) to which the name of his wife Hierokleia daughter of Opsiades of Oion was later added.

buried in the city, was probably the grandson (SS) of Demochares I, and father of Simulos II, perhaps attested as owning two ore-processing installations in (?) Amphitrope in the middle of the fourth century.¹¹⁵

Theaios son of Hippokles, councillor for Lower Potamos in 371/0 (*IG* ii³ 4. 53) had a son, Epikrates, buried on Samos (*IG* xii 6. 275). Epikrates son of Aristokrates, *IOrop* 353 II 9, also belonged to Lower P., but may be unconnected.

It has been suggested that Phokion belonged to Potamos, but this is far from certain.¹¹⁶

A very prominent monument consisting of five statues by Sthennis and Leochares was set up on the Akropolis c.348–318 to commemorate the family of Pasikles son of Myron of Potamos; Pasikles' son Pandaites served as one of the ephebic lochagoi of his tribe in 333/2/1.¹¹⁷ Another very conspicuous memorial was erected after Chaironeia in the Kerameikos to commemorate Bion son of Eubios P., who had died as a young man without leaving offspring. The name of his nephew (BS) Archikles son of Archias was added to the column carrying Bion's loutrophoros, and stelai commemorating other members of the family may have stood in the same peribolos.¹¹⁸ One would like to know whether these two competitive families belonged to the same section of the deme.

¹¹⁵ *APF* 3721. Demochares I, *IG* i³ 455; dedication with his brother [-5-]rates, i³ 954 (it may be worth suggesting that the brother's name might have been [Timok]rates and he might have been an ancestor of Timokrates son of Timokles P., who served as ephebic lochagos in 333/2/1, Reinmuth 1971 no. 9 = Alipherè 2015 I 27, II 21 and conceivably thesmothetes later in the century, *Agora* XVI 87, proposed by a Potamios—but the name is attested in several other Leontis demes in the period). The form of the dedication, a marble slab with a relief of 2 youths, one standing and one seated, is unparalleled; if (as seems likely) it represents the dedicants, the date should be c.450 or earlier rather than c.440. Possibly the family's wealth derived from an early involvement in mining. Demochares II, *IG* ii² 1607. 61, *SEMA* 578; Simulos II, *Agora* XIX P 14. 25–7 (conjectural restorations). Simulos father of Ktesippos of Kytheros, *IG* ii² 1929. 20 (*APF* 8889), could have been a DS of Simulos I.

¹¹⁶ Ch. 16 n. 32; Phylidis 2008, A 3. Phyle and Potamos are the only demes in which the name Phokion is attested in the 4th c., but Phokos, the name of the general's father and son, occurs in Iphistiadai, Oe (*APF* 6098), and Phaleron. A Phokion served as councillor for Potamos in (?) 336/5, *Agora* XV 42. 206 (M. H. Hansen 1992); if this is the general, he was 66 in that year (*APF* 15076). A Phokion appears in the Erechtheis casualty list of 459, *IG* i³ 1147. 184. Fossey 2003 is unconvincing.

¹¹⁷ Cf. ch. 12 n. 103, Table 12.1; *APF* 643; *IG* ii² 3829; Reinmuth 1971 no. 9 (Alipherè 2015) I 23, II 16–17, III 10.

¹¹⁸ Bergemann 1997, 187 A 21 (omitting *IG* ii² 11360); reconstruction of peribolos pl. 2. 4. Another loutrophoros, *SEMA* 580 = *CAT* 3. 890 (c.350 *SEMA*, but *CAT*'s date must be later) probably commemorated Moiragenes son of Kephisodoros P.; the father acted as guarantor for Androkles of Sphetos in the Lykourgan period, *IG* ii² 1593 = *SEG* 52. 142.

V Akamantis

CITY TRITTYS

The principal city deme was of course Kerameis, which is solidly located in the area west and north-west of the Agora, both inside the Dipylon gate and outside.¹ The other city demes were Hermos, Cholargos, Eiresidai, Iphistiadai, and perhaps Eitea. These may have stretched in a continuous line from Chaidari to Irakli, but can hardly have been contiguous at any point with Kerameis.

Kerameis

The deme was presumably already populous by the end of the sixth century;² in the fourth century it appointed six councillors. At the time of Kleisthenes' reforms the leading family in the deme was that of Glaukos I and his son Leagros I, the latter named frequently on vases as *kalos*; their residence in the potters' deme presumably helped them in exploiting this form of advertisement. Leagros dedicated an altar to the Twelve Gods in the Agora, perhaps in the 470s, and was a candidate for ostracism at this time; he was one of the generals appointed to lead a major colonizing expedition to the Strymon valley in 465/4, which ended in a disastrous defeat at Drabeskos. His son Glaukon II, also frequently named as *kalos*, had to establish himself as a serious candidate for election as general against his fellow-tribesman Perikles of Cholargos; it is a tribute to the strength of the family's reputation that he succeeded, serving as Perikles' colleague in 441/0, 439/8, (?) 435/4, and 433/2, perhaps also in other years. His wife, a daughter of Teisandros (Table 4.2), was a sister of the wife of Perikles' son Xanthippos; their daughter became *c.*420 the first wife of Kallias III son of Hipponikos of Alopeke. Her brother Leagros II did not live up to the family's reputation, and the family subsequently disappears.³

¹ See references in *Agora III*, plus Papadopoulos 1996, 2003; Siewert 1999; Stroszeck 2003; Ruggeri 2005; Steffélbauer 2007; and Ruggeri, Siewert, and Steffélbauer 2007.

² There may have been some depopulation in the 5th–4th c. as the area occupied by tombs extended.

³ *APF* 3027; 8429 IV. The history of this family is involved in several chronological cruces, concerning (1) the dating of Athenian vases and sculpture in the late 6th and early 5th c. (Francis and Vickers 1981; Boardman 1992; V. Parker 1994); (2) whether the large Kerameikos deposit of ostraka (Brenne 2001),

It has been suggested that Demainetos I K. was the Bouzyges Demainetos who served as general in the Korinthish War, but since Demainetos I's father Timasitheos I seems to have served as diaitetes in 371/0, Demainetos I was probably born too late for this identification; he should be the Demainetos K. for whom trierarchic activity is attested in the 350s and 340s. His son Timesitheos II, perhaps mentioned as a handsome young athlete by Aischines (1. 156) in 346, served as trierarch before 323/2, and had a son Timotheos who was ephēbe in 305/4.⁴

It is gratifying to be able to identify a family of successful potters in the deme: Bakchios son of Amphis— was commemorated in the late fourth century by a stele with a verse inscription celebrating his craft, and his sons Bakchios II and Kittos II moved to Ephesos to practise their trade; Kittos I, who signed a Panathenaic amphora *c.*367/6, was perhaps a brother of Bakchios I.⁵

More surprisingly, but still in a tradition of artisanship, Kerameis may have been the deme of a trireme-builder. The name Nausinikos, attested as that of the builder of the horse-transport *Gnómē* and *Hégemonē*, occurs only in Kerameis and

which contains joinable sherds naming Leagros and Megakles IV, belongs to a single ostrakophoria of the 470s or contains sherds from several years (D. M. Lewis 1974); (3) the date of the Athenian defeat at Drabeskos (see discussion in Humphreys 1999). Leagros' altar is *IG* i³ 951 (470s–early 460s, Stewart 2008); i³ 958, a dedication commemorating a victory in dithyramb of Akamantis with a choregos called [. . .]gros, in the (?) 440s, is perhaps best left out of account, since the names Epagros and Euagros appear in the 4th c. in Kephale (*Agora* XV 42. 275, ?336/5) and Prospalta (*IG* ii² 7314 = *CAT* 3. 361), both in Akamantis. In any case, the information that Leagros died at Drabeskos comes only from Pausanias (1. 29. 5), and it is not clear whether he (or his source) derived it from a casualty list or deduced it (questionably) from *Hdt.* 9. 75. Since I accept the date 465/4 for Leagros' command in Thrace with Sophanes of Dekeleia (Humphreys 1999), I would put Leagros' birth-date *c.*500 at the latest and more probably *c.*510. It is not unlikely that the family deliberately encouraged vase-painters to celebrate its younger members as *kaloí*, having realized that the fashion had political functions, and thus managed to prolong Leagros' and Glaukon's *kalos* inscriptions beyond the normal period (cf. Mannack 2014; R. F. Sutton 1992, 15–16 on the psykter by Smikros, Malibu 82 AE 53, BArch 30685, representing the vase-painter and potter Euphronios seducing Leagros, which may be a negative comment on both parties in the relationship; on political uses of symbolism *c.*480–460 see Humphreys *op. cit.*). On the other hand, Leagros II was still unmarried *c.*400 (Andokides 1. 117–19, ch. 4 n. 8), which should mean that he was born *c.*440 or later; this makes it very difficult to accept the statement of [Themistokles] *Ep.* VIII p. 747 Hercher 1873 that Leagros I was a *synephēbos* of Themistokles. This synchronism resembles the connection between Themistokles and Ephialtes reported in *A.P.* 25. 3–4; both seem to use the name of Themistokles as a way of stigmatizing the proponents of the new policies of the 460s, and some misunderstanding of metaphorical expressions (in *Stesimbrotos*?) may be involved. The Nolan amphora BArch 212623 representing a choregic dedication for a victory by Akamantis, with the additional 'inscription' *Glaukon kalos*, need not imply that Glaukon was the choregos (he might have been a member of the chorus); however, if Leagros indeed died in 465/4, a choregic victory a few years later by his son, aged *c.*18–20, is a possibility.

⁴ *APF* 3273; on the date of the list of diaitetai *IG* ii³ 4. 24 see *SEG* 34. 63; Lambert 2004b n. 5. See also ch. 25 n. 21, 20 n. 88. There is no very strong reason to associate Demainetos with Demostatos K., archon eponymos in 393/2, or with the family or families in which the names Demostate and Demainete occur, *IG* ii² 11865b (p. 888) = *CAT* 5. 380; 12973 = *CAT* 4. 379.

⁵ Ch. 6 p. 175; *SEG* 61. 210. Cf. Bodel 2000.

Kephale,⁶ and a daughter of Nausinikos of Kerameis who died in childhood was commemorated by a naiskos found in Piraeus. The son of a Nausinikos who served as one of three hieropoioi of the orgeones of Bendis in Piraeus in 337/6 may have been her brother, or may have belonged to Kephale ([Demosthenes] 59. 65). Polydamas son of Euthyphron I K., treasurer of the Other Gods in 375/4, may have been the grandfather (FF) of Euthykrates and Theophron sons of Euthyphron (II), commemorated together on a stele found in the Kerameikos; both brothers are attested as naopoioi at Delphi, Euthykrates in 334/3 and again *c.*326–324, Theophron in the latter period. Euthykrates also appears as guarantor for the lease of a house on Delos (see Table 27.1).⁷

Several other demesmen of Kerameis seem to have lived in Piraeus, including Nikandros, whose wife, daughter of Phantias (K.?), may have been related to the wealthy diaitetes Phanos of [Demosthenes] 29. 23–4, perhaps the Phanos or Phanes K. whose son dedicated statues of the hero-doctors Machaon and Podaleirios in the city Asklepieion in 350/49.⁸ Also Ar[istippos] (unjustifiable restoration, length of name unknown; Aristodemos and Archestratos attested in K. in the fourth century) and Hegemon, sons of Hegesippos K. (Papazarkadas 2011, 302 no. 7); the former leased a marsh in Piraeus in the Lykourgan period (*Agora XIX* L 9. 82–3) and the latter freed a slave living there at the same date (*IG* ii² 1567. 15–16). Possibly related to Hegesistratos son of Hegesilaos K., involved in a diadikasia in 381/0 (*SEG* 32. 171, *APF* p. 210).

⁶ *IG* ii² 1627. 247 etc. (see *LGNP* Nausinikos 2). In the Peloponnesian War horse-transports were made from old triremes (Thuc. 2. 56), and Nausinikos' ships are categorized as no longer in service in the dock records of 329/8 and subsequent years. Nausinikos of Kephale, archon eponymos in 378/7, is probably rather old for the trireme-builder, but the hieropoios of *IG* ii² 1255. 11–12 may belong to Kerameis. The archon's son Boethos took part in the Lykourgan Pythais of (?) 326/5 (Jacquemin a. o. 2012, 54), with other elderly men; another son, Nausiphilos, acted as witness for Apollodoros of Acharnai in the late 340s concerning an earlier incident (in the 370s? cf. *AO* p. 290) in which he had acted as guarantor for Epainetos of Andros, [Dem.] 59. 65, 71.

⁷ Nausinikos' daughter Hierokleia, *IG* ii² 6328 = *CAT* 1. 366 (Bergemann 1997, 170 no. 495), *c.*360? Orgeones, *IG* ii² 1255, cf. *SEG* 19. 125. The Nausinikos and Euphron named on *IG* ii² 11404 = *CAT* 2. 384b (no reason to correct to Eu<thy>phron as *IG*) may not belong to K. (*IG* xii 6. 262. 113, Phrearrhioi, has been added online to the list s.v. *Euphron* in *LGNP* II). Euthykrates and Theophron, ii² 6323 (names cut separately?), *CID* II 32. 33, 79 A 1, 102 II B 26–7 (read [Theophron Eu<thy>phronos, [Euthykrates E]u<thy>phronos?), 119. 25 (read Euthy[phronos], 27; Euthykrates, *ID* 104-8 B 5, *c.*360–30).

⁸ *IG* ii² 6341 = *CAT* 2. 350a (Bergemann 1997, 168 naiskos no. 393; now dated in the 350s rather than 390s as *IG*), Philogeiton K. with Peisagora; ii² 6337, Protonikos son of Lykiskos, *c.*395–365 (a son or daughter Nikostrat[os] or [-e], buried in the city in mid-century, ii² 6333). Nikandros, ii² 6332, 395–365; the absence of a demotic for his father-in-law Phantias is easier to understand if he also belonged to Kerameis. Phanos, *APF* 14079 (acting as private not public arbitrator; for doubts on the authenticity of [Dem.] 29 see Humphreys 1985*b*, 1986*a*; ch. 7 n. 145); dedication, *IG* ii² 4353, *c.*350 (Peck's suggestion that the son was called [Lama]chos, *SEG* 42. 180, is not plausible). For the possibility that the cavalryman Phanes of *IG* ii² 5222. 2 belonged to Akamantis see ch. 21 n. 48. A more modest dedication to a healing hero, Amynos, was made by Diophantos son of Kallias K., *IG* ii² 4385 (Aleshire 1991, A 3); his father may have served as councillor in (?) 336/5, *Agora XV* 42. 286, and his son Kephisios was epebe in 305/4, ii² 478. 79 (Reinmuth 1971 no. 17). Androkles son of Kleinias K. served as priest of Asklepios in 328/7 (Aleshire 1991 no. 864); *IG* ii² 6334 may commemorate his son [Pol]ykarpos.

Notes: LGPN Euthyphron 2, Nausinikos 5–6, cites IG ii² 11404 in connection with this family, but the stone reads *Euphron* and there seems to be no reason to emend it, or to link this family with ii² 6328.

TABLE 27.1. Kerameis: Euthyphron

Notes: Lambert 2004c suggests reading [Eu]xenos as well as [Eu]ktemon; the councillor Euktemon K. of *Agora* XV 42. 288 may be a descendant. LGPN identifies Theodoros I and II, which since ii² 6326/7 is a loutrophoros-stele is unlikely.

TABLE 27.2. Kerameis: [Eu?]xenos

Another intra-deme marriage linked Polykrates son of [Eu?]ktemon with the family of his wife Myrrhine daughter of Theodoros I (see Table 27.2). Myrrhine was commemorated with her father-in-law [Eu?]ktemon son of [Eu?]xenos K. on a relief stele found in the city. Her brother Phalanthos had two children: his daughter Phainippe's stele was found in the Agora, and a stele with a relief loutrophoros commemorating her brother Theodoros II was found in Piraeus. Phalanthos, councillor in 328/7, will have been either Phainippe's father or a later member of the family.⁹

⁹ [Eu]ktemon and Myrrhine (represented with a further woman), IG ii² 6335 = CAT 3. 395; the relief and Myrrhine's name were added. Phainippe, SEMA 287 (mid 4th c.); Theodoros II, IG ii² 6326/7 (before 350); Phalanthos II, IG ii³ 360 (?) (it is not necessary to assume that he was the son of Theodoros II; there is also the possibility that Phainippe married within the deme and had a son who was called after his MF, especially since the death of Theodoros II may have made Phainippe an epikleros).

Epiteles K. leased a mine at Laureion for 20 dr. in 367/6, and is named on a horos from the mining area. A fairly well-to-do family of no special distinction that can possibly be traced for four generations begins with Epikrates I son of Demo[krates I K.], named in a diadikasia list of c.380, *IG ii*² 1928. Epikrates son of Olympion I K., councillor in the late fourth century, could be the liturgist's grandson (SS), and uncle (FB) of two fellow-councillors. Olympion II and Kleonostos, sons of Mnesiades K. Epikrates' son Demokrates (II?) was one of the epimeletai of the Mysteries in 267/6 (Menekles).¹⁰ Androstenes (II) son of Andropeithes (II) K., also named in this Council list, should be the grandson (SS) of the Androstenes son of Andropeithes commemorated by *IG ii*² 6315 (mid fourth century), and the cousin (FBS) of Androstenes III son of Pytheas I, father of Pytheas II and Satyra, commemorated together on *SEMA* 282 (*SEG* 25. 248).

Eitea

The deme has not been located, and there are difficulties in distinguishing members of Akamantis' Eitea from members of Eitea in Antiochis. Demokrates E. of Akamantis, one of the treasurers of trierarchic funds in 323/2, may possibly be named on the curse tablet Wünsch 1897, 103, but the name is very common.¹¹

Hermos

Plutarch *Phokion* 22 mentions a temenos of Hermes on the road from Athens to Eleusis, in which Phokion's son-in-law Charikles erected a statue of the hetaira Pythionike paid for by money from Harpalos, but this really should not be regarded as evidence of anything. However, a site for the deme near the Athens–Eleusis road is supported by the provenance of the relief stele of Euangelos son of Theophilos and his wife, and the record of two members of the deme as owners of draught animals in the building records from Eleusis.

Euangelos' father Theophilos served as taxiarch or phylarch with Thrasymedes of Acharnai in 373/2, and perhaps as a result of this experience married his son Euangelos to Thrasymedes' daughter; Euangelos served as councillor in (?) 336/5 and is represented as an elderly man on his tombstone c.320.¹²

¹⁰ Epiteles: *Agora* XIX P 5. 44, *SEG* 32. 236. Council: *Agora* XV 56 with *SEG* 34. 175; on the date see ch. 17 n. 18; Appendix 1. Demokrates II: *IG ii*³ 915.

¹¹ The arguments for locating Akamantis' Eitea (rather than that of Antiochis) at Grammatiko (see ch. 32 n. 37), discussed and rejected by Traill 1986, 140–2, are not strong. On Wünsch 1897, 103 see Wilhelm 1904; ch. 14 n. 83. Either Eitea or Hermos may perhaps have lain between Kerameis and Chologos. The name is probably related to *itea*, willow tree (or at least would have been so interpreted), so the site should be near a river, either the Kephisos, city tritrys, or the 'potamos' of SE Attica (ch. 26 n. 111), coastal tritrys.

¹² *IG ii*³ 4. 244; ch. 21 n. 121; *IG ii*² 6077 = *CAT* 2. 376, Scholl 1996 no. 113 (cf. ch. 14 n. 31; Thrasymedes' daughter seems to have been born relatively late in her father's life); *Agora* XV 42. 295. On gravestones from the Sacred Way and Chaidari (ii² 6072, 6077, 6088) see Karagiorga-Stathakopoulou 1988, 91.

Three families of Hermos, of the same social background, all used names beginning with Anti-, although it is not possible to reconstruct any precise links between them. Antisthenes served as hellenotamias in 411 during the regime of the Four Hundred; Antimachos served as paredros of the hellenotamiai in 416/5, and his grandson (SS) Antimachos II son of Philon was trierarch of the ship that took theoroi and choruses to Delos for the festival in 375/4; Pyrrhias son of Antikrates carted stone for the building operations at Eleusis c.333, and Antikrates son of Sokrates served as hipparch in the same period; the cavalryman Antikrates H. attested c.250 will be a descendant. All of them may well have belonged to landowning families; the same is probably true of Charias H., councillor in 335/4, who was paid 75 dr. for carting 'Lousian earth' to the Eleusinion in Athens in 329/8.¹³

Kallias son of Lysimachos H. emerged into political activity as a patriot in the period after the liberation of Athens in 307, serving as councillor in 304/3 and proposing honours in the following year for Nikon of Abydos, whose benefactions had included help to Athenian survivors after a sea-battle in the Hellespont, perhaps in the Lamian War; he served as councillor again in 283/2, proposing a decree concerning the sanctuary of Aphrodite Pandemos.¹⁴

Cholargos

Knemon, the grumpy old man of Menander's *Dyskolos*, farmed at Phyle and hated people 'all the way to Cholargos' (32–4); it is not clear whether this passage implies that part of Cholargos lay on the top of Mt Aigaleos and thus was visible from Phyle, or whether the point is that Knemon hated even 'neighbours' whom he could not see because they were hidden by high land. In any case there is general consensus, resting on very slender evidence, that Cholargos lay on the south-east side of Aigaleos. The Herakleion of the Mesogeioi may have been in this deme.¹⁵

The dominant family in the deme in the fifth century was clearly that of Xanthippos and Perikles; the latter's land, situated in an area open to devastation by invading Spartan armies in the early years of the Peloponnesian War, may well have been in the deme. Perikles' two older sons served in the cavalry, and died in

¹³ Antisthenes, *IG* i³ 373. 12f.; Antimachos I and II *APF* 1124; Pyrrhias *IEleus* 159. 91; Antikrates Sokratous *IG* ii³ 4. 249. 3, cf. Bugh 1988 I A 3 and II B 7; Charias, *Agora* XV 43. 130, *IEleus* 177. 258 (the Charias of l. 207 may be a different man; for landowners hauling stone and other loads for sanctuaries see ch. 19 n. 192).

¹⁴ *Agora* XV 58. 96, 61. 3, 71. 8; *IG* ii² 493 with Habicht 1995, 50; ii³ 879 (arch. Euthios). Kallias also served as naopoios at Delphi at some date after 310, *CID* II 119. 29, 122 I 11.

¹⁵ The *Dyskolos* passage (perhaps due only to associations with *cholê*, cf. ch. 26 n. 54) would also be compatible with a deme site on the outskirts of the city, which is perhaps what the Mesogeioi texts suggest (see however, Thuc. 2. 13. 1). *IG* ii² 7789, commemorating the daughter of a demesman, came from Chaidari, which seems to have been something of a collecting-point for stones (three of Hermos, two—*IG* ii² 6090, *SEG* 13. 115 = *SEMA* 225—of Eroiadai); cf. perhaps ii² 7768. For a deme-site on Aigaleos that may have belonged either to Cholargos or to Eupyridai see ch. 26 n. 47. Mesogeioi *IG* ii² 1248, see however ch. 20 n. 130. The name Cholargos was later given to a village in the Mesogeia (Barber 1999, 80) and thence to a Metro station on the route to the Mesogeia.

the plague without leaving issue; Perikles II, his son by Aspasia, died in 406, and we do not hear of descendants. The Perikles of Cholargos now attested as a trierarch *c.*354 may be a descendant (son ?) of Perikles III son of Hippokrates, the statesman's great-nephew (BSS).¹⁶ Rivalry in deme and tribe with Perikles II may have encouraged Polyaratos of Cholargos to ally himself indirectly with the descendants of Harmodios, *c.*420, by marrying a daughter of Menexenos I of Kydathenaion. Allegations of complicity with oligarchs seem to have been made against Menexenos' sons-in-law in the lawsuits over family property that erupted shortly after the end of the Peloponnesian War, but it is not clear whether these were based on charges more substantive than general social status; the marriage of a daughter of Polyaratos to Kleomedon of Kydathenaion, son of the 'demagogue' Kleon, between *c.*405 and 399, may have been an attempt to secure some protective democratic colouring. Polyaratos' son Periandros had a political career.¹⁷ Another wealthy member of the deme may have been the miller Nausikydes, a self-made man who seems to have had a slave-staffed establishment in or near the city, but bought pigs and cattle, so he evidently had land. His (?) son Nausimenes I married the daughter of Kiron I of (?) Pithos.¹⁸

On Kephisophon son of Lysiphon Ch., one of the elder statesmen of the Lykourgan era, see Humphreys 2004, 95–6. If he was the Kephisophon involved in the Harpalos affair (Worthington 1992, 210) he would have been 64 at the

¹⁶ *APF* 11811; Ariphron and Perikles on a skyphos, Daskalake 2013. Hippokrates son of Ariphron had three sons, Telesippos, Demophon, and Perikles III (a fourth son called Xanthippos, suggested by Matthaiou 2011*a*, 87–8, is not all that probable). The latter was 'still very young in 412' (*APF*), so might just be the trierarch of *SEG* 45. 147. Telesarchos Ch., who made a dedication to Asklepios in 340/39 (*IG* ii² 1533. 14, Aleshire 1991 no. 13509), and Telesarchides, councillor in (?) 336/5, *Agora* XV 42. 300, may be descendants of Telesippos. Telesarchos Ch. also appears in the mining records (*Agora* XIX P 5. 50, leases for 1550 dr., 367/6, cf. P 7. 12?); he may be the Telesarchos represented with his (?) brother Archinos and their (?) father Euphanes on *IG* ii² 11498 = *CAT* 3. 207, a relief stele of *c.*400 in the Piraeus Museum. The name of Archilla daughter of Lysippos, probably Euphanes' wife, was perhaps added later to the stele. Nikostratos son of Euphanes II Ch., commemorated on the 3rd c. kioniskos *IG* ii² 7787, and Euphanes IV son of Eukles Ch., councillor in 281/0, *Agora* XV 72. 13 (cf. Euphanes ? V, *SEG* 28. 147. 7, late 3rd c.), would then be descendants.

¹⁷ *APF* 11907, 3773; Table 7.2B. Polyaratos served as *paredros* to the hellenotamiai in 410/9, *IG* i³ 375. 8ff. (cf. ch. 15 n. 4). On the suggestion of an earlier tie between Kleon and the family of Menexenos see ch. 4 n. 46. Polyaratos' other son-in-law, Eryximachos, may himself have been suspected of oligarchic sympathies. Proxenos Ch., councillor in (?) 336/5 (*Agora* XV 42. 299) may be a descendant. Note also that [Menexeno]s, [Periandro]s, or [Bathyllo]s is attested in a liturgic record of *c.*330–322, *SEG* 46. 181. 5. Periandros' son Polyaratos II and Bathyllos' son Theophrastos both served as liturgists in the 330s–320s.

¹⁸ *APF* 8443, with table. The view (accepted by *APF* and by *LGPN* no. 5) that the sophist Nausikydes of Cholargos of Plat. *Gorg.* 487c was the wealthy miller of Xen. *Mem.* 2. 7. 6 and Ar. *Ekk.* 424 is somewhat rash, since the name Nausikydes may have been less rare in the 5th c. than later (cf. *LGPN* nos. 1, 8). The sophist was presumably the brother or father of Nausimenes I Ch., who married the daughter of Kiron (of Pithos? ch. 29 n. 45, ch. 7 case 3) between *c.*404 and 390, and died without issue after four years of marriage. (With reference to Nausimenes' alleged poverty at the time of his death, Is. 8. 8, it is worth noting that in touching on the failure of Nausimenes' kin to return his widow's dowry the speaker of Is. 8 was on delicate ground, since in § 14 he calls on members of the family to act as witnesses for him.)

time. The Lysiphon Ch. who was councillor in 336/5 (*Agora* XV 42. 301) must have been a brother (Kephisophon was diaitetes in 330/29, *IG* ii³ 4. 33).

The family of Xenokles I Ch., who worked on the Parthenon (Plutarch *Perikles* 13), can be traced into the second century. Xenokles II, diaitetes in 330/29 (*IG* ii³ 4. 33) was probably a grandson of Xenokles I and father of Xenodemos I, whose son Xenokles III was councillor in 304/3 and again c.280 (*Agora* XV 61. 118, 72. 8); his son was ephebe in 305/4 (*IG* ii² 478. 74). A later Xenodemos (IV) contributed to the epidosis of 183/2 (Hermogenes: *IG* ii² 2332 = *SEG* 32. 218, Migotte 1992 no. 19).

Eiresidai

The deme bordered on Iphistiadai, since Plato's land in Iphistiadai lay next to that of the family of his brother-in-law (ZH) Eurymedon of Myrrhinous, which was in Eiresidai. Possibly Eiresidai should be placed between Iphistiadai and Cholargos.¹⁹

Eiresidai was the deme of a famous pankratiast, Aristophon son of Lysinos, for whom the Athenians erected a statue at Olympia, the base of which survives; he made a dedication at Athens to Asklepios and appears as leader of an eranos that lent a talent on security of a house and land in the Spata area.²⁰

Iphistiadai

A horos of a sanctuary of Herakles, which may well be the sanctuary of Herakles in Iphistiadai mentioned in Plato's will, was found in modern Irakli. Plato's land in this deme was bordered on the north by 'the road from the sanctuary at Kephisia' and on the south by the Herakleion.²¹

Plato's other neighbours belonged to Cholleidai and Phrearrhioi; evidently land in the deme had changed hands quite freely, at least from the time of the Peloponnesian War. Nevertheless we have evidence of long-lasting attachment to the area from one local gravestone. It was set up c.430 to commemorate Aristetas I., represented with his father and wife; the two lions on top of the stele perhaps represented the military prowess of the two men. Later, probably in the fourth century, the relief was repaired and the names of Aristetas' sons, first Aristomachos

¹⁹ D. L. 3. 41; the position of Eiresidai in Traill's map (1986; cf. Stanton 1994) does not fit this datum.

²⁰ Paus. 6. 13. 11, 14. 1, *I. Olympia* 169 (Moretti 1957 no. 484); *IG* ii² 4397 (Aleshire 1991, no. 2111); Finley 1952 no. 30 = ii² 2699. Dow (Nachlass, 'Horoi') noted that the creditor . . . lippos E—des of *IG* ii² 2753 + *SEG* 17. 61 (cf. 17. 24–5; Finley 1952 no. 97) is Philippos son of Antiphemos E., councillor in 338/7 (*IG* ii³ 4. 27. 18), who may also appear in *IG* ii³ 316, and 317. *PAAH* 1963, 7f. (M. J. Osborne 1988 no. 24, *SEMA* 194) is an early 4th c. relief stele from the Akademy area which represents a woman sitting in front of a stele, commemorating Hippylos and Lysippides sons of Iason of Eiresidai (*CAT* 3. 218 suggests a connection with *IG* ii² 11728, but this does not seem particularly likely).

²¹ D. L. 3. 41; *IG* ii² 2611; 2610, another horos from a Herakles sanctuary, copied in a private house in Kephisia, may well also have belonged to the sanctuary in Iphistiadai. See Klaffenbach 1926.

and then Aristonymos, were added (another name was deleted to make room for that of Aristonymos). Finally, the name of Timariste daughter of Theophon of Lamptraí, presumably wife of one of the sons, was added.²²

INLAND TRITTYS

Sphettos, Hagnous, and Prospalta are all approximately located; Kikynna is not. The inland and coastal trittyes of Akamantis were contiguous.

Sphettos

The deme lay in the area of modern Koropi and of the medieval village Philiati (sometimes called Koursala) to the west of it. Medieval builders were active in this area and most of the reported material comes from secondary use. The deme decree *SEG* 36. 187, of the second half of the fourth century, which contains references to a sanctuary of Demeter (?), a theatre, and a priest of Dionysos, came from Philiati. The base of a statue of Demetrios of Phaleron commissioned by the deme from the sculptor Antignotos was found at Kastro tou Christou, where there may have been a sanctuary.²³ A dedication to Hermes by Demokedes son of Demonstratos (no demotic) was found at Philiati, as was a relief dedicated to Dionysos, showing him with sixteen worshippers, two crowned, and a pig, perhaps the cast of a performance at the local Rural Dionysia (or just a *kómos*?); a dedication to Kybele came from the church of Ag. Demetrios, half an hour west of Koropi.²⁴

²² *IG* i³ 1283 *bis* (*LGP*N thinks that Timariste was the wife of Aristetas/Aristaios). *CAT* 3. 075 seems to have an erroneous provenance, and says that lines 2 and 3 were cut *in rasura*. On additions and alterations to grave monuments see also ch. 11 at n. 45 ff. *IG* ii² 6297, also found in the deme area, is a trapeza commemorating —les son of Kallimachos I, probably Epikles son of Kallimachos who served as councillor in the 250s, *IG* ii³ 922. 115, or a brother.

²³ See Kalogeropoulou 1969, also Ross 1855, 219–20; *AGC* 21 X7/Y4, 32–36, X8/Y3 2–3; *AD* 54 B 1, 116; Kakavogianne 2009. Geometric and later cemetery at Philiati, *AD* 42, 1987 (1992) B 1, 97. There were Mycenaean chamber tombs at Kastro tou Christou. The honorand of the deme decree *SEG* 36. 187 (restorations in this text require revision), Apollodoros son of A—, may be an ancestor of Apollodoros Apollodorou, councillor in 223/2, *IG* ii³ 1153. 32–3, 48, 52–3, 68. Statue of Demetrios of Phaleron, *SEG* 25. 206. Although *IG* ii³ 4. 281 has now been attributed by Tracy (1994a) to Demetrios II, the story that 360 statues were erected by the demes in honour of a Demetrios Ph. (Wehrli 1968, F 24. 52 = D. L. 5. 75–6, Fortenbaugh and Schütrumpf 2000 F 1) is still likely to refer to Demetrios I (especially in view of the philosophically significant number; see ch. 18 n. 37); Aixone honoured Demetrios I (*IG* ii² 1201, cf. *SEG* 29. 130, ch. 29 n. 113, 31 n. 11), and so probably did Sphettos. This text shows that the sculptor Antignotos of Pliny *NH* 34. 86 worked in the late 4th c.; on the Antignotos who signed *IG* ii² 3442–3 see Keesling 2007; 2010c.

²⁴ Hermes, *IG* ii² 4628; Solders 1931, 41 no. 20; dedication to Dionysos, perhaps commemorating a choregic victory, from chapel NW of Koropi, Milchhöfer 1887, 98 no. 103; Voutiras 1991. Kybele, Vermaseren 1982, 114–15 no. 386.

The dominant family in the deme may always have been that in which the names Thymochares, Kallias, and Phaidros are repeated. A Thymochares who died at Drabeskos (?) in 464, and another who served as *tamias* in 440/39, may have belonged to it, although neither has a recorded demotic; the same is true of the Thymochares who served as general under the Four Hundred in 411. Kallias I S., who owned land and leased a mine in Nape in 367/6, may have been the general's son. Mining activity is also attested for Thymochares II and Phaidros I, who were perhaps sons of Kallias I. Thymochares III, son of Phaidros I, was one of the commissioners appointed to run the *Amphiarai* in 329/8; he may have purchased land at Sphettos in the *hekatostai* sales. He perhaps served as general in 322/1 or 321/0, and certainly did so in 315/4 and 313/2. His sons Kallias II and Phaidros II were both prominent in the period between the liberation of Athens in 307 and the Chremonidean War, Kallias acting on Athens' behalf in Egypt while Phaidros—who lived on into the 250s—stayed in Attika. Both had sons called Thymochares: Thymochares IV, son of Phaidros, served as *agonothetes* of the Dionysia in 274/3 (Euboulos), and perhaps as *archon eponymos* in the 250s; Thymochares V, son of Kallias, dedicated a silver drinking vessel in 277 on Delos, where his father had been granted the status of *proxenos*. Either of these two cousins may be the Thymochares attested as cavalryman, and as contributing to an *epidosis* in 248/7. Phaidros III son of Thymochares IV served as *ephebe* in 220/19 (Menekrates of Oe).²⁵

The Anaitios who was a member of the Thirty should according to Loeper's hypothesis have belonged to the inland *trittys* of Akamantis and may therefore have been Anaitios of Sphettos, who served as one of the *hellenotamiai* in 410/9.²⁶

²⁵ *APF* 13964. *IG* i³ 1144. 51, 458. 11–12; Thuc. 8. 95. 2, Xen. *Hell.* 1. 1. 1. Kallias I, *Agora XIX* P 5. 42, 48, 65 (owns land, leases 2 mines for 20 dr. each). Thymochares II, *SEG* 28. 204; the *lekythos* Peek 1942, 125 no. 271 = *CAT* 0. 232, *SEMA* 1964, found in the Laureion area, may commemorate him. Phaidros (II ? no demotic), *Agora XIX* P 20. 93. Phaidros II is associated with Misgolas of Kollytos and Misgolas' boyfriend Timarchos of Sphettos by Aisch. 1. 43 in a passage implying that they were of approximately the same age, i.e. born c.390–385 (ch. 26 n. 96; Fisher 2001, 176–7); he served as general in 347/6, c.334, and in 323/2. Thymochares III, *IG* ii³ 355, Lambert 1997a F 6 B 41; Paschidis 2008 no. A 17. A. J. Bayliss 2011 dates the generalships 322/1, 315/4, 313/2. On Kallias II see T. L. Shear 1978 (*IG* ii³ 911); M. J. Osborne 1979; Habicht 1979 ch. 2, 2006b 158–9; Dreyer 1996; Humphreys 2007; Paschidis 2008 A 47; J. L. Shear 2010; M. J. Osborne 2015; his Delian *proxeny* *IG* xi 4. 527. On the career of Phaidros II and the date of *IG* ii³ 985 (259/8 or 255/4) see Gauthier 1985; Henry 1992; M. J. Osborne 1989; Habicht 1995; Humphreys 2007; G. J. Oliver 2007a, 243 nn. 71–2; Paschidis A 46. Thymochares V, *IG* xi 2. 164 B 1–2, 203 B 31 (Habicht 1979, 149f.; missed by *LGP*N); Thymochares IV or V, Bugh 1988 II B 275, *IG* ii³ 1011 II 70 (probably also the *archon eponymos* of the early 250s). Aleshire 1991, p. 137 argues that the *epimeletes* of the Asklepion in 247/6 (*IG* ii³ 1010 = Stele V 73) was not Thymo[cha]res of Sphettos]. Phaidros III, *IG* ii³ 1196. 15. The [Th]ymochares commemorated on a *loutrophoros*-stele (not *lekythos*) from Markopoulo with a Timotheos and a Eunike (not Synike? *Mes.-Arg.* 413, *SEG* 57. 248) may be affinally connected, but cf. Timotheos of Hagnous, *IG* ii² 5279 and (?) *SEG* 56. 289.

²⁶ *IG* i³ 375. 50; restored in *SEG* 32.161 Stele 1 [14], but not in *Agora XIX* P 2. His office in 410/9 would suggest that he had supported Theramenes in 411. Aischines the Socratic (son of Lysanias) also belonged to S.

Xenokles son of Xeinis S. is the first attested member of a family that became prominent in the Lykourgan era and can be traced into the third century. Xenokles made two dedications on the Akropolis commemorating liturgic victories, with a tribal torch-race team at the Panathenaia of 346/5, and with a team of pyrrhichistai. After Chaironeia he became one of Lykourgos' associates, and took over the position of finance minister (*epi tēi dioikēsēi*) for (?) 332/1–329/8. After Lykourgos' death he became, with Lykourgos' son Habron, a symbol of the retrospectively idealized halcyon summer of democracy; it was probably in 318/7, after Polyperchon's proclamation of freedom for the Greek cities, that he took office as epimeletes of the Mysteries, dedicating two statues at Eleusis and constructing a new bridge on the processional route at his own expense. He emerged again in 307/6 as agonothetes of (?) both the Dionysia and the Lenaia, and in the following year led an embassy to Antigonos I that brought back a gift of 140 talents for Athena.²⁷

Xenokles had one or perhaps two attested brothers: Krates, if the Krates named with him on a curse tablet of (?) the 320s was a brother, and Androkles, who financed Akamantis' eutaxia team c.330. Both Xenokles and Androkles are recorded as contractors for some kind of public business in the Lykourgan period. Xenokles II, perhaps a grandson (SS) of Xenokles I, contributed to the epidosis of 248/7 and may have served as tribal priest of Akamas in 223/2.²⁸

²⁷ See also ch. 20 n. 137; *APF* 11234; Ampolo 1979, Habicht 1988*b*; O'Sullivan 2009. Gymnasiarch for torch-race *IG* ii³ 4. 340; for pyrrhichistai 4. 434 (Rausa 1998; Goette 2007*b*, 122–4). It should be noted that the only other known dedication for a victory with pyrrhichistai is that of Atarbos of Thorikos in 323/2 (Table 27.6B; ch. 12 n. 85; Appendix 3); this may indicate that they saw each other as rivals within the tribe. Mysteries: *IG* ii³ 4. 212–13, archonship of Archippos; Kirchner (followed by *APF*) dated the office in 321/0, but 318/7 seems to me politically more likely. Bridge, *Anth. Pal.* ix 147 = Gow and Page 1965 I p. 11 no. 2; *IEleus* 95. Agonothetes, *IG* ii³ 4. 518, 519; Lambert 2003*a* (restoring [Androkles] in 3073, questionably); see D. M. Lewis 1988 on the importance of the celebrations in this year. I share his doubts (p. 303) about the ascription of ii³ 4. 518 to the Lenaia rather than the Dionysia. Embassy, *IG* ii² 1492 B 99–102, see Lewis *ibid.*; if the episode in a parody-epic by Matron (Athen. 134d–137c) in which the 'rhetor' Xenokles hosts a banquet refers to X. of Sphettos—which is not certain—it may derive from this embassy, on which Xenokles was accompanied by Chionides of Thria and possibly by Kleainetos of Kydathenaion; on the circumstances see Billows 1990, 147–51; Cargill 1995, 51–2; Paschidis 2008, A 31. This may have been the occasion for Antagoras' epigram: see Gow and Page 1965 II, 29.

²⁸ Curse: Xeinis and Xenokles, Humphreys 2010*b*; ch. 14 n. 70; *SEG* 58. 265 A I 24–5; 'the other Krates', I. 23. If this means that there were 2 men called Krates in Sphettos (which is quite uncertain), there might be a connection with Krates son of Ktesibios S., represented as a hoplite c.350 with his father and his brother Ktesikrates on the lekythos *IG* ii² 7504 = *CAT* 3. 868. Antipatros son of Ktesibios (too young to be represented on the lekythos?) whose name was added later, had a son Phoxias who served as councillor in 281/0 (*Agora XV* 72. 17), and may be the Phoxias attested in the cavalry c.250 (Bugh 1988, II B 213). The A[n]tipa[tros] S. whose son sold land as (?) demarch of Sphettos in the hekatostai sales (Lambert 1997*a*, F 6 B 28) cannot have been the son of Ktesibios; if any link with Ktesibios' family is to be constructed, it would perhaps be best to assume that the demarch had a sister who became Ktesibios' second (?) wife (see Appendix 2). Eutaxia, *IG* ii³ 550. with Lambert 2001. Contractors: *IG* ii² 1593 = *SEG* 48. 155, 52. 142 (Lambert 2002*a*; Papazarkadas 2011, 115 n. 71 suggests they were tax-farmers). For

Sphettos had a number of members who were active in politics in the second half of the fourth century; it seems to have been a deme in which most of the energy of the elite was drawn off by the city. Polyeuktos son of Sostratos S. perhaps appears first in 356/5, as councillor, proposing honours for ambassadors from Neapolis in Thrace; most of his political activity, however, belongs in the 340s and the Lykourgan period. He accompanied Demosthenes and others on an embassy to the Peloponnese in 343/2 to encourage opposition to Philip, and was sufficiently active in the Assembly and perhaps also the lawcourts in the Lykourgan period to be named prominently in the list of politicians whose extradition was demanded by Alexander in 335. He was accused of taking money from Harpalos in 324, but acquitted, and actively supported Athens' bid for freedom in the Lamian War. He is attested as a mine lessee *c.*350 at Thorikos, and is named *c.*323 (?) on a curse tablet with his (?) son Sostratos and with Strombichos III and Eukrates of Euonymon, perhaps affines. He may have died *c.*322. Antimachos S., whose son or daughter Sostrat[os] or [-e] died in the late fourth century, may have been a brother of Polyeuktos.²⁹

Timarchos S. was another ally of Demosthenes. He served in the 360s or 350s as logistes, as archon on Andros, and as councillor, and he was councillor again in 347/6; in the latter year he is known to have proposed two decrees, one hostile to Philip and the other concerned with houses on the Pnyx. He had also taken part in a number of embassies before 346/5; in that year he accused Aischines of misconduct on the embassy to Philip (*parapresbeia*), and the case was blocked by Aischines' counter-accusation that Timarchos had lost his citizen rights by prostituting himself in his youth. Aischines' speech, despite its obvious tendentiousness, contains a number of assertions about Timarchos' property and family affairs, supported by witness testimony, that may be trustworthy. Timarchos' father Arizelos had (according to Aischines) a blind brother, Arignotos, who had not married; their property had remained undivided, and Arizelos managed it, paying Arignotos a living allowance (a third brother, Eupolemos, who had been a professional trainer of athletes, *paidotribês*, had died young and unmarried). Arizelos died while Timarchos was still a minor; his guardians continued to pay Arignotos' allowance. However, when Timarchos came of age, 'thrusting away' (*parôsamenos*) his uncle, he ceased to provide for him. He inherited a large *eschatía* at Sphettos, a house 'behind the

Androkles see also n. 35. Xenokles II (son of Xeínis II): *IG* ii³ 1011 I 57, ii³ 1153. 39–40, 55, ii³ 1035 (with reference to Xenokles I).

²⁹ On Polyeuktos' career see M. H. Hansen 1983*b*, 175; Oikonomides 1991; there is not much reason to identify him as the stepfather of Charidemos ([*Dem.*] 58. 30–2, cf. chs. 2 n. 30, 29 n. 71). Bosworth (1980) *ad Arr.* 1. 10. 4 regards *Plut. Dem.* 23, in which Polyeuktos' name follows that of Demosthenes, as the most reliable list of the politicians demanded by Alexander. Mine lease, *Agora XIX P* 16. 16; curse tablet *SEG* 58. 265 I A 60–4, cf. Humphreys 2010*b*; Sostrat[os] (?) the spacing favours this reading rather than Sostrat[e] Antimachou S., *SEMA* 639, found re-used in Koryze St (Makriyanni) south of the ancient city.

Akropolis', and land at Alopeke (where his mother perhaps lived), as well as nine slave leather-workers, a woman skilled in weaving who sold her work in the market, and a skilled male weaver (*poikiltês*). His father had also owned land at Kephisia and Amphitrope, and two mining ergasteria, one in Aulon and the other in Thrasymos; he had lent 3000 dr. to a fellow-demesman, Metagenes, who testified for Aischines that he had repaid part of this sum to Arizelos and the rest to Timarchos. Apparently Timarchos in his defence claimed, or was expected to claim, that he had sold property elsewhere in order to increase his investment in mining, a claim Aischines tries to discredit.³⁰

Metagenes also had something of a political career, acting as ambassador to the Phokians in 343, and may therefore have had a base in the city; however, he was commemorated with his wife on a naiskos found in the deme area.³¹

Timostratos son of Smikrias S. freed a slave wall-builder (*teichistês*), perhaps an agricultural worker, living in Sphettos, in (?) the 320s, so he may have owned land in the deme.³²

Diopieithes II son of Diopieithes I S. was involved in a dispute over trierarchic obligations in 349/8, and collaborated with Euboulides of Halimous on a decree for exiles

³⁰ Cawkwell 1981 argued that the list of the offices to which T. was appointed by lot, in Aisch. 1. 107–13, is in chronological order, but this would compound the problems surrounding the ages of Misgolas, Aischines, and Timarchos (see ch. 24 n. 6). Aischines distinguishes offices in which T. worked alone from those in which he had colleagues. On the procedural aspects of Aisch. 1 see Lipsius 1915, 280–2; A. R. W. Harrison 1971, 204–5; Fisher 2001, 36–53. Timarchos' property, Aisch. 1. 97–105 (the property listed in § 101 appears to have been sold by Arignotos, perhaps towards the end of his life). The town house was bought first by an actor and then by a *chorodidaskalos*, so it was perhaps near the theatre, 'behind the Akropolis' from the point of view of the lawcourts in the Agora. The land at Sphettos was bought by Mnesitheos (son of Tachyboulos) of Myrrhinous, attested as syntrierarch in (?) 341/0, *APF* 10297, see ch. 25 n. 47. *CAT* 3. 342 = *SEMA* 1673 (lekkythos, no provenance) may commemorate Timarchos with his daughter Deipyle and his brother (?) Zeliass, perhaps Deipyle's husband (FB). The stone names Deipyle Timarchou, Timarchos Arizelou, and Zeliass Arizelou; the name Arizelos is otherwise attested only in Steiria. It is however odd that if Timarchos had a brother he was not mentioned in Aisch. 1.

³¹ Embassy Aisch. 2. 134 (in 343 Metagenes testified for Aischines). Naiskos, from Koropi, *IG* ii² 7523 = *CAT* 4. 423 (Bergemann 1997, 166 no. 311). Metagenes is represented as an elderly man; the standing woman, who looks elderly, is taken to be his wife, and the seated woman his daughter. Other local tombstones: *IG* ii² 7510, relief Ioutrophoros, Philati, Demetrios son of Aischron; his sister Philoumene perhaps married into the family of Platon son of Teisamenos S., commemorated on a stele recorded at Koropi, *IG* ii² 7527 (the second name on the stone cannot be reconstructed with any confidence and the relationships are unclear); they may have been related to Teisiades son of Teisippos S., secretary to the Delian amphiktyons in 341/0 (*ID* 42. 8); ii² 7504 (Koropi).

³² *SEG* 18. 36 B 343–5. It is not clear whether there was any relationship between Timostratos and the Timokles S. who served as councillor in (?) 336/5 (*Agora* XV 42. 310), or Timotheos son of Agasikles I and his sons Agasikles II (*IG* ii² 7501) and Timesios (7528), who were apparently buried in a peribolos NE of Lykavettos, on the road leading from Ambelokipi to the Hymettos–Pentelikon gap (Bergemann 1997, 192 F 16). Menalkes S., whose daughter married into Myrrhinous (ch. 25 n. 53), may have been resident in the deme.

from Abdera in 346/5; he had earlier proposed another anti-Macedonian decree. Hyperides had prosecuted him in a political case, and says that he had the reputation of being the cleverest (*deinotatos*) politician of his time. He was apparently dead at the time of this comment, made in 324 at the latest, so the (?) . . . peithes son of Diopheithes of S[phettos] who freed two slave women with a Leochares son of Leochares in (?) the 320s may be a son.³³

Nausistratos son of Stratokles S. seems to have married a sister of Dexileos of Thorikos; his name was added to her stele in the conspicuous family peribolos in the Kerameikos. Another son of Stratokles, Straton, is attested as diaitetes in (?) 371/0.

Euetion son of Autokleides S. is recorded as secretary to the kleruchs' council on Samos c.350, but apparently did not stay there long; he leased a disused mine for 150 dr. c.340, served as diaitetes in 329/8 and councillor in the following year, and is also recorded as trierarch in the 320s. The councillor Autokleides S. who served in (?) 336/5 may be a brother (or cousin) rather than a son.³⁴

Androkles S., the speaker of [Demosthenes] 35, had lent money for a trading voyage and was evidently resident in Piraeus or in the city.³⁵ The borrower had been introduced to him by his *epitêdeioi* (friends or kin) and fellow-demesmen Thrasymedes (II) and Melanopos sons of Diophantos I (son of Thrasymedes I) S., with whom he spent much of his time. Their father was councillor in 368/7, proposing honours for Koroibos of Sparta and for an embassy from Lesbos; he later held the post of manager of the theorkon, and in 352/1 proposed a vote of thanksgiving for the successful expedition to stop Philip at Thermopylai. He testified for Demosthenes against Aischines in 343. He is attested in the mining records as registering (?) a mine and leasing it for 20 dr. The Diophantos son of Th[rasymedes?] S. who bought three properties in the deme, at least one with a house, for which he paid 1000 dr. or more, in the hekatostai sales may be either Diophantos I or a homonymous grandson.³⁶

³³ Diopheithes II, *APF* 4328 (*IG* ii² 1620. 32–74, ii² 218. 22–3, Dem. 18. 70, Hyp. 4 *Eux.* 29); . . . peithes, ii² 1575. 4–12 (the women's place(s) of residence are uncertain but do not seem to be Sphettos). The [D]iophe[i]th[e]s —tios who leased the shrine of Hypodektes in the city from orgeones at the end of the 4th c. (*IG* ii² 2501) may be the manumittor, or a younger member of the family.

³⁴ Nausistratos: *IG* ii² 6230 (Bergemann 1997, A1; see Table 27.6A); *IG* ii³ 4. 24. 25. Euetion: *IG* xii 6. 262, *Agora* XIX P 26. 218, *IG* ii³ 4. 34 with *IG* ii³ 360, ii³ 359 (Lambert 2004b no. 11), *APF* 5463. Cf. ch. 17 n. 15. Autokleides: *Agora* XV 42. 308; Aleshire 1991.

³⁵ [Dem.] 35 (not 25 as *LGP*N Androkles 57) 6, 10, 14. He may also be the long-lived Androkles of Men. *Samia* 606 (cf. Papazarkadas 2011, 289).

³⁶ Diophantos I (see M. H. Hansen 1983b, 166) appears as a witness and synegoros in Is. 3. 22, and was evidently already relatively well known at this time. He apparently served on the theoric board (schol. Aisch. 3. 24), but otherwise appears as an opponent of Euboulos' policies (this may also be the implication of Dem. 20. 137). Mining: *Agora* XIX P 9. [10], 13. *IG* ii² 107, his decree for the embassies from Lesbos, carries a rider by Autolykos of Thorikos, the purpose of which seems to be to ensure that the names of Autolykos and his two fellow-ambassadors, omitted by Diophantos, appeared in the decree. Lambert 1997a, F 6 B 30–4, with p. 156 no. 26, regards the hekatostai purchaser as Diophantos I; this is an important plank in his argument for two sales, one c.343 and the other about 20 years later. There is however no reason why a homonymous grandson born in the 350s should not appear as a purchaser in a single sale of the 320s (see Appendix 2).

Hagnous

The deme lay in the Markopoulo area, perhaps at Dardiste, southwest of Markopoulo.³⁷ Stephanos of Byzantion refers to a mention in Solon's axones of sacrifices at Hagnous to the herald-hero Leos, who informed Theseus that the sons of Pallas were planning to ambush him; this seems to imply that in the early sixth century Hagnous had a cult of Leos that was recognized in the city's calendar, but we hear nothing of it later. A dedication to Hermes made in the fourth or third century by Theopompos son of Ktesikles H., which was re-used in a church southeast of Koropi, may have come from a deme sanctuary.³⁸

The Theognis who arrested metics under the Thirty may have been Theognis II H., whose father Telestes son of Theognis I H. served as secretary to the treasurers of Athena in 423/2; Theognis III, syntrierarch *c.*350, may be the oligarch's grandson (SS).³⁹

The most distinguished family attested in the deme is that of Derkylos son of Autokles I H., who was prominent by the middle of the fourth century. Derkylos served on all three embassies to Philip in 346 (with his fellow-demesman Philokrates); he seems to have managed to remain on good terms with both Demosthenes and Aischines. He and his brother Kallias were among the wealthy Athenians who guaranteed the triremes sent to Chalkis in 341. His service as general, for which he was honoured by the deme Eleusis, may not have been his

³⁷ There was a good deal of movement of stones in this area, first for church construction and later to the houses of collectors in Markopoulo. *IG* ii² 5259 (cf. *SEG* 56. 289), 5277–9, and 5280a were all recorded at Markopoulo; 5280 was re-used in the church of Panagia Moskou NE of Markopoulo (see also *SEMA* 9). Kirsten (1959) put Hagnous at Dankla; Traill (1986, 132) put it at Dardiste and attributed *IG* ii² 1183 to it. See however ch. 25 s. 'Myrrhinous' for re-attribution to Myrrhinous. Steinhauer 2001 suggests that the deme had more than one centre (Dankla, Liotrivi, Pouli).

³⁸ St. Byz. s.v. *Hagnous*; Plut. *Thes.* 13; it was claimed that as a result of this action there was no intermarriage between Hagnous and Pallene. One wonders whether this story might be connected with the cult of Athena Pallenis (see ch. 20 nn. 56, 129); Peek (1942, p. 25) suggested that the parasite of *SEG* 34. 157. 11 might be Kallias son of Autokles of Hagnous, but Myrrhinous is also now a possibility (*SEG* 23. 161. 14), and there is no other obvious member of Hagnous in the list. Hermes, *IG* ii² 4657, re-used in the church of St George at Drokeia/Rhodokia, *AGC* 21 X8/Y3 no. 3. Theopompos' father (or son) Ktesikles served as priest of Asklepios and dedicated a silver cup weighing 75 dr. in the Asklepieion (*IG* ii² 4400, ii³ 898, Aleshire 1989 Inv. IV 118; ead. 1991 no. 8866, suggesting that the priest is Theopompos' son, but the dedication is not closely dated). Nikarete daughter of Ktesikles H., commemorated by a stele found between Athens and Piraeus, *IG* ii² 5275, of the second half of the 4th c., may belong to an earlier generation.

³⁹ Theognis II, Lys. 12. 6–15; the error in Xenophon's list of the 30, Theogenes for Theomenes (of Xypete) does not imply that the Lysias passage is also corrupt (indeed it might have produced a 'correction' of Xenophon's text). Identification with the tragic poet *TGF* I no. 28 is doubtful, since several sources call the latter a Megarian. *Ek tôn triakonta* in Schol. Ar. *Ach.* 11 must be corrupt, cf. ch. 29 n. 34. Telestes (attributed to 433/2 instead of 423/2 in *LGPV* Theognis 9, Telestes 11, and to 424/3 in *APF* 6738), *IG* i³ 302. 29; 303. 40, 48; Theognis III, *IG* ii² 1622. 662. Themis 2009b suggests that the Lysimenes who was a target of abuse in the first half of the 4th c. was L. of H., councillor *c.*336 (*Agora* XV 42. 318).

first military command. He owned property in Eleusis (the deme granted him freedom from local taxes). His son Autokles II made a dedication with the daughter of Emmenides of Koile, presumably his wife.⁴⁰

On the embassies to Philip Derkylos was accompanying his fellow-demesman Philokrates son of Pythodoros, who was impeached by Hypericides in 343 for persuading the Athenians to conclude the peace, and condemned *in absentia*. As a result, his property was sold by the poletai. It included two or three workshops in Melite with an adjoining house, and probably a group of rural properties including land and a house at Hagnous.⁴¹

⁴⁰ *APF* 3248, *IEleus* 99 (on the date and interpretation see Couvenhes 1998; ch. 30 n. 79). Derkylos would have had to compete for office with the family of Phaidros and Thymochares of Sphettos and with Leosthenes of Kephale. Autokles II, *IG* ii² 3837 = *SEG* 42. 167 (no provenance); his father-in-law Emmenides was one of the private citizens appointed in 352/1 to survey the boundaries of the sacred orgas, *IG* ii³ 292, 79–80, and may have belonged to the Kerykes or Eumolpidai (Humphreys 2017*b*). He served as councillor in 349/8, ii³ 296. 4–5. Derkylos' brother Kallias might conceivably have derived his name from an intra-deme marriage with the family of Kallias I H., whose son Kephisodoros was honoured in 346/5 for his work as supervisor of the water-supply (*IG* ii³ 301). Kallias II, son of Kephisodoros, is known from two dikast-tickets found in the same grave, possibly on the road to the Akademy (Kroll 1972, 149b–150, class VI; it seems less likely that they belonged to Kallias I; the report of Conze 1893–1922 *ap. IG* ii² 11804 that this lekythos belonged to the same grave may not be reliable; it is not mentioned in Ross 1846, 54 no. 25b). *Comm. IEleus* 57 suggests, in view of Derkylos' Eleusinian connections and the name of his brother Kallias, that their mother may have been Kekropia, daughter of the daidouchos Kallias (*APF* 7826 misses her; ch. 20 n. 94), whose husband was an Autokles. However, Autokles son of Strombichides of Euonymon (*APF* 4386) also has to be considered. In either case Clinton is probably right in attributing Kekropia's dedication to Kephisodotos I.

⁴¹ Philokrates H. is probably the Philokrates who proposed *IG* ii² 182, and whose decrees are mentioned in that text and in ii³ 292. 55, though no demotic is given. He too probably belonged to one of the Eleusinian genê (Humphreys 2017*b*). Poletai sale, *Agora* XIX P 26. 367–403?, 449–60 + *SEG* 60. 197. Some of this property seems to have been in Myrrhinous; there are references in ll. 382–95 to the Eikadeis, perhaps a genos or group of orgeones based in Myrrhinous (see ch. 12 n. 59, 19 n. 152, 25 n. 44), and to a shrine of Artemis, perhaps the well-known Artemis Kolainis of Myrrhinous. Lines 403–17 may also be part of Philokrates' property, including some at Hagnous. Line 367 perhaps [demarch of Hagnous] Sosias (*SEG* *ibid*). The kleter Kephisodoros (H)ag— has been identified with Kephisodoros son of Kallias of Hagnous, but the letters *Ag* may be the beginning of a patronymic rather than a demotic (cf. *AO* p. 342). Clairmont's assertion *CAT* 4. 472 that *IG* ii² 5701 (Bergemann 1997, naiskos no. 629) commemorated a daughter of Philokrates of Hagnous named Pherokleia [*sic*], seems quite unfounded (see Bergemann pl. 122). However, the family of Timokrates son of Kallippides H., which seems to have been responsible for commissioning the monument, must have been wealthy. Timokrates will have been either the husband or the son of Hierokleia daughter of Philokrates of Atene, for whom the naiskos was perhaps made; Timokrates' daughter Kallistrate was commemorated on *SEMA* 11 (see Schmaltz and Salta 2003 no. 28 on changes made to this monument) with (?) her mother Timagora daughter of Ekphantides of Myrrhinous (both monuments seem to have been found at Markopoulo). Bergemann (90, 108–10) thinks that the seated woman and youngish bearded man at left and right of the group portrayed on *IG* ii² 5701 are Hierokleia and Timokrates, with older parents in the background, but I am not convinced that it is impossible to see the seated woman (whose head is lost) as Hierokleia, grouped with her daughter, husband, and son.

Nikeratos H. was also wealthy and perhaps city-based; the horos *SEG* 55. 289 (56. 122), from the Kerameikos area, marked property worth 7000 dr. put up as security by the lessee of his estate.

Kikynna

This was a small deme, appointing only two councillors in the fourth century; we have no evidence by which to locate it precisely, although Aristophanes' *Clouds* implies that it was rural and included high ground suitable for pasturing goats; a location west of Sphettos, on the slopes of Hymettos, is perhaps not impossible. It had a well-known festival of Apollo.⁴² The only well-attested family in the deme⁴³ is that of Lysitheides K., which had mining interests and probably also a base in the city. Lysitheides I was an early pupil of Isokrates, appears as an arbitrator *c.*372 in [Demosthenes] 52, and is attested as trierarch in 355. His (eldest?) son Lysikrates won a victory as choregos with a boys' choir in 335/4, so must have been born by 375. He is recorded as owning property near Laureion (?) *c.*350, and as a principal trierarch in 325/4. His choregic victory was commemorated by the 'monument of Lysikrates', still conspicuous on its site in the ancient Street of Tripods.⁴⁴

⁴² Location, cf. Steinhauer 2001; Kakavogianne 2009, 190 (Chalidou/Karela); Ar. *Clouds* 71–2 (for a *phelleus* on Hymettos see ch. 29 n. 92). Milchhöfer 1892 suggested a connection with the cult of Apollo Kynneios of the Kynneidai on Hymettos (R. Parker 1996, 304). However, *IG* ii² 6469, commemorating Chairylla wife of Prokles of Kikynna, was re-used in a church in Kalyvia Kouvaras, which might suggest a site for Kikynna somewhere near Prospalta. There may have been more than one small deme of Akamantis in this area. Apollonia, schol. (vetera) Ar. *Clouds* 134.

⁴³ The family of Eraton owned properties in Sphettos and in Kikynna (Lys. 17. 5, 8), but we do not know their deme. It is also possible that the Chaireleos of the Thirty, who may have belonged to Akamantis, was Ch. of Kikynna, attested as neokoros of Poseidon Hippios in 413/2/1, *IG* i³ 405.

⁴⁴ *APF* 9461; Lysikrates' monument, *IG* ii³ 4. 460, Travlos 1971, 348–51; Goette 2007a. Property, *Agora* XIX P 13. 47, cf. 15. 11. His son Ly[sithe]ides III made two dedications to Asklepios (one a gold crown) in the late 4th or early 3rd c. (Aleshire 1989, 211 = *Stele* IV 62; 1991, no. 9396). The Lysitheides K. who owned land at Thorikos, and perhaps elsewhere in the mining region, *c.*340 (*Agora* XIX P 27. 102–3, P 28. 6–7) may be Lysitheides II, a homonymous son of Lysitheides I; if so, he may be the father of Pythodoros [Lysithe]dou K., who as trierarch dedicated shields to Athena in some year before 305/4, possibly after fighting with Demetrios Poliorketes at Salamis in 306 (*IG* ii² 1491. 30–34, with D. M. Lewis 1988; Habicht 1995, 82–4). Either Lysikrates or Lysitheides II had perhaps died by *c.*330/29, when the heirs (*paides*) of a Kikynneus appear as landowners (P 35. 4, cf. 7–8; there is no pressing reason to restore [Lysitheido]u as the patronymic of *paides* of unknown deme in P 27. 98–9). *IG* ii² 6477 = 7358, found at (?) Ambelokipi, may commemorate a daughter of Lamachos of E[—], wife of Kephisokles of Kikynna, whose sons Lamachos and Euboulos K. served as ephebes in 305/4 (Peek 1942, 223 no. 33; *IG* ii² 478 = Reinmuth 1971, no. 17. 130–2). Papazarkadas (*SEG* 54. 223, 339) restores a son of Leukos K. in the diadikasia-list of 383/2 *IG* ii² 1930. 9; tombstone of L.'s daughter Kallisto, *SEMA* 318 (400–350).

Prospalta

The deme lay somewhere in the area of Kalyvia Kouvaras (Thorikou); it had a well-known sanctuary of Demeter and Kore.⁴⁵

Although we have a number of tombstones from the deme area, most of our evidence for the activity of demesmen comes from elsewhere, with the exception of a kin group who made a dedication to Asklepios as orgeones (ch. 12 n. 43). Euxenides son of Amphidexios P., commemorated with his brother Amphisthenes and his son Amphidexios II on a group of monuments that probably stood in a peribolos close to the city, in the area of Omonia Square, won victories at the Nemeia and Isthmia; Euxenides' name suggests a relationship with Euxenos son of Euphanes I P., secretary to the treasurers of Athena in 417, and Myrrhine daughter of Euphanes II P., who made a dedication probably to Asklepios in the first half of the fourth century with (?) an Apollonios (see Table 27.3). Amphitekton P., priest of Asklepios in 348/7, may also have belonged to this family.⁴⁶

Menios son of Diphilos P., attested as syntrierarch in or before 338/7, had a brother called Archeneos who served as one of the Delian amphiktyons in 341/0.⁴⁷ Nausistratos

⁴⁵ Deme-site at Enneapyrgi NW of Kalyvia, where *IG* ii² 7306 was found in the church of St Peter; cf. *KvA* text III–VI p. 12; R. G. Osborne 1985*a*, 193; Philippou-Angelou 1986, 131–50, 2000; *Mes.-Arg.* 205–212; Steinhauer 2001 thinks the deme had more than one centre (Ennea Pyrgi, Ag. Petros, Ag. Georgios E. of Kalyvia, Volomandra). Sanctuary, Paus. 1. 31. 1. The name Propharta seems to have been given to the hill between Markopoulo and Drerivouni. Buchholz 1963 suggested that another settlement site at Megale Avle between Kalyvia and Keratea (between the churches of Ag. Trias and Ag. Kyriake), where a dedication of Prospaltian orgeones to Asklepios, *IG* ii² 2355, was recorded, also belonged to Prospalta. The stele *IG* ii² 7725, commemorating Mnesistrate daughter of Sophanes of Phrearrhioi with her husband Diophantos son of Dion of Kephale, and the naiskos ii² 11873 = *CAT* 3. 423, representing Mnesistrate with her (?) daughter Kleostrate, also came from this area (church of Ag. Antonios; Bergemann 1997, 207, peribolos V 6, naiskos 298, with an erroneous *IG* reference; *LGP*N s.v. Kleostrate 6, Sophanes 18, takes the two women to be sisters). In view of the size of Kephale, it may be more likely that the Megale Avle site belonged to that deme (cf. Humphreys 2007; another Asklepios dedication from Keratea, *SEG* 61. 169). *SEMA* 586, from Volomandra, commemorated Lyandros son of Gnathios I P. and his wife Menestrata daughter of Kephisophon P.; their grandson (SS) [Phr]ynichos son of Gnathios II served as councillor in 303/2, *Agora* XV 62. 122 (on archaic tombs from Volomandra see Philippou-Angelou op. cit.). *IG* ii² 7311, from the deme area, was set up for Hegeso daughter of Lykophron P. The remains of walls noted by *KvA* XIII along the road leading from Kalyvia to Koropi may well have belonged to periboloi. It is unclear whether the horos marking a hieron of the Medontidai, *IG* i³ 1383, recorded at Keratea, would have been set up in Prospalta or in Kephale. *IG* ii² 7315 = *CAT* 1. 381, perhaps found in the Koropi area, commemorated Kleonike, daughter of Diagoras P.; cf. also ii² 10898 + *SEG* 13. 184, from near Keratea, Attas with [Euag]ora Diagorou.

⁴⁶ *IG* ii² 7305, 7309–10; Bergemann 1997, peribolos F 8a; *IG* i³ 305. 6 etc.; see *LGP*N Euxenos 20; *IG* ii² 4364, 4427. Apolexis P., whose daughter married Theopompos of Oion Kerameikon, left land in the deme to his two sons, Is. 11. 48–9 (*APF* 2921 XII).

⁴⁷ *APF* 10032; *ID* 42. 7. There may be a connection with Archedemos son of Archinos of (?) P., trierarch in the 330s (*APF* p. 69) and/or with —peithes son of Archinos of (?) P., councillor c.340, *Agora* XV 39. 6, but the attribution to Prospalta is somewhat doubtful in both cases (this section of *Agora* XV 39 has three possible links with Prospalta and two each with Kephale and Sphettos). The security horos Finley 1952 no. 17, on which Aischylos son of Diphilides P. is creditor, came from the deme area (Kalyvia Kouvaras; Humphreys 2007, 65 n. 6; cf. J. E. Jones and Lambert 1999, 133).

Note: LGPN has Amphisthenes as son of Amphidexios II.

TABLE 27.3. Prospalta: Euphanes

P. served as a member of the kleruchs' council on Samos *c.*350; his son Lysimachos is attested as proedros in 299/8, and Nausias son of Nausikrates, councillor in Athens in 335/4, may have been related to them. Olympiodoros son of Eumelos P[—], who sold property on Salamis for the Eikadeis in the hekastotai sales, may have been the son of Eumelos son of Eumeliades of Prospalta, councillor in 335/4; the councillor's names suggest that the family had at one time owned sheep, for which the high land on either side of the Kalyvia–Keratea valley perhaps provided grazing.⁴⁸

Two families left tombstones in Piraeus. Epikrates son of Kallias P., commemorated by a stele, served as councillor in (?) 336/5; Eukolon daughter of Kallias P., commemorated by a stele of the third century now in the Eleusis museum, may have been his granddaughter (SD). The rare name borne both by Sotairos son of Sokrates P. and by Sotairos son of Deinon of Peiraios, commemorated on the same relief stele from Piraeus, suggests an affinal link (see Table 27.4). Since Sotairides son of Sosandros of Peiraios, whose dikasticket is preserved, presumably came from the same family, it is likely that Sokrates of Prospalta had married a daughter of Sotairos I of Peiraios. The two Sotairoi are represented on their stele with a woman; since Sotairos of Prospalta is seated and thus represented as senior to his cousin, it seems possible that the woman is a daughter of Sotairos of Prospalta who had married her cousin (FMBS) Sotairos of Peiraios.⁴⁹

⁴⁸ *IG* xii 6. 262 V 22; *IG* ii³ 844. 8–9; *Agora* XV 43. 119–20. Olympiodoros Eumelou, Lambert 1997*a*, F 13 A 13; the reading P[—] for the demotic 'cannot be excluded', p. 105. Eikadeis, ch. 12 n. 43. Eumelos, *Agora* XV 43. 121–2. Cf. also *IG* ii² 11438 = *CEG* 503.

⁴⁹ *IG* ii² 7307 Epikrates, 7308 Eukolon. Sotairos a. o., *IG* ii² 7319; Sokratides P., commemorated with a Sostratos by a loutrophoros of the second half of the 4th c., ii² 7318 + 12743 (Pologiorge 2002*b*), also from Piraeus, may be related, as may the son of a Sostratos P. who served as one of the treasurers of Athena

TABLE 27.4.
Prospalta: Sotairos

The Embios whose pottery workshop, which functioned from the late fourth to the second century, has been excavated on the north end of Karababa hill (on the site of the Spata airport) probably belonged to Prospalta, since the name is attested in the later Hellenistic period in that deme, and does not occur elsewhere.⁵⁰

COASTAL TRITTYS

The coastal demes of Akamantis are generally agreed to have been Poros, Kephale, and Thorikos; the two latter are securely located, but *Poros* is not. Traill (1986) places it at Metropisi; this location is partly based on an association in the hekatoistai texts between Poros and Besa, the latter being located in the northern sector of the Legrain valley. The deme-site at Plaka, if not assigned to Deiradiotai, would be an alternative candidate for identification as Poros.⁵¹

Demesmen are not well attested, and no classical grave monument can be attributed to a possible deme area. Nikostratos son of Gyles P. married Phile daughter of Kalliades of Potamos, which might suggest residence in southeast Attika; since the name is rare, Gyles P. may have been a grandson (DS) of Gyles of Probalinthos. The daughter of Thouphanes P. made a dedication in (?) the 340s at Thorikos to [Hygi?]eia.⁵²

in 345/4 (*IG* ii² 1443. 4). Sotairides, Kroll 1972 no. 31. For Makartatos P. (perhaps commemorated on *CAT* 2. 861 = *SEMA* 2134, with a Chrysopolis) see *APF* 2921 XII; ch. 7 Case 9.

⁵⁰ *SEG* 34. 250. Topography of workshop area: Steinhauer 1994*a*, Steinhauer a. o. 2005.

⁵¹ Metropisi had a large ancient nekropolis, seen by Vanderpool (Stanton 1984*b*); see also Lohmann 1993*a*, insisting that Metropisi's communication routes lead NE. The name Poros would derive from the location of the deme at a pass leading from the Anavyssos plain to the Potamos valley (Traill 1975*a*, on Metropisi; a similar explanation would be valid for Plaka, on which see *AGC* 21 X9/Y2 no. 7). Alternatively, one might assume that the deme (which appointed three councillors in the 4th c.) had been coastal, perhaps at Kake Thalassa, but was no longer inhabited in Strabo's day. (Goette 2000, puts Amphitrope [ch. 32 n. 103] at Legrain.) See also Papazarkadas 2011, 292.

⁵² Nikostratos, *IG* ii² 7250 (no provenance); cf. ch. 25 n. 15 on Gyles of Probalinthos. Democharides P. has been eliminated from *SEG* 58. 265, but we still have Demonstratos son of Democharides P. on *IG* ii² 2861, a monument consisting of more than one stone (see drawing in *IG*) with 6? (12? more?) crowns

Kephale

This was the largest deme in the coastal trittys, appointing nine councillors in the fourth century. The main settlement was perhaps at Mesochori, east of modern Keratea, or at Megale Avle; it has been suggested that in the classical period the coastal village at Kake Thalassa, which had a sanctuary of Dionysos, belonged to Kephale. The main deme centre was evidently a settlement of some importance before Kleisthenes' reforms, since a sixth-century 'Hipparchan' herm marked the half-way point between it and the city of Athens; two well-known archaic statues, and fragments of others, were found in the area. The eponymous hero Kephalos was the subject of a myth which in the sixth century formed part of a complex of stories about Athens' expertise in dealing with cases of accidental homicide, and later became a subject for tragedy (ch. 20 n. 81). The sacrifice prescribed for him on the calendar *IG* i³ 256 *bis* = *SEG* 33. 147 was probably made by the neighbouring deme Thorikos; presumably he also received sacrifices at Kephale. The deme also had sanctuaries of Aphrodite, of the Dioskouroi, of Hera (?), and of another hero, and possibly a cave-cult of Pan; it was perhaps the base of the phratry Achniadai. Tombs lined roads leading from the deme centre; in the last decades of the nineteenth century local residents were actively engaged in unofficial excavation and sale of antiquities.⁵³

In the late fifth century the deme contained at least one prominent family, that of Teisias II son of Teisimachos, who served as general at the siege of Melos in 417/6, and probably also in the following year. His father is attested as one of the treasurers of Athena in 444/3. Teisias' service in Melos suggests a link with Alkibiades, and thus supports the case for identifying him with the Teisias who

for epimeletai (and others?), of uncertain date. Daughter of Thoupphanes P. (added online to *LGP*N), *Thorikos* V, 149 no. 1. On Thoutimos and Androkles, sons of Androkles P., *IG* ii² 5752, see *APF* 12267.

⁵³ See Buchholz 1963 (with map, reproduced in Papahatzes 1974, 406); Athanasios 1985; Philippou-Angelou 1986. Herm, *IG* i³ 1023, found at Koursala (Koropi; see Ross 1855, 217); on roads from Kephale to Athens see Kakavogianne 2009. It is worth noting that Kephale rather than Thorikos is chosen as the terminal point on the road leading through the former to the latter. Buchholz' view that Kake Thalassa became a separate deme, Kyrteidai, in the 3rd c. BCE is problematic, since Kyrteidai is first attested in the 2nd c. CE, and does not appear in Strabo's list of coastal demes (C 399/ 9. 1. 21–2). Archaic statues: *AGC* 21, X9/Y3 nos. 15–17, and Philippou-Angelou, loc. cit. *SEG* 33. 147 is discussed below, s.v. Thorikos, nn. 69–72; on Kephalos' homicide see Humphreys 1991, p. 33. Horos of Aphrodite Kephalethen, *IG* ii² 2604, cf. Is. 2. 31 (*AGC* 21 X9/Y3 no. 21, near cave of Pan); of hero Egglem—?, ii² 2612 (attributed by Solders 1931, 7, implausibly, to He[ra] E[i]lei[thia]); the horos of Demeter and Kore attributed to Kephale in *IG* i² 869 is a doublet of ii² 2600, from Thorikos, *IG* i³ p. 972). Dioskouroi, Paus. 1. 31. 1. Achniadai, ch. 19 n. 8. Tombs, Buchholz, *ibid.*; cf. *BCH* 82, 1958, 672, 675 fig. 10. Unofficial excavations, Leonardos 1892 (cf. *AA* 1899, 147, Louvre acquisitions); ch. 11 n. 16. The rubble fort at Ovriokastro, between K. and the Potamos demes, may date from the early 3rd c. BCE (Lauter 1992; but Lohmann 2001 thinks it medieval). *AD* 46 B 1, 1991 (1996), 66: peribolos at Grava, farm (?) at Senkini, settlement remains (?) around chapel of Ag. Antonios at Roudseri. Sanctuary on Keratovouni, Steinhauer 2001 (Langdon 1976, 103). Note also horos marking land of Dionysios the *mantis* (500–450), *IG* i³ 1140, found in the Keratea area.

commissioned Alkibiades to buy a four-horse racing team from the city of Argos for him and enter it in his name at the Olympic games of 416, and subsequently sued Alkibiades (successfully) for entering the team under his own name. On the basis of this identification, Teisias will have served as councillor under the Thirty in 404/3 and will have been a brother-in-law of Charikles, one of the prominent members of the junta. The priest of Asklepios in 338/7, Teisias, who belonged to Akamantis, may well be a descendant.⁵⁴

The trierarch Nikippos K., who belonged to the *genos* Brytidai and appeared as witness for Apollodoros of Acharnai in the late 340s (*APF* 10833, [Dem.] 59. 61), seems to have belonged to a similar milieu (aristocratic pretensions, horse-racing).

Leosthenes son of Leosthenes of Kephale served as general in charge of the countryside in (?) 329/8; his syntrierarchs and heirs owed money for a damaged trireme at the end of 323/2, and his sister Philoumene set up a dedication to Athena made by the younger Kephisodotos on the Akropolis shortly after 350. Identifications with other generals bearing the same name are problematic.⁵⁵

Another military leader from Kephale, Smikythion, was honoured by the deme Eleusis for his services as peripolarch in the late fourth century, at a moment when the deme needed defending.⁵⁶

The comic poet Philippides K., whose father Philokles is attested as trierarch, was honoured by the city in 283/2 with a gold crown, a bronze statue to be set up in the theatre, and hereditary *sitesis*, for his services as ambassador to Lysimachos,

⁵⁴ *APF* 13479; Teisimachos son of Teisias I, *IG* i³ 455. 16; Teisias II kedestes of Charikles, Isokr. 16. 42; Teisias III, *IG* ii² 1533 = Aleshire 1989 Inv. III 29, *SEG* 30. 163. Teisias II will first have tried to make a career with the help of Alkibiades (the Melian expedition looks like one of the latter's attempts to provide occupation and pay for the fleet after the Peace of Nikias) and will then have moved into the oligarchic camp. Cf. ch. 15 s. 'The Thirty'.

⁵⁵ *APF* 9142 requires revision. The generalship of L. of Kephale is recorded on *I Orop* 353, on the date of which (329/8?) see Humphreys 2009. The Leosthenes who (having perhaps served under Dareios III, Badian 1961) collected a force of mercenaries on Cape Tainaron in the southern Peloponnese in 324/3, commanded the Athenian force at Lamia, died in the autumn of 323, and was commemorated by a painting of him with his sons set up in the *temenos* of Zeus Soter and Athena Soteira in Piraeus (Paus. 1. 1. 3), may not have belonged to Kephale (cf. Worthington 1987; Gehrke 1976, 78–9, and Jaschinski 1981, 52–4 accepted the identification). Worthington (*ibid.*; cf. *APF* loc. cit.; Gabrielsen 1994, 168–9) points out that the damages to *Hebe* during the trierarchy of Leosthenes K. and his *synteleis* (*IG* ii² 1631. 601–5, 681–2, Leosthenes' heirs; 499–501, 605–7 *synteleis*) may not have occurred in 324/3/2. The Leosthenes who was defeated by Alexander of Pherai in 362/1 and fled to Macedon, where he was still alive at Philip's court in 346/5 (Aisch. 2. 21), is also not necessarily to be attributed to Kephale; he might be the L. of (?) Kydathenaion attested as trierarch in (?) 366/5, *APF* p. 344 (wrongly dated c.336/5, *LGPN* Leosthenes 7). The Malthake daughter of Moschos, wife of a Leosthenes, who made two dedications to Artemis Brauronia (*LGPN* Malthake 2, cf. 1, 3), and the Leosthenes who served in the cavalry c.250 (Bugh 1988, II B 147), may or may not be linked to one or another of these generals. Philoumene, Matthaiou 1994 = *SEG* 44. 136.

⁵⁶ *IEleus* 80; see ch. 30 n. 78. Cf. also Pamphilos son of Demetrios K., honoured at Rhamnous as military official, below, n. 65.

his generosity to individual Athenians who had fallen into Lysimachos' hands, and his contributions to festivals. He was evidently a very wealthy man, having acquired funds from Lysimachos to add to the estate inherited from his father. The decree awarding the honours was proposed by his fellow-demesman Nikeratos son of Phileas, whose father is also attested as trierarch.⁵⁷

The burial areas of the deme have yielded a rich harvest of monuments. Two pairs of stones can be attributed with some confidence to periboloi: a stele and naiskos commemorating Mnesistrate daughter of Sophanes of Phrearrhioi, wife of Diophantos son of Dion K., and two stelai commemorating Timotheos son of Nikon I K. and his son Nikon II, with the latter's wife (?) Mnesikleia. Nikon is attested as syntrierarch on two ships in 322.⁵⁸ A pair of lekythoi commemorating a Kephisodoros, perhaps the father of the Kephisodoros Kephisodorou K. who served as councillor in 303/2, with his (?) wife Lysimache, will also have stood together;⁵⁹ the same may be true of the stelai commemorating Demochares son of Demokles K. and Nikaïos son of Demochares K. Demochares owned a dikastic pinax, and his father had served as treasurer of sacred funds in 398/7, so this family may have had a base in the city as well as in the deme.⁶⁰

Aischron K. was commemorated by a loutrophoros representing him as a beardless youth, with his father.⁶¹ A naiskos representing the young Lykourgos with his father Hierophon K. may possibly be identical with a similar monument in which the father's name is reported as Xenophon; however, both names are attested in the deme in the fourth century, Hierophon as councillor in (?) 336/5, and Xenophon as father of Theophilos K., secretary in 299/8. The kioniskos of Theophilos' son Philion has the peculiar distinction of being (according to Koumanoudes) the only monument published by Lenormant from Athens that has subsequently been traced.⁶² Mnesimache, daughter

⁵⁷ Philippides, *APF* 14546, *IG* ii³ 877; Habicht 1995; Paschidis 2008, A 40. Philokles perhaps appears on a curse tablet (Wünsch 1897, 103, cf. Wilhelm 1904, 122–5; but see ch. 14 n. 83); Philistides son of Philippos K., secretary to the naopoioi on Delos in 345/4 (*ID* 104-23. 14; 104-24. 1), and councillor in (?) 336/5 (*Agora* XV 42. 273), was perhaps the poet's uncle (FB). Nikeratos, *APF* 14239, may also have been a relative.

⁵⁸ Mnesistrate: *IG* ii² 7725 with Diophantos, 11873 = *CAT* 3. 423 (re-used at the same site) with Kleostrate, presumably her daughter, and a servant (Bergemann 1997, peribolos V 6). Sophanes K, ii² 6369, from Athens, may be their son. Timotheos and Nikon (Bergemann, peribolos V 5), *IG* ii² 6370; 12803a = *CAT* 3. 465a, representing Nikon and Mnesikleia and naming another woman, Timostrate (perhaps a daughter or sister of Nikon); *APF* 11111. It seems to me less likely that the Timotheos named (first) on ii² 6370 is a son of the trierarch who died before his father.

⁵⁹ *CAT* 2. 842 with 2. 842a = *IG* ii² 11844; *Agora* XV 62. 91. Bergemann, peribolos V 7.

⁶⁰ *IG* ii² 6350, 6365; the latter is undated. Demochares' pinax, Kroll 1972, no. 111c (no provenance); Demokles, *LGPN* no. 35 (cf. possibly ii² 10909 = *CAT* 2. 279, loutrophoros of Demokles, with his father Autokles, from Keratea; n. 65 below). The (?) lost lekythos reported from Senkini or Dardiza by Leonardos 1892, 27 no. 17, commemorating Nikostratos, Demochares, and [P?]anta[klea] or [-riste] may belong to the same family, and perhaps suggests an affinal link with the family of Theainetos K., buried on Salamis, discussed below with Table 27.5).

⁶¹ Aischron, *IG* ii² 6345 = *CAT* 2. 336, Hamiaux 1992 no. 184, c.370.

⁶² *IG* ii² 6358 = *CAT* 2. 911, representing Hierophon as a bearded elderly father leaning on a stick, facing the young Lykourgos, a nude boy, with a dog (added?) by the young man. A naiskos with similar

of Kallimachos K., was commemorated in the second half of the fourth century by a stele to which the name of her mother, Timarete daughter of Euthymachos of Lamptraï, was later added. The stele of Pythodoros son of Noumenios with his wife, Ktesikleia daughter of Naukrates K., was also found in the deme; however, a descendant, Pythodoros II son of Noumenios II, settled in Egypt.⁶³

Other monuments found in the Mesogeia may in some cases at least have travelled from burial-sites in the deme. The loutrophoros of Eschat(i)on son of Pythokles, on which he is represented with his parents, was found either at Sounion or at Spata.⁶⁴ A stele naming Androkles II son of Androkles I K. with his wife Phanistrate, his son Antisthenes II, and Antisthenes I, son of Alkisthenes K., was recorded at Kato Vraona; a lekythos naming a Pamphilos and a Kleitopolis, found at the church of Ag. Athanasios in the hills north of Keratea, may have commemorated an ancestor of the military officer Pamphilos son of Demetrios K., honoured at Rhamnous c.220; a stele found at Mpriki near Thorikos, naming an Autokles and a Demokles, may possibly commemorate an older kinsman of Autokles II son of Autokles I K., councillor in 303/2.⁶⁵

Another set of three monuments, linked by the name Aiolos, may all have been set up in the deme, but if so they became scattered through sale; none of the names can be linked to Kephale. A relief lekythos seen at Roudseri by Leonardos, representing Kalliphanes as

inscriptions but giving the father's name as Xenophon was recorded by S. A. Koumanoudes in Athens, *AEE*² no. 162. Matthaiou (ad loc., cf. *SEMA* 294) notes that *IG* ii² 6358 appears to have travelled straight from SE Attika (Keratea, then Lavrion) to the National Museum in Athens; however, if the two monuments are not identical (in which case Hierophon and Xenophon would presumably be brothers, sons of a Lykourgos I) one would perhaps have to assume that Koumanoudes' statement that the Xenophon monument had been moved to the museum was due to confusion with ii² 6358. Hierophon, *Agora* XV 42. 274; Theophilos son of Xenophon, *IG* ii³ 844–5; Philion ii² 6372 (*RhM* 21, 1866, 378 no. 162). *IG* ii² 12237 = *CAT* 3. 823, a loutrophoros of (?) the first or second quarter of the 4th c. from Keratea commemorating a Lykourgos son of Hieroptes with his father, his (?) mother Nausiptoleme, and his young (?) sister Phainippe (Kokula 1984 L 93, 360s), may be an earlier monument belonging to this family (youth's figure changed according to Schmaltz and Salta 2003, no. 15); a connection with Hierokles K., commemorated by a painted stele of the 5th c., *IG* ii² 6357 = i³ 1331 (no provenance; *CAT* 244, Posamentir 2006, no. 28) is also possible.

⁶³ *IG* ii² 6363; for Timarete's family see ch. 23 n. 73. Pythodoros, ii² 6366; the name of Ktesikleia was added later. Pythodoros II appears as an *Athenaios tēs epigonēs* in the late 3rd c., *BGU* 1269. 1 (A. Martin 1989). *IG* ii² 12324, of uncertain date, from Keratea, may commemorate Noumenios I or II. Cf. perhaps also ii² 11844, c.350, Keratea, Kephisodoros and Lysimache; the name is common but a Kephisodoros son of Kephisodoros K. was councillor in 303/2, *Agora* XV 62. 91. *SEMA* 2156–7, paired lekythoi for a Melanthios from 'Ag. Trias between Markopoulo and Porto Rapti' (outskirts of Markopoulo?) may commemorate Melanthios father of Megalokles K., councillor in 305/4 (*Agora* XV 58. 60).

⁶⁴ Eschation, ii² 6353 = *SEG* 16. 195 (*AG* I; there is room on the squeeze for the iota); attributed to Spata by *CAT* 3. 859, but there may be some confusion, since *CAT* erroneously has Eschation's father as Pythodoros (ii² 6353 attributes the stone to Sounion). Eschation is bearded but probably unmarried.

⁶⁵ Androkles, *IG* ii² 6346 (re-used in a church); since all the names are said to have been cut by the same hand, Antisthenes I is more likely to have been the MF of Antisthenes II than his SS. Pamphilos, *Hesp.* 19, 1950, 28 no. 3, cf. *IG* ii² 1322. 36; *PAAH* 1991 30–1, no. 4 (with reference to descendants). Autokles and Demokles, ii² 10909, loutrophoros, dated before 350 (ch. 11 n. 40); there may be a connection with Demokles father of Demochares, as noted above, n. 60. Autokles II, *Agora* XV 58. 63.

a soldier, with his father Aiolos, went to the Louvre; a Kalliphanes is represented with a Leonike on *CAT* 2. 875; and on *CAT* 7. 330 = *SEG* 14. 229 Stratokleia, Leonike, Aiolos, Aristomache, and Axiomache are represented with two maids.⁶⁶

While members of leading families from Kephale made political careers in the city, it is rarer to find evidence of less eminent demesmen whose activities were based outside the deme. However, Theomnestos K., who freed a slave kapelos *c.*(?) 330, probably had a base in the city or Piraeus; a tombstone of his family was found at Koukouvaones, north-west of the city (towards Kephisia).⁶⁷

Two tombstones from Salamis record members of families from Kephale that may have been linked to each other and to other families in the deme (see Table 27.5); the group as a whole contributed five councillors in the years 305/4–303/2, a significant date in view of Athens' recent recovery of Salamis. There may have been some relationship already between Lysimenes I, whose son and grandsons were buried on Salamis, and Lysimachos I, the hypothetical common grandfather of two councillors named Lysimachos; Lysistratos K., who lent money secured on property in Ikarion, may also have been linked to them. The name of Theainetos I, son of Lysimenes I, perhaps recurs as that of [Theai?]n-etos II, son of Theagenes K., councillor in 303/2 and (?) father of Aristoteles son of Theainetos K., who served as secretary in (?) 218/7. Theagenes may have had two other sons, Philokrates I son of Th—, councillor in 305/4, and [Pol]ykrates (deme uncertain), commemorated on a tombstone from Salamis, *IG* ii² 6354, with the son or daughter of a Philokrates. [Pol]ykrates' name might suggest an affinal link with the Polykrates K. whose son Lysimachos II served as councillor in 303/2; the latter's cousin (FBS) Lysimachos III son of Hippokrates had served in 304/3. Philokrates II K., probably a grandson (SS) of Philokrates I, served as ephebe in (?) 266/5. For other K. councillors at the end of the fourth century cf. ch. 17 n. 18.

⁶⁶ *IG* ii² 10603 = *CAT* 3. 921, in the Louvre; Leonardos 1892, Hamiaux 1992, no. 177; this lekythos may be 20–30 years later than the other two monuments (so *CAT*), but the date 2nd–1st c. BCE in *LGP*N (Aiolos 2, Kalliphanes 24) seems mistaken and is contradicted s. Leonike 2, where all three monuments are dated *c.*375–350. *CAT* 2. 875, *SEMA* 2035, Kalliphanes and Leonike; *CAT* 7. 330 = *SEG* 14. 229, *SEMA* 2412, now in the Metropolitan Museum, New York, Stratokleia a. o. *CAT* thinks that Leonike was the wife of Kalliphanes, and Aristomache and Axiomache their daughters; Aiolos would have survived to a ripe old age in a household of women.

⁶⁷ *IG* ii² 1566. 13; 6356, Theomnestos I son of Theomenes I K; Theomenes II son of Theomnestos I. Since this text is dated *c.*350, the manumittor may be Theomnestos II son of Theomenes II. Note also Sosi[-*c.*6-] Sostr[atou] K., commemorated on a stele of the 4th c. found in the city (*SEMA* 296), presumably related to —phr— —ostratou K., commemorated on a lekythos of unknown provenance of *c.*380 (*CAT* 3. 777 = *SEMA* 297 (A)) to which the name of Pyrrhos son of Pankles of Potamos was added; a later member of this family in K., —tos son of Sostratos, is recorded as ephebe *c.*236/5 (arch. Kimon: *IG* ii² 1027 c 11). *IG* ii² 6359–6360, also from Athens, are probably readings of a single stone.

Notes: IG ii² 6354 is the same stone as 5759; LGPN should be corrected. 6355 = CAT 5.910, Scholl 1996 no. 489. Lysimenes II is represented as a hoplite. The gap between Theainetos and Aristoteles is long but not impossible. Both marriages of Theagenes are hypothetical.

TABLE 27.5. Kephale: Lysimachos (a different reconstruction in M. C. Taylor 1997)

Thorikos

Thanks to Belgian excavations on the site since 1963, supplemented more recently by those of the Greek archaeological service, the main site is well known. The akropolis (Velatouri) has prehistoric remains, including evidence of early metal-working, and in the historical period seems to have been inhabited at least from the sixth century; evidence of cult at a MH shaft grave and at one of the Mycenaean tholos tombs cut into the hillside also begins in the sixth century, and continues into the fourth. The two burial areas that have been explored, which attest iron-age settlement on the site from *c.*1100, have yielded surprisingly few inscriptions, but the one near the theatre had ‘monumental’ graves from *c.*500. The classical town spread over the southern slopes of the hill; a theatre area was in use from the late sixth century, and was enlarged *c.*450 and again about a century later. The temple of Dionysos, associated with the theatre, may have been built at about the same time as the first theatre extension. A public building of unusual form—perhaps two stoas flanking a central wall—was begun in the last quarter of the fifth century but abandoned due to flooding. The isthmus of the Agios Nikolaos peninsula east of the city was fortified in 412. In addition to the evidence for cult provided by the calendar, discussed below, Thorikos perhaps had a shrine of Hygieia and/or a healing hero in the ‘industrial’ area of the town, with finds from the sixth century; a temenos of Demeter and Kore; and a shrine of Zeus (?) Auanter.⁶⁸

The sacrificial calendar *IG* i³ 256 *bis* in my opinion belongs to the deme.⁶⁹ On this view we learn from it that Th.—like the Salaminioi to the south and Halai to

⁶⁸ General accounts: Mussche 1974, 1994; Travlos 1988; Goette 1999, 2001. Hero-cult at Tholos I, Devillers 1988 (cf. Whitley 1994*b*): main period *c.*550–425, finds mainly cheap vases. Grave monuments attributed to Thorikos: *IG* ii² 11780 (cf. 6225, from Synterini, and below, n. 86); *AEE* 537 (kioniskos, Agathias Leokritou Th., *SEMA* 3037, suspect, not in *LGP*N); *SEMA* 255–6 (below, n. 80). Town: see *Thorikos VII*, 1970–1 (1978) 39–110; Mussche (ed) 2008, plans pp. 58, 62. Theatre (in the Lykourgan period it could have held 6000) Bingen 1991; Goette 1995*b*, 2014. ‘Doric building’ of stoa-like form, Dinsmoor 1982; Oikonomakou 1996; *AD* 49 B 1, 64–6. Kakavogianne and Anetakis 2012 take it to be a market. Fort (marked on *KvA*): Xen. *Hell.* 1. 2. 1, see Lauter a. o. 1989, Lauter 1992. Healing hero, *Thorikos V*, 1968 (1971), 103–30 (dedication to Hygieia, above n. 52, daughter of Thouphanes of Poros); see however Lauter 1993, 135 n. 426; Humphreys 2007, n. 12. Demeter and Kore, *IG* ii² 2600, cf. above, n. 53. The ‘Doric building’ has been thought to be the Koreion, but on slender grounds (N. D. Robertson 1996; the horos ii² 2600 perhaps came from this site, but so did a pederastic inscription, *Ergon* 1995, 20–3). Zeus Auanter or Lu(m)anter, *IG* ii² 2606 (conceivably associated with the sekos of Zeus Kataibates?); see now M. Miles 2015*b*. Two tile fragments stamped with the abbreviations Nikarch/Akam/Chaire, *Thorikos IX* nos. 89–90, see Bingen 1990 (*SEG* 40. 52), remain mysterious and scarcely provide evidence for a deme cult of Akamas. A possible subordinate hamlet of Th., to the west, with a (?) public building, ergasteria, and burial areas, Salliora-Oikonomakou 1985 [1991]; but see also Besa, ch. 32 nn. 98–9. Unpublished deme decree of ? Thorikos, *c.*460–440, providing for lease of two *temenê*, the Dionysion, and the Herakleion, Matthaiou 2009*a*; Papazarkadas 2011, 113.

⁶⁹ I summarize here the analysis in Humphreys 2004, 155–65. See also Lupu 2005, 115–49; *SEG* 54. 60. M. H. Jameson (*per ep.*; cf. Ismard 2010) was once inclined to attribute the text to a (pre-Kleisthenic?)

the north—had a salt-pan; as we would expect, it celebrated the Rural Dionysia; it had a Pythion, and perhaps a sanctuary of the Eleusinian goddesses (*koreion*). It sent victims to Agrai for the Diasia (ch. 22 n. 57). The text was dated *c.*430 in *IG* i³, in the 420s by Matthaïou (2009*a*). I have suggested that it was a response to complaints that sacrifices, perhaps especially those at peripheral sites,⁷⁰ had been omitted; anxiety had perhaps been aroused by the plague, the flooding of the ‘Doric building’, or the lightning-strike at Sounion mentioned by Aristophanes (*Clouds* 402) in 422. Deme meetings in Metageitnion for euthynai and in Skirophorion (for scrutiny of eighteen-year-olds and elections?) are suggested by reference to oath-victims.⁷¹ It is interesting that Th. sacrificed in Mounichion to Artemis Mounichia (in Piraeus?) rather than at the nearby sanctuaries of Brauron and Halai. A sacrifice to Poseidon at Sounion was perhaps shared with the Salaminioi, since there are other resemblances between the cultic assemblages of the two bodies.⁷² There are also signs, however, that Thorikos’ early theatrical tradition might have encouraged the introduction of offerings to figures prominent in tragedy.

Even the financing of dramatic competitions at the Rural Dionysia seems to have required some regulation *c.*420, the date of a very fragmentary inscription excavated in the theatre. It appears to record a decision that the names of choregoi, both for tragedy and for comedy, should be recorded on stone, followed by a list which does not seem to have contained more than three names, probably the choregoi of a single year. As at Ikarion (ch. 24 at n. 28), there may have been complaints from ex-choregoi that they were carrying too much of the financial burden, while others evaded their responsibilities. Mnesi[as], one of the listed choregoi, may be the son of Ameipsias Mnesi[o], who is mentioned at the end of the decree, perhaps as having been concerned in some way with the decree or the record. The son of —ylides, also a choregos, may have been the father or another relative of Aischylides Th., who appears in a mining record of *c.*330/29, perhaps as a landowner.⁷³ Another decree, perhaps also passed in the Lykourgan period, informs us that three choregoi were appointed each year and that prospective choregoi were to bid for the honour, a minimum sum being

amphiktyonic religious association similar to the Marathonian Tetrapolis; evidence that Thorikos was running its own Rural Dionysia by the late 5th c. may perhaps tell against this, and the somewhat sinister associations of Kephalos may explain his appearance in association with the Plynteria and oath-taking. On the ‘heroines of the Koroneians’ see now Papazarkadas 2011, 26 n. 50; *Nymphé Korōneia*, *BE* 2009, 255.

⁷⁰ We now have a horos of the hero Hyperpedios, from the Thorikos valley, *SEG* 51. 158, cf. 52. 157; Papazarkadas 2011, 139. Krahe 1941 rejects the association of the toponym Mykenai with mushrooms.

⁷¹ There may have been further meetings, possibly in Boedromion (cf. ch. 22 at n. 108 on the prerisia; ch. 30 n. 76), or in association with the Rural Dionysia.

⁷² It is also possible that the Poseidon cult derived from an early amphiktyony; see ch. 18 n. 6.

⁷³ *IG* i³ 256 *bis*; cf. Takaeuchi 2013, 102–5. The length of line is not very certain and I cannot suggest a restoration for l. 8, in which Ameipsias appears. Aischylides, *Agora* XIX P 34. 5. Dorokles, father of the third choregos, bears a name not attested elsewhere.

fixed by the deme. The number of three choregoi is surprising, but is supported by the earlier text, and perhaps by a choregic dedication of c.380–350 made by three choregoi, two for comedy and one for tragedy. However, a list of (?) victorious actors, dated by demarchs, names only two in each year, one for comedy and one for tragedy. Apparently at Thorikos prizes were awarded to actors but not to productions.⁷⁴

The earliest prominent family that can be traced in the deme is that of Kason, *kalos* on vases dated in the 530s, and his son Boon, who appears on ostraka both as *Thorikios* and as *Thorikôi oikôn*.⁷⁵ Since one would expect a boy named as *kalos* to be resident in Athens, possibly the family had moved to Thorikos in the late sixth century to engage in mining.

The names of the choregoi who dedicated SEG 34. 174—Demochares, Democharides, and [?Dema]des—lead to a connected group of families who were evidently prominent in the deme, although there are some problems of reconstruction (see Tables 27.6A–27.6D). Demochares I, the choregos, may be the Demochares Th. named in IG i³ 1032. 186 as (?) one of the survivors of Aigospotamoi (ch. 21 n. 41); he could have been a young man at the time of the battle. Democharides (and [?Dema]des?) may have been his son(s) or brother(s). Democharides is named three times on the large curse tablet SEG 58. 265 (A 1 13, 26; B 128). Demochares probably also had a son called Attabos, whose son Demochares II was commemorated on a stele found in the church of the Prophet Daniel near the Akademy. The stele also names Demochares II's two sisters, their husbands (members of Thorikos), Demochares' (?) wife Myrte, and her father Paramythos son of Stephanos of Aphidnai. It may have been set up by Myrte after the death of the other members of the family (ch. 11 nn. 33–4). Attabos II Th. and his (?) son Stephanos, both attested in the third century, were presumably descendents of Attabos I.

⁷⁴ Decree SEG 34. 107 (date, Matthaïou 2009*a*); see Summa 2006; P. Wilson 2007*d*; 2010*a*, 71–6 (SEG 57. 126). Dedication SEG 34. 174; list of (?) actors SEG 40. 167. The minimum sum for a choregia may have been 300 or 3000 dr.; since the speaker of Lysias 21 spent 3000 dr. as choregos for a full tragic programme in 411/10, and 1600 for comedy in 403/2 (APFD 7), the smaller sum is the more probable of the two, but even for a rural performance it seems low. IG i³ 1027 *bis*, dated c.435–410, is a verse dedication by a choregos called Python made in fulfilment of a vow, which might suggest victory in a competition; perhaps he was celebrating the victory of his leading actor, or his own success in the bidding competition. The choregoi of SEG 34. 174 may have been kin (P. Wilson 2010*a*, 43 n. 22) who had served in different years. The interpretation of SEG 40. 167 as a list of victorious actors is based on the identification of Pindaros son of Proteas in l. 2 as the well-known tragic actor Pindaros (see *Thorikos IX*, 1990, no. 84). Possibly, if there were three productions each year, the same comic actor played in both comedies, or a full program of tragedy (three tragedies and a satyr-play) was split between two choregoi (however, performance of trilogies at the Rural Dionysia is not so far attested elsewhere); on IG ii³ 4. 498, see ch. 29 n. 131.

⁷⁵ Brenne 2001, no. 43. Siewert 2002, T1/39, suggests that the phrase *Thorikôi oikôn* cast doubt on Boon's citizenship; this seems to me unlikely (ch. 22 n. 39).

TABLE 27.6A.
Thorikos: LysaniasTABLE 27.6B. Thorikos:
Atarbos APF 2679

It may be coincidence that Stephanos (II) bore the name of Myrte's grandfather (FF), but there is rather more reason to posit a continuous family tradition in the case of Paramythos son of Demochares of Antigonis, ephebe in 242/1 (archon Philoneos), who bears two of the family names. He may be the descendant of a sister of Myrte who married into Lamptrai, later transferred to Antigonis.

Euthippos Th., father of the brothers Charmides and Sosigenes II, one or both of whom married into Demochares' family, probably had a brother called Sosippos, whose son Sosigenes III is attested by a late fourth century tomb monument commemorating him with his wife Chairylla (n. 80). The names suggest a horse-owning family.

The name Attabos does not occur elsewhere in Attika, and may be a variant of the better-attested name Atarbos, which also occurs in Thorikos. In that case

TABLE 27.6C.
Thorikos:
Attabos

Demochares I and a brother may both have been the sons of a hypothetical Attabos or Atarbos I. A son of the brother, named Atarbos II, would have married a daughter of Lysistratos, member of another prominent family of Thorikos (Table 27.6A). His son [Lysi?]stratos II made a dedication on the Akropolis in the middle of the fourth century, and is probably also the [Lysistratos? At]arbou Th. who commemorated a victory with a boys' choir at the Thargelia *c.*350–325 with the choregic monument *IG* ii³ 4. 495. Lysistratos II's son Atarbos III won choregic victories with a boys' choir and with pyrrichistai in 323/2, and purchased land at Thorikos in the hekatoistai sales; he may be the Ata[rbo]s who made a dedication to Asklepios with another person *c.*300.⁷⁶

The two lineages descended (on this hypothesis) from Atarbos I can be linked to two other families in the deme. The name Lysistratos, as I have suggested, probably came into the Atarbos line through a marriage of Atarbos II to a daughter of Lysistratos I son of Lysanias I Th.⁷⁷ The family of the latter is known principally from an imposing cluster of monuments set up in a prominent site in the Kerameikos round the stele of Dexileos son of Lysanias I, who died while

⁷⁶ Appendix 3 with J. L. Shear 2003 for the various uncertainties in this reconstruction, and references to other discussions of the data; ch. 12 n. 85. For the variation Atarbos/Attabos cf. perhaps Mnesippos/Mnasippos in Table 24.7.

⁷⁷ Lysippides, who put a decree to the vote in Thorikos *c.*400 (it is not certain that he was demarch), *SEG* 34. 107, may have belonged to this family.

fighting in the cavalry in the Corinthian War.⁷⁸ Dexileos had two brothers, Lysistratos I and Lysias, and a sister, Melitta, who married Nausistratos son of Stratokles of Sphettos.⁷⁹ Lysistratos I, in addition to the daughter hypothesized above, seems to have had a son, Lysanias II, who served on a board of officials in mid-century and had two sons, Lysistratos II and Lysanias IV, who made a dedication together in the late fourth century.

Lysias, Dexileos' second brother, was commemorated at the Kerameikos site *c.*340 (*IG* ii² 6227); his son Lysanias III was commemorated with his (Lysanias') wife Kallistrate and son Kalliphanes on a trapeza perhaps inscribed shortly after Demetrios of Phaleron's legislation limiting display in tomb monuments (ii² 6226). Kalliphanes may also have been commemorated alone by a (?) pedestal, ii² 11817. He had served as councillor in (?) 336/5 (*Agora* XV 42. 270).

The marriage of one or both of the sons of Euthippos Th. to daughters of Attabos I links the Attabos/Atarbos lineage to yet another family, resident in the deme, via the marriage of Sosigenes II (son of Euthippos' brother Sosippos) to Chairylla daughter of Chai— Th. Chairylla's father was probably related to Charinos son of Chairephon I Th. and Charinos' son Chairephon II, who should be either Chairylla's father or her uncle (FB). Charinos, Chairephon II, and the latter's sister Sosippe were all buried in the deme *c.*370–350; Sosippe's name may suggest an earlier marriage with the family of Sosippos and Euthippos.⁸⁰

There may also have been a connection between the lineage of Chairephon I and two other lines in which names based on the root Char- were used. Aristokrates son of Chares I Th. was honoured on Paros in the middle of the fourth century; he may be the Aristokrates Th. named (with his fellow-demesman Autolykos II?) in 361/0, and should be the father of Chares II, who served as councillor in 348/7 and in that capacity was cited by Demosthenes as a witness in his speech against Meidias (21. 121). A son of Chares II leased a mine *c.*340/39.⁸¹ Exekestides I

⁷⁸ *IG* ii² 6217, 6226, 6227, 6230, 11817 (see also notes to Table 27.6A). There is a considerable gap between Dexileos' stele of 394/3, ii² 6217, and the other monuments, dated *c.*350–310, and no monument for Dexileos' brother Lysistratos I is preserved (ch. 11 n. 21). Dexileos' monument, Bugh 1988 II A 24; Ensoli 1987; Spence 1993; Nemeth 1994; Stupperich 1994a. His dates of birth and death are recorded, probably to show that he was too young to have been involved with the Thirty. He was also named on the public monument *IG* ii² 5222, cut by the same hand as ii² 6217 or at least in the same style (Dow Nachlass). See ch. 21 n. 48. ii² 6217 tells us that Dexileos was one of the '*pente hippeis*', possibly a small squadron used for special manoeuvres (Xen. *Hipparch.* 8. 25).

⁷⁹ Straton son of Stratokles of Sphettos, diatetes in 371/0 or 363/2 (*IG* ii³ 4. 24, *SEG* 34. 63, cf. n. 4, Appendix 1; this genealogy somewhat favours the earlier date, since Melitta's husband should have been born before *c.*425), will have been Nausistratos' brother. Nausistratos' name was added later to ii² 6230, of mid-century, Melitta's stele.

⁸⁰ Sosigenes III and Chairylla were buried in the deme in the late 4th c, *SEG* 34. 202 = *SEMA* 256 (255, Sosigenes son of Sosippos, also from the deme).

⁸¹ Aristokrates: Matthaiou 1998 = *SEG* 48. 1135 (*LGP*N no. 92); *SEG* 23. 78. 11 = Reinmuth 1971 no. 1 (see now A. Chankowski 2014). If Aristokrates was born in the 420s (since a grandson was adult *c.*340,

son of Charias Tho—, named in a diadikasia list of 381/0, may well have belonged to Thorikos, since the son of an Exekestides served as councillor for Akamantis in 378/7, and an Exekestides of Thorikos served as general in 357/6 and eponym of a naval symmory not long afterwards. The Ex[ekes]tides son of Cha— commemorated by a stele with a relief loutrophoros, found at Brahami, was presumably a grandson (SS) of Exekestides I.⁸²

One of the interesting features of the evidence on Thorikos is that it provides evidence for continuing economic involvement in the deme area on the part of families based in the city. Mantias Th. served as treasurer of the dockyards in 377/6 and as general in 360/59; he married a daughter of Polyaratos of Chologos and was also involved with Plangon, daughter of Pamphilos of Keiriadai, who also had a military career. Mantias took out a mining lease c.364 with his son Mantitheos, shortly after the latter came of age, and this Mantitheos or his half-brother Mantitheos-Boiotos purchased land at Thorikos in the hekatomastai sales.⁸³

Land in the deme was bought on the same occasion by a Karkin[os], presumably a descendant of the comic poet Karkinos son of Xenotimos I Th. of the fifth century. Karkinos' son Xenokles, grandson (SS) Karkinos II, and (?) great-grandson (SSS) Xenokles II all wrote tragedies, and presumably had a base in the city, but another (older?) son, Xenotimos II, dedicated horse trappings at Brauron before 398/7.⁸⁴

Agora XIX P 29. 46, he cannot have been born later) he might still be alive as an elderly man in 361/0; it is less likely that the Aristokrates of *SEG* 23. 78 is a grandson. There may be a connection through Polykles son of Aristokrates Th., *IG* ii² 6237 (3rd–2nd c.) with a well-known family of Hellenistic sculptors; see Stewart 1979, 42–59. The list of witnesses in Dem. 21. 121 is often regarded as a later invention, since some of the documents in this speech are later additions (MacDowell 1990, 43–7, 343–4), but of the 5 named witnesses two (Chares, and Lysimachos of Alopeke) are attested in the right period, while the existence of Moschos of Paiania is supported by the use of the name Moschion in the deme in the 3rd c. and perhaps by *IG* ii² 7034 (known only from Pittakes). If the witness Pammenes son of Pammenes of D. 21. 22 belonged to Thorikos (so Oikonomides *ap. OCT Dem.* II), his existence may be supported by *SEMA* 254, naming him with his son (city, dated c.300). However, MacDowell 1990, 245 was right to point out that the name is otherwise attested only in the Roman period.

⁸² *APF* 4718; since the councillor (*IG* ii³ 4. 52. 4) cannot be a son of the general, it is perhaps more likely that the Exekestides of the diadikasia text had two sons, Cha[r]ias II] (father of Exekestides III, perhaps commemorated by the loutrophoros-relief *IG* ii² 11269) and Exekestides II, the general. The Philok— whose ergasterion at Th. was marked by a horos (late 4th–3rd c., *SEG* 48. 166) might be Philokles Th., councillor in 304/3 (*Agora* XV 61. 81 = *SEG* 36. 216. 14, [Phi]lokl[es]), possibly a grandson of Philokles son of Ainesias Th., commemorated in the early 4th c. by *IG* ii² 6243 (but the name has been restored, questionably, as Philok[rates]).

⁸³ *APF* 9667, cf. Humphreys 1989. (M. C. Miller 2010a suggests that the Mantitheos of Lys. 16 belonged to the same family and attributes the hekatomastai purchases to him.) Hekatomastai, Lambert 1997a F 8 A 39–41, two purchases (that one plot was bought by each brother is hardly likely). R. G. Osborne's claim (2011) that Thorikos had a high proportion of demesmen still resident in the deme is not supported by prosopographical analysis.

⁸⁴ *APF* 8254; Lambert 1997a F 8 A 33. Karkinos II should have been born by 405, so the purchaser should be his son or grandson; a grandson born c.345 could have bought land in the 320s as a young man. (n. 36; Appendix 2). Xenotimos II, D. Harris 1995, II no. 31.

Thorikians are relatively common in the mining records. As we have seen, a son of Chares Th. leased a mine c.340. Smikythos son of Epiteles Th. owned land in the mining area next to Nikias Th., about the middle of the fourth century; he served as councillor in 338/7, and his son Epiteles II is attested as a principal trierarch before 323/2, as performing the eutaxia liturgy c.330, and perhaps as a landowner. Eudraon Th. owned property at Thorikos in the mining area, and leased a mine in (?) 341/0 for 500 dr., an unusually high rent; he is also attested as a trierarch. Eudraon III son of Ly—, councillor for Thorikos in 305/4, is probably his nephew (BS).⁸⁵

The son of Kallias Th. recorded as (?) a landowner in the mining area in (?) 341/0 was probably Thoukritides, who seems to have made a dedication with his father Kallias son of Kalli[krates?] to Zeus Philios in the second half of the fourth century. Kallias served as diaitetes in 329/8; Thoukritides served as councillor in 338/7 and as secretary of the Eleusinian epistatai from 332/1 to 329/8. The syntrierarch Kallias Th. recorded in 322 is more likely to be Thoukritides' son than his father.⁸⁶

Nausikrates I Th. was buried in the city with Boularchides Th. (*IG* ii² 6234), possibly the liturgist of *IG* ii² 1929 (*APF* 2914; the name Boularchos is however attested in the fourth century in Phlya, ch. 29 n. 85). Nausikrates' son Nausikrates II married the daughter of Pytheas of Alopeke (*SEG* 54. 338; ch. 32 n. 19).

Autolykos I and II Th. were distinguished figures in the city, but their only discernible link with deme affairs is that the heroine Philonis, who received an offering at Thorikos in Mounychion, is said by Pherekydes (*FGH* 3 F 120) to have been the mother of Autolykos by Hermes. Possibly the family belonged to the genos Kepholidai. However, the name of Autolykos I is also linked to that of

⁸⁵ Smikythos and Epiteles, *APF* 4959: *Agora* XIX P 16. 13, P 29. 49, *Agora* XV 39. 8; Lambert 2001 reads Epitelēs in *IG* ii³ 550. 20. Eudraon, *APF* 5444: *Agora* XIX P 13. 50, P 27. 100, P 29. 17–20; *Agora* XV 58. 73, Eudraon III. The Eudraon who contributed a set of oars by 347/6 should be Eudraon II, but the syntrierarch of 322 may be Eudraon III (who might also be a DS of Eudraon I or Eudraon II). Other Thorikioi in the mining records: Menon, registrant in 370/69, P 4. 40; P 14. 35, owner; P 19. 26, registrant. P 26. 239–40 Aischines, owner (cf. perhaps Aischylides, owner?, P 34. 5, c.330/29); P 27. 82, son of Kallias (n. 86), owner?, 341/0; P 34. 3, owner; P 34. 6–7 son of Epameinon, owner?

⁸⁶ *APF* 7865; Thoukritides, *IG* ii³ 4. 27, *IG* ii² 1544. 10; dedication, *SEG* 41. 173/44. 135. Spacing seems to require (if the text was symmetrically arranged) Kalli[-6-7-] as Kallias' patronymic, and Thoukr[itides] rather than Thoukr[itōs] as the name of the second dedicant. Kirchner restored the diaitetes' patronymic in *IG* ii³ 4. 35. 19 as Kalli[telous], but as *APF* (7865, 8210) points out, we do not know whether the trierarch Kalliteles Thor— of c.350 belonged to Thorikos or Thorai. Kallias' father might have been Kallikr[ates] son of Dionysi [os?] Th., commemorated by a stone found at Synterini in the mining district (*IG* ii² 6225, undated, but given the pattern of mining activity and the prosopography it should belong to the 4th c.). In that case Kallikrates (II) Th., recorded as contractor at Eleusis c.333/2 (*IEleus* 159. 64), will be Thoukritides' brother, and they will have been related to Dionysios II son of Kalliades, councillor with Thoukritides in (?) 338/7 (*Agora* XV 39. 10 and (?) 336/5 (*ibid.* 42. 266), and father of Kallippides, crowned in 304/3 as member of a board of officials (*IG* ii² 488. 11). *IG* ii² 6219 + *SEG* 23. 133, a bronze vessel, also names a Dionysios Th., perhaps as its owner; it was found in Piraeus (and is probably not funerary). Cf. also *IG* ii² 11780 = *CEG* 492, a stele of the beginning of the 4th c., found at Thorikos, commemorating a Kallimachos who died overseas, with [Kal]limachos son of Kall— Th., epebe in 305/4 (*IG* ii² 478 Reinmuth 1971 no. 17. 134).

his father Lykon, attacked in comedy as a cuckold and homosexual (*malthakos*). Autolykos I was a much-feted boy pankratiast who won at the Panathenaia in the summer of 422/1, and figures both in Xenophon's *Symposium* and Eupolis' *Flatterers*; he was killed by the Thirty. Autolykos II, probably his son, served as envoy to Lesbos in 368/7 and held office as tribal epimeletes in 361/0. He was probably still alive as a member of the Areiopagos in 347/6, and may be the Autolykos who served as kosmetes of the epheboi in (?) 331/0 or 330/29; he would have been in his seventies, but from a symbolic point of view he was a well-qualified candidate.⁸⁷

⁸⁷ Lambert 1996 suggested that they belonged to a phratry or genos Ionidai, but see R. Parker 1996, 325; on the Kephallidai see ch. 20 n. 81. Lykon: Kratinos *PCG* 4. 232 F 214; *PCG* 5. 320–1; Sommerstein 2008. Schol. Ar. *Lys.* 270, and Schol. Plat. *Apol.* 23e say that his wife was Rhodian, which can hardly have been literally true. Cf. ch. 13 n. 13. Autolykos II: *IG* ii² 107; Reinmuth 1971 no. 1. Areiopagos, *AO* p. 322; kosmetes, Reinmuth 1 = *SEG* 23. 78. 15, 18 (*pace* A. Chankowski 2014, the 9-letter patronymic may be [Autolykou], and the archon by whom the text is dated, [*epi*] or [*ep* –11–12–], may be [Aristophanous], 331/0, or [Aristophontos], 330/29. Mitchel 1976 suggested that the kosmetes was A. III son of A. II).

VI Oineis

Oineis was topographically a relatively compact tribe, with city demes in the area stretching from the river Kephisos westward to Mt Aigaleos and eastward towards the city, a very large inland trittys to the north of these consisting of a single deme, Acharnai, and a coastal trittys stretching from the west side of Aigaleos and the Thriasian plain up to Phyle on Mt Parnes. Some small demes of Leontis, however, seem to have separated the city trittys from Acharnai.

CITY TRITTYS

Boutadai

This was probably the deme closest to the city, although it is far from certain that the tombs of a group of Lykourgos' kin, found near the Academy (Table 4.6), lay in the deme. In any case, this family, which held the Eteoboutadai's priesthood of Poseidon Erechtheus, must have had a leading position in the deme both at the time of Kleisthenes' reforms and in the late fourth century, when Lykourgos IV became the dominant figure in Athens after the battle of Chaironeia. His second son Habron, who served as ephebe *c.*330, re-emerged as a figure carrying at least symbolic weight after the restoration of democracy, holding his father's post as finance minister in 307/6 and serving as treasurer of military funds in 306/5.¹ Habron's niece Kallisto, daughter of Lykophron II, married into another very prominent family in the tribe, her husband being Kleombrotos, son of the well-known general Deinokrates of Acharnai (n. 54).

Boutadai was perhaps the base of the phratry to which Aischines (of Kothokidai) belonged, which sacrificed on altars shared with the genos Eteoboutadai (see below *s.v.* *Kothokidai*). The deme also contained at least two families belonging to the genos Salaminioi: those of Thrasykles I, who served as hellenotamias in 410/9, and whose grandson (SS) Thrasykles II son of Thrason, was hereditary herald of the genos in 363/2, and of Melittios son of Exekestides, who like

¹ *APF* 9251; cf. ch. 20 n. 132 and Table 4.6. Tombs, SEG 37. 161–2, Bergemann 1997 peribolos D 8. Habron, Reinmuth 1971 no 12. 72; *IG* ii² 463. 36, 1492. 123.

Thrasykles II served as one of the oattakers for the Salaminioi of the Seven Tribes in the same year.²

Interest in the sanctuary of Kephisos at Phaleron is documented for Kephisodotos son of Demogenes B., who dedicated a relief and altar there in the last decades of the fifth century to Hermes, Echelos, and [I]asile. A homonymous descendant, Kephisodotos son of Deinias, served as councillor in 303/2.³ Demogenes' name seems to imply that he was born in the deme, perhaps relatively soon after it acquired deme status.

There seem thus to be some signs of resistance to cultic domination by the Eteoboutadai and their phratry. Moreover, Boutadai was not peopled solely by wealthy families with religious interests. It was also the deme of residence of a woman kithara-player, freed by two sons of Theodoros of Melite in the late fourth century.⁴

Kothokidai

This deme has been located in the coastal trittys, but only on the evidence of a single tombstone of the Imperial period found near a church at Goritsa.⁵ Aischines' statement (2. 147) that his phratry shared its altars with the Eteoboutadai suggests a location in the city trittys near Boutadai.

Land at Kothokidai was owned by the Apheidantidai, probably a *genos*, and by the Oikatai, perhaps also a *genos*, or a group of *orgeones* (Lambert 1997a F 16 A 19–21). Both groups might have belonged to the phratry based at Boutadai. Straton son of Mnesiphanes K. acted as *epimeletes* of the Oikatai in the *hekatostai* sales and bought their plot himself for 100 dr.; Mnesimachos II son of Mnesochos K., probably a kinsman of Straton, bought the land sold by the Apheidantidai, for

² *Agora* XIX L 4a 75–6. Note that the existence of Salaminian families in this area is relevant to Kimon's interest in the Oschophoria. The name Exekestides also occurs in Kothokidai (Table 28.1).

³ *IG* i³ 986; the reading A<l>exo in line Ba, which would associate a woman with the dedication, is unclear. Cf. ii² 4547, a 4th c. text from the same site.

⁴ *SEG* 18. 36 A 505–9. Did she play at Skiron? (St. Byz. s.v. *Skiros*, cf. *Lex. Bekker* 1814 p. 300, 23, *Et. Mag.* p. 717. 28, both quoted *FGH* III B *Suppl.* I p. 287, with notes 30–43, *ibid.* II pp. 196–7).

⁵ *IG* ii² 6481 (note that ii² 6477 = 7358, from Ambelokipi, is now attributed to Kikynna, Peek 1942, 233 no. 33). Traill (1975a, 1986; followed by Stanton 1994), in accepting a location in the coastal trittys for K., was influenced by the desire to equalize the size of trittyses, but in any case the size of Acharnai made this impossible for Oineis. Milchhöfer 1892 argues that Ar. *Thesm.* 620 implies a situation for K. at some distance from the city (women whose husbands belonged to the deme would rarely be seen at the city Thesmophoria); but the demotic—for Mnesilochos, disguised as a woman—may have been chosen in allusion to *kothēma*, a term for the male genitals (Hsch.). In the *hekatostai* sales, Leontios of Epikēphisia sold land in Kothokidai on behalf of the *genos* Apheidantidai (ch. 20 n. 142; Lambert 1997a F 16 A 19–21); this also suggests a location in the city trittys. Aischines' claim (2. 147) that his father lost property during the Peloponnesian War is vague and not to be accepted without question; in any case it would not decide the question of location (Perikles' land at Cholargos was topographically at risk, Thuc. 2. 13. 1).

210 dr. He was perhaps the grandson (SS) of the Mnesim[achos?] K. whose wife was commemorated by a stele of *c.*400, a fragment of which was found on the Akropolis, and an ancestor of Mnesimachos III son of Aristokles, ephebe in 246/5. Mnesiades K., one of the dockyard superintendents in 375/4, and Mnesikles K., ephebe *c.*330, probably belonged to the same family.⁶

One of the wealthier families in the deme was based on Salamis. Unfortunately the relationships are very difficult to reconstruct (see Table 28.1). The earliest attested member of the family is Diodoros son of Exekestides (I), who won a victory with a boys' chorus at a Salaminian festival in the early fourth century. Exekestides son of Aristodoros, commemorated on Salamis by a stele to which the name of his son was added, was presumably Diodoros' nephew (BS). Diodoros and Aristodoros may have had a brother, Aristodemos, whose son Silanion died in battle; another son, Aristophon was buried at Sepolia, north of the city, with his sister Demokleia and her husband Exopios of Halai. The Exekestos who owned land on Salamis in 402/1 may be a fourth son of Exekestides I; Exekestos II, secretary of the poletai in 367/6, would then be his son, and may be the father of Aristodemos Exekestou K., who served as councillor in 304/3.⁷

Note: Exekestides II or III, *IG* ii² 1613.183.

TABLE 28.1. Kothokidai: Exekestides *APF* 4179

⁶ Mnesim[achos] I, *IG* ii² 6478; Mnesimachos III, ii³ 1008. 14 (arch. Polyeuktos); Mnesiades, ii² 1622. 489; Mnesikles, Reinmuth 1971 no. 12 II 69.

⁷ I accept here—with some hesitation—Pittakes' assertion that *IG* ii² 6474, reported by Rangaves (1855, 1518) as commemorating an Exekestides son of Aristodemos K., is a doublet of ii² 6475, the stone of Exekestides son of Aristodoros. Other reconstructions in *APF* 4719, M. C. Taylor 1997 Stemma 1, and Bergemann 1997, 209 (peribolos Z 6). The man or men named Silanion listed in the thiasos inscription *IG* ii² 2347, from Salamis, may be descendants of the hoplite (or of a kinsman).

The family of Aischines, despite Demosthenes' aspersions, seems to have been of respectable hoplite status; the names of the orator's father and younger brother, Atrometos and Aphobetos, probably indicate some pride in a military tradition. Atrometos, according to his son, was forced into exile by the Thirty and lost his property; after a period in Corinth, he 'returned from Phyle' with the democrats, but subsequently took service as a mercenary in Asia in order to restore his economic position. All this is somewhat dubious. There may well already have been a connection between Atrometos and the liturgic family in Paiania into which Aischines subsequently married, since Aischines' elder brother was called Philochares, a name used in the Paiania family (*APF* 14625, Table 25.3). Atrometos' wife Glaukothea daughter of Glaukos of Acharnai, who shared her husband's exile in Corinth according to Aischines, had a brother who acted as a *mantis* and held some kind of command in the 390s or 380s. In any case, Aischines and his brothers did well. Philochares was elected general from 345/4 to 343/2, and cannot have owed the office solely to Aischines' influence; Aischines and his younger brother Aphobetos, according to Demosthenes, both worked their way up from under-secretaries to secretaries (of the Council and Demos). Aischines became active in the Assembly, and served as ambassador to the Peloponnese and to Philip of Macedon in 347/6; he was again involved in negotiations with Philip in the following year, and in 338/7, and represented Athens at Delphi as a *pylagoras* in 340/39. Aphobetos replaced Aischines on one of the embassies to Philip, and had some financial responsibilities (before 343). Aischines' son Atrometos II perhaps served as ephebic lochagos for his tribe in the Lykourgan period.⁸

Hippotomadai

It was transferred into Demetrias with Kothokidai in 307/6, and may therefore have been its neighbour. The appearance of Menekles H. as one of the epistatai for Eleusis in 408/7 does not of course mean that H. was in the Eleusinian plain.⁹

⁸ *APF* 14625, E. M. Harris 1995; Table 2.4. It is not clear what Demosthenes had said against Atrometos in 343 (Aisch. 2. 78; the published version of Dem. 19 was evidently toned down), but it seems not unlikely that he had at some point sympathized with the oligarchs, had later come into conflict with the Thirty and left for Corinth, had returned with the restoration of democracy, but had found life politically uncomfortable in Athens and had left again for Asia. Athletic activities in his youth, 'before he lost his property' (Aisch. 2. 147), may suggest an upper-class lifestyle. Kleoboulos, *CEG* 519; on the date of his office (396/5 or 388/7?) see *AO* p. 206–7. Atrometos II, *IEleus* 82. 7. On Aischines' date of birth (390?) see ch. 27 n. 30.

⁹ Traill (1986) assigns Hippotomadai to the city trittys on the base of one prytany list. Menekles, *IG* i³ 386. 1.

Lakiadai

It is firmly located by Pausanias (1. 37. 2) in the area where the Sacred Way crossed the river Kephisos, which puts it in modern Aigaleo. It was the eponymous deme of the city trittys of Oineis; since it was not, at least in the fourth century, the largest deme in its trittys, it may have owed this position to the prominence of the family of Miltiades and Kimon in the early fifth century.

Pausanias saw a sanctuary of Demeter and Kore in L., on the east side of the Kephisos (presumably close to the Sacred Way), with an altar dedicated to Zephyros and perhaps also altars of Zeus and Poseidon; on the other side of the river was an altar of Zeus Meilichios. The *genos* Phytalidai were responsible both for this altar and for the sanctuary of Demeter. They claimed to have purified Theseus when he arrived in Attika, but this association with Theseus may have been developed only in the 470s, when Kimon discovered the hero's bones on the island of Skyros and brought them back to Athens (ch. 20 n. 69).

Miltiades III may already have been resident somewhere west of the city when the Dolonkoi, on their way back from Delphi to the Thracian Chersonese (Gallipoli peninsula), in the 550s or 540s, invited him to come with them. However, there are problems in assuming that there was continuity in landholding between the departure of Miltiades III and the return in 493 of Miltiades IV; and if the latter had an ancestral connection with Lakiadai, we do not know if it derived from Miltiades III or from his half-brother Kimon I. The latter was buried in Koile, but this site was probably chosen because it was in a conspicuous position just outside the city. Kimon II, in any case, is said to have owned land in his deme.¹⁰

Kimon was ostracized in 461 but was elected general on his return ten years later, and died in Cyprus after an important victory over the Persians in 451. His reputation earned his son Lakedaimonios election first (in the 450s or 440s) as hipparch and later, in 433/2, as general; he may have held military office at other dates, although he does not seem to have left much of a reputation. His twin Oulios may have held office as corn-controller (*sitophylax*) c.425, and had a son named Aristokrates. Their brother Thettalos indicted Alkibiades for profanation of the Mysteries in 415; it seems quite possible that the family had some involvement with the oligarchic regimes of 411 and 404.¹¹

¹⁰ *APF* 8429. Miltiades IV was on Lemnos in 507, and there may have been some element of fiction in the assignation of demes to Athenians on the island at this time (cf. Marchiandi 2008*a*). Stesagoras, the second husband of the mother of Miltiades III, and grandfather (FF) of Miltiades IV, may have been a kinsman of the widow's first husband Kypselos; Miltiades III seems to have regarded the sons of his half-brother (MS) Kimon I as his heirs (Table 2.4). Moreover, Miltiades IV, who had probably held the eponymous archonship in 524/3, may have left for the Chersonese by agreement with the Peisistratidai. Tomb, ch. 10 n. 110. Land of Kimon II, *A.P.* 27. 3, Plut. *Kim.* 10. 1–2.

¹¹ *APF* *ibid.*; the Miltiades who came to Athens with Lysander in 404 (Lys. 12. 72), if he had been sent to Sparta by the oligarchs, may well have been chosen for the sake of his name; this would help

Lakiadai was also the deme of the actor or tragic poet Makareus, who died young and was commemorated in the Kerameikos by a large naiskos with a loutrophoros on top and a verse epitaph on its base. Archebios, also named on the naiskos, was presumably a relative, and an ancestor of Archebios son of Epiteles L., whose wife Olympias was commemorated in the second century BCE by a kioniskos.¹²

Philinos son of Nikostratos L. served as voluntary trierarch to Euboia in 358, and performed other trierarchies in the 350s; —as Philinou L., agonothete for the Dionysia in the early third century, may be his son, as may the Nikostrat[os] Phil[i]nou? who bought land at (?) Echelidai in the hekatomastai sales. Another prominent family of the second half of the fourth century used the rare names Cheimeus and Kikon; Cheimeus, already attested as trierarch in 357/6, was elected sophronistes of the epheboi of Oineis c.330; the base (?) bearing his name may perhaps have belonged to a dedication rather than a funerary monument. The Kikon who served as priest of Aphrodite in Piraeus in (?) the middle of the fourth century may have been his son, and may also be the Kikon who won a victory at the Amphiaraiia in (?) 329/8 with a ‘processional pair’.¹³

A dedication to Herakles was set up in the city in the late fourth century by Straton son of Stratokles L. with his two sons, Kleophon and Theodotos; Kleophon’s son Straton II served as councillor in 303/2 (*IG* ii² 4611, *Agora* XV 62. 190).

There is no evidence from inscriptions for any activity of Lakiadai as a deme;¹⁴ its leading citizens may have been too much involved in political careers in the city, or possibly (in the case of the Phytalidai) in *genos* activity, to devote much attention to deme affairs.

to explain why we hear nothing further of the family until Kimon (IV?) appears as ambassador to Philip in 346. Miltiades VI, who led a colony to the Adriatic in 325/4, may have been the son of this Kimon; his daughter Euthydike, who made a dedication on the Akropolis (*IG* ii² 1466. 7–8, 1469 A 30–1 with *APF* 8429 XV), first married Alexander’s hetairios Ophellas, who became tyrant of Kyrene, and then (in 307/6) married Demetrios Poliorketes. Her son by her first marriage, accepted as an Athenian citizen, was commemorated by a kioniskos found in the area of St John Rentis between the city and Piraeus (ii² 6630). The connection of these 4th c. members of the family either with Kimon or with the Miltiades son of Stesagoras, perhaps a contemporary of Sokrates, mentioned by Aischines the Socratic, is unclear. Note also [. . .] esagoras, hippeus of Oineis on the casualty list *SEG* 48. 83, Matthaiou 2011a, 85–6.

¹² Makareus: *IG* ii² 6626 = *CEG* 568, *CAT* (Suppl.) RSE 24 (after c.350); Stephanes 1988 no 1595. Archebios (II), ii² 5946.

¹³ Philinos: *APF* 14327, with *SEG* 45. 147 (355/4); Lambert 1997a F 9 A 9, Nikostratos II (no demotic). Cheimeus: *APF* 15545, Reinmuth 1971 no. 12; ii² 6635, reported by Rangaves (1855, 1533) as a ‘white marble pedestal’ from Hyperides St in Plaka, inside the city walls, is accepted as funerary by Bergemann 1997, 228 no. 6, and by Nielsen a.o. 1989, 415 n. 14. Kikon, *IG* ii² 4586; *IG* vii 414 + *SEG* 1. 126. 41 (date, Knoepfler 1993b).

¹⁴ The text reported in *SEG* 43. 113 from *EA* 1841, 586, as a deme dedication read *LAKKIADA* and was said to resemble *IG* ii² 2864a (2nd c. BCE) in lettering. It may be a personal name. (However, absence of deme inscriptions does not necessarily imply lack of activity.)

Epikēphisia

It presumably lay on the Kephisos, perhaps upstream from Lakiadai. A deme decree of the late fourth century, honouring the demesmen elected to prosecute Neokles, who had won their case, was found near the Dipylon. The proposer, Pythodoros son of Philokles, appears as guarantor of a lease of sacred property taken out by his son in 343/2 for 160 dr.¹⁵

Leonteus son of Kalliades I E. sold property in the hekatostai sales (at Kothokidai) on behalf of the genos Apheidantidai; Leontichos son of Kalliades (II) councillor in 281/0, is probably his grandson (SS).¹⁶

Kephisogeiton E., appropriately named, was commemorated in the middle of the fourth century with Phormion son of Ophelon of Peiraios by a funerary stele found by the Sacred Way, and thus not far from the deme area.¹⁷ Hegemon E. was represented on his grave monument as a young horseman. Lykiskos son of Diodotos E., who freed a slave in the late fourth century, was apparently buried in a peribolos belonging to a family of Sphettos, 'by the road leading from Ambelokepos to the Mesogeion'.¹⁸

Lousia

It has been very tentatively placed at the northern end of the city trittys on the basis of a single tombstone of the fourth century, re-used in a church in Kato Liosia.¹⁹

Hippolochides son of Thrasymedes L. was evidently a wealthy man: he set up two impressive monuments on or near the Akropolis before the middle of the fourth century, a group of two bronze statues made by Demetrios and a single statue by Symenos. At some date before 354 he adopted Thrasyboulos son of Aischines, also of Lousia, and no doubt a kinsman. Thrasyboulos seems to have

¹⁵ *IG* ii² 1205; if the stone is too late to relate to a case deriving from the diapsephisis of 346/5, Neokles was presumably a delinquent deme official or debtor. Pythodoros, *Agora* XIX L 6. 79–80; Papazarkadas 2011, 314 no. 70.

¹⁶ Lambert 1997a, F 16 A 20 (suggesting that Leonteus and Leontichos were brothers); *Agora* XV 72. 62; *IG* ii³ 1180. 9 (cf. *SEG* 21. 401), perhaps Leontichos or a brother (Lambert).

¹⁷ *IG* ii² 6060a, p. 880; see discussion in *APF* 11672 IX and ch. 30 n. 15. If the trierarch Phormion son of Ktesiphon of Peiraios was the banker who started his career as a slave of Pasion of Acharnai, Phormion son of Ophelon cannot have been related to him. Presumably the latter was an affine of Kephisogeiton.

¹⁸ Hegemon, *IG* ii² 6060 = *CAT* 2. 867a (375–50), no provenance; represented as a mounted hunter (dog, petasos) rather than a cavalryman. Lykiskos, *SEG* 18. 36 A 207 (evidence on the slave's occupation and residence is lost); ii² 7527. 10 (added; Bergemann 1997, peribolos F 16).

¹⁹ *IG* ii² 6756; Peck 1942, 115 no. 234, found at Ag. Theodoros in the Peristeri area, might have had the demotic [Lo]us[ieus]. The reference in *IEleus* 177. 257 to costs for carting Lousian earth is taken in *RE* s.v. *Lousia* to suggest a site near Skiron, i.e. on the E side of Aigaleos.

changed his name to Hippolochides (II), and appears in this guise as trierarch in the (?) 330s and perhaps on a curse tablet of the same date. Aischines, his father, had married into a wealthy family of gennetai in Leukonoion, whose affairs are known to us from Isaïos 7.²⁰

Euktemon L. may possibly have led an expedition of kleruchs to Samos in 366/5 as a young man, but if so he returned to Athens. He filed a charge of desertion (*lipotaxia*) against Demosthenes in (?) 348/7, at the prompting of Meidias according to Demosthenes, but did not pursue it in court. He seems to be the Euktemon son of Charias attested in Delphi as naopoios in 345, 343, and 334; his son Charias (II) served as councillor in 303/2, and Charias' son Polymedes served in 281/0.²¹

Perithoidai, Ptelea, and Oe are linked to each other, to Boutadai, and perhaps to the sanctuary of the Kephalidai at Daphni by a mythical genealogy in which Peirithoos is the son-in-law (DH) of Boutes and the son of Kephalos' sister Dia, Oie is Kephalos' daughter, and Pteleon is the adulterer who seduced Kephalos' wife Prokris. It is not clear, however, whether these relationships, attested in a variety of sources, were ever linked in a single account (see Table 28.2).²²

TABLE 28.2. Heroes of Oineis

²⁰ APF 1395. Thrasyboulos was Aischines' only son, and Aischines may have died before the adoption, which was presumably made in order to exclude rival claimants. Dedications, *IG* ii² 4895, 4898; cf. ch. 26 n. 67 on Demetrios. The Hippolochides of Wunsch 1897, 65 (Wilhelm 1904, 119; ch. 14 n. 72) may perhaps be either H. I or H. II. Hippolochides II, ii² 1623. 237–8. About another trierarchic family in L., APF 8762, there is little information.

²¹ *IG* ii² 1609. 88, Eukte[monos Lou?]si (date, *SEG* 25. 184); Dem. 21. 103, 139 (with MacDowell 1990); naopoios, *CID* II 31. 74, 96; 79 A I 13; 119. 23. Charias, *Agora* XV 62. 192; Polymedes, 72. 58.

²² In Apollod. 3. 197 = 3. 15. 1, Boutes and Erechtheus are brothers, sons of Pandion; Erechtheus' wife is the grand-daughter (DD) of Kephisos; Prokris wife of Kephalos and Chthonia wife of Boutes are sisters, daughters of Erechtheus; Pteleon is Prokris' lover. Oie is Kephalos' daughter in Philoch. *FGH* 328 F 28 (cf. Dow 1963a). Peirithoos' wife Hippodameia is daughter of Boutes in D. S. 4. 70. 3 and Schol. *Il.* 1. 263, but the source may not be Attic (P. is associated with the deme Perithoidai by Ephoros, *FGH* 70 F 23). Oe will be discussed below with the coastal trittys. Kallias son of Charias of P. made a dedication to Aphrodite at Dafni in the first half of the 4th c., *IG* ii² 4570; the text of Plut. *Mor.* 440b has been emended to refer to him, but see ch. 29 n. 119.

Perithoidai

One late fourth or early third century gravestone was found at the church of Ag. Georgios in Chaidari. It commemorates two brothers, Eukles and Philistides sons of Aischylos P. Eukles served as councillor in 303/2, and Philistides is attested as one of the contractors responsible for rebuilding the city's walls in 307/6, guaranteed by a third brother, Euktemon. The [? Euktem]on son of Aischines II P. who served as tamias in 342/1 was perhaps an earlier member of the family, possibly their great-uncle (FB) or grandfather (FF). If so, the family can be traced back to Aischines I P., hellenotamias in 418/7.²³

Perithoidai has four attested liturgists, including Hyperbolos, whose lamp-making establishment was evidently located in or near the city.²⁴ Pherekleides son of Pherekles P., who served as general in 324/3, freed a slave grammateus and family resident in Thorikos, probably in the 320s, so he presumably had mining interests. It is possible that he was the Pherekleides paid for carting stone to Eleusis in 329/8, and/or the eponymous archon of 304/3.²⁵

Some interest in the deme in Eleusinian affairs is perhaps suggested also by the service of Glaukon P. as one of the horistai appointed to survey the sacred orgas in 352. Later, in the second century, Hierophantes son of Noupgrades P. served as hierophant; possibly Glaukon too belonged to the Eumolpidai.²⁶

Ptelea

It has only one recorded liturgist, Phanokles son of Phaniades, who served as syntrierarch in 322/1 and was appointed proxenos of Eretria in the late fourth

²³ *IG* ii² 7219, dated 4th c. by Kirchner, with a date *c.* 350 for ii² 1746, now recognized as part of *Agora* XV 62 (Eukles, l. 182). Philistides and Euktemon II, ii² 463 + *SEG* 25. 78. 122–5; [Euktem?]on I, ii² 1455. 3; Aischines I, *IG* i³ 287. 5.

²⁴ *APF* p. 61; 10328; 13910 (Hyperbolos); 14791.

²⁵ General of the Akte, *IOrop* 353 (on the date see Humphreys 2009; he was also honoured at Rhamnous, presumably as general of the chora, and thus in a different year, *IG* ii³ 4. 288 = *AO* p. 413). Manumission *SEG* 18. 36 A 464–75; Eleusis, *IEleus* 177. 50 (cf. Burford 1960 on stone-carting by wealthy landowners). In *IG* ii² 553+ (M. J. Osborne 1981–3, D 44), [Phere]kleides perhaps appears to support the case for granting citizenship to a benefactor called Neaios, having previously drawn Neaios to the attention of the authorities while he was serving as general (ll. 5–8); Osborne dated this text in 304/3, but Tracy (1995) assigns it to the cutter of ii² 330 + 445. 3 = ii³ 327, Schwenk 1985 no. 18, a text of 335/4, and puts it probably in the 330s.

²⁶ *IG* ii³ 292. 81; Glaukon son of —s P., councillor in 303/2 (*Agora* XV 62. 183), may be his grandson. Hierophantes, ii² 1934 (cf. Humphreys 2017b; Table 20.3). (Polyeuches son of Antagoras served as one of the epimeletai at Eleusis in 332–329, but they were appointed by lot.) Other members of P. with interests outside the deme: Naumachos rented two properties on Salamis before the middle of the 4th c., *IG* ii² 1590a [5], 8 (p. 810); Kallimachos and Demochares P. served as ? councillors on Imbros in 352/1, *IG* xii 8. 63b 4–5.

century. Diomedes son of Diodoros P. was honoured as general at Rhamnous perhaps *c.*250.²⁷

INLAND TRITTYS

Acharnai

Acharnai was not only by far the largest of the Attic demes, appointing twenty-two councillors in the fourth century, but was also in all probability the largest trittys. It doubtless contained more than one settlement centre, but there is no evidence of any regular division within the deme such as those that divided upper and lower sections of some other demes.²⁸

Finds from the area of modern Menidi and Ano Liosia probably belonged to Acharnai; concentrations of material have been found on the hills of Agioi Saranta (provenance of the deme decree *IG* ii² 1207) and Prophetes Elias, but it does not seem very clear whether these concentrations mark the sites of villages or are due to later transport of building materials. The sanctuary of Herakles at Ano Limni Zofra may have been either in Acharnai or in one of the small Leontis demes; a dedication to Herakles of *c.*500–480 by a Hippotheride[s], very possibly the H. of Acharnai who made a dedication on the Akropolis at the same date, was found in the church of Ag. Vlasios at Menidi. The church of Ag. Nikolaos, also at Menidi, has capitals from a smallish building of the second half of the fifth century.²⁹

²⁷ Phanokles, *APF* 14058; Diomedes, *SEG* 43. 31 = *IRb* 14 (*LPGN* Diomedes 11, attested in 208/7, may suggest that this text should be dated later?). *SEMA* 587, from Od. Zakynthou in Aigaleos, might come from the deme area, but is 3rd–2nd c.

²⁸ Only one inscription (*IG* ii³ 4. 56, 360/59) gives the ‘quota’ of 22 (Aphidnai, also a one-deme trittys and the second-largest deme, appointed 16 councillors). Note that Hornblower 1991 emends *hoplitai* in Thuc. 2. 20. 4 to *politai*. Traill (1986, 142–4) thinks that the deme had two settlement centres, the smaller of which regularly contributed 6–7 councillors to the city trittys, but his argument is far from compelling (if, as accepted here, n. 58, the date of *Agora* XV 68 is *c.*320, there is no guarantee that Oineis appointed 50 councillors in the year that it represents). Note also that Acharnai was not divided in 307/6, when one section was taken from each of the divided demes for transfer into the new tribes Antigonis and Demetrias; if there had been a recognized and regularly operationalized division between two settlements in the deme, Acharnai would surely have been a prime case for division on this occasion. On the question of whether the competition between *kómoi* mobilized entries from different villages (*kómai*), see below at n. 45. Information on neighbouring demes in Platonos-Giota 2013 is outdated and unreliable.

²⁹ On topography see Vanderpool 1965*b* (with map); Papahatzes 1974, 410ff.; Steinhauer 1992, 183 n. 1; 1994, n. 25; Platonos-Giota 2004*a*, 2013; Kellogg 2013*b*. Ag. Saranta, perhaps the site of the deme sanctuary of Athena Hippias, was earlier known as Agioi Pantas. *AD* 42 B 1, 1987 (1992) 62–7, burial ground used from PA into the 3rd c. CE, children’s burials from the mid 5th c. to *c.*375. Platonos-Giota 2013, 147–8 reports excavation of the deme’s theatre at Odos Salaminos, possibly constructed in the early 4th c. (but see Goette 2014), and a new (Roman) inscription mentioning Athena Hippias from Ag.

Acharnai had a theatre (partly excavated), a sanctuary of Athena Hippiā, and altars of Ares and Athena Areia; Pausanias also notes cults of Apollo Agūieus, Herakles, Dionysos Kissios or Melpomenos, and Athena Hygieia. The view that an Acharnian temple of Ares and Athena was moved to the Agora in the Roman period has now been disproved.³⁰

We have three deme decrees of the fourth century explicitly identified as passed by Acharnai, plus several other documents that may have issued from the deme. The earliest of these is a text concerning leases found at Kamatero, dated before the middle of the fourth century. It perhaps mentions Acha[rnai], and may be a record of leases granted by the (or a) deme, but very little survives. The only preserved name, Aischron, is not otherwise attested in Acharnai (or in any other deme in this area).³¹ *IG* ii² 1173 has been conjecturally attributed to Acharnai, but it has no provenance.³²

Ioannis; see Makres 2009*c* for other finds here probably from the sanctuary, including *SEG* 56. 230, mid-fourth-century dedication commemorating the victory as gymnasiarch for the Panathenaia of —pos son of Stratokles A. (names in -ippos are not the only possibility). Ano Limni Zofra, Themis 2004, 255, 266–9 = *SEG* 54. 235; there is little reason (*pace* Platonos-Giota 2013, 147) to suppose that the Herakleion *en kyklōi* of Cholargos lay in this area (ch. 20 n. 130). Hippotherides, *IG* i³ 971, 698; Hippotherses son of Klearchos A., ephebe *c.*330 (Reinmuth 1971, no. 12 II 44), named in a list of Athenians of (?) 323 found on Euboia (*IG* xii 9. 1242. 20), may be a descendant; Kallippos son of Hippotherses A., who served as one of the epimeletai responsible for the procession of Dionysos in 266/5 (arch. Nikias, *IG* i³ 920. 29), is probably his son. Ag. Nikolaos, *Hesp.* 65, 1996, 135. The Hippotherses of *POxy* XIII 1606 (Lysias F LXX Carey 2007), who fled to Dekeleia when the 400 fell, and was later associated with the Thirty (Sakurai 1995), may also belong to this family.

³⁰ Paus. I. 31. 6; Polemon F 78 Preller 1838 (Athen. 234f.) says that the laws of the basileus prescribed sacrifice to Apollo at Acharnai (possibly Agūieus?) by parasites. On the supposed temple of Ares and Athena see Goette 2001, 81; Kellogg 2013*b*, 161–8; ch. 32 n. 41. For a dedication to Kybele see Kellogg 2013*b*, 168–9.

³¹ *Agora* XIX L 5 (Aischron, l. 23; only published in the *Agora* series because the finder brought it to the Agora). Cf. Behrend 1970, 74–5. Walbank (*Agora* XIX) suggests an association with the ‘Acharnian’ aqueduct project (ch. 22 n. 61), but both the date and the mention of an *oikia* (?) in l. 24 make this unlikely; there is no trace of the terminology characteristic of the aqueduct documents, which belong to the third quarter of the century (however, *IG* ii² 2491, 2502, *SEG* 19. 181–2, and *SEG* 21. 642, classed as deme documents by Papazarkadas 2011, with *SEG* 54. 237, do belong to the aqueduct dossier: see Matthaiou 2009*b*, Georgousopoulou 2013. *SEG* 54. 80 is a doubtful case). *IG* ii² 1362 = *LS* 37, late 4th c., also found in the Kamatero area (at Dragomano), concerning the cult of Apollo Erithaseos, is conventionally assigned to Eupyridae.

³² *APF* p. 36 notes that the name Leonteus is found in Acharnai, in which case the proposer Leonteus might be the father of Thrasyllus son of Leonteus A., councillor *c.*321, *Agora* XV 54. 3–4 (the date for ii² 1173 in the first half of the 4th c., Kirchner, perhaps on the basis of the spelling [*thal*]/*lo* in l. 9–10, seems to me rather early; most honorific deme decrees of this type are Lykourgan. *APF* prefers Kephisia, and is followed by Aleshire 1991, 86; see however ch. 24 n. 93). The choregos who is honoured, Lykomedes, bears a name attested in the classical period in Phlya, Boutadai, Konthyle, and Thorikos. The restorations printed in *IG* ii² need modifying; the reliefs show that only two crowns were awarded, probably of 500 dr. each (to the demarch and a choregos?). The name of the demarch, [Dio? Neo?]kles son of Kalli—, does not help.

Most of the Acharnian decrees probably belong to the Lykourgan period, although a relief that may belong to an honorary decree passed by the deme³³ has on stylistic grounds been dated earlier than *SEG* 21. 519 (which may belong to the 330s). The latter text, which commemorates the erection of altars of Ares and Athena Areia, was found in clandestine excavations at Menidi with R/O no. 88, a copy of the oath sworn by Athenian epheboi and of the oath allegedly sworn by the Greeks before the battle of Plataia. *SEG* 21. 519 bears a relief of Athena Areia crowning Ares. The dates assigned to it on the basis of the style of the relief and lettering have ranged from the 340s to c.320; the Leon who is recorded in it as priest of Athena and Ares could be the Leon son of [Di?]on honoured as epimel-etes of the Rural Dionysia for 315/4.³⁴ The text specifies arrangements for the rapid construction of the altars; Delphi has been consulted, but the approval of the oracle seems to have been taken for granted. The proposer, Kalliteles son of Stesias A., might be the Kalliteles A. who served as councillor in 360/59, but the name is common. The construction of the altars is associated with the introduction (or elaboration) of the festival Areia. Arrangements are made for the benefactor who has advanced money for the altars to be repaid.³⁵

Both this text and the associated record of the ephebic and Plataia oaths seem to belong historically in the early years of the Lykourgan ephebate. The oath stele, generally thought on epigraphic grounds to be the earlier of the two inscriptions, was a version of the Plataia oath in which the Greeks swear only to destroy Thebes, and not to destroy all states that join the Persians. The association of the Plataia oath with that sworn by the ephebes clearly indicates support for Philip's project of invading Persia, and the choice of the 'Theban' version of the oath suggests a date after Alexander's destruction of Thebes in 335.³⁶ The oath-stele was set up

³³ M. Meyer 1989*a* A 119 (Lawton 1995 no. 147 dates it in the 320s). This text is now in a private collection in Athens. Milchhöfer also (no. 515) reported from Menidi a monument representing crowns awarded by the Athenian demos and by the honorand's tribe and deme, which seems to be lost (cf. Peek 1942 no. 53). Milchhöfer no. 499 (dated c.310 by Meyer, A 149, c.350–325 by Lawton, no. 125), represents an armed figure (Ares? Oineus?) by an altar, with three worshippers (possibly tribal epimeletai? cf. ch. 21 n. 71).

³⁴ *SEG* 21. 519 (altars); see Tracy 1995, 125–6 (cutter of EM 12807) on the various dates that have been assigned to the lettering and the relief. The relief is dated c.320 by M. Meyer 1989*a* A 137, 350–325 by Lawton 1995 no. 143; the lettering is dated c.320, or in the Lykourgan period, by Tracy (cutter of EM 12807, working c.334/3–314/3). Leon: *SEG* 43. 26, discussed below at n. 40.

³⁵ See L. Robert 1938; Delphi was asked whether construction of the altars would be beneficial both for the deme and for the Athenians. Kalliteles: *IG* ii³ 4. 56. 56. The Kalliteles A. once read on our largest curse tablet (*SEG* 58. 265) is now assigned to Kydantidai. Ziebarth 1934 no. 15b names a Stesias who might be his father, although side a is directed against (i.a.) Lysimachos of Alopeke.

³⁶ On religious innovations associated with the ephebate see Humphreys 1985*a*. Celebration of the Areia may not have lasted long. Oath stele (*SEG* 57. 117), R/O no. 88 (dating it before Chaironeia); M. Meyer 1989*a* A 65, Lawton 1995, 177; Scharff 2016, App. III. On the Plataia oath—the first literary version of which may date from c.371 or the 360s—see also Siewert 1972; N. D. Robertson 1976; Van

by the priest of Ares and Athena Areia, Dion son of Dion, probably the brother (or father) of Leon son of Dion, who held the same office at the time of the altar decree. Possibly they belonged to a local genos; the versions of the two oaths used by Dion suggest a certain antiquarian interest in ritual.³⁷ Leon may also have served as epimeletes of the Dionysia in 315/4 (see below at n. 40).

IG ii² 1207 is a deme decree of Acharnai proposed by the son of —okles, found at Menidi in the church of Agioi Saranta; it honours the priestess of Athena Hippiia for her dedication(s) in the sanctuary.³⁸

IG ii² 1206, a theatre lease (?) of unknown provenance which does not explicitly refer to Acharnai, has been assigned to the deme on the basis of its instructions for publication in the sanctuary of A[then]a [Hippiia]. This attribution is slightly strengthened by the possibility of restoring the demarch's name in l. 18 as [Dio-g]enes, and identifying him with the proposer of *SEG* 43. 26 (discussed below at n. 43). The preserved part of the text, presumably the end of an honorary decree, provides for payment every year of 20 dr. to the honorands for a sacrifice, the money to come from theatre revenues or, if that source is inadequate (or unavailable), from deme revenues.³⁹

SEG 43. 26, a recent discovery, contains two deme decrees of A. inscribed on a single stone and published in the sanctuary of Athena Hippiia. The stone was found in re-use in Roman baths in Liosia Street, Menidi, behind the church of St John. The second decree on the stone (B) was passed in 315/4, just after the Rural Dionysia, and the first (A) at the beginning of 314/3. Decree B praises the demarch Oinophilos son of Oinophilos, the treasurer Phanomachos son of Nikodemos, and the epimeletes of the Dionysia Leo[n] son of [Di?]on, for conducting the sacrifice to Dionysos, the procession, and the dramatic competition, and awards them crowns of ivy, to be proclaimed in future at the Dionysia, and the hereditary right to front-row seats at the festival.⁴⁰

Wees 2006*b*; Krentz 2007; according to Justin 11. 3. 10, reference was made to the 'Theban' version in a meeting of the League of Corinth in 335.

³⁷ The Acharnian and literary versions of the ephebic oath are compared in L. Robert 1938, 293–316, and Siewert 1977. Robert assigned the stele to the Lykourgan period.

³⁸ Dated at the end of the 4th c.; Androkles, Autokles (n. 70), Demokles, and Pythokles are possible names for the proposer's father. The length of line is quite uncertain.

³⁹ *SEG* 38. 123 gives parts of two additional lines from the earlier part of the text; see also *SEG* 60. 166; Csapo 2007; *SEG* 57. 124. In ll. 13–14 Whitehead (1986*a*, 140 n. 106) questions the restoration *ton gram[m]latea meta t[on] dêmotôn* and suggests [*huper*] rather than [*meta*] (*SEG* 43. 26. 23 has merely *ton grammatēa tōn dêmotōn*). [Diog]enes: Epigenes and Theogenes are also attested in Acharnai in the classical period.

⁴⁰ See Steinhauer 1992; ll. 22–3 are wrongly divided in his published text (*SEG* 44. 57). Both decrees are on the same side of the stele. Steinhauer restores [*The*]ônos as the patronymic of the epimeletes, but Takaeuchi 2013 confirms D̄ion. The grant of *proedria* in decree B seems to be an afterthought, added after the provisions for publication, but apparently by the same proposer. P. Wilson 2010*a*, 78–82, thinks that Leon was appointed by the city.

The later decree (A), also proposed by Diogenes son of Naukydes, honours the tamias Phanomachos, and was passed after he had completed his year of office. He is praised for making all the deme's sacrifices to gods and heroes, helping the demarch to conduct the Dionysia, dedicating a silver cup weighing one mina (100 dr.) according to law, presenting his accounts both to the city and to the deme within the time-limits prescribed by the laws of each body, handing over a surplus of 326 dr. to the demesmen, successfully passing his euthynai, and generally carrying out all the duties required of him. He receives an olive crown.

The main historical interest of this text is that it gives us a securely dated view of deme life under Demetrios of Phaleron. The tamias' obligation to present his accounts to the city as well as the deme is a novelty, and the dedication of a silver cup seems to imply that the institution of such dedications by liturgists, c.330, had been extended to some deme liturgists and/or officials. Demetrios may have been responsible. The introduction of an epimeletes of the Dionysia, apparently replacing the choregoi of earlier years, may be related to Demetrios' reform of the City Dionysia.⁴¹

The son of the proposer Diogenes, Naukydes II, had served as one of the ephobic lochagoi of Oineis c.330; Diogenes will have been in his mid-sixties at the time of our texts. Philokydes, councillor for Acharnai in 360/59, and his son Epikydes, honoured by Gargettos during the second half of the century, may have belonged to the same family.⁴²

The tamias Phanomachos son of Nikodemos was perhaps the grandson (SS) of the Phanomachos A. who served as councillor in 360/59, who in turn is probably the [Ph]anomachos whose son Satyros served as dikast in the middle of the century. The epimeletes of the Dionysia may have been either the Leon who was priest of Athena and Ares in (?) the 330s, or a younger man, the Leon A. who

⁴¹ See Csapo a. o. 2013. For the dedication of silver cups (of 50 dr. in other known instances) by liturgists see D. M. Lewis 1968; their function is apparently to provide proof that a liturgy has been performed. Demetrios' reform of the City Dionysia has sometimes been dated to 309/8 on the basis of *FGH* 76 F 10 (Pickard-Cambridge 1988 suggests 316/5). There was no general abolition of choregiai at the Rural Dionysia, since they are attested in Aixone in 313/2 (see ch. 29 n. 114). *Pace* Steinhauer (1992), these texts do not show that the state had taken over financing of the Rural Dionysia (or, P. Wilson 2010*a*, was contributing to it), only that some control was being exercised over Acharnai, which in view of its size may have received special treatment (as, for other reasons, did Peiraios). The tamias' position of course was not formally liturgic, although de facto he was probably expected to be generous (as was the agonothe of the City Dionysia).

⁴² Steinhauer 1992 takes the lochagos (Reinmuth 1971 no. 12 II 52 and right side 1) to be the father of Diogenes, which is impossible. Nausistrate daughter of Naukydes A., commemorated by a relief lekythos recorded in Athens, in which she is represented as a married woman (seated, with a girl standing behind her, and a standing bearded man; *IG* ii² 5823 = *CAT* 3. 421b), was probably Diogenes' sister. Diophantos son of Diogenes A., who went to Samos as a kleruch in (?) 361/0, *IG* ii² 1952 II 34, could have been the uncle (MB) of the proposer, but in a deme of the size of Acharnai this is a slender possibility.

served as ephebe $\epsilon.330$; he may well have been the son of Dion II (son of Dion I), who as priest of Ares and Athena set up the stele bearing the ephebic and Plataian oaths.⁴³

Earlier records of the celebration of the Rural Dionysia in the deme are provided by three choregic dedications. *IG ii*³ 4. 500, of the early fourth century, was found in the city, but seems to record victories in the Rural Dionysia, and can be assigned to Acharnai on prosopographical grounds (cf. P. Wilson 2000, 306–7). It commemorates victories by Mnesistratos I son of Misgon (A.) with Diopethes son of Diodoros, of Mnesistratos' son Mnesimachos I with Theotimos son of Diotimos I, perhaps Mnesimachos' uncle (MB), and of a Theoti[mos] with a Mnesi— (see Table 28.3). Diotimos IV, the second son of Mnesistratos, is attested as a mine lessee in mid-century; his nephew (BS) Mnesistratos II son of Mnesimachos I appears in a list of magistrates of about the same date: The son (7 letters, Alipherê 2015) of a Mnesistratos A. served as kosmetes of the epheboi in 333/2; he is presumably the son of Mnesistratos II, although if so he is rather young for a kosmetes. Mnesimachos II, perhaps a brother of Mnesistratos II, served as diaitetes in 325/4 and may be the Mnesimachos A. who with others (including Nikias of Oe) dedicated a relief representing a sacrifice to Asklepios and Hygieia. Mnesias A., who served as ephebe $\epsilon.330$, may belong to this family, perhaps as a son of Mnesistratos II or Mnesimachos II.⁴⁴

Mnesimachos I's co-choregos Theotimos son of Diotimos I also belonged to a well-attested family. His father may well have been the Diotimos A. who served on a commission appointed to arm the poorer citizens in 404/3 after the democrats had captured Piraeus; he testified to this in court in 398/7. In addition to Theotimos, he may have had two other children: a daughter (?) married to Mnesistratos I, and a second son, Diomnestos (whose name may suggest that there had been an earlier connection between the two families). The Diotimos (III) A. who acted as symproedros of the kleruchs on Samos in 346/5 was probably Theotimos' son; another son, a second Theo[ti]mos, may have served in the kleruchs' council at about the same date. Diomnestos had two attested sons, Diotimos II, commemorated after mid-century by a naiskos

⁴³ Phanomachos I, *IG ii*³ 4. 56. 58, *SEG* 34. 146e; Leon, Reinmuth 1971 no. 12 II 47 (it would be nice to think that the erection of the oath stele was associated with his ephebate). Note also Kleomedon son of Leon A., purchaser in the hekatomtai sales.

⁴⁴ Kosmetes, Reinmuth 1971 no. 9 (cf. Humphreys 2009 n. 3; Alipherê 2015; Appendix 1). Another kosmetes from A., Thougeiton son of Aristokrates, *SEG* 54. 227 (333/2/1). His brother and nephew, *SEMA* 144 (Drapetsona, Piraeus). *IG ii*³ 4. 500 with Makres 1998; Agelidis 2009 no. 55. The absence of demotics shows that this is a deme dedication. The honorand who commemorated his crowns on Milchhöfer 1888, no. 515 (n. 33 above) might also belong to this family, but Deinokrates son of Kleombrotos (below, n. 54) is another possibility. Mnesimachos II's fellow-dedicant is presumably Nikias son of Nikostratos of Oe, recorded on *IG xii* 9. 1242. 7 (Euboia, ? $\epsilon.323$). Cf. *SEG* 61. 70, son of Mnesarchos A. choregos 420s.

Notes: It is far from certain that the kosmetes of Reinmuth 9 (read Mnesistratos, not Ainesistratos, in ii³ 4.63) was also named on *IG* ii³ 4.334 (ii² 2976, Reinmuth 8).

TABLE 28.3. Acharnai: Mnesarchos

of unknown provenance, and Diomedon, who purchased some confiscated property from the poletai in 342/1.

Mnesistratos I's fellow-choregos Diopeithes son of Diodoros I A. may have been the father of S[imon?] son of Diopeithes; the Diodoros (II) who served as epebe *c.*330 may have belonged to this family, but cannot have been a grandson of Diodoros I (if Simon was the son of the choregos he was fairly old by 323).

The second (not necessarily Dionysiac) dedication, *IG* ii³ 4. 234, was found at Menidi and was set up in 340/39 by a victorious komarchos, Antiphanes I son of Ep—; he was perhaps the Antiphanes A. whose wife and young son Antias were commemorated after 340 by a relief stele found in Piraeus. Antiphanes II, who served as epebe *c.*330, may have been a second son, and may be the Antiphanes A. who made a dedication to Asklepios. The title komarchos comes from *kômos* (a band of revellers) rather than *kômê*, village, but in the Tetrakomoi (Piraeus, Phaleron, Xypete, and Thymaitadai) the competing komoi came from the four demes of the association; possibly subdivisions of the deme competed in Acharnai.⁴⁵

⁴⁵ *IG* ii³ 4. 234 was set up in the archonship of a Theophrastos; a date in 313/2 seems to be unlikely in view of *SEG* 43. 26, discussed above at n. 40. However, the text does not explicitly refer to the Rural Dionysia (note the warning in Pickard-Cambridge 1988, 44–5); the komos competition of the Tetrakomoi

A third dedication, by three synchoregoi (Summa 2004, *SEG* 54. 302) was recorded by Kirchner in the ruins of the church of Agios Vlasios, with *IG* ii² 5809, in 1907. The names of the choregoi cannot be securely restored, but we have their patronymics. Dorotheos, father of the second, could be the D. who was councillor in 360/59 (*IG* ii³ 4. 56. 50), and Kleomedon, father of the first, might be the grandfather (FF) of the K. who appears in a list of magistrates of (?) c.300 (*IG* ii² 1704).⁴⁶ A date in the Lykourgan period seems plausible.

So much for the attested deme notables, men who played prominent roles in deme affairs. Many families will have had larger fish to fry; Acharnai lay within easy reach of the city, though since it also provided a sizeable pool of voters ambitious men may have taken care to appear at deme meetings and festivals.

One of the deme's most prominent families in the fifth century must have been that descended from Asteios—a name implying political ambitions and quite probably city residence (see Table 28.4). Asteios' two sons Erasistratos and Diokles were both named on ostraka in the early fifth century; Erasistratos' son Phaiax was also a target, in the ostracism of 417, and had been the leading member of an embassy to Sicily in 422, which

TABLE 28.4.
Acharnai: Asteios
APF 13921 (revised)

honoured Herakles, who was also worshipped at Acharnai. Antias, *IG* ii² 5783 = *CAT* 1. 942; if the date of ii³ 4. 234 is 313/2 the komarch will be his father (cf. Aleshire 1991, no. 1229). The komarch's wife (for what it is worth) came from Xypete.

⁴⁶ *IG* ii² 4317, a dedication by a Dorotheos son of Dorotheos A. and others, from the Akropolis, may be Hellenistic. The probability that Kleomedon I and II were descendants of the 5th c. politician Kleophon A. is fairly low. Note also the epimeletes from A., son of Kleo— on *IG* ii² 2861 adn. (*IRb* 91, ch. 31 n. 78).

probably implies wealth, and perhaps also local connections on the island. According to [Plato] *Eryxias* 392a, a nephew (*adelphidous*) of Phaiax, Erasistratos III, had travelled to Sicily and back before 415 with his uncle, perhaps on the occasion of this embassy. This nephew may be the Erasistratos who had a dispute with Plato's stepbrother (MHS) Demos son of Pylilampes about the peacocks given to Pylilampes by the King of Persia, and may also be, as suggested by *APF*, one of the Thirty. A homonymous grandson of Asteios may have died as a cavalryman in the 420s, *SEG* 48. 83 with Matthaïou 2011a. Phaiax (I) seems to have had two sons: Erasistratos II, mentioned in Plutarch *Agessilaos* 15. 7 as responsible for a witty comparison between Athens and Sparta, and Phaiax II, father of Leodamas, honoured on Paros in the middle of the fourth century. The date of the latter text makes it unlikely that the honorand was the Leodamas who was appointed as archon for 382/1 but rejected at his dokimasia because of his associations with the oligarchs of 411 and 404, and possible to identify him with the L. who was a pupil of Isokrates; he became a well-known *rhetor*, i.a. serving as ambassador to Thebes, and his brother Euaion killed a man called Boiotos in a brawl. Phaiax III, son of Leodamas, is attested as trierarch at some date between 356 and 346/5, and was still alive in 322.⁴⁷

Rivalry in deme and tribe between Phaiax' family and that of Kleippides son of Deinias, general in 429/8, and his better-known son Kleophon, will have helped to push Phaiax' sons towards oligarchy and Kleophon towards extreme democracy. Kleippides and his two sons, Kleophon and Philinos I, all appear on ostraka. Kleophon owned a workshop of slave lyre-makers, and occupied the house of Andokides (of Kydathenaion) while the latter was in exile. Philinos II, councillor and strategos of the Samos kleruchy c.350, was probably a grandson (SS) of Philinos I; his son Philostratos served as councillor in 328/7, and is named first among the three epimeletai responsible for the dedication made by the Council in that year. The Philostratos A. attested as trierarch in the 370s may well have been his grandfather.⁴⁸ A third Acharnian family also produced a general in the fifth century, Kallistratos, who served c.441–438. Thrasymedes son of Kallistratos A., taxiarch or phylarch in 373/2, may be his son.⁴⁹

The Eurymachos son of Eu— condemned in 415 for mutilating Herms, since the name is rare, may have been the father of Kephisodotos son of Eurymachos A., named as guarantor in a Delian record between 360 and 330. He may also have been the Eurymachos commemorated by a stele of the early fourth century, found in Piraeus, with an epigram

⁴⁷ *APF* 13921. Leodamas, *SEG* 48. 1135; cf. perhaps *SEG* 61. 170.

⁴⁸ *APF* 14726 (Philostratos I and II only; but the status of the family makes descent from Philinos I very plausible). The name Deinias is too common for any attempt to trace connections. Ostraka: Brenne 2001 nos. 136–7, Kleippides; *Agora* XXV 600–607, Brenne 140, Kleophon; 659, Brenne 224 Philinos. Kleophon's occupation of Andokides' house, Andok. I. 146; lyremakers *ibid.*, with Aisch. 2. 76, *A.P.* 28. 3 with P. J. Rhodes 1981a, 354–5. Lys. 19. 48 says he died poor, but the same need not be true of his brother. Philinos II, *IG* xii 6. 262 VI 6, XI 14; Philostratos II, *IG* ii³ 360. 4, 48. Descendants, *APF* loc. cit.

⁴⁹ Kallistratos and Thrasymedes, *AO* pp. 89 (441/0), 246. A name as common as Kallistratos is not a safe guide to relationships in this large deme, but a Kallistratos son of Kalliades served as tamias in 398/7 (*LGP*N no. 39), a Kallistratos was councillor in 360/59 (*IG* ii³ 4. 56. 64), a Kallistratos son of Kallisthenes freed a slave woolworker living in Melite in (?) the 320s (*IG* ii² 1576. 65–8), and a Kallist[ratos] served in the council in 303/2 (*Agora* XV 62. 165).

referring to his ambitions (*hyperphialai dianoiar*).⁵⁰ Eurymenes son of Meleteon A. won a victory at the Thargelia in the late fifth century (*IG* i³ 961, *APF* 5976); his sister Polyippe dedicated gold bracelets on the Akropolis (D. Harris 1995 V no. 130).

In the fourth century, there were three members of the deme competing for high military office in the 360s: Timomachos (general in 367/6 and 361/0), Kephisodotos (general in 360), and the immigrant Charidemos, whose first attested generalship was in 361/0, and who established himself solidly in office in the 350s. Euthykles of Thria, another deme of Oineis, attacked both Kephisodotos and Charidemos; perhaps he too had military ambitions. Timomachos, who was condemned to death *in absentia* for his activities in 361/0, was a kedestes (DH?) of the politician Kallistratos of Aphidnai; Timomachos I A., who worked as a carpenter on the roof of the Erechtheion in 409/8, may have been his grandfather (FF).⁵¹

The general Kephisodotos may have been K. II son of Archippos I, who was commemorated with his father (son of Kephisodotos I) and his brother Periphas, named after an early king of Attika, on a stele found at Perdna north of Menidi (see Table 28.5). He may be the Kephisodotos A. represented in Anaxandrides' *Protesilaos* as playing the kithara at Iphikrates' dinners in Thrace.⁵² Euthykles son of Archippos (III?), represented as a young

Notes: Hamiaux 1992 no. 304 regards the relief and inscription of ii² 5798 as genuine though the top of the vase (loutrophoros) is not. *SEG* 43.82 disagrees.

TABLE 28.5. Acharnai: Kephisodotos

⁵⁰ Eurymachos, *IG* i³ 422. 238; *IG* ii² 11466 = *Agora* XVII 827, *CEG* 535; Kephisodotos guarantees lease, *ID* 104-8 B 9.

⁵¹ Kleoboulos son of Glaukon A. may have served as general in the 390s or 380s; see above, n. 8 (E. M. Harris 1995 doubts whether this family had any significant status). On the date at which Charidemos was granted citizenship see D. H. Kelly 1990; on Euthykles of Thria see below, n. 82. Timomachos, *APF* 8157 IV; Timomachos I, *IG* i³ 475. 245. He may have worked with a slave team; even so, this would be a family that rose in the social scale.

⁵² *IG* ii² 5787a (p. 890), refund by the Greek princesses, *Polemon* 7, 1958, 62, 95-6; *SEG* 19. 242, 39. 253. Anaxandrides, *PCG* 2. 260ff., F 42. 18 (the events would be dated c.383 and are attributed by

horseman, with his parents, on a loutrophoros of (?) the 320s from Piraeus, may have been the grandson (SS) either of the general or of Periphas, and may be the Euthykses A. who served as ephebe c.330. Kephisodotos son of Euarchides A., who in 329/8 proposed the second rider to the probouleuma honouring Herakleides of Salamis in Cyprus for his gifts of corn, may be unconnected, as may Timodemos son of Kephisodotos A., councillor c.321; he proposed an honorary decree passed by the Athenian kleruchs on Lemnos, either before 318 or in 307/6.⁵³

Charidemos came from Oreos in Euboia; we do not know why he selected Acharnai as his deme. His sons were called Eurymedon, Phylakos, and Troilos (*APF* 15380), but we cannot trace the later history of the family.

Charidemos was still in office as general in 338/7; by this time there was competition in the tribe from Aischines' elder brother Philochares, and in the deme from Deinokrates I son of Kleombrotos I A. The latter is attested as general in 338/7 and 336/5, and was honoured by the demos with a gold crown and a statue. His son Kleombrotos II married Lykourgos' granddaughter (SD) Kallisto, daughter of Lykophron II; since she was an epikleros, it is possible that there had been a previous marriage between the two families, although Kleombrotos was certainly not her next-of-kin. Deinokrates I may have had a daughter who married Menon A., and had a son [Dei?]nokrates II who bought land at Lousia in the hekatostai sales for 2600 dr. and a daughter who married Pythodoros II of Acharnai.⁵⁴

Pythodoros I A., who acted as agent for the banker Pasion in the 390s and may have been responsible for Pasion's admission to Acharnai when he was granted citizenship, is the first known member of a sizeable liturgic family. The nickname *skēnitēs* given to him by Isokrates (17. 33–4) is linked to a story that he had tried to rig the selection of judges for the Dionysia, and need not be taken as evidence of low origins (though of course this is Isokrates' implication). His son Nikostratos I had two sons. Pythodoros II, presumably the older, was born in 384/3, serving as diaitetes in 325/4. He aided Pasion's son Apollodoros in 361/0, and served as syntrierarch with Menon A., perhaps

PCG to Kephisodotos I, although the play was performed after 376; the question is whether K. was named as a well-known musician or—like Melanopos, who anoints Kallistratos' feet with Egyptian oil—as a young hanger-on; cf. also Plut. *Dem.* 13. 3).

⁵³ Ktesilla, Archippos, and Euthykses, *IG* ii² 5798 = *CAT* 3. 382, Hamiaux 1992 no. 304. Euthykses as ephebe, Reinmuth 1971 no. 12 II 62. Kephisodotos son of Euarchides, *IG* ii³ 367. 51, R/O no. 95 (*AO* p. 396 wrongly has the patronymic as Eucharides). Timodemos, *Agora* XV 54. 5; ii² 3207. 28–30 (the honorand may have been Lykourgos IV of Boutadai).

⁵⁴ *APF* 9251; Table 4.6. Deinokrates' generalships *IRb* 93 (338/7); *IG* ii² 1628. 351, 370; 1629. 871, 890 (336/5); *IRb* 94 undated (it is not categorically stated that in 336/5 D. was acting as general, but it is likely). Statue, *IEleus* 81 (*IG* ii³ 4. 278). *AO* has Nausikles of Oe, Charidemos, and possibly also Stratokles of (?) Lakiadai, to whom D. must be added, all as generals in 338/7, which may be too many representatives from Oineis. Statue, *IEleus* 181; see Wilhelm 1909, 47–8 no. 34. To account for the name of [Dei?]nokrates son of Menon A. in the hekatostai records (Lambert 1997a, F 11 B 5) *APF* 12413 suggested that Menon I son of Pythodoros I A. married a sister of Kleombrotos I; their son would have been born in the late 390s or 380. The names [X]enokrates (*SEMA* 156) and Ameinokrates (*IG* ii² 10639, found at Menidi) may also have been used in Acharnai (however, Lambert says that the space in the hekatostai text is too short for the latter name, and it is far from certain that the Xenokrates of the *Agora* text belonged to A.). For a different reconstruction see Table 28.6.

his father-in-law, in 356; in 341/0 he was one of the amphiktyons at Delos. He in turn had two sons: Nikostratos III, who was an ephebic lochagos of Oineis in one of the early years of the ephebate, and Menon II; the latter is attested as syntrierarch before 325/4 (during his father's lifetime), and principal trierarch in 322. Pythodoros II and Nikostratos III jointly manumitted a slave tanner living in Skambonidai in the 330s or 320s, and Nikostratos III served as councillor in the 320s. Pythodoros II may also have had two daughters, one of whom became the mother of Pythodoros V son of [Der?]kon A., trierarch in the 330s, and the other of Pythodoros VI son of Po— A., ephebe in the same year as his uncle (MB) Nikostratos III.⁵⁵

Nikostratos II, the second son of Nikostratos I, won a victory at the Dionysia with a boys' chorus in 331/0, and served as a dikast. He may be the N. of Acharnai who manumitted a slave woolworker, and the father of Mnesiptoleme, who died as a young girl. If the choregic dedication, ii³ 4. 510 seen by Fourmont at Menidi, belongs to A., the dedicant may be [Nik]ostratos; the stone may even commemorate his success in 331/0 together with another (local?) victory in comedy. The Menon A. who was elected with Thymochares and Straton of Sphettos to set up a statue of Thymochares' father Phaidros, and may also have been a member of the committee that supervised the construction of Zeno's tomb in 261/0, could have derived his name from a connection either with the family of Pythodoros or that of Deinokrates, but direct links cannot be traced; there is no great reason to identify him with Menon son of Proxenides, buried in the city (*SEMA* 153). Proxenides may have been the Proxenides son of Lysimachides attested as a contractor on Delos in 346/5, but this would imply rather long generations.⁵⁶

Proxenides' father may be the Lysi[machid]es of A. who contributed naval equipment in or by (?) 366/5, and is the first attested member of a four-generation lineage (see Table 28.6). The Lysimachides son of Lysimachos who in mid-century dedicated a relief of a bearded man holding a large leg, found in the sanctuary of the healing hero Amynos, may have been either Lysimachides I or II, but the eponymous archon Lysimachides of 339/8, if he belonged to Acharnai, was probably L. II, commemorated after Demetrios of Phaleron's legislation on tomb monuments in a peribolos in the Kerameikos with his sons Lysimachos (II?) and Lysistratos.⁵⁷

⁵⁵ On the reconstruction put forward here, [Dei?]nokrates son of Menon, purchaser in the hekatostai sales, is a cousin (FBS) of the general Deinokrates son of Kleombrotos; Menon II son of Pythodoros II is named after his MF.

⁵⁶ *IG* ii² 3106: [Phil]ostratos (n. 48) and [Dein]ostratos (*IG* ii² 1566, 21, cf. 36?) are also attested in A. Menon and Phaidros' statue, *IG* ii³ 985. 100: note that if ii³ 983 were dated in 254/3 this text could not belong to 255/4 (as suggested in *SEG* 34. 86), since this would make Lyandros son of Lysiades of Anaphlystos councillor in two successive years. Zeno, D. L. 7. 12; Habicht 1982*a*, 21, 1988*a* (the text of D. L., corrected already by Droysen, has Medon; *LGP*N has the reference both under Medon 4—deleted online—and under Menon 20). M.'s tombstone, *SEMA* 153. Proxenides, *ID* 104-24. 17. Cf. ch. 5 n. 58.

⁵⁷ We do not have a patronymic for the archon of 339/8, but we know his demotic. The peribolos in the Kerameikos (Bergemann 1997, A 4) seems to have contained 5 kioniskoi: two for Lysimachides II, one each for his sons, and the fifth (*IG* ii² 11720) for a [Hip]pakides, or conceivably for [Par]pakides of

Notes. SEMA 150, a stone found on Salamis to which the name of a Lysimachos A. was added (*pace* M. C. Taylor 1993, this is unlikely to be the first name on the stone), may be connected, but the name is common.

For chronological reasons, the Menon A. of D.L. 7.12 (if this is the correct reading) and *IG* ii³ 983 is unlikely to be the son of Proxenides.

The dedicant of ii² 4387 is [—]des Lysimachou A.

TABLE 28.6. Acharnai: Lysimachides, *APF* 9480

The wealthiest family in the deme in the fourth century was presumably that of the banker Pasion and his two sons Apollodoros and Pasikles. Their main economic base was urban, consisting of a bank in Piraeus and a shield-factory, but Apollodoros owned land in three demes, one of which may well have been Acharnai (the other two perhaps urban). Pasion II son of Pasikles perhaps bought land in the hekatostai sales, possibly in Acharnai, and was named on a curse tablet *c.*323; he manumitted a slave living on Salamis at about the same date. An aunt (FZ) of Apollodoros' wife (who came from a family in Athmonon) had married an Acharnian, Menekles; their son Stephanos is attested as syntrierarch in 323. Menekles had a brother, Nikias; they may possibly have belonged to a family in Acharnai that used the name Echestratos, and it is possible that Philippos son of Nikias A., who served as ephebic lochagos *c.*330 and became prominent in the restored democracy at the end of the fourth century, was a son of Menekles' brother (see Table 28.7).⁵⁸

Daidalidai, attested on *IG* ii² 2385. 77 and on a curse tablet of the Lykourgan period (*SEG* 40. 269 = 42. 218; see ch. 29 n. 41).

⁵⁸ *APF* 11672 X, with table p. 441 (Trevett 1992 does not add anything new on prosopography). Apollodoros' real estate, [Dem.] 50. 8; for his rural neighbours, perhaps owning land in their deme Pelekes, see ch. 26 n. 53. P[asi?]kles A., *SEG* 58. 265 A 56. Pasion II: Lambert 1997a F 16 B 16, Wünsch 1897, 103a 6, *IG* ii² 1570. 42–3. Oikonomides' suggested restorations in *SEG* 42. 93 are improbable. Identifications based on the very common name Nikias, in such a large deme, are extremely risky. However, the date *c.*320 now assigned to *Agora* XV 68, in which Nikias (II?) and Theophilos, sons of Echestratos, appear as councillors, fits with the identification of Menekles' brother Nikias, born *c.*420,

Notes: It is far from certain that Nikias I son of Echestratos I is to be identified either with the brother of Menekles or with Nikias father of Philippus.

SEG 52.200 (unpublished) has been variously reported as a curse tablet or a tombstone. *Agora XV 68* is dated in the 320s by Traill 1986, 2003.

TABLE 28.7. Acharnai: Echestratos, *APF* 11672 X

The companions of Philippus III as ephebic lochagoi *c.*330 from Acharnai were a Kephisogenes, who probably appears again as proposer of an honorary decree in 306/5,⁵⁹ and Sostratos III, who came from a liturgic family (Naukydes A., son of the Diogenes who proposed the deme decrees of SEG 43. 26 in 314, was probably the ephebic taxiarch of the year).

Sostratos III served as ephebe in the same year as Demophilos II A., who may be either his brother or cousin (FBS) (see Table 28.8). A Demophilos A. served as councillor, and hieropoios for Eleusis, in 329/8, proposed a decree on naval matters in 323, and may conceivably have been the Demophilos who prosecuted Aristotle and (?) Phokion (*APF* 13346).⁶⁰

as Nikias I, father of Echestratos (ch. 17 n. 18). *IG* ii² 5824 is best dated after *c.*320 and ascribed to Nikias II. Echestratos II may have married a daughter of Alkisthenes A. Philippus III son of Nikias A., ephebic lochagos *c.*330, played a prominent role in the restored democracy at the end of the 4th c., proposing a decree in 306/5 concerning the reconstruction of Athens' fleet, and serving as treasurer of military funds in 305/4 (G. J. Oliver 2007*a*, 182) and general finance minister in 304/3, in which year he proposed crowns for Antigonos and Demetrios.

⁵⁹ Reinmuth 1971 no. 12 II 51; *IG* ii³ 1011.

⁶⁰ *APF* 7562; add Koumanoudes 1970*b* with SEG 30. 127.

Notes: *APF*’s entry needs revision. The Demophilos of *SEG* 58.265 B 1 belonged to Phlya, not Acharnai, and the Lysikles of A I 4 may be too late for IG ii² 5812. The first name of the proposer of ii³ 419 may have been [Sostratos], and it is far from clear that other references to a politically active Demophilos of Acharnai belong to this family (the name is attested in 17 demes in the classical period). Since Sostratos II paid the trierarchic debts of Demophilos A., and called one of his sons Demophilos, it seems likely that he married an epikleric daughter of Demophilos I (his FBD).

TABLE 28.8. Acharnai: Sostratos *APF* 13346 (revised)

Naukydes and his father Diogenes may have been affinally linked to another liturgic family in A., some of whom were buried in the deme (see Table 29.9). The argument rests on the occurrence of the name Nausistrate in both families. Hieron son of Hieronymos I A., commemorated before mid-century by a stele found in the deme, has two attested children: a son, Hieronymos II, who served as trierarch in (?) 337/6, won a choregic victory at the Thargelia, and was buried in the Kerameikos after Demetrios’ legislation on funerary monuments; and a daughter, Nausistrate, who married Protimos of Kephisia and was buried with him in Piraeus. Nausistrate daughter of Naukydes A., commemorated by a relief lekythos on which she is represented seated, with a bearded man and a maid, may have been the wife of Hieron I. Moreover, Hieronymos II married a woman called Diophante, who made a dedication to Artemis Brauronia before c.336; since the name Diophantos occurs in Naukydes’ family, this may have been a second marriage between the two lines, perhaps between cousins (FZS/MBD).

In addition to Hieron I, a number of other Acharnians buried in the deme deserve attention. Several families used names based on the root Glauk-, but in such a large deme this does not necessarily imply kinship. The mantis Kleoboulos son of Glaukos, brother of Aischines’ mother Glaukothea, held a military command in the 390s or 380s and was commemorated by a poem celebrating his military exploits as well as his professional expertise. Glaukiades, also commemorated at Menidi by a poem, who died in war in the early fourth century, may have been connected, and may perhaps have been the father of

TABLE 28.9.
Acharnai:
Naukydes I,
Hieronymos I

the Glaukias A. who went to Samos as a kleruch. The Glaukon A. who served as councillor in 360/59 had a son Demeas, also buried in the deme.⁶¹

A lekythos found at Menidi represents a Demetrios, with [Ep?]ainetos and Lys—, perhaps his parents; a second monument, recorded in a private house in Athens, commemorates Demainetos A., Demetrios son of Epainetos (I) A., Epainetos II son of Demainetos, and E[u]strate, daughter of Peithon of Phyle. Demainetos II, son of Demainetos I, presumably the brother of Epainetos II, served as councillor in the 320s (*Agora* XV 68. 18).⁶²

IG ii² 5842, a stele of the middle of the fourth century, commemorated Tynnias and Ameinias sons of Tynnides A., with Ameinias' daughter Aristokrite and an Arch—. Aristokrite's brother [Dion]ysios, who died as a boy, had been commemorated by a more elaborate monument, a stele representing him with a dog, with a siren and doves on top, dated c.380–360. Chairestratos son of Ameinias A., who served as secretary *kata prytaneian* in 337/6, should be another brother.⁶³

Eukles I A., may have had two sons: Pancharion, commemorated in the deme, as were a son and a granddaughter (SD), Phanagora, with her husband; and Epit[eles], whose son Eukles II went to Samos as a kleruch in (?) 361/0, and probably served as diaitetes in 325/4. Eukles III son of Aristeides A., named on a list of Athenians from Euboia of c.323, may be a grandson (DS) of Eukles II by an intra-deme marriage; Euthydemos II, who served as councillor in 303/2, was probably a son of Phanagora.

A naiskos fragment with an epigram found at Tatoi may have travelled there from the deme area. It commemorated Philokrates I son of Phrynichos A., who

⁶¹ Kleoboulos, *APF* 14625II with *CEG* 519 (*SEMA* 148); Glaukiades, *IG* ii² 10998 = *CEG* 489 (*SEG* 56. 430); Glaukias, *IG* xii 6. 261, 262 VI 8; Glaukon, *IG* ii³ 4. 56. 53, *IG* ii² 5788 (wrongly dated Hellenistic in *LGP*N).

⁶² *CAT* 2. 396c = *SEMA* 142 A. *SEG* 57. 212 = *SEMA* 142; *CAT* 2. 443a.

⁶³ The names on *IG* ii² 5842 are not well preserved, but the restorations seem convincing. [Dion]ysios: ii² 5780 (name, Peek 1942 at no. 356) = *CAT* 1. 370 (dating in the 360s). *CAT* says the latter stone was found in 1908 near the city slaughterhouse, but one would expect the two monuments to have stood together. Chairestratos, see *LGP*N no. 15.

Note: Chronology (Eukles II born 385/4) suggests that Eukles III and Euthydemos II were named for MF rather than FF.

TABLE 28.10. Acharnai: Eukles

may have had two sons; Philokrates II, who guaranteed a lease of sacred property in (?) 333/2, served as trierarch in 322, and was perhaps councillor in 303/2; and Smikythos, who was buried on Salamis (see Table 28.10).⁶⁴

Other tombstones from the deme area include the anthemion stele of Philourgos I A., to which the names of (1) Kallias A, (2) (?) his wife (or daughter), (3) Kratinos A., (4) [Pe]lisinoe daughter of Lysippos of Aixone, and (5) Philourgos II son of Lykinides A, were added. Another anthemion stele, of c.390–365, commemorated Hegistrate [*sic*] daughter of Hegemachos (no demotic), who may have been related

⁶⁴ APF 14604. Philokrates I, *IG* ii² 5847 = *CEG* 565, Bergemann 1997, 228 no. 15, mid 4th c.; Philokrates II has no patronymic in *IG* ii² 1632. 56; the patronymic of the councillor of 303/2 (*Agora* XV 62. 160) is Phil—; in *Agora* XIX L 9. 60 the demotic is restored. That the trierarch was a son of Philokrates I, who served as councillor in his early sixties in 303/2, is possible but very far from certain. If the Smikythos of *IG* ii² 5835 (known only from drawings and not closely dated) was a son of Philokrates I, the latter might have married a daughter of Smikythos son of Charinos A., who served as secretary at some date before 378/7 (*IG* ii² 77. 1; the decree concerns the republication of honours perhaps decreed in the 5th c., but this process continued into the 380s; see P. J. Rhodes 1972, 83–4). Malekos son of Smikythos A., *IG* ii² 5816, may be the secretary's son if his stone is correctly dated to the first half of the 4th c. (*IG* calls it a *cippus*, which would suggest a date at the end of the century; it went to the Leiden museum from the Rottiers collection). All this is clearly shaky. Theophilos son of Olympiodoros A., also buried on Salamis (*IG* ii² 5806), perhaps had a descendant who was *basileus* in 229/8, ii² 1706. 2. Theophilos' father *might* be the Olympiodoros son of Diogeiton Ach— who guaranteed a lease c.330 (*Agora* XIX L 9. 84–5); if so, his grandfather would be Diogeiton II A., treasurer of Athena in 398/7 (*IG* ii² 1388 etc.) and dockyard superintendent in 377/6 (ii² 1604. 2); the son of Diogeiton I A. who was one of the epistatai for the golden Nikai c.407/6 (*IG* i³ 469. 28) would be father of Diogeiton II. Cf. Papazarkadas 2011, 313 no. 65. On Timodemios son of Timonous (Pind. *Nem.* 2. 19) see below, n. 66.

to Hegestratos son of Hegetorides A. and Hegetor A., the latter ephebe c.330. Relief stele of a Herakleides, possibly the son of Sosistratides, see n. 67.⁶⁵

Acharnai contained at least three families belonging to the genos Salaminioi. Antisthenes son of Antigenes A. served as archon of the Salaminioi of the Seven Tribes in 363/2; Aristarchos son of Demokles and Arkeon son of Eumelides I acted as oath-takers in the same year. Aristarchos may be the father of Philokedes Aristarchou A., who was honoured by Lamptraí in the late fourth century, and evidently lived in that deme; by 305/4 he was a member of the Areiopagos. Arkeon had a son Eumelides II who was tamias in 343/2. Kleagoros I A., who served as arbitrator for the Salaminioi in 363/2, had a great-grandson Antimachos IV son of Kleagoros II who served as phylarch in 282/1; Antimachos III son of Antinous A., trierarch before 334/3, may have been a cousin (FBS) of Antimachos II, the hypothetical father of Kleagoros II (see Table 28.11).⁶⁶

As one would expect, given the size of the deme, there is some evidence for Acharnians with mining interests, though not a great deal. Dionysios A., voluntary trierarch in 338/7, may be the man of that name who is mentioned in 350/49 as having previously worked a mine; Epikydes son of Philokydes, whose father served as councillor in 360/59, leased two mines in 320/19; Herakleides A., perhaps buried in the deme, may be the Herakleides son of Sosistratides of Ach[arnai?] who appears in an undated mining record; Hermodoros A., who denounced the property of Stesileides of Siphnos in the mining area to the poletai in 323/2, may have had interests in the area himself; Kleomedon son of Leon, who bought an eschatia at Besa in the hekatostai sales, may be the Kleome[don?]

⁶⁵ Philourgos a. o., *IG* ii² 5848; line 8 *Kallio[u gynē]* is restored, and a daughter Kallistagora Kallio[u] is perhaps more likely. A connection between the Kallias of this text and the Kallias son of Theoteles A. who went to Samos as a kleruch in (?) 361/0, *IG* ii² 1952. 32, is fairly unlikely. Kratinos A. has been removed from *SEG* 58. 265. Hegistrate, ii² 11569a; Hegestratos Hegetoridou A., *IEleus* 82. 10 (Appendix 1); Hegetor, Reinmuth 1971 no. 12 II 61. Herakleides, ii² 11604. Cf. also ii² 5829, Opsios; 5830, Pandios (loutrophoros); 5817 Meidon I with sons Meidias and —oleos, and Meidias' son Meidon II.

⁶⁶ *Agora* XIX L 4a. Philokedes, *IG* ii² 1204; 1492. 128. Eumelides II, *IG* ii² 1443. 7. [Ch]a[ri]as son of Arkeon, who appears on *IG* ii³ 4. 334. 11 (Reinmuth 1971, no. 8), may, since the tribal affiliation and office of the men named in ll. 10–12 is uncertain, have belonged to Acharnai; the name Arkeon is not so far attested in any other deme (see Appendix 1). Kleagoros, *Agora* XIX L 4a 6 (-os not -as, Lambert 1997a, 91); Antimachos III, *APF* 1155, *IG* ii² 1623. 249. (On the restoration in Traill 1975a, 129ff., of an Antimachos son of A[ntias of Acharnai] as proedros in 295/4 see M. J. Osborne 1981–3 D 67. 7, with commentary.) Antimachos IV, *SEG* 21. 515. 31; his father Kleagoros II son of Antimachos II perhaps appears on the curse tablet Wunsch 1897, 38. 3, see Habicht 1997; Wilhelm 1904, 120; Gager 1992, ch. 3 no. 37. (*SEG* 24. 194. 23, a possible descendant, ephebe in 164/3.) Timodemos son of Timonous A., the pankratiast honoured in Pindar's second Nemean ode, is associated with Salamis (19); he may have grown up on the island, but this may equally well be an allusion to membership of the genos Salaminioi (for a later Timodemos A. see above, n. 53; Lambert 1999a, 118–9 XXXIV). Another possible Salaminios is Phaidros A., who made a dedication at Sounion (*SEG* 54. 329); his daughter Sostrate was buried in the deme area, *IG* ii² 5839, and his wife dedicated a gold object weighing 3 + dr. to Artemis Brauronia in 337/6, *IG* ii² 1534. 107.

Note: On LGPN's suggestion that Antimachos 18 = Antimachos IV (30) see Habicht 1997.

TABLE 28.11. Acharnai: Antimachos

recorded as owning land, possibly at Besa, shortly before the middle of the fourth century, and may have belonged to A[charnai].⁶⁷

For Acharnai the main point of prosopographical interest in the new list of kleruchic councillors and officials of c.350 from Samos is that the kleruchs' strategos Philinos A. may have been a grandson (SS) of Philinos son of Kleippides, brother of the demagogue Kleophon.⁶⁸

The Telemachos who introduced the cult of Asklepios to Athens, and commemorated this act with an impressive monument in the city Asklepieion, *may* have been the grandfather of Telemachos (II) son of Theangelos A., who proposed two decrees for Herakleides of Salamis in Cyprus c.329, bought the property of

⁶⁷ Dionysios, *APF* 4159; *Agora* XIX P 18. 68. Epikydes, *Agora* XIX P 38. 25–6, 30 (Philokydes, *IG* ii³ 4. 56. 59; there may be a relationship with the family in which the name Naukydes is used, Table 28.10); Herakleides, *IG* ii² 11604, *Agora* XIX P 44. 15 (statistically he is more likely to belong to Ach[arnai] than to Ach[erdaus]); Hermodoros, *IG* ii² 1631. 439; Kleomedon son of Leon, Lambert 1997a, F 7 A 16 with p. 164; *Agora* XIX P 11. 17 (the name Kleomedon recurs in Acharnai in a list of nine tribally-appointed officials of the first half of the 4th c., *IG* ii² 1704. 8, hence Acharnai is somewhat more likely than Halai Aixonides; however, there is a Kleomedon of the right date in Anaphlystos, *Agora* XV 46. 61).

⁶⁸ *IG* xii 6. 262 (Philinos, n. 48 above); it seems likely to me that the list of Acharnians in col. VI continues at least to l. 13, where Athenogenes may well be the father of Pythokles son of [Athe]nogenes A., councillor c.320 (*Agora* XV 68. 19), epebe c.330 (Reinmuth 1971, no. 12 II 53; possibly the rule that councillors had to be over 30, P. J. Rhodes 1972 p. 1, had been relaxed when citizen numbers were reduced in 322?), and trierarch in the 320s (*APF* 12440). Although lists of kleruchs can be very irregular in the size of deme contingents, 8 seems a large number for Lakiadai, and since the names M[n]esith[e]jos (l. 16) and Theopompos (l. 18) are attested in Lakiadai it may be preferable to read a name beginning with Αλκ— in l. 11, where Hallof reads Λακ[ia]δα[i], and restore the demotic Lakiadai in l. 14 or 15. See also above, n. 44 Theo[ti]mos; Table 28.3 Glaukias; n. 65 Kallias; Table 28.11 Eukles. See also Culasso Gastaldi 2011, 241, for Ekphantos A, kleruch on Lemnos (*APF* p. 175).

Meixidamos of Myrrhinous from the poletai *c.*339, and proposed a decree of the tribe Oineis, perhaps posthumously honouring Lykourgos, in (?) 307/6.⁶⁹

A politically active contemporary of Telemachos II, Autokles II son of Autias II A., appears on a possibly ephebic list, and served as secretary in 327/6. His grandfather (FF) Autokles I son of Autias I had been councillor in 360/59; his son Autias III was one of the Athenian taxiarchs honoured for participating in the festival Basileia at Lebaeia in 281/0, and was made proxenos and euergetes at Oropos. Demostrate, daughter of Autokles I, was buried in the Paiania area and commemorated by a relief stele representing her with a maid, crowned by a siren and doves.⁷⁰

A Megakles (I) of Acharnai is named on ostraka, and may have been connected to the Alkmaionidai; Menippos I A. and his son Megakles III and grandson Menippos II were presumably descendants. Megakles III and Menippos II appear as guarantors for Philistides of Perithoidai's contract to rebuild part of the city wall in 307/6; Menippos II was commemorated not long afterwards by a stone found on the Akropolis.⁷¹

COASTAL TRITTYS

Oe

As we have seen, the eponymous heroine of the deme, Oie, is said by Philochoros to be the daughter of Kephalos, which might indicate a site near the sanctuary of

⁶⁹ Telemachos I, *SEG* 47. 232, see ch. 12 n. 75, 20 n. 95; *AAA* 15, 1982, 31–43; Clinton 1994*a*. Monument now in Akropolis Museum, cf. Eliakes 2003. Aleshire 1991, 13561 with p. 127, points out that the restoration Thea[ngelos] in *IG* ii² 4963. 1–2 as the name of the priest of Asklepios (no demotic) is highly speculative; cf. R. Parker 1996, 178, with the suggestion that Telemachos I might have been Epidaurian; Wickkiser 2011. The name Telemachos also occurs in Athens in the 4th c. in Aphidnai, Pallene, and Phlya; Telemachos of Phlya, buried in Piraeus *c.*365, *IG* ii² 7711, is an attractive candidate, but may be too young. Telemachos son of Theangelos A, *IG* ii³ 367, R/O 95, Schwenk 1985 no. 68. 28, 46 (*c.*329); *IG* ii³ 315 (339/8); ii³ 3207. 26 (307/6); *Agora* XIX P 26. 496; R. G. Osborne 1983 (Timokles F 23 *PCG*, the reference to Telemachos' chytra, seems to me merely to imply that he was skinny and mean). The Telemachos who 'sold' an ergasterion in Maroneia, subsequently acquired by Pantainetos (Dem. 37. 5–6; before 347/6) was perhaps—since he is given no demotic—a well-known man, but seems too early for T. son of Theangelos.

⁷⁰ Autokles I, *IG* ii³ 4. 56. 45; Demostrate *IG* ii² 5789 (*CAT* 1. 898 = *AD* 27 B 1, 1972, 696 no. 2); Autokles II, *IG* ii² 2408. 3 (see Appendix 1); *IG* ii³ 361, 420, 362; Autias III, *SEG* 25. 90. 23; *IG* vii 4266. 3 (= *Iorop* 5). The Autias of Acharnai who contributed 200 dr. to an epidosis in 248/7 (*IG* ii³ 1011 II 72) was perhaps either a son or a grandson of Autias III (the latter would have been in his 80s by this time).

⁷¹ *APF* 10037. Megakles I, Brenne 2001 no. 168; Megakles III and Menippos II, *SEG* 25. 123–4; Menippos II, *IG* ii² 5818 (dated *c.*300). For Philistides of Perithoidai see above, n. 23. The Megakles–Menippos line was presumably related somehow to Demokrates A., proxenos of Karthaia on Keos and councillor in 360/59 (*IG* xii 5. 542. 39, missed by *APF* 10037; *IG* ii³ 4. 56. 54), to his son Menippos, who performed the eutaxia liturgy for Oineis *c.*330 (*IG* ii³ 550. 23), and to his (?) grandsons Demokrates and —on sons of Demotion, named on a list of (?) *c.*323 found in Euboia (*IG* xii 9. 1242. 16), but it is not easy to see how.

the genos Kephhalidai at Dafni. The chorus in Sophokles' *Oidipous at Kolonos* (1059–64) imagines the Theban army fleeing westwards from Kolonos to the stony ridge of Mt Aigaleos, through (*ek*) the district of Oe, and the scholion to this passage says that Aigaleos was the boundary of the deme.⁷²

Oe has six attested liturgic families, plus two generals who do not figure in the liturgic record. The best known of the latter in modern times, thanks to Thucydides and Aristophanes, is Lamachos son of Xenophanes O., who is attested as general in 436/5, 425/4/3, and from 416/5 to 414/3; he was also a member of the commission that took the oath of peace and alliance with Sparta in 422/1. His son Tydeus I served as general in 405/4. A grandson, [La?]machos II, may possibly appear as lessee or guarantor in a record of leases of public land; a great-grandson, Tydeus II, freed a slave baker living in Alopeke in (?) the 320s. Kallistratos son of Empedoklos, who served as secretary in 429/8 and general in 418/7, and conceivably as hipparch in 413/2,⁷³ was presumably a kinsman (perhaps father) of the Empedoklos II O. who served as ambassador to Thebes in (?) the early 350s; however, if the ambassador was Kallistratos' son, the Empedoklos III O. who served as councillor in 328/7 must have been a younger man. Kallistratos II son of Kallistratos I O., buried in the Kerameikos before the middle of the fourth century, was presumably a second son of the general; his wife (or widow) seems to have made a dedication to Artemis Brauronia, before c.336. Philemon son of Kallistratos III O., who proposed a decree concerning ambassadors in 320/19 and was commemorated by a painted lekythos of the late fourth or early third century, may well belong to this family, but seems to have been born too late to be a son of Kallistratos II.⁷⁴

⁷² These passages are ignored by those who claim that Oe was near Koropi (ch. 25 s. 'Oa/Oai' with n. 39). See above, n. 22 with Table 28.2; ch. 20 n. 81 on the Kephhalidai. The Sophokles passage is problematic and some editors emend *ek nomou* (*Oiatidos*) to *eis nomon*; it is not certain that the scholiast had local knowledge. See Jebb 1907, 286–8; Kamerbeek 1984; Edmunds 1993. No reading of the text unambiguously locates Oe W of Aigaleos, where one would like to have it, but a location that includes the W slopes of the mountain may be acceptable. *AD* 49 B 1, 1999, 73–5 puts a cave at Kalisteri Phyles in Oe. Cf. Platonos-Giota 2004, 337–42. See however below, at nn. 80–2 on Thria. Clinton 1996, 118; 122 no. 8: no sanctuary of Demeter at Oe; ch. 22 n. 39, on forms of the demotic.

⁷³ For details of office dates see *AO* (note that Lamachos is Lamachippion in *Ar. Ach.* 1207, perhaps implying cavalry experience). Lamachos and Kallistratos will have been competing for office with each other and with Phaiax and Kleophon of Acharnai (Table 28.4; above, n. 48; ch. 16 at n. 43). The hipparch Kallistratos has no demotic and may well be K. son of Empedoklos of Aphidnai (ch. 31 n. 30). Note that while the rare name Empedoklos and the common K. are securely attested for Oe, *Καλλιστράτος* in *IG* i³ 370. 21 is far from certain. [La?]machos II, *IG* ii² 1593. 25, 27; Tydeus II, *SEG* 18. 36 B 5–7 (ii² 12833 may be his tomb stele, provenance unknown).

⁷⁴ Empedoklos II, *IG* ii² 175; Empedoklos III, *IG* ii³ 360; Kallistratos II, *IG* ii² 6923 (trapeza); wife of a Kallistratos O. (II or III), ii² 1524. 187; Philemon, son of Kallistratos III, ii² 381, 6965 (painted, according to *AEE* 923, and recorded in Kolokotronis' house in Plaka).

One would like to know more about Aristokles O., whose daughter Aristomache dedicated on the Akropolis in (or before) 402/1 a gold olive wreath weighing 36 + drachmas (originally awarded to her father?). Kallion, wife of Aristokles (no demotic), who dedicated a much smaller gold object to Artemis Brauronia on the Akropolis at the same date, may well have been her mother.⁷⁵ Aristokles was presumably the grandfather (FF or—if Aristomache was an epikleros, as the dedication might suggest, but there was no adoption—MF) of Aristokles son of Epainetos O., who became involved as a private arbitrator at some date after 355 in the dispute known from [Demosthenes] 33. The arbitrator was commemorated on *IG* ii² 6945a (no provenance) with Aristophon I son of Aristyllos O., perhaps the grandfather of Aristophon II son of Phokiades, councillor in 303/2 (*Agora* XV 62. 180).

The most important man in the deme in the late fourth century was presumably Nausikles son of Klearchos, who had been adopted into Aigilia but returned to Oe when he had fathered a son to take his place in his adoptive family. He served as general in 353/2 at Thermopylai, on the expedition to block Philip of Macedon from marching south into Greece; perhaps satisfied that the Macedonian problem had been solved, he was associated with his fellow-tribesman and contemporary Aischines in the peace negotiations of 346, and supported Aischines in court in 343. After the battle of Chaironeia he apparently changed his views, and became an associate of Demosthenes and (?) Hypereides. He held another generalship before 334, and died in or before 325/4. Goette (1989) suggested that a large naiskos-like monument set up in the Kerameikos, commemorating a man who during his lifetime had been awarded seventeen crowns, was commissioned in 325/4 by Nausikles' son Klearchos of Aigilia to commemorate his father. If so, there may have been some rivalry between Klearchos and the sons and supporters of Lykourgos IV of Boutadai, who died at about the same date.⁷⁶

⁷⁵ Aristomache, D. Harris 1995, V no. 424; Kallion V no. 138. Wreaths were usually dedicated by men (ibid. p. 236); cf. ch. 24 n. 95 on the daughter of Nikeratos of Kydantidai.

⁷⁶ *APF* 10552 (contemporary of Aischines, 2. 184). On Nausikles after Chaironeia see E. M. Harris 1994; against his suggestion (1996) that it was Klearchos, not Nausikles, who was adopted see chs. 2, 32 n. 59. Monument, *IG* ii² 3206, *SEG* 39. 211; chs. 11 n. 62, 12 n. 25 (*APF* D 8; Wankel 1995 questions Goette's identification). The similar monument attributed to Lykourgos, ii² 3207, is thought to have been erected posthumously in 307/6 (cf. n. 53). The decrees of the boule and demos recorded on the latter stone were proposed by Theomenes O., who may perhaps have felt that Nausikles' achievements had been overrated (in any case his son's Macedonian associations, D. S. 18. 64–5, will have tarnished his memory). If Theomenes is the Th. of O. who served as amphiktyon on Delos in 346/5 (*ID* 104-24. 5), he will have been an elderly man in 307/6, but many elderly men re-emerged into public activity in that year (ch. 17 n. 15; *LGP*N Theomenes 5 dates ii² 3207 c.324, following M. H. Hansen 1983b, 163; this change of date has been missed at Epiktetos 46). It might allow us to identify Diophanes of Kephisia (crown V) with D. II whose father Diophanes I K. was councillor in 367/6, *IG* ii³ 4. 54. 23. Nausikles' son Klearchos (of Aigilia) served as hieropoios on the Pythais of (?) 326/5, (*FD* III (1) 511. 7, Jacquemin a. o. 2012 no. 54), presumably in place of his father because the latter by this time was dying or dead.

Kephisodoros of Oe, perhaps the [Kephiso?]doros son of Melesias O. who won a choregic victory in 375/4, contributed naval equipment in or before 366/5; he served as one of the parasites of Athena Pallenis, possibly in the 350s.⁷⁷

Polykrates son of Polyaratos O., commemorated on a stone found south of Athens with Xenokrite daughter of Ameinias of Piraeus, is probably the Polykrates O. who served as councillor in 360/59; his young son Polykrates II was commemorated by a relief found in the Kerameikos. A second son, Euphronios, perhaps served as councillor c.330 and appears in a list of (?) c.323 found in Euboia.⁷⁸ Some interest in Eleusis is perhaps shown, in this deme, by the appointment of Aristeides O. as one of the horistai responsible for surveying the sacred orgas in 352/1, and of Antigenes son of Xenokles as 'host' of Plouton (in the city), perhaps in the 320s.⁷⁹

Thria

It is generally located at Kalyvia Chassia or Chasiotika in the Thriasian plain; a sanctuary of Aphrodite Phile in its territory may be the one at the western end of the Dafni pass. A rubble fort of (?) the early third century BCE is described by McCredie (1966, 6–11) and Lauter (1992). It was perhaps a good deme for horse-raising, producing the hipparch Antidoros, and Pheidon, who served as hipparch to Lemnos and as phylarch, both probably in the Lykourgan period.⁸⁰

⁷⁷ APF9816 with p. 290; SEG 34. 157. 29 (ch. 20 n. 129). Both the name—though very common—and the office would prima facie suggest a location east of Aigaleos for the deme, but of course individual families could move. On families from Oe who appear in the Mesogeia see ch. 25 nn. 39, 60; add the votive capital dedicated at Brauron (with Philomelos of Marathon) by Xenokrateia daughter of Polyoros O. (Bouras 1967, 144 with fig. 104; missed by LGPN), possibly related to Xenokrateia daughter of Eukleides O., commemorated at Velanideza by IG ii² 6958 = CAT 172 (Eukl[eides] added) and perhaps named on 12250 = CAT 3. 341 (loutrophoros, commemorating Nikandros? mid 4th c.), and/or to Xenokrite daughter of Smikythos O., cursed on SEG 24. 262. 7 (ch. 14 s. 'Curse Tablets'. Kalliphon O., whose stele of the mid 4th c. was found at Koropi (IG ii² 6967 + SEG 13. 112; cf. ii² 6954, Kalliphantos O., also from Koropi), had a (?) grandson Kalliphon II, who served as ephebe c.330 (Reinmuth 1971, no 12 I 25). Also from the Koropi area, (1) SEMA 472, commemorating Menon II son of Menios O. with his son Menoitios; Menios (son of Menon I) was one of the treasurers of Athena and the other gods in 390/89 (IG ii² 1400. 4), and Menon II was a dockyard superintendent in 356/5 (ii² 1622. 479). (2) SEMA 471, for Lysistrate daughter of Lysistratos I O., perhaps sister of Lysistratos (Lysistratou) II, councillor in 303/2 (Agora XV 62. 178). Note also SEMA 875–7, a group of tombstones at Rhamnous (Bergemann 1997, peribolos Z 6) commemorating Pytharchos son of Python O. with two sons, a daughter Pythokrite (?) and his (?) wife Timokleia.

⁷⁸ Polykrates I Polyaratou, SEMA 473; Polykrates (I), IG ii³ 4. 56. 38; Polykrates II with Plathane daughter of Kallimachos of Melite (his mother?), anthemion stele with relief, CAT 2. 892 = SEMA 435; [Eu]phro[n]i[os]?, Agora XV 48. 17; E. Polykratous IG xii 9. 1242. 7. Xenokrite was perhaps the second wife of Polykrates I? her relationship, if any, to Xenokrite daughter of Smikythos O., SEG 24. 262. 7, is unclear.

⁷⁹ Aristeides, IG ii³ 292; Antigenes, ii² 1933. 7.

⁸⁰ Aphrodite, Athen.VI 255c. Dating of the remains at Dafni (Wide 1910; Travlos 1988, 177–85) is unclear, but the 'priest's house' seems to belong to the end of the 4th c. or later, PAAH 1937, 29. The kioniskos of Straton son of Smikros Th., IG ii² 6266, was found in the deme area. Antidoros and Pheidon,

Chionides Th., who served with Habron of Boutadai and others as one of the ephebic lochagoi of Oineis *c.*330, played a fairly prominent role at the time of the liberation of Athens by Demetrios Poliorketes in 307/6, again in conjunction with Habron; he travelled as ambassador to Antigonos with Xenokles of Sphettos, returning with a gift of money for the city, and also collected money from Lemnos and Imbros. He was probably the proposer of an honorary decree for Nikomedes son of Aristandros of Kos, a supporter of Antigones and Demetrios, passed between 306 and 303/2. His grandson Chionides II served as councillor *c.*260.⁸¹

Euboulos I, Telesiboulos, and Euboulos II Th., who served as ephebes in the same year *c.*330 (Reinmuth 1971 no. 12, I 31–3), look as if they should have been related to each other, but do not appear elsewhere.

Euthykles Th., trierarch in 359/8, was active in the city as a rhetor, prosecuting Kephisodotos of (?) Acharnai for his activities as general in 360/59, and later delivering Demosthenes 23. Archenomides son of Straton, who acted as witness *c.*351 in a lawsuit concerning maritime trade, presumably lived either in Piraeus or in the city.⁸²

Wünsch (1897, 7) suggested that the potters Nausias and Thrasykles to whom a Mnesiergos sent a letter belonged to Th., a Thrasykles son of Nausikrates Th. being known as proposer of *IG* ii² 450 in 314/3, and (since Wünsch) as anagrapheus in 321/0 (*SEG* 21. 303–4; cf. Paschidis 2008, A 18). This is not particularly likely; names in Nausi— are common in Athens, and both Nausias (*IG* ii² 6049) and Thrasykles (*APF* 7322, trierarch before 325/4) occur in Eleusis, while Mnesiergos may occur in Eitea (ch. 32 n. 37). It should be noted that, unless the cutter or his source made a mistake, two men called Nausikrates served as councillors from Thria in 360/59 (*IG* ii³ 4. 56. 28, 34; probably cousins, FBS, see ch. 17 s. ‘Councillors’). We do not know which of them was the father of Thrasykles’ son Kallidemios, *IG* ii² 6257. Thrasykles should not be restored in ii³ 466 (Lambert 2002*c*).

Note that *Agora* XIX P 7. 13 refers to the daughter of an [Aisch]ylos (the poletai do not use women’s names), while P 13. 14 has [land?] of Aischylos of Thria; perhaps P 13 should be earlier than P 7?

Phyle

The deme was situated high up on Mt Parnes, and had a fortified centre, perhaps already walled at the time of the Peloponnesian War; it was a suitable place for Pan and misanthropes (Menander, *Dyskolos*). Panakton, close to the Boiotian

SEG 30. 114; Pheidon, Mnesimachos F 4. 7 *PCG* (7, 19–23; cf. Spence 1993, 306 no. 145). Stratokles of Oion (K.) owned an *agron* at Thria worth 2½ talents (15,000 dr.), Is. 11. 42.

⁸¹ Chionides I, Reinmuth 1971 no. 12 I 34, II 74; *IG* ii² 1492. 101, 132 (cf. *SEG* 34. 72 = ii² 675 + 525); M. J. Osborne 1981–3 D 51. [1], (Habicht 1982*a*, 198–9; references missed by Paschidis 2008 A 33). Chionides II, *IG* ii³ 1080. 17 (patronymic —I. iou).

⁸² Euthykles, *APF* 5581 (on *APF* 10423, the oddly-named Morychos Lachemoirou Th., listed as trierarch in (?) the late 5th c., see ch. 8). Archenomides, [Dem.] 35. 34.

TABLE 28.12.
Phyle: Aristoteles

border, was fortified in the early fourth century and became in the Lykourgan period the station of an ephebic garrison. Phyle passed a decree *c.* 330 honouring the ephebes of Pandionis; we have no other evidence of deme activity.⁸³

The most distinguished member of the deme known to us is Sophilos son of Aristoteles, who was general in (?) 334/3 and 333/2, and one of the epimeletai of the Amphiaraia in 329/8 (see Table 28.12). His son [Aristotele]s II, with the son of a fellow-demesman Pamphilos, freed a slave woolworker (or prostitute) in (?) the late 320s (*SEG* 18. 36 B 346-8). Sophilos probably had two brothers; Aristophon (II) and Aristokleides; the latter freed a slave askos-maker also in the late 320s, and made a dedication to the healing hero Amynos. Both of them

⁸³ See especially M. H. Munn 1989; M. H. and M. L. Z. Munn 1989, 1990. The Skourta plain area near the fort, occupied from the EBA to late PG periods, seems subsequently to have been deserted until the 5th c.; there is therefore some question as to when Ph. became a deme. The plain was held by Boiotia from *c.* 420-370, and then returned to Athenian control, whereupon the number of farms seems to have increased. Meritt's suggestion (*Hesp.* 1940, 72f. no. 10) that in 307/6 Phyle was divided between Oineis and Demetrias has been rejected, see M. J. Osborne 1981-3 (II) 139-41. Ph. was a 'stronghold' (*chôrion ischuron*) in 403 (Xen. *Hell.* 2. 4. 2); the fortifications now visible are dated *c.* 400-375 (Lauter 1992; Goette 2001, 268-9, plan and map; plans in *MDAI(A)* 49, 1924, pl. VI, whence Pouilloux 1954b pl. 32. 1; Travlos 1988, 319-28; see also *AD* 56-9 B 1, 428-9). We do not know whether Ph. was regularly garrisoned before the Lykourgan period. Ephebic texts, cf. *IG* ii³ 4. 342, Reinmuth 1971 no. 10; three decrees found by the Munns at Panakton, two Leontis and one Hippothontis, are not yet published (Humphreys 2009; ch. 26 n. 60).

seem to have served as councillors in 304/3, at an advanced age. Aristophon III son of Antigenes I Ph., who served as ephebe *c.*330, may have belonged to a related line; his homonymous grandson served as councillor *c.*260, and the latter's son Antigenes III served later in the third century.⁸⁴

The deme's two attested liturgists, Kallistratos and Spintharos (son of Mnesitheides), both active in the Lykourgan period, perhaps lived in the city; Kallistratos made a dedication to Asklepios.⁸⁵

Lysistratos Ph., who served on a board of magistrates at Eleusis (*IEleus* 77), appears as creditor on a Lemnian horos, Culasso Gastaldi 2006 no. 13.

Tyrmeidai

There is no evidence on location. The only traceable family is that of Tleson I and his son-in-law Kallistratos; Kallistratos' sons Tleson II and Kallistratos II served as councillors in 304/3 and 303/2, and [Tles?]on III son of Tleson II served in 281/0. Possibly Tleson I's daughter Glykera (wife of Kallistratos I) was an epikleros who married an agnate.⁸⁶

⁸⁴ See also Petrakos 2004 for Sophilos; Appendix 1 on *IEleus* 82.

⁸⁵ *APF* 8185 (dedication *IG* ii²1534. 66); *APF* 12858 (A 151 could be either man). Demosthenes Ph. freed a woolworker living in Kydathenaion, *SEG* 18. 36 A 154.

⁸⁶ *IG* ii² 7578 (no provenance), stele commemorating Glykera and naming her father and husband; *Agora* XV 61. 151 Tleson II, 62. 196 Kallistratos II, 72. 66 [Tles?]on III. Traill 1986, 142–4 attempts to link Tyrmeidai with part of Acharnai, but this depends on his hypothesis of a division in the latter deme, on which see n. 28 above.

VII Kekropis

The approximate location of the larger demes is known, but their council quotas are uncertain.¹

CITY TRITTYS

Melite (seven councillors?) lay within the walls, Xypete (also seven?) between Piraeus and the city. Daidalidai (one) may also have been a city deme; Epieikidai (one) is unlocatable. I argue here that Pithos (three or two) may also have belonged to the city trittys.

Melite

The deme lay west and south-west of the Agora and contained the Eurysakeion (used as a tribal sanctuary by Aiantis), sanctuaries of Herakles Alexikakos and Zeus Meilichios, and a small temple of Artemis Aristoboule, supposedly built by Themistokles (who presumably lived in the deme) and restored *c.*330 by Neoptolemos son of Antikles M. This lay beside a road leading to the Piraeus gate, between the Hill of the Nymphs and Kolonos Agoraios, and received dedications of krateriskoi, a characteristic offering for Artemis, from the early fifth century.²

Two deme decrees of the classical period are preserved: one of *c.*480–450, very fragmentary, possibly inscribed on the same stone as a decree of the state;

¹ Traill 1978*a* modifies Traill 1975*a*.

² On the topography see Lalonde 2006*a*, 2006*b*. For the Eurysakeion see ch. 20 n. 111. The sanctuary of Herakles Alexikakos (cf. also *Agora* XIX P 26. 453–4) may have been on a site excavated by Dörpfeld in the 1890s (see Tagalidou 1993; *IG* i³ 1058 = *Agora* XIX H 6, *c.*450). Herakles was perhaps here associated with the nymph Melite (Schol. Ar. *Frogs* 501, cf. E. B. Harrison 2002). In antiquity the sanctuary was associated with the plague, but the sculptor Hageladas of Argos who made the cult statue for it may have lived earlier (Tagalidou); it is possible that it was founded after the Persian wars, conceivably as a deme family's response to Themistokles' foundation. On the latter see Threpsiades and Vanderpool 1963, Amandry 1967, and ch. 20 p. 669 (Chr. Meier 1995, 323 suggests that it was founded as a counter-move to Kimon's Theseia). It is not clear whether Themistokles gave it to the deme from the outset, or it was taken over when he was exiled.

TABLE 29.1. Melite:
Euthydemos

the other of *c.*330, honouring Neoptolemos son of Antikles, possibly in association with honours granted by the state at the same time (Table 29.1).³

A list of names and patronymics, without demotics, dated by the archon Theophrastos (340/39 or 313/2) has been assigned to Melite on prosopographical grounds. Its demarch Euthydemos may have belonged to a well-known family of building contractors in Melite; possibly the stone lists contributors to the cost of a statue or a deme building project.⁴ The family begins with Euthydemos I, working as a carpenter on the Erechtheion in 409/8 (*IG* i³ 475. 247f.), probably father of Demetrios M., known as father of Euthydemos II, who appears in a list of tribally-appointed officials of (?) mid-century, *IG* ii³ 4. 63, and as one of the architects who produced specifications for the ‘arsenal of Philon’ (?) *c.*330 (*IG* ii² 1668, with Tracy 1995, 86). Euthydemos son of E. II is listed as (?) a kleruch in *IG* ii² 1927. 5 (Humphreys 2010*a*, 77–8); Euthydemos (III) son of Epikrates, ephebe in 333/2/1 (*IG* ii³ 4. 337) may be E. II’s grandson, and son of the Epikra[tes] M. attested in a list of (?) diaitetai, *IG* ii² 2373. 6. A later

³ *IG* i³ 243 D, F 10 = *Agora* XIX, L A 1, *SEG* 49. 56, has been thought to be a deme decree of Melite, but may not belong to the same stone as A–C (see Lalonde 1999; Papazarkadas 2011, 113 n. 57; the restoration [*ton dēmarchon ton Meli*]teōn in B 30–33 was very rash. Honours for Neoptolemos, *SEG* 22. 116 (cf. below, n. 14). *Agora* XVI 251, fragmentary deme decree of M. honouring a priest, 3rd–2nd c. *IG* ii² 4630 (M. Meyer 1989*a* A 94; Lawton 1995 no. 106) has a relief of [D]emos, Athena, and Herakles, and was found in the church of Ag. Demetrios Loumbadiaris, possibly in the Melite area, but this means little; in any case the decree over which the relief stood may well have been passed by the state (there will have been at least one lost figure to the left of Demos, towards whom Demos and the two deities face; Herakles is crowning Athena). Cf. Güntner 1994; Lalonde 2006*a*, 2006*b*.

⁴ *IG* ii² 2394. Lambert 1997*a*, 150 no. 3, suggests that the list might equally well be attributed to Oa (Klearistos, Hierokles) or Kydantidai (Euthydemos). It was found at Koropi (Koursala).

Euthydemos M. was a sitophylax in 239/8 (Athenodoros; *IG* ii³ 1023*ab*, Kritzas 2015).

Clinton 1996, 120–5, argues that *Agora* XVI 277, XXXI 35, a decree of [Melite] honouring the deme priestess of the Thesmophoroi c.200–180, refers to her activities in the City Eleusinion and not in a deme sanctuary. The association with Melite derives from her husband, Krateas son of Nikolaos M., commemorated on *IG* ii² 6860 (kioniskos, Kerameikos). Clinton's suggestion that the site of the City Eleusinion was once in the deme Melite seems to me problematical.

Several old, wealthy families belonged to Melite, as one might expect from its central location. The ancestry of Neoptolemos, the benefactor of the Lykourgan period, can probably be traced back to a Memnon (I) celebrated as kalos at the end of the sixth century; Antikles I, general in 440/39, may have been his son. A later Antikles (II), son of Memnon II, was perhaps the pupil of Isokrates, of that name, who had been crowned by the city. He had two or three sons: Memnon III, whose son Antikles III was honoured by the orgeones of (?) Amynos, Asklepios, and Dexion for acting as banquet host (*histiator*) in 313/2 (ch. 12 nn. 62–3); Neoptolemos, honoured by his deme and by the genos Eumolpidai; and possibly Antikles IV, whose son [-4–5-]es would have been councillor between 360 and 340. Neoptolemos served on the Pythais of (?) 326/5, and credited his epidosis to the corn-fund of the early 320s towards payment of the trierarchic debts of Euboios of Anagyrous, Philippides of Paiania, Phaiax (II) of Acharnai, his fellow-demesman Onetor (V) of Melite, and Konon III of Anaphlystos. In addition to restoring the temple of Artemis Aristoboule, he undertook to regild the statue of Apollo in the Agora, for which he was crowned by the demos on the proposal of Lykourgos, and dedicated a relief, probably in a cave on the north side of the Akropolis, to Pan, the Nymphs, Hermes, Zeus, Apollo, Artemis, and Demeter. He is probably the Neoptolemos who owned land in the mining area, in Anaphlystos, and he headed an eranos-group that made a loan of a talent (6000 dr.) secured on an ergasterion and slaves at Laureion. He freed a slave couple resident in Melite, perhaps in his household, and a slave carpenter.⁵

⁵ *APF* 10652 (with table); Memnon I (?), BArch 200531. Antikles II son of Memnon II is named on *IG* ii² 2383 (line 19), a list from (?) Eleusis which seems to contain at least 15 and perhaps more members of Melite (the heading *Meliteis* in l. 10 is restored, and there is no evidence that other demes of Kekropis were included; the right-hand side of the stone is preserved, but it had at least 2 columns of names; cf. Dow 1983). It is dated to mid-century (on prosopographical grounds one would say c.340) and resembles two Kekropis monuments from the Akropolis, *IG* ii² 1155 (Lambert 2015*b*), 339/8, dedication by soldiers (misdescribed by Tracy 1995, 99; according to the ii² description, though not the layout, fr. a was the base, not 'heading', of fr. b), and *IG* ii² 2385 (possibly colonists? Humphreys 2010*a*, 76; below, n. 41). Identification with the Antikles of Isokr. 15. 93 is based only on the grounds that the latter should have come from a prominent and wealthy family. Antikles III, *IG* ii² 1259 (Aleshire 1991, A 1, 313/2).

The family of Demosthenes' opponent Onetor may have been similar. The [O]neto[r] or [O]neto[r]ides who (perhaps) served as eponymous archon in 527/6 may have been an ancestor; the office would presumably indicate that Hippias and Hipparchos thought the family worth cultivating at a delicate time.⁶ An early Onetor (I) named as the dedicant or his father on a statue-base of c.500–480 from the Akropolis is likely to have belonged to the Melite family; his daughter Hippylla dedicated a mirror to Artemis Brauronia c.475, and the Onetor (II) who was kalos in the 470s may be her brother.⁷

Be all that as it may, Philonides I, father of Demosthenes' opponent Onetor III, was well known in town in the early decades of the fourth century for his wealth, his uncouthness, and his affair with the Corinthian hetaira Nais. His daughter was married first to a wealthy Timokrates, and subsequently to Demosthenes' cousin (FZS) and guardian Aphobos. Her brothers Onetor III and Philonides II were cited by Isokrates in 354/3 as pupils who had given generously to the city and had been honoured in return. Onetor III's three sons Philonides III, Onetor IV, and Philon are all recorded as liturgists; Philonides may have bought two eschatiai at Upper Lamptrai in the hekatomastai sales, one for at least 15,000 dr. Philonides III and Philon are named on a list of Melite demesmen found at Eleusis.⁸

Neoptolemos and the Eumolpidai (c.330 in Tracy 1995, 84), *IEleus* 93, cf. ch. 20 n. 139; statue of Apollo, [Plut.] *Mor.* 843f (reference to Delphi may mean only that N. had volunteered and Delphi had been consulted). Dedication to Pan, etc., *Hesp.* 42, 1973 (T. L. Shear), 168–70, *SEG* 58. 204; another dedication, found on the Akropolis, *IG* ii² 4901. Land at Anaphlystos (c.340), *Agora* XIX P 26. 289; eranos, *SEG* 32. 236; manumissions, *IG* ii² 1569 B I 53–60; *SEG* 18. 36 B 216–17. *FGE* 908–9, epigram from a statue of N., perhaps set up in or after 307/6. The restoration of the deme-heading *Meliteis* in *Agora* XV 20. 8 (followed by [–4–5–]es Antikleous in line 9) is quite uncertain. *Pace* Csapo 2004, Csapo and Wilson 2010, 2013, he cannot be the actor Neoptolemos of Skyros.

⁶ *APF* 11473; cf. Table 8.2; *IG* i³ 1031. 16 (it is conceivable that the elections for 527/6 were held before Peisistratos' death).

⁷ *IG* i³ 706 = *CEG* 233; i³ 984–5 Hippylla; kalos-names (Onetor, Onetorides), BArch 306453, 306454, Edinburgh Painter. *IG* i³ 21 does not accept the restoration of an [Onet]or as councillor and epistates in 450/49; i³ 1147 *bis*, a casualty list of (?) 460/59, has an Onetor (line 17), but there are some arguments for ascribing it to II Aigeis.

⁸ *APF* 11473, Table 8.2. Philonides I seems to have been born in the 420s, which is improbably late for a son of Onetor II; references Ar. *Plut.* 179; *PCG* 7, Nikochares F 4 (380s), Philyllios F 22, Plato F 65, Theopompos F 5. The syntrierarchs of *IG* ii² 1622. 656–662 (after 357? D. M. Lewis 1997, 218–21) may have been father and son, Onetor III with Philonides II, rather than brothers. Lambert 1997a F 2 A 10–11, 15–16, [–c.10–] Onetoros [Meli?] may be Philonides (Lambert suggests he is the Onetorides of *Agora* XV 492. 118, but it is not clear that this man belonged to Melite, and on the current dating c.370—but see Humphreys 2010a—he might be rather old for the hekatomastai sales; see Appendix 2). Philonides and Philon appear in *IG* ii² 2383 (ll. 11, 17; see n. 5 above); ii² 13003, a trapeza commemorating a Philon Oneto<r>os, found in the Agora, might belong to this Philon if it could be dated after 324/3.

The name Onetor occurs in other families of M.⁹ that have no obvious agnatic connection with that of Philonides and Onetor III, but may have been linked to it by marriages within the deme. It is tempting to suppose that one of these marriages linked a daughter of Philonides I to another prominent Melite family, descended from Kleidemides I, whose peribolos in the Kerameikos was still enough of a source of family pride and concern for its monuments to be restored after 338. Kleidemides' son Koroibos married a Hegeso daughter of Proxenos (of the Gephyraioi?), whose monument is one of the finest reliefs of the late fifth century. Her husband was apparently commemorated *c.*365 by a stele to which the names of his son Kleidemides II and grandson Koroibos II were added; the peribolos already contained, in addition to the stele of Hegeso, a stele with a relief Ioutrophoros and poem commemorating Kleidemos I son of Kleidemides I, possibly its earliest monument (ch. 11 n. 27). Aristomache, sister of Koroibos I and Kleidemos I, married a Philochoros son of Demonikos, perhaps of Konthyle, and was buried at Kokla between Paiania and Erchia, also in the early fourth century.

The Proxenos (I) of Melite whose sons Aischetades I and Onetor appear on the deme list *IG* ii² 2383 may have been a son of Hegeso, and hence a brother of Kleidemides II; he may have married a daughter of Philonides I and called one of his sons after the boy's maternal uncle (MB) Onetor III. The Aischetades who served as general in 317/6 may be Aischetades I, in his late fifties by that date; his (?) grandson Aischetades II son of Proxenos II served as ephebe in 267/6 (archon Menekles).

If, as Jacoby suggested, the historian Kleidemos belonged to Melite, he would have been a son of Koroibos I, brother of Kleidemides II and (?) Proxenos I.¹⁰

The name Onetor also occurs in the family of Kephisodoros I M. Onetor son of Kephisodoros I proposed a tribal decree of Kekropis in 376/5; he may have had a brother called Lysistratos, whose juror's ticket is preserved.¹¹

Another very wealthy family, rivalling those of Memnon and Philonides, was descended from Eurippides M. His son Xenophon served as hipparch, and is attested as general in 441/40, 439/8, and 430/29; he died on campaign in 429,

⁹ See discussion in *APF* 11473. The name Onetorides is not so far clearly attested in Melite; the archon of 527/6, if [O]neto[r]ides (n. 6 above), might be the man of that name who was kalos in the 530s; the O. who appears in a casualty list of VIII Hippothontis in 446/5, *IG* i³ 1163. 10, may have belonged to Eleusis (cf. *LGP*N Onetorides 7, 10; no. 9 is not certainly of Akamantis; Lambert, 1997*a*, 171 no. 82, questions the attribution of no. 6 to Acharnai).

¹⁰ See ch. 11 n. 27. We do not know the historian's deme; the name Kleidemos is also attested in Plotheia *c.*350–325, *IG* ii³ 4. 439 (*SEG* 59. 194).

¹¹ *APF* 11473 (p. 425, C); decree *IG* ii² 1141 = *CEG* 890, ch. 21 n. 93; dikast-ticket Kroll 1972 no. 68c, class IV, buried with its fourth user (Paramonos of Aithalidai, cf. ii² 5396) in the middle of the 4th c., issued after 378/7. The patronymic Kephisodorou was added, presumably (Kroll) to distinguish the owner from a homonym in the deme, possibly the (younger) Lysistratos M. who served on a board of 8 magistrates who perhaps made a dedication at Eleusis in (?) the 340s (*IEleus* 77. 11; Elpines of Probalinthos, l. 7, tombstone *SEG* 41. 200 = ii² 7292; Skaphon of Philaidai, l. 6., is mentioned in the hypothesis to [Dem.] 25). This Lysistratos is probably the father of Lysikrates Lysist[rat]ou, who served on a board of officials in 304/3 (ii² 488. 6) and proposed ii² 506 *c.*302/1. It is not clear where the Onetor M. who served (and misbehaved) as priest of Asklepios shortly before 274/3 belongs (Aleshire 1989, pp. 212, 222). See also below, n. 18, on Onetor son of Arkesilas M.

leaving a daughter who married money and became the mother of the speaker of Lysias 19. The latter married a granddaughter (SD) of Sokrates' rich friend Kriton of Alopeke; one of his sisters was married first to her cousin (FBS or FZS) Phaidros of Myrrhinous, and later to Konon II's assistant Aristophanes son of Nikophemos; a second sister married Philomelos of Paiania.¹²

Nikides son of Phoinikides M., condemned in 415 for parodying the Eleusinian Mysteries, seems to have belonged to the same social and intellectual milieu as Xenophon M. and his descendants. He owned land in Potamos, and at Diros in Euboea.¹³

The family that used the name Hegesippos can probably be traced back to the early fifth century (see Table 29.2). Hegesippos I may have had two sons, Hegesias I and

TABLE 29.2. Melite: Hegesippos

¹² APF 5951 Euripides, 1969 Kritodemos, 14670 Philomelos. The Xenophon of Melite attested in the cavalry in the mid 4th c. (Bugh 1988, II A 93) may be descended from the general through a posthumously adopted grandson (DS). (For the possibility that Phokion belonged to Melite see below, n. 41.) Aristophanes may have belonged to Rhamnous (ch. 31 n. 90).

¹³ IG i³ 422 col. III 212 (Potamos; leased); 424. 17-20, choria in Diros (location on the island unknown), and a house with doors.

Aristomachos I. Hegesias II son of Hegesippos II (and grandson of Hegesias I) served as *daietetes* in 325/4; his son Hegesippos IV proposed the deme decree in honour of Neoptolemos *c.*330 or later. Hegesippos III (son of Aristomachos I?) served as one of the curators of the dockyard in 366/5; a debt incurred in this year was paid between 345 and 341 by his sons Aristomachos II and Thallos. Thallos' sons Hegesippos VI and Euphemos I served as (?) *epilektoi* together in the late fourth century. Aristomachos III and his brother Demochares II, sons of Demochares I, served with them. Aristomachos is also listed as *ephebic lochagos* in 333/2/1; they presumably belonged to the same family. Hegesippos VII, great-grandson (?) of Aristomachos II, served as councillor in 281/0 and secretary in 276/5.¹⁴

This family's fondness for the name Hegesippos suggests a cavalry tradition, but none of them is so far attested in the cavalry records.¹⁵ Horsemen from M. are rather rare (see above at n. 12 for Xenophon son of Eurippides), but Philon son of Aristokles is represented as a cavalryman in combat on his *loutrophoros*, from a burial area close to the city on its north-eastern side. A stele from the same site commemorated his brothers Kleitophon and Hegestratos, with Kleitophon's wife and daughter. Eukles son of Lysias M. served in the cavalry on Salamis *c.*320.¹⁶

Xenokles M., who was the object of an *apographē* *c.*350, owned two properties, apparently in the deme, one next to a road and a plot owned by the deme, the other a house and (?) shed (*klision*). Apart from this, we have no direct evidence of residence in the deme, although it was well sited for the politically ambitious and those engaged in urban occupations, such as the family of Euthydemos.¹⁷

Meliteis also appear further afield. Neoptolemos, as we have seen, had mining interests, as did Onetor son of Arkesilas I. However, Onetor's grandson (SS) Diognetos son of Arkesilas II leased the sanctuary of the *orgeones* of Egretes, in or near the city, in 306/5; his son —es served as councillor in 304/3.¹⁸

¹⁴ Humphreys 2010*a*. Aristomachos: *IG* ii³ 4. 337. It seems to me likely that Hegesias II was dead before the decree for Neoptolemos (*SEG* 22. 116) was passed, leaving his son as the senior member of the family; this would lower the date of the decree to 324/3 or later. Pausanias son of Charidemos M., also listed as ? *epilektos* in the late 4th c. (*SEG* 36. 155. 99), may be a son or later descendant of the Charidemos of (?) M. commemorated on *IG* ii² 6879 in the early 4th c. with a Charopides, a Chariades, and (?) their father (no provenance, Ionic lettering, assigned to the end of the 5th c. by *IG* ii¹ and ii²).

¹⁵ A Demochares served in the cavalry in the mid 3rd c., Bugh 1988 II B 62, but he has no demotic and the name is common.

¹⁶ Philon *SEMA* 438, *CAT* 4. 432 (340s), Odos Nikes 27; Kleitophon a. o., *SEMA* 425 (*IG* ii² 5391, commemorating Kephisodotos I of Aithalidai, came from the same site, but seems unconnected). Eukles, ii³ 4. 323. 8.

¹⁷ Xenokles, *Agora* XIX P 17. 14–20 (*oikopedon Meliteôn*). *LGP*N Xenokles 66 should be deleted (*SEG* 58. 265). Euthydemos, Table 29.1. Nikeratos son of Nikeratos M. manumitted with Pheidippos son of Sosidemios of Xypete four slaves resident in Melite, *SEG* 18. 36 B 223–266. Nikeratos son of Nikomachos M. proposed a decree of initiates on Lemnos in the 330s–320s (?), Culasso Gastaldi 2011.

¹⁸ Onetor, *Agora* XIX P 26. 230, 236 (342/1?); Diognetos, *IG* ii² 2499 (cf. Papazarkadas 2011, 204); —es, *Agora* XV 61. 139; an Arkesilas M., son of either Onetor or Diognetos, is commemorated on the trapeza *SEMA* 424, with his (?) daughter Chrysothemis. The Diognetos *ho Ergotimou* (?) M. named on one ostrakon (see Brenne 2001, no. 59; *Agora* XXV no. 1084) is too remote for any secure connection.

Eudemides M., probably son of the Athenodoros who served as hellenotamias in 407/6, may be the E. named on a list dated c.350 from Piraeus of contributors to the cost of dedicating a statue and renovating a sanctuary; if so, he was perhaps resident in Piraeus. His son Theodoros I is attested as trierarch in (?) 365, and again at some date before 334/3; he had two sons, Athenodoros III and Theodoros II. The latter served as (?) *epilektos* in the late fourth century, and they jointly freed a female kithara-player living in Epikhephisia in (?) the 320s; Athenodoros may have been an actor. Athenodoros II son of De—, councillor in the first half of the fourth century, was presumably a grandson (SS) of Athenodoros I. Theodoros III son of Olympichos M., who leased mines at Besa in the 340s, might be an affine, but the name is extremely common.¹⁹

The only midwife known from Attika, Phanostrate, whose father may have belonged to M., was buried at Acharnai.²⁰ Philagros son of Alexis I M. made a dedication to Asklepios c.350, and acted as witness for Apollodoros of Acharnai in the Neaira case c.340. He was commemorated with his wife Hedyline daughter of Teisamenos of Oion and their son Alexis II on a naiskos (?) found at Goudi, north of Zographou, on the western slopes of Hymettos; another naiskos was set up for Kleagora, wife of Philagros' second (?) son Phileas, with a poem recording that she died in childbirth. Alexis II's son [Philagro?]s served as councillor in 304/3.²¹

A loutrophoros set up in the Kerameikos in the middle of the fourth century to commemorate Leophorbides son of Eunomos M., who is represented with his father, both armed, seems to have become the focus for a set of further monuments set up after Demetrios' legislation on funerals: a kioniskos for Eunomos himself (son of Eucharistos), another for a further son, Actor, another kioniskos for Eunomia daughter of Eunomos, and a base (?) with a poem recording that he died young, perhaps in battle, for Actor's son. [Euch?]aristos II M., who appears in a list of (?) 279/8, perhaps of picked troops (*epi]lektōi*), would also belong to this family if his name is correctly restored.²² Plathane

¹⁹ APF6882. Athenodoros I, *IG* i³ 377. 7f., 11; Eudemides (?), ii² 2329. 13 (the name occurs in other demes); Theodoros I, ii² 1609. 111, 1623. 50–9 (in the latter passage Theodoros II seems to be named as heir to his father's debt before he has come of age); Theodoros II, *SEG* 36. 155. 103 with Humphreys 2010a (he seems to be the older son); with Athenodoros III (named after an uncle, FB, who died childless?), *SEG* 18. 36 A 505–9; Athenodoros II, *Agora* XV 20. 10 (but see n. 5); Theodoros III son of Olympichos, *Agora* XIX P 13. 76–7 (? *SEG* 28. 121. 79–80), P 26. 266. Athenodoros the actor (suggested by D. M. Lewis, *per ep.*), Stephanes 1988 no. 75. It is not clear whether or where the architect Athenodoros M. who worked at Eleusis in (?) 336/5 (*IEleus* 159. 60, cf. *IEleus* 177. 11) fits into this family.

²⁰ *IG* ii² 6873 = *CAT* 2. 890 (perhaps not Melite, *SEG* 33. 214; 375–350). It is not clear whether she is represented in a birthing chair because (ironically) she died in childbirth, or because the family or sculptor chose this rather inept way of indicating her profession (no discussion of iconography in Laes 2011; see also Kennedy 2014).

²¹ Philagros I, *IG* ii² 4378, Aleshire 1991 no. 14212; [Dem.] 59. 32; *IG* ii² 6874 (Hedyline's name added). Kleagora (Phileas' name added), ii² 6858 = *CEG* 604. [Philagro?]s II, *Agora* XV 61. 138. Diphilos son of Satyros M., who also testified for Apollodoros (his sister had married Phrastor of Aigilia after the end of Ph.'s relationship with Neaira's daughter Phano, [Dem.] 59. 58), is named on the curse tablet Coll. Froehner (L. Robert 1936) 11. 14.

²² Bergemann 1997, peribolos AOa; stemma, Willemsen 1970. Leophorbides, *IG* ii² 6861 + *SEG* 16. 197 = *CAT* 2. 910 (c.345?); Eunomos, ii² 6849; Aktor, ii² 6824; Eunomia, Willemsen no. 6 (c.300);

daughter of Kallimachos M. was commemorated c.320 in the Kerameikos with her adolescent son Polykrates II son of Polykrates I of Oe. Her father Kallimachos son of Kallistratos was commemorated by a naiskos of unknown provenance that carried a poem praising his virtue and naming also his father (known as a witness for Euxitheos of Halimous c.345) and two women, Lysistrate and Nikostrate.²³

Two other men of Melite called as witnesses by Euxitheos (second cousins of Kallimachos) had a father or brother, another Euxitheos, who went to Samos as a kleruch.²⁴

Kleomenes M. appears on a list of (?) diaitetai of c.355; his son Kleainetos was diaitetes in 325/4 and proposed a decree of the orgeones of Amynos, perhaps somewhat earlier.²⁵

Xypete

The (probable) site of the Herakleion of the Tetrakomoi (Xypete, Phaleron, Peiraios, and Thymaitadai) was identified at Vari Kaminia, north of Piraeus, in the 1940s, but was never properly excavated. It would have lain in Xypete, but not necessarily at the deme centre.²⁶ The sanctuary of Hermes, Kephisos, and other deities at Echelidai, near the south side of the Long Walls, has also been attributed to Xypete. In addition, the deme may have contained a sanctuary of Kybele, at Moschato, apparently founded in the early fourth century. Pausanias mentions a temple of Hera that was not rebuilt after the Persian wars; the sanctuary however still had funds in the fifth century.²⁷ Phaleron and Peiraios lay south of the deme,

Aktor's son, ii² 10620a (p. 886), c.300; [Euch?]aristos II, *Hesperia* 9, 1940, 72–7f. no. 10 (epilektoi, 3rd c.; division of Phlya in 307/6 is unlikely). It is possible that Eunomos son of Eucharistos was a nephew (BS) and not the father of Leophorbides; for the genealogy suggested here, Leophorbides' loutrophoros should not be dated too early. In any case, this is an interesting example of the continuing use, after a gap of half a century and after Demetrios' legislation, of a peribolos initially created to commemorate a young man who died childless.

²³ Plathane, *CAT* 2. 892 = *SEMA* 435 (ch. 28 n. 78). Kallimachos, *IG* ii² 6857 (dated c.360, which prosopographically seems too early); Kallistratos, Dem. 57. 37 (*APF* 3126). Note also the more recent find from Odos Kerameikou 44 (near the Irian gate) of the relief stele of Philokrates son of Antikrates M. with Chrysilla daughter of Mikion of Anaphlystos, *SEMA* 437. *IG* ii² 6826/7 and 6835 seem to commemorate the same family, despite the differences in reported spelling of names.

²⁴ *IG* xii 6. 262 VII 22 (c.350) with Dem. 57. 39; as Habicht and Hallof 1995 point out, Euxitheos' instructions to call as witnesses the two sons who are in Athens suggests that the family's home was Samos.

²⁵ Kleomenes, *IG* ii² 2373. 5; Kleainetos, ii³ 4. 35. 122; ii² 1252 + 999. 1 (ch. 12 nn. 62–3).

²⁶ Papagiannopoulos-Palaos 1929, Travlos 1988; a short distance SW of the church of Zoodochos Pege (*A to Z* 155 A 2). Burials were also found in this area. See now Conwell 1993, 2008 for a collection of excavation references; on more recent finds Rautopoulou 2013 (useless maps).

²⁷ Echelos, Travlos 1988, 288–90, identified from *IG* i³ 986–7 (ii² 4547; see ch. 12 n. 93); St. Byz. puts Echelidai in a marshy area between Piraeus and the Herakleion of the Tetrakomoi. It may have been in Phaleron. Kybele, Travlos, loc. cit. (I am not clear why he thinks it was the deme centre), near the church of the Metamorphosis (*A to Z* 156 B 3); *AGC* 21 X6/Y4 no. 53 (*AAA* 4, 1971, 140–3). Hera, Paus. 1. 1. 5 ('on the road to Phaleron', 10. 35. 2); *IG* i³ 383. 65. Possible shrine of Dionysos, Syropoulos 2013 (useless maps).

Thymaitadai to the west; it may perhaps have been contiguous with Daidalidai to the (north)-east (n. 39), while the city demes of Oineis lay to its north.

As far as we know, the only deme activity that produced records on stone was participation in the komos-competition at the Tetrakomoi's festival of Herakles. Whatever the origin of this cult, after Kleisthenes' reforms it seems de facto to have been run by the four contributing demes, each of which appointed an epimeletes and entered a team of komasts. Xypete won the competition in 330/29, and set up a tripod in the sanctuary to commemorate the victory.²⁸ The deme had four komarchoi, probably liturgists who organized and paid for team training: Peisidamas son of Peisides, Lykinos son of Lykon, and two brothers who also danced, Philton²⁹ and Pamphilos sons of Aischytos. Pamphilos possibly purchased land at Xypete in the hekatostai sales; he was made proxenos of Argos at some date between 330 and 300, and his son Prokleides served as secretary in 303/2.³⁰ The other two komasts were a Pythe[as], who cannot otherwise be traced, and Philaios son of Philon, who belonged to a well-attested family.

TABLE 29.3. Xypete: Philon
(other reconstructions in
IG ii² and Whitehead
1986*a*)

²⁸ *IG ii³* 4. 228 (227 was set up for a victory by Phaleron, ch. 31 n. 7). *ii³* 4. 225 is a dedication by epimeletai of the Tetrakomoi, but the name of Xypete's representative is lost. The statement of St. Byz. s.v. *Echelidai* that the athletic competitions of the Panathenaia were held at the Herakleion of the Tetrakomoi may perhaps rest on a misunderstanding.

²⁹ A connection has been suggested between Philton's sons and the liturgist Philtades son of Ktesi[as] or [-kles], *APF* 14785 with p. 600, who might be the Philtiades [*sic*] X. who testified in [Dem.] 35. 20, 34 (351-340); note however Philtades Philiadou of Konthyle, *IG ii²* 10174. 4-6 with *SEG* 13. 173.

³⁰ See the discussion in R. Parker 1996, 328-9. Pamphilos: Lambert 1997*a* F 12 A 6, [-c.12-13-]ytou Xypet (no restoration suggested); proxeny, *SEG* 30. 355. 5; Prokleides, *Agora* XV 62. 350. Pamphilos son of Melesippos, whose name was added in (?) the late 4th c. to a stele found north of the Dipylon (*IG ii²* 7045. 13-14), might be a grandson, but the name is common (Bergemann 1997, 228 no. 10; see below, n. 105).

Reconstruction of this family runs into the problem of dating *IG* ii² 1927. Humphreys 2010*a* argues that it is not a list of diaitetai serving *c.*360, but perhaps of kleruchs, of (?) mid-century.³¹ Philon I, on this view, probably had two sons: Isarchos, who may have been serving as demarch when he buried his fellow-demesman Theophilos in 367/6,³² and Kleinias I, father of Philon II (see Table 29.3). The latter served as councillor in the middle of the century. He too may have had two sons, Kleinias II, who is recorded on ii² 1927 as (?) kleruch, and Philaios, who acted as komast in 330/29 and served as sophronistes for his tribe in 305/4. Philon III son of Philaios, commemorated by a kioniskos at the end of the century, should be the sophronistes' son.

Xypete contained an Alkmeonid family: Kallixenos son of Aristonymos X., his son Megakles, and his brother Alkmeon all appear on ostraka. Aristonymos would have been a brother of Kleisthenes; the names do not occur later in the deme.³³

Subsequently, the deme does not figure with distinction in the records of Athenian office-holders, having no attested generals, and one member of the Thirty, Theomenes, who owned a house on Salamis.³⁴

Note: *LGN* Euktaios 5 has E. II as son of E. I, but see Lambert p. 169.

TABLE 29.4. Xypete: Euktaios (*APF* 16814, modified)

³¹ The case for diaitetai *c.*360 was argued by Ruschenbusch 1982.

³² Whitehead 1986*a* is rightly sceptical; Isarchos may have been acting as a kinsman or friend.

³³ *APF* 9688 VII (the case for placing Alkmeon in Agryle is not very strong); cf. Brenne 2001 no. 13 and Table 15.2.

³⁴ *Agora* XIX P 2 d 8–10, 16–19. Land sold by the poletai on this occasion had apparently been owned (not leased) by the Thirty before they came to power, since leased land was returned to its owners. Cf. Loening 1987; Lys. 12. 8, 19; Sakurai 1995 on the treatment of other forms of property. Walbank 1982*a* discusses the problems of identifying this member of the junta, elsewhere called Theogenes (Xen. *Hell.* 2. 3. 2) and said to be a tragic poet (cf. Suda s.v. *Theognis* 137). It is not certain that Theomenes X. was one of the Thirty, rather than a holder of some other office, but his deme fits Loeper's hypothesis. Cf. ch. 27 n. 39.

The best attested family in the deme is that of Euktaios I, perhaps the Euktaios X. who was made proxenos of Karthaia on the island of Keos at some date after 363/2, or his grandfather (see Table 29.4). His grandson (SS) Nikias I son of Nikodemos won a victory with a boys' choir at the Dionysia in 320/19, commemorated by an inscription over the doorway of what was evidently an impressive monument (*IG* ii³ 4. 467). Another son of Nikodemos, perhaps Euktaios II (whose son Nikias II served as ephebe in 334/3/2) bought property at Phaleron for (?) 150 dr. in the hekatostai sales. Nikias I's son Euktaios III and his cousin (FBS) Nikias II son of Euktaios II both served in the cavalry on Salamis c.320. Their aunt (FZ), Hedyline daughter of Nikodemos, was buried on Salamis.

Antigenes I X. may have had three sons: Antikrates I, Aristomachos, and Ischomachos I (see Table 29.5). Antikrates I was commemorated by a relief stele representing him with his (?) wife Glykantis [*sic*]; the names of his son Antigenes II and his (?) grandson (SS) [Antikrate]s II were (probably) added later (*SEMA* 465). Aristomachos had two sons, Antigenes III who served as poletes in 324/3 and Ischomachos II, epilektos (?) in the late fourth century. Either Antigenes II or Antigenes III may have been the Antigenes X. who visited his friend Leokrates (of Pallene?) in Megara in the late 330s. Ischomachos II served as (?) epilektos with Asopodoros son of Ischomachos (I), who was either his son or perhaps his cousin (FBS).

TABLE 29.5. Xypete:
Antigenes

Two marriages within the deme can be deduced. Nikippos II son of Epigenes seems to have married his cousin (FBD) Praxo daughter of Nikippos I, who was perhaps an epikleros; the stele commemorating Epigenes (son of Diaitos), Nikippos II, and Praxo, and the lekythos set up for Nikippos I son of Diaitos and his wife Praxi[ll]a, daughter of Ameinias of Kopros, both apparently found in the Piraeus area, may have come from a peribolos in deme territory (see Table 29.6). A loutrophoros-stele found on Salamis commemorated Nikippos (II?) with his (?) son Epigenes (II). Kephisophon son of Kephisodoros I X. married Aristodike daughter of Diokl[es] or [-eides] X.; a relief stele representing the couple with

Notes: Against the reading *Diaitos* on a Kerameikos curse tablet, SEG 40. 265, see SEG 42. 217. SEG 54. 341, Ioutrophoros-stele c.350, Nikippos Xypetaion, Epimenes Xypetaion, from Salamis, Piraeus Museum 4232; see Pologiorge 2009 (SEG 57. 218) with a different reconstruction of the family.

TABLE 29.6. Xypete: Diaitos (Bergemann 1997a, peribolos L 13 + Pologiorge, 2009, 231–5, revised)

their son Kephisogenes and their daughter Aristodike II seems to have been set up to commemorate Aristodike II. Kephisodoros II X., who appears in a list of soldiers of the second half of the fourth century, was presumably a grandson of Kephisodoros I, either a second son of Kephisophon or the child of a sibling.³⁵

Alkenor son of Melesias I X., possibly the comic poet of that name, commemorated with his wife (from Eleusis) by a relief stele to which the name of their son Melesias II was added, may also have been buried in the deme.³⁶

Thrasyphon son of Hierokleides X., whose son perhaps served as altar priest and daidouchos at Eleusis in the late third century, will have been a member of the genos Kerykes; he proposed two decrees on Eleusinian topics, and may have been treasurer of the stratiotic fund c.245.³⁷

³⁵ IG ii² 6932 = CAT 4. 468 (= SEG 13. 11, Peek 1954/AG I no. 38), mid 4th c., Kephisophon and family; all figures look towards the young woman seated at the (viewer's) left (CAT in my view misrepresents both the relationships and the occasion for the stele). The Kephiso-based names here suggest relations with the shrine at Echelidai (n. 27). Kephisodoros II, IG ii³ 4. 282. 30; Kephisodoros III, son of Aristodemos X., who in 229/8 proposed ii³ 1135 (M. J. Osborne 1981–3 D 90; SEG 34. 73) on behalf of Timosthenes II of Karystos (grandson of Timosthenes I of ii² 467), may have been a grandson (SS) of Kephisodoros II (doubts, Paschidis 2008 A 80, but see now Knoepfler 2015a). The choregos Diodoros son of Exekestides, who won a victory with a boys' chorus on Salamis in the early 4th c. (IG ii³ 4. 499, cf. M. C. Taylor 1997, 166–71), belonged to Kekropis; the name Exekestides is attested in Xypete and Aixone, with Salamis connections in Kothokidai (Table 28.1).

³⁶ IG ii² 6926 = CAT 271 (Bergemann 1997, 217 no. 77) mid 4th c., PCG 2 p. 16. Also from the deme area, CAT 2. 347a, commemorating Boiton son of Aortos X., with his wife Pansistrate [*sic*]. Note that ii² 7188, commemorating Archestrate daughter of Charidemos, is attributed by LGPN (Archestrate 11, Charidemos 13) to Acherdous and not (as in ii²) Xypete. On Selon X. see below, n. 105.

³⁷ See Dow 1979; G. J. Oliver 2007a, 225 with n. 186; ch. 20 n. 139. Theosebes X. belonged to the phratry Medontidai, see ch. 19 n. 127.

Demostratos X., who owned land adjoining that of Plato in Eiresidai, may be the D. son of Androstheneis, who served as councillor *c.*320, and conceivably a descendant of the Demostratos X. who served as secretary to the treasurers of Athena in 440/39; Androstheneis II son of Kallias X., ephebe in 250/49, may be a later member of the family.³⁸

Daidalidai

The house owned by Theosebes of Xypete in Alopeke lay south of the Daidaleion and the road leading to it, which suggests that Daidalidai adjoined Alopeke; one would like to place it west of Alopeke and next to Xypete, but it is not clear whether Xypete could have stretched so far east (Epieikidai and Pithos, see below, might also have lain in this area).³⁹

Kallikrates son of Satyros D., who was one of the guarantors of the ships sent to Chalkis in 341 and paid his debt in 325/4, is the deme's only liturgist. His father was presumably the Satyros D. who served as one of the treasurers of Athena in 389/8.⁴⁰

Parpakides son of Menekrates I D., named on *IG* ii² 2385 with his brother Ariston, also appears on a curse tablet from the Kerameikos; Menekrates II son of P[arpakides], possibly a kleruch or colonist in the mid or late fourth century (Humphreys 2010*a*), should be his father or son. Ergokrat[es] son of Ergomenes, also named on ii² 2385, may be the Ergokrates named with Phokion, and with several men who may possibly have belonged to VII Kekropis, on another curse tablet.⁴¹

E[-5-]os son of Euthydemos freed a slave resident in Oropos in the 320s; possibly he had a lease or contract to work land assigned to his tribe.⁴²

³⁸ D. L. 3. 42; *IG* ii² 1927. 14 with Humphreys 2010*a*. Demostratos I, *IG* i³ 458. 6–8, cf. 363. 13; Androstheneis II, ii³ 1008. 15 (arch. Polyeuktos). Pheidippos son of Sosidemos X., *APF* 14160, freed with Nikeratos of Melite a slave craftsman and family living in that deme, *SEG* 18. 36 B 223–266 (n. 17 above).

³⁹ *Agora XIX* P 5. 9–12. Traill 1986 puts Daidalidai NE of Alopeke. On Daidalos see Kearns 1989.

⁴⁰ *APF* 7959; long generations, ch. 5 pp. 158–61.

⁴¹ *IG* ii² 2385 (Daidalidai, ll. 75–9) is a list of members of VII Kekropis with a very large contingent from Athmonon (n. 65), possibly colonists sent to the Adriatic in 325 (Humphreys 2010*a*). Curse tablet, *SEG* 40. 269 (42. 218). For the possibility that [Par]pakide[s] was commemorated on *IG* ii² 11720 see ch. 28 n. 57; for the riddling tombstone of Sostratos and Eratokles D. see ch. 4 n. 32. Menekrates II, ii² 1927. 45–6. Ergokrates, Wunsch 1897, 24; Wilhelm 1904 assigned this tablet to the 370s (see Table 29.12; below, n. 135), but there may be a case for attributing it to troubles in Kekropis in the Lykourgan period, in which case the arguments for assigning Phokion to Melite (on the basis of Plut. *Phok.* 18. 8) may need reconsidering.

⁴² *SEG* 25. 180. 44; this dates face A of the stele reconstructed in D. M. Lewis 1959 between *c.*330 and 322.

Epieikidai

There is no evidence on location. The only member of the deme about whose family we have any information is Kleonymos son of Kleemporos, one of the thesmothetai of 329/8, who probably also appears on *IG* ii² 2385 (81). He was crowned by the demos, the Council (twice), his tribe, his deme, and his colleagues. The Kleemporos whose tombstone of the mid fourth century is known may well be his father. The name suggests a location not too far from Piraeus, so perhaps near Xypete, but of course there is no guarantee that the family was living in or near the deme when Kleemporos was named.⁴³

Pithos

The appearance of Perikles son of Perikleides P. (who served as sophronistes in 333/2/1) as one of the parasites of Athena Pallenis, in (?) 343/2 or 336/5, does not prove that Pithos belonged to the inland trittys.⁴⁴ Kiron, whose estate was the subject of the dispute for which Isaios 8 was written, owned land at Phlya, but he also had city property, and in any case it is not certain that he belonged to Pithos.⁴⁵ Other evidence, such as it is, points rather to the Piraeus region, and it seems possible that Pithos (like Daidalidai?) was a smallish settlement on the fringe of the Xypete area that opted for independent deme status. The relief stele commemorating Chairestrate daughter of Philon of Phaleron with her father, her husband Kephisodotos of Pithos, and their (?) daughter Aristylla, was recorded in the Piraeus museum.⁴⁶

⁴³ Kleonymos *IG* ii³ 4. 85; Kleemporos *CAT* 2. 363a.

⁴⁴ Perikles *IG* ii³ 4. 337. 6; Polemon F 78 Preller 1838 = Athen. 234d. This text gives Pythodoros as archon, but should probably be emended to Pythodotos (343/2) or Pythodelos (336/5), since there are strong prosopographical arguments for a 4th c. date (ch. 20 n. 139). For the range of demes supplying parasites see *ibid.*

⁴⁵ *APF* 8443. Kiron lived in the city (Is. 8. 35), and it is not certain that the Rural Dionysia to which he took his grandsons (§ 15) were at Phlya (where a theatre is not otherwise attested), or that the festival was in Kiron's deme rather than one in which he had property. A Kiron Pitheus is now attested in *SEG* 58. 265 A 6, (c.340?), with Eunomos and Aristogeiton P. (ll. 2–3), perhaps brothers (Jordan and Curbera 2008, 139); this Kiron may be Isaios' client, Humphreys 2010b (the name is also attested in Phaleron and Prasiai). Kiron (II) P., probably the creditor whose loan of 600 dr. is recorded on *Agora* XIX H 87, and his sons O . . . ainos(?) and Mnesikles (*IG* ii² 2385. 96, 101) may (also?) have been related to Pataikos P., tamias in 390/89, his sons Teisamenos I (ii² 2385. 102) and Kiros I, and the latter's son Teisamenos, ephebe in 334/3/2 (Reinmuth 1971 no. 2, R/O 89, II 24). On Kiro- names see Curbera 2013, 129–30.

⁴⁶ *IG* ii² 7230 = *CAT* 4. 330, c.390–365; *CAT* thinks Aristylla is the deceased, but Chairestrate seems to me more likely. ii² 7227 was also found in Piraeus but commemorates a married woman. Chairippos and Autokles P., *APF* 2731, were perhaps city residents. Chairippos (II?) served in the council in 335/4, *Agora* XV 43. 171; his son Autokles II was ephebe in 334/3/2, Reinmuth 1971 no. 2 II 25, and is attested as syntrierarch in 322 (*APF* 2731). Lambert (1997a, 177) suggests that the [–c.7–]es son of

The two richest men in the deme both seem to have made their money in the mining district, which tells us nothing about the location of Pithos. Diokles I son of Diochares P. dedicated a tithe (*aparchē*) from his mining activities in the 380s; he owned land in Nape (the Agrileza valley) near that of Timesios, and served on a commission charged with making gold processional vessels in 375/4 or 374/3. He may be named on a curse tablet of the 350s. His wife served as one of the *archousai* of the Thesmophoria in Pithos at some date between 383 and 363; his son Diochares II appears in the mining records as a landowner at Sounion and Thorikos and as registering and leasing a mine in the 340s, and may be the Diochares who gave his name to a gate in the city wall near the Lykeion, and to a bath-house, perhaps in the same area.⁴⁷

The second mining family was that of Pheidippos son of Phayllos I. He owned land at Sounion and Thorikos, had at least one ergasterion at Thorikos, and is also recorded as registrant and lessee. His sons Phayllos II and Diphilos also appear in the mining records, during their father's lifetime; Diphilos owns land and an ergasterion in 342/1, although his father lived until at least 334/3. However, the son of a Phayllos P. who handed over trireme equipment c.324 was perhaps a son of Phayllos II.⁴⁸

An A[ph]ar[eus] (?) P. served as tamias in 384/3; since the only other bearer of the name is Isokrates' stepson and adopted son (adult by 369/8), it is conceivable that either the father of Isokrates' wife Plathane or her first husband Hippias came from Pithos.⁴⁹ The tragic poets Meletos I and his son Meletos II, one of whom was perhaps the Meletos who accused Sokrates, also belonged to P.⁵⁰

INLAND TRITTYS

The demes that can be fairly securely attributed to this trittys are Sypalettos, Trinemeia, Athmonon, and Phlya; in that order, they seem to have occupied a

Chairippos who bought land at (?) Teithras in the hekatostai sales (F 3. 6) was Autokles I (Autokles II would be more likely, but in any case the name Chairippos is attested in several other demes at this date).

⁴⁷ APF 4048; dedication IG ii² 4320 + SEG 17. 79 = CEG 756; land *Agora* XIX P 5. 48–9, 58; commission SEG 39. 171. 5, see AO; curse tablet SEG 40. 265/42. 217, found next to a burial dated in the 350s (ch. 14 n. 83). Wife, Is. 8. 19–20. Diochares II, *Agora* XIX P 24. 18, c.345/4 (owns land at Sounion); P 25. 25 (owns land); P 27. 91, c.341/0 (owns at Thorikos). Gates, Strabo 9. 1. 19/C 397; bath-house, ii² 2495. 6 = *Agora* XIX L 10. 41–2 (c.333?).

⁴⁸ APF 14164; possibly Pheidippos married a daughter of Diphilos of Sounion, APF 4487, although of course there are other possibilities (Diphilos son of Pheidippos being presumably named after his MF).

⁴⁹ IG ii² 1407. 5; APF 7716. Since Isokrates' stepson was Hippias' third son, and called his own sons Alexandros and Lysikles, the probability of a connection with P. is rather slim.

⁵⁰ TGF I 186–7 no. 47–8; on Sokrates' accuser see MacDowell 1962, 208–10; ch. 13 n. 30.

crescent of territory running from the upper Kephisos across the northern end of the Attic plain to the north-western slopes of Hymettos.

Sypalettos

The deme decree *IG* i³ 245 was found at Koukouvaones. It was set up c.470–460 and seems to regulate the loan of deme funds against security, but is too fragmentary to provide much information.⁵¹ Two demesmen, Ktemon and another man whose name is not preserved, owned land in the deme area in the path of the ‘Acharnian’ aqueduct, constructed probably in the Lykourgan period to bring water to the city from the upper Kephisos. Ktesos S., secretary of the epistatai for Eleusis in 409/8, may be an earlier member of Ktemon’s family.⁵²

Other evidence for demesmen takes us outside the deme. Stratokles son of Isandros and Isandros son of Stratokles both appear in the mining records of the late 340s, and Isandros may be the son of Stratokles S. who bought land at Phaleron for 1000 dr. in the hekatomai sales.⁵³ Lysikles II son of Zelarchos S. leased a mine in 341/0; his (?) cousin (FBS) Lysikles III son of Antipatros I is named on the Kekropis list *IG* ii² 2385 (92), and had a homonymous grandson who served as priest of Asklepios in or before 257/6 and instructed the ephebes in javelin-throwing in the middle of the third century.⁵⁴

Autosophos (I) son of Autoboulos I S. was commemorated by a relief stele found in Piraeus; he seems to have died as a baby, and is represented with his father, who served as councillor perhaps twice in the second quarter of the fourth century and apparently had a later son, also called Autosophos (II), whose son Autoboulos II was councillor in 335/4 and in an earlier year (Table 29.7). Automedes, listed among the casualties of Kekropis in (?) 409/8, may have been an earlier member of the family.⁵⁵

⁵¹ Ll. 7–8 *ana [pa|n et]os? ana[neō|se]ōs?* There is a fine of 1000 dr. for anyone who proposes a *ddōsis* or *lélxis*, which might be a partial distribution (a sort of theorikon?) or a general share-out, i.e. the deme may be making arrangements to invest surplus revenue instead of distributing it? (cf. Hdt. 7. 144. 1–2; 3. 57. 2). Cf. also ch. 24 n. 89 on i³ 247, which may contain similar provisions.

⁵² *IG* ii² 2502 (erroneously classed as a deme decree in Stanton 1984*a*); *SEG* 19. 181; Vanderpool 1965*b*; Matthaiou 2009*b*. Ktesos, *IG* i³ 386. 5.

⁵³ *Agora* XIX P 26. 281–2, a Stratokles owns land at Anaphlystos; P 27. 17, Stratokles S. leases; P 26. 259–60, 266, Isandros registers a mine and leases it. Lambert (1997*a*, F 9 B 22, p. 163 no. 50) thinks that Isandros is the father, Stratokles (II) the son, but if the landowner Stratokles of P 26. 281–2 is of Sypalettos he is more likely to be the father. Note also Sandros [*sic*] son of Phrynyon in the Sypalettos section of *IG* ii² 2385 + 2431. 91.

⁵⁴ Lysikles II (I assume a grandfather Lysikles I), *Agora* XIX P 27. 37; Lysikles IV (son of Antipatros II) Aleshire 1989, Stele V 79, 83, and *IG* ii³ 986. 28–9, 1026. 3.

⁵⁵ *IG* ii² 7486 = CAT 1. 715, found near the railway station at Piraeus harbour, first quarter of the 4th c. For cases where the name of a dead child is given to a later-born sibling see ch. 8 nn. 32–3. Automedes, *IG* i³ 1191. 256 (= *Agora* XVII 23); there is an Autosthenes in Xypete, but the semantic link is closer for Sypalettos. See also Appendix 1.

Note: CAT and LGPN assume that CAT 1.715 commemorates the adult, but there is no other example of this iconography (dead man with infant), and it seems to me more likely (though still unusual) that it commemorates the child.

TABLE 29.7. Sypalettos: Automedes

Aristarchos I S. married the daughter of Xenainetos of Acharnai and had two sons and two daughters; one of the sons, Kyronides, married his cousin (FBD), the daughter of Aristarchos' brother Aristomenes, and had two sons, Aristarchos II and Xenainetos II. The latter's claim to the estate of Aristarchos I was the subject of Isaios 10. Aristomenes, who acted as guardian to the children of Aristarchos I, had a son called Apollodoros who may be represented on a relief lekythos commemorating Aristarchos II, with a woman called Kallistomache, perhaps Apollodoros' sister and Aristarchos II's mother. Apollodoros' son Antidotos served as councillor in 333/2 and proposed a council decree approving the petition of traders from Kition in Cyprus to found a sanctuary of Aphrodite. A descendent, Apollodoros II son of Aristomenes II, made a dedication to Asklepios in the late third century.⁵⁶

Since the name is rare (though perhaps commoner in the archaic period than later) it seems quite possible that the Myrmex S. listed as member of a trireme crew on *IG* i³ 1032. 187 is the M. whose death is hoped for in Aristophanes *Frogs* 1506 and the father of Euphanes son of Myrmex, commemorated with his son Antiphon (who has an epigram praising his *dikaio synē*), on *SEMA* 1543 and 1880 (*CEG* 559) from Peiraios St. In this case Antiphon may be the syntrierarch Antiphon S. of *IG* ii² 1622. 139 (before 342/1; *APF* 1305). *IG* ii² 11500, Euphanes Myr—, came from the Agora and may be unconnected.

⁵⁶ See ch. 7 with Table 7.5. Lekythos, *IG* ii² 10754 = CAT 3. 351c (no provenance, no demotics or patronymics). Antidotos, ii³ 337; Apollodoros II, ii² 4442, Aleshire 1991 p. 88 (with Lysandrides son of Lysanias Pelex, their names added to a stone already bearing a dedicatory inscription of Kallias son of Kallias of Euonymon).

Trinemeia

Milchhöfer, followed by Traill and Goette, located T. at a site on the southwest slope of Mt Pentelikon, at Pendeli-Kokkinaras, where there are three farms, a classical village, a small temple near a spring, late antique and medieval remains, and a road (modern and probably also ancient) leading to a marble quarry. It is not entirely clear, however, that the site is large enough for a deme site, although the possibility that the deme's population was mainly scattered has to be considered. Horoi may have marked its territory. Strabo (C 399/9. 1. 24) places T. at the source of the river Kephisos, which fits this area.⁵⁷

The best-known member of the deme is Aristokrates I son of Skellias, if his demotic is correctly assigned; he served as general in 413/2, as taxiarch in 411 under the Four Hundred (supporting Theramenes), and as general again in 410/9, 407/6, and 406/5; he may already have been a member of the commission of oath-takers who made peace and alliance with Sparta in 422/1. He either won a choregic victory in the 430s or restored a monument set up by a homonymous grandfather. A nephew (BS or ZS) Epichares I won a victory at Olympia in the boys' stadion race, perhaps in 396. The victor's grandson, Epichares II, was the speaker of [Demosthenes] 58, and was supported by his brother Aristokrates.⁵⁸

Charmylos son of Kallisthenes I T. served as councillor in the middle of the fourth century and is attested as a lessee or guarantor on Delos at about the same date. His son Kallisthenes II in 328/7 proposed a Council decree honouring the epimeletai responsible for a dedication at the Amphiarion; Kallisthenes' son Theoteles was councillor in 303/2.⁵⁹

A prominent family of heralds, presumably resident in the city, who received citizenship at some date between 358/7 and 333, for some reason chose to register in T. Thougenes son of Philokles T., ephebe in 333/2/1, may be a son of Philokles II, probably the first member of the family to have citizen rights; the Philokles (III) T. who served as phylarch in 282/1 was presumably a son of Thougenes or of another son of Philokles II.⁶⁰

⁵⁷ Milchhöfer 1892, 413; Traill 1986; Goette 2002*b*, 2010, with new archaeological data.

⁵⁸ *APF* 1904. The choregic dedication *IG* i³ 964, known from reports by Pittakes and Rangaves, was rediscovered in 1970 (T. L. Shear 1971). It is dated to the 430s (*IG*) or 420s (Shear), but inscribed in archaizing lettering; Raubitschek 1982 suggested that Aristokrates was imitating a monument set up by a homonymous grandfather (cf. also R. Thomas 1989, 133 n. 115).

⁵⁹ Charmylos, *Agora* XV 18 + *SEG* 28. 150. 15; *IG* ii² 1641. 17, 23 (*ID* 104–26 A 19, 24 + *SEG* 28. 141); Kallisthenes II, *IG* ii³ 360. 41; Theoteles, *Agora* XV 62. 225.

⁶⁰ *IG* ii² 145 + *SEG* 14. 56 (M. J. Osborne 1981–3 T 20a), which records honours to Eukles I and Philokles II, does not seem to me (*pace* Osborne) to imply that by the time of the second text they already had citizenship. The stele contains two decrees, the first proposed c.401 by Eurippides of Melite (literary texts, followed by *LGN*, correct the spelling to match that of the tragedian), the second (before 358/7)

Athmonon

The deme clearly lay in the area of modern Marousi, which has produced two deme texts and a number of tombstones. It had a well-known temple of Artemis Amarysia (Pausanias I. 31. 4–5), presumably connected with the cult on Euboia, and hence perhaps going back to an early date.⁶¹ The festival Amarousia at A. seems to have been under deme management by 324/3, since a deme decree of that date (*IG* ii² 1203) specifies that the honorands, deme merarchoi, are to have their crowns proclaimed at the festival (*agôn*); the hieron in which the stele is to be set up is probably that of Artemis. The ephebes of 334/3/2, perhaps the first of the new system, who were honoured by Athmonon, may have taken part in the festival; their tribal sophronistes Adeistos son of Antimachos belonged to the deme. The proposer of the deme decree, Euphronios, may be named in the list of (?) epilektoi *SEG* 36. 155. 64 (Humphreys 2010*a*, 79).⁶² Athmonon may also have had a sanctuary of Demeter and Kore, since in 341/0 the deme was engaged in a diadikasia concerning ‘myrrh and smilax’, used in the cult of the Eleusinian goddesses, by whom the deme’s opponent (perhaps representing a *genos*?) swears.⁶³

The earliest text from the deme is a list of over thirty-six names, apparently of liturgists, which can be dated prosopographically to the early fourth century (*SEG* 24. 197). It may have been produced in the course of a dispute over liability for deme liturgies that had arisen in the years immediately following the Peloponnesian War; dispersal of demesmen during the war years, changes for better or worse in the economic situation of families about which fellow-demesmen were poorly informed, and hostility to wealthy families who had supported the oligarchic regimes of 411 and 404, or were suspected of sympathizing with them, all made this a period when resentment and conflict were likely to

by Melanopos of Aixone; I do not know whether the connection with Kekropis is significant. Thougenes, *IG* ii³ 4. 337. 40; Philokles III, Wolicki 1996 (ii³ 983). Phile[a]s son of [Philok]les T. was councillor in 281/0, *Agora* XV 72. 98 + *SEG* 36. 217. See ch. 6 n. 9.

⁶¹ Location: Pikoulas 1998, Skilardi 2009, 2013; *Marousi* 2004. Deme decrees: *SEG* 24. 197 (cf. 47. 189), *IG* ii² 1203. The horoi *IG* i² 865 are excluded from i³, as archaizing texts of the Roman period. The choregic fragment ii³ 4. 509 (cf. *SEG* 51. 193, P. Wilson 2010*a*) was also found at Marousi. On the Euboian Amarysia, which in the Hellenistic period had a gymnastic competition (*IG* xii 9. 234) see Knoepfler 1972; 1988*b*, 391 on Athmonon; S. Huber 2003, 167–8. See also R. Parker 2005*a*, 457; ch. 18 n. 7; if the Athmonon cult was early, it may have been taken over by the deme from a phratry or *genos*.

⁶² *IG* ii² 1156 = Reinmuth 1971 no. 2, R/O 89, an ephebic dedication to which decrees of Kekropis, the Council, Eleusis, and Athmonon are appended; see Humphreys 1985*a* on cultic innovations associated with the ephebate (conceivably the programme of the Amarousia was expanded at this time; cf. ch. 28 n. 36 on the Areia at Acharnai). Adeistos may be attested in the cavalry c.350, Kroll 1972 no. 16; Aixone (cf. *IG* ii³ 550. 26) is also possible.

⁶³ [Dein.] F XXXIV Conomis 1975. Palles 2003 restored *IG* ii³ 4. 509 as a choregic dedication from Marousi naming Meidogenes as demarch. His homonymous grandson was archon’s paredros in 283/2; [Meid?]Jonides son of Meidon, councillor in the mid 4th c., *SEG* 28. 150. 11, may be his brother.

arise.⁶⁴ There is no trace in this list of the financial system that had been adopted by 324/3, in which the deme's liturgists were divided into sections (*merê*; see below). We also have a long list of Athmoneis (at least seventy) on a stone that perhaps formed part of a tribal dedication set up in the sanctuary of Kekrops on the Akropolis, probably in the Lykourgan period.⁶⁵ The two lists together make Athmonon an unusually well-documented deme from the prosopographical point of view.

The deme decree of 323/2 praises the six merarchoi of the previous year for their management of sacrifices and deme funds, and awards each of them a gold crown of 500 dr. Possibly each *meros* was responsible for funds or property producing a revenue of c.500 dr. to be spent on sacrifices, for which the merarchoi, i.e. the liturgists appointed by the *merê* for 324/3, had paid out of their own pockets; in this case the situation would be similar to that in Erchia (ch. 24), where however there were only five sections instead of six. The demarch Po—is to make arrangements for publication.⁶⁶ Athmonon did not as a deme sell property in the hekatomtai sales, but a group with two archons, apparently based in the deme, sold at least three plots (*chôria*) in the deme, one for 625 dr.⁶⁷

The family with the best claim to antiquity in the deme was perhaps that of Thrasippos I, born in the late fifth century, and his descendants Phrynaios (son) and Thrasippos II (grandson, SS). The name Phrynaios, though a nickname-form derived from *phrynê*, toad or 'brownskin', is attested only in Athmonon and Hybadai, so this family may well descend from either or both of the Phrynaioi

⁶⁴ Cf. the diadikasia lists of the state (Gabrielsen 1987b); ch. 19 n. 92.

⁶⁵ IG ii² 2385 + 2431 + 2431a (SEG 33. 160; Dow promised a re-edition, but there is nothing in the Nachlass beyond the comments in Dow 1983). The only problem for a date in the Lykourgan period is Aristokleides son of Aristomenes (2385. 15), whose (?) son Aristotimos Aristokleidous was trierarch before 330 (APF p. 62, ii² 1624. 57–8 + SEG 13. 48); however, there are other cases in which a son is trierarch during his father's lifetime (ch. 5 n. 47). On Nikostratos (II) A., ii² 1927. 38, whom I take to be the father or son of Nikochares son of Nikostratos I, ii² 2385. 48, see Humphreys 2010a. [Eub]ios son of Oinobios, 2385. 65, can hardly be the Eubios who served as diaitetes in 325/4, ii³ 4. 35. 119.

⁶⁶ IG ii² 1203 = Schwenk 1985 no. 70 (not discussed by Papazarkadas 2011); on liturgic 'sections' see also ch. 22 n. 102. Possible names for the demarch, attested in the deme, are Po[lemon] (CAT 190, lekythos, 2 armed men, undated), Po[lyzelos] (son of Stratonides, ii² 2385. 62), or Po[lykles] or Po[lykrates], the two latter names both used by a family buried in the deme area. IG ii² 5349, a stele with anthemion and rosettes recorded by Rangaves north of Marousi, names Polykles (I) A. with Sostrate daughter of Morsimos of Alopeke (probably his wife and, since the name is rare, perhaps descended from the Morsimos of the late 5th c. who was a bad playwright but a good eye-doctor, TGF 2nd ed. no. 29, below n. 142, ch. 32 n. 24), and a Polykrates, perhaps their son; we do not know whether the names were inscribed successively, but the practice is fairly common on such stelai. ii² 5348, recorded by Fourmont in Kephisia, possibly came from the same peribolos, and commemorated the son of a Polykles A. Eukrates son of Polykrates A. is recorded as (?) kleruch in the mid 4th c. (ii² 1927. 40–1; see Humphreys 2010a). The demarch might be either Polykrates or an otherwise unattested son, Polykles II.

⁶⁷ Lambert 1997a, F 12 A 5–13; perhaps a genos. (It does not seem particularly likely that liturgic *merê* would act independently in such a context, nor that they had archons.)

who served as eponymous archons in (?) 536/5 and *c.*500. Phrynaios served as trierarch in the 350s and perhaps the early 340s, and is probably the Phrynaios [Thras]ippou who was responsible as principal trierarch or syntrierarch for three triakontors in 325/4; Thrasippos II served as ephebic lochagos in 333/2/1 and as principal trierarch before 323/2, and probably purchased (with the son of a Chaireleides) a chorion and house at Prasiai in the hekatostai sales for at least 2375 dr.⁶⁸

Theozotides I, who can fairly safely be ascribed to A. on the basis of the combination of family names in *IG* ii² 1927. 38–9, was evidently relatively prominent as a politician at the end of the fifth century. His proposal, *c.*409 or in 403/2, that benefits given to the orphans of men who had died in war should be restricted to the legitimate sons of Athenian citizens (attacked by Lysias, F LXIV Carey 2007) suggests a relatively right-wing position, as does the association of his younger son Theodotos with Sokrates. Theodotos' elder brother Nikostratos I appeared in court to support Sokrates at his trial. He perhaps had two sons: Theozotides II, choregos before 348, who was appointed proxenos by Karthaia on the island of Keos, and Nikochares. Nikostratos II son of Theozotides II would, on my interpretation of *IG* ii² 1927, have been a kleruch.⁶⁹

The name of Theozotides I's younger son Theodotos, though admittedly very common and not dissimilar to that of his father, may suggest a link with another prosperous family in Athmonon (see Table 29.8). Theodorides I (perhaps son of Theodoros I) probably had two sons: Theodotos I, whose son Theodoros III is named in *IG* ii² 2385. 24, and Theodoros II, whose son Theodorides II is named in the following line. Theodorides II proposed the deme decree ii² 1203 in 323/2; his brother Simon is also named in ii² 2385 (11). Either Theodotos I or Theodoros II probably appears as relieved from a liturgic obligation in the (?) 380s. Thougeiton and Ameinias, sons of a Theodoros (I?), named on the deme liturgy list *SEG* 24. 197, may belong to another branch of the same family; it is possible that Thougeiton is named twice because he was acting as guardian for his nephews (BS) Theodotos I and Theodoros II.

Theokles A., listed in *IG* ii² 2385. 69, is probably the man of that name who with Philoktemon A. lent 2000 dr. secured on a house and chorion in the deme;

⁶⁸ *APF* 7297 + 14996. Phrynaios, *Hesp.* 1995, 206 (*SEG* 45. 147), trierarch 355/4 or 354/3; *IG* ii² 1622. 635, between 356 and 346; ii² 1629. 93–4, 111–12, 131–4. Thrasippos II, *IEleus* 86. 7, 20, ii² 1631. 533; Lambert 1997*a*, F 4. 5, [Thrasipp]os (ii² 1580). Co-purchase of land is not common; possibly the buyers were guardians converting an orphan's inheritance into real estate. The name Chaireleides/Chareleides occurs in Steiria and Angele, both relatively close to Prasiai, in the 4th c.

⁶⁹ *APF* 6915. Theozotides I: Lysias F VI Gernet and Bizos 1926, LXIV Carey 2007, with Stroud 1971 (*SEG* 28. 46; date, Matthaiou 2011*a*, 73, cf. *BE* 2012, 158; chs. 1 n. 102, 2 n. 75, 22 n. 16). He also proposed the proxyeny decree *IG* ii² 5 = *SEG* 14. 36, *c.*400. Nikostratos I and Theodotos, Plat. *Apol.* 33c; Theozotides II, Dem. 21. 59, *IG* xii 5. 542. 35–6; Nikochares, ii² 2385. 48; Nikostratos II, ii² 1927. 38–9 with Humphreys 2010*a*.

Note: Whitehead (1986*a*) distinguishes the Thougeiton of SEG 24. 197. 6 from the homonym in line 45, but it would be surprising to find grandfather and adult grandson in the same list.

TABLE 29.8. Athmonon: Theodoros, APF 12699

he may be the banker Theokles. His son Simon served as ephebic lochagos in 333/2/1, and may be the Simon A. who paid a naval debt in 323/2.⁷⁰

Andron I son of Aischylos I A., who appears in the deme liturgy list of *c.*400, may have been the father of the Aischylos (II) whose estate gave rise to controversy in (probably) the late 340s (see Table 29.9). This Aischylos' daughter, who seems to have had no brothers, married an Ischomachos, and had a son called Charidemos who was adopted after his father's death by his maternal grandfather. Ischomachos' widow (the boy's mother) was remarried, to a Polyeuktos. After Aischylos II had died, the father of the speaker of [Demosthenes] 58 proposed a decree by which Charidemos was to receive state support *qua* son of Ischomachos. The decree was attacked as illegal, on the grounds that it was a manoeuvre designed to bring Aischylos II's estate into the hands of Polyeuktos, whose wife might have been considered to have recovered the status of epikleros if her son had returned to the oikos of her first husband. Although the legal implications of the decree were far from clear, the attack was successful, and Charidemos remained in Aischylos' oikos, from which he performed the eutaxia liturgy *c.*330. Aischron son of Aischylos III A., councillor in 281/0, may be Charidemos' grandson (SS).⁷¹

⁷⁰ Finley 1952, no. 22, horos dated *c.*350–325, found at Marousi; [Dem.] 53. 9; Simon, *IEleus* 86. 10, IG ii² 1631. 662 (cf. APF 12699). Philoktemon's son served as one of the dockyard superintendents in 334/3, ii² 1623. 2.

⁷¹ Andron I, SEG 24. 197. 31; [Andre]as son of Andron A., councillor in the mid 4th c. (*Agora XV* 18 = SEG 28. 150. 10) should be his son and a brother of Aischylos II; the councillor's son Andron II was commemorated by a kioniskos of the early 3rd c. found in Athens, IG ii² 5323. On the Charidemos affair see ch. 2 n. 30; the account in APF 436 is unsatisfactory (add to the list of Ischomachoi in APF

TABLE 29.9. Athmonon:
Aischylos

Adeistos A., whose son Ariston is also named on the deme liturgy list, may—since his name is rare—be the Adeistos represented with a son (or brother), Mi...k—, on a relief stele from the Kerameikos, *IG* ii² 10577 = *CAT* 2. 425*b* (see Table 29.10). Isokrates son of Ariston, *IG* ii² 2385. 45, is probably the liturgist's son and Chariessa daughter of Ariston A., commemorated by a stone also found in the city, may be his daughter. Adeistos son of Antimachos A., who was elected sophronistes of his tribe for 334/3/2, probably the first year of the ephebate, should be descended in some way from Adeistos I, perhaps matrilaterally; Antimachos son of Aristokrates, named on *IG* ii² 2385 (47), may be either his father or a nephew (BS). Antiphon son of Aristomachos, one of the merarchoi of 324/3, may have been related to them.⁷²

7826 XIII, I. son of Hippomachos of Lamptrai, buried as an Athenian kleruch at Potidaia, *IG* i³ 1511). Note the dedication by a Phileia daughter of a Charidemos A. of a bronze statue on the Akropolis as *dekatê* of her estate at Athmonon, *IG* i³ 800 (480s?). *IG* ii² 10613 = *CAT* 2. 383e, a lekythos found at Marousi representing a seated woman, Timagora, and a standing bearded man, Aischylos, may commemorate Aischylos II or his wife. Eutaxia, *IG* ii³ 550. 25. Aischraios son of Ch— A., epilektos (?) in the late 4th c., *SEG* 36. 155. 67 with Humphreys 2010*a*, seems too old to be Charidemos' son, and it is also difficult to reconstruct the relationship between Aischron, son of Aischylos III (*Agora* XV 72. 90 with *SEG* 36. 217) and Aischron son of Athenodoros, XV 72. 91; cf. Aischron son of Glaukippos A., ii² 2385. 49, Athen— A., l. 22, and — [Aischr]onos, l. 21.

⁷² Persons who appear on the liturgy list *SEG* 24. 197 are discussed by Whitehead 1986*a*, 421–5; comments that follow here mostly diverge from and/or supplement his reconstructions.

Notes: Adeistos III may be the cavalryman of *Hesp.* 46, 1977, 111 no. 16, c.360–340. *IG* ii² 5357 is known only from a record by Spon, and undateable. The suggestion of Lambert 1997*a*, 151 no. 5, is rash.

TABLE 29.10. Athmonon: Adeistos

TABLE 29.11. Athmonon: Smikrias, *APF* 12762

Isotimides son of Smikrias I, whose (?) sons Isokles, Smikrion, and Philistides were registered as liturgists in his place, takes us to a group of families in A. using names based on the root Smik- (see Table 29.11). Philistides is probably the father of Pausistratos Philistidou, listed on *IG* ii² 2385 (10); Smikrias II, councilor and epistates in 369/8, is probably the son of a brother of Isotimides. The latter had proposed a decree in 415/4 excluding men who had committed impiety from sacred areas. Smikronides son of Me—, named (without demotic) on a diadikasia list of c.380, may be the father of [N]i[k]ias Smikronidou (A.) of *IG* ii² 2385. 13, may be named on a curse tablet, and may be related to the Isotimides

line. Affinal links are also possible with Phalanthos son of Demetrios A., named on the liturgy list, and his son Smikythion who was one of the merarchs of 324/3; they may in turn be linked to Phalanthides son of Pheidestratos (ii² 2385. 16) and to the Phalanthos A. whose son served as ephebe c.236/5 (arch. Kimon). Smikyliion A., whose son Lykiskos manumitted three slaves living in Piraeus in the 320s, and whose grandson Lykophron son of Lykiskos was one of the merarchs of 324/3 (a younger brother? was ephebe in 333/2/1) bears another related name.⁷³

The deme liturgist Kallias son of Apollodoros may be a son or kinsman of the Apollodoros A. who appears on a crew list of (?) c.400; it is not clear whether Euxitheos and Lysimachides, sons of Kallias, who also figure in the deme liturgy list, are related to him. A Kallias son of Lysimachides of Athens is named in an inscription set up in Piraeus at the end of the third century to record honours granted to him by Delphi; he was perhaps a descendant of the Kallias son of Lysimachides who set up a conspicuous statue of a horse seen at Delphi by Pausanias, with an inscription saying that it was dedicated from Persian spoils. However, the names in question are rather common, and Lysimachides of Keiriadai, whose son Aristoteles was made a proxenos at Delphi c.227, may have been the father of the third-century dedicant.⁷⁴

⁷³ SEG 24. 197. 13–15; either Isotimides had recently died or he was alive but had divided his property among his sons. Euthydikos son of Akesandros and Thrasykles son of Thrasylos are also assessed in place of someone else (name lost); they may be guardians paying for the orphan children of a dead liturgist or brothers-in-law (WZH) assessed in place of their wives' father. Euthykles had a brother, Euthydemos, also listed (l. 16); their father might have been related to the Akesandros commemorated on SEMA 2216 (c.400, no provenance) with his wife Myrte and his daughters Kallistarete and Kallithaleia (the name Akesandros is also attested, later, in Anaphlystos; the daughters' names do not encourage identification of their father with the father of Euthykles and Euthydemos). LGPN Pausistratos 1–2 suggests that Pausistratos son of Philistides may be the P. who appears in *Agora* XIX P 24. 14 as leasing a mine, but the name is of a common type and the case for identification is weak. Smikrias II, ID 88. 4; Whitehead thinks he should be a son of Isotimides, but his absence from SEG 24. 197 would in that case be odd unless he was a younger member of the family named for a firstborn who had died (ch. 8 nn. 32–3). Isotimides' decree (no demotic, but the name is not attested elsewhere) Andok. 1. 71, cf. 8; Lys. 6. 9, 24. Smikronides, IG ii² 1928. 9, APF 12762; curse tablet Wilhelm 1904, 121; the name, though only attested in the three texts discussed here, is not rare in type. Phalanthos Demetriou, SEG 24. 197. 10; Smikythion, ii² 1203. 13, 22; father of ephebe —ion, ii³ 1027. 58. Lykiskos son of Smikyliion, ii² 1564. 1–14 (the case for identifying him with the eponymous archon L. of 344/3 is thin); [— c. 9 —] son of Lykiskos, ephebe, IG ii³ 4. 337. 23; Lykophron ii² 1203. 10, 23.

⁷⁴ Kallias Apollodorou SEG 24. 197. 22; if the Apollodoros A. of IG i³ 1032. 145–6 was indeed his father, and i³ 1032 is not a casualty list (ch. 21 n. 41), why did he not appear on the list? (not yet back in Athens? still presumed missing?). It is unlikely, if this Apollodoros was his father, that Euxitheos and Lysimachides (ll. 25, 29) were Kallias' sons. LGPN (Kallias 56, Lysimachides 5, following Kirchner) identifies the 3rd c. Kallias honoured in IG ii² 2799 with the dedicant of Paus. 10. 18. 1, but Pausanias clearly understood the monument he saw to belong to the 5th c., and one does not see why a 3rd c. monument should refer to Persians. Aristoteles of Keiriadai, FD III (2) 79. Cf. also Aristophilos Lysim—A., councillor in 281/0, *Agora* XV 72. 88 with SEG 36. 217.

Notes: IG ii² 5347 = 5349 (Peck 1942, no. 145) Wilhelm 1904 dates Wünsch 24 c.350, but the prominence of Phokion may suggest a later date.

TABLE 29.12. Athmonon: Pistokles

Pistias son of Kothon, another deme liturgist, perhaps came from a family with Spartan ties or sympathies (see Table 29.12). He and his son (or nephew?) Pistokles, also named on the liturgy list, were probably related to Pistokles son of Pisthetairos, whose tombstone of the mid-fourth century was found in the Marousi area. The Pistokles, perhaps of Kekropis, named on a curse tablet may belong to a younger generation. Pistonides A., whose son Nikodemos served as one of the epistatai for the Eleusinion in 356/5–353/2, may also belong to this group.⁷⁵

The liturgist Sosibios son of Sosimenes I was probably the father of Sosimenes II and Sokrates A., who died young c.390–365, and were commemorated by a stele perhaps found in Piraeus with a relief of a chous standing on a loutrophoros. The family survived; a [Sosimen?]es son of Sosibios served as councillor in 281/0.⁷⁶

⁷⁵ Kothon would have been named c.460 or earlier.

⁷⁶ SEG 24. 197. 37; IG ii² 5352 (Piraeus museum 2158; no attested provenance). Cf. Petrocheilos 2003. Both boys have demotics, although Sokrates, if represented by the chous, cannot yet have been admitted to the deme (Whitehead 1986a, 425 no. 145, thinks that the stone commemorated the liturgist's father and ? uncle, FB; see however ch. 11 at nn. 35–43 on the significance of loutrophoroi). [Sosimen?]es III, *Agora* XV 72 + SEG 36. 217. 87. On the other liturgists of SEG 24. 197: Kollytides Mnesimachou (18) has a notable name; was he born in the Archidamian War, when the family had moved to Kollytos? Kteson son of Eutychides (28) has a son or later descendant (SSS?) Theophilos, whose kioniskos AEE² no. 14 was found in 1888 north of Piraeus; cf. Theophilos Tr—A., *APF* 7119, choregos for boys' dithyramb in 331/0, and his (?) son Peithias, councillor in 271/0, IG ii³ 908. 6 (arch. Pytharatos). Mnesimachos son of Salaipon (20) should be an ancestor (if father, the generations are long) of —ratos Mnesimachou, ephebe in 333/2/1, IG 4. 337. 22; Mne—? epilektos in the late 4th c. (if he is correctly ascribed to A.), SEG 36. 155. 63 with Humphreys 2010a, may be another member of the family; cf. Mnesiphilos, IG ii² 2385. 70, Mnesiergos I, secretary of the treasurers of Athena in 398/7 (LGPN no. 1; perhaps the Mnesiergos of the letter IG III p. 7b, found at Chaidari east of Dafni), and Mnesiergos II son of Mnesias, who proposed a decree honouring the astynomoi for their role in the festival of Asklepios, and perhaps another honouring theoroi, in the early 3rd c. (LGPN no. 2). If Hierokles son of Archestratos (30) was paredros of the hellenotamiai in 418/7, IG i³ 370, the Archestratos (II) A. who served as proedros

Notes: *IG* ii² 5338 = *CAT* 2. 426b, Phanylla's name perhaps added. The Lysikles of *SEG* 58. 265 A4 belonged to Acharnai, not (as *APF*) Athmonon. The creditor on Finley 76 may be L. I. or a (hypothetical) L. II.

TABLE 29.13. Athmonon: Lysias *APF* 9430

The next generation of Athmoneis is represented by the tribal dedication (?) *IG* ii² 2385, on which Athmonon seems to occupy at least ll. 4–74, with much smaller contingents (ranging from one, Epieikidai, to at least seventeen from Pithos) from other demes. [Tle?]son son of Tlesimenes (l. 8) now has a kinsman (brother?) Tlesias, who served as a councillor in the kleruchy on Samos c.350.⁷⁷ Lysias An[–]o(u), 71, may be the father of Lysanias, Andronikos, and Lysippos (II), sons of Lysias (57, 59, 61), or the son of Andronikos (see Table 29.13). Lysippos II served as merarch in 324/3; the Lysippos (I) whose son Lysikles served as syntrierarch shortly after 341/0 should be an older man, perhaps an uncle (FB) of Lysippos II. Lysikles' daughter Hedeia was commemorated by a relief stele of the second half of the fourth century; she probably married Aristoleides A., whose daughter Phanylla is named on the same stone. The Lysikles A. who appears as creditor for 700 dr. on a horos of 315/4 found near the Akropolis may be a son of Hedeia and Aristoleides.

Speusandrides (II) and Thymades, sons of Demades (2385. 50, 53), may be cousins (FBS) of Speusandrides I son of Philodemos A., who died as a young hoplite early in the fourth century; part of the base of a dedication set up on the

in 325/4 (*IG* ii² 361 = ii³ 368, not ii² 363 as *LGN* Archestratos 46, Schwenk 1985 no. 69. 6) cannot have been his son, but must be a later member of the family. Antidoros son of Ergoteles (12) may be, or be related to, the Antidoros of ii² 2385. 56; cf. Ergophilos son of Chairephilos, *ibid.* 9.

⁷⁷ Lambert 2004c suggests [Kte]son. Brother, *IG* xii 6. 262 col. VII 16.

Akropolis by Speusandrides (II) survives. Thymades freed a female woolworker, whose place of residence is unfortunately lost, in the 320s. Philodemos son of Philokrates (63), and his brothers Epameinon (43) and Epikrates (52) may belong to the same lineage; Epameinon II son of Epichares served in the council in 281/0.⁷⁸

Four sons of Oinobios appear on the list: Nikon (40), Phytaios (41), Oinokles (46), and Eubios (65). Eubios served as diaitetes in 325/4. Oinokles' name can be restored in the records of manumission phialai as freeing a *stypopólês* resident in Peiraios; he apparently did not follow in the agricultural tradition suggested by the names given to his father and by the latter to his sons (with the exception of Nikon).⁷⁹

Pantakles, whose sons Kallippos (14) and Kallias (51) appear on the list, also had a daughter, Philia, who married an Athmoneus, Archedikos son of Archedemos I; they are commemorated with their son Archedemos II and with Archedikos' brother Chaireas on a stele found in Piraeus, with a relief of a loutrophoros on which Archedemos II is represented with his father (see Table 29.14). Kallias son of Pantakles might be the father of Kallias II son of Kallias, councillor in the middle of the fourth century.⁸⁰

Archedikos' family may have been linked (affinally?) to a group of demesmen using names based on the root Chair- (see Table 29.15). Chairias son of Pyrrhias is named on the deme liturgy list. Chairephanes I son of Chairokles was com-

TABLE 29.14.
Athmonon: Pantakles
and Archedemos

⁷⁸ Speusandrides I, *IG* ii² 12640 = *CAT* 2. 248, no provenance; dedication of Speusandrides II, mid 4th c., ii² 4903; Thymades, *SEG* 18. 36 B 57; Epameinon II, *Agora* XV 72 + *SEG* 36. 217. 94.

⁷⁹ Eubios, *IG* ii³ 4. 35. 119; [Oinokl]es, ii² 1570, = *SEG* 18. 44. 24–6 (*SEG* 44. 67); eranistai were involved, so it is not certain that Oinokles was the owner.

⁸⁰ Archedikos a.o., *IG* ii² 5327 = *CAT* 3. 213 = Hamiaux 1992 no. 183. Kirchner, following Koumanoudes (*AEE* 73), gives the provenance as Piraeus; Hamiaux says that Fauvel claimed to have acquired it from Marousi, but possibly this provenance derives from the demotics. The order of inscription of the names is probably (1) Archedemos II, (2) Philia, (3) Chaireas, (4) Archedemos I (deeper-cut than the rest). *SEG* 35. 163 and Bergemann (1996) interpret Chaireas as the deceased, in my view mistakenly. (Note that on another Athmonon stone in the Louvre, *CAT* 1. 931, the inscription should be read as Philit[ia] (or [-ion], *LGNP* Philitia 2) not Philip— as Hamiaux no. 203.) Kallias Kalliou, *SEG* 28. 150. 12.

memorated in the middle of the fourth century by a stele with anthemion and rosettes. His son Chariades married Teisikrateia daughter of Alkimachos of Angele, and perhaps moved to his wife's deme, since their tombstone, which also names two sons, Chairephanes II and Chairestratos, was found at Prasiai. Nevertheless, Chairephanes II served as one of Athmonon's merarchs in 324/3. Ap[-c. 3-]s son of Chariades A., who sold an eschatia at Phlya for 1875 dr. with a fellow-official in the hekatostai sales, possibly on behalf of the orgeones of Zeus Epakrios, may have been a third son of this pair.⁸¹

The merarchoi of 324/3, Antiphon son of Aristomachos, Chairephanes II son of Chariades, Dionysophanes son of Dionysodoros I, Lykophron son of Lykiskos, Lysippos II son of Lysias, and Smikythion son of Phalanthos, have all been discussed above with the exception of Dionysophanes, who may have had a descendant in the third or second century, Polykrateia daughter of Dionysodoros II A., whose son became basileus (*IG* ii² 3863).

One of the main interests of these three lists, spanning the period c.400–324, is that they provide a good picture of the way in which demesmen were loosely

TABLE 29.15. Athmonon:
Chairokles

⁸¹ *SEMA* 32 (*SEG* 56. 253); Lambert 1997*a*, 151–2 no. 7. Cf. also Ergophilos son of Chairephilos, 2385. 9; the son of [Char]etades (27), the son of Chairimenes (31), and Charines, who served in the council in 378/7, *IG* ii² 43. 6. Note further: Platon son of Sosistratos (44) and Platon son of Kallistratos (66; his brother P[ythe]rmos, 12) should be cousins (FBS); the son of Prokles (35) may have been related to Patrokleia daughter of Prokleides A., commemorated perhaps shortly before the legislation of Demetrios of Phaleron (surely not after, as *LGPV* Patrokleia 3, Prokleides 13?) by a relief stele found near Marousi, representing her as a seated (so married?) woman with her (?) husband, *IG* ii² 5346 = *CAT* 2. 462a; Polyzelos son of Stratonides (62) and Strato[n] or [-nides] (72) may have been connected with Straton and Blepios A., commemorated by a relief stele of uncertain date (4th c. in any case) and unknown provenance, ii² 5329; [M]e[id]ias son of Meidias (7), Meidokles son of Phanokles (58) and Meidippides son of Phainippides (60) were probably related to each other and to [Meid?]onides son of Meidon, who served as councillor in the mid-4th c., *SEG* 28. 150. 11 (the latter's ? grandson, Meidogenes son of Meidon II, served as archon's paredros in 282/1, *IG* ii³ 881. 33).

grouped into kindreds based on descent and, in some cases, intermarriage, identifiable both to themselves and to us by the use of related names.⁸²

Phlya

The deme-site lay in the area of Chalandri; see Skilardi 2009, 161 (burials, Pologiorge 2012). It was the home of a group of cults managed by the *genos* Lykomidai, and their control may have inhibited deme activities. The deme lent money, in association with the *genos* and the tribe, Kekropis, in (?) the 360s, and may have sold two properties with houses on them in the *hekatostai* sales, one for two and a half talents (15,000 dr.).⁸³

The Lykomidai family descended from Aischraios was evidently dominant in the deme in the later fifth century, holding generalships in 433/2, 417/6, and perhaps 411/0; Pythodoros son of Isolochos, elected for 426/5 and 425/4, may have been a rival, but his tribe and deme are far from certain.⁸⁴

The poet Euripides belonged to the deme, but biographical information about him and his family is probably unreliable (Lefkowitz 1981).

⁸² It is of course possible in any single instance that a name characteristic of a deme lineage has been acquired by another family through marriage with a family in another deme; however, except perhaps in the case of the commonest names, such a coincidence is not likely to happen repeatedly in a deme within a few generations. There is perhaps somewhat more danger that one may conflate homonymous cousins, if their patronymics are not known. There is not much to say about demesmen of A. who do not figure on one of these lists; Exekestos son of Aristogenes A., who proposed honours for the local polemarch and his *paredroi* on Imbros at (?) a date when Imbros was independent, between 318 and 307 (*IG* xii 8. 47. 5), may have been a descendant of the Exekestos A. who was secretary to the treasurers of Athena in 446/5 (*LGN* Exek[estos] 15).

⁸³ See ch. 20 p. 669; also for the possibility that Myron of Phlya (Plut. *Sol.* 12. 3–4) and the 5th c. general Myronides belonged to this *genos*. There was also a prominent family of the *genos* Pyrrhakidai in Phlya in the second century BCE. A 2nd c. horos of a hieron of the Mother was published in *AD* 42 B 1, 1987 (1992) 107. Loan, *IG* ii² 2670 = Finley 1952 no. 146. *Hekatostai*, Lambert 1997a F 10 A 5–12. Note also a [*chôr*]ion at Ph. sold by two *epimeletai* of the *Dipoliastai* (ch. 20 n. 126), Xenotimos son of Timotheos Ph. and a member of a deme beginning with L (or A[thmonon?]), F 11 A 5–9; an *eschatia* at Ph. sold perhaps by *orgeones* of Zeus Epakrios, F 11 A 1–4 (see Table 29.16; ch. 19 n. 167).

⁸⁴ Cf. ch. 20 n. 39; Kleomedes son of Lykomedes may have been general also in 418/7 (*AO*, 144–5); cf. *APF* 9238. There could be a case for ascribing to this family the [L]ykomedes of *IG* ii² 1173. 7–8, if it really belongs to the early 4th c., but it may be dated too early (cf. ch. 28 n. 32). Pythodoros son of Isolochos, Thuc. 3. 86. 1, is usually attributed to VII Kekropis, although this is not certain, and Laches (Aixone) also represented the tribe in 426/5; VIII Hippothontis does not so far have a representative in either 426/5 or 425/4. The attribution to Phlya seems to be based only on the occurrence of the name Pythodoros in the deme *c.* 445 (*LGN* no. 83), which means very little with such a common name. Isol[ochos] son of [Ph]il[ode]mos, named on the curse tablet Wünsch 1897, 136, if it has been correctly read, may be a descendant (the presence of Philo[d]emos son of Nikomachos, *ephebe* in 333/2/1, in Phlya, *IG* ii³ 4. 337. 45, does not alter matters much). On Myron and Myronides Ph. see also ch. 30 n. 37. Conceivably Nikostratos son of Gniphon, cursed on *Agora XXVIII* pp. 55–7 (*SEG* 44. 226) belonged to the Phlya family of *APF* 3057 (ch. 32 n. 64).

A relief monument of *c.*400, representing [-7-10-]ulos Ph. as a horseman trampling on a fallen enemy, must have been set up by a prominent family, perhaps one anxious to re-establish credit after the restoration of democracy in 403. The horseman may perhaps have been a kinsman of Aristoboulos son of Boularchos I, who served on a board of epistatai, probably connected with the cult of Apollo, in the early fourth century. Aristoboulos' son Boularchos II served as taxiarch of his tribe in 339/8, and *his* son, Boularchos III son of Boularchos II, served as host of Plouton in (?) the 320s; Kallitheos son of Boularchos III was one of the epimeletai responsible for the procession at the Dionysia in 266/5. Euboulos I and his descendants, prominent in the 330s, may belong to the same family. Euboulos II son of Euboulos I was ephebic taxiarch, and his brother Synboulos one of the lochagoi, in 333/2/1; their brother Nikeratos was (?) epilektos in the late fourth century, and a later Nikeratos (III, son of N. II) was ephebe in 267/6 and contributed to an epidosis in 248/7; he may be the Nikeratos attested as hippeus in the middle of the third century.⁸⁵

Philinos son of Gniphon I Ph., treasurer of Athena in 377/6 and trierarch at about the same date, may be a brother of the Prokles son of Gniphon (demotic lost) who dedicated a relief stele showing three riders found on the Akropolis, perhaps as hipparch or phylarch. Prokles' son Gniphon II appears in the poletai lease records as guarantor for Arrheneides of Paiania (ch. 25 n. 29) and perhaps as a lessee (Papazarkadas 2011, 303–4 nos. 17–18). Proxenos son of Prokles Ph., phylarch in 282/1, *SEG* 46. 167. 26, may be Gniphon II's grandson.⁸⁶

A rather impressive group of monuments found in (north)-west Piraeus commemorated a woman named Melite, wife of Spoudokrates Ph., their son Telemachos, and Telemachos' son Spoudokrates II. Spoudias Ph., hellenotamias in 410/9, may be an earlier member of the family.⁸⁷

⁸⁵ —ulos, *IG* ii² 7716 = *CAT* 2. 130, *CEG* 99 (making the point that one would expect -oulos for names ending in -oulos at this period, but such variations do occur: Threatte 1980, 238–41). *CAT* dates this stone between 420 and 410; Ensoli 1987 considers the Dexileos monument (395; see ch. 27 n. 78) a little later. Aristoboulos, *IG* ii³ 4. 66, *SEG* 32. 241 (*c.*350); Boularchos II, ii² 1155. 2 (Lambert 2015*b*); Boularchos III, ii² 1933. 9 (320s?); Kallitheos, ii³ 920. 25–6, arch. Nikias of Otryne. Euboulos II and Synboulos, ii³ 4. 337. 42–3; Nikeratos I, *SEG*. 36. 155. 75 (Humphreys 2010*a*); Nikeratos III, *IG* ii³ 917 (Nikias Otryne) col. III 43; ii³ 1011 I 78 (arch. Diomedon); Bugh 1988 II B 175.

⁸⁶ Philinos: *IG* ii² 1410, 1411, 1604. 29–30. Prokles' dedication ii² 12523 (with Peek 1942, 131 no. 292) has been attributed to Thorai on the strength of ii² 6214 = *CEG* 601, a monument to Kydimachos son of [G]ni[pho]n of Thorai, but see Habicht 1997. The connection, if any, between the phylarch Proxenos of *SEG* 21. 525/46. 167, and Proxenos son of Athenades Ph., commemorated with his wife Lysistrate and his son Eudemos on *IG* ii² 7704 = 7237a (p. 882; Hildebrandt 2006 no. 129 '*c.*340') cannot be reconstructed.

⁸⁷ Bergemann 1997, peribolos L 9b. Melite, *IG* ii² 7695 = *CAT* 1. 315 (dated early 4th c. by Kirchner, shortly after 375 by *CAT*, suggesting influence of the Eirene of Kephisodotos, *c.*360 by Bergemann). Telemachos, with Hierokleia daughter of Opsiadēs of Oion, presumably his wife (added), ii² 7711 = *CEG* 512 (dated *c.*390–65); the epitaph refers to burial next to his mother. Spoudokrates II, ii² 7708, second

Another Ph. family resident in Piraeus was commemorated on *IG* ii² 7702, naming Polykles Ph., his wife Themisto daughter of Apollodoros of Teithras, their daughter Glyke, and her husband Kalliades son of Kallias of Erchia. The dikast-tickets of Polykles and of Polymnestos son (?) of Ari— Ph. are said to have come from the same site. The restoration of Polymnestos' patronymic as Ari[mnestos] is supported by the appearance of [Ari?] or [Poly?]mnestos son of Arim[nestos] Ph. as (?) epilektos in the late fourth century; the dikast's father may have been the Arimnestos attested as a councillor of Kekropis in the early fourth century.⁸⁸

Kiron, whose estate was the subject of dispute in the case for which Isaïos 8 was written, owned a country estate at Phlya worth one talent (6000 dr.); he lived in the city and we do not know his deme.⁸⁹

Archedikos II son of Archedikos I Ph. served as one of the ephebic lochagoi of Kekropis in 333/2/1; the Archedikos son of Arche— recorded as (?) epilektos in the late fourth century is perhaps best regarded as a cousin (FBS), possibly son of the Archenomo[s] of Kekropis who proposed a tribal decree in honour of a demesman of Phlya.⁹⁰

Kometides son of Antigenides Ph., his brother Antigenes, and Antigenes' son Charisandros, all appear in *IG* ii² 1927 (+ *SEG* 32. 170), perhaps a list of kleruchs (Humphreys 2010*a*, 77-8).

half of 4th c. (Kirchner thought this was Spoudokrates I, which seems to me less likely). Hierokleia's brother (or father) Opsades son of Opsades of Oion, was commemorated by a relief stele dated c.400–375, *SEG* 26. 296 (no provenance); for confusion in *LGP*N Opsades see ch. 26 n. 114. For the possibility that Telemachos or a grandfather (FF) was responsible for introducing the cult of Asklepios to Athens cf. ch. 28 n. 69.

⁸⁸ On *IG* ii² 7702 see Bergemann 1997, 218 no. 118; Kroll 1972, fig. 231. Kirchner thought all the names were inscribed by the same hand, but both on the photograph in Kroll and on the squeeze the name of Kalliades looks to me like a later addition. Dikast-tickets, Kroll no. 29 Polymnestos, class III (360s); no. 124b, Polykles, class VI; 125b, Polymnestos Ari— class VI (after c.350). *SEG* 36. 155. 73, [Ari] or [Poly]mnestos Arim[nestou] (Humphreys 2010*a*; it is doubtful whether there is room on the stone for [Poly]mnestos.) Arimnestos (I?), *Agora* XV 16. 3. Also Piraeus, ii² 7680, Eukoline daughter of Demetrios I Ph., mid 4th c.; she seems to have had two brothers, Sotion, whose son Demetrios II was commemorated after Demetrios of Phaleron's legislation by a kioniskos with a relief loutrophoros, ii² 7673, and Dorotheos, whose son Demetrios III was also commemorated by a kioniskos (ii² 7672); the latter was probably the father of Demostratos son of Demetrios Ph., perhaps the Demostratos Ph. who served as thesmothetes in 227/6 (ii² 1706. 29) and as general of the coast in 229 and another year (*SEG* 15. 111. 10; *SEG* 41. 248*a*; *IRB* 22–3).

⁸⁹ *APF* 8443; see ch. 7; n. 45 above. See also ch. 12 p. 413 for Autophilos Ph. and family, city residents (*IG* ii² 4327). On Diokles Ph., who also appears in Is. 8, see ch. 7 Case 3; Papazarkadas 2011, 313 no. 68 (son rents a house in Kydathenaion).

⁹⁰ See Humphreys 2010*a* on *SEG* 36. 155. Archenomos, *IG* ii² 1145. 2 (the suggested reference in l. 7 to the eponymous archon of 353/2 is quite uncertain). Apemantos I Ph., whose son Apemantos II served as (?) epilektos in the late 4th c., *SEG* 36. 155. 76, is probably the Apemantos (no demotic) who served as hieromnemon to Delphi in the archonships of Theolytos and Kaphis (328/7/6; *CID* II 71. 43–4, 72. 6, 94. 4, 96. 6). He may be related to Apemon Ph., one of the dockyard superintendants in 360/59 (*IG* ii² 1622. 520–3). The name Apemantos is also attested now in Eroiadai (*IG* xii 6. 262) and Kollytos (*SEG* 56. 262). Another demesman, Panaitos son of Pantakles, naopoios c.300 (*CID* II 119. 30) was crowned in Athens with others (names lost), *IG* ii² 3855.

COASTAL TRITTYS

Aixone

The deme site lay in the Glyphada area, although the epigraphic evidence mainly comes from re-use in churches, accumulation of material on the Louriotis estate at Trachones, and excavations of the early nineteenth century; the reported theatre may have been an illusion. However, the deme did have a theatre, in which the Rural Dionysia were celebrated, with dramatic performances, and decrees were set up; it also had a sanctuary of Herakles, Hebe, and Alkmene, and one of Demeter.⁹¹

The name Aixone means ‘Goatland’, and deme documents show that pastures on Hymettos were exploited. *IG* ii² 1196, passed when a Dor— was demarch (possibly the Dorotheos of ii² 1198, dated 326/5), directs the demarch to institute proceedings against debtors, and perhaps also a delinquent tax-farmer, in connection (in part at least) with the *ennomion*, probably pasture-dues paid by owners of flocks that grazed on deme land. The deme had also, at the end of 346/5, granted a lease for 40 years of a plot called the Phelleis—stony or rocky ground—at a rent of 152 dr. per year; the lessees, Autokles I son of Auteas I and his son Auteas II, were to grow new olive trees from the stumps of those currently

⁹¹ See Eliot 1962, 8, A. P. Matthaiou 1999*a*; and Goette 2004 on finds in this area, and the early excavations (1819) of Fauvel, Gropius, and Rottiers (cf. biographical notes in Bracken 1975; Beschi 1975; Callipolitis-Feytmans 1953 on Rottiers); Giannakopoulou-Konsolake 1990. The farm reported on Od. Glenou by Kouragios 2013, 70–1, should be in Aixone. The deme decrees *IG* ii² 1196–1198, 1200, and 1202 were all recorded at Trachones, but said to come from the area of the church of Ag. Nikolaos at Pirnari (*A to Z* 199 Γ 4), which is also the provenance of *SEG* 54. 214 (= *IG* ii² 1356+), and perhaps of ii² 1199 and 2492, said to have been excavated together, and 1201. The ‘theatre’ (*Polemon* 1, 1929, 163) was also supposed to be in this area; however, the choregic monument ii³ 4. 498, ascribed to Aixone by Papagiannopoulos-Palaios (1929*c*) seems to have been found at Ag. Nikolaos in Voula–Vouliagmeni (*A to Z* 206 D 3) and probably belongs to Halai, see below n. 131. On the Louriotis estate see also Geroulanos 1973 and ch. 23 n. 5. Giannopoulou-Konsolake 1990 contains a deme prosopography. The list of priests’ perquisites *SEG* 54. 214/57. 119/61. 141 (cf. Ackermann 2007, 2011; Scullion 2009; Parker 2010*a*) attests cults of the Eleusinian goddesses (in a thesmophorion? cf. *IG* ii³ 4. 229), Dionysos An[thios], a heroine, Paralos, and Archegetes (possibly father of Alkmene: Kearns 1989, 143). The *pentēkostyes* who sacrificed in the deme’s heroa have been taken to be subdivisions of the deme based on the organization of pre-Themistoklean galley crews (Steinhauer 2004) or on the pre-Kleisthenic army (Ackermann 2011); Parker 2010*a* suggested subdivisions of a *genos*. A connection with ships seems plausible, but since a 6th c. pentekontor was probably a bireme with (about) 50 oars per bank (Humphreys 1978, 300 n. 10), and a trireme was similarly organized ([Dem.] 50. 25), we do not have to imagine survivals from early times. Possibly the pentekostyes were subdivisions of the ‘sacred’ trireme *Paralos*, even though they do not restrict themselves to the cult of its eponymous hero; cf. perhaps sacrifice by subdivisions of warship crews in Hellenistic Kos, (*SEG* 50. 766. 5–9). In that case they would not be subdivisions of the deme; the Paraloi of *SEG* 46. 162 (= *IG* ii² 1254) and 46. 163 honour men from Cholleidai and Athmonon (ch. 18 n. 101). Those stones (or parts of them) were found in a wreck at Mahdia; the Paraloi were perhaps based in Piraeus even if their shrine was in Aixone.

on the property, which were to be cut down. These texts suggest an attempt by the deme to appropriate and exploit marginal (and in the case of the Phelleis, abandoned?) land as a source of revenue, an enterprise that seems to have had its problems.⁹² It seems possible that the unusual level of attendance at deme meetings (and acrimony) generated by the diapsephisis of 346/5 had prompted attention to other matters, and it had been reported that the Phelleis needed attention and (probably) was no longer bringing in rent. The plot seems to have been in a terraced area, since it was to be marked with two horoi on each of two sides; in addition to olives, it grew grain and vines.⁹³

As was normal, the lessees came from the deme elite; Auteas II, the son, served as choregos at the Rural Dionysia in 313/2. His father, Autokles I son of Auteas I, was probably a cousin (FBS?) of Autokles son of Timeas A., who was one of the treasurers of Athena in 350/49.⁹⁴ The demarch of the year was Demosthenes (who may have had a son Archedemos, buried at Rhamnous in the third century)⁹⁵ and the deme also had two (or more) treasurers. A rider to the decree, proposed by Eteokles II son of Skaon, deals with the procedure for cutting down the old olive trees on the plot and selling the wood: a commission of three men, Eteokles himself with Nauson and Hagnotheos, is appointed to deal with this.

Eteokles' father Skaon, son of Eteokles I, served as diaitetes (?) c.370, *IG* ii³ 4. 24; Skaon's father may be the Eteokles against whom a lost speech of Lysias was directed. Since the name Eteokles is attested earlier in Aixone than in Aithalidai, and in a family with a taste for heroic names, it is possible that the mother of Eteokles I son of Chremonides I of Aithalidai was a daughter of Eteokles II of

⁹² ii² 1196, see Whitehead 1982 for date; cut by same hand as 1198, Tracy 1995 (cutter of ii² 354); Papazarkadas 2007*a*, *SEG* 57. 120. There seem to be two categories of debtors (l. 6–8), (1) a group of non-payers who in some cases have guaranteed their obligations with property that turned out to be subject to other claims (14–15), who may be lessees of deme land, and (2) the man who has not paid the price of the *enno[m]ion*, who I take to be either a flock-owner who has leased pasture-rights from the deme or a tax-farmer who has undertaken to collect dues from shepherds (B 8–11); cf. Chandezon 2003, 22–4. *IG* ii² 2492 (with Papazarkadas 2007*a* = *SEG* 57. 120, cf. Papazarkadas 2011) end of 346/5 (the year of the diapsephisis) or beginning of 345/4: Behrend 1970 no. 25, *SEG* 24. 202; Moreno 2007, 51–3, 64–5. On *phelleus* see Krasilnikoff 2008 with *BE* 2009, 173; Krasilnikoff 2010.

⁹³ Cf. the complaint of Euxitheos, Dem. 57. 9, that his opponent Euboulides had wasted time in the meeting at which the diapsephisis vote was held, making speeches on other topics (ch. 26 n. 15). Horoi, ii² 2492. 23–4; this disproves Krasilnikoff's view (2010) that terraced land was called *eschatia*, not *phelleus*. Cf. ch. 22 n. 52 on the use of horoi to mark deme territory. If provisions for exploiting the *phelleus* were 'the final stage of a long process of land improvement' (Papazarkadas 2011, 127) that does not preclude some interruptions in the process.

⁹⁴ Auteas II, *SEG* 36. 186, arch. Theophrastos; on the arguments for attributing the text to 313/2 rather than 340/39 see below, n. 114 (Lawton 1995, no. 154 considers the style of the relief closer to the later date).

⁹⁵ *SEMA* 813, kioniskos, Archedemos son of Demosthenes of Aixone (possibly a later descendant).

Aixone.⁹⁶ Nauson's sons Kallisthenes and Anticharmos appear in 320/19 as archon and hieropoios for the festival of Hebe; a son of Antichar[mos?] may have been associated with the syndikoi honoured by the deme *c.*325.⁹⁷

Syndikoi were to be appointed according to the provisions of *IG* ii² 1196 to assist the demarch in taking delinquent debtors to court, if they failed either to pay up or to take advantage of the decree's offer of a hearing at a deme meeting. *IG* ii² 1197 perhaps honours syndikoi who served on this occasion; if so, the syndikoi who served with Laches son of Melanopos, whose honours were cited as a precedent, must have served earlier, perhaps at appeal cases associated with the diapsephsis of 346/5.⁹⁸

This Laches (IV) belonged to a family with a long tradition of prominence in the city (Table 29.16).⁹⁹ Laches II served as general in various years between 427 and 418, when he died in action at the battle of Mantinea. Melanopos II was

⁹⁶ Skaon, *IG* ii³ 4. 24. Lambert 2004*b*, n. 5; Eteokles I (?) Lys. F XLVI Thalheim 1913, LI Carey 2007; an earlier Eteokles, *kalos* in the last quarter of the 6th c. (BArch 201566, Stephanes 1988 no. 914a), may also belong to the Aixone family (for the family in Aithalidai see ch. 26 n. 66; the Eteokles who freed a slave living in Kollytos in the 320s, *IG* ii² 1553. 2–3, the latest stele in the series, presumably belonged to Aithalidai, unless he was the Eteokles who perhaps served as ephebe in III Pandionis in 333/2/1 (*IG* ii³ 4. 334. 16; see however Appendix 1 on the character of this list).

⁹⁷ Kallisthenes and Anticharmos, *IG* ii² 1199. 25–6, 8–9; —tes Antich[a —], 1197. 7 (*SEG* 25. 144, *c.*330; the name Antichares is also attested in the deme at this period, ii² 5407).

⁹⁸ *IG* ii² 1196. 17–19; 1197. The latter text is dated *c.*330 by Kirchner, who may have been influenced by the appearance of one (actually two) of the honorands in ii² 1927 (which he regarded as a list of diaitetai of *c.*325). The reference in ll. 14–15 to restriction of honours by law might, however, suggest a later date (see Humphreys 2010*a* for the interpretation of ii² 1927 as a list of kleruchs, ? mid 4th c.). In this case Laches and his colleagues may have served on the board for which ii² 1196 makes provision. Laches was condemned for financial corruption in a state office in 331 (Dem. *Ep.* 3. 24, 26; Clavaud 1987); although he got off, at Alexander's request, his service to the deme should probably have predated this affair (his name should not be read in *Hesp.* 1947, 152 no. 144, see *Agora XVIII* V 644). It is also possible that the proceedings resulting from ii² 1196 lasted more than one year and involved more than one panel of syndikoi.

⁹⁹ Laches IV may be the syntrierarch of *IG* ii² 1632. 250 (322), *APF* p. 339, but Hekale is also a possibility (*APF* 7564). There is now a herm of the second half of the 6th c. at Rhamnous dedicated by a Laches, *IRB* 74; cf. *SEG* 41. 30, Laches on a vase of the early 5th c., BArch 11911. Laches I, *LGN* 2. Melanopos I: Pausanias (1. 29. 6) saw a monument in the Kerameikos commemorating two horsemen, Melanopos and Makartatos, who died in a battle at Tanagra, against Lakedaimonians and Boiotians. It was assumed that this was the battle of 458 until the discovery of *IG* i³ 1288, a stele fragment of *c.*410 with an epigram commemorating a Melanopos and another man, who died in battle (*CEG* 90 + II p. 301; Clairmont 1983 I, 140–1, no. 21e). There are three possibilities: (1) i³ 1288 is the stele seen by Pausanias (or his source; see Knoepfler 1996 on Pausanias' methods), and commemorated men who died in an otherwise unattested battle *c.*410; (2) this is not Pausanias' monument, we do not know the name of the second man whom it commemorated, nor where the two men died, and the Melanopos named is unlikely to be the father of Laches II; (3) this is not Pausanias' monument, but was set up (after 411?) by Melanopos II to commemorate his father Laches II and his grandfather Melanopos I, possibly near an earlier monument commemorating the latter (cf. Clairmont). In favour of (1) it must be admitted that an individual monument of the type described by Pausanias would be surprising in 458, and that the name Melanopos is not uncommon.

Notes: The account in D. 24. 126–7 makes it very unlikely that the Melanopos of this text was son of Laches II; however, there seems to be no reason why the taxiarch of 394/3 (Lys. 3. 45) should not be the general of 364/3 (D. S.), whose patronymic is unknown.

TABLE 29.16. Aixone: Laches

appointed ambassador to Sparta in 372/1; either he or Melanopos III served as councillor in (?) 364/3. Diophantos of Sphettos was his *kêdestês*, probably son-in-law, since one of Diophantos' sons was called Melanopos.¹⁰⁰ Laches IV, the syndikos, who was probably also the Laches who (?) made a dedication *c.*330 (IG ii² 2400), was the son of Melanopos III. Laches III served as taxiarch in 394/3, and probably as general in 364/3. The rhetor Melanopos (III), an opponent of Demosthenes, was probably one of his sons, and was probably also the Melanopos who went as ambassador to Mausolos in 355.¹⁰¹

The identifiable (?) syndikoi honoured in IG ii² 1197 were: (1) a son of the current demarch Philotheros (Philotheros was probably buried in the deme with his wife Chairippe) and (2) [Euxen?]ides son of Ka[llippos], whose father may have died in Sicily *c.*350 (see immediately below), and who may appear as

¹⁰⁰ Harp. s.v. *Melanopos*, ch. 27 at n. 36. Cf. [Dem.] 35. 6 (*c.*350).

¹⁰¹ LGPN has a different reconstruction of the family. It is fairly clear from Dem. 24. 127 that the rhetor Melanopos was not the son of the general Laches II; §§ 126–7 also show that the rhetor had *adelphoi*. Cf. also Ar. *Rhet.* 1374b; Plut. *Dem.* 13.

[Eu]xeni[des] | [Kalli]ppo[u] on *IG* ii² 1927. 48–9. Among their associates was Leophilos son of [Eud]ikos, also named on ii² 1927; other associates (*synako[louthountes?*) were the son of Antich[armos] or [-ares], discussed above at n. 97, and the son of a Kallias, possibly the priest of the Herakleidai named in *IG* ii² 1199. 24.¹⁰²

Kallippos' family (see Table 29.17) is known from a group of tombstones found in Piraeus (Marchiandi 2007). Kallippos (II) and his brother Philostratos (sons of Philon I) left Athens for Sicily with Dion in 357, at a time when Kallippos was perhaps in political difficulties as a result of his cooperation with Timomachos of Acharnai while serving as trierarch in 361/0. Dion had stayed, while in Attika, at Kallippos' house, which was perhaps in Piraeus rather than in the city itself.¹⁰³ Kallippos died in Sicily; after his death one or more of his sons may have returned to Athens and set up a stele to commemorate him (*IG* ii² 5432). The (assumed) family peribolos would also have held (1) an anthe-mion stele set up c.390–365 to honour Phanagora, probably the mother of Kallippos and his siblings, to which the names of her (?) daughter Philostrate daughter of Philon A., her husband Philon I son of Kallippos (I), and Alkimache daughter of Kallimachos of

TABLE 29.17.
Aixone: Kallippos
APF 8065

¹⁰² Philotheros and Chairippe, *IG* ii² 13042/3 = *CAT* 2. 816, relief stele representing a seated woman with a child and a standing young man, found at Glyphada; possibly Chairippe died before her husband. Euxenides, ii² 1927. 48–9; Leophilos, 50–1; the third representative of Aixone on this list, Demokrates son of Euphiletos (52–3), is named as a choregos in 326/5 on ii² 1198. 4–5.

¹⁰³ This is suggested by the provenance of the tombstones, but Plut. *Dion* 17. 2 says 'Athens'. For another reference to Aixoneans living in Piraeus (perhaps temporarily), note Xen. *Hell.* 2. 4. 26, where cavalry of the oligarchs in the city in 403 attacked Aixoneans who were going out to their fields to collect food. The Philon who was general in (?) the 360s has been thought to be Kallippos' father, but the name is very common.

Anagyrus, perhaps the second wife of Philon I, were added; (2) a stele (known only from a copy by Ross) naming Kallippos II, his sons Proxenos and Philon II, and his brother or grandson (SS) Philostratos son of Philon; (3) a painted stele of the second half of the fourth century naming an Aristagora with Hedyline daughter of Philon (II?) of Aixone, *IG* ii² 5408, *CAT* 117, Posamentir 2006 no. 131, Piraeus Museum 1367 (probably mother and daughter). Philokrates son of Philon (I?) was commemorated in the deme by a monument (known only from a report by Milchhöfer) naming him with perhaps the name of a sibling (— [Phil?]onos) added. Possibly he stayed in the deme when his brothers left Attika.

IG ii² 1198, a deme decree dated 326/5, honours two choregoi, who receive gold crowns and 10 dr. for sacrifice;¹⁰⁴ the decree is to be set up in the deme theatre. The proposer was Philoktemon son of Chremes, whose father held the post of eponymous archon of the city in this year, evidently a source of some pride for his family; another son, Philaios, proposed the deme decree ii² 1199 in (?) 320/19, and Philoktemon also proposed ii² 1200 in 317/6. One of the choregoi was Demokrates II son of Euphiletos, who appears on ii² 1927 (52–3), perhaps as a kleruch in ? mid-century. His name (though a common one) may imply a connection with the family of Lysis II son of Demokrates I, eponym of

Notes. *APF* and *LGP*N Demokrates 24 report that Demokrates II was named on Ziebarth 1934 no. 1, but there is no trace of him in Jordan and Curbera 2008 (*SEG* 58. 265).

TABLE 29.18. Aixone: Lysis *APF* 9574

¹⁰⁴ The value of the crowns is unclear; Kirchner read Π†††//, i.e. 8+ dr., Tracy 1995 reads:[A]Y: and interprets this as 1400 dr. Neither sum is at all probable; the usual sum is 500 dr. (cf. ii² 1200. 9; Takeuchi 2013, 89–90); 10 dr. would buy a sheep or, perhaps more probably, a goat. Another deme decree of (?) the 320s, *SEG* 46. 154. Leaios, the father of one of the honorands, is attested as a (??) councillor in mid-century, *Agora* XV 16.

Plato's dialogue *Lysis* (see Table 29.18). Euphiletos, father of Demokrates II, may be the Euphiletos son of Simon A. who testified for Apollodoros of Acharnai in the late 340s about the visit of Neaira and Nikarete to the Panathenaia of 378/7. Lysis I, the first known member of the family, may be the *kalos* Lysis of the 470s–460s; his victories are perhaps listed on *SEG* 57. 270. His son Demokrates I, evidently a well-known man, may be the Demokrates known in the 430s as a lover of Alkibiades. His son Lysis II should have been born c.425. Lysis II had a younger brother (perhaps the Simon whose son was called Euphiletos), a son called Timokleides, commemorated with him on a loutrophoros of c.350 from the area of Moschato (ancient Xypete), and a daughter, Isthmionike, who married Euegoros son of Philoinos of Paiania and was commemorated with her husband on a rosette stele of the middle of the fourth century found in the Dipylon area.¹⁰⁵

The other choregos honoured in 326/5 was Hegesias II son of Lysistratos. Nakion daughter of Hegesias I, who married within the deme and was commemorated before mid-century with her husband Chairion son of Mikylion A., who lived to be ninety, and their daughter Euxitheia, was probably the choregos' aunt (FZ).¹⁰⁶

The date of the deme decree *IG* ii² 1199 is controversial, but Whitehead's argument that the Neaichmos currently in office is the eponymous archon of 320/19 is strengthened by the possible appearance of this rare name in a list of epheboi from Halai Aixonides of 333/2/1.¹⁰⁷

¹⁰⁵ At some date three names were added to *IG* ii² 7045, the stele of Euegoros and Isthmionike (Bergemann 1997, 228 no. 10), those of Satyra daughter of Aischron of Koile, wife of Selon, Demophile daughter of Amphikedes of Aphidnai, and Pamphilos son of Melesippos of Xypete. Satyra's husband was probably Selon II of Xypete, commemorated on ii² 6940 (no provenance; names said to be all in one hand) with his father Philyllos son of Selon I and with Aristokl[es?] son of —phon (*AEE* 905 in l. 8 reads . . . ὄντ[ος]; I could see nothing on the squeeze). ii² 12597, a rosette stele with a relief of a myrtle crown below the rosettes, found at Aixone, commemorated —kles son of Selon; it may be the same stone as ii² 11159, reported from Vari, on which Pittakes read *Diokles Silonos*. Aristokles son of Kalliphon A. was one of the hieropoioi honoured in the deme decree ii² 1199 in (?) 320/19. On Lysis see chs. 11 n. 40, 13 n. 23, 20 n. 89; D. Schmidt 1999; *SEG* 61. 199.

¹⁰⁶ *IG* ii² 5452 = *CAT* 3. 453a, *CEG* 531, from Piraeus. Chairion is represented with a book-roll in his hand, standing by a chest containing other rolls, so he was perhaps an author (a philosopher, since he practised sophrosyne?). Nakion is represented as a woman in her prime, Euxitheia as a young woman, which can hardly be realistic if the stone commemorates Chairion, unless Nakion was his second wife or his sophrosyne led him to marry extremely late. On references to old age on tomb monuments see Humphreys 1983a/1993, 114; M. Meyer 1989b. It is possible that the Mikylion named on a list of ships' crews, *IG* i³ 1032. 239, was Chairion's father.

¹⁰⁷ Whitehead 1982; *IEleus* 86. 65, N[e]aich[m]os son of Hierophon (cf. *SEG* 53. 147, 57. 121). *LGP*N attributes the Neaichmos of ii² 1199 to Aixone and dates the decree 325/4. On the view taken here, *LGP*N's Neaichmos 1, 2, and 3 are all one person. The phrase 'the demarch in office after Neaichmos' in 1199. 15–16 (*ton dēmarchon ton met[a Neaichmon archonta*) is elliptical but would have been perfectly comprehensible at the time. The decree was presumably passed just after the festival of

The proposer, as already noted, was Philaios son of Chremes, brother of the proposer of ii² 1198. The decree praises the four hieropoioi of the sanctuary of Hebe for taking care of the sacrifices to Hebe and the other gods, and for presenting their accounts and passing scrutiny; a second decree on the same stone praises two sophronistai and a herald for their philotimia concerning the all-night festival (*panmychis*), and commends the priest of the Herakleidai, the priestess of Hebe and Alkmene, and the archon (of the festival?). All are to receive olive crowns, and the decrees (evidently passed on the same occasion and apparently proposed by the same man) are to be set up in the sanctuary of Hebe. If these decrees were indeed passed in 320/19, they belong to a year in which the ephebate was not functioning; the deme's sophronistai, a title associated with the ephebate, had perhaps taken it upon themselves to continue a programme that had been developed in the Lykourgan period, despite the changed circumstances.¹⁰⁸

The hieropoioi were: (1) Anticharmos son of Nauson, brother of the festival archon Kallisthenes and son of the Nauson who served on a deme committee in 345; (2) Nearchos son of Chairigenes, whose father is perhaps attested as councillor in the early fourth century; (3) Theodotos son of Aischron, ephebe in 334/3/2, whose father was one of the dockyard superintendents in 362/1, and paid a debt arising from this service in the late 340s; (4) Aristokles son of Kalliphon, whose father Kalliphon and (?) uncle (FB) Aristokleides were members of a commission (two per tribe) concerned with *dikaïosynê* on Imbros in (?) 352/1.¹⁰⁹

The sophronistai were apparently appointed by the deme. Kimon is otherwise unknown. Metalexis had a son, E— [Metal]exidos, who had been ephebe in 332/1/0; their colleague Pythodoros son of Pytheas may be the Pythodoros A.

Hebe, at a date when the hieropoioi for the festival had presented their accounts, but the demarch for the coming year had not yet been elected.

¹⁰⁸ If the ephebate functioned at all during the period 322–307 it must have been much curtailed in numbers and apparently was not given the prominence it had had during the Lykourgan period; we have no ephebic monuments certainly attributable to these years. See chs. 27 n. 42, 30 n. 75, on IG ii² 1187. Polyperchon's proclamation of freedom for the Greek cities was not made until autumn 319/8, and it is doubtful whether the festival of Hebe in Aixone could have been influenced even by the death of Antipatros in the summer of 319 (Erchia and Thorikos both sacrificed to the Herakleidai in Elaphebolion). Matthaïou 1999, 144–6, questionably restored [*sôphronistai*] in an early 4th c. text from Aixone (SEG 46. 149); Makres 2003, following him, suggests that the Aixone sophronistai were pre-Lykourgan, which I doubt (cf. Humphreys 2004, 192 n. 160).

¹⁰⁹ Anticharmos: see also n. 97 above. [Ch]airigenes, *Agora* XV 16. 11 (perhaps not council, P. J. Rhodes 1980); *LGN* Nearchos 3–4 perhaps belong to Lakiadai, cf. ii² 6624. Theodotos: ii² 1156 = Reinmuth 1971 no. 2, R/O 89. 18; Aischron ii² 1622. 502. Kalliphon and Aristokleides, IG xii 8. 63. 6–8 (if the spaces are correctly recorded, it is necessary to assume haplography, *ep' Aristodemou archontos <teph>*). Despite Cargill's doubts (1995, 101–2) they were perhaps members of a kleruchs' council, for which IG xii 6. 262 provides some parallel. See also n. 105 above on Aristokles son of Kalliphon.

whose sons Thrasyllus and Kriton supplied Herakleides Pontikos with an anecdote about pleasure. Thrasyllus' delusions of grandeur—he thought that every ship he saw entering Piraeus belonged to him—seem to imply residence in the port, and shipping interests; Kriton's journey to Sicily was perhaps a trading voyage.¹¹⁰

The herald Charikles is otherwise unknown. The priest of the Herakleidai, Kallias, might be K. son of Deinokrates (II?), ephebe in 333/2/1, or the Kallias who served as (?) epilektos later in the century, but is more likely to be an older man. Deinokrates I son of Kalliades was buried in the Acharnai area, his son Deinokrates II at Thria, both in mid-century. Kallias son of Kalliades, perhaps the brother of Deinokrates I, was buried 'on the road to Aixone'. The son of a Kallias who assisted the (?) syndikoi of ii² 1197. 8 might be the priest's son; so possibly might Euxenos son of Kallias, secretary to the council in 281/0.¹¹¹

IG ii² 1200, proposed by Philoktemon son of Chremes (who had proposed ii² 1198 in 326/5) was passed in 317/6, probably just after the Rural Dionysia. Each of the two choregoi of the year—Leontios son of Dion and Glaukon (II) son of Kallikrates—is to receive a gold crown of 500 dr. This probably implies that they had covered out of their own resources some of the expenses for which the deme was responsible. Leontios may have been the brother of Diodoros son of Dion, commemorated by an anthemion stele dated c.340–317, found on the road to Kephisia; Glaukon's father Kallikrates I proposed the tribal decree honouring the ephebes of 334/3/2, and the Kallikrates son of Glaukon honoured by the deme in (?) 313/2 (see below at n. 115) may be the choregos' son.¹¹²

¹¹⁰ ii² 1199. 19–20 reads *Mega* vvvv|*léxin* (?); the correct reading *Meta* was reported by Koumanoudes in *REG* 73, 1960, 92 (cf. Traill 1986, 9). Kimon may have been related to Kimortion A., named on a curse tablet (Wünsch 1897, 100b 11; dated c.360–330 by Wünsch, 3rd c. by *LGPN*; Philokles of Lamprai, b 10–11, may appear also on ii² 2703 = Finley 1952 no. 47, dated 4th–3rd c.). E— son of [Meta]lexis, *SEG* 36. 155. 35. Thrasyllus and Kriton sons of Pythodoros A. (born c.380?), Wehrli 1953 (*Schule des Aristoteles* vii, Herakleides) F 56, Schütrumpf 2008 no. 40 = Athen. XII 554 e (cf. also Bosworth 1994).

¹¹¹ Kallias is a very common name and identifications are problematic. The priesthood was perhaps the *genos* priesthood referred to in Plat. *Lysis* 205c–d, and the absence of a patronymic for the priest—certainly not the only Kallias in the deme at this time—may suggest that it was still a *genos* appointment and held for life. This does not of course imply that Kallias was related to Lysis (identifications are discussed in *APF* 9574). Kallias son of Deinokrates, IG ii³ 4. 337 col. II 27; Deinokrates I, ii² 5414, Deinokrates II 5413, Kallias son of Kalliades 5430 (undated, known only from Ross); cf. also *CAT* 2. 349c = *SEMA* 726, from Glyphada (350s?), Sostrate daughter of Amphi[ke?]des of [Aix?]one with Kalliades son of Deinias (*Deinios* *CAT*) of [Aix?]one or Oa, see ch. 25 n. 39 (*CAT* attributes Amphikedes and Sostrate to Oinoe); Apollodoros son of Kalliades, deme epimeletes (?) in the 320s (*SEG* 46. 154); Kallias, *SEG* 36. 155. 28 with Humphreys 2010a (it is not entirely certain that this part of the list belongs to Aixone).

¹¹² The recipient of a gold crown was expected to dedicate it in an appropriate sanctuary (D. M. Lewis 1988, cf. P. Wilson 2010a, 48), which meant that the money expended by the deme on crowns might have been available for some purposes at a later date (in the city, old gold and silver dedications were eventually melted down to make ritual vessels; it is doubtful, however, whether the metal could have been

IG ii² 1201 is a decree passed by Aixone to honour Demetrios (I) of Phaleron. The proposer, [Aristok]rates son of Aristophanes, was honoured in 313/2 with Kallikrates II son of Glaukon. The decree refers to the peace negotiated in 317 by Demetrios and to other benefactions, possibly including Demetrios' legislation (ll. 11–13). Interpretation is affected by the date to which the decree is assigned. If it belongs to the period between Demetrios' assumption of power in 317 and Antigonos' proclamation of freedom for the Greeks in (?) 315, it would be an example of Athenian adulation of the 'philosopher-king'; a feeling that Demetrios' rule was preferable to the experiences of 322–317 may have persisted for the first two years, and Kassander's decision to rebuild Thebes in (?) 315 produced a positive reaction in Athens. On the other hand, between Antigonos' proclamation and the peace agreement made with him by Demetrios of Phaleron in winter 313/2, enthusiasm may have been aroused by the dispatch of twenty Athenian ships to Lemnos in (?) autumn 313, or possibly by an attempt to recover Samos. This would put ii² 1201 in the same year as ii² 1202 and *SEG* 36. 186.¹¹³

ii² 1202 is dated by the eponymous archon Theophrastos which puts it either in 340/39 or in 313/2; prosopography favours the later date.¹¹⁴ The decree was passed at the (or an) *agora kyria* of the deme, at the end of the year (crowns were to be funded out of the deme's surplus for the year); this was perhaps the meeting at which euthynai were conducted, and possibly also the assembly at which new candidates for admission were scrutinized. Crowns of 500 dr. each are awarded to two men who had evidently been concerned with the Rural Dionysia, since the text is headed by a relief showing Papposilenos, dressed in a goatskin, passing a kantharos of wine across an altar to Dionysos, who holds a

used for making new crowns, even in a smaller organization); even so, funds were taken out of circulation for some time, and it seems unlikely that a deme could afford this unless some of the year's budget had not been spent. Diodoros son of Dion, ii² 5418; Kallikrates I, ii² 1156. 26 (Reinmuth 1971 no. 2, R/O 89); Kallikrates II, ii² 1202). Gold crowns awarded to two or more officials (*epimeletai*?) in the 320s, *SEG* 46. 154.

¹¹³ In 1201. 11 one should perhaps read *nomothetês* or *stratêgos* (Habicht 1995, 64 n. 48), rather than Wilhelm's *epimelêtês*, which is one letter too long (*epistatês* and *prostatês* are also possible. See however Kirchner's note ad loc. Tracy 1995, 43–6 and A. J. Bayliss 2011, 78–9 accept *epimelêtês*). On the events of these years see Billows 1990; Habicht, op. cit. 70–73; Wheatley 1998; Lambert 2000c on *IG* ii² 450; Paschidis 2008, 507–9. Thymochares of Sphettos was one of those who favoured assisting Kassander, see ii³ 985. 9–18 (the question of the date of honours awarded to Demetrios of Phaleron arises also in the case of Sphettos, ch. 27 n. 23; cf. ch. 31 n. 11). Gauthier 1979 dates our text in 317. See also n. 117 below.

¹¹⁴ M. Meyer 1989a, A 140, and Lawton 1995, no. 155 also favour the later date, but see *BE* 2011, 240. *SEG* 36. 186 (Meyer A 141, Lawton no. 154; cf. P. Wilson 2000; 2010, 47), also dated in Theophrastos' archonship, is similar in style but not by the same carver. Tracy 1995, 99–100, attributes ii² 1202 to the cutter of *IG* ii² 244, who he thinks did not work after c.320, and therefore prefers the earlier date; however, some of his cutters have a longer working life than the c.28 years that would result from dating *IG* ii² 1202 in 313/2, and there are arguments for dating ii³ 485 in 315/4 (see however Lambert 2007a, no. 99, suggesting the Lamian War; Walbank 1997 on Tracy's methods).

scroll; however, the honorands are not choregoi, since the choregoi of the same year were honoured in another decree (*SEG* 36. 186), and received crowns of only 100 dr. The honorands of ii² 1202 are not designated as holding any official position, and may have stepped in to avert a financial crisis. One was Kallikrates (II) son of Glaukon, whose father had served as choregos in 326/5 (ii² 1200), and the other Aristokrates son of Aristophanes, who proposed the decree in honour of Demetrios of Phaleron (1201), possibly in this year.¹¹⁵

ii² 1202 and *SEG* 36.186 were both proposed by the same man, Glaukides II son of Sosippos. His father Sosippos son of Glaukides I was commemorated by an anthemion stele found in the deme; his brother Smikythos served in the cavalry on Salamis c.320.¹¹⁶ The choregoi honoured in this decree are Auteas son of Autokles, the son of the tenant to whom the lease ii² 2492 was awarded in 345, and Philoxenides son of Philippos. The latter's father was probably the Philippos A. who made a loan of a talent (6000 dr.) secured on an oikia and stone-working establishment in the Dipylon area, and whose daughter Kallistomache married Lykophron III of Boutadai, son of the statesman Lykourgos (Table 4.6). This affinal link should probably place Philoxenides in the camp of those who were eager to free Athens from Macedonian domination, which may support the view that there had been something of a reconciliation in the early part of 313/2 between this group and the supporters of Demetrios of Phaleron.¹¹⁷

¹¹⁵ On the dates of deme meetings see ch. 22 n. 109. M. Meyer (1989*a*, A 140) suggests that Papposilenos' goatskin is an allusion to the name of the deme. Whitehead 1986*a*, followed by P. Wilson 2010*a*, 47, suggested that the honorands were the losing choregoi (all the evidence seems to be against this); Steinhauer 1992 that they were choregoi at the City Dionysia. They do not seem to be the deme's tamiai (cf. ll. 14, 20), and there does not seem to be any way of connecting them with the obligation to present accounts and dedicate a phiale attested for Acharnai in 315/4 (*SEG* 43. 26); if they had done this, why should the decree not say so? For honours to benefactors who rescue a deme from a financial crisis see *SEG* 2. 7 (ch. 26 n. 21). Giannakopoulou-Konsolake 1990, 28 no. 26 publishes a stele from the Aixone area found in 1972 commemorating an Aristokrates who might just possibly be the grandfather (FF?) of the honorand (Piraeus Museum 3629 = *SEMA* 1580, [Ari]stokrates/[Aristoph]an[ous], Odos Metaxa 32).

¹¹⁶ Sosippos, *SEMA* 52, Hildebrandt 2006 no. 91 (cf. Giannakopoulou-Konsolake 1990, 125 no. 22), found about 200 m south of the church of Ag. Nikolaos at Pirnari; Smikythos, *IG* ii³ 4. 323. 18. Either Sosippos or Philippos could be the Aixone trierarch of *IG* ii² 1604. 87 (the names Thrasippos and Lysippos are also attested in the deme).

¹¹⁷ Philippos' loan, ii² 2752 = Finley 1952, no. 87; Kallistomache, ch. 20 n. 132 (*APF* 9251). Her marriage is likely to have taken place after Lykourgos' death (Lykophron's younger brother Habron was ephebe c.330), and should therefore imply a distinct commitment on her father's part to 'Lykourgan' patriotism, including support for democracy and, no doubt, the Lamian War. This must have been one of the wealthiest families in the deme, and while it is conceivable that Philippos was dead by 317 and his son took a different line, one should perhaps hesitate before ascribing ii² 1201 to mindless adulation of Demetrios of Phaleron (n. 113). Ischyrias A. (*APF* 7730), who served as councillor in 306/5, proposing one or two decrees concerning sacred funds (ii² 1492. 108, 114), and may have been trierarch in the following year, seems to be another 'Lykourgan' in Aixone.

Like other demes, Aixone contained prominent families that appear in the records of the city but not in those of the deme. Proteas son of Epikles held office as general in several years in the period c.435–430, before the emergence of Laches; his daughter Rhode perhaps married a fellow-tribesman (a demesman of Melite), and was buried north of Patesia, between Athens and Acharnai.¹¹⁸ Chabrias (son of Ktesippos I?) must have been one of the deme's most conspicuous members in the fourth century. He was already elected general for 390/89, and held the office repeatedly thereafter until 357/6, by which time he would have been over sixty; he died on active service in that year. He had a town house; the party he gave at Cape Kolias to celebrate his victory at Naxos in 374 was perhaps held in the sanctuary of Aphrodite rather than on a private estate. His son Ktesippos may have served as trierarch before 334, and won a victory as choregos with a boys' choir, perhaps in the 320s; he was attacked by comic poets as effeminate, greedy, and extravagant.¹¹⁹

Chares A. (*APF* 15294) was syntrierarch in (?) the 340s (*IG* ii² 1622. 751) and perhaps trierarch again later (*IG* ii³ 418, with Lambert 2007*a* no. 77); he performed the eutaxia liturgy c.330, *IG* ii³ 550; Lambert 2001, 55 n. 27, suggests that his patronymic was *Ad[ei]stou*.

Aixoneans may figure prominently in the curse tablet Wunsch 1897, 30, which begins with the names of seven men who may well be citizens, two of whom might belong to Aixone, continues with references to *kapéloi*, probably tavern-keepers, and concludes with a woman (?) from A. and the son of Eupolis A. The father is presumably Eupolis son of Pronapes A., attested as trierarch before 334; his daughter Demainete, although she seems to have married a demesman of Phegaia, was buried in Aixone. This Eupolis was a grandson (DS) of Eupolis of Leukonoion, one of whose daughters married a Pronapes, perhaps the [Prona?]pes son of —mos A. of whose tombstone, set up in the deme, we have a fragment.¹²⁰

¹¹⁸ *AO* s.v.; Rhode, *IG* i² 1077 (not in i³), *EAA* 862, Peek 1942, 100 no. 175 (from Plakakia, 'beyond Patessia': in modern Nea Chalkedon?). Alternatively, it may have been Proteas who married into Melite. The family of Leon and Kichesias A. (Habicht 1982*a*, 194–7) became very prominent from the 3rd c. on but is not so far attested earlier.

¹¹⁹ *APF* 15086. The restoration of [Kte]sippos (Chabrias' father?) in ii² 1604. 87 as trierarch in 377/6 seems to me unwarranted. It is not entirely certain that Chabrias' father was called Ktesippos, since many of the stones in the collection to which *IG* xiv 1222 belongs are clearly post-classical (Visconti 1782, 13–14), and the patronymic may have been deduced from the name of the general's son Ktesippos; in any case the general's father would have been over 70 by 377/6, while his son Ktesippos (II?) was not yet 18 in 355 (Dem. 20. 82). Chabrias' town house, Hyp. F 137, cf. LSJ s.v. *amphodon*. Cape Kolias was in Halimous; on the cult of Aphrodite see R. Parker 1996, 304–5 and ch. 20 n. 45. Ktesikles (II?), see *APF* loc. cit. Since Iphikrates died between 354 and 350, and the story of the cheeky youngster who asked him what kind of soldier he was should refer to his early commands over peltasts, Plutarch's attribution of the anecdote (*Mor.* 440b) to a Kallias son of Chabrias can hardly be historically accurate. The story circulated in various versions (cf. *Mor.* 187b) and is perhaps hardly worth emending; Schwartz's *ton Chabriou tamian* is not implausible.

¹²⁰ Curse tablet, see also Wilhelm 1904, 111, and ch. 14 pp. 471–2 on upper- and underclass names in such texts. The names Aristokles, Poseidippos, and Lysistratos (ll. 4–6) are all attested in A. (Poseidippos not until c.200); l. 12 ... *a Aixon[éthen?]*, followed by another name? l. 13 [Eup]olios Aixoneus. This section of the text is however very faintly written. Eupolis, *APF* 1395; his daughter Demainete, *SEMA*

We now know that Diphilos son of Nausichares A. served as ephebe in 333/2/1, which means that he can hardly be the demesman of Aixone attested as general in Samos *c.*326. He belonged to a family whose grave monuments were set up in the city area, with the exception of one relief lekythos. The lekythos *IG* ii² 6166, from the Dipylon area, represented Diphilos' parents, Diphile daughter of Timokleides of Euonymon and Nausichares II son of Nausikrates A., one of whom seems to have died shortly after Diphilos' birth. A large stele from the city area, known only from early copies (ii² 5440), commemorated Nausikrates son of Nausichares I, presumably the father of Nausichares II, while a lekythos recorded at Chasani, set up for —on son of Nausikrates (ii² 12235), may in view of its provenance have commemorated an uncle (FB) of Diphilos, brother of Nausichares II.¹²¹

Polykrates II son of Phantias (II), who also served as ephebe in 333/2/1, was presumably a grandson or great-nephew (BSS) of Polystratos son of Phantias I, commemorated before mid-century in Piraeus by a stele also naming his sons Polykrates I and [Phantias II?], and his daughter (or wife) [Phain?]ippe.¹²² Aischytes son of Aischines A., who married Philte, daughter of Philonides of Peiraia, was also buried in Piraeus.¹²³

The Thalinos A. commemorated with his daughter Mnesikleia and his son Thaliarchos on a stele found in Piraeus may—since the stele was set up originally to commemorate Mnesikleia—be the Thalinos who registered a mine in Nape *c.*340; Thaliarchos may be named also with a Philippos and a Thalippos on a stele recorded at Chasani, perhaps from the deme area.¹²⁴ Philistides II son of Philistides I A., who farmed the metoikion and five-drachma tax *en tois ergois*, was presumably also operating in the mining region.¹²⁵

45; [Prona?]pes, ii² 5454 (*SEG* 44. 181). For the 5th c. hipparch Pronapes, perhaps of Prasiai, see *APF* 12250; Spence 1993, 308, no. 167.

¹²¹ Diphilos, *IG* ii³ 4. 337. 31 (he evidently got his name from his mother rather than her father, which is unusual, see ch. 8 n. 58, but cf. perhaps Diodoros son of Diphilos of Euonymon, councillor in the 250s, *IG* ii³ 922. 37). It had previously been assumed (still in *AO* p. 400, Shipley 1987 p. 160) that the general of ii² 1628a 120 was the Athenian general on Samos [Di?]philos named in *I Priene* 5. 18 (shortly before 326/5); in any case, however, there seems from the photograph to be space for 3–4 letters rather than 2 in the Priene text.

¹²² Polykrates II, *IG* ii³ 4. 337. 28; Polystratos and family, ii² 5442 (*SEG* 40. 239 = *CAT* 3. 364c, found in 'Attika', representing an old man, Polystratos, with a warrior, Polykrates, could belong to this family, but the names are common, and attested in this combination also in Deiradiotai; ch. 26 n. 110). The names of [Eu]ktemonides son of [Te]lesandros A., commemorated by a stone of the mid 4th c. from 'Athens' (ii² 5425), both occur in ii² 2329 (15, 14), a list of contributors to a statue and sanctuary repairs from Piraeus of (?) *c.*320. Antikrates Eukt[emonidou?] A., whose dikast-ticket Kroll 1972 no. 72 (class IV, 350s?) is said to have come from Aixone, may be Euktemonides' son and may be the Antikrates A. of *Agora* XV 16. 14.

¹²³ ii² 5404; ch. 30 n. 24.

¹²⁴ Mnesikleia, Thalinos, Thaliarchos, names inscribed successively on ii² 5439, dated before mid-century (Bergemann 1997, 214 no. 61); Thalinos (no demotic, but the name is very rare), *Agora* XIX P 29. 6–13; Philippos, Thalippos, Thaliarchos, ii² 12936, dated 365–340.

¹²⁵ *Agora* XIX P 26. 470; his guarantor Meixidemos of Myrrhinous lived in Piraeus. *Pace* R. G. Osborne 1985a, 3, there is no agnatic connection with Pausistratos son of Philistides, ii² 2385. 10, who belonged to Athmonon. The exotically-named Atarbion son of Tynnias, ephebe in 333/2/1, *IG* ii³ 4. 337. 26, may have owed his name to a connection with the family of Thorikos that used the name Atarbos (Table 27.6B; but the name is also attested, 5th c., in Euonymon).

Notes: LGPN Eukles 27 misreports SEMA 54 = CAT 4. 417. Ph . . . is may be the daughter of Eukleides I

TABLE 29.19. Aixone: Eukleides

Amphistratos A., attested as a kleruch on Samos *c.* 350, had a grandson, Amphistratos II son of Philemonides, who served as ephebe in 334/3/2, with Eukles son of Eukleides (see Table 29.19), perhaps the brother of Ph...is Eukleidous, whose name was (?) added to a relief stele representing Nausias son of Philinos A. with his father Philinos son of Eukleides and his wife or mother (SEMA 54).¹²⁶

Halai Aixonides

The name does not seem to imply any conceptual subordination to Aixone, since the demes were of comparable size (Halai had six councillors, Aixone perhaps eight); the qualification may belong to the Roman period, added to distinguish the Halai near Aixone from the settlement of the same name near Araphen (on salt see Langdon 2010). Halai A. was always well attested epigraphically and prosopographically (despite some difficulties in distinguishing members of homonymous demes), and has become much better known archaeologically as a result of a number of excavations in the Voula area. Its religious centre, the sanctuary of Apollo Zoster on the neck of the Megalo Kavouri peninsula (the

¹²⁶ IG xii 6. 262 VII 32; ii² 1156 = Reinmuth 1971, no. 2, II 16, 13, R/O 89. Amphiteles son of Amphistratos, whose 4th c. stele ii² 10654 was seen by Peek at Vari, may have been the son of Amphistratos I. Demetrios (Eukleous), who served as ephebe in 333/2/1, IG ii³ 4. 337. 29, may have belonged to Eukles' family. Demokleides son of Demeas, ephebe in 334/3/2 (Reinmuth no. 2 II 17), had a brother Demonstratos who died as a child and was buried in the deme (ii² 5417, mid 4th c.; since a demotic is given, possibly the ephebe's grandfather, FF, or FFB, great uncle, but it is not unknown for demotics to be given to children, cf. n. 76 above). Chorokles A. (wife and daughter ii² 5416, CAT 2. 376d; Pleket 1958 no. 72 says from Glyphada, not Sacred Way), may have been a descendant of the actor Phrynichos son of Chorokles (Schol. Ar. *Birds* 750; Stephanes 1988, 2586, late 5th c.). On the problematic stone ii² 5421a (p. 879) = CAT 5. 450, see now CEG 521; it seems to have been set up for Phanistrate, wife or daughter of Exekestos A. (CEG rejects reference to grandsons, *huiónoi*), and represents her (seated) with a standing elderly man, a young woman, another woman, and a seated old man (which perhaps implies that she had a daughter, or daughters, but no sons); the name of Exekestides son of Proteon A. was added, followed by another name possibly starting in Xan- (ZAN).

western side of Vouliagmeni harbour) was explored in the 1920s. Activity on the site in the archaic period is so far documented only by one Corinthian vase, but there was a temple from c.500, with additions made in the (?) second half of the fourth century. Three bases of c.475 held dedications made by the deme; there was also another dedication of c.500–480, probably private. Athena, Artemis, and Leto were worshipped in addition to Apollo; Leto had allegedly stopped at Cape Zoster, on her way to Delos, to give birth to Apollo and Artemis, because her labour pains had started. This story may be associated with the interest in Delos shown by Athens at the time of the Peisistratidai. The funds of the temple were in the hands of the Treasurers of the Other Gods during the Peloponnesian War, but deme decrees were published in the sanctuary; if it had ever been in any sense ‘under state control’ (which is doubtful), it had perhaps been returned to deme management after 403. A text of c.440 from the sanctuary records a transfer of 1088½ dr. from one board of (state?) treasurers to another, and names the secretary of the incoming board.¹²⁷

A number of habitation sites and cemeteries are now known, plus a line of horoi along the Kaminia hill, separating Halai from (?) Anagyrus, of uncertain date.¹²⁸ The settlements of Ano Voula and Kalaboka (between 400 and 700 m apart) are generally agreed to belong to Halai. There was also settlement on the akropolis, Kastraki, from the beginning of the fourth century, and smaller areas at Nea Kalymnos (a farm hamlet?), Pighadakia, and the Megalo Kavouri peninsula; a classical agora near Leophoros Vares was excavated in 2007. A fort on the Megalo Kavouri peninsula perhaps belongs to the period of the Chremonidean War. The principal burial area seems to have been in Pighadakia, between the main settlements and the sanctuary on Cape Zoster, but graves have been found in other areas also. The boundary between Halai and Aixone should have lain in the area of the Punta promontory, which shelters the south side of the harbour

¹²⁷ *Halai Aixonides* in St. Byz., *Aixonikoi* in Str. 9. 1. 21/C 399. Apollo Zoster, see Travlos 1988, 467–79; the ‘priest’s house’ of c.500, altered in the 4th c. by the division of the space into smaller rooms, is now thought to be a farm (Goette 2001, 197; 2004, 12, not noticed by Kouragios 2013). Dedications, IG i³ 1013a–c by the deme, 1012 = CEG 308 (probably) private. Leto: Hyp. *Deliakos* F 67 Jensen 1917, 70 Blass 1894; Paus. 1. 31. 1 (the story may even have been developed after the foundation of the Delian League in 478). Other Gods, i³ 369. 67, 92 (326/5–323/2); see ch. 22 at n. 98. Treasurers, i³ 249 + SEG 59. 59 (Kourinou 2009). D. M. Lewis (unpublished lecture of the 1980s on hands in 5th c. Attic inscriptions) thought that the second cutter (ll. 9–15) was the same as i³ 7 (Praxiergidai), which might move the date up a little; however, the text has four-bar sigma. Procedure and prosopography (?) favour attribution to the city; it looks as if the Zoster sanctuary may already have been lending money to the city at the date of this text. Linders 1975 (83 n. 45) thinks that Kourouniotes 1927–8 no. 3, a 3rd c. decree of the demos and council honouring the priest of Apollo Zoster, implies state control, but if so this may have been a Hellenistic development, necessitated by depopulation of the countryside.

¹²⁸ See ch. 22 n. 52. Traill (1986, 145) suggests that the horoi marked ZO/BA are Roman in date and separated *Zoster* from *Baris*, the latter term having already come into use to denote modern Vari; these might be the names of estates (cf. IG ii² 2776). See now Krasilnikoff 2010.

of Glyphada; the boundary between Halai and Anagyrous would have run along the Kaminia hill, from the headland east of Vouliagmeni harbour.¹²⁹

Of the two best-known settlements, the north-western one (Ano Voula) had a temple by a major crossroads, two potteries, small shrines, and houses, some with towers. The south-eastern settlement had small shrines, houses (one with a large tower), workshops, and cisterns; the excavated area (Kalaboka) may have been on the edge of the village, and had some open space between houses.¹³⁰ The agora was at its western end.

No theatre has been located, but two choregic inscriptions were found (not *in situ*) on the eastern side of the Kalaboka site.¹³¹

Most of the texts produced by the deme cluster about an episode perhaps to be dated in the early 360s, when there was a scandal over the management of deme finances.¹³² The sequence of events, in my view, was: (1) Nikomenes made a denunciation, as a result of which the deme took actions described in a part of the text of *IG ii² 1175* that Fourmont could not read, and decided to impose an oath (curse) to be sworn by the demarch Nikostratos, the treasurers, and the priests and priestesses. (2) In (?) 368/7, apparently as a result of continued problems, Euthemon proposed that in future demarchs and tamiai should deposit statements of receipts and expenditures every month in locked boxes, a procedure already adopted voluntarily by the officials of 368/7, and should present their accounts, before Metageitnion in the year following their year of office, solely on the basis of these records. This decree is to be set up in the agora, and the demarch is to administer an oath to the euthynos and his paredroi, who are

¹²⁹ Andreou 1994 (with maps); see also Lohmann 1992, 1993; Lauter 1993; Steinhauer 1994; Matthaiou 1999; Goette 1999, 2004. The settlement and wall on Kastraki are known only from surface survey; Andreou gives references also for smaller settlement areas. Agora, Kouragios 2013, 72, at the W end of area Γ on Andreou 1994 fig. 2; *ibid.* 70, Odos Daidalou, at E end of SE hamlet, public (??) building with coin hoard of second half 5th c. Fort: Lauter 1992, G. J. Oliver 2007*a*, 155–7. Burial areas: in addition to Andreou see *AD* 34 B1, 1979, 77–9, 81–7; Lauter, *loc. cit.*; Kouragios 2013. A burial area with rich archaic to classical tombs on Prince Peter St, Voula, *AD* 44 B 1, 1989 (1995) might belong either to Halai or to Aixone. R. Parker 2005*a*, 63 n. 47 doubts whether both hamlets in Ano Voula belonged to H. On the question whether Anagyrous is to be located at Vari see ch. 23 s.v..

¹³⁰ Lauter, Andreou, Steinhauer, as cited in n. 129. On ‘tower houses’ see ch. 22 n. 3; Andreou thinks that one of the towers was used for cult. Further excavation reported in *AD* 46 B 1, 1991 (1996), 61; more settlement, towers, graves on Megalo Kavouri peninsula, Kouragios 2013, 75–6.

¹³¹ *IG ii³ 4. 498*, the complete text, was assigned by Papagiannopoulos-Palaios (*Polemon* 1, 1929*c*, 162–3), who thought he had found a theatre on the site, to Aixone, but the site (Palaiochori/Kalaboka: see Andreou) and prosopography (below, n. 138) show that it is to be attributed to Halai; in any case Luppe (1969, 1973; cf. P. Wilson 2000) argues convincingly that the productions recorded took place in the city (*contra*, Csapo 2004, 2010*b*). Another text from Kalaboka (*SEG* 38. 263) contains only the word *edidaske*.

¹³² The latest deme text is Kourouniotes 1927–8 no. 5 = *SEG* 38. 124, EM 12671, ascribed by Tracy 1988 to the cutter of Agora I 3238 and dated by him between 285 and 245 (only the arrangements for publication are preserved).

to swear that they will abide by its provisions (ii² 1174, *SEG* 47. 147).¹³³ This dispute was followed by the dedication of a statue in the city to Aphrodite, probably Aphrodite Pandemos, interpreted as symbolizing reconciliation and solidarity in the deme; this was organised by an elected commission of twenty-four demesmen, headed by Astyphilos, the proposer of ii² 1175, the whistle-blower Nikomenes, and Euthemon. A decree honouring the priest of Apollo and four elected assistants was passed before the dedication of the statue, either before the deme's troubles started or else between 368/7 and the completion of the statue.¹³⁴

Nikomenes is the son of Hieron, and presumably therefore the brother of Nikostratos son of Hieron H., who served as one of the amphiktyons on Delos in 374/3; the latter may be the Nikostratos who was serving as demarch when Nikomenes made his complaint. Hieron son of Nautes, one of the younger members of the Aphrodite commission, may have been their nephew (BS or ZS). Nikomenes and Euthemon may be named on the curse tablet Wunsch 1897, 24; however, members of other demes in Kekropis also seem to be named, so the curse was not motivated (solely) by the troubles in Halai.¹³⁵

¹³³ Thanks to Stephen Lambert for a copy of Wilhelm's unpublished drawing of ii² 1175. Wilhelm (1901) dated ii² 1174 before 1175, but it seems to me more likely that the affair started with Nikomenes' denunciation: the deme officials of 368/7 were already nervously taking measures to protect themselves. *Poiēsa[s]thai tên ar[an?]*, 1175. 21–2, seems to be parallel to the use of *poiēō* in the middle for sacrifice, i.e. the officials are taking the oath rather than administering it (for which *exorkoō* is used in 1174. 15). Wilhelm took the genitive *Euthēmonos* in 1175. 5–6 to be a reference to the provisions of 1174, but the context is unclear and this is not a necessary assumption (on the other hand, Whitehead's interpretation of the genitive as a patronymic, 1986*a* p. 431, no. 187, is prosopographically unlikely). ii² 1175 was recorded by Fourmont at 'Philia', i.e. probably Philia (Sphettos?), but may have been brought to him from elsewhere; ii² 1174 came from Aliki (Punta). Nikomenes (1175. 1–2) is Wilhelm's suggestion for Fourmont's Niko.enos; it is very strongly supported by Nikomenes' presence in the dedication on ii³ 4. 223. 6, but that should be noted that a Nikoxenides son of Niketes served as councillor for Halai Aix. in 303/2, *Agora* XV 62. 215. On *kibōtia* (locked deposit-boxes) see Georgoudi 1988*b*, 236.

¹³⁴ The decree for the priest and assistants, R/O 46 (Kourouniotes 1927–8 no. 4) was proposed by Hagnotheos, who was evidently dead (or dying?) by the time the statue was dedicated, since his sons appear in the commission and he does not (the demarch Nikostratos of ii² 1175. 22 is also absent from the dedication list, but possibly he had been convicted of malpractice). The dedication ii³ 4. 223 was found in the church of Hypapante near the SE corner of the Agora (A. Mommsen 1868, 22–4 no. 16), and hence not far from the W end of the Akropolis, which seems to be where the sanctuary of Aphrodite Pandemos was located (some material was re-used in the wall near the Beulé gate, W of the Akropolis; on the area see Schmalz 2006; on the location of the sanctuary see Foucart 1889; Beschi 1967–8; Dontas 1983, 63; Pirenne-Delforge 1994, 26–34; Rosenzweig 2004, 14–15; N. D. Robertson 2005; Greco 2010, 190–1). Note however that the deme had its own sanctuary of Aphrodite (*SEG* 49. 141); *IG* ii³ 4. 223 might have travelled. On the 'civic' character of this goddess see Apollodoros *FGH* 244 F 113 (apparently referring to the current Agora, not an earlier one, *pace* Dontas loc. cit., Oikonomides 1964); Paus. 1. 22. 3; N. D. Robertson 1992, 37, 50; Schachter 1992*b*, 40–1; Pirenne-Delforge 1988, 1994, 2005; R. Parker 1996, 48–9; 2005*a*, 407–8; *SEG* 36. 1039 (Erythrai, c.400); Parker and Obbink 2000 (Kos); Van Bremen 2003, 324–6. E. Simon 1970 thinks that her head appeared on the reverse of 1/2-dr. and 1/4-dr. coins possibly minted in 507/6.

¹³⁵ Nikomenes, ii³ 4. 223. 6 (no. 2 on the list); Nikostratos, *ID* 98 A 61. The brothers may have been on bad terms. Nikostratos does not appear on 4. 233, either because he had died (in which case he cannot

Notes: The Philagros of IG ii² 1632. 192 (APF 14208 bis) may have belonged to Halai Araphenides. Astyanax I belonged to Kekropis, but the deme is unknown. IG ii² 5495a = CAT 3. 322, Schmalz A132. Since IG ii² 11961–2 are a pair, it seems likely that they commemorate Leon II and III rather than L. I and III.

TABLE 29.20. Halai Aixonides: Diokles

Astyphilos, the proposer of *IG* ii² 1175, is a member of a large and well-documented lineage (see Table 29.20) that may just possibly have belonged to the genos Bouzygai (ch. 20 n. 88). The first known member of the family may be Diokles I, whose name appears on a vase of c.430 found 'near Vari'. Philagros I, father of Astyphilos, would have been Diokles' son. Astyphilos' name was clearly coined in reference to that of his father, and may imply that he was born during the Peloponnesian War, when the family was living in the city; it is also possible, however, that Philagros had taken a wife from another prominent lineage in the deme, perhaps a daughter of the Astyanax of (?) Halai who died in battle in 447.¹³⁶ Astyphilos probably had an elder brother, Diokles II, who had died before the Aphrodite commission was set up; his son Philagros II is one of the younger members of the commission (*IG* ii³ 4. 223. 24, no. 20). Astyphilos perhaps proposed decrees of the state in 378/7 and 373/2, and perhaps served as councillor in the latter year with his brother Leon. His name heads the list of commission members; he is named with a Philonautes, possibly of Pallene, on the curse tablet Wünsch 1897, 57, and also, with his son Menyllos, Philonautes, and other associates, on Wünsch 47–50, a group of tablets found together (ch. 14 n. 82). Menyllos (ii³ 4. 223, no. 18) is probably the son of Astyphilos who served as councillor at some date after mid-century. He was the main target of Wünsch 47–50, on which he is attacked with his father (and, as noted above, Philonautes), a Phantias, and his kedestes Kephisokles, perhaps K. II of Halai A., who might have been his brother-in-law (ZH or WB). Menyllos was represented with his father on a group of lekythoi found at Voula (*SEMA* 70–71).

Leon son of Philagros I, Astyphilos' brother, is represented with his (?) cousin (FBS) Leon son of Autokrates on a pair of lekythoi, and may also be the Leon of Halai represented on a relief lekythos with his wife Demagora and his daughter Helike. He served in the Council in (?) 373/2, as noted above, but was perhaps dead by the time the Aphrodite commission was set up. He may have had three sons, who were perhaps still minors at that date. Philagros III was probably the

be the N. of Halai who was trierarch in 356, *APF* 11019, who may be N. son of Nikomenes of Halai Araphenides, *Agora* XV 492. 67, ch. 24 n. 109; Nikochares son of Nikostratos, ii² 2385. 48, cited by Whitehead 1982, belongs to Athmonon), or because he had come too badly out of the affair to be involved in the reconciliation. Hieron II son of Nautes, ii³ 4. 223. 21 (no. 17; Hieron son of Hierokles I H., father of Hierokles II, is probably H. Ara., ch. 24 n. 111). Wünsch 1897, 24, see Wilhelm 1904; Wilhelm attributed the [Eu]pheros of this tablet to Aphidnai (*APF* 8157), but note Euph[eros?] son of Oinocharēs H., whose stele fragment of the mid 4th c., ii² 5482, was recorded at Kara and may have come from the deme area (ii² 5459, 5466, other Halai stones, were also recorded at Kara; see ch. 23 n. 5 on the Louriotis estate). For possible members of Daidalidai and Athmonon on this tablet see above, nn. 41, 75, and Table 29.12.

¹³⁶ On Diokles see ch. 20 n. 88. The syntrierarch Philagros of 322, *APF* 14208 *bis*, may belong to either Halai, since *IG* ii³ 4. 36. 4, if Halai (which is not certain), is H. Araphenides. Astyanax (Kekropis) i³ 1162. 87. See also ch. 17 n. 18.

Philagros son of Le— (no demotic) who guaranteed a lease for an isoteles living in Peiraios in 343/2; Autokrates, as we have seen, was probably the father of Leon II, commemorated with his cousin Leon II on two lekythoi; the Kleomedon son of Leon of Ha— or A— who bought land at Besa in the hekatostai sales may have been a third son, in which case he may well be the Kleom[edon] attested in the mining records as owning land, possibly at Besa, in mid-century.

Euthemon, who proposed *IG ii*² 1175 and is mentioned in 1174, also belongs to a well-attested and prominent family (ch. 20 n. 116; Table 29.21). He is named third in the Aphrodite list, after Astyphilos and Nikomenes, and his name is followed by that of Chaireas son of Chairias, whose daughter married Euthemon's son Eupolis II. The latter is no. 14 on the list, followed by his brother Euktemon, who is attested as syntrierarch in 322; a younger brother, [Theo]philos, is no. 21. Eukles son of Eukleides, no. 11 (see below at n. 146), seems to have married a daughter of Euthemon; his son Euthemon son of Eukles served as ephebe in 333/2/1. Eupolis II son of Eu[themon H.?] appears on a fragment from the poletai records; Theophilos may be the Theophilos H. whose son served as (?) epilektos in the late fourth century, and whose grandson Theophilos son of E[uthemon?] was councillor in 304/3 (*Agora XV* 61. 196). The relation (if any) to this family of the Theophilos H. (Aix.?) whose property on Lemnos was confiscated in 370/69 (*Agora XIX P* 4. 8) and who left descendants

Notes: *LGPN* has Chaireas II as son of Eupolis I, but Eupolis II seems more likely. Euthemon is cursed on Wunsch 24 b 2. *SEMA* 1946 (*SEG* 49. 217, c.360), found at Voula, commemorates a Theophilos with his (?) wife Peisistrate (from the photograph this seems more likely than the reading Teisistrate, an otherwise unattested name) and daughter Mnesimede, with an Olympiodoros. For another Theophilos in Halai see Table 29.20.

TABLE 29.21. Halai Aixionides: Eupolis, *APF* 5791 (cf. Table 20.3)

on the island (Culasso Gastaldi 2010, 361–3) is unclear. Eupolis II and his wife were buried in the deme; their son Chaireas II was commemorated by a naiskos of unknown provenance in the second half of the century (*SEMA* 76, *CAT Suppl.* 42 RSE 67).

A decree proposed by Hagnotheos son of Ekphantides—who, as noted above (n. 134), seems to have died before the Aphrodite commission was set up—honours the priest of Apollo Zoster, Polystratos son of Charmides, and a commission of four men concerned in the restoration of the hieron of Apollo and the *kosmésis* of its statues. The priest does not appear on the Aphrodite list; of the four commissioners, Aischeas son of Phileriphos is no. 10 on that list, while Pantakles son of Sokrates may be a brother of Diotheides son of Sokrates, no. 7, and Theodotos son of Theodotos will have been a relative (FBS?) of Theodotos son of Theaitetes, no. 19. Hagnias son of Melesias, the fourth commissioner, is not on the Aphrodite list. Archaeological evidence for work on the temple is dated approximately to the middle of the fourth century, so this decree cannot be too far removed in date from those concerning the financial scandal and the Aphrodite dedication. It is not clear whether the discrepancies between the two lists are due to the decision of three of the Apollo commissioners that they had made a sufficient contribution to deme expenses through their involvement in that project, or whether there was some tension between the priest of Apollo and his supporters, who wanted to concentrate deme expenditure on local projects, and the Aphrodite party, who liked the idea of a dedication in the city.¹³⁷

Hagnotheos son of Ekphantides, the proposer of this decree (R/O no. 46), may have been a descendant of the comic poet Ekphantides, whose *Peirai* is the first play named in a list of choregic victories set up in the deme. Whether the competitions were those of the city or of the deme's Rural Dionysia is disputed (Csapo 2010*b*). The choregoi were a Thrasyboulos, an Epichares (?), and possibly Eu[polis I]. Hagnotheos' tombstone, with a daughter or in-deme wife, dated to mid-century (which must be too late) was found in the Agora (*SEMA* 56). Two sons, Euphiletos and Diodoros, appear as no. 9 and no. 12 on the Aphrodite list.¹³⁸

¹³⁷ *SEG* 42. 112, dated *c.*360 (Kourouniotes 1927–8, no. 4; Peek 1942, 9–10 no. 7). The absence of the priest of Apollo from the Aphrodite commission might perhaps be explained by a feeling that it was inappropriate for him to be involved in a dedication to another deity, although I do not know of much evidence that Greek priests (even if serving for life, which is not certain in this case) were expected to be exclusive in their loyalties. Hagnias son of Melesias I: the Melesias of Halai who served as epistates in 357/6, *IG* ii² 121, might be either Melesias I or a son (or brother) of Hagnias, Melesias II; the tamias of 334/3, ii² 1493. 4, must be Melesias II (*LGPN* s.v. *Hagnias* 10, *Melesias* 12, wrongly dates Kourouniotis no. 4 to the late 4th c.); cf. perhaps Meletos son of Laches of Halai Aix., *Agora* XV 62. 212.

¹³⁸ Ekphantides, *PCG* 5 126–9 (victor in 459/8, *IG* ii² 2325. 49; Pickard-Cambridge 1988, 54–6 suggests that he may have been dead by *c.*442, in which case he cannot have been Hagnotheos' father); note also the bearded Ekphantides represented as singer in a symposion-scene by Euphronios, *c.*513–508 (BArch 275007, Munich 9404), and Lys. F 205 Sauppe (126 Blass 1868 CXV/257 Carey 2007), on

The priest of Apollo Zoster was perhaps the Polystratos H. for whom we have a record of an allotment(?) -pinakion issued in the 360s or later, and a tombstone.¹³⁹

Aischeas son of Phileriphos, as noted, is no. 10 in the Aphrodite list. His son Phi[leriphos] sold land as demarch of Halai in the hektostai sales.¹⁴⁰

The other members of the Apollo commission will be discussed below in connection with their (?) relatives on the Aphrodite commission, to whose members we now return. Its first four members (Astyphilos, Nikomenes, Euthemon, and Chaireas) have been discussed. The fifth, Argeios son of Demochares, may possibly have served as councillor with Astyphilos and his brother Leon in (?) 373/2.¹⁴¹ Aristomachos son of Astyanax (II), no. 6, and his brother Astydamos, no. 8, may have been affinally linked to Astyphilos. Aristomachos, Philagros (II or III), and Astyanax (III, son of Aristomachos?) appear together in a group of five men from Halai on a record of men who took concessions or leases from the state and their guarantors.¹⁴²

behalf of Nikomache against Ekphantides and Diophanes (this would be a younger man than the poet; the name Ekphantides is also attested in Dekeleia). Choregic dedication, ii³ 4. 498; see Whitehead 1986a, 46 n. 32; P. Wilson 2000; Csapo 2004, 61–2, 2010b; *APF* p. 183–4, 238. The other two poets are Kratinos (*Boukolos*) and Sophokles (*Telepheia*). Luppe 1969 (cf. 1973) claims that the space in line 1 is not long enough for Ep[ichares], and thinks that the second letter of the name might be Y, which raises the possibility that the choregos was Eu[polis I]. The dedication was apparently set up in the early 4th c. by the last choregos, who won with the *Telepheia*; one would expect that there had been some link between the choregoi, but its form is not evident, and no other name in Thras- is attested for Halai in the classical period. Epichares (I. 7) might be the father of Epikrates son of Epichares H., who dedicated ii² 4884 on the Akropolis in the first half of the 4th c., and grandfather (?) of Epichares II H., whose dikastic pinax of class V was found in Kypseli (Kroll 1972 no. 88), but we do not know to which tribe either of those men belonged. An Epikrates son of Semiades of H. Aix. was ephebe in 333/2/1, *IG* ii³ 4. 337. 64, but the name is attested also in H. Araphenides (ii³ 4. 75. 13, 343/2). Hagnotheos H. with Nikodike H., *SEMA* 56; it seems likely that all three occurrences of the name in Halai refer to the same man. On the Hagnotheos son of Diodoros who proposed a deme decree in (?) 289/8 (*SEG* 49. 143 with 56. 197) see p. 1094 at n. 148. Note that another Halai decree, from C. Zoster, has been dated c. 265 (n. 132); below, *ibid.*

¹³⁹ Kroll 1972 no. 155, class VI; see pp. 66–8 on dates; the pinax is lost and it is not certain that it was non-dikastic. The priest may also be the Polystratos H. commemorated on the stele *IG* ii² 5511a (p. 879), with Polyaratos H., Leukonides H., and a Polystrate; Leukonides should be the Athenian of that name who defended his kedeses Philotades of Kydathenaion, who had been rejected at the diapsephisis of 346/5 (Aisch. I. 115), but we have no way of telling for certain whether these men belonged to H. Aix. or H. Araphenides. Note also dikastic (?) pinax of Dionysios H. from agora area, *SEG* 57. 293.

¹⁴⁰ Lambert 1997a, F 9 A 17–18 (on the purchaser Philippos see below, n. 144). The Phileriphos named on an ostrakon dated after 420 (Brenne 2001 no. 223) may be an ancestor either of this family or of Phileriphos of Hamaxanteia, *APF* p. 535; though the name is rare, it is not inappropriate here in a deme that would have had grazing on Hymettos, and it cannot be regarded as certain that the two families had at some time been affinally linked.

¹⁴¹ *IG* ii³ 4. 23. 9; the stone has [-12-]aros, the suggestion was made by Sundwall, cf. ii² 1743; [Eupheros Oinoch]aros, see n. 135 above, would also fit.

¹⁴² *IG* ii² 1593, 1–5 = *SEG* 52. 142 (the earlier restoration [*enguê*]tés in line 5 was quite groundless). It is dated to mid 4th c. (perhaps largely on prosopographical grounds), and since no reference to

No. 7, [Di]otheides son of Sokrates I, is presumably the father of no. 24, Sokrates II son of D[i]othei<d>es; a stele commemorating both of them, with Sokrates' wife Mnesagora daughter of Hierophon of Halai, was found in the deme burial area of Pighadakia/Palaiochori (*SEMA* 59). Mnesagora's brother N[e]ai[chm?]os served as ephebe in 333/2/1, and may have been the archon eponymos of the city in 320/19. Pantakles son of Sokrates, one of the Apollo commissioners, may have been Diotheides' brother; Sokrates III son of Sthenokrates and Sokrates IV son of Eukrates, both of whom were ephebes in 333/2/1, may have belonged to other branches of this family.¹⁴³

Nos. 8–12 have already been discussed. No. 13, [Phil]ippos son of Aischines, may have been a cousin of no. 16, Philippos son of Athenippos; one of them will be the Philippos H. who bought land in the hekatostai sales for four talents (24,000 dr.). Aischines son of Polyzelos H., named in the diadikasia documents, may be the father of no. 13; Athenippos, father of no. 16, was buried in the deme area, and may be the Athenip[os] recorded (without deme) as syntrierarch before 356.¹⁴⁴

Nos 14–15 and 17–18 have been discussed. No. 19, Theodotos (III) son of Theaitetos, and no. 23, Theoboulos son of Theodotos (II?), were presumably

boundaries is preserved and there are no property-designations or prices it can hardly be a record of land leases, though classed with them in ii². It appears to be a list of men taking up some form of fixed-price state contract (Papazarkadas 2011, 285–90, suggests tax-farming). The name Astydamos is also attested in the family of the poet and eye-doctor Morsimos, but in view of the Halai family's fondness for names in Asty-, it is uncertain whether there was any connection (chs. 6 n. 7, 32 n. 24).

¹⁴³ Stephen Lambert, who kindly examined the stone for me in Athens (spring 1998), reports that there may be traces of the delta of D[i]othei<d>ou in *IG* ii³ 4. 223. 28; Köhler however (ii¹ 1208. 28) read P A T H Σ Q Ε O Θ E I Λ O Y and printed [The]othei<d>ou. Stele, *SEMA* 57 (reused in a well; *A to Z* 205 D 4), from *AD* 40 B 1, 1985 (1990) 64; the wife's name is reported as Anesagora but this name is otherwise unknown, and misreading of the commoner Mnesagora seems likely (so *SEMA*); it is perhaps worth noting that ii² 12147 = i³ 1315 (*CEG* 84, *CAT* 1. 610, dated 420–410 in i³), commemorating a young girl, Mnesagora (represented with her baby brother Nikocharēs), is said to have come from Vari. N[e]ai[chm?]os seems to be the only attested name that fits the traces reported in *IG* ii³ 4. 337. 65; if this is the archon of 320/19 (see above, n. 107), he will have held office at the age of 31, but in the period of restricted citizenship. Pantakles, *SEG* 42. 112; Sokrates III and IV, ii³ 4. 337. 56, 68. If the relationship between Sokrates II and Neaichmos is correctly reconstructed, it may suggest a date in the 350s rather than 360s for ii³ 4. 223, since Sokrates was presumably over 18 when that text was inscribed, and his brother-in-law (WB) was born c.352.

¹⁴⁴ See Lambert 1997*a*, F 9 A 20–1, with p. 176; *APF* 233; *APF* pp. 537–8. The Philippos H. who was prosecuted for mining offences, Hyp. 4 *Eux.* 34, and the Philippos H. whose son Nikion and granddaughter (SD) Kleinarete (who married a man from Acharnai) were commemorated on a mid-century *akanthos* stele found (re-used) in the city (*SEMA* 68; Nikion's name added to that of his sister and her husband), might belong to either Halai. Aischines son of Polyzelos (H. Aix.), *APF* 343; stele of Athenippos son of Philippos, before mid-century, *in vivo Vari*, *IG* ii² 10589. Identification of Philippos' father as the syntrierarch would put the date of ii³ 4. 223 later than his trierarchy; however, there is an Athenippos in Piraeus who may be the trierarch.

The councillor Theodotos of 281/0, *Agora XV* 72. 95, (Whitehead 1986*a*) is Athmonon not Halai (Traill 1986).

TABLE 29.22. Halai Aixionides: Theodotos

related to Theodotos II son of Theodotos I, honoured as one of the commissioners of Apollo in *SEG* 42. 112 (see Table 29.22). No. 22, if he is [Nik?]andr[os] son of Hegesias, may be the father of Aristoboule, commemorated with her (?) mother on a stele found in the deme region.¹⁴⁵

The family of Eukles of Halai (Table 20.3), which probably belonged to the Eumolpidai, and made dedications in the cave of Pan at Vari, is represented in this dossier only by Eukles son of Eukleides (*IG* ii³ 4. 223. 15), perhaps Euthemon's son-in-law. He may be the Eukl— son of Eukl— of Halai named on a mid-century stele fragment found on the Akropolis. Eukles son of L[akles], perhaps his nephew (BS), bought two parcels of land at Poros in the hekatostai sales for 125 dr. A later Eukles son of Eukles, who perhaps served as ephebe in the 250s (archon Thymochares), was honoured by the council and demos as priest of Apollo Zoster, and dedicated his crowns in the sanctuary; in the fifth and fourth centuries, however, the family seems to have taken little interest in deme affairs, although its activities at the cave of Pan in Anagyrous may imply that some of its members were still resident in the deme.¹⁴⁶

One new deme decree and fragments of three similar texts have recently been discovered. The deme decree (Steinhauer 2009*a*, *SEG* 59. 142) was re-used in a Roman building on 'the *dilophos* of Vari' (on the Athens–Vari road), not far from

¹⁴⁵ ii³ 4. 223 has [...]andros. Aristoboule, ii² 5733, recorded in a private house in Vari, *c.* mid-century, with Archedike daughter of Demokles of Aphidnai, whose brother Demokrates by 336/5 held the seat allocated to descendants of Aristogeiton at dinners in the prytaneion (*APF* 12267 IV). Archedike (who married after *c.* 370) may have been Nikandros' wife (ch. 31 n. 24).

¹⁴⁶ Cf. ch. 12 n. 77, 20 n. 99. Peek 1942, pp. 8–10, nos. 6–8, discusses Kourouniotes 1927–8 no. 4 and other texts from the sanctuary on C. Zoster, in which no names are preserved; his no. 8 (Kourouniotes no. 5) is now dated *c.* 265 by Tracy (n. 132). There is, as Whitehead (1986*a*, 381 no. 58) says, no reason to ascribe the horos ii² 2761b, Finley 1952 no. 5, to H. Aix. rather than H. Ara. (the same property had earlier been mortgaged to Periandros of Cholargos, attested *c.* 362–57; ch. 27 n. 17).

the agora site, and was passed in 338/7. It honours the three tamiai of the preceding year for performing all the sacrifices and their other duties, and handing over a surplus of 388 dr. to the *hieropoioi* (i.e. they had covered some of the expenses themselves). It was proposed by an Anaschetos, presumably A. son of Demoteles H.¹⁴⁷ The other texts (*SEG* 49. 141–3) were found at the crossroads of Odos Kalymnou and Odos Vas. Georgiou II; *SEG* 49. 141 prescribes that it should be set up in the Aph[rodision?], which may therefore have been in this area. This text and no. 143 refer to a single tamias; the former honours the tamias and hieropoioi of the year in which Ambrosios was *ar[chon]*. It was proposed by Ha[g]notheos son of Diodoros, probably son of the Diodoros of *IG* ii³ 4. 223. Ambrosios may be the A. who dedicated, with a Diopeithes, *IG* ii² 4658 = *CEG* 784 (no provenance) to Artemis Demosyne. He is generally taken to be an otherwise unattested archon eponymos, perhaps of one of the years 291/0/89/8, but Hagnotheos II would have been an old man by this time; there remains a possibility that Ambrosios held a local office (further specified in a lost part of the text). We do in any case have a deme decree of H. attributed to the third century (n. 132 above). G. J. Oliver 2007*a*, 155–7, suggests that fortifications on Kastraki and on Cape Zoster were related to the use of Vouliagmeni as a harbour free from Macedonian control in the 280s–260s; possibly the presence of a garrison, here as at other forts (Eleusis, Rhamnous) kept deme institutions alive when they were disappearing elsewhere.¹⁴⁸

It is noteworthy that deme texts were set up in three different locations: the sanctuary of Apollo, the Aphrodision, and (probably) the agora.

Two further tomb monuments found near the deme area deserve mention. An anthemion stele of *c.*360 from Lambrika commemorated Aisimos son of Aisimides and his son Stephanos; Stephanos (II) son of Aisimides (II), attested as ephebe from Halai in 333/2/1, was probably Aisimos' grandson (SS), named after an uncle (FB) who had perhaps died without leaving heirs.¹⁴⁹ Philodemos H.,

¹⁴⁷ *APF* 819; ch. 14 n. 60. Since an Archemachos son of Antimachos of Halai (Ara.) is attested as one of 2 deme choregoi in 341/0 (*SEG* 46. 153, ch. 24 s. 'Halai Araphenides') and is probably the father of the councillor Kallimedes of Aigeis in 341/0 (*IG* ii³ 4. 76. 53), it is likely that the polemarch Demoteles son of Antimachos H. (*IG* ii² 1578, *c.*330) and his ? grandson (SS) Demoteles II son of Sokles (ii² 5476, no provenance) belonged to H. Ara. and not H. Aix. See also Takaeuchi 2013, 91–4.

¹⁴⁸ See Steinhauer 1998. Diopeithes might be the husband of Demarchia daughter of Diognetos H., *IG* ii² 5470, but we do not know his tribe. Tracy 2003, 45 thought that Ambrosios should have been archon after 270, but does not discuss lettering; M. J. Osborne 2003, 67–8 thought the lettering looked later than the 290s, but *id.* 2009*b* suggests that he was archon in 291/0 or 289/8; since Byrne 2007 has moved Telokles from 290/89 to 280/79, the former year also becomes a possibility for Ambrosios. Note however the remarks of Papazarkadas 2011, 296–5 on the problems of identifying the office of such otherwise unattested floating archons.

¹⁴⁹ ii² 10605, Aisimos with Stephanos I; Stephanos II *IG* ii³ 4. 337. 55 (lochagos); note also perhaps S[teph]anides H., kleruch on Samos *c.*350, *IG* xii 6. 262 VII 14 (it does not seem possible to read the name as Sanniades).

Names suggest that Aischron and Kallaischros may be kin. Reconstruction conjectural. Some names on *IG* ii² 5633 perhaps added.

TABLE 29.23. Halai Aixionides: Kallaischros

father of . . g. kion [*sic*], known from a tombstone fragment recorded in a church at Vari, is now attested as a kleruch on Samos *c.* 350.¹⁵⁰ The loutrophoros-stele of Kallaischros II son of Kallon H. (ch. 11 n. 37) was found at Vlachika Varis with a small lekythos commemorating Demostate daughter of Aischron and Kalliades I son of Kallaischros I, perhaps his aunt and uncle (FB; *SEMA* 67, 1709; *SEG* 54.341) (see Table 29.23); Demostate's name was also inscribed in the late fourth century on a re-used naiskos in the Kerameikos, with those of Mikion son of Aiantodoros of Anagyrous and Ameiniche daughter of Mikion of Thria (*IG* ii² 5633). Kalliades II son of Kallias H., ephebe in 333/2/1, may be a grandson (SS) of Kalliades I.

In addition to a family of Eumolpidai, Halai may also have had a family that belonged to the genos Gephyraioi, which became prominent in the Hellenistic and Roman periods. Diodoros I, named in Demosthenes 57, had two sons, Ktesibios I and Sosistratos, both perhaps dead before the Aphrodite commission was set up (see Table 29.24). Ktesibios I (*APF* 3933, Demosthenes 57. 38) died on service at Abydos in (?) 387. The Ktesibios (II) who was trierarch in 373/2 (*IG* ii² 1607. 71) may be a son of Sosistratos,¹⁵¹ adopted by will or posthumously to his (?) uncle. Sosistratos may have had a second son, Diodoros II, father of

¹⁵⁰ ii² 5522; Kirchner suggests [Tho]r[y]kion. *IG* xii 6. 262 VII 12.

¹⁵¹ *IG* ii² 5520 (no provenance) = Posamentir 2006, no. 64.

Xenokrateia and Eponymos could be the children of a [Sos]ibios; for Xenokrateia see Petrakos 1992. Note two in-tribe marriages.

TABLE 29.24. Halai: Diodoros *APF* 3933 (cf. Table 7.12)

Breton, councillor in 303/2, and his (younger?) brother Epigonos, ephebe in 333/2/1.¹⁵²

It should be noted that we could restore [Kte]sibios rather than [So]sibios H. as the father of Xenokrate[ia], commemorated on *SEMA* 74 (*CAT* 3. 396 + *Suppl.* 119), and of the councillor Epo[nymos], *Agora* XV 62. 209, 303/2. The latter reference would attach the family to H. Aix.; Xenokrateia's stele was found at Velanideza, but she could have married into the Mesogeia.

A similar case to that of Ktesibios I and II may be represented by Diophantos I of H., who apparently died as trierarch in 349/8, debts being collected from his heir Diognetos son of Diodotos of Phlya (*APF* 4424, *IG* ii² 1620. 32f., with Gabrielsen 1994, 61–2). The choregos Diophantos II H. who won a victory as boys' choregos in 333/2 (*IG* ii² 2318; *APF* requires correction) may be Diognetos, adopted and renamed (the relationship in this case would have to be matrilateral).

Bryon son of Dryon H., ephebe in 333/2/1, with his brother Hedylos, and councillor in 303/2, may be connected with the Bryon Oma— named on a fragmentary fourth century base from the Agora, possibly funerary.¹⁵³

The record of activity outside the deme is slim, but Hierophanes of H. Aix., diaitetes in 325/4, may be the Hierophanes of Halai commemorated on a sarcophagus-lid of the

¹⁵² Archedemos son of Diodoros, councillor in 259/8 (*IG* ii³ 983. 45, Philinos) may instead be related to Polyphilos son of Archedemos H., creditor on a Lemnian horos (Culasso Gastaldi 2006 no. 13) and/or Archedamas son of Archedemos H., who freed a woolworker living in Kydathenaion ε.320 (?), *SEG* 18. 36 A 520f.

¹⁵³ Bryon and Hedylos, *IG* ii³ 4. 337. 59, 58 (this list has a surprising number of Halaieis); Bryon, *Agora* XV 62. 216; Bryon Oma—, *SEMA* 1644.

fourth century or later found in the Laureion area. The ephebic didaskalos Philokrates II son of Philinos H., honoured at Oropos between 304 and 287, was probably the grandson (SS) of another diaitetes of 325/4, Philokrates I; Philokrates II served as councillor in 304/3, and his father may be the Philinos H. who lent 3000 dr. secured on half a chorion, house, and kepos in the Laureion area.¹⁵⁴

¹⁵⁴ Hierophanes, *IG* ii³ 4. 35. 109, *SEG* 28. 329. Philokrates II, *IOrop* 369–370 with Petrakos 1968 p. 32, *Agora* XV 61. 199, *LGN* Philokrates 79 (Stephanes 1988 no. 2532, erroneously assigning the didaskalos—who anyway was not theatrical—to H. Ara., presumably because he was honoured by Aigeis); Philokrates I, ii³ 4. 35. 110; Philinos, *SEG* 33. 175. Note that if this reconstruction is right Ph. II would have been young as a councillor.

VIII Hippothontis

The tribe has several small demes that are not at all securely located: Eroiadai, Acherdous, Elaious, Auridai,¹ and Hamaxanteia, with one councillor apiece. Eroiadai may have belonged to the city, and Acherdous to the inland trittys; they are so grouped here, the other three demes being discussed with the coastal trittys. The location of Azenia (two councillors) and Anakaia (three) is controversial. Traill, rightly in my view, puts Anakaia in the inland trittys and Azenia in the Sarandopotamos valley; however, he assigns both Azenia and Oinoe (Myoupolis) to the inland trittys. This produces more equal numbers of councillors (in the fourth century), but I am not convinced that position on the ground can be ignored in this way; I take it that Oinoe and the valleys opening off the Eleusinian plain belonged to the coastal trittys, and that ad hoc arrangements were made to assign the tribe's prytaneis to duty in the Agora. Lohmann placed Anakaia in the Koundoura valley, but arguments from myth and cult, discussed below, favour a site in the Dekeleia–Pentelikon area.²

CITY TRITTYS

Peiraios

This was evidently the dominant deme in the trittys, which appointed eight (?) councillors in the fourth century; the number may originally have been smaller. It was bordered on its north-west side by Thymaitadai, also a member of the Tetrakomoi (with Xypete, ch. 29 nn. 26–7, and Phaleron); Thymaitadai in turn was probably contiguous with Korydallos, which lay south-east of Mt Aigaleos.

¹ Lambert has suggested to me that Auridai may have belonged to the inland trittys; see the discussion of the deme below, nn. 44, 124. His view is slightly supported by the position of Auridai in the Samian list *IG* xii 6. 262.

² Like Traill (1986), I put Anakaia (n. 57) at Mygdaleza. The position of the Attic–Megarian border is still controversial; see the bibliography below, n. 119. One of the unlocated smaller demes of Hippothontis may have occupied the site north of Aspropyrgos allocated by Traill to Kothokidai, cf. ch. 28 n. 5. There does not seem to me to be any regular pattern in the ordering of demes on lists of councillors, diaitetai, and kleruchs in this tribe (see ch. 21).

The other two city demes that can be located, Koile and Keiriadai, occupied an area round the south-western gates of the city, Koile partly inside the walls and partly outside, Keiriadai outside, and to the west of Koile, in the area of modern Petralona. It is not clear whether a continuous line of Hippothontis territory linked Thymaitadai and Keiriadai.³

The city's original harbour had been, it was believed, at Phaleron, but the shelter for ships in the three bays of the Piraeus peninsula—Mounichion (Tourkolimano/Mikro Limani), Zea (Passalimani), and Kantharos—was much better, since in summer the afternoon sea-breeze blows briskly into Phaleron bay. The Piraeus harbours were developed especially after the construction of Athens' fleet of triremes in the 480s, but must certainly have been used earlier. The sanctuary of Artemis Mounichia on the south side of Tourkolimano/Mikrolimano has offerings from the tenth century.⁴

As the base of the fleet, P. became an atypical deme in the amount of state attention devoted to its affairs. The demarch, by the late fourth century, was appointed by the city; we do not know when this practice was introduced. Celebration of the Rural Dionysia in P. and appointment of choregoi was (as elsewhere) one of his duties. Presumably he had to be a demesman.⁵ The deme had its own Thesmophorion, which was under deme control, used by women not only at the Thesmophoria but also at the Plerosia, Kalamaia, and Skira; in the middle of the fourth century it was necessary to prohibit unauthorized use of the sanctuary for meetings, purifications, and the construction of private shrines. Earlier laws, presumably also passed by the deme, had empowered the demarch to impose fines for such offences and, in case of failure to pay, take offenders to court. Deme regulations also prohibited the removal of wood from the sanctuary, and the area was leased for pasture (see below at n. 8). The decree we have, *IG ii² 1177*, was to

³ See further discussion under individual demes. It may have been felt that the association of Koile and Keiriadai with the route from the city to Piraeus provided sufficient motivation for assigning them to Hippothontis, although the route covered by the Long Walls appears to have passed through the territory of Xypete.

⁴ Lohmann (1993*a*, 270) argues that Peiraios probably still had only a small citizen population in 507. An increase in the number of demesmen after that date can be ascribed to incorporation into P. of migrants from other demes as well as immigrants from elsewhere—both procedures legally questionable but quite probable in the case of an area whose population undoubtedly grew very rapidly in the period c.490–450. R. Parker (1996, 115 n. 49) points out that P.'s membership in the Tetrakomoi probably implies that there was a pre-Kleisthenic village on the peninsula (see ch. 18 n. 43 on the 'Twelve Towns'). For discussions of the archaeological evidence see Travlos 1988, 340–63; von Eickstedt 1991; Hoepfner a. o. 1994, 22–50 (plan, fig. 14); Mersch 1996, 168–73; Blackman a. o. 2014. Rescue excavations (quarries, cisterns, graves) are reported in *AD 44 B 1*, 1989 (1995), 54–5; Lygouri-Tolia 2013; Papadopoulou 2015. Artemis Mounichia, Palaiokrassa 1983/1991. Quarries, Langdon 2000, with map. For early maps of the area see Loven and Schaldemose 2011.

⁵ *A.P.* 54. 8; the only demarch whose name is known, Phrynion (*IG ii² 2498*, 321/0), is not otherwise attested.

be published by the demarch and horistai, probably members of a commission set up to redefine and mark the boundaries of the sanctuary (which has not been located).⁶

The deme also had its own theatre, apparently on the western side of the ‘akropolis’ Kastella, above Mounichia; it already existed at the time of the Dekeleian War. In 324/3 it was leased to four men, two of whom (Melesias of Lamptraia and Arethousios of Pelekes) were not demesmen. The lessees were responsible for keeping the theatre in good repair, and collected entry-money from spectators, with the exception of those to whom the deme had granted front-row seats (*prohedria*) either ex officio (priests, demarch, tamiai, and herald) or as a personal privilege. Theaios, praised in the lease decree for having increased the deme’s revenue from the theatre (i.e. the rent) by 300 dr., had perhaps either proposed an increase in the price of tickets or put in a counter-bid that had caused the lessees to raise their offer.⁷

The deme also owned land, which it leased; in 321/0 an inscription was set up containing general regulations for deme leases, which were to run for ten years and to be secured on land if the rent was more than 10 dr. per annum. The plots named are the Paralia (shore? temenos of Paralos? Papazarkadas 2011, 138), Halmyris (saltmarsh), Theseion, Thesmophorion, and Schoinous (reedmarsh); the two latter were used for pasture. The Halmyris had a building on it.⁸

⁶ *IG* ii² 1177 = *SEG* 25. 143; see Papazarkadas 2011, 128; G. J. Oliver 2012. (*IG* i³ 242, a fragment of a *lex sacra* of the 480s, was found in Piraeus but we do not know by whom it was issued.) In view of the evidence from other demes (ch. 22 nn. 108, 114) it is surprising to find the Plerosia here as a women’s festival (N. D. Robertson 1996 takes a different view). On the Kalamaia see R. Parker 2005*a*, 195, 474. The demarch of Eleusis sacrifices at the Halos, Chloia, and Kalamaia *c.*165/4 (Pelops), *IEleus* 229 (but it remains possible that in smaller demes Demeter-festivals were funded by the husbands of *archousai*, ch. 12 n. 31).

⁷ The classical theatre (marked on *KpA* II–IIa; see G. J. Oliver 2007*a*, map 2; Csapo 2007, 107) was found in the 19th c. but is not preserved. It is mentioned in Thuc. 8. 93, cf. Lys. 13. 32, Xen. Hell. 2. 4. 32. A new theatre was built near the Zea harbour *c.*200 (Steinhauer n.d. 28). Lease, *Agora* XVI 93, *Agora* XIX L 13 (*SEG* 57. 130); cutter of *IG* ii² 1262, Tracy 1995, 139. Part of the text was found in the Agora, but since ii² 1176 fr. b found its way to the British Museum, it cannot be regarded as certain that the decree was published in the city as well as in the deme (the text only specifies publication in the deme). See n. 9 below on *Agora* XVI 160, and Stroud 1974. The Dionysia in P. were celebrated between the Theseia (Pyropsion) and the Lenaia (Gamelion), presumably in Posideion, the month attested for other demes (ii² 1496 col. IV 70, 135, 144). On the terms of the lease see Behrend 1970, nos 30–1 (all one text); he points out that in response to Theaios’ proposal three of the four lessees, whose contributions were originally of 1000 dr. (Melesias, Oinophon) or 500 dr. (Aristophanes, Arethousios), raised their bids by 100 dr. each (Arethousios was the fourth). The high rent, 3300 dr., suggests that performances were held on more than one occasion (unless the lease ran for more than one year). Only demesmen are mentioned as spectators; possibly before Theaios’ proposal demesmen had had free seats? See also Csapo 2007, 90–4; Goette 2014.

⁸ *IG* ii² 2498; Behrend 1970 no. 29; Germain 1982; Chandezon 2003, 21–2; Papazarkadas 2011, 121–2, 134, 138; Pernin 2014. The Halmyris, despite its name, was used for farming; Travlos 1988, 340 locates it between Piraeus and Phaleron. See also Conwell 1993. Papazarkadas 138 suggests that the plot

Another deme decree, found—like part of the theatre text—in the Athenian Agora, has been dated to the early third century; if, as has been claimed, Piraeus and the city were reunited in 281, it might date from this occasion. It seems to arrange for an epidosis by both men and women, perhaps of 20 dr. per person, to pay for fortifications, and was proposed by [-c. 10-]s son of Philistides. Another deme decree of the same period grants honours to Kallidamas son of Kallimedon of Cholleidai for his service both to the Athenian demos and to the deme in difficult times (*epi tôn kairôn*); he is to receive a portion of all deme sacrifices except those specifically restricted to demesmen, and for this purpose may affiliate himself to whichever dining group (*triakas*) he wishes. He is also to have a special seat at the theatre among the grandees of the deme, and at the Dionysia is to be led in by the demarch, with the priests and other recipients of prohedria; he is to pay taxes as a demesman, and receives an olive crown, to be proclaimed at the tragedy competition by the herald. The decree is to be set up in the sanctuary of Hestia.⁹

This is a relatively meagre haul of texts¹⁰ for a deme that might have been expected to pick up from the city the habit of recording decisions on stone. Intensive activity on the site throughout antiquity and again from the date of

Paralia was connected with the cult of Paralos (ch. 29 n. 91), but this is hardly necessary. On the Theseion see Philochoros *FGH* 328 F 18, with commentary. There may be a relation between this text and the hekatoistai sales, which must have raised the question whether land owned by demes and other corporate groups was being effectively administered (ch. 22 n. 62). If the *apotiméma* required as security from lessees was calculated on the basis of a capital value of 12½ times rent, lessees who paid more than 10 dr. rent had to own real estate worth more than 125 dr. Those who paid less than 10 dr. (renting pasturage, Papazarkadas loc. cit.) had to name a guarantor. On saltings see Langdon 2010. Lambert 2004*a* reads *IG* ii² 2623 as *horos P[ei]|raizôn [oi]||[ki]as*.

⁹ *Agora* XVI 160, refers to deme property in P. (3rd c.); cf. Carusi 2014. As with the theatre decree, it does not seem to me necessary to suppose that the text had been set up in the Agora at Athens; it was to be published 'on the wall near the entrance'. The British Museum acquired *IG* ii² 1214, ii² 1176 fr. b, and ii² 2492 (Hicks 1874, XI–XIII) from the Society of Dilettanti; ii² 1214 is said to have been found in Piraeus, the other two texts are not given a provenance. It is possible that a group of Piraeus texts passed through the hands of a dealer in Plaka. There is, however, some question whether P. would have financed fortifications or passed honorary decrees when controlled by a Macedonian garrison. Gauthier's argument (1979) for a reunification of the city and Piraeus in 281 was accepted by Reger 1992 but rejected by Heinen 1981, Habicht 1995, 130 n. 3, and G. J. Oliver 2007*a*, 54–64; rejection would probably put ii² 1214 before 295. Philistides, the father of the proposer, probably served in the council in 303/2 (*Agora* XV 62. 249, Ph. son of Lamprokles); the family is discussed below (Table 30.1). *IG* ii² 1214, the decree for Kallidamas, was proposed by a Diodoros, who perhaps served as councillor in 281/0 (*Agora* XV 72. 140); Kallidamas' father Kallimedon is named on a list of (?) tamiai from (?) 325/4 (*AO* p. 214–15). On the division of P. demesmen into *triakades* (groups of 30) for dining at festivals see ch. 19 n. 34 on phratry thiasoi; ch. 29 n. 91.

¹⁰ A fragment dated c.300 from the sanctuary of Artemis Mounichia may mention *démotai* (Palaiokrassa 1983/1991, 233–4, pl. 59a), but provides no further information. *IG* ii² 3229 is a list of contributors to the dedication of a statue and building work in a sanctuary (no provenance), of c.350, headed by Aristophanes P., but contributors came from several demes, so this was not a deme project.

Greek independence may be part of the explanation; but the fact that many of the major sanctuaries and festivals were managed by the state and not by the deme may have restricted deme activity. The sanctuary of Artemis Mounichia was perhaps originally the responsibility of a *genos*; in the later fifth century its funds (or some of them) were held by the Treasurers of the Other Gods; this does not necessarily imply absence of local control.¹¹ The cult of Zeus Soter and Athena Soteira seems to have been a new foundation by the state, perhaps in the later part of the fifth century. Asklepios ‘came up to Athens from Zea’ in 420/19; it is not clear whether the Asklepieion in Piraeus was already in existence at that date, or was founded subsequently, but in any case it was not controlled by the deme. A temple of Aphrodite Euploia was built in Piraeus by Konon (II) of Anaphlystos to commemorate his victory off Knidos in 394, according to Pausanias, but we do not know how the priest or priestess was appointed and who was responsible for cult.¹²

Piraeus was also the location of a number of immigrant cults that were given various degrees of official recognition: Bendis was established with a festival at which there was a torch-race, probably by tribal teams, and a civic procession, before 429; a sanctuary of Kybele seems to have been founded in the early fourth century; a group from Kition in Cyprus was granted permission to buy land for a sanctuary of Aphrodite (Astarte) in 333/2.¹³

The visibility of the state in P. is well illustrated by *IG* ii² 380, a decree of 320/19—perhaps inspired by Platonic ideas about the need for port areas to be strictly regulated—which directs the market officials (*agoranomoi*) of P. to use their funds for work on the agora and on their own office, the *agoranomeion*; since they have taken over the responsibilities of the police (*astynomoi*), they are also to repair the streets used for the processions of Zeus Soter and Dionysos, compel those who have tipped earth onto these roads to remove it, and impose

¹¹ *Genos*, see R. Parker 1996, 319; Other Gods, see ch. 22 p. 804.

¹² Zeus Soter and Athena Soteira, perhaps in the area of Ag. Trias (*A to Z* 153 E 24), Travlos 1988; R. Parker 1996, 239–40. Asklepios, *IG* ii² 4962; R. Parker 175–82; Clinton 1994*a*; Eickstedt 2001; see below, n. 87, on *IG* ii² 47, which shows the state managing the cult in the early 4th c. An unpublished site E of Zea, excavated at the end of the 19th c., supposedly produced temple remains, a statue, votives, dedications, and inscriptions, including that of Euthydemos, ii² 4962 (*AD* 1888, 132–6; Eickstedt 1991, 114 with III 1. 131, wrongly places this site on Serangiu SE of Zea); public buildings of c.350–320 excavated NE of Zea at Neorion 114–18 (four dining rooms, bath, courtyard; *AD* 42 B 1, 1987, 53–60) are interpreted as facilities for trireme crews. Aphrodite: Paus. 1. 1. 3; R. Parker (1996, 238) discusses evidence that a sanctuary existed before Konon’s victory.

¹³ Bendis: see R. Parker 1996, 170–5; G. J. Oliver 2007*a*, 66–7; Sakurai 2014, later date; ch. 12 n. 64. Kybele: Travlos 1988, 288–97; Petrocheilos 1992; Parker 188–93; Borgeaud 1996, 46–51; Steinhauer 2015, late 6th c. statue dedicated by a Hipparete (probably a common name in wealthy families of the period). Aphrodite: *IG* ii³ 337; Baslez 1986; Parker 160–1. The association of the introduction of the cult of Isis (unlocated) with Lykourgos II, which would place it in the 5th c., is rejected by R. R. Simms 1989, who suggests a date between 339 and 333.

fines in future on anyone who deposits earth or dung in the agora or on roads (cf. G. J. Oliver 2012).

In addition to public buildings—sanctuaries, the agora, magistrates' offices, and the slipways, ship-sheds, and storage lofts of the fleet¹⁴—one could also see in Piraeus the houses of many prominent and/or wealthy men: Kallias of Alopeke, Timotheos son of Iphikrates of Rhamnous, the banker Pasion, Demosthenes.¹⁵

At least one family of demesmen, perhaps two, can be traced back into the fifth century. The Archeboulos named on a casualty list of Hippothontis of 409 bears a name only attested in this deme, and was perhaps the father of Bathyllos P., syntrierarch c.350, since a Bathyllos II son of Archeboulos II was honoured at Delphi c.284/3. Archeboulos II or a brother, son of [Bathyl?]los I, may have commemorated a victory in men's dithyramb c.350; the Archeboulos (III) who served in the cavalry c.250 will have been a son of Bathyllos II.¹⁶

Sostratos I, whose sons (Philistides I and a brother) were commemorated on a painted stele with an epigram, set up in the second half of the fourth century, on which the brother's name was later erased and replaced by that of Sostratos II son of Philistides I, may be the first attested member of a family that can be followed for several generations (see Table 30.1). The epigram records that each of the brothers had served four times (?) in an office concerned with dancing in religious festivals in Athens, and that both lived to see grandchildren. Despite the reference to 'Athens', it is tempting to suppose that the office concerned was that of komarchos at the Herakleion of the Tetrakomoi.¹⁷ A daughter of Philistides I, born c.370, perhaps married Lamprokles son of Aresias I P., tamias in 351/0, whose two sons were called Aresias II (?) and Philistides II; the latter served as councillor in 303/2, and was perhaps the father of Theodotos son of Philistides P., commemorated with his son Philistides III in the early third century by a trapeza found in the St John Rentes area; another son of Philistides II proposed the deme decree of the early third century concerning contributions for fortifications. Aresias II had a son Lamprokles II, whose son Aresias III served as councillor in the 250s; Nikostratos son of Aresias P., named as an official (?) and as guarantor in Eleusinian records of (?) 354/3 (*IEleus* 141. 18, 145. 6–7), will have been a brother of Lamprokles I.

¹⁴ For Philo's arsenal, near Plateia Kanare, see *AD* 44 B 1, 1989 (1995) 50; Steinhauer in Hoepfner a.o. 1994; *AD* 64, 2009, B1–2, 221. On Eetioneia see Steinhauer 2003. There may have been building associated with the introduction of the ephebate; *IG* ii² 478, a decree honouring the ephebes of 305/4, found in Piraeus (Reinmuth 1971, no. 17), was to be set up [*en tōi gymnasi?*] *ōi tōn ephēbōn*, in the ephebes' gymnasium (cf. Humphreys 1985a n. 32). A sanctuary owned by an association of Dionysiastai was excavated on Plataia Korae.

¹⁵ Kallias, Xen. *Symp.* 1. 2; Timotheos and Pasion, [Dem.] 49. 22; Demosthenes, Dein. 1. 69. For Pasion's successor Phormion, who perhaps became a demesman of P., see *APF* 11672 IX and ch. 28 n. 17.

¹⁶ *APF* 2817. Archeboulos I, *IG* i³ 1191. 273; son of [Bathyl?]los I P., ii³ 4. 450 (there are of course many other possibilities); Bathyllos II, *FD* III 2. 200; Archeboulos III, Bugh 1988 II B 65–6.

¹⁷ *IG* ii² 7095 = *CEG* 570; Wilhelm 1934. [T]e[tr]aki in l. 6 is uncertain. On the Tetrakomoi see ch. 29 n. 28.

Notes: All this is obviously very conjectural, especially the marriages of Hephaistia and Archestrates (for corrections to IG ii² 7188–9 see *LGP*N Archestrates 11, Sophilos 23). It seems impossible that they were sisters. On IG ii² 7195 (*CEG* 570) see Wilhelm 1934.

IEleus 141 now dated 354/3

TABLE 30.1. Peiraios: Sophilos

The name Sophilos also occurs in another well-attested P. family but there is no clear connection with the family of the dancing grandfathers. Aristomachos I son of Aristaïos served as epimeletes of the Tetrakomoi c.350. His son Sophilos II had two sons: Aristomachos II, whose son Sophilos V served in the Council in 303/2, and Sosias, whose son Sophilos IV served in the same year. Sostratos II's son Sophilos III also served in the Council in 303/2. Chairion daughter of Sophilos P., whose kioniskos of the early third century was found on Salamis, will have been a daughter of one of these three cousins. Both families took wives from a lineage in Acherdous (n. 62).

The richer of the two theatre lessees in 324/3 who belonged to P., Oinophon son of Euphiletos, has no known connections. The other, Aristophanes son of Smikythos, heads *IG* ii² 2329, the list of contributors to building work on a hieron and dedication of a statue (n. 10). The Smikythos who appears in line 10 of the list may be a son, Smikythos II, although his patronymic and deme are not preserved. Aristophanes' co-lessee Arethousios Pelex is named at line 11.¹⁸

Kalliades son of Philinos, who proposed a rider to the decree concerning the theatre lease, was honoured at some time in the second half of the fourth century with his brother Lysimachides by the orgeones of Amynos, Asklepios, and Dexion. They were praised for their *aretê* and *dikaïosynê*, and awarded gold crowns of 500 dr. each, with money for a sacrifice and dedication and for the stelai recording these honours, which they were to set up. Possibly they had helped the orgeones in a court case; Lysimachides was named with a number of others, including Menon (II) son of Aristokles, probably a member of a wealthy P. family, in a curse tablet that mentions synegoroi.¹⁹

Menon II's father Aristokles son of Menon I was commemorated in the early fourth century by a relief stele portraying him on a prancing horse, with an epigram alluding to the pleasures of riding with contemporaries; he had perhaps taken part in the tribal anthippasia competition. Menekles son of Automenes P., who is recorded as (?) kleruch in mid-century, may be a younger member of this family.²⁰

¹⁸ See n. 7. Ll. 14–15 may be Telesandros II and Euktemonides II (?) of Aixone, cf. *IG* ii² 5425, Euktemonides I son of Telesandros I, mid 4th c., and Antikrates Eukt(emonidou) Aix. (Kroll 1972 no. 72, class IV, 350s?, from Aixone), who is perhaps also named on ii² 2375. 14.

¹⁹ Theatre, n. 7; orgeones, *IG* ii² 1252 (Aleshire 1991, A 5; Papazarkadas 2011, 313 no. 66 wrongly gives the name as Lysimachos). Kalliades and Lysimachides may have been grandsons (SS) of Kalliades son of Kallikrates, commemorated c.390–365 on the stele ii² 7170, found in Piraeus. It is conceivable that Lysimachides' name came from Lysimachides of Acharnai (*APF* 9480, Aleshire 1991 A 9), who made a dedication in the sanctuary of Amynos, but the dates do not fit well. Curse tablet, Wunsch 1897, 95 (B 23–4); the tablet was hard to read and names demesmen of Phlya and (?) Anaphlystos as well as P.

²⁰ Aristokles, *IG* ii² 7151 (from Athens) = *CEG* 482, *CAT* 2. 209a; cf. also Sassi 1981. He is bearded, and may have served as phylarch (ch. 21 n. 48). Menekles, ii² 1927. 60–61, see Humphreys 2010a. On Theoboulos son of Theophanes P., ii² 2393, and his homonymous (?) great-grandson (SSS), general c.200, ii² 1934, ii³ 4. 8, see Tracy 1990, 155–6.

Horse-raising seems to be implied also by the names of Agonippos P. and his son Hippon, the latter commemorated by a stele of c.360 with a relief loutrophoros. Another such stele, commemorating a Nikomachos P., found near the French archaeological school in Athens (Didotou 6), bears an epigram alluding to sheep-raising on Lemnos. Nikomachos (II?) son of Nikomenes was commemorated by an anthemion stele of c.365–340 reported from Trachones, on which he is named with two women, perhaps successive wives; he may have been a younger kinsman of Nikomachos I.²¹ Nautical interests are represented by the names of Keleuon son of Nausistratos I P. and his son Nausistratos II, lessee of an orchard (*Agora XIX* L 6. 14–15; Papazarkadas 2011, 307 no. 37).

On Philophron son of Philokles P., guarantor for Kephisophon of Paiania and mine lessee, buried on Imbros, see Papazarkadas op. cit. 316 no. 84.

A son of Lysinios I P. bought land at Phaleron for 440 dr. in the hekatostai sales; the [Ly?]sinos (II) who proposed a decree of thiasotai of Bendis in 272/1 may be the purchaser's son.²²

As one would expect, Peiraiaans figure solidly in the records from Salamis. Hagnotheos P. acts as guarantor for a Diophantos who rents property on the island in the early fourth century, possibly the father of Epikrates Diophantou P., recorded as serving in the cavalry on Salamis c.320.²³ Xenotimos son of Olympiodoros P., commemorated by a stele with a relief loutrophoros found on Salamis, was perhaps the son of the Olympiodoros P. who was still serving as trierarch in 323/2, who in turn may be the Olympiodoros son of Philoxenos P. of a stone copied by Pittakes. Ktesippos son of Olympiodoros P., councillor in 303/2, was probably a second son of the trierarch.²⁴

²¹ Hippon, ii² 7169, no provenance (three demesmen of P. serve in the cavalry on Salamis c.320, ii³ 4. 323; one of them, Eustrophos, seems to have come from a Eumolpid family, since a homonym was hierophant in the late 2nd c., *IG* ii² 2452). Nikomachos I, ii² 7180 = *CEG* 475, *CAT* 1. 303; attempts to fix the date during the period 404–387, when Lemnos was independent from Athens, are probably mistaken, since in any case some families may have sent ashes back to Athens for burial. Provenance 'Athens'. Nikomachos II, ii² 6054 (Louriotes estate, *AEE*² no. 295); Philoumene daughter of Gnathon of Eleusis (n. 94) is named first, and the names of Nikomachos and of Phile daughter of Eupheros of Kephisia are later additions.

²² Lambert 1997a F 9 B 16, [-c. 7–8-] Lysinou; *IG* ii² 1317 + *SEG* 3. 127 (arch. Lysitheides); M. J. Osborne 2009a, 658–60 no. 1 (ch. 12 n. 47). It is not stoichedon; the restoration [Ly]sinos is uncertain, but probable.

²³ *IG* ii² 1590a (p. 810) 7–8, both names erased. The Hagnotheos P. named on Audollent 1904 no. 50 with his wife Myrrhine and his sons Apollonios and Parthenios, though dated to the 4th c. by Audollent, may be later; Apollonios is uncommon and Parthenios unknown in the classical period. Epikrates, ii³ 4. 323. 25 (the name Diophantos is attested in ten other demes in the classical period). Cf. Diophantos son of Epikrates P., commemorated by a kioniskos found on Salamis, *SEMA* 548, and Philinos, adopted son of Diophantos P., another kioniskos from Salamis, ii² 7194 (the expression *gonoi de* with the genitor's name does not seem to occur on tombstones before the 3rd c., ch. 2 n. 81), M. C. Taylor 1997, 310 no. 339.

²⁴ Xenotimos, ii² 7181 (lost); trierarch, *APF* 11407; Olympiodoros Philoxenou, ii² 7182 (Athens, undated); Ktesippos, *Agora XV* 62. 250. However, the Olympiodoros son of Eumelos P[—] who sold

Sitta von Reden (1995) has characterized P. as ‘a world apart’; certainly the high proportion of metics among its residents would have distinguished it from the more rural demes, though not perhaps from those of the city proper, but its demesmen do not seem to differ markedly in their political and economic interests, in so far as we can reconstruct them, from those of other demes.

Thymaitadai

The *Karten von Attika* reported a deme-site at Kera(t)sini, north-west of Piraeus, assigned to Thymaitadai, and placed Korydallos further west; the general locations are not in doubt, but we have little information about archaeological remains in this area. Thymaitadai was the base of a phratry.²⁵ There is no record of deme activity apart from participation in the festival of the Tetrakomoi (*IG* ii³ 4. 225). A son of Simondes Th. bought property in the deme from the Tetrakomoi in the hekatostai sales; he may have had mining interests.²⁶

The most distinguished member of the deme in the fourth century was the historian Phanodemos, son of Diyllos I, who served as councillor in 343/2 and played quite a prominent role in the Lykourgan era. His son Diyllos II, also a historian, was councillor in 303/2.²⁷

Korydallos occupied territory between Thymaitadai and Mt Aigaleos. Erasiphon son of Epikrates K., commemorated c.350 by an anthemion stele found in Piraeus, may possibly have belonged to a wealthy family from which a client of Lysias tried to collect debts in the early fourth century.²⁸

land on Salamis for a group of Eikadeis in the hekatostai sales (Lambert 1997a, F 13A 13, Π / .) is more likely to belong to Prospalta (ch. 27 n. 48). Wilhelm’s suggestion (1904) that he is named on the curse tablet Wunsch 1897, 103 a 5 is not particularly likely; several names here have Lamptrai connections (chs. 14 n. 83, 23 n. 76) and Olympiodoros (attested in Lamptrai in the 2nd c. BCE) is a very common name. Further afield, note Antichares, kleruch on Samos c.350, *IG* xii 6. 262 VIII 13, perhaps related to (but rather young to be identified with?) Antichares father of Philotades (not Philostratos as Habicht and Hallof 1995 p. 295) P., and grandfather of Philonides II P., ii² 7199 (after mid-century); cf. Philte daughter of Philonides I P., buried Piraeus with a husband from Aixone, ii² 5404, 390–365; Philon son of Philonides III, ii² 7197 = 7198 (cf. *AJP* 64, 1943, 338), dated 2nd c. BCE.

²⁵ *KvA Text* II 10–11. Leake reported temple remains on the hill between Ag. Georgios and the sea, Milchhöfer saw building remains but could not judge their character. Phratry, ch. 19 n. 6. Korydallos (hieron of Kore Soteira, possibly identified on Mt K., with a heroon), *KvA Text* II 11–14.

²⁶ Lambert 1997a F 9 B 14, [-7–8-Jos Simondou; *APF* 12710 suggested a connection with the Simondes of *Agora* XIX P 26. 328, but he is assigned in that publication to Sounion (the name is also attested in the 4th c. in Hybadai and Kephisia).

²⁷ *FGH* 325, Humphreys 1985a, Brun 2013, Phanodemos, with *SEG* 63. 98; *FGH* 73, *Agora* XV 62. 259 Diyllos II.

²⁸ *IG* ii² 6452, Lys. 17; Agryle and Kikynna (ch. 27 n. 42) are other possibilities. Phormisios son of Menekleides Th. won a choregic victory at the Thargelia in 380/79, *IG* ii³ 4. 476.

Keiriadai

The deme bordered Koile on its east side; it is not clear whether it was contiguous with Thymaitadai to the west (more probably, part of the territory of Xypete separated them).²⁹

Pamphilos K., who served as general in 389/8 and was subsequently condemned to pay a large fine, will have been a prominent member of the deme until the family was overwhelmed by this debt. His daughter Plangon, who lived in the city, presumably with her three brothers, bore two sons to Mantias of Thorikos who were recognized as legitimate by their father, not without controversy. Pamphilos' sons were called Boiotos, Euthydemos, and Hedylos; Boiotos may have been given his name in reference to the exile of democrats in Boiotia under the Thirty, and may be the Boiotos who represented his deme in an appeal case resulting from an adverse decision by the demesmen. He is less likely to be the Boiotos who was killed by Euaion in a brawl at some date in or shortly after 348.³⁰

Aietes K., who served as polemarch in 371/0, was called as a witness by Apollodoros of Acharnai in the 340s to testify concerning the claim to free status made by Neaira during his term of office ([Demosthenes] 59. 40). A Chion K. served as theoros to the oracle of Ammon in Libya at an unknown date; it is not clear whether the Chion K. attested as member of (?) the kleruchs' council on Imbros in 352/1 is the same man or a descendant.³¹

Euthykrates son of Demarchos K., whose grave monument was found in the deme area (Pramanton St no. 8), had a daughter, Timesylla, who seems to have married into the family of Teisamenos of Sphettos, and was buried in that deme.³²

Koile, as noted above, occupied an area that had perhaps originally lain both inside and outside the walls of the city; the conspicuous tomb of Kimon Koalemos' racehorses, round which other monuments to members of the family accumulated, was probably just outside the gate in the pre-Themistoklean wall (if there

²⁹ To maintain the theory that trittyes were designed as continuous stretches of territory, one might have to assume that residents of part of the area between the core areas of Thymaitadai and Keiriadai had preferred to register in Xypete.

³⁰ *APF* 9667 (needs revision); on the Mantias affair (Dem. 39–40) see Humphreys 1989 and forthcoming *a*. Isaios' speech *pros Boioton ek dêmotôn ephesis*, in which Keiriadai was mentioned (F VI (37) Thalheim 1903), need not have been written for a case arising from the diapsephesis of 346/5 (and, *pace APF*, cannot have been written for a case concerning the admission to Thorikos of Mantitheos-Boiotos). The fight between Euaion and a Boiotos is mentioned in Dem. 21. 71–2, written for a case of 347/6; Boiotos K. was alive in 349/8 (Dem. 39. 32), and in any case the brawlers were probably younger men (the name Boiotos is attested also in the 4th c. in Eroiadai and Melite).

³¹ *IG* ii² 1642 = *SEG* 21. 562. 35; *IG* xii 8. 63b 10.

³² Euthykrates, *AD* 23 (1968) B 88, *SEMA* 279; Timesylla, *IG* ii² 7527, mid 4th c. Note that ii² 6309 = *CAT* 3. 891 was read by Peek (1942, 168 no. 348) as commemorating [Myn]nine daughter of Hera[kle]ides K., with her father and her (?) husband Diokleides son of Mnesikleides of Ikarion.

was one), between the Pnyx and Mouseion hills.³³ It was probably the most distinguished of Hippothontis' city demes in terms of the antiquity and status of its leading families, some of whom belonged to Eleusinian genê.

[*Spin*]tharos [*ek Ko*]ilês appears on ostraka of the early fifth century, and so probably does his son Phalanthos. Melanthos son of Phalanthos, also a target in the early fifth century, may belong to the same family; a Euphiletos son of Melanthios K. appears on a tribal list of the later fourth century.³⁴

Metagenes (I) K., general in 433/2, belonged to the genos Kerykes. His son Epigenes I served as amphiktyon on Delos from 377/6 to 374/3, and in his turn had two sons, Metagenes II, diaitetes in (?) 330/29, and (probably) Euergetes I, father of Epigenes; the latter proposed a decree of the Kerykes at the end of the century. Epigenes's son Euergetes II served as councillor in 304/3, and the family can be traced into the Hellenistic period. The Euergetes named on the curse tablet Wünsch 1897, 104 may have belonged to it.³⁵

Laispodias III son of Andronymos (?) K., who was elected general for 414/3, and served as ambassador to Sparta under the Four Hundred, was probably a descendant of the Laispodias who set up a dedication on the Akropolis c.500–480; the Laispodias son of Laispodias K. named on an ostrakon of the 480s will be the dedicant or his son.³⁶ There may well have been rivalry in the deme and tribe in the late fifth century between Laispodias (III) and Archinos K., who held office as general many times, according to Demosthenes (24. 135), and played a prominent role in the democrats' 'return from Phyle' in 403, as one of the more moderate members of the group. He opposed the proposal that all those who had been under siege at Phyle should be granted citizenship, proposing instead that each should receive an olive crown and money for sacrifices and dedications; he shortened the time allowed for registration to those who chose to settle in

³³ Most if not all of Koile would subsequently have been enclosed by the Themistoklean wall and by the Long Walls built in 457. See now Greco 2011, 349–57; on the pre-Themistoklean wall, Papadopoulos 2008. On Kimon's tomb see ch. 10 n. 110. Unpublished rock-cut inscriptions in K., *BE* 2013 no. 14. Lambert 1997b, 96–7, is inclined to place the 'agora in Koile' of the Salaminioi in this deme rather than in Sounion with the other property mentioned in the same context (*Agora* XIX L 4a 16–18).

³⁴ Spintharos, Brenne 2001 nos. 247–8; *Agora* XXV no. 662; Phalanthos, *ibid.* 667; Melanthos, *ibid.* 640–2; Euphiletos, *IG* ii² 2393 (on the date and character of the text see below, n. 97).

³⁵ See ch. 20 n. 101, Table 20.2. *APF* 10807 notes the possibility of an affinal connection with the Eumolpid family of Epigenes of Kydathenaion, which is tempting in view of the Eleusinian connections of both families; however, since the names Epigenes and Metagenes are synonyms, the occurrence of the same pair of names in both families carries little weight (Epigenes I K. does seem to have been born rather late in his father's life). References *LGP*N Metagenes 8 (I), 9 (II); Epigenes 49 (I), 50 (II); Euergetes 2 (I), 3 (II). It is unlikely that the Metagenes of Wünsch 1897, 102 belongs to this family, since the milieu seems to be the urban underclass.

³⁶ *LGP*N Laispodias 5 (III), 1 (I), 3–4 (I–II) (the name is otherwise attested only in Anaphlystos [2], where it may well be borne by a grandson (DS) of Laispodias III). On Philon son of Philon K., another ambassador, and his descendants, see Papazarkadas 2011, 316–17 no. 84.

Eleusis with the Thirty, and strengthened the amnesty provisions, first by persuading the Council summarily to execute an early offender, and secondly by introducing the *paragraphe* procedure for use by those who claimed to have been the target of attacks contrary to the amnesty agreement. His son Myronides is known only because he was fined after holding some office; the name suggests that the well-known general Myronides of the 450s may have been Archinos' father or father-in-law.³⁷

Aristoneides son of Emmenides I K. dedicated a group (?) of bronze statues on the Akropolis *c.* 450; a descendant, Emmenides II, was councillor and *epistates* in 349/8 and perhaps served as one of the *horistai* who re-mapped the sacred *orgas* on the boundary between Eleusis and Megara in 352/1.³⁸

Eroiadai

Two tombstones of demesmen and a *dikastic* pinax were recorded at Chaidari, near Dafni; if the deme-site lay in this area it is possible that the whole of the south part of Mt Aigaleos belonged to the city *trittys* of Hippothontis and that the city and coastal *trittyes* were contiguous.³⁹

As in the case of other homonymous demes, it is often impossible to tell whether members of an *Eroiadai* belonged to Hippothontis or to Antiochis. However, Satyros I son of Nik[ias I] E., who may appear in a *diadikasia* list of *c.* 380, had descendants whose records can be linked to Hippothontis: Satyros II son of Nikias II served as councillor for the tribe in 303/2, and Diodoros son of Satyros I made a dedication commemorating a victory with a boys' choir at the Thargelia of

³⁷ Archinos, *SEG* 28. 45. 55, *Aisch.* 3. 187–90; *paragraphe*, *A.P.* 40. 1–2 with P. J. Rhodes 1981*a ad loc.*; *RE* Archinos 2; M. H. Hansen 1983*b*, 162; 1987*a*, 209–10. His funeral speech (date unknown) was admired. Myronides (K.), *Dem.* 24. 135. His son attested as *ephebe*, *IG* ii³ 4. 340, perhaps with the son of [Hiero]μημερον (son of Teisimachos, *ID* 104.5. 21–2, 359/8). It is in any case somewhat doubtful whether the Myronides said to have served as ambassador in 480/79 and as general in the following year can be identified with the Myronides who was general in the 450s. The M. of the 480s was presumably the Myronides of Phlya named on an ostrakon of the early 5th c. (*LGPN* 9, Brenne 2001 no. 193); if he was still capable of active service in the 450s, and if he was of an age to be Archinos' father-in-law, he must have been rather young in 480 (perhaps there were family connections with Sparta; he may have been a descendant of Myron of Phlya, *A.P.* 1; ch. 29 n. 83).

³⁸ *IG* i³ 875; Emmenides II, ii³ 296. 4–5, ii³ 292. 79–80 (demotic restored). His name appears with that of Autokles son of Derkylos of Hagnous (ch. 27 n. 40) on an *epistyle* (?) of the late 4th c., possibly from the dedication or tombstone of a woman who was the daughter of the one man and wife of the other, ii² 3837 = *SEG* 42. 167 (the names of both men are in the genitive case; the stone is broken on all sides).

³⁹ *IG* ii² 6090 = *CAT* 3. 371d (stele with *sima* and a mourning siren), —s son of Demarchos E.; Demarchos' *dikast*-ticket (class VI), Kroll 1972, no. 117. *CAT* 2. 912 = *SEMA* 225 (lekythos), Pheidippos son of Pheidias Oreiades. *CAT* says that the lekythos was probably set up for Pheidippos' wife (name erased) and points out that the provenance may be Odos Kotsias 18, Peristeri (*A to Z D* 2–Z 1); alternatively, Korytsas in Chaidari may be a possibility?

355/4.⁴⁰ Apollodoros son of Pistodoros I, who is recorded as (?) kleruch in mid-century, had a son Pistodoros II who appears in a list of soldiers of 306/5; a relief lekythos of the middle of the fourth century, representing Pistodoros I as a bearded man and Apollodoros as a beardless hoplite, would have been set up to commemorate Pistodoros I.⁴¹ Myrmex 'Oreïades', buried at Eleusis with Archippe daughter of Damainetos of that deme at the beginning of the fourth century (during the period of occupation by the Thirty?), may have been a son or grandson of the Myrmex of Hippothontis who was killed in battle in 448.⁴²

The career of the most distinguished demesman of the Lykourgan period, Philokles son of Phormion, has generated extensive controversy. He served as kosmetes of the epheboi in (probably) 329/8, and may also be the Philokles who as general with responsibility for the Piraeus area in 325/4 let Harpalos land, and was consequently deposed. The general had served as hipparch three or four times and as general in more than ten years.⁴³

INLAND TRITTYS (DIAKRIS)

This consisted of Dekeleia, Oion Dekeleikon, and probably Anakaia and Acherdous. Traill assigns Oinoe and Azenia also to the inland trittys, but on his locations they were contiguous with demes of the coastal trittys, and separated from Dekeleia by demes belonging to VI Oineis and IV Leontis.⁴⁴

⁴⁰ Satyros I, *IG* ii² 1928. 23 = *SEG* 32. 171 (*APF* 12580); the demotic is lost and both names are relatively common, but there is no obvious reason why they should be combined, and date and social status are appropriate for the Eroïadai family (however, it is not clear whether Satyros is named as a potential liturgist or as an official). Nikias II, syntrierarch in 356, *APF* 10798; Satyros II, *Agora* XV 62. 262; Diodoros, *SEG* 27. 17 with Traill 1975*b*, 386–8. On Sondrides son of S[ostr]atos E. see Papazarkadas 2011, 314 no. 74.

⁴¹ Apollodoros, *IG* ii² 1927. 63–4 (on the date and character of this list see Humphreys 2010*a*); lekythos, *IG* ii² 6095 = *CAT* 2. 405 (perhaps a stock scene designed for commemoration of a young hoplite who died in battle, used here on the death of Pistodoros I); Pistodoros II, ii³ 4. 319. 9, cf. A. J. Bayliss 2003. The entries in *LGP*N Apollodoros 98–100 are probably all one man; the Pistodoros entry is confused.

⁴² *SEMA* 202; the Archippe named on *IG* ii² 6090 with the son of Demarchos E. might have been Myrmex' daughter. [M]yrmex of Hippothontis, *IG* i³ 1163. 8.

⁴³ Philokles is recorded as kosmetes on *IOr*op 353 = Reinmuth 1971, no. 15; redating of this text to 329/8 instead of 325/4 (fortified by the arguments of Knoepfler 1993*b* for dating the first Athenian celebration of the penteteric Great Amphiarraia in 329/8; see Humphreys 2009) removes the problems created for the identification of kosmetes and general by the date 325/4 (the general was deprived of responsibility for ephebes after admitting Harpalos, Dein. 3. 15, and thus could not have been honoured as kosmetes in 325/4, even if it had been possible to hold the two offices concurrently, which is most unlikely). With *IOr*op 353 dated to 329/8, we have to assume that Deinarchos' reference to the general's responsibility for ephebes was justified by the presence of the ephebes in Piraeus in their first year of service.

⁴⁴ For further discussion of locations see under individual demes; for the name of this trittys, and for Traill's attempt (1975*a*, 1986) to construct trittytes appointing equal numbers of councillors, see ch. 21

Dekeleia

The general location of the deme, at Tatoi, is well established, although difficulties of access to the area, which belonged to the royal family, have limited archaeological exploration.⁴⁵

Dekeleia was the base of the phratry Demotionidai, which had a sanctuary of Leto, and of the 'oikos' Dekeleieis; identifiable members of the phratry are demesmen either of Dekeleia or of its neighbour Oion Dekeleikon. The deme was occupied by the Spartans from 413 to 403, the site being chosen mainly, presumably, for its strategic position on a major route from Attika into Boiotia, but perhaps also in part because the 'oikos' claimed that its eponymous ancestor Dekelos had helped the Dioskouroi to find Helen when Theseus had abducted her and hidden her at Aphidnai. The effects of the Spartan occupation on relations between demesmen who stayed in the deme and those who took refuge in Athens have already been discussed.⁴⁶

The leading member of the deme in the early fifth century—who belonged to the oikos and thus also to the phratry—was one of the most colourful personalities of a period that contained many leading figures brightly painted by our sources, Sophanes son of Eutyichides, who had killed an Argive pentathlete in single combat, and held his ground in the hoplite line as if anchored to the spot. He served (and died) as general in 465/4 on the ill-fated colonial expedition to Drabeskos, which seems to have been the policy of Kimon's opponents. The Sophanes who was *kalos* in the 450s may be his son, and may also be the Sophanes who was killed in action *c.* 411.⁴⁷

The Aristarchos who served as general under the Four Hundred may have been Aristarchos of D., who won a victory with a boys' chorus in 422/1, but there are other possibilities.⁴⁸ Oinobios D. (if Aristarchos came from Dekeleia, a local rival) served as general under the restored democracy in 410/9. A highly

n. 25. Auridai (nn. 1, 124) may also have belonged to the inland trittys, but I have grouped it below at the end of the coastal trittys with other small unlocated demes.

⁴⁵ AGC 21, X7/Y6 no. 13, puts the settlement at Zoodochos Pege, with the burial area (no. 14) on a hill ten minutes (approx. 650 m) to the north, and the Spartan fort on Palaiokastros (no. 15), which also has Bronze Age fortifications (Simpson 1965, no. 383). Cf. Ober 1985; Mersch 1996, 118–20; Funke 2000; Goette 2001, 270 (on my latest road map, 2012, Katsimidi at 1120m ? is not named, and Beletsi is Korphi). For demesmen buried in the deme see ch. 19 n. 105 on the family of Nikodemos; the boy Antiphanes represented with his mother Melis on IG ii² 12109 = CAT 1. 870, a relief stele of the 350s found at Tatoi, may perhaps have been related (BS?) to —kles son of Antiphane[s] D., councillor *c.* 360–340, *Agora* XV 20. 34.

⁴⁶ See ch. 19 on the phratry and prosopography of phratry members. Dekeleia also had a shrine of Zeus Parnethios, possibly in the care of the (?) genos Komadai, IG i³ 1186 *bis*, ch. 20 n. 45.

⁴⁷ Hdt. 9. 73–5; see Humphreys 1999. Evans (1988, 9) notes that this passage in Hdt. must have been written before 427 (Thuc. 3. 26. 3). Possible son, LGPN Sophanes 1–2.

⁴⁸ APF 1663, LGPN Aristarchos 4; the general was one of the extremist oligarchs who joined the Spartans in Dekeleia after the fall of the Four Hundred.

problematic passage of Pausanias appears to say that he saw a record on the Akropolis that Oinobios proposed a decree recalling Thucydides from exile.⁴⁹

Thrasylos son of Thrasylos, who set up a particularly conspicuous choregic monument in 320/19, also belonged to Dekeleia. He acted as 'host' for Plouton at about the same date, and the god continued to favour his family; his son Thrasykles served as phylarch in 282/1 and as agonothete in 271/0 (archon Pytharatos).⁵⁰

Oion Dekeleikon

I have suggested that Oion Dekeleikon and Oion Kerameikon may have been neighbouring villages on the east/southeast side of Dekeleia, Oion Dekeleikon perhaps at Baffi-Keramidi and Oion Kerameikon at Bogiati.⁵¹

Alexandros son of Alexias of Oion was buried in the deme area, although the trapeza commemorating his mother Nako, daughter of Phantias O., was found in the city. Alexandros leased sacred land in 343/2, and may be the son of [Al]exias [of Oion] who was trierarch c.330; he brought a case against Polyuktos of (?) Kydantidai, perhaps concerning the land in Oropian territory granted to Hippothontis and Akamantis.⁵²

Polynikos son of Phokiades I. O., proposer of the tribal decree *IEleus* 67, was the father of Phokiades II, councillor in 335/4 (*Agora* XV 43, cf. n. 50); Phokiades I served as treasurer in 425/4 (*IG* i³ 300. 6, etc.). Since the name is rare, there may be a link with the family of Phokiades I son of Teisias I of Eleusis (n. 101).

⁴⁹ Paus. 1. 23. 9, attacked by Wilamowitz 1877, defended by Schöll 1878, 437–42.

⁵⁰ *APF* 7341; *LGN* Thrasylos 16–17, Thrasykles 13–14 (for 13's patronymic see Habicht 1997). For the Thrasykles son of Thrasylos who was councillor for Hippothontis in 335/4, *Agora* XV 43. 184, see Traill 2003 n. 16.

⁵¹ See Milchhöfer 1887, 1892; *AGC* 21 X7/Y6 no. 1–2 Baffi, 3–4 Bogiati; Mersch 1996, 112–13 (Bogiati); ch. 26 n. 68. Two Oion tombstones were found (re-used in a church) at Bogiati, *SEMA* 485 (Alexandros) and *IG* ii² 6990 = 7009. Note also that Aristogenes son of Aristophilos, whose tombstone was seen at Baffi by Fourmont and Milchhöfer (ii² 10773), bears names that both occur in Hippothontis (i³ 1163. 18, 1186. 71).

⁵² *SEMA* 485, *IG* ii² 7000 (Nako). Alexandros, *APF* 529, *Agora* XIX L 6. 148 with *SEG* 61. 145; Papazarkadas 2011, 301. Hyp. 4 *Eux.* 12 refers to Alexandros' prosecution of Polyuktos, apparently for his proposal (*Eux.* 16–17) that Hippothontis and Akamantis should restore their allocation of Oropian territory to Amphiaraios (Whitehead 2000, 193–4); Dein. F III 3 Conomis 1975, from a speech in this case, refers to Alexandros' ownership of a *boleôn*, apparently an area where dung was collected for resale. If Alexandros was acting on behalf of his tribe in this case, the family will have belonged to Oion Dekeleikon (ch. 26 n. 71); his grandfather (MF) Phantias O. may possibly have been related to Phantias of Dekeleia (ii² 5983, see ch. 19 n. 105). Alexandros and Alexias (I or II?) may be named on the curse tablet *SEG* 58. 266 (D. R. Jordan 2008), which perhaps arose from a conflict in the tribe: the names Aristarchos (*IG* ii² 6020) and Aristophanes (*Agora* XV 62. 268) occur in Elaious, and Epikouros in Eleusis (*Agora* XV 43. 179) and Oinoe (*IG* ii² 2393. 13).

It is possible that the herald Anthemokritos, killed by the Megarians when he delivered a protest against their use of sacred land belonging to Eleusis, belonged to Oion D.; a Kleinomachos son of Anthemokritos O. is recorded as (?) kleruch from Hippothontis in mid-century. He may be the well-known Kleinomachos whose house in the city was bought by Spintharos son of Euboulos of Probalinthos; this Kleinomachos mediated between Demosthenes and Theokrines of Hybadai in the late 340s, and perhaps also served as *naopoios* at Delphi in the 340s or 330s.⁵³

[Pan?]dios son of Sokles O. served as secretary in 355/4 (*IOrop* 290, Knoepfler 1986); if Pandios II son of Pythodelos, *anagrapheus* in 303/2 (*Agora* XV 62. 231), is his grandson, he belonged to Hippothontis. He may be the Pandios who proposed two decrees c.369/8.⁵⁴ The Aischylion O. who lent 1000 dr. on security of a house in the fourth or third century may be a descendant of the Aischylion of Hippothontis who died on campaign c.411, but the name also occurs in Anakaia.⁵⁵ It is conceivable that Dorotheos son of Theodoros O., who bought land on Salamis for 2500 dr. in the *hekatostai* sales, was the son of a Samian kleruch.⁵⁶

Anakaia

Lohmann (1989) suggested that this deme should be located in the coastal tritys, in the Koundoura valley, but he did not consider the mythical and cultic arguments for placing it in Epakria, where the Dioskouroi (Anakes) had visited Dekeleia and Aphidnai, and where Plotheia made contributions to a festival Anakia. The area of Mygdaleza may be a possible location.⁵⁷

⁵³ The death of the herald (Philochoros *FGH* 328 F 155, Plut. *Per* 30. 3) seems to have occurred in the 430s; his statue (outside the Dipylon gate) is mentioned in Is. F XVI Scheibe (*Against Kalydon*), for which the alternative date for his death shortly before 352 seems rather late. See Connor 1962; de Ste. Croix 1972, 247–51; Stadter 1989, 278, 281. He probably belonged to one of the Eleusinian genê (Kerykes?) The horos, *IG* ii² 2558 (see *BCH* 71, 1947–8, 390, missed by *LGN*) was crudely cut in Ionic lettering onto a stone that had previously been used for another purpose; it came from the burial area NE of the ancient city, on Stadiou St, not from the Kerameikos, where the herald was allegedly buried (Paus. 1. 36. 3). The name Anthemokritos is also attested in the classical period in Acharnai (*APF* 944) and Melite. Kleinomachos, *IG* ii² 1927. 104 (see Humphreys 2010*a*); without demotic, [Dem.] 58. 42, 59. 39, *CID* II 119. 22.

⁵⁴ *LGN* Pandios 6, 7 (Oion), 2 (no demotic; see also ch. 24 n. 129). *IG* ii¹ 2394 was published as the tombstone of Sokles son of Hippothon of Oion, but might perhaps be part of a tribal list (e.g. of councillors) in which Sokles' name ended the list of representatives of Kekropis (he might be from Melite or Halai) and was followed by the headings *Hippothontidos* and *ex Oiou*.

⁵⁵ *LGN* Aischylion 2–4. On Opsiades of Oion see ch. 26 nn. 69, 114.

⁵⁶ Dorotheos, Lambert 1997*a* F 13 A 16. In the list of councillors on Samos *IG* xii 6. 262 it seems to me rather unlikely that Hamaxanteia supplied three councillors; it may be possible to read *ex Oiou* in col. VIII 31 (so also Habicht and Hallof 1995).

⁵⁷ On the association of the Dioskouroi with this area see chs. 19 n. 39, 24 n. 50. There are several small hill plains and valleys, and demes may have contained more than one hamlet, plus scattered farms.

Philombrotos son of Philokles A., councillor in 335/4, whose son's tombstone was found in the Agora, may have been a descendant of the eponymous archon of 594/3.⁵⁸ Two families in A. can be traced for several generations. Exekestos I and his (?) wife, daughter of Philon of Euonymon, commemorated by a rosette stele of the mid-fourth century found on the Akropolis, seem to have had two sons, Aristeides, named on a list of (?) kleruchs of mid-century, and Exekias, councillor in the same period. The latter's son Exekestos II served on a tribal board perhaps concerned with theatrical matters in mid-century, and was councillor in the 330s; his son Proteas appears on a horos of the late fourth or early third century from the Kerameikos, as holding a copy of the loan agreement to which the horos relates, which may suggest urban residence.⁵⁹

[Thra]son I (?) son of Aristokles A. appears on the same list of (?) kleruchs, with his son (or father) [Aristokl]es; Thrason II son of Thrasymedes I, councillor in 335/4, should be a grandson (SS) of Thrason I. A later member of the family, Thrason IV son of Thrason III, proposed a decree honouring Zeno in 262/1, and headed the commission appointed to build a grave-monument for him. Thrasymedes II A., thesmothetes in 229/8, may be a son of Thrason IV.⁶⁰

Acherdous

In Euphorion's *Dionysos* the god comes from Thessaly through Boiotia to Aphidnai, Acherdous, and Melainai, and thence travels on to Nemea; this suggests a location on the eastern end of Mt Parnes, somewhere north of Dekeleia.⁶¹

Thoukydides A., tamias in 424/3, and perhaps responsible for a rider to a decree of the same year, is said by Androtion to have been a poet, son of Ariston; he may have been a brother or other relative of Phayllos I A., one of the ten commissioners in charge of Piraeus during the rule of the Thirty (see Table 30.2).

Buck (1889, 162) claimed that ancient building remains were found in excavations at (A)mygdaleza; *SEG* 32. 144, a dedication by a man honoured by the Epakreis for his service as archon at the Apollonia (ch. 19 n. 16), was re-used in a church there. Traill 1986 puts Anakaia at Mygdaleza (on the arguments against locating Hekale there see ch. 26 nn. 73–4).

⁵⁸ *LGPN* Philombrotos 1–3; the tombstone, *SEMA* 373, has no demotic. The name is also attested in the late 4th c. in Pallene (*LGPN* no. 4, son councillor 273/2).

⁵⁹ Exekestos I, *IG* ii² 6197; Aristeides, *Agora* XV 492. 139 (see Humphreys 2010a); Exekias, *ibid.* 20. 30; Exekestos II, *IG* ii³ 4. 63. 8, *SEG* 28. 152. 6; Proteas, *Kerameikos III* no. 21, Finley 1952 no. 171.

⁶⁰ [Thra]son I and [Aristokl]es, *Agora* XV 492. 137, 140; Thrason II *ibid.* 43. 194; Thrason IV, *D. L.* 7. 10–12, arch. Arrheneides, cf. Paschidis 2008, A 58. Thrasymedes II, *IG* ii² 1706. 19 (not 1709 as *LGPN* Thrasymedes 11).

⁶¹ F 19 e 21 van Groningen 1977 (*POxy* XIX 2219–20); cf. Bartoletti 1963. Melainai seems to have been in or near Aphidnai (chs. 31 n. 19; 19 n. 27). Euphorion also mentions Kolone (ch. 32 n. 35); the order of names (Aphidnai, Acherdous, Kolone, Melainai) does not seem to be geographical. The Roman estate (?) called Achradous of *IG* ii² 2776. 119, possibly at Ionidai and in any case associated with land-holdings in SE Attika (cf. Lohmann 1993a I, 51–4), is probably not connected with the deme (the name could be given to any area in which there were pear-trees).

TABLE 30.2. Acherdous:
Phayllos *APF* pp. 53–4

Note: See also P. J. Rhodes 1981*a*, 460.

The latter's (?) son Aristion son of Phayllos won a choregic victory at the Thargelia in 359/8 and is attested as trierarch in the 330s.

Another upper-class family in Acherdous was that of Elpias and his son Chairedemos. Elpias perhaps proposed a decree concerning the cult of the Dioskouroi in the city, which may suggest that he also had an interest in the Anakia of Epakria; his son Chairedemos was one of the four men denounced by Andokides in 415 for parodying the Mysteries. He went into exile, but had returned and recovered at least some of his property by 400; his daughter and (?) granddaughter (SD) married into a family of Peiraios.⁶²

Pylagoras I A., father of the secretary of 335/4 Proxenos I, presumably belonged to a family with Delphic connections; Proxenos II son of Pylagoras II proposed a tribal decree in (?) 283/2 honouring Phyleus son of Chairios of Eleusis for his service as priest of Asklepios in the previous year and as thesmothetes in the current year.⁶³

Pamphilos A., described as *epieikēs* by Aischines (l. 110), denounced Hegesandros of Sounion and Timarchos of Sphettos for embezzling public money *c.*360.⁶⁴

⁶² Elpias, *IG* i³ 133; did he belong to a *genos* associated with the cult at (?) Anakaia? It is possible that members of both these upper-class families, like the Gephyraioi (ch. 20 n. 47), were drawn to Athens by the Peisistratids, but retained (at least until 507) their landholdings in NE Attika; loss of revenue due to the war, and perhaps an ongoing tradition of relations with Boiotia, may have generated oligarchic sympathies, although Chairedemos' name seems to indicate a commitment to the democratic system on his father's part in the 430s. Chairedemos, *Andok.* 1. 52, 63, 67; the reference to sale of his property in *IG* i³ 428. 7 gives no details. For his descendants see Table 30.1. Against the restoration in *LGPN* Chairedemos 13 of Acherdous as the garbled demotic of *IG* ii² 7188 see Table 30.1.

⁶³ Proxenos I, *IG* ii² 331, *LGPN* Proxenos 15; Proxenos II, *IG* ii² 1163 (arch. Euthios); the name may suggest a marriage alliance with the Gephyraioi. Possibly Pyrrhos son of Pythodoros A., who acted as host for Plouton in the late 4th c. (ii² 1933. 8) and dedicated a gold-inlaid bowl in the Asklepieion (Aleshire 1989, *Stele* IV 70) belonged to the same family. Connection with Asklepios is also attested for Nikodemos son of Phourourchos A., who served as priest of the god at some date in the third quarter of the 4th c. (Aleshire 1991 no. 10855, *IG* ii² 4351) and made a dedication to Hygieia, *SEG* 41. 166.

⁶⁴ On the date see ch. 27 n. 30.

COASTAL TRITTYS

The leading deme in the trittys was of course Eleusis, which also served as the headquarters of the tribe, the Hippothontion being located in its territory (chapter 21 p. 749). The trittys covered the western part of the Thriasian plain and probably the Koundoura and Sarantopotamos valleys to the north and west of it. It is conceivable that Kopros and Korydallos (in the city trittys) were contiguous on the coast.

Eleusis

This was a substantial town, a place of pilgrimage for Greeks in general as well as Athenians, with a distinctive history; it was the cultic base of at least five *genê*, and presumably of a phratry.⁶⁵ It had easy access to the sea and to the island of Salamis, and farmland in the plain. From c.335 it was also one of the garrison towns in which detachments of epheboi were regularly stationed, reinforced by other troops when necessary.⁶⁶

Eleusis had been chosen by the Thirty as a place of refuge in winter 404/3, no doubt mainly because the site was too sacred to be attacked;⁶⁷ they seized and executed the adult males present in the deme when they occupied the town. Normal relations with Athens were restored in 401/0.⁶⁸

This dating makes it most unlikely that *IG* i³ 970 (*IEleus* 53), a dedication set up at Eleusis by Gnathis son of Timokedes and Anaxandrides son of Timagoras to commemorate choregic victories won with a comedy by Aristophanes and a tragedy by Sophokles, refers to victories won in 402/1, as suggested by Kirchner. Since the two men were synchoregoi, and it is not clear that this arrangement was in force in the city in any year except 406/5, their victories were probably won at the Rural Dionysia in Eleusis.⁶⁹

⁶⁵ There is a useful plan in *AD* 43 B 1 (1988 [1993]) 41, with information about finds of houses and tombs; see also Travlos 1988, 91–169; Goette 2001, 270; Papangele 2002. On the *genê* (Eumolpidai, Kerykes, Philleidai, Krokonidai, Koironidai) see ch. 20. Clinton (1974, 13 n. 13) calculates that as many as 2150 initiates might have come to the town in 408/7, but much conjecture is involved. On the problems of dealing with pilgrim crowds see Pouilloux 1977 (Delphi, 247/6); ch. 12 at nn. 35–9.

⁶⁶ See below at nn. 70–84 on deme decrees. The date of the walls is unknown; see Ober 1985, M. H. Munn 1993, Goette 2001, 275.

⁶⁷ Xen. *Hell.* 2. 4. 8–10. Previous use of Eleusis as a cavalry station (Thuc. 4. 68, perhaps 2. 19) may have had some influence.

⁶⁸ *A.P.* 40. 4, see D. M. Lewis 1993, J. L. Shear 2011. *SEG* 30. 101 concerns the re-absorption (Lewis, n. 8).

⁶⁹ Kirchner's note on ii² 3090 is rather confused; see now P. Wilson 2000, 375–6 n. 164; Csapo 2004, 59–60, 2010*b*. The cutter also inscribed *IG* i³ 106 (409/8), 179 (c.415–405), and 515 (408/7); Wilhelm 1906, 177 n. 1; 'Erechtheis cutter', D. M. Lewis lecture (UP; 1984–90?). If the victories were won at the Rural Dionysia synchoregia was perhaps not a regular institution (cf. P. Wilson 2010*a*, 45; the

Our other evidence for deme activity in Eleusis begins only in the second half of the fourth century.⁷⁰ The deme conferred honours on Hierokleides of Paiania for his activities as hierophant, probably in the 340s or 330s.⁷¹ The three Thebans honoured by the deme (*IEleus* 70, 71) had probably arrived as refugees after Alexander's destruction of the city in 335. One of them, Damasias, had brought with him a group of students (*mathétai*); he had trained two additional choruses, one of men and one of boys, to compete in the Rural Dionysia, and was awarded a gold crown of 1000 dr., 100 dr. for a sacrifice, an honorary seat at festivals, and hereditary remission of deme taxes. The Theban honorand of the other decree received an olive crown, remission of taxes, and an honorary seat at festivals.⁷²

Indirect evidence of another deme decree is provided by ii³ 4. 232, a dedication to Dionysos by four men whom the deme had crowned; it was probably set up in the 330s, since one of the dedicants, Antiphanes son of Euxenides, was serving as priest of Herakles in Akris in 332/1.⁷³

Eleusis responded enthusiastically to the introduction of the ephebate, voting honours for the ephebes of both Hippothontis and Kekropis who served in 334/3/2—probably the first cohort—and for those of Pandionis at about the same time.⁷⁴ The deme's decision in 332/1 to put the finances of the local cult of Herakles on a new footing may also have been prompted by the presence of ephebes in the town. Philokomos son of Phalanthides proposed that the quarry on the Akris peninsula should be leased and the rent income used for sacrifices to Herakles, and Moirokles, a member of a prominent deme family that will be

two men might, for example, have been fellow-guardians, or the husbands of two sisters who were epikleroi), or the victories were not won in the same year. For the choregoi see below, pp. 1124–5, with Table 30.4.

⁷⁰ *IG* i³ 251 was found at Eleusis, but there is no reason to regard it as a deme text; the same is true in my view of *IEleus* 175, part of a sacred calendar of c.300 (regarded as a deme calendar by Dow and Healey 1965; Roux 1966; Whitehead 1986a; N. D. Robertson 1996; attributed to the state by *IEleus*, Jameson 1977; excerpt of Eleusinian data from a state calendar, comm. *IEleus* 175. Further deme decrees, ? c.350, *IEleus* 68–9.

⁷¹ *IEleus* 72; Clinton 1974, 18. See ch. 20 n. 96.

⁷² On Theban refugees at Eleusis see Koumanoudes 1961. Whitehead 1986a thinks that *oikésas* (*IEleus* 70. 3, 38) implies that the honorands were no longer resident but the aorist seems to refer to the act of immigration, see LSJ s.v. *oikeô* 2. Phryniskos of Thebes was added in a rider to the same decree, but details are lost.

⁷³ *IEleus* 85; his father or son Euxenides is recorded as (?) kleruch in mid-century, *IG* ii² 1927. 71–2, see Humphreys 2010a.

⁷⁴ Reinmuth 1971 nos 2–3 (3 = *SEG* 34. 106), Kekropis and Hippothontis; no. 10 = *IG* ii³ 4. 342, Pandionis, 332/1/0?, inscribed by the cutter of ii³ 337, Tracy 1995 (Tracy claims that the text from *kai ekosmoun* in l. 5 was erased and not reinscribed). *IG* ii³ 4. 337, from Eleusis, is a dedication by the Kekropis sophronistes and ephebes of 333/2/1; they had been honoured both by Eleusis and by Rhamnous. It is not clear whether all tribes were represented in the ephebic garrison at Eleusis or whether some were stationed at Eleusis and others elsewhere, nor whether tribal squadrons always stayed together or could be split.

discussed below, took a lease for five years at a rent of 150 dr. per annum; he also made an additional contribution of 100 dr. for the Herakleia. Philokomos was rewarded with a gold crown worth 100 dr., to be paid by Moirokles (apparently from his rent payment); it seems likely that he either owned the land on which the quarry was situated or had been intermittently exploiting it himself in the previous period (perhaps both). Moirokles, who was probably the prime mover in the whole affair, drew on a precedent in his own family; his father Euthydemos I had served as priest of Asklepios in Piraeus, where the state had assigned quarry revenues to the cult in an analogous fashion.⁷⁵

This decree provides the important information that the deme held its elections (*archairesiai*) in Metageitnion, in the Theseion in Athens. The Theseion was presumably chosen because the deme wished to use the allotment machines located there; the elections were perhaps held in the second month of the year because it was convenient for demes to wait until all the city's officials and liturgists had been appointed before making their own assignments. We also learn that the deme had a euthynos, a synegoros, and hieromnemes.⁷⁶

Our next deme decrees probably come from the period of the Lamian War and its aftermath.⁷⁷ *IEleus* 80 honours the peripolarchos Smikythion of Kephale, who stationed himself at Eleusis with his mercenaries and subsequently persuaded the generals and the demos that the town needed a garrison. The situation suggests either the Lamian War or the period following Polyperchon's proclamation of

⁷⁵ *IEleus* 85, Lupu 2005, 151–8, Alipheré 2013; see Ampolo 1983, Flament 2013; Humphreys 1985a on deme initiatives in cult related to the ephebate (ch. 29 nn. 62, 108); Feyel 2012; Carusi 2014. Moirokles' gift of an additional 100 dr. for the Herakleia released 100 dr. of his first rent payment for Philokomos' crown; Philokomos must have earned his reward by giving up some putative rights or income. Euthydemos, *IG* ii² 47, see Ampolo 1982 and below, n. 87. Ampolo does not seem to me to have disproved Burford's arguments (1965, 1969) that quarry exploitation was often informal and unsystematic. What the examples from Piraeus and Eleusis show is that public ownership of quarries might be established by a proposal to use revenues for religious purposes. See also Papazarkadas 2011, 229–30; ch. 22 at n. 82. There is no justification for restoring Moirokles as proposer of *Agora* XVI 82.

⁷⁶ Eleusis was a large deme (eleven councillors); small demes may have conducted all the main civic business of the year (appointment of councillors and deme officials, scrutiny of outgoing officials and 18-year-olds) at a single meeting, which would presumably have been held in Skirophorion. Erchia and Thorikos (ch. 24 at nn. 73–4, 27 n. 71) may have held elections in Metageitnion (see also ch. 22 n. 115). As far as we know there was no formal prohibition on combining city and deme offices (on Euboulides of Halimous see ch. 26 n. 15) or liturgies, but most men would probably have thought this too burdensome. In addition to the officials mentioned in *IEleus* 85, Eleusis had a tamias (*IEleus* 71. 8).

⁷⁷ Marc 1993 publishes a decree of c.330, passed by a body smaller than the state, honouring a son of [Pyth?]odoros of El[eusis], but since his demotic is given it is probably not a deme decree. He may be the father or son of Pythodoros son of Euphron E., naopoios at Delphi in 324/3 (*CID* II 102 B 26) and thus perhaps related to Euphron son of Aichmeas E., commemorated with his father and his (?) wife Archippe daughter of Stesippos of Acharnai on a lost stele of the 4th c. found at Eleusis, *IG* ii² 6022. On *IEleus* 175, often thought to be a deme decree of the Lykourgan period, see n. 70.

freedom for the Greeks in autumn 319.⁷⁸ It has been argued that the decree honouring the general Derkylos of Hagnous, in which he is praised for concerning himself with the education of boys in the deme, belongs to 319/8 and implies that he was quietly allowing general access of local boys to ephebic training in Eleusis, ignoring the restriction of citizenship to those owning more than 2000 dr. that had been in force since 322.⁷⁹

A decree honouring Xenokles of Sphettos, Lykourgos' associate, probably belongs to 318/7. In his capacity as epimeletes of the Mysteries he had built a new wooden bridge, which improved the route of the processions that carried the Eleusinian *sacra* to Athens and back, while also allowing farmers and other inhabitants of the countryside to take refuge quickly inside the walls of the town in time of danger.⁸⁰ A decree honouring a demesman of Phyle, perhaps passed at about the same time, refers only in a vague and general way to benefactions.⁸¹

ii³ 4. 281, the base of a statue of Demetrios of Phaleron, has been redated to the 250s and assigned to his grandson.⁸²

Towards the end of the fourth century, probably in the period of restored democracy after 307, Eleusis honoured its demarch Euthydemos II, son of the quarry lessee Moirokles;⁸³ the activities of this family will be discussed below at nn. 87–93. The only other deme text that belongs to the fourth century is a fragmentary and very dubiously restored document that seems to concern the lease of a furnished synoikia.⁸⁴ In Menander's *Sikyonios* (183–271), performed

⁷⁸ *IEleus* 80, M. Meyer 1989a A 117 (dated c.330), Lawton 1995 no. 152 (325–300); Tracy 1995 puts the lettering c.320. On the historical situation see Habicht 1995. Relief and lettering seem similar to those of *IEleus* 99, for Derkylos (n. 79).

⁷⁹ *IG* ii² 1187 = *IEleus* 99, M. Meyer 1989a A 133, Lawton no. 127 (the latter thinks the relief looks earlier than 325; earlier, Lykourgos, date also *SEG* 49. 135); Tracy 1995, cut by the cutter of *IEleus* 99, who also cut ii² 1157, 1195, and 1266+ (cf. Walbank 1989). Date, Mitchel 1964 (the question of demes' reactions to the legislation of 322 has never been explored); *contra*, Couvenhes 1998, ch. 27 n. 40, dating in 330s.

⁸⁰ *IEleus* 95, dated either 321/0 or 318/7 (318/7 in A. J. Bayliss 2011, 99, 234 n. 7); it seems more likely that Xenokles was holding office and receiving honours in a period of restored democracy, as he was to do again in 307/6 (ch. 27 at n. 27).

⁸¹ *IEleus* 96. In *IEleus* 74 (M. Meyer 1989a, A 148; Lawton 1995 no. 161) only the heading of the deme decree is preserved (Meyer dates it c.310).

⁸² Tracy 1994a, cf. Habicht 1995, 151, 155–8. The dedication was set up by the garrisons of Eleusis, Panakton, and Phyle; on Demetrios II see ch. 31 n. 11.

⁸³ *IEleus* 101; Tracy 1995 attributes it to the cutter of ii² 1262, also responsible for *IEleus* 100 (a decree of the Kerykes for Euthydemos after he had served as paredros to the archon basileus), 1241 (Dyaleis, 300/299), 1263–5, and 2390, and thinks it might be as early as 320 (id., 1994b, 243 n. 28); cf. Walbank 1989. *IEleus* 102, perhaps part of a dedication, mentions a strategos and the demarch Euthy[demos?]; were it not that Clinton says the top of the stone seems original, one would take this to be the end of a deme decree carrying instructions for the demarch to publish it (cf. *IEleus* 80. 27–31).

⁸⁴ *IEleus* 176 with comm.; Tracy 1995, cutter of ii³ 359, c.330 (Kirchner had put it at the end of the century). References to Thria had been entirely restored, and in l. 5 —agoran may be part of a proper name.

c.320–295, Blepēs of Eleusis explains that when he arrived in Eleusis from the city for a festival—‘to find one of the demesmen sacrificing a scrawny little cow and listen to the participants’ complaints’—he found a crowd outside the propylaea gathered round a girl, which turned into an informal deme assembly to discuss her case. The scene gives a vivid impression of a meeting in which speakers are constantly interrupted by, or appealing for, acclamations from the audience.⁸⁵

Surprisingly, we cannot identify a single member of any of the Eleusinian *genē* who belonged to the deme earlier than the third century hierophant Chairētios Prophetou E. of *IEleus* 201, although there must surely have been families of *gennetai* who were still in the town in 507.⁸⁶

The most interesting family in our records is that of Euthydemos I, the priest of Asklepios in Piraeus (see Table 30.3). Although there is no evidence that his tenure of the office was formally exceptional in any way, he undertook his responsibilities with unusual initiative and energy, expounding to the *demos* that the god required *prothymata*, setting up *stelai* near the altars with pictures of the cakes (*popana*) to be used for private preliminary offerings, and recording his own activities on a stele that already stood in the sanctuary.⁸⁷

The priest seems to have had a brother, Kallippos I, whose son Moirokles I was commemorated by a *naiskos*, found by the road from the Dipylon to the Akademy, at some date before Demetrios of Phaleron’s legislation on funerals. Moirokles I’s son Kallippos II had a distinguished career in the early third century, serving as general in 279 of the Athenian troops sent to defend Delphi against the Gauls, as ambassador to Arcadian Orchomenos before the Chremonidean War, and as Athenian representative to the council of the allied forces.⁸⁸ In view of his son’s record, it seems likely that it was Moirokles I who

⁸⁵ Cf. Potter 1996, Kuhn 2012, on acclamations.

⁸⁶ Did some of them disappear in the massacre by the Thirty?

⁸⁷ *IG* ii² 47. 23–32 (the *demos*’ decree added, perhaps by Euthydemos, to an inventory of sacred property). Euthydemos probably claimed to have been instructed by the god in a dream (cf. Humphreys 2017*b*), and the message about preliminary offerings seems to have been a pretext for a general reconsideration of the sanctuary’s finances; building work was also needed (47. 31–2). See Ampolo 1979, 1981, 1982, 1983; Aleshire 1991, Z 4 = 5533; R. Parker 1996, 181–3. Parker rightly stresses Euthydemos’ innovations (I doubt, however, whether Plato Com. *PCG* 7 F 188 is parodying his law); this does not necessarily mean that the cult had newly become a state responsibility (there is no indication in ii² 47 that the *epistatai* of Asklepios, the use of quarry revenues, or the festival to which *prothymata* were to be added were of recent date). Euthydemos’ priesthood is probably to be dated c.370–350 (Aleshire; but see n. 92 below). On ii² 4962 (*LS* 21) the record of Euthydemos’ activities is cut in a different hand from the regulations for (private) *prothymata*, but this may be only because it was cut after the end of his year of office.

⁸⁸ Paus. 1. 3. 5, 1. 4. 2, 10. 20. 5; *IG* ii³ 912. 22–3; *ISE* 53; *IRb* 14. *LGPn* Kallippos 29–30, though aware of the existence of Kallippos I (ii² 6043, cf. Koumanoudes and Matthaïou 1987), considers Kallippos II to be the son of Moirokles II (Moirokles no. 1), to whom all references other than ii² 6043 are attributed. See also A. J. Bayliss 2011.

TABLE 30.3. Eleusis: Moirokles

Note: The Euthystratos son of Euthydemos of *Agora* XV 43.182 probably belonged to Dekeleia.

was the politician of the 320s ‘Moirokles the Salaminian’, so called perhaps to distinguish him from his homonymous cousin (FBS) Moirokles II, the quarry lessee, whose interests may have been concentrated in the deme. The Salaminian may also be the proposer of *IG* ii³ 414. We do not know which of the two cousins served as diaitetes *c.*330; the deme decree *IEleus* 95, for Xenokles of Sphettos, passed in (?) 318/7, was proposed by Moirokles II.⁸⁹ Archandros son of Kallippos II served as general at least once, in 248/7 (Diomedon), in which year he also contributed to the epidosis.⁹⁰

Moirokles II, son of Euthydemos I, was honoured by the deme in (probably) the 330s with three other men, one of whom, Antigenes son of Euxenides, is probably the Antigenes who was serving as priest of Herakles in 332/1. (Euthystratos son of Euthydemos, who was one of Hippothontis’ councillors in 335/4, probably

⁸⁹ On the politician see Ampolo 1981. I assume that he was called Salaminios because he owned property on the island; see ch. 20 n. 105; M. C. Taylor 1997, 85–7 (296 no. 237 confuses him with his cousin). He was a member of the Eleven in 325/4 or 324/3 (Dem. *Ep.* 3. 16–18), was accused with Pataikos, Taureas, and Aristogeiton of speaking in the Assembly while *atimos* (ibid.), proposed, as a friend of traders, a decree concerning the punishment of Melos for harbouring pirates ([Dem.] 58. 53, 56), was bribed by Harpalos, and was demanded by Alexander in 335 (Arr. *Anab.* 1. 10. 4; he does not appear in all lists). Diaitetes, *IG* ii³ 4. 33. 109–110; deme decree, *IEleus* 95. 5 (read [Moi]r[okles]; on the date see n. 80 above). In view of the careers of their sons, there may be some grounds for thinking that Moirokles II was the older of the cousins and the diaitetes of *c.*330. The Moirokles who supplied tiles for the Eleusinian sanctuary for 40 dr. in 330/29, *IEleus* 177. 271–2, may be one of these two men (the carting cost is high, did the tiles come from Salamis?) or a freedman of the family.

⁹⁰ *IRh* 131, *IG* ii³ 1011 II 61; *SEG* 38. 125–7, 47. 151, cf. G. J. Oliver 2007*a*, 186, 200–1; ch. 16 n. 45; *IRh* 27, 28, 140. Unpublished decree for A., general in 244, Petrakos 1997, 622.

belonged to Dekeleia.)⁹¹ Moirokles II's son Euthydemos II, as we have seen, was honoured by the deme for his services as demarch and by the genos Kerykes for serving as paredros to the archon basileus. The Epikleides son of Euthydemos who was one of Hippothontis' councillors in 303/2 may have been his son.⁹² The name Epikleides is uncommon—it is otherwise attested only in Acharnai—and there may have been a link between Euthydemos' family and that of the eponymous archon of 394/3, Euboulides son of Epikleides E. A descendant, Euboulides II son of Euboulos, proposed decrees in 305/4 and 304/3.⁹³

The descendants of Timokedes I were evidently, like Moirokles II and Euthydemos II, active in deme affairs (see Table 30.4). Gnathis I son of Timokedes I set up in the late fifth century a monument commemorating choregic victories (n. 69); his co-choregos Anaxandrides son of Timagoras may perhaps have been a kinsman. Timokedes II son of Gnathis I was honoured in 356/5 for his services as taxiarch. Gnathis II, demarch probably in the late 330s, was presumably a grandson (SS) of Gnathis I; the Timokedes (IV?) son of Gnathis who proposed the deme decree in honour of Smikythion of Kephale *c.*(?) 320 (n. 78) will have been either the demarch's son or (less probably) his father. Timokedes III, son of Timasias, one of the four demesmen crowned *c.*330, may have been a nephew (ZS) of Gnathis II.

TABLE 30.4. Eleusis:
Timokedes

Note: IG ii³ 4.246 is dated 356/5, so probably honoured T. I rather than T. II.

⁹¹ Moirokles II, IG ii³ 4. 232; on his role in the proposal to use quarry revenue for the cult of Herakles, *IEleus.* 85, see above, n. 75. Euthystratos, *Agora* XV 43. 182; Traill 2003, 122 n. 16.

⁹² *IEleus* 101 (above, n. 83); *IEleus* 100, see ch. 20 n. 138. Epikleides, *Agora* XV 62. 241 (it is not entirely certain that he belonged to Eleusis; Aleshire 1991, Z 4 [no. 5533] has him as son of Euthydemos I, which seems to me less likely; this influenced her low date for Euthydemos' priesthood, which was based on prosopographical calculations and not on epigraphic dating).

⁹³ The archon's brother Diktys served as his paredros: see IG ii³ 4. 42 and ch. 15 n. 5. Euboulides II: *Hesp* 5, 1936, 201ff.; ii² 483, the latter for a doctor from Rhodes.

There may have been some link between the Timokedes–Gnathis lineage and Εὐθ[ί]ας son of [Γνα]τ[ί]ον E., who proposed the deme decree honouring Hierokleides of Paiania. Euthias' sister Philoumene married a demesman of Peiraios, Nikomachos son of Nikomenes, and was commemorated with him on a stele recorded at Trachones.⁹⁴

Onetor, demarch in (?) 318/7, may have been related to Timokles son of Onetorides E., named in a diadikasia list of 381/0, and to the Onetorides of Hippothontis who died on campaign in 446.⁹⁵ The Epigenes who proposed the decree about the cult of Herakles in 332/1 may have been either E. son of Lysanias, commemorated on a stele of (?) the fourth century reported from Athens, or—perhaps more probably—E. son of Mikrion, commemorated with his wife Melisto daughter of Hegestratos of Oion by a naiskos. If the stonecutter made a mistake and this Epigenes' father was called Smikrion, he would be the brother of Philoxenos son of Smikrion, represented with his father and his sister Aristodike on another naiskos.⁹⁶

Kallimachos (II) son of Kallikrates, who proposed the two decrees for Thebans preserved on *IEIeus* 70, may be the son of Kallikrates son of Kallima[chos] I, named in a list of (?) diaitetai and buried in the deme.⁹⁷ The proposer of *IEIeus* 74, —thes son of Nausistratos (I), was probably the father of the Nausistratos (II) E. who in 289/8 made a loan of 200 dr. secured on a house at Eleusis.⁹⁸ In

⁹⁴ Εὐθ[ί]ας, *IEIeus* 72; Philoumene, *IG* ii² 6054 (from the Louriotis estate, *AEE*² no. 295). The name of another woman, perhaps Nikomachos' second wife, was added to the stele (since it is dated c.365–340, Philoumene probably died relatively young; Whitehead's suggestion, 1986*a*, 427 no. 159, that she was Euthias' mother seems to be a slip). Euthias may be the man of that name, son of [Πυ]τ[ί]ον (no demotic), paid for carting bricks for the sanctuary at Eleusis in 329/8, *IEIeus* 177. 56, 58.

⁹⁵ Onetor, *IEIeus* 95 (n. 80 above); Timokles, *SEG* 32. 171c 9 (*APF* p. 512); Onetorides, *IG* i³ 1163. 10. Kirchner's restoration of the demarch's name, [Onet]or Aiso[nos], as that of the proposer of *IEIeus* 96 is not really justifiable.

⁹⁶ *IEIeus* 85; Epigenes Lysaniou *IG* ii² 6031, from the city; Epigenes Mikrionos, ii² 6999 = *CAT* 3. 369c (no provenance). Philoxenos, ii² 6052 = *CAT* 267 (no provenance; names added, Schmaltz and Salsa 2003 no. 43). Cf. perhaps Philoxenos son of Antiphon E., member of a mid-4th c. tribal board, *IG* ii³ 4. 66; Antiphon E., treasurer of the sanctuary of Hera on Samos in 346/5, *IG* xii 6. 261; Antiphon son of Koroibos E., secretary in 325/4, *IG* ii³ 367–8; Antiphon E, dikast-ticket from Aigina, Class III or IV, *SEG* 34. 141. ii² 6999 definitely has Mikrion on the stone, and there seems to be a parallel in Rhamnous, *SEG* 34. 194. The name might have been formed from the commoner Smikrion as a result of dissimilation plus the influence of the name Mikion (cf. Threatte 1980, 507–10); however, in this case there seems to be a good argument for assuming an error by the cutter. Epigenes the Keryx, suggested by Koumanoudes and Gofas 1978 as proposer of *IEIeus* 85, probably belonged to Koile and not to Eleusis (see above n. 35; Table 20.2).

⁹⁷ *IG* ii² 2393. 6; Dow 1983 suggests diaitetai or epheboi, and the irregular numbers (only one name each from Peiraios and Eleusis) and prosopography (see ii² on line 11, *APF* 9792 on line 12) favour the former alternative. *SEG* 56. 259, tombstone and epigram of Kallimachos son of Kallikrates (no demotic, not yet fully published), Hildebrandt 2006 no. 153 (on Hildebrandt's datings see ch. 11 n. 28).

⁹⁸ Finley 1952 no. 6, archon Aristonymos. Theodoros of Oinoe, with whom the agreement was deposited, may have belonged to IX Aiantis, cf. *IG* ii² 502 + *SEG* 45. 88. 10–11, *Agora* XV 72. 205.

addition to Gnathis I and Anaxandrides son of Timagoras,⁹⁹ Hieron son of A—and Athenodoros son of Go— set up monuments commemorating choregic victories in the Rural Dionysia.¹⁰⁰

Philippos, proposer of the deme decree *IEleus* 99 in (?) the Lykourgan period (n. 79), may be the father of the orgeones Satyros and Philokrates who appear on a dedication once ascribed to Megara (*IG* vii 33, *SEG* 57. 416) but attached to Eleusis by the name of Phokiades I son of Teisias I, whose son Teisias II was ephebe in 246/5 (*IG* ii³ 1026. 34, Philoneos); Teisias III son of Phokiades II contributed to an epidosis in 183/2 (*IG* ii² 2332 = *SEG* 32. 218, Migeotte 1992 no. 19, Hermogenes).¹⁰¹ Epikrates son of Philokrates E., who registered a mine and leased it for 20 dr. c.350 (*Agora* XIX P 9. 35 with *SEG* 48. 146) and the Philokrates named on a beehive and on rupestral horoi marking an ergasterion (*SEG* 44. 240, 48. 167–8, cf. 52. 247), may be related, as may the (?) kleruch Satyros son of Ergophilos, *IG* ii² 1927. 73 (cf. Humphreys 2010*a*).

So much for men attested as playing an active role in deme affairs. In the eyes of the wider world, the most distinguished member of the deme was presumably the poet Aischylos son of Euphoriion I. His brother Kynegeiros served as general in 490/89; his sons Euphoriion II and Euaion also wrote tragedies, and the latter is named as *kalos* on vases.¹⁰²

In the 360s and 350s Dorotheos E. was a well-known figure in Athens; Apollodoros of Acharnai names him as owner of a house, and Xenokles of Kopros asked him and his brother Philochares to come to Besa in order to testify in the case concerning the inheritance of Xenokles' wife Phile. They are described (by implication) as *epieikestatoi* and *gnôrimotatoi*. Doro[theos] probably dedicated a statue at Eleusis in the middle of the century; another dedication, by Phileas son of Dorotheos (II) E., may be Hellenistic or later, but provides a slight basis for thinking that the Phileas E. who advanced part of a loan of 4500 dr. secured on a mining ergasterion and thirty slaves at Maroneia may have been a kinsman or affine of Dorotheos I.¹⁰³

⁹⁹ The comic poet Anaxandrides, active in the 370s, may have belonged to Eleusis if he was an Athenian, but this is not certain. [Anaxandr?]ides (II) son of [A]naxandros E. freed a slave in the 320s, *IG* ii² 1571. 3.

¹⁰⁰ *IG* ii³ 4. 509, 504 (no demotics, but the stones were found at Eleusis). Athenodoros may have been a relative (son?) of the [Gor]gias E. attested as symproedros on Samos in 346/5, *IG* xii 6. 261.

¹⁰¹ On Phokiades of Oion see above at n. 52.

¹⁰² *TGF*² I nos. 12–13; Euaion *kalos*, over 10 examples, BArch 207471. The restoration [Eupho]rion in *IG* ii³ 1021. 2 (281/80, arch. Ourias, Byrne 2007) is rash, since the commoner Smikrion would fit equally well.

¹⁰³ Dorotheos' house, [Dem.] 59. 39; testimony for Xenokles, Is. 3. 20–2, an interesting case of intra-tribal cooperation (but possibly they also had mining interests, in view of the loan by Phileas, Dem. 37. 4 and *hypothesis*, cf. *Agora* XIX P 27. 87). [Presb]ych[a]res son of [?]Philo]chares E., secretary to the treasurers of Athena in 409/8, *LGN* Presbychares 1, may be an ancestor. Dedication by Doro[theos], *IEleus* 65; the dedication of Phileas (II), *IG* ii¹ 1656, is later (Clinton 1971, 125–6).

Another prominent member of the deme in the fourth century was the architect Philon son of Exekestides, responsible for the arsenal building completed *c.*330 in Peiraios and for work *c.*317 on the portico of the Telesterion at Eleusis. He was syntrierarch *c.*350, and made a dedication at the Asklepieion in Athens in 331/0.¹⁰⁴

Pataikos E., eponym of a naval symmory *c.*350, may be the Pataikos who was priest of Asklepios in 345/4, but the name is also attested in Pithos and Sounion. He sold two pigs to the Eleusinian epistatai in 329/8, which might suggest that he owned land in the deme, and he may be the Pataikos who suffered partial atimia, perhaps as a result of unpaid debts to the state.¹⁰⁵

The brothers Thrasylos I and Megakleides II, sons of Megakleides I E., belonged to a family that can be traced for at least four generations. They are named in [Demosthenes] 52. 70 as traders who borrowed 4000 dr. for a voyage to Acre; Megakleides II appeared as a witness for Apollodoros of Acharnai *c.*369/8 in connection with this transaction. He was also the opponent of Isokrates and Aphareus in their antidosis case in 354, and he set up a dedication commemorating victory with a boys' choir in 349/8. Thrasylos I's son Thrasykles is attested as trierarch before 325. The Thrasylos (II) E. whose wife dedicated a statue of their son Thrasylos III to a hero, perhaps in the area north of the Agora, in the third century, was perhaps a grandson of Thrasylos I. Thrasylos III or a later homonym contributed 200 dr. to the epidosis of 248/7.¹⁰⁶

Since the name is rare, Onesandros son of Ithaimenes E., crowned by the Paraloi in the second half of the fourth century (*IG* ii³ 4. 259), may be affinally related to the kleruch Ithaimenes of Erchia, *IG* xii 6. 262 II 22.

Thebagenes E., if his name implies that he was born in 404/3, was an elderly man when he served as ambassador to Herakleia Pontika in 329/8 to protest against that city's treatment of Herakleides of Salamis in Cyprus, *IG* ii³ 367. 45. He may have been a trader.

Aristokleia, daughter of Timokrates son of Philinos E., married a demesman, Autokleides son of Autokrates; their tombstone was found north of Piraeus. Timokrates served as hieropoios in 325/4.¹⁰⁷

¹⁰⁴ *APF* 14833; Aleshire 1991 (Stele III 95); *EAA* VI, 1965, 126–6. Philon worked at Delphi *c.*338. Philagros, who drew up the original specifications for the portico (*IG* ii² 1666 + *SEG* 30. 110), may have belonged to E., but the name is common.

¹⁰⁵ *APF* 11678; Aleshire 1989 doubts whether the priest belonged to Eleusis.

¹⁰⁶ *APF* 7322 (Megakleides II's dedication, *IG* ii³ 4. 493, Koumanoudes 1970*b* no. 8; antidosis [Dein.] F XCVI Conomis 1975); statue-base of Thrasylos III, from Agioi Asomatoi (*A to Z* 123 D 4), *SEG* 21. 754; epidosis, *IG* ii³ 1011 I 79.

¹⁰⁷ *IG* ii² 6028, *c.* 340–317. Timokrates, *Kerameikos* III 10 (dedication by hieropoioi). For Eleusinians buried in the deme see ii² 6036, [The]oros son of Kephisodotos, possibly the Theoros E. who served as treasurer on Samos in 346/5, *IG* xii 6. 261. 4; ii² 6024, —| Antigenos | [Eleusi]nios, mid 4th c., cf. perhaps ii² 10696, Eleusis museum = *CAT* 3. 425, Antigenes (seated, bearded), standing woman, Antiphilos (standing young man); the name of Antisthenes son of Antiphilos was added later (since the woman is looking at Antiphilos who should therefore be the deceased, and he seems too young to have had children, Kirchner suggests that Antisthenes was a brother of Antigenes). *SEMA* 211, a (?) loutrophoros-base,

Cavalry families seem rather rare in Eleusis, but Kleophantos II son of Kleophon and Theogenes son of Theomedes I. served in the cavalry on Salamis c.320, the latter as hipparch. Kleophantos I, perhaps grandfather (FF) of Kleophantos II, served as (?) diaitetes in 343/2. Theogenes' son Theomedes II is attested as a cavalry officer at some date between c.286 and 261.¹⁰⁸

As already noted, Eleusis is likely to have had close contacts with Salamis. The son of Polites E., —tos, freed a slave living on the island in (?) the 320s. Smikythion I son of Smikythos I and Smikythion II son of Isonomos both acted as guarantors for leases of land on the island in the first half of the fourth century; one of them may be the Smikythion commemorated with his (?) wife and daughter Phainippe and Kleo by a naiskos found on Salamis, and Pythokrates son of Smikythos II E., commemorated on the island at the end of the third century, may be a later member of the family. Thrasy machos son of Mikion E. and his son Thar<s>ias, commemorated by a stone seen on Salamis by Spon, may possibly have been related to the family of Thrasyllus I, discussed above at n. 106.¹⁰⁹

Kopros

The deme has been fairly persuasively located close to Eleusis on the basis of a large gravestone of the third or early second century, found in re-use in a medieval tower on the bridge over the Kephisos, about a kilometre east of Eleusis (Vanderpool 1953).

Epikouros K., hellenotamias in (?) 409/8, may well be the son of Paches son of Epikouros, general in 428/7; the hellenotamias may also be the homosexual mentioned by Aristophanes in the 390s.¹¹⁰ Apart from this possibility, no one from the deme is attested as holding high office; there is also no evidence of activity within the deme. Xenokles K., the opponent of the speaker of Isaios 3, married a wife (of doubtful legitimacy) whose father lived in the city and owned a mining ergasterion at Besa. Xenotimos son of Xenokritos, who is named on a list of (?) kleruchs of the 360s, and whose son Nikoteles is also recorded as (?) kleruch, in mid-century, may have been related to Xenokles.¹¹¹ Euboulides son of Euboulos I, who appears on the former kleruch-list, had a son Euboulos II whose loutrophoros-stele, of the second half of the fourth century, was found at

from Eleusis with the name of Proxenos son of Eudoros, named on ii² 1927. 75 (see Humphreys 2010*a*), is perhaps not necessarily funerary; fuller publication is needed. On *SEG* 32. 277 the names look late; *CAT* 3. 426 = *SEMA* 332 commemorates the wife of Promethides E.

¹⁰⁸ *IG* ii³ 4. 323. 2–3, 15–16 Theogenes, 19 Kleophantos. Diaitetes? ii³ 4. 31. 54 (dedication by men crowned for *dî[kaiosynê]*; format is wrong for Council; Humphreys 2010*a*, 81–2). Theomedes II, *IG* ii³ 949.

¹⁰⁹ See M. C. Taylor 1997 (ii² 1566. 24; 1590*a*; 12849/50; *SEMA* 214, *CAT* 0. 114; ii² 6037).

¹¹⁰ Paches, Thuc. 3. 18. 3; Epikouros, *IG* i³ 376. 12, 40, 43; Ar. *Ekk.* 644 with schol.

¹¹¹ Is. 3. 22; see ch. 7 Case 4. Xenotimos, *Agora* XV 492. 135 (see Humphreys 2010*a*); Nikoteles, *IG* ii² 1927. 79, *ibid.*

Markopoulo in the Mesogeia. Aristeides K. had two sons: —ophon died unmarried, about the middle of the fourth century, and was buried in Piraeus, while Pamphilos died on campaign in Euboia *c.*323. Euktemon son of Aision perhaps served in the cavalry in Euboia in 348, and donated a trireme for the campaign; his father, trierarch before 356, is probably the Aision who was known as a rhetor, and is thus likely to have been a city resident.¹¹²

Elaious

There is no firm evidence on location, but the deme is thought to have been in the area of Eleusis; Traill (1986) suggests a site east of Magoula, about five kilometres north of Eleusis.¹¹³

Elaious has one attested liturgist, Diokles II son of Diokles I, whose son Phileas served in the cavalry on Salamis *c.*320. Nikoboulos I E., tamias of the Other Gods in 421/0, may be too old to be the father of Nikodemos (son of Nikoboulos II?), who served as dikast in the 360s and as diaitetes in 330/29, but they must be related; the dikast may be the [Niko?]demos son of [Niko?]boulos II E. commemorated with his (?) wife Pausilla on a relief stele found in Athens, and Nikoboulos III son of Nikodemos, councillor in mid-century, is probably his son.¹¹⁴

Oinoe

The deme is securely located at Myoupolis on Mt Parnes; it would have included the fort at Panakton, garrisoned by ephebes in the Lykourgan period, and the Skourta plain, settled at the end of the sixth century, lost to Boiotia during the Peloponnesian War, and perhaps inhabited both by Athenian and by Boiotian farmers in the fourth century; on the Athenian side the farms were abandoned in the third century. Oinoe itself was a ‘fortified deme’, with an upper citadel and a walled lower village; surface finds attest occupation from the middle of the fifth century BCE to the Byzantine period.¹¹⁵

¹¹² Euboulides, *Agora* XV 492. 133 (Humphreys 2010*a*); Euboulos II, *SEMA* 333, with Pologiorge 2002*b*. —ophon son of Aristeides, ii² 6535 (Ioutrophoros); Pamphilos, *IG* xii 9. 1242. 11; Aision and Euktemon, *APF* 315.

¹¹³ The site assigned by Traill to Kothokidai (ch. 28 n. 5), and perhaps the Koundoura valley (see below on Azenia) may be alternative possibilities.

¹¹⁴ Diokles and Phileas, *APF* 4021. Nikoboulos I, *IG* i³ 472. 10; Nikodemos, Kroll 1972 no. 89, *IG* ii³ 4. 33. 17, ii² 12434 = *CAT* 2. 338a (the patronymic is only restored here; Pausilla added later? she may be the daughter of a [*Trikor*]ysios); Nikoboulos III, *SEG* 28. 152. 28.

¹¹⁵ M. H. Munn 1989 on Panakton (destroyed by the Boiotians in the Peloponnesian War, rebuilt perhaps *c.*350); M. H. Munn and M. L. Z. Munn 1990 on the Skourta plain; M. H. Munn 2010. Lauter 1992 on the deme site at Myoupolis (fortified by 431, Thuc. 2. 18); cf. also Lohmann 1995; ch. 28 n. 83.

There was a homonymous deme in IX Aiantis, which creates the usual prosopographical problems; none of the evidence on demotai can be linked topographically to the deme.¹¹⁶

An interesting example of continuity in office is provided by Aristokles O., who served as one of the epimeletai of the dockyard in 369/8, and his son [Aristod]emos, who held the same office in 333/2; Aristokrates son of Aristodemos O., proedros in 314/3, may be the latter's son.¹¹⁷ Menekrates O., tamias in 404/3 under the Thirty, might be the father of Meniskos son of Menekrates, diaitetes from O.-Hippothontis in (?) 330/29. Another diaitetes, Phantias son of Themistios, married Sostrate daughter of Andropheles; they are named with their daughter Sostrate II on a lost stele.¹¹⁸

Azenia

Traill placed Azenia at a deme-site south of Kokkini, but did not consider the deme-site(s) subsequently explored in the Koundoura valley, which is now by many scholars considered to have been part of Attika. Lohmann's arguments (1993*a*) for putting Azenia on the coast near Eleusis, or even in the city trittys, are invalid, since he argues from the provenance of stones set up after the end of the fourth century, by which time the villages of the Koundoura and upper Sarantopotamos valleys (Kokkini is in the latter) were probably deserted (the demes, of course, continued to exist as bodies of citizens). If Lohmann's arguments for locating Anakaia (n. 57) in the Koundoura valley are rejected, and if the valley contained a single deme, with its main settlement at Agios Georgios,

Ober 1995, 111–12 doubts whether Oinoe was occupied as early as 507 (cf. Edmonson 1966, 32); the question of Athenian settlement in this area is linked to the question of the date of the development of a closer relation between Athens and Eleutherai, which is itself controversial (Connor 1989; Sourvinou-Inwood 1994*a*).

¹¹⁶ Deductions from the region in which stones are found are unsafe: Epichares son of Platon O., commemorated with his wife and son by a naiskos found at Kalyvia Chasiotika in the Thriasian plain, is attested as a diaitetes of Aiantis (*IG* ii² 6972, *IG* ii³ 4. 35. 144). On Lysitheides son of Lysimachos O. see Papazarkadas 2011, 309 no. 48. Note (not in *LGP*N) dowry horos for 8000 dr. for Archilla daughter of Kratylos son of Philonides O., from Lemnos, *SEG* 45. 1190.

¹¹⁷ Aristokles, *IG* ii² 1617. 79; [Aristod]emos (imos *IG*), ii² 1623. 5; *LGP*N Aristokles 64 and Papazarkadas 2011, 302 no. 9 identify Aristokles with the Aristo— O. who appears in *Agora* XIX L 6. 120, and 9. 40, 46, but we do not know the full name, and this man may well have belonged to Aiantis. Aristokrates, ii² 450. 7. Timokrates son of Epikrates O., kleruch (?) from Hippothontis in mid-century (ii² 1927. 87–8; see Humphreys 2010*a*), may be the brother of Mnesikles son of Epikrates O., who dedicated ii² 4640 to Demeter and Kore on the Akropolis; Epikrates son of Kallistratos O., antigraphus in 303/2, *Agora* XV 62. 233, might be the son of a third brother, but the name is a common one.

¹¹⁸ Menekrates, *IG* i³ 380. 3; Meniskos, ii² 2393. 10; Phantias, ii³ 4. 35. 131, ii² 6984 = *CAT* 272. The name Andropheles is otherwise attested only in Rhamnous, *IRb* 245 (*SEMA* 806, early 3rd c.).

Azenia (two councillors) may be the only unlocated deme of Hippothontis large enough for the location.¹¹⁹

A deme situated near the border between Attika and Megara would not be inappropriate for the only prominent Azenian family of the classical period, that of Aristophon, which has a firmly anti-Spartan and anti-oligarchic tradition. He was born in the 430s, and was still alive in 340/39, when he made a dedication to Asklepios, though he was dead by 330. He was granted *ateleia* as a reward for his opposition to the Thirty; his brother Aristomedes (son of Aristophanes I) served as *tamias* in 400/399, and had a son, Aristophanes II, who is named in a list of (?) *kleruchs* of the 360s; the latter is named with Aristophon on a curse tablet. Aristophon may have had three sons: Demostratos, possibly named in reference to the democrats' 'return from Phyle' in 403, and if so perhaps the oldest; Aristophanes III, who may be named on a list found on the Akropolis; and Aristomedes II, *syntrierarch* before 356; either Aristophanes III or Aristomedes II served as *diaitetes* in 330/29. Demostratos probably served as ambassador to Sparta in 371.¹²⁰

Hagnodemos son of Pistodemos (apparently a member of another family of convinced democrats), who served as councillor in the 330s, had a son, Meidonides, who perhaps bought an estate at Acharnai for 4000 dr. in the *hekatostai* sales; if so, the date of mid-century given to his funerary stele must be too early. Meidonides' name may suggest a (matrilateral?) connection with Meidylos I son of Meidyliides A., named in a lease-record of 343/2, and his (?) grandson (SS) Meidylos II, councillor in 281/0.¹²¹

¹¹⁹ Traill 1986, 137–8 with n. 40; Lohmann 1989, 1995; Suto 1991; Van der Maele 1983; Lauter 1992. Agios Georgios was fortified, perhaps only in the 3rd c. (Lauter 1992); there was another fort and hamlet at Mylos, on the south side of the valley, a settlement at Palaiochori in the eastern half of the valley which might have been a separate deme, and a hamlet of 3–4 farms (or possibly a sanctuary, Suto p. 259) on hill 503 between the two valley areas. There may also be isolated farms in the area (interpretation and dating of some of the tower remains is controversial, see Suto).

¹²⁰ *APF* 2108; Aristophon's dedication, *IG* ii² 1533. 13 = Aleshire 1989 Inv. III 13. Aristophanes II son of Aristomedes I, *Agora* XV 492. 127, see Humphreys 2010a; Coll. Froehner (L. Robert 1936) 11. 25 (*SEG* 37. 214; Aristophon, not, as stated in *APF* Aristomedes I, line 29); ii² 2386. 10, demotic restored (Dow 1983 thought this list was related to ii² 2385, but the latter is listed by demes, with headings, whereas 2386 is not, though demotics are given). *SEG* 40. 269 = 42. 218, another curse tablet of the Lykourgan period, also names an Aristomedes, perhaps Aristomedes II. Aristo— of Azenia *diaitetes*, *IG* ii² 4. 33. On Demostratos see *APF* loc. cit.; *AO* s. 372. Tuplin 1977 suggested that Aristophon himself was an ambassador; however, his argument that it would be odd for Xenophon (*Hell.* 6. 3. 2) to give patronymics only for Autokles and Demostratos is weak, since both were the sons of distinguished men and the latter, at least, was still young, in his early 30s.

¹²¹ Hagnodemos, *SEG* 28. 152. 9; Meidonides, *IG* ii² 5311, Lambert 1997a F 16 B 4 ([Meido]n[i]des Ἡγν[ο]δεμου Αze). Lambert p. 168 suggests that Hagnodemos may have been matrilinearly related to Hagnodemos son of Hagnon of Acharnai, *APF* 139, but since the latter's name is semantically close to that of his father this is doubtful. Meidylos I, *Agora* XIX L 6. 104 (Papazarkadas 2011, 310 no. 51); Meidylos II, *Agora* XV 72. 148.

Hamaxanteia

There is no evidence on location, but there are some unclaimed sites in the coastal trittys.¹²²

Since Philerippos II son of Apsephion (III), both of whose names are rare, is attested as choregos from H. in the middle of the fourth century (*IG* ii³ 4. 451, *SEG* 61. 166), there is a fair chance that earlier Apsephions belonged to the same family, which in that case would have a long political tradition (see Table 30.5).¹²³ Apsithyllos I son of Teisias is named (without demotic) on three ostraka of the early fifth century; Apsephion I, eponymous archon in 469/8, may be his son, and would be the father of Apsithyllos II, whose son Apsephion II served as one

TABLE 30.5. Hamaxanteia:
Teisias, *APF* p. 604

¹²² See above, chs. 21 pp. 726–30, 24 n. 98 on the possibility that some small demes opted in 507 for independence because they were the homes of politically ambitious men. The name Apsephion also occurs in Phegaia and Phyle, in the late 4th c., but in association with more modern, less aristocratic names (Pamphilos, Moschos). Other unusual names in H.: Aineias son of Phyg—, councillor between 360 and 340, *Agora* XV 20. 41; Tlempolemos son of Agathymides, councillor in the 330s, *SEG* 28. 152. 15. Cf. Papazarkadas 2011, 303 no. 11 on [Aristokles?] son of Aristokles of Hama(xanteia).

¹²³ Philerippos' name (fond of young goats) might suggest a hill area for the deme; cf. perhaps Antheus H., who in (?) 336/5 provided 30 skins (*diptherai*) to be worn by slaves in the sanctuary at Eleusis (*IEleus* 159. 46–7). Cavalry: *IG* ii² 5601, Panaitios H., with horse, loutrophoros-stele, c.390.

of the Delian amphiktyons in 410/9, and of Philerippos I (son of Apsephion), who may be named on an ostrakon of *c.*420. Philerippos I would be the father of Apsephion III and grandfather (FF) of the choregos. Either Apsephion II or Apsephion III may be the father of Bathippos, who had recently died in 354 and had a son called Apsephion (IV).

Auridai

The situation concerning location resembles that of Hamaxanteia; ‘breezes’ may suggest an upland site.¹²⁴ One family of A. had connections with the Amphiaraiion: Neoptolemos son of Stratokles was commemorated there by a dedication set up by his son Charias, perhaps shortly before Oropos was awarded to Athens, and Charias may have been the Athenian of that name who won the flute competition in 329/8. Charias is attested three times as trierarch.¹²⁵

¹²⁴ It is perhaps just worth noting that a Hephaistion A. is attested as councillor on Samos *c.*350, *IG* xii 6. 262, VIII 38, and that a possible altar of Hephaistos was recorded by Vanderpool (1965*b*) at a deme-site south of Dekeleia (by the three asterisks and note ‘Wasserleitung’ on *KpA* XX). However, the late Roman deme Sphendale seems to have been near Dekeleia (Traill 1975*a*, 91–2); Amymone was another late Roman deme of Hippothontis, and so possibly was Melainai (see however n. 61 above and ch. 32 n. 35).

¹²⁵ *IOrp* 341, 520 (date, Knoepfler 1993*b*); *APF* 15339. The identification is based on the combination of Charias’ name and patronymic (the demotic is given only in the dockyard records), but since they are not semantically related this is a fairly sound argument. On Archedemos A., *APF* 2321, see Papazarkadas 2011, 303 no. 14.

IX Aiantis

The tribe had only six demes, all of which were of some antiquity as towns by 507, and are fairly securely located. Phaleron, the only deme in the city trittys, was Athens' principal port in early times;¹ Aphidnai was by the sixth century the home of the *genos* Gephyraioi; the Tetrapolis in the Marathon plain, to which Marathon, Oinoe, and Trikorynthos belonged, had an old religious tradition, as did Rhamnous, the fourth deme of the coastal trittys. The Tetrakomoi (to which Phaleron belonged), Aphidnai, and the Tetrapolis all appear in the list of the Twelve Towns of early Attika.²

CITY TRITTYS

Phaleron

We have references to the cult centres of the deme in the works of Philochoros and Plutarch, a fifth-century inscription perhaps concerned with the cult of Apollo Delios, and further evidence from the records of the *genos* Salaminioi.³ Philochoros says that Theseus founded shrines at Phaleron, near that of Skiros, for Nausithoos and Phaiax, who had been sent by Skiros to serve as pilot and lookout on the hero's voyage to Crete. The Salaminioi sacrificed at Phaleron to Athena Skiras and to Skiros in Maimakterion, and to Poseidon Hippodromios, Phaiax, Teukros, and Nauseiros in Boedromion; their sacrifice to Theseus on Pyanopsion 6 may also have been made at Phaleron. Pausanias saw a sanctuary of Demeter, temples of Athena Skiras and Zeus, and altars dedicated to the Unknown Gods, to heroes, to

¹ See ch. 30 at n. 4 on use of the Piraeus peninsula harbours before the 480s. It is not clear whether in the archaic period the mouth of the Kephisos would have been navigable enough to provide shelter. Mersch 1996, 162–6 has a list of finds from the Phaleron area. See also *AD* 60 B 1, 2005 (2014), 240; Killgrove 2016.

² On the Gephyraioi see ch. 20 n. 47; on the Twelve Towns ch. 18 at nn. 43–5. Traill (1986) thinks that Phaleron was consistently grouped with Rhamnous to constitute the city trittys of Aiantis, but see ch. 21; the two are listed successively in *Agora* XV 62, but not in 61 or (as restored) 72.

³ Philochoros *FGH* 328 F 111; Paus. 1. 1. 4; *IG* i³ 130, cf. 383. 153–4; *Agora* XIX L 4a. The Salaminioi are discussed in ch. 20.

the sons of Theseus, to Phaleros, and to Androgeos son of Minos. Phaleron was also the location of the lawcourt *epi Palladiōi*, possibly associated with the altar of the sons of Theseus.⁴

By the late fourth century the deme apparently claimed responsibility for a cult of Poseidon, since it was involved in a court case against the (?) genos Phoinikes.⁵ The deme may also have been concerned with the cult of Apollo Delios at Phaleron; the state perhaps supported—c.432, after the earthquake on Delos reported by Thucydides?—a levy of contributions from shipowners and (?) demes for construction or repair of a temple or shrine. Some of Apollo's property was in the hands of the Treasurers of the Other Gods by 429/8.⁶

Phaleron took part in the dancing competitions at the Herakleion of the Tetrakomoi, and will have appointed komarchoi and komastai for this purpose; its team set up a dedication commemorating a victory in the middle of the fourth century. We have no deme decrees. The demarch [M]enippos reported property owned by oligarchs in the deme in 402/1, and in the hekatostai sales the archon of the kome of [Phaleron?], son of a Pytheas Ph., sold land at Phaleron for 1000 dr. The archon's father may be Pytheas son of Glaukon I Ph., whose dikast-ticket (class V) was found in Piraeus; we also have the dikast-ticket of the latter's (presumably) elder son Glaukon II.⁷

⁴ Poseidon Hippodromios may be the same as Poseidon Hippios, and may have been so called because his sanctuary was near the hippodrome. Teukros was honoured as the father of the Salaminian Ajax; Nauseiros may be Philochoros' Nausithoos. The sacrifice in Boedromion perhaps took place on the 8th. Some of the sanctuaries and altars may have changed designation by the time of Pausanias; none of them has been located. On the lawcourt *epi Palladiōi* see Humphreys 1991, n. 17.

⁵ D. H. *Dein.* 10 (F XX Conomis 1975); see above, ch. 20 n. 123; R. Parker 1996, 317 (perhaps Poseidon Hippodromios; that the Phoinikes were a genos is supported by Hsch. s.v., from a commentary on *Dein.*? and by the existence of a genos Phoinikes, claiming to have been instituted by Kadmos, on Rhodes, D. S. 5. 58. 2). A member of the genos Brytidai (ch. 20 at n. 113) in Ph., Eualkos, [Dem.] 59. 61, councillor in 337/6, *IG* ii³ 324. 35.

⁶ *IG* i³ 130, with D. M. Lewis 1960. Everything about this text is very uncertain, including the assumption that the two fragments came from the same stone. Fr. b may have been found in Piraeus; Peppa-Delmousou 1988a suggested on the basis of the reference to contributions from the Deli[ans] that it concerned repairs to a temple on Delos. Earthquake, Thuc. 2. 8. 3. In fr. a 12 (after arrangements for a tax on shipowners, *nauklēroi*, of 1 dr. per ship) contributions for [??oikod|om]ia are to be made *dēmosiai* of 50 dr., *idiai* according to the individual's ability; *dēmosiai* here may mean 'by deme'. Other Gods, i³ 383. 153–4 (see ch. 22 n. 100).

⁷ Dedication, *IG* ii³ 4. 227. The dedicants are (1) —machos son of Satyros, perhaps represented with his father on *CAT* 2. 257 (Piraeus Museum; seated old man, S[a]tyros, standing young man); (2) Pl—, possibly Pleistias I, father of Pleistarche (*CAT* 2. 363 = *SEMA* 661) and grandfather (FF) of Pleistias II son of Chairedemos, councillor in 303/2, *Agora* XV 62. 287 (the latter's sister may have married into Erchia, cf. ii² 7629); (3) —n son of Theophilos; and (4) Philostr[atos]. [M]enippos, *Agora* XIX P 2 abc 6; hekatostai, Lambert 1997a F 9 B 18 with pp. 190–2, no. 24; 211–12. Dikast-tickets, Kroll 1972, 103 B, 84 B (also class V).

Three ostraka of the early fifth century name a Hippokrates of Phaleron, possibly the son of Anaxileos, who is named on 47 sherds with patronymic but no demotic.⁸

The deme had two notorious oligarchs, but no democrat of distinction. Eumathes, who probably owned a house at Phaleron,⁹ was one of the Thirty, and Demetrios I son of Phanostratos I ruled as a Macedonian puppet from 317 to 307 (Paschidis 2008 A 4). His family can probably be traced back to a Himeraios (I) recorded as a war casualty in Aiantis *c.*411; he would be the father of Phanostratos I, whose two sons were Himeraios II and Demetrios I. Himeraios served as priest of Poseidon Pelagios in (?) 335/4, and was awarded a gold crown of 500 dr. by the demos for his service, together with the priests of Dionysos, Zeus Soter, and Ammon, and the Council's hieropoioi. He was the target of an eisangelia by Deinarchos, and served as one of the prosecutors in the Harpalos affair; he fled with Hypereides in 322 after Athens' defeat in the Lamian War, was condemned to death in his absence, and was killed soon afterwards.¹⁰

Traditional accounts of the career of Demetrios I need revision in the light of Tracy's contention that the record of achievements on the statue-base *IG* ii³ 4. 281, from Eleusis, was cut by a man whose activity seems to fall between *c.*270 and *c.*235, and thus should be attributed to Demetrios' homonymous grandson (SS), who in Habicht's and Tracy's view held a position analogous to that of his grandfather from 262 to 255. There are however serious difficulties with this view, which rests on very slender evidence, and it seems to me more likely that the younger Demetrios, after a colourful youth in the racing world, had a conventional (though very successful) military career as phylarch, hipparch, and general in the later 250s and the 240s, in the course of which he was honoured by the garrisons of western Attika.¹¹

⁸ Brenne 2001 no. 106 Phalereus; 104 son of Anaxileos, with *Agora* XXV nos. 274–82. There is no reason to assume any relationship with Hippokrates of Alopeke, a much more prominent candidate (ch. 15 n. 24), since the name was popular with aristocratic families. Kallikrates I son of Hippo[krates?] Ph., councillor *c.*330, *Agora* XV 46. 37–8 (with his son Kallikrates II, 39–40), may conceivably be a descendant.

⁹ *Agora* XIX P 2 abc 7 (cf. Walbank 1982*b*).

¹⁰ *APF* 3455. Himeraios I, *IG* i³ 1186. 102; Himeraios II, *IG* ii³ 416 (cf. Lambert 2003*b*; one of the hieropoioi honoured is Philostratos of Pallene, perhaps Ph. son of Nikostratos, who was councillor in 335/4, *Agora* XV 43. 210); eisangelia (between 336 and 322), M. H. Hansen 1975 no. 130, D. H. *Dein.* 10 p. 652 = Conomis 1975 F XIV; death, Plut. *Dem.* 28. 2–4, Suda s.v. *Antipatros* A 2703. Note *APF*'s suggestion that Demetrios I married a daughter of Konon II of Anaphlystos (but see ch. 32 at n. 75). He may be the D[eme]trios Ph. who served as councillor *c.*330, *Agora* XV 46. 44.

¹¹ Tracy 1994*a* (*SEG* 44. 163); Habicht 1995, 155–8. However, the reattribution of this text does not affect the question of the tradition that 365 statues were set up in the demes to Demetrios I; see above, chs. 27 n. 23; 29 n. 113. *IG* ii³ 4. 281 records honours from the garrisons of Eleusis, Panakton, and Phyle, and should have been set up after D. had held a command in that area (*sc.* the generalship of the chora, round Eleusis); *IEleus* 194, another text found at Eleusis, honouring a Demetrios, may also belong to D. II of Phaleron (on possible dates for his commands see M. J. Osborne 1989, Oetjen

The wealthiest man in the deme in the first half of the fourth century was probably Antidoros, who served as trierarch at least eight times between 377 and 356, six times in partnership with Aristolochos of Erchia; they seem to have been partners also in a bank, which crashed, perhaps around the time of the Social War. Antidoros retained enough property to serve twice subsequently as trierarch on his own.¹²

Aristokrates II son of Physkion will also have been a well-known figure in the city. Aristokrates I, probably his grandfather (FF), served as hellenotamias in 421/0; it is not clear whether the Aristokrates who was victorious as choregos in tragedy at the Dionysia in 388/7 was the grandfather or the grandson. It was presumably the grandson who, probably still as a relatively young man, acted as one of the guarantors of Neaira's free status c.370; later in life he was honoured for service as a priest.¹³

2000; the restoration [Apatouria] in line 22 is quite unjustified, cf. ch. 19 n. 13; G. J. Oliver 2007*a* does not mention this identification). Possibly D. I, *SEG* 46. 249. Habicht's theory of a 'regency' of D. II is based on (1) the statement of Apollodoros *FGH* 244 F 44 that after the end of the Chremonidean War a garrison was placed in the city, something happened to the magistracies (the word is lost), and everything became subject to the rule of a single man. This may well be a description of a de facto rather than de jure state of affairs (epigraphic texts show that the normal civil magistracies continued to function), and the holder of real power, if not Antigonos himself, may be the commander of the garrison. (2) The other alleged piece of evidence comes from Hegesandros, an anecdotal writer of the second century BCE (Athen. 4, 167 e-f), who says that Demetrios II, when summoned and rebuked by the Areiopagos for his disreputable behaviour, had turned the tables by naming members of that council as receivers of bribes and adulterers; Antigonos, on hearing of this, appointed him thesmothetes (Oetjen 2000 and Tracy 2003, 19 take this to be the ordinary magistracy). This looks to me like a contemporary joke, perhaps somewhat garbled in transmission (cf. Paschidis 2008 A 59; G. J. Oliver 2011, 41). Habicht does not explain why Demetrios, whose grandfather fled to Egypt after being expelled from Athens by Demetrios Poliorketes, should have been on such good terms with Macedon, nor how he managed to combine a puppet regentship with an evidently distinguished military career. It seems more likely that he left Egypt when Demetrios I fell out of favour after the succession of Ptolemy II Philadelphos in 283, and spent the late 280s and the 270s partly in Athens and partly, perhaps, helping men like Glaukon of Aithalidai to build up contacts with other states (cf. Humphreys 2007; horse-racing was a good cover for this, and his victory at the Delia must belong to the period of Ptolemaic influence, though E. Will 1979 I, 231–3 rightly warns against overestimating the degree of control exercised over the islands either by Egypt or by Macedon). D. II may have been too young to hold a military command in the Chremonidean War, perhaps only born in the 290s, since Demetrios I was probably born c.355; hence Demetrios son of Demetrios Ph., epistates and councillor c.265/4 (arch. Euboulos, *IG* ii³ 1259. 6), may not be his son, though the Demetrios Ph. who served as peripolarch in the late 3rd or early 2nd c. (Peck 1942, no. 25; G. J. Oliver 2007*a*, 180; *SEG* 61. 151) might be a son or grandson; there are however several Demetriois in Ph. in the late 4th and the 3rd c., including a Demetrios whose son Sokles served as councillor in 303/2, *Agora* XV 62. 292, who can hardly have belonged to the tyrant's family. D. II's first recorded office is as phylarch in 256/5 (Antimachos); he may also have served as councillor and treasurer c.240 (*IG* ii³ 1006. 14, [D]emetrios Ph[nostratou]). See comm. on *IEleus* 194–5; *SEG* 61. 151.

¹² *APF* 1036; bank crash, Dem. 36. 50.

¹³ *APF* 1926. Choregia, *IG* ii² 2318. 198; honours to priest, ii² 3454 (Ma and Tracy 2004). The disposition of the letters shows that the name would have been encircled by a crown, which should date the

We can reconstruct a fairly large family, probably based in Piraeus, descended from Philon I, who is represented on a relief stele of 390–365 with his daughter Chairestrate and with Kephisodotos of Pithos, perhaps her husband, and Aristylla, perhaps their daughter (see Table 31.1). His (?) son Demarchos I (the name possibly indicating that his father had served as demarch?) is attested on a dikast-ticket of class VI, and as father of Dionysios, perhaps councillor *c.*330, who was commemorated by a stele found in Piraeus. Demarchos' (presumably) elder son Philon II may have served as councillor in the same year as his brother, and dedicated bronze vessels in the Asklepicion in 340/39. He seems to have had four children: Demarchos II, who won a scribal competition and was buried in the Kerameikos in the second half of the third century; Polyxenos, whose son Philon III was buried in the same peribolos as his uncle (FB) Demarchos; Soso, also buried there, with her husband Apollodoros of Potamos and their daughter Mikkion, who was married to her cousin (MBS) Philon III; and Demo, wife of Asklepiodoros of Kropidai, whose kioniskos may also have stood in the family precinct.¹⁴

Note: 7230 found Piraeus, the other monuments Kerameikos. 7230 = Scholl 1996, 277, CAT 4. 330. The stone commemorates Chairestrate; Aristylla may be her mother, not daughter. 7598, 7600, 7271 all 3rd c., 7627 ? 2nd c. Demarchos I, Philon II no patronymics. Soso's father, no demotic.

TABLE 31.1. Phaleron: Philon

text to the second half of the fourth century or later (*Hesperia* 2, 1933, 155 n. 4, dated it to the first half of the century on letter forms; Ma and Tracy put it in the 2nd c.).

¹⁴ It is possible that some stones moved from Phaleron to Piraeus in postclassical times. The stele of Nausichares son of Nausistratos Ph., IG ii² 7615 (mid 4th c.) was also recorded in Piraeus; we do not know where Fourmont saw ii² 7614, which commemorated Nausichares' father Nausistratos son of Hierokles I with another son, Hierokles I, a daughter, Eukoline, and possibly his wife (Bergemann 1997, peribolos L 14).

Ktesikrates son of Ktesiphon was commemorated by a stele with a relief of an armed man and a loutrophoros, dated before the middle of the fourth century; presumably he died in battle. His monument was found either on Salamis or in the deme. A man of the same name is recorded as (?) kleruch in mid-century. Ktesiphon II son of Boiethos [*sic*], whose name was later added to the stele of Ktesikrates, is probably a nephew (BS) of the latter; his father served as (?) councillor in the 330s.

The dikast-ticket of Kallias I son of Kalliochos I (class IV, issued c.350) was found in a grave in Pikrodafni St, near Old Phaleron, which suggests continued ties with the deme area; his nephew (BS) Kalliochos II son of Kallimachos served as councillor in 303/2.¹⁵ Local interests are also attested for the family of Mys Ph., whose son leased property in the deme in the Lykourgan period. Mys carted and cleaned stones for the sanctuary at Eleusis c.327/6; an ancestor may be commemorated with his family on a group of lekythoi of the first half of the fourth century with (perhaps) his father Sokleides, his mother Philia, his brother Meles, and his sister Metrodora.¹⁶

Two Phalerian families, in addition to that of Demetrios, kept horses, at least in the third century. Kallikrates IV, who served in the cavalry c.250, was probably related to one or both of the two men of that name listed as (?) councillors in the 330s, and to the Kallikrates who in the late fourth or early third century lent 500 dr. secured on a house and tavern in the city area. Possibly the Kallippos Ph. who lent money in the same period (took over the same loan?), and made four dedications in the Asklepicion, some with his wife Mika, was a kinsman. Nikesias II, who also served in the cavalry c.250, was probably a descendant of Nikesias I son of Nikesidikos, tamias in 377/6.¹⁷

Charops Ph. is named as a leading member of the orgeones of the Healing Hero in 333/2, when they granted a lease of a garden (*kēpos*); a tombstone from the Agora may commemorate him with his son Apollodoros and his daughter Philesia. Eugeiton son of Eukles Ph. represented his phratry c.330 in a lawsuit and received a gold crown, which he

¹⁵ Kroll 1972, no. 73b; Kalliochos II, *Agora* XV 62. 284. Whether the dikast Kallias was related to Kallias son of Philetairos Ph., commemorated by a stele with a relief loutrophoros and a siren on top, found in Athens (*IG* ii² 7610, c.350) is uncertain, since the name is so common.

¹⁶ Mys (II), *IEleus* 159. 6; son, *Agora* XIX L 11. 9f. (cf. Papazarkadas 2011, 310 no. 54). Mys I, ii² 12215–16 = *CAT* 4. 323, 322, a pair of lekythoi (the former dated at the beginning of the century, from Glyphada, the only monument that names Sokleides; the latter collected by Elgin, no provenance); 12121 = *CAT* 4. 321, from Chasani, 1½ km S of Trachones. A stele representing Eunostides Ph. shaking hands with a youth, with a woman (Timostratē) behind the youth (ii² 7605 = *CAT* 3. 378c) was found at Old Phaleron; Eunostides may be a descendant of the Eunost[ides?] of Aiantis named on a casualty list of the mid 5th c., *IG* i³ 1169. 2.

¹⁷ Kallikrates IV, Bugh 1988 II B 122; Kallikrates I, perhaps son of Hippo—*Agora* XV 46. 37; Kallikrates II, perhaps son of Kal[likrates II?], *ibid.* 39 (it is not certain that this is a list of councillors, see Table 31.1, nor is it certain that Hippo (v.) in line 38 and Kal (v.) in line 40 are patronymics, added to distinguish homonyms, although the abbreviation of the names may support this interpretation). Kallikrates III, *SEG* 29. 157 (Agesilaos and Plataiōi Sts, *A to Z* Γ 2/3; Finley 1952² no. 92 B). Kallippos, *Agora* XIX H 106 = Finley 1952 no. 92 A; *IG* ii² 1534 = Aleshire 1989 Stele V 108, 111, 119, 121 (Aleshire 1991 no. 8087). Nikesias II, Bugh 1988 II B 176; Nikesias I, ii² 1410–11.

dedicated, presumably in the phratry shrine, which was perhaps in the city, since the stone recording the dedication was found on the Akropolis.¹⁸

INLAND TRITTYS

Aphidnai

Like the city trittys, this contained only one deme; Aphidnai was second in size only to Acharnai, appointing sixteen councillors in the fourth century. In addition to the main deme site at Kotroni, the deme seems to have contained at least four villages (*kômai*), Titakidai, Thyrgonidai, Petalidai, and Hyporeia; the village of Melainai, perhaps on the northeast end of Mt Parnes, may also have belonged to it. Petalidai, Hyporeia, and Melainai sold land in the hekatostai sales, which may possibly be an indication that deme finances were decentralized, each kome managing its own property, and perhaps funding the sacrifices at its own sanctuary or sanctuaries. The patronymic of Leukaïos son of Komarchos A., secretary of the treasurers of Athena in 413/2, may imply that he came from one of the villages.¹⁹

¹⁸ Lease, *SEG* 24. 203, Schwenk 1985 no. 32 (ch. 12 n. 63); tombstone *Agora* XVII 712 (dated '4th c.?'). Eugeiton, *IG* ii² 1238 = *SEG* 38. 128, dated c.330 by Tracy 1995, 100 (cutter of ii² 244), M. Meyer 1989*a* A 160, Lawton 1995 no. 102; *pace* Hedrick 1988*c*, the fact that the stone was found on the Akropolis (to which inscriptions were sometimes moved in modern times) does not imply that he was not a member of the phratry, and the wording of the text implies that he was. Chairion Ph., secretary of the council in 361/0 (*IG* ii² 116. 6), was probably the father of —nokles, councillor in 304/3 (*Agora* XV 59. 7/61. 245) and of the guarantor of *Agora* XIX L. 6. 64–5 (cf. Papazarkadas 2011, 317 no. 89, but restoration of his name is unwarranted).

¹⁹ Philochoros *FGH* 328 F 94 says that the deme was called both Aphidnai and Aphidna, but the demotic in -aios rather than -eus favours Aphidnai. Some of the villages became demes in the Roman period; Traill (1975*a*, 90–1) places the Roman demes Eunostidai and Klopidae also in this area. However, Lambert 1997*a*, 196–7, nos. 34–5, points out that Melainai (F 10 B 17–20) and Klopidae (F 10 B 21–3) seem to belong to a section of the hekatostai records concerned with groups attached to X Antiochis, in which case they would be subordinate communities of Kolonai, Eitea, or Semachidai (see ch. 32 n. 33). Lambert suggests that Eunostidai might be restored as seller in F 7 B 1–2. Hyporeia sells 7 eschatiai F 7 B 3–19, for 5250? dr. (but see n. 35 below); five buyers from Aphidnai, one (buying two properties) from Kolonos; Hyporeia may already have been a separate deme by c.200 (Lambert, pp. 193–4, no. 28). [Petalidai], F 7 B 20–6, was also perhaps a deme c.200 (*ibid.* no. 29); it is mentioned as the location of property in *Agora* XIX P 26. 500. Titakidai and Thyrgonidai may have been phratry or genos bases (chs. 19 n. 18, 20 n. 46), which may explain—if their cults were still the responsibility of these bodies—why they do not appear with the other villages in the section of the hekatostai records devoted to sales by demes and their subdivisions. Milchhöfer 1892 suggests that there were ancient villages at Kapandriti (*AGC* 21 X7/Y8 no. 6), Masi (Polydendri, *AGC* 21 X7/Y7 nos. 3–5), and Tsiurka (Kiurka); *KpA* locates Titakidai at Drasera east of Kiurka. This part of Attika is made up of hill country and small valleys; it is perhaps understandable that small villages close to the Boiotian border did not opt for separate deme status (though the same motives apparently did not operate in the Koundoura valley near the Megarian border, cf. ch. 30 n. 119; perhaps the no-man's-land constituted by the sacred orgas made a difference there). Leukaïos son of Komarchos, *LGPN* Leukaïos 2, Komarchos 3; —us son of Leukaïos, who dedicated *IG* i³

The site at Kotroni, which had an important Bronze Age settlement and was fortified again with a rubble wall perhaps in or before the fourth century BCE, has been little explored, and part of the deme's territory has vanished beneath the waters of the *limnê* of Marathon, a large reservoir constructed in 1926–31. The members of a garrison stationed in the fort made a dedication at Rhamnous in 212/11.²⁰

Aphidnai was the home of the *genos* Gephyraioi and, presumably, its cult of Demeter Achaia; it may have led a relatively independent existence in the border area between Athens and Oropos until the Peisistratid period. However, the ties with the city developed by some leading men in the sixth century, combined with the absence of epigraphic evidence from the deme (which may be due to lack of exploration) means that the demesmen known to us are largely city-based.²¹

The families of the 'tyrant-killers' Harmodios and Aristogeiton, whose hereditary privilege of dining in the *prytaneion* gave the holders a reason for living in the city, were somewhat in eclipse in the early fifth century, perhaps in part because neither of the tyrannicides had left sons, and it took time for leading lines to emerge.²² Kallimachos I A., who served as polemarch in 490, and was presumably an important figure in the deme and city before his death at Marathon, left no descendant who made any mark in the fifth century, although Kallimachos II A., who served as one of the treasurers of Hera on Samos in 357/6/5, and his (?) son Kallisthenes, buried in the Kerameikos in the late fourth century, may have claimed descent from him.²³

889 on the Akropolis c.440, may be his father or uncle (FB). On Melainai cf. also chs. 19 n. 27; 30 n. 61, 32 n. 35. Excavation at the Kotroni fort, *AR* 2011/12 (cf. 2006/7).

²⁰ Buck 1892 has a useful map of the deme area (opposite p. 158). Prehistoric remains, Forsén 2010; fort, Lauter 1992, still referred to in *IG* ii² 2776. 96–7, in the early 2nd c. CE. Dedication, *IRh* 32 (arch. Archelaos), a copy to be set up at Aphidnai; cf. *IRh* 34, a similar dedication, without date. These texts confirm (at least for the 3rd c.) the accuracy of the inserted document in Dem. 18. 38, which names Aphidnai as one of Attika's garrison-posts. There is evidence of cult on Kotroni hill from the late Geometric to Archaic periods (Mersch 1996, 109–10). The lack of exploration invalidates Ismard's argument from the absence of deme decrees (2011, 167; the *kômai* have not produced decrees either).

²¹ Gephyraioi, ch. 20 n. 47; Demeter Achaia, Hdt. 5. 57–61, Schachter 1981, 162. Although the 'oikos' Dekeleis claimed to have helped the Dioskouroi against Theseus, who was aided by Aphidnai, the name of Demotion A., commemorated by a pair of *lekythoi* (or a single vase?) from the Kerameikos, with his (?) daughter Hagnokrite and his (?) wife Helle daughter of Kallianax of Paiania, might suggest that an ancestor who belonged to the phratry Demotionidai had moved from the Dekeleia area to Aphidnai before 507 (*IG* ii² 5736, 7038; Peek 1942, 210 no. 364, cf. Mitsos 1949, 27 no. 8, identifies the two stones and claims that the description of the relief is wrong at 7038 and the restoration of Kallia[nakt]os as Kallim[ach]os wrong at 5736; *CAT* 264/274 thinks that there may have been a pair of vases). *AD* 20 B 1, 1965, 123 with pl. 96c, is a stele fragment from Kapandriti, but no name is preserved.

²² For a possible daughter of Aristogeiton see *APF* 12267 III, and ch. 20 n. 136; note that collaterals who had, or thought they should have, *sitesis* gave the tyrannicides' names to their sons.

²³ Kallimachos I, Keesling 2010*b*; Kallimachos II, *IG* xii 6. 261. 8, 60; Kallisthenes Kallimachou, *IG* ii² 5756, trapeza, possibly after 322 when the Athenian *kleruchs* were evicted from Samos.

By 336/5 Aristogeiton's seat at the prytaneion dinners was held by Demokrates II, son of Demokles I, who as an elderly man was apparently a well-known figure in the city from the late 340s to 327/6. His tribe used his father, or a son Demokles II, as *klētēr* for a summons served on property in Aphidnai in (?) 342/1, which shows that the family was considered to be of some weight in tribal affairs; this is confirmed by Demokrates' appearance as proposer of a tribal decree in 327/6. He did not necessarily live in the deme; his role in the machinations of Euktemon of Kephisia suggests city residence.²⁴

We can perhaps trace Demokrates' ancestry back into the fifth century. If he was the grandson (SS) of Demokrates (I) son of Charixenides A., commemorated on a tombstone that is unfortunately both lost and undated (*IG* ii² 5737), his grandfather may have been the son of Charixenides I, named on a casualty-list of Aiantis for 464, and the brother of Charixenides II, listed among the tribe's war dead c.410 (see Table 31.2). They may have been related to Chaireleides son of Charixenos A., tamias in 444/3. Demokrates III son of Demokritos A., named on an unpublished tombstone, and his (?) son Demokritos II, syntrierarch in 322, were perhaps cousins (FZS and FZSS?) of Demokrates I.

The Harmodios branch of the Gephyraioi can be traced back to Proxenos I A., who served as hellenotamias in 410/9, and whose father (Harmodios II?) may have married a daughter of Dikaiogenes of Kydathenaion. Proxenos' son Harmodios III, who perhaps lived in the city near Euphiletos, the speaker of Lysias I, defended his family's privilege in 371 by attacking as illegal a proposal to grant dining rights and other honours to Iphikrates; he may be the Harmodios named on a fourth-century stele found in the city, and/or the father of Myrrhine daughter of Harmodios, named on an epistyle of c.360 reported from Koropi. A second son, Dikaiogenes III, was adopted into Kydathenaion, and possibly a

²⁴ *APF* 12267 IV; *klētēr*, *Agora* XIX P 26, 488–530 (at 512) (*pace APF*, this does not imply deme residence); on the Euktemon affair see Is. 6, ch. 7 Case 1. Demokrates agreed to say that he had betrothed his sister (perhaps Archedike, who subsequently married Nikandros of Halai Aixonides and was commemorated with her daughter at Vari in the mid 4th c., *IG* ii² 5733, see ch. 29 n. 145) to Euktemon, probably in 367; at this time he was presumably a relatively young man, perhaps a client of the brothel owned by Euktemon. Other bearers of the name Aristogeiton in A. presumably came from lines that considered themselves entitled to the prytaneion seat, but this does not imply that their claims were either unobjectionable or successful. The Aristogeiton of Aiantis who died in battle in 409, *IG* i³ 1191. 293, probably belonged to A. The Aristogeiton A. who was involved in a case for which Isaios wrote a speech (*F* III 1–2 Thalheim 1903) may possibly have had connections with Lemnos (*APF* 12267 III; ch. 20 n. 136). The Aristogeiton A. whose daughter Eukoline married Dikaiogenos IV of Kydathenaion, and was commemorated with him and their son by a round-based funerary monument at the end of the 4th c. (*IG* ii² 6569, no provenance), and whose son Thoutimos III was named on an anthemion stele dated 340–317, found on the Areiopagos (ii² 5752), was very possibly the ambassador Aristogeiton sent to Dareios III with Iphikrates II and Dropides (cf. below, n. 34) and captured by Alexander; it is much more doubtful whether he was the well-known politician A. of the Lykourgan period (Sealey 1960), since by this time the name is attested in several other demes (cf. *APF* 12267 IV).

Note: LGPN Demokritos 6, Demokrates 30, unpublished early 4th c. tombstone.

TABLE 31.2. Aphidnai: Charixenos APF 3549, 12267 IV (revised)

daughter, Hegeso, was commemorated by an exceptionally fine relief stele of 410–400. Harmodios III's son Proxenos II is attested as trierarch in the 350s and general in the 340s; he was condemned, perhaps after his command in 347/6, but reappears in 341 as one of the guarantors of triremes for Chalkis (and as general in 339/8); his son Harmodios IV paid off the resulting debt in 325/4, and probably appears on a horos with Peithon of Marathon as creditor for 1500 dr. The family can be traced into the third century.²⁵

During the Peloponnesian War the leading member of the deme was Demosthenes son of Alkisthenes, who served frequently as general between 427/6 and 413/2, when he died in Sicily. His victory with a men's chorus at the Dionysia of 423/2 may have been a successful attempt to reassert himself after Kleon had taken most of the credit for the capture of a Spartan force on the island of Sphakteria in 425/4, and after his failures at Megara, Siphai, and Sikyon

²⁵ APF 12267 V–VI; ch. 20 n. 135, Table 7.2. Proxenos I's service in 410/9 suggests that if Dikaiogenes III later claimed that P. had been involved with the 400, there was little substance in the accusation. Dikaiogenes III may have been named to commemorate an uncle (FB) who died childless. Proxenos I's rosette stele (fragment) of c.400, IG ii³ 5765. Hegeso, IG i³ 1289; her father's demotic is not supplied, but the quality of the work may support the attribution (see ch. 11 n. 27). Harmodios III, APF *ibid.* VI A (Euphiletos, Lys 1. 41; tombstone? ii² 10822; Myrrhine, 12203). Harmodios IV, *Agora XIX H* 95).

in 424/3. A probable grandson (SS), Thoukydides son of Alkisthenes II A., appears perhaps *c.*350 as a member of a consortium of guarantors backing a stonemason from Thespiiai who took on a contract for *c.*7300 dr. on Delos.²⁶

Another demesman with Delian connections in the fourth century is Alkmeonides II son of Thrasydaios, listed *c.*370 as owing 510 dr. to the temple for interest on a loan. His father Thrasydaios son of Alkmeonides I is named on a diadikasia list *c.*380 as being released from a liturgic obligation; Alkmeonides I may have been the second husband of Agariste, in which case he denounced some of those involved in parodying the Mysteries.²⁷

One of the men condemned for mutilating the Hermai in 415 was Panaitios son of Philocharēs I A. (see Table 31.3); he owned land on which he grew vines and kept bees, cattle, sheep, and goats (possibly one of the *eschatai* of the deme area), had a slave donkey-driver, and had perhaps leased a *temenos* in Euboia. Kleonymos I A., who had two sons, Philocharēs (II?) and Philonides (both of whom named sons after their father), was probably Panaitios' brother. Philonides is attested as trierarch before 356;²⁸ his son Kleonymos

TABLE 31.3. Aphidnai:
Philocharēs

²⁶ *APF* 3585; Thoukydides, *ID* 104-4 A 31 (named in appreciation of the historian's account of his grandfather? a link with Thoukydides of Achardous, ch. 30 at nn. 61–2, is also possible).

²⁷ Alkmeonides II, *IG* ii² 1635. 126; Thrasydaios, ii² 1929. 14, *APF* 9688 XIII. Husband of Agariste, Andok. 1. 16; see ch. 13 n. 34 (*pace APF*'s comments, the fact that two aristocratic members of A. plotted against the Peisistratidai was not likely to deter other members of the deme from making aristocratic alliances; indeed, a rival family that resented the kudos gained by the Gephyraioi might well make an alliance with the Alkmeonidai, who themselves claimed responsibility for expelling the tyrants. Note also on Delos Ariston son of Eukleon A., amphiktyon in 364/3, buried at Acharnai, ii² 5730, and Archippos son of Archestratos, naopoios in 346/5/4, *APF* 12267 III (possibly of the Gephyraioi).

²⁸ Panaitios' property, *IG* i³ 422. 204, 426. 52–64; he also had a pair of plough oxen, so he grew some grain. Lease, i³ 418 = *Agora* XIX L 2. 6. Condemnation, Andok. 1. 52, 67 (MacDowell 1962 suggests that the Panaitios of l. 13 was another man). Philonides, *APF* 14892.

III is recorded as (?) kleruch in mid-century, and was perhaps the father of Philonides (II?), whose wife Onychion was buried in the Kerameikos c.300. Kleonymos II son of Philochares II leased a mine in (?) 342/1.

Eucharides son of Eucharos A. served as thesmothetes in 444/3 and was named on an ostrakon that may belong to the same year; Chares son of Eucharistos A., who had a career of some distinction in the third century, may be a descendant.²⁹

Another family in A. with political ambitions was that of Kallikrates I, who married a sister of the politician Agyrrhios of Kollytos (Table 8.7). They had three sons, and perhaps a daughter. Kallistratos, the most distinguished of the sons, proposed a rider to a decree before 378/7, and served as general in the latter year; he was elected general again for 373/2 and 372/1, was active in the Assembly in 370/69 and 369/8, and is attested as syntrierarch in (?) 366/5. His two brothers, Eupheros and Aristokrates, probably appear together on a curse tablet; his sister probably married Timomachos of Acharnai. All three brothers named sons after their father. Kallikrates II son of Kallistratos served as syntrierarch before 356 and perhaps as ambassador to Phokis in 346/5; his cousins (FBS) Kallikrates III son of Eupheros and Kallikrates IV son of Aristokrates are both attested as liturgists. Kallias son of Kallikrates A., who freed a slave donkey-driver resident in Kollytos in the Lykourgan period, will be the son of one of these homonymous cousins. [–c.10–] son of Aristokrates A., councillor in 306/5, may be a grandson of Kallikrates IV.³⁰

There may have been rivalry in the deme—if either family took any interest in deme affairs—between Kallikrates' family and that of Kephisodoros I. The latter's son Teisandros was known as a sophist in the late fifth century, which presumably implies city residence.³¹ His brother Kephisophon was represented with his wife

²⁹ *AO* p. 86; possibly secretary in the 450s, p.105; (possibly *kalos* c.480, BArch 202230); ostrakon, Brenne 2001, no. 73 (written by a disgruntled litigant who thought the thesmothetes had mishandled his case?). On *IG* ii² 5768 (not connected to the thesmothetes) see ch. 11 on loutrophoroi.

³⁰ *APF* 8157; Hochschulz 2007. Kallikrates I's son Kallistratos was Agyrrhios' adelphidous (ZS). Note that Agyrrhios is now attested as still alive and active in 374/3 (Stroud 1998, *SEG* 47. 96, R/O 26). Since Agyrrhios himself had a son named Kallikrates, it is possible that there had been an earlier marriage between the two families, but it is perhaps more likely that the boy was named after Kallikrates I; see Humphreys 1986*a* on relations between WB and ZH, and chs. 8, 24 n. 5. Eupheros and Aristokrates, Wunsch 1897, 24a with Wilhelm 1904, ch. 15 s. 'Ostracism'. Kallias, *SEG* 18. 36 B 270; [Kallikrates V?] son of Aristokrates, *Agora* XVI 113 (a brother of Kallikrates IV would probably have been born too early). On Kallistratos son of Empedokles A. (Plut. [*Mor.*] 844b, not in *LGPN*) see ch. 28 n. 73.

³¹ *APF* 8410. The name Teisandros suggests a connection (perhaps affinal?) with Kleisthenes' opponent Isagoras son of Teisandros, who belonged to a family in Aphidnai that worshipped 'Zeus Karios' (Hdt. 5. 66, perhaps an error of Hdt. or a copyist for Zeus Karaïos, known in Boiotia, ch. 15 p. 488). The possibility of a connection with Teisikles I A. and his two sons, Euktemon and Teisikles II, who made a pair of dedications to Athena Ergane c.350, *Agora* XVIII V 579, is much more tenuous, though they should not necessarily be regarded as working smiths. Euktemon's son Demetrios served as councillor in 332/1 and again in 328/7, and in both years concerned himself with the Amphiarion (*IG* ii³ 348 with *BE* 2012, 129; *IG* ii³ 360, without patronymic). We may however have a working smith of Aphidnai in Timotheos, who supplied masons' tools to the sanctuary at Eleusis in (?) 336/5, *IEleus* 159. 56.

and son on a (probably) painted stele from Piraeus, apparently set up c.365–340 to commemorate the son, Kephisodoros II. Kephisophon seems to have had a second son, Kephalion, with whom the will of Pasion of Acharnai was deposited in 370/69; he is attested as syntrierarch in (?) 366/5. Kephalion's son Kephisophon II also had banking contacts; he acted as guarantor for the banker Blepaios of Lamptraí c.337/6. He was elected general for 345/4, 342/1, and 340/39, and finance minister (*epi to theôrikon*) for 343/2; in the latter year he leased a house belonging to Artemis Agrotera in Kollytos for 686 dr. He may have proposed a law in 338/7 or the following year concerning the fortification of Piraeus, and appears on a curse tablet. The Kephalion (II) who served as syntrierarch in 322 is probably his son.³²

Aphidnai contributed one of the members of the Thirty, Drakontides son of Euthykrates I; his son (or grandson?) Euthykrates II served as councillor in 337/6 and 328/7, and leased an estate at Eleusis in 331/0. Either Euthykrates II or a brother bought an eschatia in Hyporeia, one of the villages of Aphidnai, for 50 dr. in the hekatomtai sales. Drakontides II son of Euthykrates III (??) was granted proxeny rights at Oropos in the early second century.³³

Another aristocrat from A. who re-emerged in the Lykourgan era is Dropides, perhaps descended from the archons of 645/4 and 593/2 and, if so, related to the 'tyrant' Kritias. Dropides son of He[rmipp?]os A. leased a mine in (?) 339/8, and is probably the Dropides A. named on a mine horos from Sounion; he may well also be the Dropides who was sent as ambassador to Dareios III in 330 with Iphikrates II and an Aristogeiton, and was captured by Alexander.³⁴

³² IG ii² 5757, Kephisodoros II, Kephisophon I, and Peisistrate, probably Kephisophon's wife; 5758, a lost stone, named a Kephisophon, Kephisodoros, and Anthylla, after an Aphidnaios whose name is lost; this might be another stele for Kephisodoros II, on which he was represented with his father and his wife or sister, or, as Kirchner thought, a stone commemorating later members of the family (paired lekythoi are quite common, but I am not aware of any examples of paired stelai). It is not particularly likely that the Kephisodoros son of Kephisophon of Athens who served as lochagos with the Ten Thousand (Xen. *Anab.* 4. 2. 13) belonged to Aphidnai, since the same combination of name and patronymic occurs also in Acharnai, Alopeke (IG ii² 2345. 32, see Humphreys 1990a), and (in reverse order) Hermos and Xypete. Kephalion, Dem. 45. 19 (the kedestes Amphias who was sent to fetch the will was probably his WB, see Humphreys 1986a); *epi to theôrikon*, IG ii³ 306; lease, *Agora* XIX L 6. 99 (Papazarkadas 2011, 307 no. 39); walls, ii³ 429, Maier 1959 no. 10; curse, Coll. Froehner 11 (L. Robert 1936).

³³ Euthykrates II, Papazarkadas 2011, 305 no. 27; with patronymic (Drakontidou), *IEleus* 177. 373, IG ii³ 360. 5, 42, 47; without, as proedros 337/6, ii³ 324–5, 418 (cf. Lambert 2004b, 100). Lambert 1997a, F 7 B 8, restores [Euthykrate]s Drakontidou and considers him a grandson of Drakontides I, but it is not impossible that the latter was a youngish man in 403 who had a son shortly before that date. Drakontides (II?) son of Euthykrates, IG vii 283. 3. Papazarkadas points out that both names occur in the Eteoboutadai (ch. 20 n. 80).

³⁴ The names of Kritias and his father Kallaischros also occur in A. (*APF* 8792 VI d), but according to Loeper's hypothesis the 'tyrant' should have belonged to Erechtheis (ch. 15 n. 30). Mine lease, *Agora* XIX P 28. 22; horos, IG ii² 2636; embassy, Arr. *Anab.* 3. 24. 4, Curt. 3. 13. 15. Alexis' play *Dropides*, *PCG* 2. 54–5, F 60–2, may have been named for him; either he or a son may appear on a list of uncertain character, ii² 2414. 15. On the ambassador Aristogeiton see above, n. 24; ch. 16 n. 25.

Several other members of Aphidnai appear as purchasers, both in their own deme and elsewhere, in the *hekatostai* sales. [Polykrates?]? son of Polykrates bought an *eschatia* at Hyporeia for (?) 50 dr.; he or his father may be the Polykrates A. who served as treasurer of naval funds in 328/7. The daughter of a Polykrates A., married to a demesman of Kerameis, was commemorated *c.*300 by a *kioniskos* found in the city. Alkiades A. bought two *eschatai* at Petalidai, where he is also attested *c.*340 as owning land. One or more sons of Euthoinos bought two *eschatai*, probably in the deme, for 50 dr. apiece, and [Molot?]? son of Eunomos A., who served as (?) councillor *c.*320, did the same. Demokedes son of [Demostratos?] A. probably bought land at Sphettos; his dedication to Hermes in that deme is preserved. Lysikrates son of Lysimachos A. bought land in Alopeke; his sister Aristaichme was commemorated with her husband Epipieithes son of Xenopeithes (Rhamnous?) on a relief stele of the second half of the fourth century, found in the city.³⁵

Timarchos, Amphikles, and Ersikles A. reported to the *poletai* that land was owned in their deme by Nikodemos of Oinoe, who had been condemned for misconduct as a tribal *epimeletes*; it is not clear whether they were acting as deme officials or as friends of the debtor. Timokrates A. is the only known *epimeletes* from Aphidnai, although one might have supposed that the deme supplied one of the tribe's three *epimeletai* each year.³⁶

Aphidnai has not produced many attested horse-owners, but Sokrates son of Eudramon served in the cavalry on Salamis *c.*320, and Prokleides I, trierarch *c.*323/2 (possibly P. son of Anacharsis A., secretary in 354/3), had a descendant,

³⁵ [Polykrates], Lambert 1997a F 7 B 6, *AO* p. 396, *IG* ii² 6344; Alkiades, Lambert F 7 B 25–6; *Agora* XIX P 26. 501–2, 508; sons of Euthoinos, Lambert F 7 B 10, 12; [Molot?]? son of Eunomos A., F 7 B 14, ii² 1927. 129 (Lambert did not restore the name, because he took ii² 1927 to be a list of *diatetai* of *c.*360; see now Humphreys 2010a. L. reads the price as 5000 dr., which seems unlikely when several other *eschatai* in the deme sold for 50 dr., perhaps a ‘fair price’ paid by public-spirited demesmen for land of little value, see Humphreys 2004 s.v. *hekatostai*). Demokedes, F 6 B 38–9; *herm* (Ross 1855, 219, Koukouvaia), ii² 4628 (see ch. 27 n. 24). Lysikrates, F 13 A 9; sister, ii² 11293 = *CAT* 2. 447b. Note that Nikandros A., who sells property as *komarch* of Hyporeia, F 7 B 3–4, may be related to Nik<a>nd<r>os son of Parmenon, represented as a small boy with his (?) sister on ii² 12251 = *CAT* 0. 910, from Piraeus (second half of the 4th c.), if the latter was a brother of Amyntas son of Parmenon A., commemorated by a *kioniskos* found in the city, ii² 5720. Epipieithes and Xenopeithes, n. 102.

³⁶ Timarchos a. o., *Agora* XIX P 26. 498 (on apographe by kin and friends see R. G. Osborne 1985; ch. 14 n. 42). Timokrates, P 26. 514 (it is possible that not all tribes appointed *epimeletai* by *trittys*, ch. 21 n. 71). A Telemachos son of D— A. appears on a dedication made by representatives from the twelve tribes (*IG* ii² 3852), at the end of the 4th or in the early 3rd c.; he may be either the Telemachos who served as trierarch before 323/2, *APF* 13560, or a descendant (*APF* suggests grandson, SS, but service by an elderly man shortly after 307/6 is not impossible; ch. 17 nn. 15, 17). Cf. perhaps Telesippos A., *diatetes* in 325/4, ii³ 4. 35. 151.

also called Prokleides, in the cavalry *c.*250.³⁷ Chares A., attested in the cavalry in the same period, will be Chares II son of Eucharistos; his father, son of Chares I, served as proedros in (?) 252/1. Chares II became a member of the Areiopagos, and appears as proedros and as proposer of decrees in the 220s.³⁸

We know of two outsiders who bought land in the deme, Euthymenes of Euonymon, who also had mining interests, and Nikokrates of Rhamnous.³⁹ There are also some possible indications of demesmen of Aphidnai moving into other rural areas,⁴⁰ but more cases in which they appear in the city–Piraeus area or overseas. Eukrates son of Exekias A. leased an ergasterion, a building, and a privy (?) in Peiraios, in perpetuity, from the deme Kytherros in the second half of the fourth century; his father acted as his guarantor. Archias son of Aristokritos freed a flute-girl living in Peiraios, in the Lykourgan period; he appears as a lessee on Delos. His sister Aristomache married Philagros of Phaleron, who served as one of the dockyard commissioners in 348/7; she and her daughter Deinomache were commemorated by a trapeza in the Kerameikos. Aristophon son of Aristion freed a wet-nurse (*tithê*) living in Skambonidai.⁴¹

Diodoros A. served as (?) councillor on Imbros in 352/1; his son Androkritos and grandson Chairigenes are commemorated on a family tomb-stele from the island (see Table 31.4). Diodoros son of Diodorides (a rare name), kleruch (?) in mid-century, may be this Diodoros or a kinsman. Aristodemos A. served

³⁷ Sokrates, *IG* ii³ 4. 323. 12; Prokleides, *APF* 1916 (Bugh 1988 II B 226). If the trierarch is the secretary, the hippeus will probably be his great-grandson (SSS). He may also be the father of Phainarete daughter of Prokleides A., wife of Aristokrates of Lamptraï, commemorated by the kioniskos ii² 5771 (dated in the second half of the 3rd c., probably because her husband is taken to be the man of that name who served as ephebe in 250/49, arch. Polyeuktos, ii³ 1008. 10).

³⁸ Chares II, Bugh 1988 II B 52 + *LGP*N Chares no. 21; Eucharistos, ii³ 1020. 32; Eucharistos or a brother may be the son of [Char]es (I?) A. who appears in a list organized by tribes (possibly ephebic?) of the early 3rd c. (ii² 2433. 3; not 4th c. as *LGP*N Chares no. 18). They may have been descendants of Eucharides A., thesmothetes in the 5th c. (n. 29 above).

³⁹ Euthymenes, *Agora* XIX P 26. 501–520, *c.*342/1; he is also named on the horos Finley 1952 no. 51a. Nikokrates, P 26. 529.

⁴⁰ *IG* ii² 5740, Dion A., seen by Finley in the Spata area; 5753, two sons and a daughter of Hierokleides A., from Patesia (two men, [Apole]xis son of Tauriskos of Amphitrope, see *APF* 2419, and —doros son of Charidemios of Phlya, are also named on the stone, and the names of two women were added in a different hand, Peek 1942, 173 no. 365; it is not clear whether this stele is a gravestone or, perhaps, a list of members of a cult-group; cf. ch. 11 n. 43); ii² 5730, Ariston son of Eukleon, from Menidi (Bergemann 1997, peribolos O 5); he served as amphiktyon on Delos in 346/3, *ID* 104-4.

⁴¹ Eukrates, *IG* ii² 2496. Archias, *SEG* 18. 36 B 211–12; *ID* 104-8 B 22, 29–30, 47, 49. Aristomache, ii² 5728 (daughter's name added, ii² date *c.*350 too high?); Philagros, ii² 1622. 549; 5727, a monument for —ades son of Aristokritos A., known only from a report by Fourmont, may commemorate another brother. Aristophon, *SEG* 18. 36 B 255–62. The wife of Spoudias A., concerned in the lawsuit of Dem. 41, made a dedication in the City Eleusinion (*Agora* XXXI no. 7), which suggests that they lived in the city. Spoudias may be an ancestor of Memnon son of Medon A. who proposed decrees in 302/1 and perhaps in 286/5, and his son Spoudias, proedros in 226/5 (Memnon, *IG* ii² 500, *Agora* XVI 123, ii³ 866, cf. Byrne 2004, 320–1, Paschidis 2008 A 51; Spoudias, *IG* ii³ 1147, Ergochares).

IG xii 6.274 not in *LGP*N.

TABLE 31.4. Aphidnai: Diodoros (*IG* xii 8.100+)

as councillor on Samos *c.*350; he is named on a horos found in the city as creditor for 2000 dr.⁴²

COASTAL TRITTYS

The largest deme in the trittys was Marathon, with a quota of ten councillors, closely followed by Rhamnous with nine.⁴³ The sites of all four demes are approximately known.

⁴² Diodoros, *IG* xii 8. 63b 14 (Cargill 1995, 101–2 doubts whether these men are councillors, but we now have a parallel on Samos, *IG* xii 6. 262). Chairigenes seems to have had a son, Chairontides I A., who was buried on Samos (*IG* xii 6. 274, 4th c.). He may be the grandfather (FF) of Chairontides II son of (H)er—, whose property was sold by the poletai in 281/0 (*Agora* XIX P 52, Ourias). The father may be Ersikles A., one of three men who *c.*340 reported property in the deme of the delinquent tribal epimeletes Nikodemos of Oinoe (ch. 21 n. 71; *Agora* XIX P 26. 498), or Her[mippo?]s, father of Dropides A; Dropides leased a mine in (?) 339/8 (*Agora* XIX P 28. 22) and probably set up the marker *IG* ii² 2636. Diodoros son of Diodorides, *IG* ii² 1927. 131, see Humphreys 2010a. Tei[-5-]s son of Teisikles A. (the son's name was not necessarily Teisikles) is also named on *IG* ii² 1927 (119–20); he and his brother [Euk]temon made dedications on the Akropolis (before he left? *Agora* XVIII V 579; ch. 12 n. 85). Euktemon's son Demetrios was councillor in 328/7, *IG* ii³ 348; cf. Lambert 2004b, 100. Aristodemos, *IG* xii 6. 262 IX 15 (Archedemos, l. 14, perhaps a kinsman?); ii² 2729 (possibly a later member of the family).

⁴³ On Traill's view that Rhamnous belonged to the city trittys see above, n. 2.

Marathon

The exact location of the deme centre is still uncertain, perhaps because it is now covered by silt. In any case, there may have been more than one habitation site in the deme (Traill 1986). There seems to have been a sanctuary, perhaps the Herakleion, in the southwest part of the plain near the Brexisa swamp, and two dedications to Dionysos have been found in the area of Divaliaki, near the river Oinoe, about 150 metres north of the low mound of Plasi, which has prehistoric remains and may have been used for cult at least from the Geometric period to the sixth century. The deme centre, at least in the Roman period, may have been closer to the coast, where there are remains of an Early Christian basilica.⁴⁴

The Herakleia at Marathon were either founded or reorganized after 490, and were given a (more?) panathenaic character by the decision that thirty men chosen among the visitors to the games, three from each tribe, over thirty years old, were to take an oath and supervise the games. The athlothetai who were responsible

⁴⁴ See Goette and Weber 2004, Oikonomakou 2004; T. Weber 2010; Tsirigote-Drakotou 2010; Fromherz 2011; Mazarakis-Ainian 2011*b*. Ismard (2010, 239–49, with Annexe 6) imagines that the deme stretched from Koukounar(t)i to Kynosoura, with the sanctuary of Delian Apollo/manteion on Kynosoura (Lambert 2000*a* is much more cautious). *IG* i³ 3, an early 5th c. text concerning the organization of the festival Herakleia, came from the Brexisa area, as did i³ 1015 *bis* = *CEG* 318, a dedication to Herakles *emphylios* of c.440 from Valaria, between Agios Theodoros and the sea; there is also re-used ancient sculpture on the site, and the epigram may refer to the Herakleia. The epithet *emphylios* has been taken as evidence that the Herakleion was near the ‘gates’ (cf. Thermopylai) through which the road from the Mesogeia passes, between Mt Agrieliiki and the sea, into the Marathon plain (Vanderpool 1966*a*, 1966*b*, placing the deme-site at Vrana, which may however be Probalinthos, ch. 25 n. 14; Koumanoudes 1978). Pritchett (1960) and Berthold (1976) both questioned this location for the Herakleion (see also D. M. Lewis 1984*c*, 606–7); Pritchett (with a useful survey of research in the area, maps, and warnings about the movement of stones) considers that the remains on the slopes of Mt Agrieliiki between Vrana and the charadra belong to a necropolis, although two temples were reported from the area also, and there is at least one dedication by a priest, from Probalinthos, *IG* ii² 7296 (see ch. 25 n. 15). Berthold, noting the discovery of a horos of a temenos of Athena (Hellotis?) from the Brexisa area (*IG* i³ 1082, which he claims was not found *in situ*), places Athena’s sanctuary at Brexisa and the Herakleion in the Vrana valley, near the church of Agios Demetrios (cf. also Monaco 1993). On Brexisa see also *Ergon* 2009, 14–24. *IG* ii³ 4. 224, a dedication to Dionysos by four hieropoioi of the Tetrapolis, of the mid 4th c., was found at Divaliaki. So were ii² 4774, a dedication of the Roman period, and ii³ 4. 348, an ephebic dedication dated by the *paidotribēs*, which can hardly belong to the 4th c. (though this date, given in the original publication *AAA* 3, 1970, 19, is accepted by *SEG*, *LGPn*, and Goette and Weber 2004, 98); the *paidotribēs*, who first appears in ephebic texts of the late 4th c., is listed among junior instructors at that date and is not attested as a figure sufficiently senior to be used for dating until the 2nd c. BCE (*IG* ii³ 4. 357, 362–4, in conjunction with an archon-date, cf. *SEG* 21. 460), although *IG* ii² 585 (*SEG* 21. 352), dated 300/299 (*SEG*), contains the beginning of a decree giving special praise to a [*paidot*]ribēs; the change from two of these gymnastic trainers to one may also be attested in ii² 478. 26 (*ton pa[idotribēn]*), see P. J. Rhodes 1981*a* on *A.P.* 42. 3. Pritchett 1960 seems to be inclined to place the deme-centre in the Divaliaki area; Traill 1986, 148 puts it about 1 km further south, NW of the prehistoric site at Plasi (on which see Mersch 1996, 178–80; *AR* 2014–15, 17). Roman site, on the shore c.1200 m E of the ‘Soros’, Travlos 1988 (sherds indicate earlier occupation in the BA, Geometric, Archaic, and Classical periods). Note that *IG* ii² 1358 = *SEG* 50. 168, the calendar text of the Tetrapolis which found its way to Koukounarti, probably Hekale (ch. 26), may have come from Probalinthos or Oinoe (see Ober 1982).

for preparations may have been appointed by the deme or the Tetrapolis, and the text on which these regulations were recorded may be a deme or Tetrapolis decree. It is cut on the same stone as an earlier text that apparently concerns legal procedure. By 346, if the decision temporarily to celebrate the Herakleia in the city, reported by Demosthenes, refers to the Marathon festival, it may have been under the control of the state.⁴⁵ The festival was evidently well known in the early decades after the battle of Marathon, attracting competitors from Opous, Aigina, and Corinth, as well as Athenians; later in the century it may have become a more local affair.⁴⁶

The second column of the Tetrapolis calendar, dated to the second quarter of the fourth century, seems to be divided according to the location of sanctuaries, with Marathon occupying B 1–53, followed by Trikorynthos. As Dow emphasized, there is no guarantee that the demarch of Marathon is responsible for sacrifices other than those immediately following references to him; most of the sacrifices were probably made by officials of the Tetrapolis. On this interpretation, the Marathon demarch sacrificed in Hekatombaion or (more probably) Metageitnion to a hero and (probably) heroine (B 1–4, two piglets and a table of offerings), and in Mounichion to the hero in Drasileia and his heroine, and the hero at the Hellotion and his heroine (B 23–26, four sheep and trapezai).⁴⁷

⁴⁵ *IG* i³ 3; see R. Parker 1996, 97; 2005*a*, 473; Lalonde 2006*b*, 71–4. The sanctuary certainly existed before the battle. *Epidēmoi* seem to be visitors rather than residents. i³ 2 is on the same stone. Herakleia of 346, Dem. 19. 58; the decision was taken on Skirophorion 27, so the festival probably took place in Hekatombaion or Metageitnion (the date of the battle was perhaps Metageitnion 16, see Burn 1962, 257; also R. Parker 2005*a*, 472–3). The calendar frieze (Deubner 1932, 226–7; E. Simon 1983, pl. 2. 3) gives evidence of a festival of Herakles in Metageitnion. On the question whether we should read [Herakle]ia or [Hephaist]ia in *A.P.* 54. 7 as the third of the penteteric festivals celebrated by the state (and run by the annual hieropoioi) see P. J. Rhodes 1981*a*, 608–10; Humphreys 2004, 112 n. 5. Strictly speaking, we are not in a position to say that if a decision was taken in the Assembly to move a festival for military reasons the festival must have been under state control (for the problems of ‘state control’ see ch. 22 at n. 95). The festival does not figure in the preserved part of the Tetrapolis calendar *SEG* 50. 168, although a sacrifice at the Herakleion, before Mounichion, is listed in *A* 19.

⁴⁶ Pind. *Ol.* 9. 89–90 = 134–7, with schol., Opous; *Py.* 8. 79 Aigina; *Ol.* 13. 110 (157) Corinth. Schol. *Ol.* 9. 90 says silver vases were given as prizes. However, bronze prize vases of the early decades of the 5th c. may have come from the Herakleia, Vanderpool 1971. The Anak(e)ia also awarded bronze prize vases (R. Parker 1996, 97; 2005*a*, 457). Amandry 1971 suggested the Epitaphia, but it is doubtful whether the latter festival existed so early, see Humphreys forthcoming *b*. If the Epitaphia were introduced c.446 (ibid.), interest in the Herakleia may subsequently have declined; in any case the Peloponnesian War is likely to have affected attendance. A revival in the 4th c., when celebration of Athens’ role in the Persian wars became more prominent, is not impossible.

⁴⁷ *IG* ii² 1358 = *SEG* 50. 168; see Lambert 2000*a*, Humphreys 2004, 165–77; add Clinton 2003 on uses of *teletē*; Stringer 2007 on Telete as daughter of Dionysos; Bevilacqua 1995, 1996 with *EBGR* 1996 (*Kernos* 12, 1999) 19–20 on *eisi(ti)tēria/exitēria*; *SEG* 54. 216; Schuddeboom 2009; De Nicolo 2012 on Apollo Apotropaios. R. Parker 1996, 111 interpreted column A I as a list of communal festivals and column A II as ‘individual sacrifices of the four demes’ (so also, for A II, Rosivach 1994, 36–40), but the two separate references to the demarch of Marathon (restored, but very plausibly, in A II 1–2) in the middle of

According to this text, the deme of Marathon, in addition to sanctuaries of Herakles and Dionysos, would have contained sanctuaries of Demeter Eleusinia and Kore (with Daira and Zeus Anthaleus?), Demeter Chloe ‘next to Meidylos’ estate’, Demeter Achaia, Gê ‘en Guais’ and Gê ‘at the oracle’, Zeus Hypatos, Neanias, Athena Hellotis (the Hellotion), and various heroes, including Aristomachos, Iolaos, and Hyttenios.⁴⁸ In addition, we learn from Philochoros’ book on the Tetrapolis (*FGH* 328 F 75) that Marathon had a sanctuary of Apollo Delios (probably the *manteion*) where a watch was kept for omens from the god; if a sign was seen, a theoria was sent to Delos.⁴⁹

None of the Tetrapolis demes has so far produced a deme document in the strict sense of the term; while this may be due to the chances of excavation, it is also quite possible that the Tetrapolis continued to be responsible for most of the religious functions that were elsewhere accumulated by demes.⁵⁰

the sacrificial year, and the heading in 39–40, ‘the following sacrifices are made in alternate years, starting with the year after Euboulos’ archonship, by the Tetrapoleis. Second year of the cycle’, show that we are dealing with Tetrapolis and not deme sacrifices (Lambert takes Euboulos to be a Tetrapolis official and not the eponymous archon of 345/4, and is tempted to think that Euboulos of Probalinthos had experience of organizing deme finances before he became prominent in the city; the name, though rather common, is not attested at this period in any other Tetrapolis deme). It seems possible that column A I lists sacrifices on a four-year cycle (the cycle of the Herakleia?); reading [*tetartês t*]rimeno (Lambert) in A I 4, the first year of the cycle would be (partly) covered by A I 1–22, the second by A I 23–31, the third (a thin year, with sacrifices only in the last quarter) by A I 32–38, and the fourth—with a special heading [*megalê? lÿstatê? dram*]os[y]nê—by A I 39–55 (+). In A I 11 Lambert restores the date of the sacrifice to Zeus Horios rather than [*tade ho archôn thu*]ei. I take it that the rubric in A I 13–15 only covers A I 16–19; it may possibly refer to sacrifices carried out in every year of the cycle (Rosivach, loc. cit., thinks it introduces a new set of sacrifices, perhaps beginning at the time of the inscription).

⁴⁸ Hyttenios was presumably the eponym of Hyttenia, a name for the Tetrapolis (St. Byz. s.v. *Tetrapolis*). Aristomachos: Lambert, op. cit.; Sineux 2007.

⁴⁹ If this was the manteion where Ge received sacrifice (A II 13), the Marathon sanctuary was perhaps created as a rival to the sanctuary of Pythian Apollo at Oinoe (below, n. 58), since Gê was associated with Apollo at Delphi rather than in Delos. The sacred trireme seized by Philip at Marathon (Dem. 4. 34) may have belonged to the deme.

⁵⁰ The same may be true of the Tetrakomoi. In the Marathon section of *SEG* 50. 168 A II there is no entry in Pyanopsion for the Apatouria, which were presumably celebrated at a phratry sanctuary in the deme. An ox (or oxen) worth (?)150+ dr. (A I 28, *in rasura*, see Lambert’s discussion) was sacrificed in Poseideion, perhaps in association with the Rural Dionysia, to [a hero?] whose heroine received a sheep; possibly this Tetrapolis sacrifice was complemented by deme activities paid for by choregoi. There is no entry in the calendar for the Thesmophoria, although Demeter is prominent (and there is a sacrifice ‘before the Skira’ to Hyttenios, Kourotrophos, the Tritopatreis, and the Akamantes, A II 30–33); the husbands of women who played prominent roles in the festival may have made contributions, as they did elsewhere (Is. 3. 80, cf. ch. 12 n. 31). One might think that the cults of the hero Marathos or Marathon and the hero Echelos or Echelaos would be the responsibility of the deme. On the other hand Pausanias (1. 32. 5) says that the Athenians consulted Delphi about the appearance during the battle of Marathon of a man who killed Persians with a ploughshare, and were told to worship Echelaos; this consultation is more likely to have been made by the city or the Tetrapolis (through the Pythioi of Oinoe?) than by the deme. Marathos, according to Dikaiarchos (Plut. *Thes.* 32, F 66 Wehrli 1967, 59 Fortenbaugh and Schütrumpf 2000), was an Arcadian who (with Eche<de>mos = Akademos) helped the Dioskouroi

Marathon did not produce any demesman of great distinction. A Boutalion M. appears on seven ostraka of the early fifth century, and his homonymous grandson (son of Ep—) served as one of the Treasurers of the Other Gods in 420/19; Antiphanes' comedy *Boutalion* or *Agroikos* belongs to the fourth century, and the name may have been chosen merely for its association with oxen.⁵¹ The deme had something of a cavalry tradition: Kephisodoros M. served as hipparch at the battle of Mantinea in 363/2; Kleonymos son of Kleoxenos I was phylarch (or taxiarch) in 373/2. The latter's son Kleoxenos II is named in a list of six demesmen of Marathon and six of Rhamnous who set up a votive monument c.350.⁵²

Aristoteles M. seems to have been well-known as a politician in the 370s; his son Aristonikos proposed the decree concerning the leasing of new territory in (?) Oropos in 335/4, and can thus be regarded as an associate of Lykourgos, who proposed the related law about the Panathenaia; they also cooperated in the same year in proposing measures against pirates.⁵³ At a less distinguished level, Timotheos I M. served as one of the dockyard commissioners in 369/8; his son ...odemos was buried in Piraeus, and a grandson, Timotheos II son of Timokleides, was councillor in 304/3. Antimachos I son of Euthynomos I was one of the Delian amphiktyons c.377–3; his homonymous grandson, son of Euthynomos II, is attested as proedros in 302/1, and a later member of the family, Euthynomos III, was epebe in 266/5.⁵⁴ These families were all probably resident in the city; so probably was Arxiphon M., represented with his wife Aristokleia and a child on a lekythos of unknown provenance, whose (probable) son Pytho[–c. 6–] made a dedication in the Eleusinion before the middle of the fourth century. Another son, Pythokles I, married a daughter of Autophilos of Phlya, perhaps a craftsman; their son Pythokles II

against Theseus and died in Attika; this myth indicates hostility to Aphidnai as well as to political figures and policies associated with Theseus, and might belong to the 470s (cf. ch. 19 n. 39). See Jameson 1951; Kearns 1989 s.v. *Echetlaïos*, *Marathos*; Kron 1999, 63–5. Oinoe probably sells property in the hekatestai sales, see below, n. 59.

⁵¹ Brenne 2001 no. 45, *Agora XXV* nn. 89–95 (son of Ep—; note also Brenne no. 46, Boutalos Oinaios, conceivably a mistake); Boutalion II, *IG* i³ 472. 12; Antiphanes, *PCG* 2 p. 346 F 69. The deme may have contained good land for raising cattle; prices are higher in the Tetrapolis calendar than elsewhere (Lambert 2000a p. 55). A Boutheros son of Dionysios M. is attested as a member of a commission possibly associated with theatrical matters (*IG* ii³ 4. 63. 9); his (?) grandson, SS, Boutheros son of Philonides, was epebe in 266/5 (ii³ 917 III 51, Nikias of Otryne). (There is also Philomelos M., hellenotamias or paredros in 415/4, *IG* i³ 370. 77, 79; a homonymous (?) grandson is attested as trierarch, *APF* 14667, and the latter's wife, Xenokleia daughter of Polyoros of Oe, made a dedication at Brauron, above, ch. 28 n. 77).

⁵² Kephisodoros, Ephoros *FGH* 70 F 85; Paus. 8. 9. 10; Kleonymos, *IG* ii³ 4. 244; Kleoxenos II, *IG* ii² 2400 with Dow 1983 (no provenance).

⁵³ Aristoteles proposed the charter decree of the second Athenian league and a rider, in 378/7, and was appointed with two others as ambassador to Thebes (*IG* ii² 43. 7, 76, 91; D. L. 5. 35 describes him as a politician and author of forensic speeches). Aristonikos, *Agora XIX* L 7; ii² 1623. 276–85 etc. (Panathenaia law, ii³ 447).

⁵⁴ Timotheos I, *IG* ii² 1617. 80; ... odemos, ii² 6814; Timotheos II, *Agora XV* 59. 35, 61. [275]. Antimachos I, ii² 1635 = *ID* 98 A 10, 62; Antimachos II, ii² 501. 9–10, 562 + *Hesp.* 9, 1940, 342 no. 5; Euthynomos III (on a calculation of generations, he should be a grandson of Antimachos II), ii³ 917 III 52 (arch. Nikias Otryne).

is named in a dedication on the Akropolis with the sons and with other grandsons (DS) of Autophilos, at about the same date.⁵⁵

The only tombstone from the deme area that can certainly be attributed to a demesman lacks personal names. It is possible, however, that Hegemō[n] son of [He]gesias, whose (?) trapeza was seen by Lolling near the Soros, was related to (son of?) Hegeṣiās M., who chaired the Assembly for a day in 323/2; Hegesistratos M., who appears in the (?) epidosis list on the back of the Tetrapolis calendar, may have belonged to the same family.⁵⁶

Oinoe

The name of the deme is preserved by the modern village Ninoi, west of modern Marathon; the ancient deme centre is thought to have been at the western end of the valley, near the medieval tower and the church of Agioi Apostoloi. A peristyle building, perhaps a Nymphaeum, of the second century CE, with marble couches for incubation, and an exedra of (?) the same period, have been excavated; there may be remains of classical farms near Agia Paraskeve at Ninoi, and a funerary area used in the Late Archaic and Classical periods, with many child burials, has been excavated at Skaleza; other tombs were excavated along the road from Ninoi to Marathon. It is not clear to which deme we should assign the valley area round modern Marathon, or the area of Ano Souli, in the hills c.3 miles upstream to the northeast of that town, from which there is burial material starting in the Geometric period and continuing throughout antiquity.⁵⁷

Oinoe had a Pythion, at which watch was kept for omens indicating the need to consult the oracle at Delphi; by the Hellenistic period, at least, this was regarded as a traditional institution of the Tetrapolis (see ch. 20 n. 143). Pythodoros son of Apollodoros, ephebe in 333/2/1, is the only bearer of a Delphi-related name who can definitely be associated with the deme in the classical period. There was

⁵⁵ Arxiphon and family, *IG* ii² 6776 = *CAT* 2. 880a (no provenance; *CAT*'s date not long before 350 seems rather late in prosopographical terms); Pytho[–c.6–], *Agora XXXI* no. 2; Pythokles II, ii² 4327.

⁵⁶ *IG* ii² 6822; Hegemō[n], ii² 11563 (patronymic [He]gesio; possibly a dedication-base? see *MDAI(A)* 10, 1885, 279); Hegesias, ii² 366. 7; Hegesistratos, Peek 1942 no. 10. 3. Note also that Daippos M., attested as trierarch in 373/2 and 356, also as contributor of naval equipment, who perhaps had a son who was councillor in 368/7 (*APF* 3101), may have been the bearded Daippos represented with an older couple and a young woman on a relief stele of mid-century from Piraeus, ii² 10983 = *CAT* 4. 380 (the older man is Kallimachos and cannot be the councillor, whose name was [–c.6–]s).

⁵⁷ Travlos 1988, 217–18 (arguments for regarding the peristyle building as a successor of the classical Pythion do not seem strong); Goette 2001, 241–2. Farms, *AD* 38 (1983) B 61; Skaleza cemetery, *ibid.* (demesman's tombstone, *SEMA* 476); tombs along road, *AD* 40 (1985) B 73–4; Photios 1982 reports settlement remains at Vredou in the hills W of the Ninoi Valley (a deme hamlet?); Ano Souli, Arapogianni 1991, cf. *AD* 42 B 1, 1987 (1992) 99–102; see Mersch 1996, 149–51, and ch. 32 n. 35, Kolonai. On the topography of the area see also Ober 1982; *AR* 2014–15, 29–30.

also a cave, with votive offerings from the fifth century, perhaps the cave of Pan mentioned by Pausanias (1. 32. 5).⁵⁸

Deme property was sold in the hekatostai sales by the demarch Mnesarchides, who may be related to Mnesarchos O., whose daughter married Phanokrates of Rhamnous.⁵⁹

Two members of the deme served as tribal epimeletai in the late 340s, Polyphilos son of Polymedes I, whose son Polymedes II was ephebe in 333/2/1, and Nikodemos son of Aristomenes, condemned for embezzlement, who owned land at Aphidnai.⁶⁰ Epichares I son of Epigenes O. served as tribal sophronistes in 333/2/1; he is recorded as (?) owing money to the temple on Delos, perhaps c.345. Epichares II son of Platon I O., diaitetes in 325/4, may be a cousin; he was commemorated with his wife Demostrate daughter of Theotimos of Pergase and their young son Platon II in the Thriasian plain.⁶¹ Phyleus I son of Pausanias I O. served with his son Pausanias II and Charidemos O. on a three-man commission honoured by the boule and demos in 336/5 (*BE* 2017. 181); Pausanias III son of Phyleus II was councillor in 281/0, and the Pausanias O. (tribe unknown) attested as hippeus c.250 may be a later member of the family. Antimachos son of Pausanias O., who was honoured (with others) by the paroikoi at Rhamnous, perhaps proposed a decree passed by the garrison there c.229, and contributed to an epidosis for the local Amphiaraiion (?) c.214, is probably the hippeus' son.⁶²

The tribal affiliation of —nos son of Kydippos, councillor for Aiantis in 281/0, and of the later Kydippos who was sent by the Tetrapolis as ambassador to Delphi, suggests that Deixenos and Kydimachos O., commemorated by a stele

⁵⁸ Python, Philoch. *FGH* 328 F 75, cf. above, nn. 49–50; Pythodoros, *IG* ii³ 4. 335. 9; cave, Travlos 1988, 217–18, Mersch loc. cit. (there is also prehistoric material); Goette and Weber 2004. Pan: Lambert 2000*a* suggests restoring a sacrifice to him in *SEG* 50. 168 A I 44–5.

⁵⁹ Lambert 1997*a* F 7 B 27; Archestrate daughter of Mnesarchos, *SEG* 30. 228, see Table 31.8. The purchasers of both plots were demotai, the first son of —bios (this would be the earliest example at Athens of the name Olbios or a compound from it, but there are several attestations at the end of the 4th and in the early 3rd c.; Lysistratos son of Bios O., mentioned by Lambert on p. 181 no. 135, belonged to Hippothontis).

⁶⁰ Polyphilos, *Agora* XIX P 26. 488–530; the chances that he also appears in *IG* ii² 2386. 3 (Polyphilos Poly—, no demotic) are not high. Polymedes II, *IG* ii³ 4. 335. 8. Polyphilos will have been in his 40s as epimeletes; the Pol— of Oinoe-Aiantis who served as (?) diaitetes in the second half of the 4th c., ii² 2393 (see Dow 1983; Clinton 1974, 22 n. 9) might be Polymedes I or Polyphilos. Nikodemos, *Agora* XIX, *ibid.*

⁶¹ Epichares I, *IG* ii³ 4. 335. 3 (on the term of office see ch. 21 n. 94); *ID* 104-22 A 16. Epichares II, *IG* ii³ 4. 35. 144; ii² 6972 (name added after those of wife and son, ch. 11 n. 45).

⁶² Phyleus I, Pausanias II, and Charidemos, *IG* ii³ 327 + *SEG* 58. 106. Pausanias III, *Agora* XV 72. 204. Hippeus, Bugh 1988 II B 190. Antimachos: *IRb* 38 (general 218/7); *IRb* 43 (215/4), paroikoi (cf. 23, 40, 42; G. J. Oliver 2007*a*, 187 n. 83); *IRb* 45 ([An]tīm[achos P]ausaniou Qīnaios), proposes decree; cf. *IRb* 41 (Antimachos only, 229 BCE); epidosis, *IRb* 167 (*SEG* 51. 234; ch. 12 n. 49; Papazarkadas 2011, 210–11).

of the early fourth century found in Piraeus, and Deixenos son of Kydikles O., named on a diadikasia list, also belonged to Aiantis.⁶³

Isod[i]kos O., who contributed to an (?) epidosis of the Tetrapolis in the first half of the fourth century, may be a descendant of the Isodikos of Aiantis named on a casualty list of c.411.⁶⁴

Trikorynthos

The deme-site was northeast of Kato Souli; the acropolis (Stavrokoraki) has Early Helladic settlement remains and (classical?) fortifications; part of the classical settlement was excavated in 1978. The area between the deme centre and the sea may have been largely marshland in antiquity, as it was in the nineteenth century, or sea;⁶⁵ however, the Kynosoura peninsula presumably formed part of the deme. The Tetrapolis sacrificed there, perhaps in Skirophorion, to an unknown deity, and also sacrificed at Trikorynthos in Metageitnion to Hera (and Kourotrophos).⁶⁶

Three tombstones of demesmen have been found in or near the deme: a stele for the son of Euthydikos at Grammatiko (Eitea X); a relief stele for Eunomos I son of Adeimantos I, represented with his wife (?) and a slave, to which the names of the wife, Chairelea, and of two sons (or of Eunomos' brother Apemantokles), were added, at Kato Souli (see Table 31.5); and a stele fragment naming [Euphi]le[τος] son of [Hen]ochides, also in the village. The two former stones may have come from the same peribolos, since a Eunomos II son of [Euthydi?]kos T. made a dedication to the Hero Iatros at Rhamnous c.300. Apemantokles, named on the stele of Eunomos I, probably served as councillor c.403/2.⁶⁷

Lysitheos II son of Lysitheos I, joint purchaser of land at Alopeke in the hekatostai sales, may have belonged either to T[rikorynthos] or to T[eithras]; if the

⁶³ Son of Kydippos I, *Agora* XV 72. 203. Kydippos II, *FD* III(2) 18, apparently the first embassy, between 247 and 198?; —pos son of Kydippos (the ambassador or his son) is granted proxenia *ibid.* 166, under the Delphian archon Eudoros, c.215? Deixenos and Kydimachos, *IG* ii² 6970; Deixenos, *APF* 8929, ii² 1929. 13. Similarly, Theodotos son of Apollodoros O., lessee of a temenos in 343/2 (*Agora* XIX L 6. 106–7, Papazarkadas 2011, 306 no. 30) is attached to Aiantis by the record of his brother Pythodoros as ephebe in 333/2/1, *IG* ii³ 4. 335. 9.

⁶⁴ Epidosis, *SEG* 50. 168 B 4; casualty list, *IG* i³ 1186. 60.

⁶⁵ On the connection of the name with Ajax see Polignac 2011. Travlos 1988, 216; Mersch 1996, 137–8 (possible sanctuary sites); Goette and Weber 2004, 25–6; Oikonomakou 2004. Themelis 1974 thinks that the marsh did not exist in antiquity but the coast was further inland. The date of the fortifications is uncertain. On the deme-affiliation of the highland area N of Kato Souli (cf. Photios 1982) see ch. 32 n. 37.

⁶⁶ *SEG* 50. 168 A I 18; A II 55–6, Hera and Kourotrophos.

⁶⁷ *IG* ii² 7549 and 7551; 7553, Euphiletos. ii³ 4. 30, which names a later Heniochides son of Euphiletos T. and is dated by the archon Lykiskos, was put in 344/3 by Wilhelm but redated to c.129 by Kirchner in the addenda, p. 348; this Heniochides is also attested as theoros from the Tetrapolis to Delphi, *FD* III (2) 8. 5.

Note: ii² 7551 commemorated Eunomos, showing him as standing, bearded, with a slave behind him, in dexiosis with (probably) a seated woman, his wife or (less probably?) mother. A later inscription runs: Chaïrelea, Apemantokles, Ad[eimantos] or Ad[eimantou]. Apemantokles served on the Council in 403/2. Since the name Eunomos is common, a connection with the E. son of Euthydikos who dedicated ii² 4436 (SEG 31. 177) *c.*300 is doubtful.

TABLE 31.5. Trikorynthos: Adeimantos IG ii² 7551 = CAT 2. 690

former, he or his father will probably be the Lysitheos T. who served as priest of Asklepios in 354/3 or 344/3, and made a dedication to the god in the latter year. A Theodoros son of Lysitheos (III) T. served as secretary in 267/6.⁶⁸

Rhamnous

The deme-site is well known, and thanks to the excavations of V. Ch. Petrakos it is one of the demes of which we can form the clearest impression. There is still, however, some uncertainty about the distribution of residential areas, at various periods, between the promontory, fortified by the middle of the fifth century if not earlier, and the area round the temples of Nemesis and Themis, about half a kilometre inland. There was already a temple on this site in the first half of the sixth century, and another (destroyed in the Persian wars?) was built at the end of the century. A new temple, on a different site, was built in the early fifth century, and a larger one (unfinished), on the site of the older temple, *c.*450–430, this time probably with some funds from the city. There are settlement remains both round the temple area and in and around the fort; from the late fifth century the road linking the two was lined with monumental grave periboloi, and similar monuments flanked the road leading south from the temple towards the Marathon plain. Archaic grave monuments were also found in the area; perhaps some of them were still standing when the first periboloi were built in the late fifth century. Northwest of the temples was a temenos, with vase offerings from the second quarter of the sixth century to the first half of the fifth, possibly the deme's Thesmophorion. Harbours were probably better in antiquity than today.⁶⁹ There was a cult of the Hero Archegetes, presumably the eponym of the

⁶⁸ Lambert 1997*a*, F 13 A 4, see p. 104; priest, Aleshire 1989 Stele I 19f.; 1991, no. 9407/8; IG ii² 4389–90. Lysitheos III, father of Theodoros, ii² 915, 916, arch. Menekles.

⁶⁹ The main accounts of the site are Pouilloux 1954*b*, Petrakos 1987*a*, and Petrakos 1999; see also Mersch 1996, 47–9, 180–5; Goette 1999; 2001, 245–9; Knittlmayer 1999. Air photo and reconstructions, Vlachopoulos 2010, 77. Mycenaean material has been found near the temple of Nemesis, and Geometric sherds in the precinct area (*Ergon* 1982, 5). Fortifications: Petrakos (*Ergon* 1997, 16) thinks that the site

deme, from the time of Kleisthenes' reforms if not sooner.⁷⁰ By the fourth century the settlement at the coast had an agora, a theatre (furnished with stone seats for dignitaries in the late fourth or third century), a gymnasium area, and a sanctuary of Aphrodite Hegemone, to which a bath was attached. In the 330s Rhamnous became one of the main centres at which epheboi did garrison duty, and this no doubt contributed to the liveliness of the community, as did the continued presence of garrison troops all through the third century.⁷¹

Rhamnous was the home of a phratry, still active in 314/3 (*IRb* 186–7; cf. *SEG* 52. 160, 315/4; ch. 19 n. 19), but the deme was managing the cult of Nemesis by the early decades of the Kleisthenic system.⁷² The first set of deme

was fortified from the 6th c.; excavation has now established that the gate tower of the inner wall existed by the middle of the 5th c. at the latest, although there was further work on the walls during the last decades of that century. It is not yet clear whether the outer wall already existed in the 5th c. or was first constructed in the early 4th c. (Lauter 1992, 80–1; see Mersch). Temples: Petrakos 1987*a*, 1999. It is now thought that both Nemesis and Themis were worshipped in each of the temples on the site, rather than having separate temples. Note that in the dedication *IG* i³ 1018 *quinquies* of the 470s the restoration Philod[or]os of *IRb* 75 is changed to Philod[em]os. The smaller temple built after the Persian wars (see however Mersch, p. 183) apparently continued in use in the late 5th and 4th centuries, after the construction of the larger one, at least for the storage of offerings, to judge from finds of jewellery in the excavations. The cost of the larger temple (variously dated between c.450 and 420) has been calculated at c.23 talents (138,000 dr.; Petrakos 1987*a*); this seems too much for a deme, although Nemesis' capital amounted to c.9–10 talents in the 440s (*IG* i³ 248 = *IRb* 182, see M/L no. 53). Periboloi: Petrakos 1999; Bergemann 1997, and below at nn. 87–100. The road and monuments were in disrepair in the 3rd c. and were robbed for stones, then destroyed by Philip V in 200 BCE, *PAAH* 1992, 20; on the restoration of periboloi here see ch. 11 n. 25. Archaic grave monuments, *PAAH* 1992, 39–41. Thesmophorion (?) *ibid.* 24–9, Nawracala 2014; cleaned and abandoned c.475. Vase dedications cover the same period as those from the temple area (Petrakos 1987*a*; the latter included a significant number of loutrophoroi in the third quarter of the 6th c. Harbours, *Ergon* 2006, 2009–11; Blackman a. o. 2011.

⁷⁰ *IG* i³ 1019 + *SEG* 43. 6 (*CEG* 314 = *IRb* 77) is a statue base with a verse dedication to the Hero Archegetes by an Antiphanes, dated c.480–460? by *IG* but 6th c. by Petrakos, who identifies the Archegetes with Neanias, perhaps brother of Oinoe (Paus. 1. 33. 8, see Kearns 1989 s.v. *Neanias, Archegetes*). A further dedication to 'the Hero', of the second half of the 5th c., *IRb* 78. The priest of the Hero Archegetes dedicated theatre seats in the late 4th or early 3rd c. (below, n. 79), and two horoi marking the hero's *hieraulé* are dated c.300 (*IRb* 79–80). It is quite likely that most Rhamnousians did not put a name to their hero, and that those who cared to speculate on his identity came to varying conclusions; nevertheless, his epithet indicates that he was in some sense felt to personify the community. Kolb's view (1981) that he was Dionysios Lenaios seems unlikely (for cult of the latter see *IRb* 116; *IG* ii³ 4. 292).

⁷¹ Agora, *PAAH* 1994, 10–17 (with plan); theatre, Kolb 1981; *PAAH*, *ibid.*, with 27–8; Lohmann 1995 (probably earlier than the stone seats); Goette 2014. Gymnasium, Lohmann, *ibid.*; *PAAH* *ibid.* 38–9. Aphrodite, *IRb* 32 (terminus ante, 222/1), *Ergon* 1995, 17–18, cf. *PAAH* 1994, 42–4; Pirenne-Delforge 1994, 38–40. *IRb* 1, once dated 356/5, is now 301/0 or 255/4, *SEG* 56. 202 (*SEG* 43. 71 possibly still 342/1); perhaps the Nemesia, or at least the games, were founded after the creation of the ephebate (R. Parker 1996, 246, 254 n. 126; Humphreys 2009 n. 5; Haake 2011, *SEG* 61. 135). On the 3rd c. garrison see G. J. Oliver 2007*a*, Oetjen 2014. We now have a text from the period of Antigonos Gonatas which shows that the Nemesia were celebrated on Hekatombaion 19, *IRb* 7; see *BE* 1994, 299, dating c.255 (or mid-240s, Kralli 2003), Habicht 1996; and a dedication showing that torch-races still took place at the end of the 2nd c. BCE, *IRb* 151. (Friend 2015 does not add anything.)

⁷² Deme-consciousness is perhaps also shown by the dedication made to Nemesis c.475–50 (or earlier?) by 'the Rhamnousioi on Lemnos', *IG* i³ 522 *bis* = *IRb* 86 (cf. Rausch 1999*b*, Marchiandi 2008, 23–7,

accounts, written on lead, is dated c.500. The first part of the text records public money (*démosion*) spent by four hieropoioi; three of them spend 161–2 dr. each, the fourth only 100 dr. The second part records receipts from three men, two of whom (Straton and Teisamenos) are also listed as hieropoioi. The two most likely explanations seem to be that either (1) each hieropoios received a sum at the beginning of his year of office to be spent on sacrifices, and returned what was unspent at the end of the year, or (2) that each was in charge of a capital sum, the revenue from which was partly spent on sacrifices and partly added to the principal.⁷³

The second explanation is perhaps supported by a later set of accounts, on stone, dated by demarchs but describing the funds recorded as the property of Nemesis. They cover five years, probably in the 440s, during the course of which the total capital rises from c.45,000 dr. to c.56,000 dr. Years I and III record totals for ‘those who owe 200 dr.’ and for ‘the rest of Nemesis’ money’; Year II only has a general total; year IV has a total for 300 dr. allocations and an overall total; year V records 200 dr. and 300 dr. allocations and an overall total; it also includes a record of 5206 dr. allocated to the hieropoioi.

It is generally agreed that the 200 dr. and 300 dr. allocations were loans granted by the managers of the temple funds to demesmen (and others?). It may not, however, be necessary to assume that all the money so described was actually out on loan. It is quite possible that a proportion of Nemesis’ money had been put in the hands of officials who were authorized to make loans from it, of not more (and not less?) than 200 dr. in any single transaction (from year IV, it was decided that some of the loans should be issued at 300 instead of 200 dr.). Managers were responsible for the safety of the funds entrusted to them, and no doubt felt some obligation to hand back a sum larger than they had received, but they will have varied in the energy with which they sought borrowers, and may in some cases even have supplemented the capital from their own resources. However, it is also possible that in a deme as remote from the city as Rhamnous it was difficult for members of the elite to find cash sums, in the period before the Peloponnesian War, when they needed them for expenditure on liturgies, dowering

dating c.475–450; Culasso Gastaldi 2011; Clinton 2014). Note also the name of Demophanes, demarch in the 440s, *IG i³ 248 = IRh 182. 32*; a descendant, Demophanes II, was syntrierarch c.350, *APF 3658*.

⁷³ *IG i³ 247 bis = IRh 181*. On the term *démosion* see D. M. Lewis 1990. A rapid transition to deme control may have been facilitated by a large overlap between membership of the deme and earlier bodies (phratry, naukraria). Four hieropoioi (of the Tetrapolis), perhaps in imitation of the organization of the pre-Kleisthenic city (four phylobasileis, four *prytaneis tôn naukrarôn* each month, eight tamiai of Athena, ch. 18 nn. 88, 97; I do not imagine that Rhamnous itself had ever used tribal representation in appointing officials). Dion, who pays in but does not spend, may have served as hieropoios in a previous year. Teisamenos, who spends only 100 dr., also pays money in; possibly he was more generous than the other three hieropoioi in providing funds or victims from his own resources. The reverse side of the tablet carries the single word *epistatôn*, apparently in a different hand, which might be an archival classification; if so, the managers of the demosion fund were called epistatai.

daughters, paying for funerals, etc. Certainly we should not assume that demes got their income from land in the earlier part of the classical period and turned only to making loans later; in Rhamnous, at least, the development seems to be in the opposite direction.⁷⁴

The amount of money controlled by the temple (and thus by the deme) is surprising. It probably indicates that the sanctuary served as an amphiktyonic centre for the communities of the Euboian straits; kleruchs returning to Attika from Euboia, and perhaps also from Lemnos and Imbros, may have passed through the town, and merchant vessels heading for the Hellespont may have worked their way northward against the prevailing northerlies of the summer months through the Euboian channel on occasion.⁷⁵ The generosity of hieropoioi in using their own funds instead of those of the deme may also have been a factor. Given that Nemesis had these cash funds, the impetus to build her a new temple (shortly after 440?) may have come from the deme, though outside contributions will also have been needed.⁷⁶

By 339/8 the deme was responsible for land owned by the temple, which was managed by a number of 'sections' (*merê*). Two leases from this year survive, both issued by the same meros and inscribed on the same stele, for different properties: one is called the *temenos en Hermêi*, the other is characterized as a temenos with a *kêpos* (garden). The second lease has a calendar of sacrifices appended to it, naming Apollo Lykeios, Zeus Herkeios, and either [Art]emis or [Th]emis. Both leases are to run for ten years, and specify the tenants' agricultural obligations in

⁷⁴ IG i³ 248 = IRb 182; year I in Attic letters, II–V in Ionic, III–V in a single hand. It is not certain that the years are consecutive. On discussions of the loan system see M/L² 53 (however, I take *para hieropoiois* in line 33 to refer to money issued to the deme's hieropoioi rather than to cash in hand.) Cf. ch. 24 at nn. 26, 47 for discussion of possibly similar financial arrangements. No doubt, as has been suggested, a single borrower could take out more than one 200 dr. or 300 dr. loan, if he provided adequate guarantors or security; however, the system seems designed to spread the risks and responsibility of handling sacred money as widely as possible (cf. n. 77 below on deme *merê*). The Parable of the Talents (cited Humphreys 2004, 148) provides an illuminating parallel. See also J. K. Davies 2001, 117–18, and the discussion in Papazarkadas 2011.

⁷⁵ See ch. 18 n. 7; the sanctuaries of Artemis Amarsia on Euboia and of Halai Araphenides and Brauron may have attracted a similar clientèle. Pouilloux 1954b, 20, with map 2, notes that it would be dangerous to sail through the islets off Rhamnous at night. See Gernet 1909 on the importance to Athens of Euboian and Thessalian grain in the 5th c. Ships may even have used the Euboian channel for southward journeys until Kimon cleared Skyros of pirates (in the 470s) and the direct route from the Hellespont to Sounion was secured by a string of kleruchies.

⁷⁶ See M/L no. 53. The development of the Amphiaraiion at Oropos as a rival attraction, at some date between (?) 450 and 414 (see R. Parker 1996, 146–9 on the problems of dating), may possibly have prompted Rhamnous to make a counter-move, and the reconstruction in Athens of the temple destroyed by the Persians may have stimulated feelings at Rhamnous that the temple there, though apparently rebuilt after the Persian attack, had not been given a form and size (the stones were polygonal, the building small) worthy of the goddess. I am doubtful whether the position of Rhamnous as a frontier town is relevant (cf. R. Parker 2005a, 59; Oropos was perhaps under Athenian control by c.450, but its inhabitants were not given citizenship, so the 'frontier' in a sense did not move).

detail. At some time the temenos *en Hermēi* had apparently been extended, because part of it is called the new, *nea* (field). The previous tenant of this property was a Hierokles, probably a member of the prominent family (Table 31.7); Archippos, one of the two leaders of the meros, might be the Rhamnousian of that name who was eponymous archon of the city in 318/7. Rhamnous did not sell land in the hekatostai sales; apparently its leasing arrangements worked satisfactorily.⁷⁷

The remaining deme texts of the fourth century come from the Lykourgan period or later, and reflect the stimulus of the presence of the ephebes and, later, other garrison troops. The deme honoured the ephebic officers and epheboi of Pandionis of (?) 332/1/0; another dedication at Rhamnous by epheboi of the same year has yet to be published. Deinokrates of Acharnai was honoured in 338/7 for his service as general, and again in (?) 336/5.⁷⁸

At some date in the last quarter of the fourth century the priest of the Hero Archegetes dedicated five (or more) stone theatre seats to Dionysos, after having been praised and crowned by the Athenian boule and demos and by the garrison at Rhamnous. The absence of any mention of epheboi may imply a date after 322.⁷⁹

⁷⁷ *IRb* 180 + *SEG* 54. 239; see Jameson 1982, 1987; Stanton 1996; Papazarkadas 2011, especially 142–5; Pernin 2014. Whitehead 1986*a*, 147–8 (following Haussoullier) thought that the meros at Rhamnous and meritai at Kytheros, unlike the merarchoi of Athmonon (ch. 22 n. 102), were entrepreneurs who had leased land from the deme and were subletting, but more probably all three groups fulfil the same function, i.e. taking responsibility for managing a part (meros) of the deme's revenues; hence *LGPn* Stesias 5 should be assigned to R. The connection, if any, with the *merismos* system in state finances (cf. Papazarkadas s.v.) is unclear. The remains of a sacrificial calendar may indicate that (as at Erchia?, ch. 24 n. 70) each meros was responsible for part of the deme's cultic obligations. Issue of new leases of state-owned land, perhaps for a ten-year period, in 343/2 (M. Walbank 1983; A. Williams 2011) may perhaps have influenced Rhamnous (or at least one of its *merē*) to introduce a similar scheme (Papazarkadas, 59 n. 180). Hierokles, Table 31.7; if the tenant is Hierokles I he will have been a fairly old man by 339/8. Archippos, *LGPn* Archippos 49; Jameson 1982, 72 n. 20, suggests a connection also with Archippe daughter of Philostratos, commemorated by a loutrophoros of the late 4th c., *SEMA* 775, (cf. below, n. 100) but inferences from women's names are insecure.

⁷⁸ Pandionis, *IG* ii³ 4. 342; unpublished text, *SEG* 43. 61/54. 227; two fragments of *IG* ii² 1181+ = *SEG* 34. 151 (ephebes of II Aigeis) came from Rhamnous (*IRb* 99; Stanton 1996). It is possible that the deme regularly honoured all the tribal squadrons (ch. 30 n. 74). Deinokrates 338/7, *IRb* 93; 336/5 (on the date see ch. 28 n. 54), *IRb* 94. *IRb* 93 also honours the peripolarch and an epimeletes; it is not clear whether the latter holds the same office as the three or more epimeletai who, perhaps with other officials, dedicated *IG* ii² 2861 = *IRb* 91 at Rhamnous after being crowned (*IRb* 2 perhaps also had a single epimeletes, c.300; cf. also *SEG* 43. 29, ? 225/4). The latter text had at least 5 crowns; the three (?) epimeletai came from tribes V, II, and (?) VI, so they were not officers of a tribal squadron. *IOrop.* 353 (see Humphreys 2009) has general honours to epimeletai in the forts (*phrouria*) on the left side and honours to an individual epimeletes (from Acharnai; the dedicating tribe is IV Leontis) on the right side. Possibly, however, the epimeletai of *IRb* 91 were not ephebic; there were epimeletai at the Amphiarraia (*IG* ii³ 355), and the Nemesia may have had an analogous board.

⁷⁹ *PAAH* 1994, 17–18 (after 333); Petrakos 1991, figs 34–5; *IRb* 82, 116; he may possibly be Xenokra[tes son of Phan]okrates (*IRb* 117), see Table 31.8.

Megakles son of Megakles R. made a dedication to Themis (or Nemesis, see Palagia 1994) *c.*300 recording that he had been crowned by the deme for his *dikaio syné* (probity in handling public funds?), and had been victorious as gymnasiarch with teams of both boys and men; these victories were perhaps won at the Nemesia. The record of a choregic victory in comedy, probably at the Rural Dionysia, was added to the stone later.⁸⁰

Honours were granted by the deme in 303/2 to Adeimantos, appointed general of the countryside (*chora*) for two years by Demetrios Poliorketes. The deme continued to pass honorary decrees, often but not invariably in association with garrison troops, citizen or non-citizen *paroikoi*, all through the third century. The most interesting recent find is a decree of the deme passed perhaps *c.*255. A sacrifice is to be made to King Antigonos (Gonatas) at the athletic competition of the Nemesia on Hekatombaion 19; the demarch and tamias are to see to this, and funds are to come from the agora tax.⁸¹

The best-known member of the deme in the fifth century was the orator and oligarch Antiphon son of Sophilos, who clearly lived in the city, but according to the decree recording his condemnation still owned a house in his deme.⁸² Anthemion, who served as hellenotamias under the Thirty, may have belonged to Rhamnous;⁸³ if so, we would have a second oligarch from the deme. Its exposed position near the frontier might well make its landowners eager for peace.

In the early fourth century the leading family was that of the general Iphikrates, son of Timotheos, who was probably born *c.*415 (see Table 31.6). They may have belonged to the genos Praxiergidai, since Iphikrates' nephew (BS) Timotheos son of Teisias dedicated an altar for Herakles, to be used by the Praxiergidai and some associates, whose names are listed. Membership of this genos, responsible for the Plynteria ritual on the Akropolis, would imply that before Kleisthenes' reforms Iphikrates' ancestors had at some time had close associations with the city.⁸⁴

Iphikrates had ties with Thrace (possibly he had served there in his youth as a mercenary?), and married the daughter of King Kotys. His son Menestheus bears

⁸⁰ *IG* ii³ 4. 513 (the interpretation of Mantes 1990 = *SEG* 40. 178 seems to me unlikely).

⁸¹ Adeimantos, *SEG* 43. 27. The exact date of his appointment for 2 years *c.*305–301 is not yet clear; cf. G. J. Oliver 2007*a*, s.v. Sacrifice to Antigonos, *IRb* 7 (n. 71 above); the proposer is Elpinikos son of Mnesippos R., also named in *IRb* 117 (*ISE* 25, Ekphantos, 235/4; cf. Paschidis 2008 A 68). Note also (in addition to the list in Whitehead 1986*a*) *IRb* 14, a deme decree of *c.*250; *IRb* 6, honours for Kleocharos son of Kleocharides R. *c.*262 (arch. Antipatros); *IRb* 4, *c.*250?, deme (?) decree proposed by [Nikost]ratos son of Epiteles, for [Po]scidonios and troops; *IRb* 39, decree by deme and residents, *c.*220; *IRb* 95. Nemesia, *IRb* 7, cf. 17; R. Parker 2005*a*, 476; Haake 2011.

⁸² In [Plut.] *Mor.* 834 a–b = Caecilius F 102 Offenloch 1907, the demarchs of Rhamnous and Agryle (ch. 23 n. 23) are ordered to report (*apophēnai*) the houses of Antiphon and Archeptolemos.

⁸³ Anthemion, *IG* i³ 380. 7 with comm.; he belonged to Aiantis, and his demotic may have been Rh[amnousios]. Another Anthemion of Aiantis died in battle *c.*411, i³ 1186. 133.

⁸⁴ *APF* 7737. Timotheos' altar, *Agora XVIII* C113; Jameson 2000, *SEG* 49. 188; ch. 20 n. 78. Lambert 1999*a* thinks that the altar may have been shared by the Praxiergidai and Salaminioi.

TABLE 31.6. Rhamnous: Timotheos (*APF* 7737)

a name that also occurs at R. in the family of Menest(h)ides and his wife Nausiptoleme, parents of Menesthenes, Menestheus, and Kallisto, commemorated on a relief stele of the 370s; possibly the two families had an agnatic or affinal link in earlier generations. Perikles son of Menestheus R., councillor in 303/2, might be a grandson (SS) of Iphikrates, in view of the ambitious choice of name. Menestheus (the general's son) married a daughter of another general, Timotheos son of Konon II of Anaphlystos. Iphikrates (I) had two other children: a daughter, Iphidike, who made two dedications to Artemis Brauronia, and a second son, Iphikrates II, one of the ambassadors sent to Dareios III in 333/2 (n. 34). A son of an Iphikrates R. served as ephebe in the early 250s; he may be a descendant either of Menestheus or of Iphikrates II.⁸⁵

Iphikrates' brother Teisias (II) seems to have been named after a maternal grandfather, Teisias I, who also belonged to Rhamnous; Teisias III son of Timarchos I, who made a dedication in the city in the middle of the fourth century, will have been a cross-cousin (MBS) of Iphikrates and Teisias II. Teisias II, who is attested as a choregos, called his two sons Timotheos (II) and Timarchos (II), the latter name indicating that Teisias II had a close relationship with his mother's brother. Timarchos II was still a lad (*meirakion*; cf. J. Davidson 2006) c.345, when Aischines cited him as an attractive boy who, unlike his homonym Timarchos of Sphettos, never acted in such a way as to attract gossip and censure.

Phrynon son of Diognetos I R., who was captured by pirates during the Olympic truce of (?) 348/7, and persuaded the Assembly to send an ambassador to Philip of Macedon to negotiate for the return of his ransom-money, was himself elected in the following year as one of the ambassadors to Philip; he presumably had some experience in oratory and public affairs. At about the same date he made a dedication to Hygieia on behalf of his son Diognetos II; he sent the boy to Philip before he had come of age. A second son, Euphanes, served as secretary in 324/3. The Diognetos R. buried in the city with a Diodelos (perhaps his brother) was probably Phrynon's father.⁸⁶

Excavation of monumental periboloi at Rhamnous has given us an unusual opportunity to identify and reconstruct families that valued visibility in the deme. The largest of them is the lineage descended from Hieron I (see Table 31.7). The

⁸⁵ Ch. 14 n. 29. Menestheus and Iphikrates are now attested as co-trierarchs in (?) 355/4, *SEG* 45. 147 + 49. 169. Note that the names Iphikrates and Menestheus (the latter a shortened form of Menesthenes) are semantically linked; however, even if Iphikrates was attracted to the name for semantic reasons, he can hardly have been unaware of its use by a family of fellow-demesmen.

⁸⁶ Phrynon, *AO* p. 317–18; dedication, *IG* ii² 4351 (Aleshire 1991, no. 3870); Diognetos II sent to Philip, Dem. 19. 230–3; Euphanes, *LGP*N no. 19; Diognetos I and Diodelos, ii² 7343 = *CAT* 2. 224, Hamiaux 1992 no. 148. The relief shows two standing men, so they were perhaps brothers rather than father and son. *LGP*N (p. 114) suggests Di[a]delos rather than Di[o]delos, but since the name (a *hapax* in either form) may have been chosen as related to Diognetos, Di[o]delos is to be preferred. The stone was sent to Paris by Fauvel and is not likely to have come from the deme area. Note also the stele of Philochares R., strategos in 357/6, ii² 7374.

Note: It is uncertain whether the dedicant of *IRb.* 171 and lessee of 180 is Hierokles IV or a homonymous son of Hieron III.

TABLE 31.7. Rhamnous: Hieron (cf. Aleshire 1991 no. 9192)

main general points to note are (1) that although the lineage was evidently significant in the deme, could afford an impressive set of tomb monuments, and had at least one member (Kleitophon I) who served in the cavalry, none of its members is as yet attested as performing a liturgy in the city; (2) that of the six (?) marriages on which we have information, four (?) were made within the deme, and another to a woman from a neighbouring deme, Trikorynthos; (3) that although Hierokles I may have taken a lease of temple property managed by the deme, members of the lineage do not appear as proposers of deme decrees or as deme officials. Their interests, as far as they can be discerned, seem to be religious.⁸⁷

The family of the priestess of Nemesis Aristonoe, whom Hieropoios II of the Hieron lineage married in (?) the third century, can perhaps be traced back to the fourth century, to the brothers Phanokrates II and Nikokrates I, sons of Xenokrates I (see Table 31.8). Phanokrates II married Archestrate daughter of Mnesarchos of Oinoe; they were buried in a single peribolos with their son Xenokrates II and Xenokrates II's son Phanokrates III. Xenokrates II served as councillor in 281/0; a dedication by him was found near the theatre seats dedicated by the priest of the Hero Archegetes, but this is not a strong reason for supposing that he was also responsible for the seats. Nikokrates I bought land at Aphidnai confiscated from Nikodemos of Oinoe (Aiantis) and sold by the poletai, c.342/1. Nikokrates II, father of the priestess, will have been the great-grandson or great-great-grandson (SSS or SSSS) of Nikokrates I.⁸⁸

Another family that evidently maintained interests in the deme starts (for us) with the sculptor Chairestratos I son of Chairedemos I, whose professional activity began c.340. He served as councillor in 328/7 and as epimeletes for the dedication made at the Amphiarion by the councillors of that year and other men; the Chairedemos R. with whom a loan agreement was deposited in 315/4

⁸⁷ Table 31.7 supersedes the table in Humphreys 1983*a*/1993, 113, which contains errors; the table in Aleshire 1991 (table 7) is very incomplete. See also ch. 11 n. 48. For the peribolos see *PAAH* 1992, 13, fig. 4; Bergemann 1997, peribolos N 5; Schmaltz 1999. The earliest councillor documented for this family served in 281/0 (Lykeas III); however, Aiantis is poorly represented in council lists of the 4th c. Marriages within the deme: Choirine daughter of Hieron (I?), Hieron II, Hieropoios II, perhaps also [Pheid?]ostratos I; Lykeas I married Kallistomache daughter of Kephisios of Trikorynthos (*IRb* 279 = *SEMA* 840). Hieron I or II may well be the Hieron R. who lent 900 dr. against property at Marathon, *SEG* 21. 656 = Finley 1952, 95A. If Lykeas son of Ly— (R?), lessee of a house? in Kydathenaion in 343/2 (*Agora XIX* L 6. 20, cf. Papazarkadas 2011, 309 no. 45; 143 n. 204), belongs to this family, he might be a son (or DS) of Lykeas I. Religious interests indicated (vaguely) by names, becoming more specific with the introduction of the name Hieropoios, and by the marriage of Hieropoios II to Aristonoe daughter of Nikokrates II (cf. Table 31.8), priestess of Nemesis. Note that we do not know whether the priestess of Nemesis was appointed by the deme, nor whether the position was always given to a woman from a deme family. It is not certain that the priestess Pheidistrate of c.300 (*IG* ii³ 4. 513) was the daughter of Eukolos of Pitthos.

⁸⁸ Dedication *IG* ii² 2849 comm. = ii³ 4. 290. The name of Mnesarchides, demarch of Oinoe-Aiantis (Lambert 1997*a*, F 7 B 27–8) provides support for placing Phanokrates I's father-in-law in Aiantis.

TABLE 31.8. Rhamnous: Phanokrates

TABLE 31.9. Rhamnous:
Protarchos

may be his son Chairedemos II. The latter's son Chairestratos II was perhaps the sculptor of the female figure dedicated by the deme liturgist Megakles *c.*300.⁸⁹

Theomnestos son of Protarchos R. performed the eutaxia liturgy for his tribe *c.*330; he was buried in the deme, with his (?) nephew (BS) Theophanes, with Kleagora (perhaps his wife) and with his son Theodemos, in the late fourth century (see Table 1.9). Theodemos is recorded as (?) kleruch in mid-century; possibly a sister, Telestagora, married within the deme and was buried in the peribolos of her husband's family (Table 31.13). There may be an affinal link between this family and Theophanes son of Hierophon, who made a dedication to Hermes in (?) 330/29, recording that he had been crowned by three successive sets of epheboi.⁹⁰

Nikostratos I, attested as syntrierarch *c.*350, had descendants who were prominent in the deme in the third century. One of his sons, [Phi?]litos, was buried in the deme in the second half of the fourth century; a second, Epiteles, had two sons, Nikostratos II and Epikouros. Nikostratos II proposed three deme decrees

⁸⁹ Chairestratos I, Frel 1979; *IG* ii³ 2. 360. 6. Chairestratos—a very suitable choice as epimeletes, being both a sculptor and a member of a deme neighbouring the Amphiaraion—is named third in the list of epimeletai, after Philostratos son of Philinos of Acharnai (from Kleophon's family, see ch. 28 n. 48) and Euthykrates son of Drakontides of Aphidnai (above, n. 33). Chairedemos II (?), *IG* ii² 2726 = Finley 1952 no. 127 (no provenance). Megakles' dedication (Frel thinks this is Chairestratos I in old age), ii³ 4. 513. Frel also attributes to Chairestratos I the 'Dancers' group at Delphi and other work (funerary monuments and dedications) in the deme; the portrait of the priestess Aristonoe (*IRb* 133) would be a later product of the same workshop.

⁹⁰ Theomnestos, *IG* ii³ 550; a Theomnestos with Aristokleia daughter of Aristophanes R., *IRb* 267 = *SEMA* 828 (*CAT* 2. 291a). Theophanes son of Hierophon (*IG* ii³ 4. 338) would perhaps have been crowned (for supplying oil for them to use in the gymnasium? for taking part in their training?) by the first three sets of ephebes, those of 334/3/2, 333/2/1, and 332/1/0. The choice of Hermes indicates an association with the gymnasium. Another liturgist from Rhamnous is Kleomedon I son of Klearetos I (*APF* 8588), attested as syntrierarch in 322; his (?) sister Pardalis made a dedication to Artemis Brauronia in the late 4th c., *SEG* 21. 557. 10 (the father's demotic is not recorded, but his name appears only in these two texts); a grandson of the trierarch, Kleomedon II son of Klearetos II, served as ephebe in 267/6 (*IG* ii³ 917 III 54, arch. Menekles). Cf. perhaps Chareisios son of Theophanes R., found on Skyros, *BE* 2011, 341.

between *c.*268/7 and *c.*250; Epikouros served as anagrapheus in 293/2, during the ‘tyranny’ of the pro-Macedonian Olympiodoros. The brothers seem to have differed in their political views, or changed them at some date after Epikouros’ term in office. Andropheles son of Nikostratos, buried in the deme in the early third century, may be a third son of Nikostratos I; his name suggests a connection with the family of Oikopheles R., whose son Hieronymos served as councillor in 330/29 and proposed a decree honouring the anagrapheus Kallikratides son of Kallikrates of Steiria (see Table 31.10). Kallikratides seems to have had connections in Rhamnous; he lent 1000 dr. on security of a house with Philon of Rhamnous (who served as diaitetes in 325/4; his son Charippos was councillor in the following year).⁹¹

Antimachides R., attested as syntrierarch *c.*350, also belongs (probably) to a family that remained active in the deme. He should be a kinsman of Antimachos (I) R., buried with his (?) wife Neariste at Rhamnous, and perhaps represented on his stele as a priest; Thrasy-machos son of Antimachos II, who served on a deme commission *c.*235, will be a descendant. Thrasy-machos had two sons, Antimachos III (buried at Rhamnous) and Thrasykles, who proposed a deme decree at the end of the third century.⁹²

The name Antiphilos links two well-documented lineages. Antiphilos I, son of Theophilos, may have married a daughter of Teisonides I (known only from

TABLE 31.10. Rhamnous: Oikopheles of Rhamnous
Oikopheles

⁹¹ Kallikratides, *LGNP* no. 10; horos *Agora XIX* H 98. Philon, *IG* ii³ 4. 35. 146; [Ch]arippos, *Agora XV* 53. 12. Cf. ch. 17 on the relationship between deme activity and council membership.

⁹² Antimachides, *APF* 1100 (the connection with Antimachos son of Antimachides of Kydathenaion proposed in *APF* is not particularly likely, since the name Antimachides, though only attested in these two instances, is a regular form of derivative from the common name Antimachos). Antimachos I, *SEMA* 791, *CAT* 2. 270b; Thrasy-machos, *IRh* 17. 46, arch. Ekphantos, *c.*235; Antimachos III, *SEMA* 792; Thrasykles, *IRh* 56.

his tomb stele of the early fourth century); they seem to have had two sons and at least one daughter (see Table 31.11). The sons, Teisippos and Theodoros I, are named on a rosette stele of the second half of the century with a Mnesagora, whose relationship to them is unclear. Theodoros I married a woman called Leonike, who probably outlived him; she dedicated a statue of their son Antiphilos II in the temple precinct at Rhamnous *c.*300. Antiphilos II probably had a son, Theodoros II, whose sons Theomenes I and Theotimos served as ephebes in 246/5. Theotimos in 215/4 proposed a decree of the Amphieraistai concerning an epidosis to raise funds for repairing the hieron of Amphiaraios at Rhamnous; he was honoured as general in that year. He or a descendant may have served as councillor *c.*180. Theomenes' descendants can be traced into the first century BCE.

A daughter of Antiphilos I may have married Kleochares I son of Kleodorides I R., who had a son called Antiphilos (III) who served as councillor in 303/2 and made a dedication to Nemesis before the end of the century. The Antiphilos who headed a group of phrateres who made loans in 319/8 and 314/3 will be either Antiphilos II or his (?) cousin (FZS) Antiphilos III. Kleochares II, son of Teisonides II, was probably a nephew (BS) of Antiphilos III. He proposed a deme decree in 262/1 in honour of his second cousin (FFBSS) Kleochares III son of Kleodorides II, honouring him for his activities in the last year of the Chremonidean War, which included sacrifices, and perhaps helping demesmen to get in their crops.⁹³

Kleodorides II, father of Kleochares III, was the son of Strombichides (I?); he served as councillor in 281/0. In addition to Kleochares III, Kleodorides had a second son, Strombichos, who served on a deme commission *c.*250, and proposed *SEG* 52. 126 in (?) 244/3; Strombichos was probably the father of K[le]o[d[or]i]dēs IV, whose son (perhaps [Strombichides] II or [Kleodorides] V) served on a deme commission *c.*225. —tomios [*sic*] son of Kleodoros, who appears in the same list, probably also belonged to this family. Kleochares III had two sons, Kleodorides III, buried in the deme in the middle of the third century, and Kleippides, who served as ephebe in 246/5.

Sostratos R., who dedicated two marble thrones to Nemesis and Themis at the end of the fourth century, may have been the father of Kephisokleides I (Sostratou), who served as councillor in 304/3. Kephisokleides' mother was probably Agariste daughter of Kephisokleides of E[itea], who was buried at Rhamnous in the second quarter of the fourth century. A descendant, Kephisokleides II son of

⁹³ Phratry, ch. 19 n. 19. *IRh* 6, the decree for Kleochares III, who held office in the archonship of Antipatros (262/1), must have been passed either shortly before or soon after Athens' surrender (cf. G. J. Oliver 2007*a*, 64), in either case indicating a resolutely anti-Macedonian stance in this family. On Rhamnous in the Chremonidean War see Knoepfler 1993*a*; Oliver *op. cit.*; Oetjen 2014.

TABLE 31.11. Rhamnous: Theophilos and Kleodorides

Sostratos II R., proposed a decree passed by troops stationed at Rhamnous in the late third century.⁹⁴

One of the older dedications in the deme—perhaps moved to a new site in the smaller temple *c.*300—was a statue of a boy, dedicated as a tithe (*aparchê*) by Lysikleides son of Epandrides, in the last quarter of the fifth century.⁹⁵ The relatively rare name Lysikleides recurs in the deme in the fourth century in a family probably descended from the dedicant (see Table 31.12). Lysikles I son of Lysitheides was commemorated at Rhamnous with his two sons, Lysikles I and Lysandros. Lysikles I had a son called Lysikleides (II), whose son Lysippos and daughter Mnesikrateia were buried in the deme. A (presumably) older son, Lysikles II, had a son, Lysikleides III, who served as councillor in 303/2. He in turn was probably the father of Lysikles III, whose son Lysikleides IV served as thesmothetes in 229/8; the names of Lysikles III and Lysikleides IV—or possibly of two later members of the family—were added in the second century to the stele of Lysippos and Mnesikrateia.⁹⁶

Names based on the root Lysi- also occur in the family of Diogeiton son of Kallias (I), whose peribolos is one of the most conspicuous monuments on the temple road (see Table 31.13). A single stone lists Diogeiton, his (?) wife Habro daughter of Archebios, their son Lysimachos I, Choronike daughter of Eudorides of Oinoe (perhaps wife of Lysimachos I), another [L]ysimachos (perhaps Lysimachos II son of Lysimachos I), Telestagora (?) daughter of Theomnestos,

⁹⁴ Sostratos *IRb* 121; Kephisokleides I, *Agora* XV 59. 56 (*SEG* 28. 154); Agariste, *SEMA* 720; Kephisokleides II, *IRb* 13. The names Kephisodoros and (?) Kephisodotos are also attested at R. in this period, but Kephisodoros seems to have connections to the family of Euphron. The son or daughter of a Kephisodotos (demotic lost) was named on *IG* ii² 6006 = *IRb* 319, a rosette stele from Rhamnous, with [Rh]odanthis daughter of Melanopos of Eitea X (her brother Hieros served as councillor for Antiochis in 334/3, *IG* ii³ 4. 81. 66, cf. ch. 32 n. 37) and with Kallistratos son of Kallistratides I R., probably her husband, and their son Kallistratides II. Kallistratos appears also in a list of demesmen of Marathon and Rhamnous who made a (?) dedication in the second half of the 4th c. (ii² 2400. 11, with Dow 1983). The restoration [Kallist]rate in ii² 6006. 10 is hardly warranted.

⁹⁵ *IG* i³ 1021 = *IRb* 88 with commentary; Lysikleides has no demotic, but was presumably a local man. The whole monument is illustrated in *MDAI(A)* 82, 1967, pl. 89.

⁹⁶ It must be admitted that Lysikleides II may have acquired his name more because of its relation to that of his father Lysikles than from reference to Lysikleides I; nevertheless, a family connection (which might have been matrilineal) is likely. An earlier thesmothetes from R., Teleskopos son of Aristokritos (328/7, see *AO* p. 396; *Agora* XVI 86), perhaps set up a dedication in the deme recording that he had been crowned (*IRb* 110, but the restoration is doubtful; cf. 111); his grandson Teleskopos II son of Aristokritos II is attested as ephebe in 267/6, *IG* ii³ 917 III 55. It is not clear whether there was any (affinal?) connection between the Lysikles family and Lysiphilos R., epimeletes of the dockyard in 368/7 (ii² 1617. 98, 1622. 553); the latter's son (or father?), [Phi?]lon son of Lysiphilos R., dedicated *IRb* 119 in the deme before mid-century. Although the name Lysiphilos is rare (otherwise attested only in Cholargos), it may have been generated here by combining the root Lysi- with the name Philon (hence my suggestion for the dedicant's name), and a connection with the Lysiphilos who dedicated *IG* i³ 705 on the Akropolis *c.*500–480 is unlikely.

Note: Note also, perhaps, —es Lysitheou R.h., *SEG* 41.76, 3rd c. deme decree.

TABLE 31.12. Rhamnous: Epandrides

whose family has already been discussed (Table 31.9; perhaps wife of Lysimachos III), and a third [L]ysimach[os], perhaps Lysimachos III (grandson of Lysimachos I), son of Lysistratos, who was councillor in 303/2 (*Agora* XV 62. 280). Diogeiton (I) may have had another son, [K]yk(n)os (?) whose son Diogeiton II is recorded as (?) kleruch in the mid-fourth century; Diogeiton III, son of Smikythion R., councillor in 281/0, may be a grandson of Diogeiton II.⁹⁷

⁹⁷ The name Kallias appears in another R. family, but since it is so common there is only a weak possibility of a link with Diogeiton's father. Kallias son of Kallippos I R. made a dedication in the Asklepion in the city in 340/39 (*IG* ii² 1533 = Aleshire 1989 Inv. III 12); Kallippos II son of Mên . . . os is recorded as (?) kleruch in mid-century (ii² 1927. 157, see Humphreys 2010*a*). Banker's label in the fort of Lysistratos son of Lysimachos (I?), *IRb* 196.

Note: *IG* ii³ 4. 35 148-9 has two Rhamnousians called Lysistratos, unless this is an error.

TABLE 31.13. Rhamnous: Kallias

The name of Diogeiton's wife Habro might possibly suggest a connection with the family of Euphranor son of Euphron I R. (see Table 31.14), responsible for another conspicuous peribolos, since the wife of (?) Euphron II was called Habrylla; but inferences from women's names are much less secure than inferences from men's names.⁹⁸ Euphranor, according to his tombstone, lived to be 105, and saw three generations of descendants, all of whom were living when he died (this statement most probably disregards children who did not live to reach maturity). He had two sons, Euphron II and Euthyphron, and a daughter, Phainarete I, who married Kleophon son of —ophon and bore him two children, Phainarete II and Nikeratos. Euphron II had a son, Archedemos, who was named on the family stele, and on another stone of the third century, which commemorates him with his wife Eukolon daughter of Arist—des and their daughter Philtate. Archedemos may be the A. of Rhamnous on behalf of whom a Kephisodoros made a dedication (?) in the deme at the end of the fourth century.⁹⁹

Two other wealthy members of the deme deserve mention. Dromokles son of Atheneas, who also has a peribolos, may be the —mokles who lent 1500 dr.

⁹⁸ On women's names see ch. 8; though a girl was often given the name of an older kinswoman (her mother or one of her grandmothers) there was perhaps more variation in the choice of model, and in any case we are much less well informed about women's names.

⁹⁹ On Kephisodoros (*IG* ii² 4923 = *IRb* 124, *SEG* 22. 168) see above n. 94. Archedemos, *SEMA* 812, Paschidis 2008 A 36.

TABLE 31.14.
Rhamnous: Euphron

secured on property in the deme; his brother Athenodoros was also buried in the peribolos (see Table 31.15).¹⁰⁰ Pamphilos son of Theogeiton I R., secretary in 306/5, is probably also the Pamphilos R. who was councillor in 304/3, and may be the Pamphilos R. who with Pheidoleos R. allegedly lent a talent (6000 dr.) to Phainippos before c.328/7. Theogeiton II, who served on a deme commission in 229/8, may be Pamphilos' son; *his* son Timotheos served on another deme commission, c.225.¹⁰¹

Xenopeithes R., who headed a group of eranistai that lent money on security of an oikos in the second half of the fourth century, may be the Xenopeithes of Aiantis who appears in a list of lampadephoroi of the Lykourgan period.¹⁰²

¹⁰⁰ Peribolos, Petrakos 1991, fig. 27 (Bergmann 1997, N 5a). Dromokles, *SEMA* 773; —mokles, *IRb* 189 (there seems to be space for 2–3 letters); Athenodoros, *SEMA* 772 (loutrophoros-stele). Their father Atheneas (not, apparently, Athenaios as *LGP*N no. 76 plus Dromokles 14, Athenodoros 105) was perhaps the A. son of Philostratos named on *SEMA* 774 with Menestheus son of Menesthides (Table 31.6), in which case Archippe daughter of Philostratos would be their aunt (FZ).

¹⁰¹ Pamphilos as secretary, *IG* ii² 470 etc. (*LGP*N Pamphilos 95); councillor, *Agora* XV 59. 55, 61. [278] (son of P—); loan, [Dem.] 42. 28. Possible tombstone of Theogeiton I, *IG* ii² 7353 (Pittakes). Theogeiton II, *SEG* 25. 111. 21; Timotheos, *IRb* 28. 8. Since the form of the name is different, a connection with the family of Diogeiton is perhaps unlikely; both families may at some period have lived near the sanctuary. A Pamphilos R. appears as symproedros in an initiates' decree on Lemnos in the Lykourgan period, Culasso Gastaldi 2010, 361 with 357 n. 58. On Laches R., who appears on Samos c.350, leased a house in the city in 343/2, and contributed to the (?) dedication *IG* ii² 2400, see Papazarkadas 2011, 308 no. 43. Son of the syntrierarch Nikostratos R., *APF* 11050 (probably), *IRb* 334 = *SEMA* 895. Note also that since the name is rare at this period Agapaios R., son of Pythodoros, and his son [Pytho]menes (more likely than [Anti]menes, cf. *IRb* 312), *SEMA* 769 = *IRb* 208, may be connected with the trierarch Agapaios of Eleusis, *APF* 96.

¹⁰² Horos, *IRb* 188; cf. perhaps Epipeithes son of Xenopeithes, *IG* ii² 11293 (city).

TABLE 31.15. Rhamnous:
Philostratos

Despite the rich material available on the prosopography of Rhamnous, it does not seem possible at present to put a name to the man who set up a dedication in the late fourth or early third century recording that he had been crowned by the Athenian boule and demos seven times, for service as general, *epi tôn ephēbôn*, taxiarch, ambassador (?), and in other offices. The stone is a salutary reminder that although stones from the deme give the impression of an intermarrying local squirearchy whose interests were often restricted to the local context, there were also men with wider ambitions. Nevertheless, the dedicant remained sufficiently attached to his deme to set up a record there of his achievements.¹⁰³

¹⁰³ Peek 1942, no. 52; IRb 132; the title *epi tôn ephēbôn* (rather than *kosmētēs* or *sôphronistês*) may indicate a date after 307. Inclusion of reference to an embassy (plausibly restored by Peek) supports the view that the dedicant was a demesman recording the whole of his political career rather than a military commander whose laurels had mostly been won for service at Rhamnous but who did not belong to the deme.

X Antiochis

There are several minor problems in this tribe concerning location of demes. The two small demes Krioa and Eroiadai are unplaceable; they will be discussed here with the city trittys, to which only Alopeke can be assigned with certainty, but they might also have been situated somewhere in the inland trittys. The trittys assignment of the three small demes north of Pentelikon—Kolonai, Semachidai, and Eitea—is controversial. Traill (1986) puts them (with Krioa and Eroiadai) in the city trittys, and considers Aigilia and Thorai to have formed the inland trittys with Pallene. However, Aigilia and Thorai had coastal territory, and formed part of a continuous stretch of land with Anaphlystos, Atene, and Amphitrope/Besa. I take the view here that the demes north of Pentelikon belonged to the inland trittys, with Pallene, and that Aigilia and Thorai were in the coastal trittys.¹

CITY TRITTYS

Alopeke

The general location of the deme, south of the city and east of Xypete, does not seem to be in doubt, but it is not clear whether its main centre (it may well have contained more than one village) was in the area of Koutsopodi/Katsipodi and Brahami, or further west, closer to the Athens–Phaleron road. In any case the deme will have covered a considerable extent of territory between Athens and Phaleron. It was probably the base of a phratry, which may have had a sanctuary at Koutsopodi, and perhaps of a sanctuary of Herakles and Antiochos, used by the tribe for worship of its eponymous hero. Whether this sanctuary is to be

¹ Cf. ch. 21 at n. 18, where it is suggested that Pallene perhaps turned out to be a smaller deme than expected, and some demes from the area north of Pentelikon were added to Antiochis to compensate for this. Amphitrope and Besa were not both coastal, but it is generally agreed that they were contiguous with each other and with Anaphlystos; (see below at n. 54), on the coastal trittys. On the view taken here, Antiochis had a small city trittys and a large coastal trittys. Speculations about political gerrymandering by Kleisthenes (Stanton 1984*a*, cf. 1984*b*) do not seem to me to correspond either to the process by which the deme system was formed or to the knowledge available before registration was completed. Stanton 1994 suggests that Eitea, Eroiadai, and Krioa were in the inland trittys.

identified with the sanctuary of Herakles at Kynosarges is controversial.² The hieromnemones of Herakles who sold property at Alopeke in the hekatostai sales, and themselves belonged to the deme, may have been tribal officials.³ There is no evidence of activity by the deme itself.

The leading family in the deme at the time of Kleisthenes' reforms was clearly that of his brother Hippokrates and the latter's son Megakles IV (we do not know Kleisthenes' deme; another brother, Aristonymos, belonged to Xypete).⁴ Alopeke also contained a leading family of the *genos* Kerykes, represented in 507/6 by Hipponikos I, probably named for his father's victory at Olympia in 564, and nicknamed Ammon. Hipponikos' son Kallias II held the office of Torchbearer (*daidouchos*) in the Mysteries of Eleusis, which may well have been held previously by earlier members of the family, and was probably passed via Hipponikos II to his son Kallias III. Kallias II was nicknamed Lakkoploutos, which may imply that he already had mining interests; his son Hipponikos II certainly did. Kallias III inherited a house in Piraeus, the scene of Xenophon's *Symposium* (1. 2).⁵

Aristeides 'the Just', son of Lysimachos A., already prominent enough to be eponymous archon in 489/8 and ostracized in the 480s, probably could not compete in wealth with the horse-racing grandees of the other two families, but was ambitious and able to afford a political career.⁶

² See the discussions of topography in Billot 1992 (especially p. 128); 1993; 1994, 932; S. Privitera 2002; Eliopoulos 2010 (ch. 24 n. 8). Billot argues that the gymnasium of Kynosarges was not in Alopeke, but NE of it, near the S gates of the city (but not necessarily on the site of the site of the Hadrianic gymnasium, which is in Odos Diamantopoulou, just S of the Ilissos, *A to Z* 144 B 3, see Travlos 1970; *AD* 46 B 1, 1991, 32–3); the sanctuary of Herakles and Antiochos would be SW of this, near the old Fix brewery, where inscriptions set up by the tribe were found (ch. 21 n. 77; *A to Z* 144 E–Z 1); several Alopeke tombstones have been found in this area (below, n. 26). On early excavations of the gymnasium area see D. W. J. Gill 2011, 165–7.

³ Lambert 1997a, F 13 A 7; Lambert 1999a suggests that *IG* ii² 2345 = *SEG* 47. 187 (which I regard as a phratry list, see ch. 19 n. 174) records a set of thiasoi worshipping Herakles, to which these hieromnemones may also have belonged (one is probably the son of a man named on ii² 2345), and which may have been connected with the *genos* Salaminioi.

⁴ *APF* 9688. See Table 4.8; ch. 15 n. 22 for ostraka directed against members of the family, and for the question whether Kallias son of Kratios of Alopeke, against whom many ostraka were cast, belonged to it. It is not clear whether Hippokrates and Aristonymos had inherited portions of a continuous estate stretching across what became the border between Xypete and Alopeke, or separate pieces of property. There is no strong reason to attach Hegesias son of Hippokrates A., (?) kleruch (*IG* ii² 1927. 162, see Humphreys 2010a) to this family.

⁵ *APF* 7826; it is very unlikely that Athenians associated the name Ammon with mining (the discussion in Zorat 1990 is rather confused; see also Bosworth 1994), and it should be remembered that *lakkoploutos* ('hole-rich', 'pit-rich') is primarily a variant of *lakkopróktos*, big-ar-se.

⁶ *APF* 1695 V. One ostrakon for Aristeides (with patronymic; Brenne 2001, no. 32) assigns him to Koile; possibly he had a house there (ch. 22 at n. 40). Another ostrakon names an Aristeides son of Xenophilos, who might possibly belong to the same family (a Xenophilos A. is attested as a member of the Areiopagos in 305/4, *IG* ii² 1492. 94, 129), but this is far from certain; the son of Xenophilos, however, is attested as choregos according to a passage of Panaitios cited by Plut. *Arist.* 1. According to

After the 470s the éclat of the deme diminished. Megakles V, son of Megakles IV, continued to race horses, winning at Olympia in 436; he perhaps served as secretary of the treasurers of Athena in 428/7, and as ambassador in 426, but did not make a name for himself in politics. His son Meletos may have been rich enough to pay 3255 dr. for a house that belonged to Theomenes of Xypete in the sale of property confiscated from the Thirty, and certainly bought property of Theomenes on Salamis for 145 dr; possibly he was acting as a family friend. Megakles VII, represented as an elderly man with his (?) wife Hiero on a lekythos from the Kerameikos, dated not long after 350, was presumably the son either of Megakles VI, *kalos* c.430, or of Meletos.⁷ Aristides' son Lysimachos II was undistinguished; only Hipponikos II, son of Kallias II, held a major office, serving as general in 426/5, and remained in the centre of political life, marrying the ex-wife of Perikles. His father Kallias had also been active, in the 460s, as ambassador to Persia and probably to Sparta; the family were proxenoi of Sparta at Athens. Kallias III is represented in Xenophon's *Hellenika* (6. 3. 2ff.) as ambassador to Sparta in 372/1, making a diplomatic speech in the old style, largely concerned with reminding his hearers of his family's and his own earlier contacts with the city.⁸

In the 440s, however, Alopeke produced another leading politician, Thoukydides son of Melesias, whose father had been a wrestler and a trainer of wrestlers; Thoukydides may have married a daughter of Kimon, and was regarded as having taken over Kimon's position as Perikles' opponent after Kimon's death, although he does not seem to have held any significant position. His son Melesias II is portrayed in Plato's *Laches* (179c) as an *apragmôn* like his friend and fellow-demesman Lysimachos II; he became a member of the Four Hundred and was sent by them to Sparta as ambassador in 411.⁹

Plutarch, Demetrios of Phaleron saw an inscription commemorating a choregic victory by an Aristides, and attributed it to the son of Lysimachos; he was criticized for this by Panaitios, who pointed out that the lettering was Ionic, and said that only two men called Aristides were attested as choregoi, the son of Xenophilos and a later man for whom Arcestratos (*fl.* c.431–404) was producer. Cyriacus of Ancona claimed to have seen the latter text (see *IG* ii² 3027) which may have been rediscovered as *IG* i³ 962 (see i³ *ad loc.* and on 969 *bis* a–b, missed by Agelidis 2009 no. 36; Molyneux 1992, 307ff.).

⁷ Megakles V–VI, see *APF* 9688; Meletos, *Agora* XIX P 2 d 19, c 1–4?; Megakles VII, *CAT* 2. 933 = *SEMA* 86 (Proukakis-Christodouloupoulos 1970, 91–4). Megakles VI and Meletos may well have had oligarchic sympathies.

⁸ Lysimachos II, Plat. *Laches* 179c (cf. *Theaitetos* 151a); on later members of the family see *APF* 1695 III–IV. On the date of Kallias' embassy or embassies to Persia see Badian 1993, Humphreys 1999 with bibliography; *APF* 7826; *AO* 84 (446/5); ch. 16 n. 13. Note that in the generation of Hipponikos II the Lokrion who was *kalos* in the 460s might be related to (a) the Lokr— of *IG* i³ 1032. 483 (rather late for the *kalos* if the list records survivors of Aigospotamoi, cf. ch. 21 n. 41), and (b) Lokrion A., councillor (?) c.330, *Agora* XV 46. 55 (not council? Appendix 1).

⁹ *APF* 7268; Melesias I, Wade-Gery 1932. Thoukydides is said to be a *kêdestês* of Kimon in *A.P.* 28. 2, Plut. *Per.* 11. 1, and *gambros*, which should mean ZH or DH, in schol. *Arist.* III 446 Dindorf 1829; since Th. was younger than Kimon, this, if accurate, should mean DH. However, Ar. *Ach.* 708–12 says

Another of Alopeke's rich quietists was Sokrates' friend and fellow-demesman Kriton. He had a farm, not necessarily in his deme, from which he made payments in kind to the sykophant Archedemos, employed to protect his interests in court; he does not seem to have been actively involved in the oligarchic regimes of the late fifth century, but is portrayed in Plato's *Crito* as ready to smuggle Sokrates out of prison and across the border to Thessalian friends. His son Kritoboulos and (?) grandson (SS) Archestratos son of Kriton II are attested as liturgists.¹⁰

Sokrates himself, also of Alopeke, was a quietist, though not rich. In social terms he was a parasite, a licensed joker who was invited to the symposia of richer friends and was not expected to reciprocate. He is greeted courteously in Plato's *Laches* (180e) by Lysimachos II, who claims to be a friend of his father but had not previously met Sokrates himself; the latter's associates were younger men. He had joined the circle of Kallias III son of Hipponikos A. when Kallias, in his early twenties, inherited his father's property and began to keep open house for Athens' smart set, including his step-brothers, the sons of Perikles, and their kinsman Alkibiades. The sons of Lysimachos II and Melesias II (Aristeides II and Thoukydides II) had met the philosopher in the gymnasium (*Laches* 181a).¹¹

The pseudo-Platonic dialogue *Theages* claims that an associate of Sokrates, Timarchos, had planned to kill Nikias son of Heroskamandros, presumably in the period preceding the *coup* of the Four Hundred, or during the rule of the Thirty. A Heroskamandros is attested as the father of Xenoklejs of Alopeke, who died at Potidaia, presumably as a kleruch, between 429 and 404; the kleruch's grandson (SS), Xenokles II son of Polyaratos A., is represented on a votive or funerary monument as a cavalryman. Heroskamandros A., thesmothetes in 225/4, will be a descendant.¹²

that in his youth Th. could have outshot with the bow even his father's *syngeneis*, which might mean that Melesias had married a Thracian woman, perhaps a sister of Miltiades' wife Hypsipyle (*syngeneis* can be used of affines as well as kin). In this case Kimon and Th. would have been cousins (MZS), and *kēdestēs* would be loosely used, which is not impossible (the Ar. passage is not noticed by Wade-Gery or *APF*). Cf. ch. 14 n. 20. Melesias as ambassador, Thuc. 8. 86. 9 (identity contested by *HCTV* 289). His brother Stephanos served as secretary c.(?) 422–420 (Humphreys 1974; *AO* 195, xli).

¹⁰ *APF* 8823. Farm and relationship with Archedemos, Xen. *Mem.* 2. 9, cf. Plato *Euthyd.* 291c; Plato, in the *Crito*, is by implication more critical of Kriton's unscrupulous attitude to law than Xenophon. Rich quietists, L. B. Carter 1986. Archedemos belonged to Pelekes (M. H. Hansen 1987a, 209), and seems to have had a homonymous (?) grandson who had a political career (Aisch. 3. 139).

¹¹ On parasites see Xenophon's portrait of Philippos in *Symp.* 11–16, 21–3, 50. Sokrates' father Sophroniskos I was supposedly a maker of terracotta figurines, D. L. 2. 18, but the enterprise (if there is any truth in the tradition) may have been of a respectable size. Sokrates also had a matrilineal half-brother, Patrokles son of Chairedemos; if he was the Patrokles A. who served as athlothes for the Panathenaia in 406/5 (*IG* i³ 378. 16), he was presumably well-to-do (the name Patrokles is attested in four other demes in the classical period, and Plat. *Euthyd.* 197e does not give Patrokles' demotic). On Kallias III's associates see Table 13.1.

¹² [Plat.] *Theages* 129b; the dialogue may have been written c.200 BCE (Souilhé 1930a), in which case the introduction of the name Heroskamandros presumably has some connection (hardly a question of

Horse-raising traditions were kept up in the deme in the fourth century by Thoudes, who served in the cavalry *c.*350 and is probably the Thoudes son of Thoudiades attested as councillor *c.*321, and the father of Nikariste; and by Lykias son of Menekleides, represented on his mid-century loutrophoros as a bearded man with a horse, possibly a cavalry officer.¹³ Demetrios son of [Anti]phanes (or [Demo]phanes, *SEG* 3. 115, cf. *APF* 3655), phylarch *c.*330, was perhaps the brother of Theodoros son of Antiphanes, who served as councillor in 334/3 and may have proposed a decree honouring Phyleus of Oinoe (IX) in the previous year; Theodoros II A., who served in the cavalry *c.*250, may belong to this family. The father of Demetrios and Theodoros may be Antiphanes son of Aresias, named as thiasos-leader in a (?) phratry epidosis-list mainly of men from Alopeke; this Antiphanes' sister Pheidylla was commemorated by a stele of high quality found in the deme.¹⁴ Thebaios son of Lysiades made a dedication to Hermes, perhaps in the Kolonos Hippios area, in the third century, to commemorate his service as phylarch; his father may be the Lysiades son of Chion II A., who manumitted a slave woolworker living in Melite, perhaps a member of his household, in the Lykourgan period, his grandfather (FF) may be the Chion of the (?) phratry epidosis list, and his great-grandfather (FFF) the Lysiades I son of Chion I commemorated on a stele of the fourth century perhaps found in the city.¹⁵

Python son of Pytharchos II A. served as phylarch in 282/1; Physon son of Pytharchos II, represented on a lekythos of the middle of the fourth century with his (?) wife Timoklea, may be his grandfather or great-uncle. Another lekythos, from Brahami, representing an armed warrior, Antiphon, shaking hands with a man leading a horse, Niketes, may have been set up by one of Alopeke's cavalry families; a Niketes A. served in the cavalry *c.*250, and an earlier Niketes A. was commemorated by a stele in the middle of the fourth century. There may also be some relationship with Antiphon son of Solon A., councillor in 334/3. Phoryskides II A. also served in the cavalry *c.*250;

reliable oral tradition) with the thesmothetes, ii² 1706. 50. Xenokles I, *IG* i³ 1512; Xenokles II, *IG* ii² 5574 = *CAT* 1. 362. Cf. also Demosthenes son of Heroskamandros A., ii² 5553, perhaps son of the thesmothetes. Aristogeiton son of Nikias A., commemorated by a loutrophoros of *c.*340–317 from Ambelokipi, *IG* ii² 5550, is hardly relevant.

¹³ Thoudes, Bugh 1988 I B 89; *Agora* XV 55. 41; Nikariste *IG* ii² 5571 (epistyle, no provenance); Lykias, ii² 5562 = *CAT* 261, no provenance (the beard suggests that, though presumably he died childless, he was old enough to hold office, cf. chs. 11, 21 n. 121).

¹⁴ Demetrios' father might be Demophanes A., trierarch before 356 (*APF* 3655, *IG* ii² 1622. 331); in this case he would presumably still have been a minor when his father's debts were paid *c.*342/1, and Themistokles (IV) of Phrearrhioi, who paid them, would have been his guardian, perhaps his MF or MB (see *APF* 6669 VII). Theodoros I, *IG* ii³ 4. 81. 56, ii³ 327. 5 (the restoration of patronymic and demotic is far from cogent); Theodoros II, Bugh 1988 II B 251; Antiphanes son of Aresias (not Araxias as *IG* ii² 2345), *SEG* 47. 187. 45 (thiasos eponym); Pheidylla, *SEMA* 88, *CAT* 2. 294a. A son of Demetrios A. was councillor in 303/2, *Agora* XV 62. 11. The attribution to A. of the sculptor Demetrios, active in the (?) early 4th c. (ch. 26 n. 67), is recorded as conjectural by *LGPN* Demetrios 162.

¹⁵ Thebaios, *PAA* 8, 1933, 70–1, *SEG* 47. 197 (added online by *LPGN*, missed by Bugh 1988; Spence 1993, etc.; erroneous reference to *PAAH* in Traill 1986, 81 n. 7; the provenance is Aimonos–(not Kimonos as *SEG*)–Eukleidou–Tripoleos. Lysiades I, *IG* ii² 5565; Chion II, *SEG* 47. 187. 85; Lysiades II, *SEG* 18. 36 B 267.

Aristeides son of Phoryskides I, named on the thiasos-list, will be an earlier member of the family.¹⁶

Theophilos son of Meliton A., who served as epimeletes on Lemnos in the 340s or early 330s, was probably the Theophilos called as supporting speaker by Hyperides' client Lykophron when the latter was indicted by Lykourgos for adultery in (?) 333. Lykophron (whose deme is unknown) had spent conspicuously on horses and had served as hipparch on Lemnos for three years; Theophilos, in addition to being well placed to testify about this service, must have been a well-known and respected figure.¹⁷

Only two generals from Alopeke are recorded in the fourth century, Diokles and (?) Sopatros. Diokles, who may possibly have been a descendant of the son of Themistokles of that name, who was adopted by his maternal grandfather Lysandros A., served in Euboia in 357/6; Sopatros held office in 329/8.¹⁸

The main figure in the deme in the Lykourgan era was perhaps Pytheas son of Sosidemos, who served as commissioner for the water supply from 334/3 to 331/0, and as councillor c.330; a trapeza found on the Sacred Way may come from his tomb. Pytheas and Nikostratos sons of Archonides A., named on a stele of the middle of the century, may possibly have been his kin; Nikostratos' son [. . .]stratos served as councillor c.321.¹⁹

Aristomachos son of Kritodemos I A. seems to have been fairly prominent in politics in the 350s–340s. His father, perhaps a kinsman of Sokrates' friend Kriton, had been killed after the battle of Aigospotamoi; he and his brother Kritodemos II are both attested as trierarchs, and his sister married the speaker of Lysias 19. His daughter married a son of Diodoros of Paiania, and was commemorated with her husband on a (?) trapeza found in that deme; the husband's family had mining interests.²⁰

¹⁶ Python, Habicht 1997; Physon, *IG* ii² 5580 = *CAT* 262 (the ? councillor Physon A. of c.330, *Agora* XV 46. 52, may be a son if both list and stele are accurately dated); Antiphon and Niketes I, ii² 10702 = *CAT* 2. 220a (son and father?); Niketes (I?) ii² 5572; Niketes II, Bugh 1988 II B 177; Antiphon son of Solon, *IG* ii³ 4. 81. 55; Phoryskides II, Bugh II B 212; Aristeides, ii² 2345. 67. Phoryskides son of Aristomenes, secretary in 248/7 (Diomedon) belonged to Leukonoion (Table 26.3). See also Papazarkadas 2011, 317 no. 87.

¹⁷ Hyp. 1 *Lyk.* 20; the speech has been dated c.333 (see Engels 1989, 192–4), but there are also arguments for a date before 338.

¹⁸ Diokles, *APF* 6669 VI, Dem. 21. 174. Diphilos son of Diokles, *SEG* 47. 187. 66, may be his son, and father of Zoilos son of Diphilos A., commemorated at the end of the 4th c. on *IG* ii² 5557. Zoilos' homonymous grandson, *IG* ii³ 1146 (226/5, Ergochares); a later Diphilos son of Diokles A. c.100 BCE, *SEG* 44. 137 (Matthaiou 1994, 182). The Diokles (A.?) of *SEG* 47. 187. 54 belonged to a different thiasos; he could be a DS of the general, but the name is common. Sopatros, see *AO* 393–4.

¹⁹ Pytheas, Humphreys 1985a; Habicht 1989; Lambert 2004b, 108 (daughter's tombstone, *SEG* 54. 150); *IG* ii³ 338 (honours proposed, but not yet awarded, while he was still in office), *SEMA* 87 (trapeza; *pace* Marchiandi 2011, 155, there is no evidence for a peribolos); *Agora* XV 46. 53; Pytheas (II) and Nikostratos ii² 5573 (no provenance); son of Nikostratos, *Agora* XV 55. 34. Dillon 1996 thinks that Pytheas I's commission only lasted one year, but he ignores Habicht 1989. Ch. 19 n. 194.

²⁰ *APF* 1969; see also 5951 (A), speaker of Lys. 19; 3953, Diodoros of Paiania, ch. 25 n. 38. The only demesmen of Alopeke with attested mining interests are Hipponikos II son of Kallias II and Antimachos,

Plangon daughter of Promachos (A.?), who died before marriage and was mourned by her mother and the mother of her fiancé, was commemorated by a stele that also names a Lakedaimonios; either she or her sister Kallisto may therefore have been the sister of the Lakedaimonios who was acquitted of a charge of asebeia brought by Euboulides of Halimous at some date before 346/5. Their brother Satyros A.—also described with reference to Lakedaimonios, who was evidently a well-known man—acted privately as arbitrator for Phrynion of Paiania *c.*370, and testified to this for Apollodoros of Acharnai in the late 340s.²¹

Exekestides son of Nikokrates I A. served as archon basileus in the late fourth century; his paredroi were his son Nikokrates II and Kleainetos son of Menon, perhaps a fellow-demesman or an affine, since the name Kleainetos is attested in the deme in the third century. Kleinias son of Exekestides A., (?) kleruch in the middle of the fourth century, may be a second son.²²

Mnesitheos A., leader of a group of eranistai who made a loan of 6000 dr., must have moved in wealthy circles; he perhaps appeared as a witness for Demosthenes against Meidias.²³

Most of the wealthy members of Alopeke will probably have had houses in the city or Piraeus, even if they also had estates in the deme. Plato represents the sons of Aristeidēs

who leased a mine in the 330s, *Agora* XIX P 15. 8, and served as councillor in 334/3, *IG* ii³ 4. 81. 54. Cf. Papazarkadas 2011, 308 no. 42.

²¹ Plangon, *CEG* 587 = *SEMA* 2326 (Plangon | Promachou | Lakedaimonios); Kallisto, *IG* ii² 5558, from the Kerameikos (stele, lost); Satyros, [Dem.] 59. 45, 47. It is fairly certain that Lakedaimonios brother of Satyros of Alopeke (*ibid.*) is the Lakedaimonios whose sister was accused of asebeia (Dem. 57. 8); whether he is also the Lakedaimonios whose name appears on Plangon's stele is controversial. Threpsiades 1952 thought that Lakedaimonios' name was a later addition, and the distinctive epigram for Plangon supports this view, although *CEG*, reading Lakedaimonio<u> where the stone has Lakedaimonios, thinks the names were simultaneously inscribed (the name is cut in letters similar to those of Plangon and her father; the spacing is more cramped, but design considerations could explain this. M. J. Osborne and Byrne 1996, 138 no. 3191, emend to Lakedaimoni<a>). Since Plangon died young, it is perhaps likely (*pace* Whitehead 1986*a*, 411 no. 19) that the woman accused of impiety was Kallisto. Plangon, to judge from the probable age of her (?) brother Satyros, should have been born in the 390s–380s and thus have died in the 370s–360s, while the case to which Dem. 57. 8 refers in 346/5 is likely to have been more recent.

²² Exekestides and paredroi, *IG* ii³ 4. 95 (for the date see *AO* p. 412; *LGP*N date needs correction); see ch. 15 at n. 6. Kleainetos, cf. Diophanes son of Kleainetos A., ephebe in 266/5, *IG* ii³ 917 III 60 (Nikias of Otryne); Kleinias, ii² 1927. 164–5, see Humphreys 2010*a*. Note also Diophanes son of Diophanes A., witness to a torture challenge presented by Apollodoros of Acharnai to Stephanos of Eroiadai, [Dem.] 59. 123 (witness testimony); Diophanes, Euteles, and Aristylla, buried on Salamis, *SEMA* 83; and Diophanes son of Euteles A., councillor (?) *c.*320, *Agora* XV 55. 43.

²³ Horos, from Teithras, *SEG* 23. 96 = Finley 1952, 2nd ed. no. 163 A; witness testimony, Dem. 21. 82 (MacDowell 1990 argues from the unconventional terminology that the testimonies in this speech are late additions, but in this passage Kallisthenes of Sphettos can be linked to a ? grandson, Kallisthenes son of Kallippos, councillor in 303/2, *Agora* XV 62. 82; one might also think of emending the demotic of Diognetos of Thorikos, the third witness, to Thorai, since the daughter of a Diognetos of Thorai was buried *c.*320, *IG* ii² 6215).

I and Melesias I as men who were to be found in the city; Lysiades II son of Chion II, as we have seen, freed a female woolworker, perhaps a domestic slave, living in Melite. Sokrates too lived in the city. Zoilos son of Diphilos I and his son Timon were buried in the Kerameikos, though admittedly this is not necessarily evidence of residence. The Morsimos A. whose daughter Sostrate married a demesman of Athmonon (and was buried with her husband in his deme), if he was the Morsimos who treated patients with eye problems and wrote bad tragedies, presumably practiced his occupations in the city or Piraeus.²⁴

Pantaretos II A., who led a group of *eranistai* who lent 1900 dr. secured on a house in Mounichia, may have lived in Piraeus, and may be the grandson of Pantaretos I son of Antiphilos I A., who served as *amphiktyon* on Delos in 393–389; Antiphilos II and Pantaretos II appear in the *thiasos*-list from Alopeke. Dieuchides A. was buried in Piraeus, in the first half of the fourth century. Diogeiton A. served as *kleter* for an *apographe* served on Theosebes of Xypete, and possibly lived in that deme; a funerary inscription seen by Rangaves in the northwest part of the city may commemorate his son Poseidonios.²⁵

Leptines son of Olympiodoros, who was *choregos* for a boys' choir at the Dionysia of 331/0, and is named in the *thiasos*-list from Alopeke, seems to have been buried in the deme, as were Pheidylla daughter of Aresias A., whose father appears on the same list and whose brother perhaps served as *phylarch*, and Meixiades son of Kydias, who may perhaps have been related to Kydenor I A. and his son Kydenor II. The latter served as secretary in the early fourth century.²⁶

²⁴ Sons of Aristeides and Melesias, Plat. *Laches* 179a–d; Lysiades II, *SEG* 18. 36 B 267; Zoilos, *IG* ii² 5557 (end of 4th c.); Timon, ii² 5581 (3rd c.); a descendant, Zoilos II son of Diphilos II, served as secretary in 226/5, ii³ 1146. 2–3 (arch. Ergochares). Sostrate, ii² 5349; Morsimos, *TGF* 2nd ed. I no. 29 (the name is only attested with a demotic in Alopeke, but the names of Morsimos' grandfather Philopeithes, father Philokles, and son Astydamos are not found there; ch. 29 n. 66). Note also Hierokleides son of Timostratos A., who proposed *IG* ii³ 294 and 297 in 349/8, perhaps as councillor, and may be represented with his father or son on ii² 11705 = *CAT* 2. 347c (lekythos, no provenance); he is probably also named on a curse tablet, *Agora* XXVIII 55–7 = *SEG* 44. 226, as *synegoros* of a Menekrates son of Krates, possibly *APF* 9940. Menekrates' father may be named on *SEG* 47. 187. 42. Autolykos son of Epilykos, named on the same curse tablet, may be the FF of Autolykos son of Lykos A., secretary in 305/4, *IG* ii² 478+ = Reinmuth 1971 no. 17.

²⁵ Pantaretos II, *IG* ii² 2743 = Finley 1952 no. 70; Pantaretos I, *ID* 97. 3; Antiphilos II and Pantaretos II, ii² 2345. 52, 57 (Humphreys 1990a; Lambert 1999a); Lambert suggests that Pantaretos was also the proposer of *IG* ii² 44, but does not provide a parallel for the form of the demotic [*Alopek*] *ieus* at this date. Dieuchides, ii² 5554; Diogeiton, *Agora* XIX P 5. 16, 367/6 (a *kleter* should probably be someone known and respected in the area in which he served his summons); Poseidonios, ii² 5575, see *AEE* 207 (Rangaves read POSDNIOS DIOONOS, so the father's name might have been Dion—not attested in Alopeke—or Diogenes, name of a son of Diogeiton who served as councillor in 334/3, *IG* ii³ 4. 81. 51). My suggestion (Humphreys 1990a) that the brothers Diodotos and Diogeiton with whose property Lys. 32 was concerned belonged to Alopeke was perhaps rash, but if correct would give us another Piraeus-based family.

²⁶ Leptines, *APF* 9045; *SEG* 25. 177; 47. 187. 22 (Leptines Olympiodoro, Lambert 1999a); *SEMA* 85, *AD* 20 B 1, 1965, 108 with pl. 71c (re-used in a later tomb on Odos Sarkadinou). The tribal priest L. (no demotic) of *SEG* 3. 117 might be a descendant. Pheidylla, *SEMA* 88, from Odos Demetrakopoulou (on the family see n. 14 above). Meixiades, *IG* ii² 5566, from Katsipodi; Kydenor II, ii² 49. 1, 7.

Note: Pythogenes and Glaukippos of Alopeke, IG xii 6. 262 X 23, 26, may be related to this family: cf. IG ii³ 997, Pythogenes Glau[kippou?] A.

TABLE 32.1. Alopeke: Pythodoros

Two A. tombstones were found in the area of Ambelokipi, where the deme was once thought to be situated, those of Aristogeiton son of Nikias (n. 12 above) and of Prokles II son of Lysarchos, ii² 5576 (kioniskos, 3rd c.), who was probably a member of a well-known family; his great-uncle (FFB) Archias son of Pythodoros served as secretary in 323, and Archias' father may be the Pythodoros A. now attested as a councillor on Samos c.350, IG xii 6. 262 X 24. SEMA 82, Prokles son of Pythodoros A. with his daughter Glykera (see Table 32.1).

Krion

There is no evidence on location; the name—place of rams (?)—might suggest a hill area, perhaps somewhere in the inland trittys.²⁷

The deme had one family prominent enough to attract some votes in the ostrakophoriai of the 480s: Timokrates I son of Aristaichmos I made a dedication on the Akropolis c.510, and his sons, Aristaichmos II and Kydrokles, appear on ostraka. Antiphon I, the next attested member of the family, was probably a grandson of Aristaichmos II or Kydrokles; he was still alive as an old man in 353/2. His son Timokrates II served as trierarch in (?) 366/5, and won a chariot victory at Olympia in (?) 352. He was the target of Demosthenes' speech *Against Timokrates*, delivered in 353/2, and was an associate of Androtion; he and his son Polyeyktos acted as witnesses for Meidias in 348, and Polyeyktos

²⁷ Milchhöfer 1892 noted that in Hes. *Theog.* 374–5 Krios is father of Pallas, which might suggest a site near Pallene; however, as Kearns 1989 (179) pointed out, the Athenian Pallas is always son of Pandion. *Krios* (LSJ s.v.) is also the name of a kind of vetch, but in compounds the meaning is always 'ram'. Perhaps city, D. M. Lewis 1976, 311.

appears again in the Demosthenic corpus as an associate of Phainippos in the 320s. Timokrates II had a sister who had married a rich citizen of Kerkyra at some date before 353/2. This is an interesting example of an aristocratic family that kept up archaic patterns of behaviour—horse-racing, marriage alliances outside Attika, preoccupation with Persia as a threat to Greeks—even in the fourth century.²⁸

A stele with a verse epigram, found in the western part of Athens, celebrates the wifely virtues of Nikoptoleme daughter of Nikokles of Hekale, married to Polymnestos son of Polyaratos K. The names of Polymnestos, his brother Polykrates, and a Philitia, also appear on the stele.²⁹

Eroiadai

Since there were two demes of this name, both small and unlocated, it is difficult to identify demesmen. Phormisios, son of the oddly-named Charoiades (for Char-Eroiades?), is recorded as (?) kleruch in the middle of the fourth century; Charoiades I son of Euphiletos (deme unknown), who served as secretary at some date between c.440 and 425, may be an ancestor, and [An]tiphanes son of Charoiades, who was a member of a two-man college in 358/7, may have been a brother.³⁰

Philodemos son of Autokles E. is attested as trierarch and as one of the guarantors of ships sent to Chalkis in 340; he proposed a rider in 340/39 to a decree in favour of the island of Tenedos, which Athens needed to conciliate in view of its strategic position near the entrance of the Hellespont and the advance of Philip in that direction. He was one of the architects commissioned to repair the fortifications of Piraeus in 337/6, and may have had trading interests in addition to professional skills; he may also be the [Phi]lodem[os] of Eroiadai attested as councillor in the 350s or 340s.³¹

²⁸ *APF* 13772. Timokrates I, *IG* i³ 619; Aristaichmos II, Brenne 2001, 130, *Agora* XXV 20; Kydrokles, Brenne 2001, 146, *Agora* XXV 610–626 (two sherds with demotic). Timokrates II, Dem. 24 (202–3 on the Kerkyraian marriage); 21. 139, 42. 11. Timokrates appears to have been a proxenos of Kerkyra. On Androtion's policy see Jacoby's introduction to *FGH* 324 (IIIb *Suppl.*).

²⁹ *IG* ii² 6551 = *CEG* 603 (seen by Pittakes on the N side of the ancient city, near Athena St between Euripidou and Eirenes, *A to Z* 124 ΓΔ 1); Kirchner indicates only the name of Philitia as a later addition, but *CEG* more plausibly suggests that ll. 1–3 were all added (the stone is lost). Possibly a reading *Kr[io]eis* should be considered in *IG* xii 6. 262 X 33.

³⁰ Phormisios, *IG* ii² 1927. 212, see Humphreys 2010a; Charoiades I, *IG* i³ 156. 11; Antiphanes, ii² 1696. 5. Wilhelm's suggestion that this last text was a list of paredroi of the eponymous archon was rightly rejected by Dow 1976; although the pairs of names are dated by archons, the absence of demotics suggests to me that the men listed served as officials of a fairly small group, based on a city sanctuary (the stone was found at the foot of the N side of the Akropolis).

³¹ *APF* 14488; *IG* ii³ 313, 429; *Agora* XV 22. 11.

INLAND TRITTYS: THE DEMES NORTH OF PENTELIKON

There are fairly strong reasons for locating Eitea, Kolonai, and Semachidai in this area, although only for Eitea is there epigraphic evidence, in the form of a deme decree from Grammatiko.³²

Semachidai

There was apparently a cult of Dionysos, with priestesses drawn from a local genos; the story that Semachos, eponym of the genos and deme, had entertained the god suggests rivalry with Ikarion, which had a similar myth. Philochoros says that the deme was in Epakria; this may imply that its members belonged to the (?) phratry Epakreis, and also implies a location north of Pentelikon.³³

The leading family in the deme in the late sixth century—perhaps responsible for its independent status—may have been that of Komonides, who dedicated a statue to Athena on the Akropolis c.500–480, if (as seems likely) he was an ancestor of Komaïos son of Komon S., attested as councillor in 334/3 and as syntrierarch and (?) cavalryman in the 350s. Komaïos' son —s served as councillor in 304/3.³⁴

Kolonai

Since there are strong arguments for locating the Kolonai of Leontis (also) in this area, if Kolonai-X is to be placed here we have to assume that an area called Kolonai, containing two or more villages, was divided between the two tribes.

³² See the sections below on the individual demes, and n. 1 above on the question why and how Antiochis acquired an 'enclave' of demes in this area.

³³ *FGH* 328 F 206. Arguments have been made for locating Semachidai in SE Attika, on the basis of the mine-name Semacheion at Laureion (*Agora* XIX P. 26. 221) and the evidence that at least one family from S. owned property in the area (Xenokles son of Antigenes I S. owned land that was confiscated in the late 4th c., perhaps for a mining offence, *Agora* XIX P 42. 3; Antigenes II S., who acted as arbitrator for the Salaminioi in the middle of the 3rd c. *ibid.* L 4b 6, may have been his son). However, the arguments for a location N of Pentelikon are stronger; possibly the family of Xenokles and Antigenes had set up a shrine of Semachos which gave its name to the mine. Genos, see ch. 20 n. 48; R. Parker 1996 p. 326, 330; sources cited by Jacoby in his commentary to Philochoros *FGH* 328 F 206. Epakreis, chs. 19 n. 16, 21 n. 138. Hollis' restoration (1990) [*Sema*]chidas in Kallim. *Hekale* F 47. 18, if correct, would also indicate a site N of Pentelikon. Traill 1986, 139 suggests locating the deme at Vredou (i.e., presumably, the unnamed site W of that hill on *KvA* XIX). Possibly Melainai, Klopidae, Phrynesioi, and Pentele should also be assigned to Antiochis, as hamlets in this area; there may be a case for assigning Mygdaleza to Semachidai and placing Anakaia (ch. 30 n. 57) further W, closer to Dekeleia. (For Melainai and Klopidae see Lambert 1997a, F 10 B 17–20 and pp. 196–7; for Phrynesioi and Pentele see Traill 1975a, 92. Pentele would have been a hamlet of Kolonai, transferred with it from Antiochis to Ptolemais).

³⁴ Komonides, *IG* i³ 914; Komaïos, *APF* 8693, *IG* ii³ 4. 81. 70, Bugh 1988 II A 45; son, *Agora* XV 61. 330.

The Antiochis deme was transferred to Ptolemais in 224/3 with Pentele, which ought to indicate an area not too far from the mountain. Ano Souli may be a possible site for it.³⁵

Evidence for demesmen leads away from the deme site, wherever that was. Philippos son of Iasidemos I and his brother Iasidemos II (councillor c.350) probably lived in the city area; Philippos, attested as syntrierarch in (?) 366/5, dedicated a crown to the Twelve Gods and Agathe Tyche. Epicharinos son of Euthykrates, councillor in 334/3, may have lived on Salamis, since a descendant, Chairedemos (III) son of Epicharinos (II?) proposed a decree of the demos on the island c.250; Charikles and Chairedemos II, sons of Chairedemos I K., named in a list of orphans whose fathers died in (?) 411/10, may be earlier members of the family.³⁶

Eitea

A deme decree of Eitea passed in 332/1 was found at Grammatiko; it is much more likely to belong to Eitea-X than to the homonymous deme in Akamantis, a tribe that had no demes north of Pentelikon. Some slight support for the attribution of Eitea-X to this area is also supplied by the marriage of a sister of Hieron son of Melanopos (councillor for Eitea-X in 334/3) to a demesman and resident of Rhamnous.³⁷ Grammatiko had metal mines that were still worked

³⁵ See ch. 26 nn. 73, 78, on Hekale and Kolonai; a Kolonai is mentioned with Aphidnai, Acherdous, and Melainai in Euphorion's *Dionysos* (Barigazzi 1963). Possibly Kolonai-IV was at Kalentzi and Kolonai-X at Ano Souli (for finds in the latter area see ch. 31 n. 57). The reference in *IG* i³ 430. 43 to the sale of a pyrgos at Kolonai, belonging to one of the Hermokopidai, probably denotes a farmhouse with tower, and does not provide grounds for Traill's location (1986, 139) at Varnava; the tower at Varnava in any case is thought to be Frankish (Lohmann 1993a, 72; Lock 1986, Langdon 1995; Lohmann 1995, 516, however, mentions a late classical farm, cf. Traill 1986, 139 n. 42; note also Camp 1991, 201), and Kahrstedt (1932) thought that Varnava would be in the territory of Oropos (see however Ober 1985). Traill, loc. cit. n. 44, doubt whether remains at Kalentzi are enough for a deme (but in any case this is an area of small villages). On Philostratos of K. (we do not know which) see ch. 26 n. 78.

³⁶ Iasidemos II, *Agora* XV 22. 4; Philippos *APF* 14398 (dedication *IG* ii² 4564, misprint in *APF*). Epicharinos I, *IG* ii³ 4. 81. 63; Chairedemos III, ii² 1225. 1; Charikles and Chairedemos II, *Agora* XVI 106A, cf. Matthaiou 2011a, 71–81. Cf. also M. C. Taylor 1997.

³⁷ *AGC* 21, X8/Y7 no. 4. Deme decree, *SEG* 28. 102 (Schwenk 1985 no. 42, M. Meyer 1989a A 104, Lawton 1995 no. 43). Traill 1986, 140–2, wonders, on the basis of tomb monuments from Rhamnous that may belong to Eitea-V, whether both the demes called Eitea were in this area, but the stones in question are late Hellenistic, and by this period Rhamnous probably had a fairly mixed population. Hieros, *IG* ii³ 4. 81. 66 (erroneous date, *LPGN* no. 2); his sister Rhodanthi, *IG* ii² 6006. Note also Agariste daughter of Kephisokleides E., also buried at Rhamnous, *SEMA* 770 (ch. 31 n. 94); she may have been related to Sokrates son of Kephisokles of Eitea-X, councillor in (?) 335/4, *Agora* XV 43. 223–4. Cf. also *IRh* 190, land mortgaged to Aristonous E., 239/8 (Lysias). The restoration Mnesiergos [Boo]nos in *Agora* XV 72. 260 (Eitea-X) is questionable, since Boon father of Himeraios may have belonged to Eitea-V (*IG* ii³ 4. 7; ii³ 946. 4). On Sounieus son of Demetrios (II?) E. see Lambert 2010a.

until World War II, and has a river, which would fit the etymology connecting the deme name with *itea*, willow (cf. ch. 27 n. 11).

The deme had a sanctuary of Basile, in which its decree was to be set up by the tamias.³⁸ The proposer was Timokrates son of Timokles II, perhaps a descendant of the Timokles (I) E. who served as tamias in 423/2. The decree praised Hippokles son of Demokles for his *areté* and *dikaïosyné*, and awarded him a gold crown of 500 dr. His daughter Samakion was buried in the Kerameikos, perhaps with a mercenary cavalryman from Argos.³⁹

INLAND TRITTYS: SOUTH OF PENTELIKON

Pallene

The general position of Pallene in the valley between Hymettos and Pentelikon, through which the main route from Athens to the Mesogeia passes, is well established. Temple foundations near the church of Agios Athanasios, on the southwest end of Pentelikon, about $\frac{3}{4}$ kilometre north of the modern road, have been plausibly identified as belonging to the temple of Athena Pallenis. The area has a number of medieval and early modern churches in which ancient stones (some brought from Athens) have been re-used, and it is now largely covered by modern building; nevertheless, there is said to be evidence of ancient settlement in the area round the temple.⁴⁰

The earliest temple on the site is thought to date from the middle of the sixth century, and may have been built to commemorate Peisistratos' victory over his opponents c.548; offerings go back to the seventh century. Since the cult of Athena Pallenis drew its parasites from a wide area, one might have expected Pallene to become a large deme, perhaps incorporating a number of surrounding villages. However, this does not seem to have happened; Gargettos, c.3 miles from the temple site, became a separate deme.⁴¹

³⁸ Mines, *Ergon* 1995, 15. Basile: also worshipped at Erchia (ch. 24 n. 69), where she received a holocaust and wineless sacrifice on Boedromion 4, possibly in association with the Genesia; she may have represented Persephone in her role as queen of the underworld.

³⁹ Tamias, *LGPNTimokles* 16; 17, *SEG* 28. 45. 37, [Timo]kles father of [Timokr?]ates E., (very dubious restoration) belongs to V Akamantis. Samakion, *IG* ii² 6007, found with 8370 = *CAT* 1. 429, Menes son of Kallias of Argos, represented as an armed rider (Bergemann 1997, peribolos A19a).

⁴⁰ Map, Goette 1997, fig. 2; churches, Bouras a. o. 1969. Goette's lists of texts found in the area (cf. also Goette 1998) shows clearly that stones were brought from Athens (e.g. the text concerning Athenian relations with Phaselis, *IG* i³ 10, and a decree for a Thessalian, ii² 26; see Humphreys 2004, 156 n. 67 and ch. 22 n. 99 on the Kallias decrees i³ 52).

⁴¹ On the cult of Athena Pallenis, see preliminary reports on the archaeological material in Goette op. cit., and *BCH* 119, 1995, 856–8; *AD* 54 B 1, 105–11; 60 B 1, 2013, 134–7; Goette 2001, 236–7;

Prosopographically the deme is not particularly distinguished, although Ameinias P. served conspicuously as a trierarch at Salamis. The eponymous archon of 440/1, Morychides, was probably the father of Lysistratos Morychidou P., secretary to the treasurers of Athena in 425/4.⁴² Habronichos I P. had an aristocratic name, but his descendants do not seem particularly prominent; his son Aristoteles I, who served as diaitetes in 371/0 or 363/2, married Kleitomache daughter of Meidyliides of Otryne, and had three sons, one of whom, Aristodemos, father of the speaker of [Demosthenes] 44, worked as a herald in Piraeus. Aristoteles II son of Philippos P., councillor in 281/0, was probably a grandson of the speaker.⁴³

Teisarchos P., whose son appears in a diadikasia list of c.380, may have been the Teisarchos denounced by Teukros in 415 for involvement in parodying the Mysteries.⁴⁴

Philotades I P., hellenotamias in 430/29, was perhaps the father of Philostratos I, epistates under the restored democracy in 411/0, whose son Philotades II served as councillor in 354/3; another son, Nikostratos, was secretary in 363/2, and his son Philostratos II is attested as councillor and hieropoios in 335/4.⁴⁵

Kleopeithes son of Theopompos, councillor in 334/3, may be the son of Theopompos P. who as epimeletes of a religious association sold a chorion at Pallene in the hekatostai sales for 50 dr. The purchaser, [—c.5–7—]enes son of Charias, also belonged to Pallene;

Mes.-Arg. 309–16, 331–41. Though it might be claimed on the theory of D. M. Lewis (1963) that Pallene was deliberately ‘enclaved’ and separated from neighbouring demes in order to break local ties based on cult, the system of parasites appears to have been adjusted (or, if post-Kleisthenic, designed) to fit the deme system (R. Parker, 1996, 330–1, thinks that the range of demes involved had widened in (?) the 5th or early 4th c., but we have no firm evidence that it was originally narrow; if the archontes are thought to come from the demes originally involved, the inclusion of Acharnai shows that this was not merely a small local amphiktyony). On possible deme sites in the area of Charvati see ch. 24 n. 91; it seems more likely that they belonged to Aigeis, linking Gargettos with Teithras, than that they were assigned to Antiochis (as hamlets of Pallene or as Krioia and/or Eroiadai). There is also some uncertainty about the area between Pallene and Paiania.

⁴² Ameinias, *APF* 683; Morychides and Lysistratos, *AO* pp. 90, 130. Dedication commemorating victory of a Palleneus (name lost) with pyrrhichistai, Goette 2007, fig. 7.

⁴³ *APF* 5638; Aristoteles I, *IG* ii³ 4. 24. 20; Aristoteles II, *Agora* XV 72. 227 ([Dem.] 44. 10 gives the impression that the speaker did not have brothers and that his uncles, FB, were childless, but we should not necessarily believe him. Chs. 7 Case 12; 24 at nn. 17–18).

⁴⁴ *APF* 13467; Andok. 1. 15. Teisarchos Euph—, commemorated by a marble lekythos of the 4th c. found in the area of Ag. Ioannis Rentes (*SEMA* 2451), might be a descendant, in which case he may also be related to Euphiletos son of Euphranor P., (?) kleruch in mid-century, *IG* ii² 1927. 202–3 (cf. Humphreys 2010a; the name Teisarchos is also attested in Halimous, but there are no links there for the patronymic).

⁴⁵ Philotades I, *IG* i³ 281. 4; Philostratos I, [Plut.] *Mor.* 833d–834b; Philotades II, *IG* ii² 136. 10; Nikostratos, ii² 109 (M. J. Osborne 1981–3, D 11 etc.), *SEG* 21. 241, *ID* 88. 29–30; cf. grave stele of Archestrate wife of Nikostratos P., Skilardi 2005, 131–5, *CEG* 543, Korres 2009, 157 fig. 10. 17, and perhaps dedication to *Hera Gē[th]omenē* by Archestrate daughter of Euripides P., Peek 1942, 51 no. 79 (city). Philostratos II, *Agora* XV 43. 210, *IG* ii³ 416. 31–2, 58, 60 (it is not certain that the latter text refers to 335/4). Cf. possibly Nikostratos son of Gniphon, cursed on *SEG* 44. 226 (n. 24), whose brother Chairestratos was councillor in 334/3, *IG* ii³ 4. 81. 40; Chairestratos son of Thoucharion, kleruch (?) in mid-century, *IG* ii² 1927. 204 (Humphreys 2010a). Also on *SEG* 44. 226, Kallistratos son of Pausistratos, perhaps the Kallistratos P. who was diaitetes in 325/4, *IG* ii³ 4. 35. 165.

his brother Hieron contributed 250 dr. towards the payment of the naval debts of Konon III of Anaphlystos and others in 326/5. Their father, Charias son of Hieron, was honoured by an unidentified group c.350, and leased a mine in 350/49.⁴⁶

Another piece of property at Pallene, probably owned by a similar group, was bought by [—c.7–9—]pos son of Molpis P. for 100 dr.; since the name is rare, he was perhaps a descendant of the Molpis who was archon in Piraeus under the Thirty.⁴⁷

A scatter of grave monuments has been found in the general region of the deme,⁴⁸ but they provide little sociological information; most of our information on the activities and interests of demesmen comes from outside the deme. Nikon son of Autoboulos P., buried with a wife from Melite near the Sacred Way, had a daughter, Philesia, buried at Rhamnous with a husband (?) from Thorai; descendants were active on Delos in the second and first centuries BCE, and a later Nikon II son of Autoboulos II took part in the Pythais of 106/5. Kallippos P., named as creditor on a horos of the early fourth century found in the Agora, had a son or grandson, Kallippos II, who served as trierarch before 323; the Kallippos P. who was one of the witnesses of Theophrastos' will, c.287, was perhaps a younger member of the family. Lykinos P., a hanger-on of the general Timomachos of Acharnai, made a dedication in the city to Hermes Enagonios in the middle of the fourth century; either he or a homonym was trierarch before 323/2.⁴⁹

Leochares I son of Leokrates I P., who served as one of five epimeletai responsible for work on the temple of Zeus Soter in Peiraios, and was perhaps also the Leochares P. recorded as syntrierarch in (?) 366/5, may have been the father of the Leokrates (II) attacked by Lykourgos in 330. Leokrates II was unmarried, and therefore relatively young, when he left Athens (with a hetaira) in 338, after the battle of Chaironeia. His father had dedicated a bronze statue in the temple of Zeus Soter (Lykourgos I. 136). Lykourgos insists that

⁴⁶ Kleopeithes, *IG* ii³ 4. 81. 41; son of Theopompos and [—c.5–7—]enes, Lambert 1997a F 13 B 6–8; Hieron, *APF* 7545; Charias, *SEG* 32. 72 (from the Agora, *Agora* XVI 106 D; the proposer belonged to Trikorinthos), *Agora* XIX P 18. 16–17 (Charias Hieron[os Palleneus?]).

⁴⁷ Lambert 1997a F 13 B 3; *FGH* 324 F 11 (the name Molpis on a RF vase of the late 6th c., BArch 200531, may be fictional). On [Hippostra]tos son of Etea[rchides] P., whose father proposed *IG* ii³ 309, see Papazarkadas 2011, 306–7 no. 34.

⁴⁸ Aristion II son of Antiphanes P. was commemorated by a loutrophoros found at Koropi, *IG* ii² 7110; [Aris?]tion son of Aristonymos, antigrapheus in the first half of the fourth century (*IG* ii³ 4. 48. 67) may be his grandfather (FF), Aristonymos' daughter Aristion (*SEG* 51. 161) his FFZ, and Melisto daughter of Antiphanes, whose kioniskos was re-used in a church at Irakli, his sister. Another sister, Pamphile, made a dedication to Asklepios (ii² 4411) at the end of the 4th c. (Aleshire 1991, no. 11522). The rosette stele of Phanodike daughter of Glaukon P. (before 350, ii² 7132) was found at Koropi, but her brother Eidas was buried in the Kerameikos (ii² 7133 with Peek 1942 no. 373, cippus, mid 4th c.). The stone of Theophanes P. was found (with ii² 5947, for a Gargettian) on a hill with two chapels, N of the point where the Mesogeia road passes the N spur of Hymettos (see Goette 1997, no. 13 = Peek 1942 no. 179, *SEMA* 538). Note also (in addition to further stones in ii²) *CAT* I. 289 = *SEMA* 534, Euthesion P., relief stele of youth with rabbit and dog; *SEMA* 743, daughter of Thrasyboulos P., from Koropi. On the stele of Demainetos De— of (?) Pallene, from the Liopesi–Markopoulo road, see ch. 25 n. 22. This was an area in which stones were moved quite extensively for postclassical building.

⁴⁹ Nikon *IG* ii² 7129; Philesia, cf. *SEG* 22. 177; Nikon II, *FD* III (2) 9. 12 (non-gennete); see also *LGP*N Nikon 84–5, Dionysios 594–5. Kallippos I, *Agora* XIX H 100; Kallippos II, *APF* 8079; Kallippos (?) III, D. L. 5. 57. Lykinos, [Dem.] 50. 53, ii² 4572, *APF* 9207 (*APF* and *LGP*N regard the trierarch as a younger man).

Leokrates' income was derived from owning a bronze-smith's workshop, but he evidently also had connections in maritime trade, which he exploited during his years of absence from Athens. The family probably lived in Piraeus. Leochares II, archon in 228/7, will be a descendant.⁵⁰

Archebios son of Archenautes P., councillor in 334/3, is probably the Archebios P. who served as proedros in Samos in 346/5, and as councillor about the same period; Archeneos, attested in the same Samian council list, and Archonides, another kleruch, may belong to the same family (a descendant, Chaireas son of Archeneos, proposed a decree for a friend of Ptolemy III in 226/5, and his son Archonides had proposed a decree concerning relations with Attalos of Pergamon in 229/8).⁵¹

Other members of the deme moved within Attika. Kephisios son of Kephisodemos I P. freed a slave bailiff or farmhand (*geórgos*) living at Hagnous, in the Lykourgan period,⁵² and at least one of the two demesmen called Epikrates had mining interests, owning land at Nape and heading a syndicate that in the 330s was exploiting one of the most profitable mines in the region; it came under attack for operating illegally. Rumour had it that he was worth 600 talents (3,600,000 dr.). He may have been the Epikrates who proposed the arrangements for the new ephebic system, c.335.⁵³

COASTAL TRITTYS

Strabo lists Aigilia and Thorai as coastal demes, and I include them here in the coastal trittys, though this makes the trittys a large one, occupying a continuous stretch of territory from modern Phoinikia to the Legrainia valley, and appointing twenty-seven councillors in the fourth century. Anaphlystos, Amphitrophé, and Besa all contained mines, and may have registered immigrants as demesmen in

⁵⁰ Leochares I, *IG* ii² 1669. 3; *APF* p. 344; see Humphreys 1985*a*, n. 40. Leokrates' sisters were married by 338 (ch. 7 Case 12), so the sibling-group will have been born in the 360–350s. Leochares II, *LGP*N no. 17.

⁵¹ Archebios, *IG* ii³ 4. 81. 38, *IG* xii 6. 261, 262 X 17; Archeneos, *ibid.* 16; Archonides I, *IG* xii 6. 252. 5; Chaireas, *IG* ii³ 1146. 9 (Paschidis 2008 A 74); Archonides II, ii³ 1136. 8.

⁵² *SEG* 18. 36 A 110; Kephisios I's (?) grandsons Kephisios II and Timokrates, sons of Kephisodemos II, served as ephebes in 266/5, *IG* ii³ 917 III 63–4 (Nikias Otryne).

⁵³ See discussion in *APF* 4909. Epikrates son of Menestratos P. served as amphiktyon on Delos in 377/6–375/4 and as diaitetes in (?) 371/0 (*IG* ii² 1635. 10, ii³ 4. 24. 27); he probably proposed *ID* 88. 15, a decree for Pythodoros of Delos, in 369/8. Either he or Epikrates son of —otes owned land at Nape in 367/6, *Agora* XIX P 5. 70–71, and is attested as syntrierarch between 356 and 346. It is not certain that the Epikrates who in 354/3 proposed a law instituting a tax on money-changing, the proceeds from which were to be used for sacrifices for Hephaistos (Dem. 24. 26–9, Faraguna 1992, 345; *Agora* I 7495, unpublished), belonged to Pallene; even if this law is thought to be prompted by mining interests—which is not obvious—an Epikrates son of Isokrates of Euonymon is also attested as a registrant and lessee of mines, *LGP*N no. 56. Epikrates son of —otes was councillor in 335/4, *Agora* XV 43. 214; he is presumably the E. of Pallene who was prosecuted for mining offences (Hyp. 4 *Eux.* 35); and should therefore be the Epikrates who proposed the ephebic law, who reputedly owned 600 T. (Harpokration s.v. *Epikrates*).

the early decades of the Kleisthenic system, since there was an expansion of mining activity from the 480s onward. The precise assignation of sites to demes within the area is contested; problems will be discussed deme by deme, but it may be noted here that the main difficulties concern Thorai (and Aigilia), where the text of Strabo requires emendation, and Amphitrope, placed by many scholars at Metropisi, but by Lohmann in the southern part of the Legraina valley.⁵⁴

Aigilia

Traill (1986) places Aigilia at Phoinikia, which would give it the coastal plain northwest of Mt Olymbos, with the Lagonisi peninsula and a site near its base with Bronze Age fortifications, Katsoulieri. The plain has yielded archaic grave monuments, including the well-known statue-base of Kroisos.⁵⁵ A dedication that made its way to Kalyvia Kouvaras (Prospalta) may also have been set up in the deme; the text records that Timosthenes son of Meixonides I A. and his sons Meixonides II and Kleostratos erected a statue (*agalma*) and [altar] to Dionysos to commemorate their victory (or victories) as choregoi in the Rural Dionysia. Timosthenes was not a deme resident, but a trader, a client of the banker Pasion of Acharnai, with whom he deposited money (or other valuables) and two silver Lycian cups weighing 237 dr., in 372/1; he testified for Pasion's son Apollodoros concerning this transaction in 362.⁵⁶

Meixonides' family may possibly have been affinally linked to another Aigilian group, known from a collection of monuments that probably stood on a single plot in the Kerameikos.⁵⁷ It seems to have contained the graves of Sostratos son of Sonautides A. and his wife Praxagora, their son Prokleides I (see Table 32.2), his wife Archippe daughter of Meixiades A., Archippe's brother Pamphilos I, Prokles, son of Prokleides I and Archippe, and Prokleides II son of Pamphilos, either Archippe's nephew (BS) or perhaps her grandson (SS). Phainippos son of Sostratos A., councillor in 334/3, may have been a brother of Prokleides I.

⁵⁴ Nn. 60, 103.

⁵⁵ Traill 1986, 144–6; Traill assumes that Thorai, at Trapouria, had no coast, but see below, n. 60. Philippou-Angelou 2000 puts A. at Pheriza, WSW of Olymbos. Archaeological data, see Mersch 1996, 175–6 (grave-lined road, Lauter 1993, 111 n. 349; MBA fortifications at Katsoulieri, Lohmann 1993a, 65 n. 471); Kroisos base, *IG* i³ 1240 (540–30), Kakavogianne and Petrocheilos 2013, Thonemann 2016, Mersch p. 34; *AD* 56–59 B 1 370–1, burials. Megakles Sogenidou A. on an ostrakon, Brenne 2001 no. 169.

⁵⁶ *IG* ii³ 4. 502 (Agelidis 2009 no. 62); the name of Kleostratos suggests a possible (affinal?) link with Kleostrate daughter of Nausistratos A., named on a curse tablet with her father, her brother Nikonymos, and others (Table 14.2), *SEG* 24. 262. Timosthenes, [Dem.] 49. 31–3. Kleostratos served as secretary in 343/2, *IG* ii³ 306–8. Aigilian tombstones from Piraeus, *IG* ii² 5369, 5375, 5380.

⁵⁷ Bergemann 1997, peribolos A 6a (*IG* ii² 5376, *CAT* 3. 460). The link is suggested by the name Meixiades; Meixippos A, commemorated c.350 by a relief stele of unknown provenance, ii² 5372 = *CAT* 2. 368d, may also be connected.

Note: The name of Prokleides II was added to ii² 5376; the reconstruction above seems to me more likely than that he was a son of Pamphilos I.

TABLE 32.2. Aigilia: Soinautides

Another councillor of that year, Archedemos son of Pheidiades A., is named on a horos found on the Akropolis as creditor for 500 dr. secured on a house. He served as diaitetes in 325/4, and was thus 51 when he was a councillor.⁵⁸

The richest and most prominent member of the deme in the Lykourgan period was clearly Klearchos II son of Nausikles I. Nausikles, son of Klearchos I of Oe, appears to have been adopted into Aigilia, perhaps as son of an epikleros, and to have returned subsequently to his deme of origin, leaving his son Klearchos II to take his place in his adoptive family. Klearchos seems to have inherited from his genitor as well as his pater; he served as co-trierarch with his genitor in 334/3. He is attested again as trierarch, in his own right, in 326/5, and was a member of the Pythais sent to Delphi, probably in that year; he was one of the ambassadors sent to Nikanor in 318 (cf. Paschidis 2008 A 9). Goette (1989) has argued that an impressive monument set up in the Kerameikos area *c.*325 for a man who had received seventeen crowns during his lifetime may have been set up by Klearchos in 325 to commemorate Nausikles. Some of the family's wealth may have come from mining.⁵⁹

⁵⁸ *IG* ii³ 4. 81. 31; horos, *IG* ii² 2730 = Finley 1952 no. 77 (a good example of the movement of stones to the Akropolis); diaitetes, ii³ 4. 35. 168.

⁵⁹ *APF* 10552, chs. 28 n. 76; 2 n. 67 on adoption. By this date Nausikles could perhaps have bequeathed his estate to Klearchos by will, without adopting him, if there were no counter-claimants in a position to make strong objections; if Goette (1989) is correct in his interpretation of *IG* ii² 3206 (there are problems concerning the form of the monument, and one would like to know where the crowns were dedicated), it would have been an astute move for Klearchos to bolster his claim to the estate by a conspicuous act of filial piety. Mining: see *APF*. The only other members of Aigilia attested as having mining interests—in both cases as landowners, in 367/6—are Kleokritos, *Agora* XIX P 5. 46, and Pyrrhakos, *ibid.* 80. Pyrrhakos may have had links with Delos, see ch. 20 n. 82.

Thorai

Strabo locates the Astypalaia peninsula, evidently that of Agios Nikolaos at the entrance to the Anavyssos bay, after Thorai, which should mean that there were some coastal hamlets on the eastern side of Mt Olymbos that were attached to that deme; its main centre was perhaps at Trapouria, north of the mountain.⁶⁰

Eupolis Th. is named on one early ostrakon. A Kleitophon Th. was general in 441/0; possibly the moderate oligarch of 412/1, Kleitophon son of Aristonymos, belonged to the same family.⁶¹ Aristoteles son of Timokrates had had a relatively successful career under the democracy, being elected general for 431/0 and (?) nauarchos for 426/5, but had also served as general under the Four Hundred in 411; he may have been the Aristoteles who was a member of the Thirty.⁶² By 412 Konon of Anaphlystos was becoming a rival for military office, a threat to the ambitions of Aristoteles, and perhaps also of his fellow-demesman Drakontides son of Leogoras, who had served as general in 433/2.⁶³

One family group can be reconstructed in some detail (see Table 32.3). Gniphon Th. had two sons, Kallikles, councillor c.350, and Kydimachos, commemorated by a stele with an epigram saying that he reached old age and lived to see grandchildren. They may also have had a sister who married Kleandros I of Thorai, since the latter is named on a curse tablet with his son Gniphonides, his SS Kleandros II, <K>leandros son of Phoinix, perhaps a kinsman, and another demesman of Thorai, Euxenos; Kleandros II is recorded as (?) kleruch

⁶⁰ See Traill 1986, 144–6; Lauter 1980 (234–5, evidence for habitation on the coast). Traill locates Thorai at Trapouria and thinks it had no coast, but this is inconsistent with the argument from Strabo's account of the relation between Thorai and Astypalaia (9. 1. 21/C 398). There is a Hellenistic sanctuary in the hills above Trapouria (Lauter; possibly already used in 4th c.? cf. ch. 26 n. 81). It is agreed by most scholars that Strabo's text must be emended to place Thorai next to Aigilia and not between Anagyrous and Lamptrai (ch. 23 n. 60).

⁶¹ Eupolis, *Agora XXV* no. 112; Brenne 2001, 83. Kleitophon, *FGH* 324 F 38; K. son of Aristonymos, *A.P.* 29. 3, 34. 3, with P. J. Rhodes 1981*a* (associated with Theramenes, and with Sokrates); a later Aristonymos Th., Bugh 1988 II B 28 (Melite is another possible affiliation for the oligarch, see *LGPN* Kleitophon 16).

⁶² Aristoteles; also hellenotamias in 421/0 (see *AO*, s.v.) and named on an ostrakon from the Kerameikos (Brenne 2001, 36, Arist[oteles] Timokratos). Cf. Aristagora daughter of Aristoteles of [Thor]ai, *IG* ii² 7834a = *Agora XVII* 140, c.300 (kioniskos). In 426/5, when Aristoteles possibly held a naval command, Hipponikos of Alopeke was serving as general from X Antiochis (Mattingly 1997 suggests that the —les Timokratous of 426/5 may have belonged to Rhamnous).

⁶³ Konon was perhaps already general in 414/3, see *APF* 13700. Drakontides, *APF* 4551; he was councillor and epistates in 446/5, so perhaps too old to be a competitor of Konon. There may have been an affinal link with Drakontides of Bate, of the Eteoboutidai. Note also Amy[n]andros? Th., possibly a member of the Amyndridai, *IG* ii² 6210 (mid 4th c., no provenance); ch. 20 n. 38.

Note: Prokles son of Gniphon I, *IG* ii² 12523 (relief of galloping horse-men: phylarch dedication?) and his son Gniphon II, *Agora* XIX L 10.44 (guarantor), may belong to Phlya, cf. *APF* 14339 with Habicht 1997.

TABLE 32.3. Thorai: Gniphon

in mid-century. Another son of Kleandros I, Kleandrides, was councillor in 334/3.⁶⁴

A relief stele, of unknown provenance, seems to have been set up in the second half of the fourth century to commemorate Demophilos son of Demetrios Th.; the names of his sister Demetria, his father, and his brother Boulis were added, and at the time of the latter's death two of the sculptured figures were identified by the names Protonoe (Demetrios' wife?) and Boulis. Boulis served as councillor in 328/7.⁶⁵

Antiphates Th., who served as syntrierarch before 356 and incurred a debt paid in 342/1 by Onomakles of Hekale, may possibly be attested as a kleruch on Samos c.350, with a Herm[o]kle[s] whose name recurs in Antiochis in the late second century.⁶⁶

⁶⁴ The maritime metaphor in Kydimachos' epigram ('sailing to a prosperous and fortunate harbour in life'), and the reference to burial in his native land, seem to imply a life of travel, as a mercenary or trader. Curse tablet, Wünsch 1897, 42 (dated 4th c. by Wilhelm 1904, 14; I do not know why *LPGN* Euxenos 25 dates it 3rd c.); only Euxenos has a demotic, either to distinguish him from a homonym, Euxenos son of Keton, or to make clear to the powers below the target indicated by the abusive expression 'son of the sea-monster' (cf. 'Lionface', l. 20). Of the other men named on the tablet, Konon (*LPGN* 56) may be Konon III of Anaphlystos; Kydias might have belonged to Halimous, and Thallos (*LPGN* 29) to Lamptrai. A Nikostratos son of Gniphon appears on another curse tablet, *SEG* 44. 226, but he may have belonged to Pallene, n. 45, or Phlya, ch. 29 n. 84 (the demotic and patronymic of Kleandros II are supplied by *IG* ii² 1927).

⁶⁵ *IG* ii² 6212 = *CAT* 3. 470a; Scholl 1996 no. 356 (dating the stele and relief in the 320s; ii² has it in mid-century). Boulis, *IG* ii³ 360. 17, ii³ 357 (redated to 328/7; see *AO* p. 397, Schwenk 1985 no. 53).

⁶⁶ *APF* 1259; in *IG* xii 6. 262 X 28 we may have the demotic Th[or]a[ieis]; l. 30 Anti[phates?].

Eudemos Th. appears on a mining inscription of the early fifth century, and the daughter of a demesman of Thorai may have married Timesios of Sounion, who owned property in Nape.⁶⁷

Anaphlystos

A location in the area round the bay of modern Anavyssos is not in doubt, but there is some question how much of the plain the deme controlled; part of the inland end perhaps belonged to Phrearrhioi. The sea level may have risen since antiquity.

On the west side of the bay and plain, the peninsula of Agios Nikolaos was occupied in the early and middle Bronze Age, but it is unclear whether there is evidence of use in the classical period.⁶⁸ The hill Velaturi/Vigla, projecting southeastwards into the plain from Olymbos, may have been the site of a settlement. There is more extensive evidence of activity, especially from burials, further north at Agios Panteleimon, at the southern end of the valley of Olymbos; it is likely that there was a village in this area, but it may have belonged to Phrearrhioi rather than Anaphlystos. The same is true of remains at Mokrisa and Ari, at the northeast end of the plain.⁶⁹ Further S on the E side, however, in the valleys between Mesochori and Kataphygi, there are burial areas, in use from the eighth century, and farms, that should belong to Anavyssos; there may have been a deme centre in the area of Agios Georgios—from which we have a fourth-century dedication to Hermes—and/or Nea (Palaia) Phokaia.⁷⁰

⁶⁷ Eudemos, *SEG* 37. 39 (re-used as cover for a grave of the first half of the 5th century); wife (?) of Timesios, *SEG* 54. 337, *SEMA* 611; Table 26.9. There is presumably a connection with the kioniskos *Agora* XVII 139 = *IG* ii² 6210a, Amphikrateia daughter of Menon of Thorai.

⁶⁸ Lohmann 1993a, 60–6; the grave monuments *IG* i³ 1242–3 were found on the Agios Nikolaos peninsula, but may have moved there in postclassical times.

⁶⁹ Vigla: Mersch 1996, no. 9. 7. Ag. Panteleimon, *ibid.* no. 2, ch. 26 n. 81. Lohmann 1993a, 66–70, argues that Anaphlystos, with more than one habitation nucleus, was the only deme in the plain. In addition to the necropolis excavated c.1965–73 there are archaic periboloi (Arapogianni 1991) and an unpublished classical farm. See also Lohmann 1984; Traill 1986, 146; *AD* 49 B 1, 1994 (1999), 67–8. The territory of Anaphlystos did include some mines, e.g. *Agora* XIX P 26. 275–6, 288. On Mokrisa and Ari see ch. 26 n. 81; Lohmann 1993a, 74–9; *AD* 60 B 1, 2005 (2013), 183–8.

⁷⁰ Mersch 1996 nos. 9. 4–5 (cf. no. 3, tumuli near Ag. Georgios), burial-mounds apparently constructed over graves of the 8th c. and remaining in use for further burials through the 6th c. (ch. 10 n. 9); cf. Lohmann 1993a, 69, unpublished burial area. Farms, Lohmann, *ibid.* Ag. Georgios and Nea Phokaia, see Pritchett 1965, 135–7; deme centre in this area, walls earlier identified as harbour works may have been on land in antiquity due to rise in sea-level (presumably seismic); possibly site of the fort mentioned by Xen. *Poroi* 4. 43; Lohmann, 66–70, doubts sea-level change, says there is no evidence of fortification here and Vigla is a more likely location. Dedication to Hermes, early 4th c., by a Lysandros, *IG* ii² 4550. There is also cult evidence from two caves and (?) a hill site near Palaia Fokaia (Mersch, 9. 8–9).

In general one can say that the area was already (re)settled by c.950, and had conspicuous grave monuments in the sixth century. Rivalries between local leading families may have produced the tribe-alignments of the Kleisthenic system,⁷¹ in which Phrearrhioi joined Sounion and the Potamos demes in Leontis, while Aigilia, Thorai, Atene, Besa, and Amphitrope were grouped with Anaphlystos.

An archaic dedication from Anavyssos was perhaps set up by a cult group, and there seems also to have been a phratry in the area. So far there is no record of collective activity by the deme.⁷² The only reference to its eponymous hero, Anaphlystos, tells us that he and Sphettos were the sons of Troizen; this genealogy perhaps suggests the period of the late fourth and early third century, when references were made to the reception of Athenian refugees in Troizen at the time of Xerxes' invasion.⁷³

Two families of Anaphlystos are attested as prominent in the fifth century, those of Timotheos I (Table 31.6) and of Tolmaios. Timotheos I son of Konon I dedicated a bronze statue on the Akropolis in the 450s; his father Konon I may well have been the eponymous archon of 462/1. Konon II, son of Timotheos I, may have held his first major command as strategos in 414/3, and served again frequently between 410/9 and 405/4. He survived the battle of Aigospotamoi and escaped to Cyprus, where with the help of King Evagoras of Salamis he gained command of a new Persian fleet in 397, and used it to combat Sparta in the Aegean; he returned to Athens in 393 and, using Persian money and private resources, rebuilt the Long Walls linking Athens and Piraeus. Evagoras and his descendants had already been granted Athenian citizenship c.407, and one of them seems to have registered in Anaphlystos, so Konon's links with the royal family may have begun before that date.⁷⁴

⁷¹ PG burial, Mersch 1996 no. 9. 1. Archaic monuments (cf. above, Aigilia, n. 55), *IG* i³ 1241, 1245 Olympos, 1242–3 Ag. Nikolaos, 1242 *bis* Vontas, 1244 near Ag. Panteleimon; Mersch no. 9. 14 Vlachika/Mandria; cf. below n. 99 (Besa), archaic mother/child relief fragment, which may possibly have moved up from a burial in the plain? (Mastrokostas 1974; ch. 21 p. 5: was part of the plain already linked with Sounion in the naukraric system? ch. 18 at nn. 96–101).

⁷² *IG* i³ 972, see ch. 20 n. 45; Faraguna 2015, 650; phratry, ch. 19 n. 7.

⁷³ Paus. 2. 30. 9; one would like to attribute the genealogy to Philochoros, a demesman of Anaphlystos who sympathized with the anti-Macedonian policy of Kallias and Phaidros of Sphettos (ch. 27 n. 25). However, discussion of the evacuation of Athenians to Troizen went back to the 320s, when Troizenian refugees were taken in and granted citizenship at Athens (Hyp. 3 *Athenogenes* 32–3, cf. M. J. Osborne 1981–3 T 72). Cf. also *IG* ii² 2796 + Peek 1942 no. 49, a decree of the demos of Troizen for Hagnonides son of Nikoxenos (of Pergase), who would have visited Troizen during his exile in 319/8, and ii² 971, reference to a decree proposed by Stratokles of Diomeia (c.307–300) granting citizenship to a Troizenian. The inscription of the Themistokles decree (M/L 23) on a stone set up at Troizen, dated to the early 3rd c. by its letter-forms (Habicht 1961a, cf. Knoepfler 2010c), may belong to the period after (?) c.272, when Spartan troops drove a Macedonian garrison out of the city (Tarn 1912, 163).

⁷⁴ *APF* 13700. Timotheos' dedication, *IG* i³ 863; Keesling 2003, 253–4 n. 13; new fragment, *SEG* 36. 146. Restoration in *SEMA* 113 very dubious. On the relation between Konon and Evagoras see Lewis and Stroud 1979; *IG* i³ 113 = M. J. Osborne 1981–3, D 3 and D 86. The Cypriote name Pnytagoras,

Timotheos II, who also had a successful military career, owned a house in Peiraios and a farm in the plain near Athens; either he or his son Konon III also acquired a large house in the city. Konon III might be the Konon of A— who appears in the mining records as owning property in Sounion, and the Konon who owned an ergasterion in Anaphlystos, an ergasterion on the Bambideios hill, and property at Thrasymos; the Konon son of Konon who registered a mine at Amphitrope c.320–19 may be his son (but see ch. 26 at n. 66). Konon III is attested frequently as trierarch in the period c.356–326/5, and served as general for Piraeus in 334/3 and 333/2 (his ancestry, rather than his own record, perhaps making him a suitable figure for the early years of the ephebate); he went with Phokion and Klearchos I of Aigilia as ambassador to Nikanor in 319/8. It has been suggested that he had a daughter who married Demetrios of Phaleron.⁷⁵

Autokles son of Tolmaios seems to have been somewhat older than Konon II; he served as general in 425/4, 424/3, and 418/7, and may have been elected also in the intervening years, for which no other general from Antiochis is attested. He may have been a younger relative of Tolmides son of Tolmaios, who was general repeatedly between 457 and 447. A daughter of Autokles may perhaps have married Strombichides I of Euonymon (general in (?) 413/2 and 412/1) and transmitted her father's name to a son. Autokles II son of Hippon A., councillor in 304/3 and creditor on a horos for a loan of 2200 dr., was presumably a descendant of the general; Autokleides A., councillor (?) during the Lykourgan period, may also belong to the family.⁷⁶

Since potters did not usually include demotics in their signatures, a red-figure krater of c.410–400 representing a torch-race, in which the leading runner wears a headdress with the name of the tribe Antiochis, signed by Nikias son of Hermokles of Anaphlystos, is an interesting example of pride in tribal victory.

borne by Evagoras' eldest son, occurs twice in Athens: a doctor, Aristokrates son of Pnytagoras, was commemorated by an epigram in the early 4th c. (*CEG* 500, *SEMA* 1581, no provenance), and Philokrates son of Pnyta[goras] of Anaphlystos served as councillor in 304/3 (*Agora* XV 61. 317). The doctor, if he belonged to Evagoras' family, would perhaps be a brother rather than a grandson of the king. On the name see Masson 1956.

⁷⁵ *APF*, loc. cit.; cf. March 2008. The expensive *pyrgos* of Timotheos (Ar. *Plout.* 190) is perhaps more likely to be a farm than part of the Long Walls (as suggested in *APF*). Konon's associate Aristophanes son of Nikophemos (Lys. 19, *APF* 595) may also have belonged to A.; cf. Aristophanes A., trierarch at Samos in 410/9, *APF* 2086, and Nikophemos A., councillor in 304/3, *Agora* XV 61. 320. On Konon III see also Paschidis 2008 A 8.

⁷⁶ Autokles, *APF* 2717; Strombichides, *ibid.* 4386, see Table 16.1; Autokles II, *Agora* XV 61. 311, *IG* ii² 2693 = Finley 1952 nos. 19–20; Autokleides, *Agora* XV 46. 66. Autokles' horos was found at Keratea; either Autokles originally lent 2200 dr. (on a house and land; not 1200 as *APF*) and subsequently half the loan was paid off and Aris[tophon?] of Teithras became joint creditor with Autokles, or Autokles and Aris[tophon?] made a joint loan of 1100 dr. and Autokles was subsequently persuaded to take full responsibility and double the loan. He would probably be the general's SSS or SSSS.

Nikias' son Diotimos was commemorated by a stele of c.360. Theodotos son of Nikias II A., if he was a kleruch in mid-century, may be a brother of Diotimos.⁷⁷

In contrast and perhaps in conscious opposition to the families of Konon and Autokles, which profited from democracy and empire, a fellow-demesman, Pythodoros son of (?) Polyzelos, was formally responsible for setting up the rule of the Four Hundred; he may also have prosecuted Protagoras.⁷⁸

On the other hand, Pyrrhandros (II) A., ambassador to Thebes in 378, may have been selected for this role because his family had made contacts in Boiotia in 404/3. He was still alive in 330, and since the name is not so far attested in any other deme he was probably the Pyrrhandros who made a dedication, perhaps to Asklepios, in the middle of the century. The Pyrrhandros who died in battle c.411, though his demotic is unknown, could well have been the ambassador's grandfather.⁷⁹

Anaphlystos' last political figure, in our period, is the historian and mantis Philochoros II. His father Kyknos son of Philochoros I served as councillor in 334/3; since the name is rare, he may perhaps have been a grandson (DS) of Kyknos of Rhamnous (the father of Diogeiton). A family connection with northeast Attika might help to explain the historian's interest in the Marathon Tetrapolis. The historian's penchant for old institutions and early history was combined with fervent anti-Macedonian patriotism, for which he lost his life after the Chremonidean War. He had a brother called Demetrios, who made a dedication in Piraeus in the late fourth century, and who may have been a councillor in 281/0.⁸⁰

⁷⁷ Krater, BM 98.7-16.6, BArch 217462. Diotimos, *IG* ii² 5662 (no provenance); Theodotos, ii² 1927. 190-1, see Humphreys 2010a. His fellow-demesman Kalliades son of Mnesiphanes (1927. 188-9) may well be the father of Theosebeia daughter of Kalliades A., named with her husband Thoutimos son of Aristogeiton of Aphidnai on a stele dated between c.340 and 317 (both names inscribed in same hand so probably simultaneously, ii² 5752).

⁷⁸ *A.P.* 29. 1-3; see P. J. Rhodes 1981a, 370, 437.

⁷⁹ Pyrrhandros A., *IG* ii² 43. 76-7 (also to Byzantion, ii² 41. 20, in the same year, with different colleagues, and proposer of ii² 44 concerning alliance with Chalkis). Dedication, ii² 4384 (not included in the Asklepios dossier by Aleshire 1991); still alive in 330, Aisch. 3. 139. He spoke in an Assembly debate in 347/6 (*AO* p. 322). Pyrrhandros I, *IG* i³ 1190. 8. A speech attributed to Hypereides 'concerning the estate of Pyrrhandros' (F XLIX/160 Jensen 1917) contained a reference to the ill-treatment (*kakôsis*) of parents or epikleroi; if this is our Pyrrhandros, perhaps there are allegations that he had been ill-treated by his children (any daughter of P. would not technically have become an epikleros until his death, by which time she would probably be over 50 and have adult children).

⁸⁰ Jacoby, comm. *FGH* 328 (III B Suppl. I-II; on the suggested connection with Kleidemos see ch. 29 n. 10). Kyknos, *IG* ii³ 4. 81. 7, 71-5; Kyknos (?) of Rhamnous, *IG* ii² 1927. 153-4 (see Humphreys 2010a). Demetrios, ii² 3835. Demetrios A., *Agora* XV 72. 238; we also have as councillors in 334/3 two other men called Demetrios from A., sons of Pythippos and of Kallippos (*IG* ii³ 4. 81. 8, 14), and the councillor of 281/0 may be a grandson of one of these. Kyknos may have married the daughter of one of them.

Note: Dow 1983 considered IG ii² 2433 ‘almost certainly ephebic’, so the entry here is perhaps [Apollodoros] III rather than Apollodoros II.

TABLE 32.4. Anaphlystos: Olympichos

We can partially reconstruct two relatively large Anaphlystos lineages, both probably based in the city area (see Table 32.4). The first is known mainly from a group of grave-monuments from the Kerameikos, which may well have stood in a single peribolos. Olympichos I perhaps had three sons: Olympiodoros I, commemorated in the middle of the fourth century with his wife Theiophante daughter of Kallias of Agryle (their son Olympichos II was also buried in the Kerameikos); Nautes, whose son Olympichos III was buried in the Kerameikos in the late fourth century; and Apollodoros I, who served as councillor in 334/3. Apollodoros’ son Olympiodoros II served in the council in 304/3, and descendants appear as ephebes and members of the cavalry in the third century. Olympiodoros II was probably the husband of ChrySION daughter of Hyperanthes III of Acharnai, who came from a trierarchic family.⁸¹

⁸¹ Cavalry, Bugh 1988 II B 185, Olympiodoros A., c.250. Other cavalry families in A.: CAT 3. 210, a lekythos representing a Charias with a horse, a standing young woman, Hippostrata, and

TABLE 32.5. Anaphlystos: Alexiades

Note: Eurymaides A. and Charias A., both named on *IG* ii² 5658, set up to commemorate Demostrate, may possibly be an earlier husband and son.

TABLE 32.6. Anaphlystos: Leokrates

The other sizeable lineage stems from Alexiades I (see Table 32.6). His son Epikrates I served as councillor in 334/3, perhaps late in life; he may be the Epikrates son of A—who registered a mine at Thrasykos c.340. He seems to have had two sons, Alexiades II (only attested indirectly in the patronymics of his sons) and Kallikrates, councillor in 304/3. Two sons of Alexiades II, Epikrates II and Xenophon II, were councillors in that year, and Epikrates II may have served a second term in 273/2. Xenophon II probably

an old man, Eurymaides, should probably be linked with *IG* ii² 5658, a stele from Liopesi set up for Demarete daughter of Leokrates of Anaphlystos, but also naming Aristideides A., his daughter Hippostrate, Charias A., and Eurymaides A. Demarete seems to have been Aristideides' wife, Hippostrate perhaps the wife of Charias, and Eurymaides—whose name occurs only in these two instances—Charias' father (the interpretation in *CAT* is not persuasive). *SEMA* 2555 came from Xenophontos 10, near Syntagma Square; it is not clear why a stele set up by a family from Anaphlystos in which there were two intra-deme marriages should be found at Liopesi (Paiania). The Leokrates A. who possibly served in the council c.321, *Agora* XV 55. 2, was perhaps a nephew (BS) of Demarete. Moschos son of Antiphanes A. proposed *SEG* 3. 115, a cavalry decree honouring Demetrios son of ...phanes of Alopeke (above, p. 1183), possibly an affine. His father was trierarch in 356/5, *IG* ii² 1612. 106.

derived his name from Xenophon I A., named on a curse tablet of the Lykourgan period, whose son Makareus freed a slave purple-dyer living in Peiraios in (?) the 320s; Alexiades II may have married a daughter of Xenophon I.⁸²

Eratrostratos son of Nausikydes A., named as leader of a phratry group that lent money against property in the deme, may have been a local resident. He served in the council in 334/3 and again in 304/3. Possibly he belonged to the family of the Nausikydes commemorated on a loutrophoros of c.420 found at Merenda, who in turn may be, or be related to, the [Na]usikydes who died in battle on or near Lemnos.⁸³ The son of Theophilos, who sold a chorion at A. for 800 dr. on behalf of a religious association in the hekatostai sales, may also have belonged to this phratry.⁸⁴

Nikodemos A., who served as secretary in 320/19, was perhaps not discontented with the regime that had disenfranchised Athenians with less than 2000 dr. of property; his son Nichomachos, however, appears as councillor in 304/3, after the restoration of democracy. Another of the councillors of this year, Antiphanes II son of Dionysios, came from a trierarchic family; his grandfather Antiphanes I is attested as syntrierarch in 356, his uncle Moschos son of Antiphanes I served as taxiarch c.330, and another uncle, —as, was (?) councillor c.320.⁸⁵

It is perhaps not surprising for a coastal deme facing westwards that a number of members of Anaphlystos moved to Piraeus. In addition to Timotheos II, Demetrios (brother of Philochoros), and Makareus, —boulos son of Peisikles, who rented property in Peiraios c.333, may have belonged to A., since the name is rare and only attested elsewhere on the two grave monuments of Boethos son of Peisikles A., one set up in Piraeus and the other perhaps in the city.⁸⁶ Two sisters from Anaphlystos, apparently epikleroi, were buried in Piraeus with an epigram recording their equal division of their inheritance and the survival of one of them to see grandchildren.⁸⁷ Chairippe daughter of Chairias (son of Euortios) A. was also buried in Piraeus, with Leon of Kydathenaion, presumably her husband; her sister Praxagora married into Oion and was perhaps commemorated with two daughters by a relief stele first recorded in the monastery of St John Theologos on Hymettos. Their father Chairias served as amphiktyon on Delos in 341/0 and seems to

⁸² One would expect Makareus to free the slave after his father's death, which would imply a date for the curse tablet *SEG* 58. 265 (B II 124) before the manumission record.

⁸³ Eratrostratos A. (no patronymic), *IG* ii² 2723 = Finley 1952, no. 41 (Nikon A., also named, does not appear elsewhere); with patronymic, *IG* ii³ 4. 81. 6, 86; *Agora* XV 61. 310 (possibly a grandson, Eratrostratos II). Nausikydes, *IG* i³ 1315 = *CAT* 2. 189, with his (?) father Elpines; Anaphlystos is the only deme in which both names are attested, but Elpines appears only in the 2nd c. BCE. [Na]usikydes, i³ 1506 = *CEG* 82, 450–25.

⁸⁴ Lambert 1997a, F 13 B 10.

⁸⁵ Nikodemos, *IG* ii² 381–2; Nikomachos, *Agora* XV 61. 313. Antiphanes II, *ibid.* 312; Antiphanes I, *APF* 1227 (with p. 395); Moschos, *SEG* 3. 115; —as, *Agora* XV 55. 24.

⁸⁶ —boulos, *Agora* XIX L 9. 66; Boethos, *IG* ii² 5655 = *SEG* 44. 183 (anthemion stele, rediscovered in Plaka, possibly moved to Athens by a collector?) and 5654, cippus, Piraeus (possibly grandfather and grandson).

⁸⁷ *IG* ii² 5673 = *CEG* 541, c.350. The first distich of the epigram refers to both sisters, the second only to one, but they were cut simultaneously. Kaibel suggested that the grandmother died first and was buried by her sister in a tomb that they would eventually share, but it is equally possible that when the grandmother was dying she asked to have her sister (who had died earlier) commemorated also on her monument.

have been succeeded during his term of office by his son Chairephon, who is attested as (?) kleruch in mid-century.⁸⁸

Atene

Atene is the subject of an extensive survey report by H. Lohmann, with a prosopography attached. It is now generally agreed that the deme-name Axeneis or Azeneis in Strabo's text, placed between Anaphlystos and Sounion, should be emended to Ateneis.⁸⁹ Lohmann assigns the two small coastal plains of Thymari and Charaka to the deme, with the island Gaidouronisi and the inland plain of Agia Photeini. He is doubtful whether there was any settlement in this area at the time of Kleisthenes' reforms, and has found no evidence that the deme ever had a nucleated centre; the habitation evidence consists of scattered farms, most numerous in the fourth century, when there seems to have been intensive production of olives and oil.⁹⁰ At this period there would have been about fifty farms, adequate to support a three-councillor deme, given that there will have been non-resident demesmen; eight of these farms were substantial installations with towers, and the smallest would have farmed about six hectares of land. After the early third century the area seems to have been almost deserted.

Atene does not appear as a mine location in the records of the poletai, and the area designated by Lohmann contains no mines. There is therefore no

⁸⁸ Chairippe, *IG* ii² 6584 (anthemion stele); Praxagora, *SEMA* 111, with Koumanoudes 1970*a*, 82, no. 6, perhaps a rediscovery of part of *IG* ii² 7005 = *CAT* 188 (a relief stele, mother and daughter, fragmentary inscription, recorded by Fourmont and Fauvel). Chairias, *ID* 42. 6; Chairephon, with the same colleagues as his father, *IG* xii 5. 113. 6–7 (ch. 17 n. 7); ii² 1927. 186–7 with Humphreys 2010*a*. Also buried Piraeus: ii² 5671, Ktesias son of Theodoros A. (after 350), perhaps the son of Theodoros Mnesarchou A., buried on Salamis in the first half of the century, ii² 5667.

⁸⁹ Lohmann 1993*a*. Str. C. 398/9. 1. 21 (Axeneis in Parisinus Gr. 1397, 10th c., and its marginalia of c.1300). A location in SE Attika is supported by *IG* ii² 2776 (though Lohmann's interpretation of this text is unsatisfactory in details).

⁹⁰ Lohmann 1995 concedes that some farms have produced a little 6th c. evidence; sanctuary material in the area goes back to the 7th c. (cf. id., 1993*a*; there was a peak sanctuary on Profitis Ilias, above the Agia Photeini plain, another small sanctuary on the hill Kassidis, and cult at one or two caves, one dedicated to nymphs (cf. also Mersch 1996, 195–8. Bintliff 1994*b*, 231–2, is sceptical about the absence of archaic settlement). Thirty-six farms have been found, others will have existed on land now covered by modern buildings; the larger farms would have had c.25 ha. of land. There seems to have been some reworking of slag at Charaka in the 3rd–2nd c. BCE (Lohmann 1984); there are also many amphora-fragments, suggesting that the bay was used for shipping oil to Piraeus—perhaps also, I would think, to other ports in SE Attika, for use as food and lamp-fuel, and for bathing, in mining areas. Lohmann 1993*b* gives a detailed account of one of the larger farms, at Thymari, occupied from c.420 to the 260s, producing meat, wool, and honey for the market. One wonders what was happening in this area at the time of the Solonian crisis; was it controlled by rich families from Anaphlystos, or were the land-hungry unaware of its potential? Cf. also Goette 2001, 201.

obvious reason why settlement should increase in the early fifth century, although it is possible that the Atene plains were occupied by men whose hopes of finding silver were destined to remain unfulfilled. It is worth remembering also that according to Herodotus (6. 90; cf. Figueira 1991, 83–93) the Athenians settled a group of dissident Aiginetans in southeast Attika in the early fifth century; possibly they formed at least part of the nucleus of the deme.

It must be admitted that onomastics provide no support for this hypothesis. Most Ateneis known to us have conventional Attic names, and the family with the most striking names, which was also the wealthiest family in the deme, that of Oionochares and his son Oionias, may be attested in Athens before 490.⁹¹ Oionias was denounced by Andokides in 415 for parodying the Mysteries, and was condemned; the total value of the property confiscated from him and sold by the poletai amounted to 81 talents and 2000 dr. (i.e. 488,000 dr.), and this may not represent the whole of his estate. The preserved references all relate to land in Euboia—in the Levantine plain, at Diros, and on the Geraistos promontory. These were presumably all areas of Athenian kleruchy, and this information sheds a surprising light on the institution; presumably Oionias or his father had bought land either from kleruchs who wished to return to Attika or from Euboians who wanted to move further away from areas of Athenian settlement.⁹²

The only epigraphic evidence so far available about deme residents leads to a family of Sounion. Glykanthis daughter of Phrasikles of Sounion was commemorated on a large stele found at Agia Varvara north of Megale Vigla, in the mountains separating Sounion from the Legrainia valley (Amphitrope?). Euphradion of Sounion's daughter, also called Glykanthis, is named on a part of a naiskos found at Agia Photeini. The two women may have been cousins (FBD), both named after their paternal grandmother.⁹³

⁹¹ An Oio— made a dedication on the Akropolis c.525, *IG* i³ 904; however, names deriving from skill in reading omens may have been commoner in the archaic period than later. The name Oionikles occurs in Crete (*LGPNI*). Given the rarity of names with this root in Attika it seems possible that Oionichos, mentioned by *Ar. Eq.* 1287 and *Kratinos* (*PCG* 4, 286 F 338 comm.) for his disgusting sexual habits (he was therefore probably young and aristocratic) was a brother of Oionias.

⁹² *IG* i³ 422. 217–18, 375–8; he may also have owned land at Oropos, i³ 428. For recent work on the mechanics of exploitation in 5th c. Athenian kleruchies see Magnetto, Erdas, and Carusi (eds) 2010. Erxleben 1975 assumes that Oionias bought from kleruchs. Note that if any substantial amount of his estate was in Atene, its sale might have made a difference to the archaeological evidence for settlement. The precise location of Diros on Euboia is unknown; on the Geraistos promontory see Seifried and Parkinson 2014.

⁹³ See Table 26.8. Glykanthis III daughter of Phrasikles, *IG* ii² 7448; Glykanthis II daughter of Euphradion, *SEMA* 611. Lohmann, who published the stone (1993*a*, 46–7, 451), considered it Hellenistic or early imperial; *SEG* 43. 92 argues for a date before Demetrios of Phaleron's legislation, or in the early 3rd c. at the latest.

The horos on which Ergophilos and Ergochares A. appear as creditors for 2300 dr., with Autodikos of Oion-Hippothontis, has no recorded provenance, but is not likely to have come from the deme area. Their names suggest that they were related, probably either as father and son or as brothers.⁹⁴

The descendants of Nausias A., secretary in the early fourth century, can be followed to the end of the third century. Nau<s>ias II son of Nikostratos I, who acted as guarantor for a lease of sacred property by his (?) son Nikostratos II N[ausiou II Ateneus?] in 343/2, may have been the secretary's grandson. Nausias III, who served as thesmothetes in 216/5, may have been a great-grandson (SSS) of Nikostratos II; his son Nikostratos III was honoured at Oropos c.200, and was commemorated in the early second century by a relief stele representing him as a beardless banqueter.⁹⁵

There is some clustering of kin in council service in Atene; Gnathios son of Euphiletos I served with his son Euphiletos II in 334/3, and two brothers, sons of Lysiades, served c.321. The third councillor in that year was a son of Menippos, perhaps Theophilos, who served as treasurer in 344/3, or a brother.⁹⁶ Kleotimos A. served as one of the epistatai for Brauron in 334/3; he may be the Kleotimos (no demotic) who leased sacred property, possibly at Marathon, in 343/2, and was presumably related to Kleotimides A., attested as syntrierarch in (?) 366/5.⁹⁷

Besa

The general location of this deme, in the upper end of the Legraina valley, in the area of Synterini and Demoliaki, is not in doubt. Lohmann (1993*a*) suggests that the deme centre was at Pousipelia, which has a spring, a medieval chapel,

⁹⁴ IG ii² 2705 = Finley 1952 no. 46. Autodikos lent an additional 500 dr. The Atenians may conceivably have been related to Ergomedes of Sounion (Table 26.9), whose family had connections in the deme. Note that the Eurektes whose female ward freed a slave living in Keiriadai, IG ii² 1570. 4, probably belonged to [At]e[n]e and not Pallene, cf. Eurektes A., tamias in 432/1, IG i³ 294, etc.

⁹⁵ Nausias I, IG ii² 76 (demotic A [-6-]); possibly also restored as [Nausias Gl]aukipou Ateneus, secretary in ii² 158 ([Nausias] may be one letter too short for the stoichedon pattern). Nausias II and Nikostratos II, *Agora XIX* L 6. 125–8 (no demotics; Papazarkadas 2011, 311 nos. 55, 58); it is more likely that father guarantees son than vice versa, but see ch. 6 Table 2. Nausias III, ii² 1706. 93; Nikostratos III, ii² 5706, *IOrop* 68. Note further on Atene prosopography: Lysikrates son of Lysanias, (?) kleruch (ii² 1927. 181–2, see Humphreys 2010*a*), whose dikast-ticket is Kroll 1972 no. 127 (Class VI), is not the Lysikrates of Lambert 1997*a*, F 13 A 9, who belonged to Aphidnai; the relief stele of a son and daughter of Chairephanes A., ii² 5712, is republished with new readings as *Agora XVII* 81; it was originally set up for a son of Chairephanes who died young (loutrophoros relief) and the names of his sister and her husband, Thrasylochos son of Xenokles of Euonymon, were added (*APF* 11221, cf. ch. 23 n. 19).

⁹⁶ See ch. 17 n. 19. Gnathios (IG ii³ 4. 81. 23–4) was commemorated by a relief stele, recorded in Athens, with his (?) wife Hediste daughter of Chari[demos] of Ikarion, *SEMA* 122; sons of Lysiades and son of Meni[pp]os, IG, ii² 1443. 5 (IG, followed by *LGP*N, has Meni[sk]os, but apart from the prosopographical link, the name Meniskos is very much rarer in the classical period than Menippos).

⁹⁷ On Kleotimos see Papazarkadas 2011, 308 no. 41, *APF* p. 318; the lessee Kleotimos of *Agora XIX* L 6. 128 cannot be the son of the trierarch Kleotimos, since his patronymic is shorter. Brauron, IG ii² 1524. 47.

and perhaps public buildings—a *lesché*, and a bath-house that was perhaps built in the fourth century, rebuilt in the Hellenistic period, when a sanctuary was founded near it, and later used for industrial purposes. There are further classical and Hellenistic remains north of the spring. Mine records refer to a mine bordering on the agora, another adjoining the Herakleion, an Archegeteion, and an Aphroditeion.⁹⁸ Farms and mine installations would have spread along the valleys from which the deme got its name, northwards to Barbaliaki and Synterini, and also down the Berzeko valley south of Kamareza, if that area also belonged to Besa.⁹⁹

Kallias of Lamptrai is recorded as owning a house and tower in Besa, and Nikandrides of Potamos a house. Curiously, only one demesman of B. has so far appeared in the mining records, the son of Pheres (?), as a landowner, probably in his own deme.¹⁰⁰

The most colourful members of the deme, presumably resident in the city, are Ktesias and his son Kranaos, who according to the speaker of Isaios 4 (§ 9) tried to claim the two talents left by the mercenary Nikostratos, first by alleging that they had won a lawsuit in which he was ordered to pay them a talent, and subsequently—when this claim was rejected for lack of evidence—by asserting that he was their freedman. Ktesias served as thesmothetes in 370/69, and appears in comedies of Anaxilas and Philetairos as a notorious glutton. A descendant, Kranaos II son of Ktesiphon B., proposed honours for a priest of Asklepios in (?) 244/3.¹⁰¹

⁹⁸ Lohmann 1993*a*, 83–95; Eliot (1962) and Traill (1986) put Besa at Synterini. *Agora* XIX P 9. 31, perhaps P 27. 35, agora mine; P 27. 12, [22], Herakleion mine; P 27. 34, Aphroditeion; P 5. 72–3, Archegeteion (Besa does not seem a promising name for a deme eponym, since the word remained in use as a term for a deep valley). On *leschai* see ch. 20 n. 3.

⁹⁹ Barbaliaki has mine workings, two towers, perhaps a farm, and graves; the archaic mother and child relief came from this area (Mastrokostas 1974); Synterini has mine-installations (*ergasteria*). Kakavogiannes 1989, 2001, reports new finds of *ergasteria* (washeries, smeltery), of the early 5th c. in the Bertseko valley, which on Lohmann's locations should presumably be attributed to Besa (or *Amphitrope*?; Kakavogiannes thinks this area is the *Maroneia* of the mine records; cf. also Themelis 1989); *AD* 60 B 1, 2005 (2014), 189–90; Mussche 1994*a*. *Agora* (?), Kakavogianne and Anetakis 2012, 198.

¹⁰⁰ Kallias, *Agora* XIX P 5. 62, 73–4; Nikandrides, P 27. 24; son of Pheres, P 18. 23, 350/49; cf. perhaps *CAT* 3. 347*a* = *SEMA* 2489 (Iekythos, no provenance; *CAT* doubts whether it is ancient), Pheres I and Pherenike with their son Pheres II (the name Pherenikos is attested in Antiochis in the Hellenistic period).

¹⁰¹ *PCG* 2. 291, 293, Anaxilas F 25, 29; F 29 associates Ktesias with Kranaos. Philetairos, *PCG* 7, 323 F 3. The speaker of Is. 4 does not produce any evidence to support his allegations, and may have been playing for laughs. Kranaos II, *IG* ii³ 1020 (arch. Lysiades), Aleshire 1991 no. 8730. Aleshire points out that identification with the dedicant [Kr]anaos of stele IV 29 (before or in 274/3? See Aleshire 1989, 205–15) is hazardous.

Nikias son of Athenion B. was commemorated by a stele found ‘south of Hymettos’; his father’s (?) dikast-ticket was found on the Akropolis and his brother Mnesimachos is recorded as (?) kleruch in mid-century.¹⁰²

Amphitrope

As has already been noted, this deme has traditionally been located at Metropisi, northeast of the Anavyssos plain. However, Traill (1986) puts Poros at Metropisi and Amphitrope at Pousipelia; Lohmann puts Amphitrope further south in the Legraina valley, with its deme centre at Poussitadi. The area appears frequently in the poletai records as a mine location, and an inscription of the Roman period mentions its glens (*béssai*).¹⁰³

An early member of the deme appears on an ostrakon of the 480s.¹⁰⁴ The best-attested of its wealthy families, descended from Euthykrates I, seems to have made its money from mining. Euthykrates I owned a workshop at Thorikos in (?) 342/1, and apparently had two sons, Archestratos I and Euthykrates II, one of whom leased mines in (?) 341/0 and (?) 339/8; they may be the sons (*paides*) of Euthy[krates] mentioned as owning land in the latter year. Both of them are attested as trierarchs in the 330s, and Archestratos gave 2000 dr. to the corn-fund in 326/5, credited against a naval debt incurred by Hyperides. Euthykrates II was probably Athenian naopoios at Delphi in 334/3; the orphaned children of a Euthykrates, whose estate was leased against the security of land in Eleusis, will have been his sons. Archestratos II, probably a grandson of Archestratos I, married [Lysistra?]te daughter of Polyeuktos of Bate, priestess of Athena Polias, at some date before c.259–255 (archon Alkibiades); the gravestones of their son Euthykrates IV and his son Polyeuktos are preserved.

¹⁰² IG ii² 5906; Kroll 1972 no. 104 (class V; the attribution to Athenion is problematic; see Kroll pp. 203–5). Mnesimachos, ii² 1927. 195, see Humphreys 2010*a*.

¹⁰³ Ch. 27 n. 51. It is argued by Traill and by Lohmann (1993*a*, 79–83) that there are not enough mines in the Metropisi area, that this area communicates with the Keratea (Kephale) valley rather than with the Anavyssos plain or the valleys of the Sounion peninsula, and that the name Metropisi, rather than being a corruption of Amphitrope, may be formed from the Albanian word *pousi* for a well (the two etymologies do not exclude each other). Bessai, IG ii² 2776. 117. See the map in Lohmann 1993*a*, 9 fig. 2; cf. Lohmann 1984, 1994. The peak sanctuary of Megalo Rimbari, in use from the late 6th to the end of the 4th c., with fine pottery dedications, would on Lohmann’s interpretation belong to A. Farm and tomb finds, Lohmann 1994. Goette 2000, 11 puts Amphitrope at Legraina.

¹⁰⁴ [Pr]oxenos A., Brenne 2001, 239.

Polyeuktos' daughter Theodote probably also served as priestess of Athena Polias in the early second century; we cannot, however, necessarily conclude that her ancestors in Amphitrope belonged to the *genos* Eteoboutadai, since she may in this period have qualified by matrilineal descent. The cavalryman Polyoktos [*sic*] of the middle of the third century may be Theodote's father.¹⁰⁵

¹⁰⁵ See chs. 5 n. 65, 20 n. 131; *APF* 2419; D. M. Lewis 1997, 196 (1955). Euthykrates I, *Agora XIX* P 26. 236–40 (*em Philomélidón*); son of —krates A. leases, P 27. 3, P 28. 31; *paides* of Euthy[k]rates], P 28. 12–13 (*paides* does not imply that they were minors, only that they held the land in indivision). Euthykrates II, *CID* II 79 A 1, 14, cf. 119. 25; orphans, *IG* ii² 2647 = Finley 1952 no. 125 (the *horos* was found at Eleusis, which would be the location of the lessee's property, not that of the orphans). The Euthykrates whose property was denounced by Teisis of Agryle, probably for mining offences, and who was according to Hyp. 4 *Eux.* 34 worth over 60 talents (360,000 dr.) sounds like E. II, except that the orphans evidently retained something (Archestratos does not seem to have suffered). Archestratos II, Euthykrates IV, Polyeuktos, *IG* ii³ 1026. 27 (arch. Alkibiades), 5610 (kioniskos, Akropolis), 5613 (kioniskos, no provenance). Polyoktos, Bugh 1988 II B 223 (for confusion in spelling between Polyeuktos and Polyoktos see Threatte 1980, 348, and ii² 3472. 5). There is no reason to connect this family with the Polyeuktos A. whose son Tauriskos was commemorated by a stele base (? 'mensa') of the mid 4th c. with a relief loutrophoros, found in the city, ii² 5614 (in view of the loutrophoros, Hierokleia daughter of Euainetos of Alopeke, named on the stele, should be Tauriskos' mother rather than his wife, and [Apole?]xis son of Tauriskos A., whose name appears in a mid-century list of uncertain character, ii² 5723, may have been Polyeuktos' brother, ch. 11 n. 43). For cavalrymen from A. we now also have Theophilos son of Chairippos I A., phylarch in the late 3rd c. or early 2nd c., *SEG* 46. 148, whose son Chairippos II was councillor *c.*169, *IG* ii³ 1333. 27, etc.

Appendices

APPENDIX ONE: LISTS

I already discussed a number of ‘lists’ with tribe and deme headings in Humphreys 2010*a*, pointing out that apart from lists of kleruchs they are all dedications. This was recognized in *IG* i³ 515, and is partly recognized in *IG* ii³ 4 (1), but unfortunately in that volume some corpora have been split up, due to the decision not to include lists for which terms referring to dedication are not preserved. I group here comments on dedications by diaitetai, epheboi, and councillors scattered elsewhere in the book.

DIAITETAI

It seems likely that *IG* ii³ 4. 24 is to be dated 371/0; not much hangs on the difference between that year and 363/2. Koumanoudes and Matthaiou 1987 publish a new list perhaps to be dated *c.*330. *IG* ii³ 4. 31 = *Agora* XV 493 may also list diatetai (archon Pytho[dotos], 343/2, or Pytho[delos], 336/5; Humphreys 2010*a* n. 40), as may ii³ 4. 33 and ii² 2373, 2388, 2393, and 2398 (Dow 1983); but prosopography does not help to supply dates for these.

EPHEBOI

Alipherê 2015 has republished Reinmuth 1971 no. 9 (Leontis, 333/2/1), with questionable restorations in column III, which would have a line-length of 36 stoichoi in ll. 3–9 and 42 in ll. 10–19, as against 26 in columns I–II; she does not explain this discrepancy. The restoration of a dedication to the hero [Leos] in l. 33 is also doubtful.¹ She fails to note the parallel dedication *SEG* 54. 227. If the didaskalos of I 34–5 was [Leokr]ates son of A[is]çḥṛajōs of Pallene, he might be a nephew (BS) of Leokrates son of Leochares, trierarch in 366/5 (*IG* ii² 1669. 3, *APF* p. 344); this might provide a slight indication that a didaskalos could be a relatively young man. However, the restoration is highly speculative.

Humphreys 2010*a* suggested that Reinmuth 16 and *SEG* 36. 155 were lists of epilektoi rather than epheboi. *IG* ii³ 4. 334 (Reinmuth no. 8), perhaps Pandionis, perhaps 333/2/1, is very poorly preserved and difficult to interpret. There may have been a painted crown round ll. 1–4. *IG* ii² 2408 = *IEleus* 82 (*SEG* 39. 184–5), partly duplicates *IG* ii³ 4. 336*a* = ii² 3105 (but is not indexed in ii³). One

¹ *IG* ii³ 4. 25 (*Agora* XV 13), also dedicated to Leos, was re-used in the Propylaia area.

of the lochagoi is Aischines' son Atrometos, which should probably put the list in the 330s. *IG ii² 2401* may also be ephebic.

COUNCILLORS

Of the texts in *Agora XV* 1–56, nos. 24 (*IG ii³ 4. 61*) and 33 are individual dedications. Charinos son of Charonides of Euonymon (24) was crowned by the Council and his *d[émotai]*; his (?) SS Charinos son of Epichares was councillor in 304/3 (*Agora XV* 61. 168), and he may have made a dedication to Ammon.² The dedicant of no. 33 was crowned by the Council of 344/3, his fellow-tribesmen (at least twice), his fellow demesmen, and (?) the cavalry. We do not know the date of his dedication, presumably set up near or even after the end of a successful career. No. 45 (*ii³ 4. 51*) is a dedication by the councillors of Teithras for 331/0 or 330/29, set up in the deme. No. 49, *IG ii³ 360*, is a dedication by councillors and others.

Agora XV 1 = *IG i³ 515* is undoubtedly a dedication by the councillors of Erechtheis for 408/7, but does not conform to the quota-numbers of later lists (*XV* 6 = *IG ii³ 4. 51*, *XV* 14+29 = *ii³ 4. 54*), has gaps in ll. 18–20 (Anagyrous), 16 (Kephisia), 31 (Upper Pergase), and 33 (Lower Pergase), and does not seem to provide a total of 50. These irregularities may be due to the difficult military situation, or possibly to the practice at this time of only registering councillors who had served a turn of duty in the Tholos (ch. 21 at n. 27).

Agora XV 10 = *ii³ 4. 21*, 12 = *ii³ 4. 48*, and 47 = *ii³ 4. 83*, are discussed in Traill 1986, 31–47, but his interest is in the relation between lists and trittyes rather than in dating or prosopography. *XV* 13a = *ii³ 4. 53* (*SEG* 28. 148) is dated 371/0.

XV 16 may not be a Council list (P. J. Rhodes 1980); it has 4 representatives from Sypalettos (quota 2), and Autobob(u)los of Sypalettos (l. 6) appears as councillor in *XV* 18. 6 (*SEG* 28. 150) and *XV* 43. 162–3; we are told that no one could serve on the Council more than twice, but the councillor of *XV* 43, 335/4, may be a grandson. *IG ii² 7486* seems to have been set up c.400 to commemorate Autosophos I son of Autoboulos I, who would have died as a small child (Table 29.7); it is a question whether the gap in time between *SEG* 28. 150 and *XV* 43 is long enough for the councillors to be FF and SS. The councillor Arimnestos of Phlya (l. 3) may have a son listed as (?) epilektos in *SEG* 36. 155. Leaios and Chairigenes of Aixone, ll. 10–11, had sons who were active in the deme in the 320s, *SEG* 46. 154 and *IG ii² 1199*. This might bring *XV* 16 down to near mid-century.

² *IG ii² 1642. 36*, cf. *SEG* 21. 562. It is not certain that the dedicant belonged to Euonymon; nor can we be sure of the date.

XV 20 appears to come from a dedication by the whole Council. In Melite, the son of Antikles (l. 9) might be a brother of the well-attested Neoptolemos, *APF* 10652, who was already active in politics by 348; P[an]tāinos son of Euthy—, l. 11, could be a son of either Euthydomos I or, more probably, Euthydomos II (Table 29.1). Arist[o]medes II son of Aristopho[n] of Azenia, *APF* 2108, was a syntrierarch before 356/5 (*IG* ii² 1612. 289). Aristophanes II, son of Aristophon, is listed on *IG* ii² 2385; Aristophanes III, son of Aristomedes I, appears on *Agora* XV 492, perhaps a list of kleruchs of c.360 (Humphreys 2010a). One of these two, or Aristomedes II, should be the Aristo— of Azenia who was diaitetes in (?) 330/29 (Koumanoudes and Matthaiou 1987). Spoudias son of Philistides, also of Azenia, had a son who was councillor in 303/2, *Agora* XV 62. 266. Ex[e]k[ia]s son of Exe— of Anakaia may be the son or father Exekestos son of Exekias A., member of a tribal board (*IG* ii³ 4. 63).³

XV 32 = *IG* ii³ 4. 26 was cut by the same hand as XV 55 (Tracy 1995, 131, c.330–317). Stephanos son of Demylos of Probalinthos, l. 59, was diaitetes in 325/4, *IG* ii³ 4. 35, but we have other examples of elderly councillors (ch. 17 n. 15). As *Agora* XV points out, Teisamenos son of Pythionikos of Kydathenaion seems to have served again in 304/3, XV 61. 69. On the other hand, Aischylides son of Aristarchos of Myrrhinous, l. 30, may also be listed (without patronymic) in *Agora* XV 42. 178. His father or son freed a slave in (?) the 320s, *SEG* 18. 36 A 398ff. Autokrates son of Aischines of (Upper) Paiania had a son who was ephebe in 305/4, *IG* ii² 478. 37 (Antigonis). For Philochares son of Philokydes, also of Paiania, see Table 25.3. Isodemos son of Isodemos of Kydathenaion, l. 53, must be related to Isodemos son of Isophilos, ephebe in (?) 332/1/0, *IG* ii³ 4. 342 (Reinmuth 1971, no. 10), but the relationship (FB?) is uncertain. Chairestratos son of Chairestratos of Paiania had a brother, Charmantides (*APF* 15502) who was a choregos before (?) 360.

XV 44: archon-date confirmed, *Hesperia* 70, 2001, 3.

XV 46 apparently comes from a dedication by all ten tribes. It has occasional patronymics, some abbreviated, and unexplained gaps. Prima facie the appearance of Boethos of Phaleron in l. 35 should indicate a date in or before the 350s, since the name of Ktesiphon son of Boethos was added to *IG* ii² 7612, which was set up in (?) the 350s for Ktesikrates son of Ktesiphon, who appears as (?) a kleruch on *IG* ii² 1927. Repetition of the name Boethos in the family is of course possible. The other possible prosopographical links depend on common names in large demes.

³ The date of ii³ 4. 63 is tied up with the history of Sophokles' descendants, the life of Misgolas of Kollytos (ch. 24 n. 6: born c.390, still alive in the late 320s?), and the disputes recorded in Isaios 6 (ch. 7 Case 1).

XV 47 = IG ii³ 4. 83: the stone is known only from a drawing by Spon; *LPGN* does not accept the rearrangement of Traill 1986. Charias son of Aristokles of Steiria, l. 36, had a son who held a sufficiently high military office to be crowned by his troops in 306/5, IG ii² 1954 = ii³ 4. 319. Polydamas son of Aristodamas of Myrrhinous, l. 27, had a father who registered and leased a mine and owned land c.340, *Agora XIX* P 26. 356–63. Stratonides son of Sosigenes of Paiania, l. 4, may well be the Strat[onides of Paiania] who was prytany-secretary for Pandionis in 320/19 (IG ii² 383b, p. 660, 5–6; no other name in Strat- fits). In this case either he served a second term as councillor (not improbable in the period of reduced citizenship) or XV 47 belongs to 320/19 (and Charias was an elderly councillor). Archikleides of Paiania, father of Archidamos (l. 7), was councillor in 343/2, IG ii³ 307–8. Euetes son of Archidamos, commemorated on IG ii² 7044, may belong to a different line of the family. Alkimachos (II) son of Andron of Paiania, l. 9. is probably grandson (SS) of Alkimachos I, XV 12 = ii³ 4. 48. 53, and cousin (FBS) of Alkimachos III son of Alketes, trierarch in the Lykourgan period (*APF* 623 needs revision). Andron son of Alkimachos (I?), who manumitted a slave in the 320s, could be his father. The relation of Lysippos son of Philinos of Paiania, l. 10, to the Phanotheos son of Lysippos P. who registered a mine in 341/0, *Agora XIX* P 27. 60, is unclear.

XV 52 [Sostratide?]s son of Ekphantos of [Eupyridai], l. 5, was probably secretary *kata prytaneian* in 329/8 (and thus was not a councillor in that year: P. J. Rhodes 1972, 135). Chalkideus of Sounion, father of Andromenes (l. 24), was an oath-swearer for the Salaminioi in 363/2 (*Agora XIX* L 4b). Thoutimides son of Phantias of Sounion (l. 26) may be the Thouti— S. who leased a mine c.340, *Agora XIX* P 29. 12. Diophanes son of Diopeithes S., l. 25, should probably be a younger kinsman of the Diophanes S. who is recorded as a landowner in *XIX* P 5. 59, 367/6 and may be the son of the Diopeithes S. who led kleruchs to the Chersonese c.343 (*APF* 4487). Pyrrhos son of Euthymachos of Potamioi Deiradiotai had a son, Euthymachos II, who was ephebe in (?) 334/3/2 or 330/29/8 onwards (Panakton 1992-400).

XV 53 was assigned to 324/3; Alessandri 1982 has questioned the restoration [*arch*]ón in l. 9, but the date is supported by the appearance of [Euphane]s son of Phrynon of Rhamnous (ll. 17–18) as secretary in IG ii² 362.

Traill 1986, 142 n. 46, expressed some doubt about the classification of XV 55 as part of a list of councillors. Its main interest is the appearance of Hipponikos (IV?) son of Kallias (IV?) of Alopeke in l. 44. His putative grandfather (FF) H. III was adult by 399 (*APF* 7826) and can hardly have served as councillor much after 350. H. IV may however be the H. who purchased two ergasteria in Melite c.340, *Agora XIX* P 26. 455, and his father may be the Kallias, involved in a lawsuit, who was cursed with a Hipponikos and a Hippolochides (of Lousia?

APF 1395 p. 47) on Wünsch 1897 no. 65 (with Wilhelm 1904). See also S. D. Lambert 1999*a* n. 51.

XV 56 = *SEG* 34. 127: the number of councillors for [Chol]leida[i], probably at least 4, suggests a date after 307/6, since Cholleidai had only 2 councillors in the fourth century, and 5 in *XV* 74 and 88 = *IG* ii³ 930 and 1030. Traill (*SEG* 34) takes Potam— in l. 28 as a patronymic rather than a deme heading and restores *Potam[ónos]*; *Potam[ou]* or *Potam[mou]* might be better. Archinos son of Aphthonetos I of Kettos, ll. 25–6, was the father of Aphthonetos II, secretary in (?) 255/4 (Kleomachos), *IG* ii³ 991–3, which may indicate a fairly late date for *XV* 56. Epikrates (III) son of Olympion of Kerameis, ll. 54–5, was probably a cousin (FBS) of E. II son of Demokrates II, whose homonymous grandfather (FF) proposed a decree in (?) the 380s (*IG* ii² 1928. 4); E. II's son was an epimeletes of the Mysteries in (?) 267/6 (Menekles). Stephanos son of Empedion of [Chol]leida[i], ll. 38–9, won a victory at the Isthmia before his half-brother Diophanes won as a beardless pankratiast, *CEG* 758 = *IG* ii³ 4. 583.⁴ Androsthenes son of Andropeithes of Kerameis, ll. 50–1, would be the grandson (SS) of the homonym commemorated on *IG* ii² 6315.

Finally, *XV* 68 may date to the 320s (Traill 1986, 2003). Nikias son of Echestratos of Acharnai, l. 22, may be commemorated by the (?) trapeza *IG* ii² 5824.

⁴ See ch. 12 n. 90. Matthaïou 1999*b* (misinterpreting the text) does not discuss dating.

APPENDIX TWO: THE *HEKATOSTAI* RECORDS

These texts, re-edited in Lambert 1997*a*, record the proceeds of a 1% tax levied on sales of land in Attika by corporate groups, ‘territorial’ units (demes and komai) on stelai 1–2, other corporate bodies (genê, phratries, orgeones) on stelai 3–4. The tax was dedicated on the Akropolis, probably to Athena. It is now generally agreed (*pace* Lambert) that the rest of the proceeds went to the selling groups, who would presumably use the money to generate income by making interest-bearing loans. The purchasers, where we can identify them from other texts, seem to have been wealthy men (being an argument from silence, this is not worth much), sometimes the selling officials themselves, although not all purchasers of deme land belonged to the owning demes.

Given that the sellers should have owned the land they sold, it is somewhat puzzling that two or perhaps four items sold by the deme Poros are listed as ‘threshing-floors called *dêmosiai*’, ‘a *chôrion* called [—]*sia*’, and ‘an *eschatia* called *d—*’. These are local names, parallel to ‘common’ in English; for some reason (privatization more of a danger in mining demes?) residents in Poros felt it necessary to emphasize their rights of access.¹

While new readings have somewhat complicated the picture since the discussion in D. M. Lewis 1973, it remains true that almost all the prices are either round-figure multiples of 50 dr., or are divisible by 12.5 (the exception is 440 dr.). This has always suggested to me (Humphreys 1985*a* n. 59) that purchasers were expected to pay a ‘fair price’ based on rents calculated as 8–8.5% of capital value (8.5% at Ephesos *c.*297, *IEph* 4A; 8% in Roman Attika, *IG* ii² 2776). There was an element of noblesse oblige in the operation.

In return for their outlay, the purchasers got a public acknowledgement of title, provided by the tax records. Similarly, in the Lykourgan period and later, liturgists dedicated phialai that were publicly recorded (*IG* ii³ 550, *SEG* 43. 26); public records of manumissions were also set up (E. A. Meyer 2010; Zelnick-Abramovitz 2005, 2013).²

¹ Threshing-floors could be privately owned ([*Dem.*] 42. 6), but the Salaminioi collectively owned one and planned to make another in the third century (*Agora* XIX L4 B 18–24), an archaizing text of the Roman period refers to a sacred threshing-floor (*IG* ii² 3194), and the name of the festival Haloa suggests that there was another at Eleusis. Papazarkadas (2011, 234) seems to think of a contrast between secular and sacred public land, but there is no evidence (or likelihood) of sacred ownership of land in these sales. Both Lambert and Papazarkadas fail to see that *kaloumenon* indicates local oral tradition.

² Faraguna 2003*b* discusses other evidence for records of land sales.

With this background, it is *prima facie* tempting to connect our texts with *IG ii*² 1471. 10–15, which records ‘gold phialai made from the *chrêmata* [which brought up] [*ha anekomisen*] Archippos *archôn* as *hekatostên*’.³ Archippos was eponymous archon in 321/0. This text is however very strange. It is, as far as I know, the only reference we have (apart from the Kylon affair) in which an eponymous archon is recorded (in the nominative case) as taking an action himself rather than dating the actions of others; and this action does not seem to correspond to anything we know from literary texts (*A.P.*, *lexica*) about the archon’s routine functions. Nor does it seem to fit what we know of the period from autumn (Metageitnion or Boedromion) 322 to spring 318, when Athens was under Macedonian control and many citizens had been disenfranchised. The Council was disorganized, the anagrapheus became a powerful figure in Assembly business, and Assembly decrees were probably carried through by a small junta (G. J. Oliver 2003), but we have no evidence of extra powers for the archon, or for other activities on the part of Archippos.

Moreover, it is unlikely that the disenfranchised poorer citizens would have been potential lessees of public land—except perhaps in Peiraios, where leasing procedures were tightened up in 321/0 and some leases were very cheap (*IG ii*² 2498, see Papazarkadas 2011 s.v.).

Fragouna’s suggestion (1992, cf. 1998) of a connection with the grain shortages of the Lykourgan period seems more plausible. If these were indeed due to weather conditions (drought),⁴ the selling groups might indeed have found it harder to recruit lessees. It may also be relevant that younger men had been leaving Attika to serve as mercenaries in the Persian army or that of Alexander, meaning perhaps a loss of potential lessees and also less market for local products in Attika.

Can prosopography help us to pin down a date? Lambert tentatively suggested on prosopographical grounds a date *c.*343 for stelai 1–2 and *c.*321 for stelai 3–4. This, however, does not seem very likely on general grounds: even if the operation was originally planned to deal only with demes and their subdivisions (why?) it would have had to be widely publicized and one would expect leading men in other corporate groups rapidly to recognize its advantages. In any case, the prosopographical arguments are not strong.

As buyers who would have been too old to purchase after *c.*340, or dead, Lambert cited [Isandros] son of Stratokles of Sypalettos (F 9 B 22) Karkinios [II, son of Xenokles of Thorikos], F 8 A 33, and [Thrasipp]os son of Phrynaios of

³ *SEG* 38. 138 with Lambert 1996*b*.

⁴ Tracy 1995, 30–5. Moreno 2007 prefers to emphasize politico-military factors, but the widespread distress attested by R/O 96 seems to be against him.

Athmonon (F 4. 5) to whom Diophantos son of Th[rasymedes] of Sphettos (F 6 B 30–31, 32, 34) should be added.

My study of the economic activities of sons in their fathers' lifetime (ch. 5) shows that Isandros and Thrasippos can well belong to the Lykourgan period. It is not a problem that Isandros registered and leased a mine *c.*342–338 (*Agora* XIX P 26. 259–60, 266) and Stratokles (his son or father) leased another in (?) 341/0 (P 27. 17–18); and the purchaser Thrasippos may be the young man who was ephebe in 333/2/1, *IG* ii³ 4. 337, whose father was still alive in 325/4 (*APF* 14996, cf. 7297).⁵

Karkinos and Diophantos are more problematic. Karkinos I of Thorikos (*APF* 8254) was well known as a tragic poet in the fifth century and his three little crablets were old enough to dance on stage by 422 (Aristophanes *Wasps* 1501ff.). One of them, Xenokles, also produced tragedies in the fifth century, and his son Karkinos II was producing before 370. Either he purchased as an old man, or the name Karkinos—probably a source of pride, and an advertisement—was also perpetuated in another branch of the family, perhaps given to a younger man.

Diophantos is usually thought to be the proposer of *IG* ii² 106 and 107 in 368/7; while this cannot be certain,⁶ he had sons who were adult and active as traders by the 340s ([Dem.] 35. 6). But one of these, Thrasymedes II, called after his FF, could well have named a son Diophantos.

For Antikrates son of Eu[kol]io[n of Anagyrous] (*APF* p. 196), who might also come into question, the record is problematic. The labourer (*misthôtês*) Eukolion registered in Erechtheis in 401/0 (*IG* ii² 10, R/O 4 col. VII 8) is now thought to have become an *isotelês* rather than a citizen, and the Euko[—] of Anagyrous of *IG* ii² 1928, 35–6 appears in an odd addition to the text (ll. 24–36) which can be neither dated nor explained. The first firm attestation of Eukolion son of Pyrrhakos is as councillor in 367/6 (*Agora* XV 15); he also owned a dikastic pinax of Class VI (Kroll 1972, 23b), and can well have had a son old enough to purchase in the 330s–320s. Lambert notes that the names Eukolion and Pyrrhakos are both rare; but the reasons are different. Eukoline is well attested in classical Attika as a woman's name, but men's names based on the adjective *eukolos* (pliant, accommodating) are less common, probably because such names were given to slaves.⁷ Pyrrhakos, on the other hand, is one of many variant forms of Pyrrhos, 'Carrots'; it may have been commoner in the fifth century than later.⁸ Connections of the name Pyrrhakos with Delos are doubtful

⁵ This would give us a *terminus post quem* of *c.*330. Cf. perhaps Phyleides son of Blepyros of Teithras, Lambert 176–7 no. 105, whose father was alive *c.*330 (*Agora* XV 45).

⁶ We know only the proposer's name, which is attested in 10 other demes before 300; the two better-known bearers, however, *APF* 4424 and 4435, were probably younger men.

⁷ See ch. 8. *IG* ii² 4568, Hedylos and Eukolos, perhaps not Attic, maybe a freedman.

⁸ *IG* i³ 1032 has a Pyrrhakos of Ach— as well as a Pyrrhichos.

(Papazarkadas 2011, Appendix V), and it would be very rash to assume that a metic Pyrrhakos who got isoteleia in 401/0 subsequently acquired citizenship and became the FF of the purchaser.

More can be said prosopographically for dating stelai 1–2 in the Lykourgan period. [–9–10–] son of Onetor of Melite (F 2 A 10–11, 15–16) may be Philonides III, attested in 325/4 (*APF* 11473 p. 423), rather than [Onetorides]. Eukles son of Lakles of Halai Aixonides (F 7 A 21–2) had a brother, Lakrates, who was councillor in 303/2 (*Agora XV* 62. 218) and a cousin (FBS), Euthemon son of Eukles, who was ephebe in 333/2/1 (*IG* ii³ 4. 337; Table 29.21). I date the choregic victory of Atarbos (F 8 A 35, 37) in 323/2 rather than 366/5 (Appendix 3). Molottos son of Eunomos of Aphidnai was not diaitetes *c.*360 but a kleruch in mid-century (Humphreys 2010a), and may thus be the purchaser [–*c.*6–]tos of F 7 B 14. More questionably, [–*c.*9–10–] son of Polykrates of Aphidnai, F 7 B 6, might be a second Polykrates and thus the treasurer of naval funds of 328/7, *IG* ii² 1628. 13–14, etc.

APPENDIX THREE: IG II³ 4. 435

This choregic dedication consists of two stones, re-used in the construction of the Beulé Gate of the Akropolis in the late third century CE, and now reunited in the Akropolis Museum (no. 1338).

The RH stone is dated by the archon Kephisodoros, 366/5 or 323/2; J. L. Shear 2003 makes a strong stylistic argument for the latter date, which in my view is supported by the prosopography.

Shear's article, however, has questionable reconstructions of the monument's history and inscriptions. In her view the RH stone would originally have stood alone and would have supported a pillar carrying 'a relief which is not preserved'.¹ The pillar is deduced from a square cutting in the centre of the upper surface, set in lead² and filled with a marble 'patch' (the bottom of the pillar), into which cuttings were made for the feet of a front-facing statue (Shear, plate 6 B). The parallels she cites for such pillars are, however, dated c.400.³ The LH stone would have been added later (but perhaps in the same year), and when it was added bronze statues would have been set on both stones, one on the left, slightly over life size, and two, smaller, on the right.

Such a commemorative statue group would be unique, as far as our evidence goes; this is a further argument for a sequence of two stones. However, no satisfactory identification for the three figures has yet been produced.⁴ If they had been designed as a group, one would expect them to represent a deity (Athena) crowning (perhaps) a personification of the tribe and its choregos. But the LH statue is not turned towards the others and the central figure on the RH stone is not turned towards it.

Starting from the inscriptions, I had also concluded that we have a sequence of stones, but it would start with the RH stone. Here there is room for c.19 letters, where the stone has been damaged, after *nikê[sas andrôn cho]rôî*.⁵ Lysistratos Thorikios would fit. *Pace* Shear, the patronymic *Ly[sistratos]* also fits the space for c.8–10 letters on the LH stone, for which her restoration *Ly[sion Thorikios]*,

¹ Or a painting? cf. Goette 2007.

² Cement, according to Makres 2009a.

³ On *Agora* I 7515, c.350, which she also cites, the cutting is rectangular and could have held a stele (listing the members of the victorious team?).

⁴ Shear suggests Atarbos and 2 pyrrhichistai, but the size of the LH figure and the discrepancies between the 2 others tell against this. For other suggestions see her nn. 50–1. For statues on choregic monuments see Goette 2007.

⁵ [*Andrôn*] is Shear's plausible restoration.

12 letters, is too long.⁶ Shear rejects the restoration *Ly[sistratos]* partly because this itself rests on the restoration [*Lysi*]*stratos* in SEG 30. 128 = IG II³ 4. 495, where she prefers the reading *Stratos*. This, however, is a rare name in classical Attika, attested otherwise only in *Agora XV* 39. 17 (*LGP*N Stratos 4 is read in *SEMA* 596 as the commoner Stratios).

Shear points out that the inscription [*pyrrich*]*istais nikêsas* on the RH stone is cut in smaller letters than the rest of the text here, and is cramped up against the left end of the stone; this too might suggest that the RH stone was secondary, fitting its description of the team, parallel to that on the LH stone, into a space rather too small for it.

On my reconstruction, the monument commemorates victories by father and son. The father, Lysimachos, would also have won a Panathenaic victory (possibly at the Greater Panathenaia of 326/5?) and would have commemorated it with a bronze statue of Athena on a relief base. When his son won a victory in 323/2 he did not need to repeat the demotic Thorikios, but he had to balance the statue of Athena with other figures. It is a problem that only the RH stone has an archon-date⁷ and that neither text includes the word *anethêke*; but these are problems for any interpretation that does not postulate a further stone, now lost.⁸

Shear accepts Lambert's date (1997*a*) of c.343–340 for stelai 1–2 of the hekatostai records, where Atarbos Lys[—] appears as a purchaser in Thorikos (F 8 A 35, 37); hence she dates his birth c.390, that of his hypothetical father Ly[sias] c.425, and that of his putative son Stratos c.360; Atarbos would be in his late sixties in 323/2. If, as I believe (Appendix 2), the hekatostai sales all took place in the Lykourgan period (perhaps after 330), Atarbos would be younger in 323/2, perhaps born in the 350s, and his father Lysistratos would be born in the 380s.

⁶ On p. 169 she omits the first iota of *Thorikios*. Space for c.9–11 letters (including the *K* of [*K*]*ephiso*[*d*]*ôrp*[*s*]) is cited on pp. 166 and 175.

⁷ Shear suggests that both victories were won, by Atarbos, in 323/2, but since Atarbos would have known that he had undertaken a second choregia (unusual) in the same year, it seems unlikely that he would have rushed to set up his first monument.

⁸ Against this see Shear n. 26. Makres 2009*a* argues for at least one further stone.

APPENDIX FOUR: LYKOURGOS' SONS

We are told by [Plutarch] *Moralia* 843e–f that the Erechtheion, in addition to wooden statues of Lykourgos and his sons made by Timarchos and Kephisodoros sons of Praxiteles, contained a *pinax* by Ismenias of Thebes, dedicated by Habron, which traced the ancestry of the family (*katagógê tou genous*) to Erechtheus son of Hephaistos and Gê, and represented Habron handing a trident (symbol of Poseidon and hence of his priesthood) to his brother Lykophron. Pausanias 1. 26. 6 refers more vaguely to *graphai* of the *genos Boutadôn*. We do not know as much as we should like about fourth-century painting; perhaps the two brothers, in the centre of the picture, were flanked by Hephaistos and by Erechtheus emerging from the earth. We do not have to postulate a genealogical table; epigraphic genealogies seem to take the form of lists, and are rare in the classical period (Chanotis 1988). It is also doubtful whether the plural of Pausanias' *graphai* should be taken as evidence of more than one painting.

The painting evidently laid strong emphasis on Habron's action; transfer of the trident does not mean that Lykophron became priest when Habron died, but that Habron, having been chosen (presumably by lot), voluntarily ceded his position to his elder brother, thus reconciling use of the lot (perhaps only to choose between Lykourgos' three sons) with an alternative point of view that made the eldest son his father's natural successor.

APPENDIX FIVE: *POXY* 2464

This is a fascinating text, but the suggestions of the editor (J. Rea) about the situation are unconvincing, mainly because he did not consider taking *katelipen* in ii 35 as reference to a betrothal by will—which apparently (ii 37, *hekousês*), gave the girl some right to reject it. He also did not see that ‘the epikleros’ is the speaker’s way of referring to his own mother, whose rights (*qua* epikleros, in their view) he is championing.

I suggest that the situation is as follows. While the epikleros was still a child her father Demostratos died leaving a will in which she was betrothed to Demeas, presumably a kinsman (cf. the betrothal by will of Demosthenes’ sister). However, she became the wife of the speaker’s father, and bore the speaker to him. All went smoothly, apparently, during the husband’s lifetime; but after he died, his wife and son came to feel that they had been defrauded of the inheritance due to them from Demostratos and planned to sue Demeas when the boy came of age.

Demeas, however, made the pre-emptive move of claiming the woman by epidikasia as an epikleros to whom he was next-of-kin, although it appears that he already had a wife: iii 25–33, *tên men oun hexei* (he was going to keep his wife), but nevertheless you (the Athenian demos) voted the epikleros to him. Demeas’ story, it seems, was that the epikleros had voluntarily ‘left her husband’ (i.e. Demeas, to whom she had been betrothed by will) and married another man; now that she was a widow, Demeas was entitled to resume his rights (the question whether he would divorce the wife he had was presumably glossed over).

It is likely that the beginning of the affair was a compromise about which neither party wished to be explicit. Demeas for some reason did not wish to marry the girl (a richer prospect in view?), and arranged for her instead to marry the speaker’s father, who was bribed (dowry?) or browbeaten into accepting the situation. We have a rather similar situation in Isaios 3 (ch. 7 Case 4), where Pyrrhos’ daughter is married to Xenokles, while his nephew (ZS) Endios is adopted as heir.

Although the speaker plays on the piteous state of orphans whose guardians defraud them, it is not certain that Demeas was appointed his guardian (his father may have had kin), and the case does not seem to have involved a charge of *kakôsis orphanou*. If, as seems likely, Demeas’ *paragraphê* to the suit originally brought by the speaker was based on the award to him by epidikasia of Demostratos’ daughter, the original suit should have concerned her right to

inherit. Demeas, no doubt, felt that this had been disposed of through the arrangement for her marriage; she cherished other views, and passed her hopes on to her son.

The case, as thus reconstructed, illustrates yet again the weakness of women who did not have friendly kin to defend their claims, and the tendency for dubious compromises to give rise later on to litigation.
